The village.—Until the recent introduction of western commodities, such as machine-made cloth, kerosine oil, umbrellas and the like, each village was provided with a complete equipment of artisans and menials, and was thus almost wholly self-supporting and independent. Its chamars skinned the dead cattle, cured their hides, and made the villagers' sandals and thongs. Local carpenters made their ploughs, local blacksmiths their shares, local potters their utensils for cooking and carrying water, and local weavers their cotton clothing. Each village had its own oil-pressers, its own washermen, and its own barbers and scavengers. Where this system was fully developed, the duties and remuneration of each group of artisans were fixed by custom and the caste rules strictly prohibited a man from entering into competition with another of the same caste. The barber, the washerman, the blacksmith, etc.

all had their own definite circle within which they worked, and they received a regular yearly payment for their services, which often took the form of a prescriptive share of the harvest, apportioned to them when the crop had been reaped and brought to the threshing floor.

Village sufficiency declining.—Even in India proper the village is no longer the self-contained industrial unit which it formerly was, and many disintegrating influences are at work to break down the solidarity of village life. The rising spirit of individualism, which is the result of modern education and western influences, is impelling the classes who perform the humbler functions in the economy of village life to aspire to higher and more dignified pursuits. There is also a tendency to replace the prescriptive yearly remuneration by payment for actual work done. In many parts for instance, the village Chamar is no longer allowed the hides of dead cattle as his perquisite, but receives instead a payment for removing the cattle and for skinning them; and the hides are then sold to a dealer by the owner of the animal. Improved means of communication have greatly stimulated migration and the consequent disruption of the village community, and by facilitating and lowering the cost of transport of commodities, have created a tendency for industries to become localised. The extensive importation of cheap European piecegoods and utensils, and the establishment in India itself of numerous factories of the western type, have more or less destroyed many village industries. The high prices of agricultural produce have also led many village artisans to abandon their hereditary craft in favour of agriculture. The extent to which this disintegration of the old village organisation is proceeding varies considerably in different parts. The change is most noticeable in the more advanced provinces, whereas in comparatively backward tracts, like Central India and Rajputana, the old organisation remains almost intact.

Agriculture.—India is pre-eminently an agricultural country. Of its total population 72 per cent. are engaged in pasture and agriculture, *viz.*, 69 per cent. in ordinary cultivation and 3 per cent. in market gardening, the growing of special products, forestry and the raising of farm stock and small animals. The 217 million persons supported by ordinary cultivation comprise nearly 8 million landlords, 167 million cultivators of their own or rented land, over 41 million farm servants and field labourers and less than a million estate agents and managers and their employes.

On the average, in the whole of India, every hundred cultivators employ 25 labourers, but the number varies in the main provinces from 2 in Assam, 10 in the Punjab, 12 in Bengal and 16 in the United Provinces to 27 in Burma, 33 in Bihar and Orissa, 40 in Madras, 41 in Bombay and 59 in the Central Provinces and Berar. These local variations appear to be independent alike of the fertility of the soil and of the density of population. The conclusion seems to be that the differences are due to social, rather than economic, conditions, and that those provinces have most field labourers which contain the largest proportion of the depressed castes who are hereditary agrestic serfs.

Of the two million persons supported by the growing of special products rather more than half were returned in tea, coffee, cinchona, indigo, etc., plantations and the remainder in fruit, vegetable, betel, vine, arecanut, etc., growers. Of those in the former group, nearly nine-tenths were enumerated in the tea-gardens of Assam (675,000) and Bengal (248,000) and most of the remainder in the coffee, tea, rubber and other plantations of Southern India.

Of the 16 persons per mille who were classed under Raising of farm stock, nearly four-fifths were herdsmen, shepherds, and goatherds, rather more than one-seventh were cattle and buffalo-breeders, and keepers and one-eleventh sheep, goat and pig breeders.

Fishing and Hunting.—In the whole of India about 2 million persons, or 6 per mille subsist by fishing and hunting. Of these, all but a small fraction are fishermen. About half the total number are found in the two provinces of Bengal (644,000) and Madras (313,000). The number who live by this occupation is exceptionally small in the United Provinces (38,000) and Punjab (10,000). The Punjab Superintendent says that, owing to the destruction of immature fish and fry and the obstruction of the free passage of fish to their spawning grounds, the five thousand odd miles of large rivers and major canals in his Province probably produce less food than an equal volume of water in any other part of the world. The sea fisheries of India, though now known to be very valuable, are at present but little exploited.

Mines.—In the whole of India only 530,000 persons or 17 in every ten thousand are supported by the extraction of minerals. Coal mines and petroleum wells account for about half the total number (277,000). The coal fields of Bihar and Orissa support 127,000 persons and those of Bengal 115,000. In the Manbhum district, which contains the Jherria, and part of the Raniganj coal field, 111,000 persons or 7 per cent. of the inhabitants are supported by work in the collieries. Though the Raniganj coal field was discovered as far back as 1774 many years elapsed before much use was made of the discovery. In 1840 the total quantity of coal sent to Calcutta was only 36,000 tons. It rose to 220,000 tons in 1858 and to six million tons in 1901. Since then the growth has been very rapid. The output in 1911 from the coal mines of Bengal and Bihar and Orissa exceeded eleven million tons. In the same year the total yield for all India was twelve million tons. Of the latter quantity nearly one million tons were exported, and four million were used by the railways. The total output however is still trivial compared with that of the United Kingdom, which amounted in 1911 to 272 million tons. Most of the persons employed in the mines of Bengal and Bihar and Orissa are aboriginal or quasi-aboriginal; about half are Bauris and Santals, and many of the remainder belong to the Bhuiya, Chamar or Mochi, Kora, Rajwar, Dosadh and Musahar castes. The great majority are recruited locally. The coal mines of Hyderabad, Assam, the Central Provinces and Berar, and the Punjab support between them only about 27,000 persons.

Metals.—Of the 98,000 persons supported by mining for metals, more than half were returned

in the Mysore State, and of these the great majority were employed in the gold mines of Kolar, where for some years past the value of the gold produced has been about £2,000,000 per annum. The mines in the Central Provinces and Berar, which support 21,000 persons, are principally for the extraction of manganese. The mining of this ore was greatly fostered by the Japanese War, which caused Russia to discontinue her exports of it for the time. There has since been a period of depression, which seems now to have come to an end. Manganese is extracted elsewhere also, *e.g.*, in Mysore and Madras. In Burma tin and lead are extracted as well as silver and wolfram in small quantities. Iron ore is worked in various places, but chiefly in Mayurbhanj which supplies the raw material for Messrs. Tata and Company's ironworks at Sakchi.

Of the 75,000 persons supported by work in quarries and mines for non-metallic minerals, other than coal and salt, two-fifths were enumerated in Bombay, where the quarrying of stone and limestone is an important business chiefly in the neighbourhood of Bombay city. In Bihar and Orissa and Madras mica mining is of some importance.

The extraction of salt and saltpetre supports 78,000 persons. Nearly a third of the total number are found in Bihar and Orissa, where the Nuniyas are still largely employed in digging out and refining saltpetre. This industry is carried on also in the Punjab. Rock salt is mined in the same province and in Rajputana.

The total number of persons employed in the extraction of minerals has risen during the decade from 235 to 517 thousand. The most noticeable increase is in Coal mines and petroleum wells which embrace nearly three times as many persons as in 1901. The bulk of the increase has occurred in Bengal and Bihar and Orissa, but it is to be noted that Hyderabad and the Central Provinces and Berar which now contribute about 12,000 persons to this group gave practically none ten years previously. Miners for metals are 2½ times as numerous as they were in 1901.

Industries.—Of the 35·3 million persons dependent on industrial occupations, nearly one-fourth or 2·6 per cent. of the total population, are supported by textile industries. Of these, the most important, from a numerical point of view, are industries connected with cotton. The number of persons supported by cotton spinning, sizing and weaving is close on 6 millions, and another half million are employed in ginning, cleaning and pressing the raw material. The proportion of the population supported by cotton spinning, sizing and weaving is 37 per mille in the Punjab, 29 in Bombay and Rajputana, 27 in Madras, 22 in the Central Provinces and Berars and 18 in the United Provinces. In Burma, Bihar and Orissa, Bengal and Assam it is much smaller, ranging only from 8 to 11 per mille. Nearly two-fifths of a million persons are supported by rope, twine and string making, and more than a third of a million by jute spinning, pressing and weaving. Other important textile industries are wool spinning and weaving, silk spinning and weaving, and dyeing and printing, etc., each of which supports from a quarter to a third of a million persons. It is clear therefore that so far as India is concerned, in spite of the growing number of cotton mills in the Bombay Presidency and elsewhere, the hand industry still, to a great extent, hold its own. Only 13,000 persons are employed in silk spinning and weaving factories, 7,000 in woollen factories including those for the making of carpets and even smaller numbers in other factories of this class. Some of these textile industries are very local. Those connected with jute are practically confined to Bengal, in which province nine-tenths of the persons supported by them were enumerated. More than half the persons dependent on rope, twine and string making and on working in 'other fibres' chiefly coir, and palmyra fibre were enumerated in Madras and its Native States and a quarter of those supported by wool industries in Hyderabad. Half the silk spinners and weavers are found in two provinces, Bengal and Madras. The dyeing, bleaching and printing of textiles and lace, crape and similar industries are almost unknown in Assam, Bengal, Burma and the Central Provinces and Berar.

Growth of Industry.—As compared with 1901 there has been a decrease of 6·1 per cent. in the number of persons supported by textile industries. This is due mainly to the almost complete extinction of cotton spinning by hand. Weaving by hand has also suffered severely from the competition of goods made by machinery both in Europe and in this country. There has been a large increase in the number of Indian cotton mills, but as the output per head in factories is far greater than that from hand-looms, the addition of a given number of factory hands involves the displacement of a far larger number of hand workers.

Hides.—As compared with 1901, a large decline in the number returned as general workers in hides is partly compensated for by an increase in shoe, boot and sandal makers. In the two heads taken together there has been a drop of about 6 per cent. During the same period the number of hide dealers has more than doubled. Owing to the growing demand for hides in Europe and America and the resulting high prices, the export trade in hides has been greatly stimulated. The local cobbler, on the other hand, having to pay more for his raw material and feeling the increasing competition of machine-made goods has been tempted to abandon his hereditary craft for some other means of livelihood, such as agriculture or work in factories of various kinds.

Woodworkers.—Wood cutting and working and basket making support 2·5 and 1·3 million persons, respectively, or 3·8 million in all. The number of factories devoted to these industries is still inconsiderable. Saw mills and timber yards each employ some 12,000 persons and carpentry works about 5,000. There is only one cane factory with 46 employes.

Metal workers.—The workers in metals are only about half as numerous as those in wood and cane. About three-quarters of the persons in this order are general workers in iron, and one-seventh are workers in brass, copper and bell-metal.

The total number of persons dependent on metal industries shows a decline of 6·6 per cent. as compared with 1901.

Earthenware.—The manufacture of glass, bricks and earthenware supports in all 2·2 milli-

on persons. Seven-eights of these are the ordinary village potters who make the various earthenware utensils for cooking and storing water which are required by the poorer classes, as well as tiles, rings for wells and the like. In most parts of India the potter, like the carpenter, oil-presses, blacksmith and cobbler, is found in practically every village.

Chemicals.—In a country like India, whose economic development is still backward, it is not to be expected that a large number of persons should be engaged in industries connected with chemical products. The total number returned as supported by these industries exceeds a million, but it shrinks to less than 100,000 if we exclude manufacture and refining of vegetable and mineral oils. The 1·1 million persons included in this group are almost entirely village artisans who extract oil from mustard linseed etc., grown by their fellow villagers.

Food Industries.—Of the 3·7 million persons supported by food industries the great majority follow occupations of a very primitive type. Rice pounders and huskers and flour grinders number 1·6 million, grain parchers, etc., 0·6 million, and toddy drawers about the same. There are 352,000 butchers, 281,000 sweetmeat makers, etc., and 97,000 bakers and biscuit makers. The other five heads of the scheme contain between them only 227,000 persons. The principal factories in connection with food industries are flour and rice mills, which employ 42,000 persons, sugar factories 8,000, opium, ganja and tobacco factories 7,000 and breweries 5,000

Dress.—In all 7·8 million persons are supported by industries of dress and the toilet. Of these 1·3 millions are grouped under the head tailors, milliners, dressmakers, etc., and 2·1 million under each of the heads (*a*) shoe, boot and sandal makers, (*b*) washermen, cleaners and dyers, and (*c*) barbers. hair-dressers and wigmakers.

Transport.—Transport supports about five million persons, or 16 per mille of the population, *viz.*, transport by water one million, transport by road 2·8 million, transport by rail one million, and the post, telegraph and telephone services 0·2 million. Transport by water, about three-fifths are owners of country boats and their boatmen; nearly one-sixth are employed on inland steamers and ocean-going vessels of all kinds, one-sixth are engaged in the construction and maintenance of canals, and one-twentieth in the management and upkeep of harbours. Transport by road includes one million carters and cart-owners, more than half a million porters and messengers and considerably less than that number of owners and drivers of pack animals. Palki owners and bearers number 202,000 and persons engaged on road construction and maintenance 563,000.

Trade.—The number of persons dependent on trade for their livelihood is 17·8 millions, or 6 per cent. of the population. Of these, more than half are supported by trade in food stuffs, including 2·9 million grocers and sellers of vegetable oil, salt and other condiments, who are for the most part the petty village shop-keepers, commonly known as salt and oil sellers; 2·2 million grain and pulse dealers; 1·6 million betel leaf, vegetables and fruit sellers, and nearly a million fish vendors. Trade in textiles is the next most important item, supporting 4 per mille of the population. In connection with these figures, it is necessary to draw attention to the great difference which exists between the economic conditions of India and those of Europe. In Europe the seller is almost invariably a middleman, whereas in India he is usually the maker of the article, and is thus classified under the industrial and not the commercial head.

Professions.—The public administration and the liberal arts support 10·9 million persons or 35 per mille, namely, public force 2·4 million, public administration 2·7 million, the professions and liberal arts 5.3 million, and persons of independent means about half a million. The head Public force includes the Army (0·7 million), the Navy (less than 5,000) and the Police (1·6 million). India has practically no navy and her army is exceptionally small, as compared with those of European countries. The number of persons actually employed in it is only 384,000 or 1 per mille of the population, as compared with 4 per mille in England and 10 in Germany. The figures for Police include village watchmen and their families. The real number in this group is greater than that shown in the census tables; many of these village officials have other means of subsistence, and the latter were sometimes shown as their principal occupation. Under the head Public administration are classed only those persons who are directly engaged in the Executive and Judicial administration and their establishments, whether employed directly under Government or under a municipality or other local body. Employees of Government and local bodies who have a specific occupation of their own, such as doctors, printers, school-masters, land surveyors, etc., are shown under the special heads provided for these occupations. Of the 5·3 million persons supported by the professions and liberal arts, Religion accounts for rather more than half, Letters and the arts and sciences for more than a sixth, Instruction and Medicine for one-eighth, and Law for one-eighteenth. The main head Religion contains 1·6 million priests ministers, etc., 0·7 million religious mendicants, 0·4 million pilgrim conductors, circumciser and persons engaged in temples, burial or burning ground service, and 0·06 million catechists and other persons in church and mission service. Of Law, more than half are lawyers, law agents and mukhtiars and the remainder lawyers' clerks and petition writers. More than two-thirds of the persons under the Medical head are medical practitioners of various kinds, including dentists: the remainder are midwives, vaccinators, compounders, nurses, etc. The real number of persons who act as midwives must exceed considerably that shown in the return. This service is usually performed by the wife of the village scavenger or other person of low caste; and she must often have been returned under her husband's occupation. Nearly three-fourths of the persons classed under Letters and the arts and sciences are found in Music composers and masters, players on musical instruments, singers, actors and dancers. The bulk of these are village drummers, whose services are invariably requisitioned on the occasion of marriages and religious festivals.

Factories.—There are in the whole of India 7,113 factories employing 2·1 million persons or 7 per mille of the population. Of these per-

sons, 810,000, or two-fifths of the total number are employed in the growing of special products, 558,000 in textile industries, 224,000 in mines, 125,000 in transport, 74,000 in food industries, 71,000 in metal industries, 49,000 in glass and earthenware industries, the same number in industries connected with chemical products and 45,000 in industries of luxury. Of the special products, tea (703,000 employees) is by far the most important. The number of tea gardens is not much more than double that of coffee plantations, but twelve times as many persons are employed on them. The coffee plantations are four times as numerous as indigo concerns and employ twice as many labourers. Of the labourers on tea gardens, 70 per cent. are returned by Assam and 27 per cent by Bengal. Madras, Mysore and Coorg contain between them practically all the coffee plantations, and Bihar and Orissa all the indigo factories. Of the persons working in mines, 143,000, or 64 per cent. are found in collieries, eight-ninths of them being in the two provinces of Bihar and Orissa and Bengal. The number of persons engaged in gold mines is about one-fifth of the number in the coal mines: nine-tenths of them were returned from Mysore. Of the 558,000 workers in textile industries, cotton mills contribute 308,000 and jute, hemp, etc., 222,000. About two-thirds of the persons employed in cotton mills are found in the Bombay Presidency, from 8 to 9 per cent. in the Central Provinces and Berar and Madras, and about half this proportion in the united Provinces and Bengal. Jute mills are a monopoly of Bengal. Of the industries connected with transport, railway workshops are by far the most important and afford employment to 99,000 persons, or 79 per cent. of the total number of persons engaged in these industries: about one-fourth of them are found in Bengal and one-sixth in Bombay. Of the factories connected with food industries, the most prominent are rice and flour mills. These employ 42,000 persons, of whom nearly three-fourths are engaged in the rice mills of Rangoon and other places in Burma.

Indians and Europeans.—The proportion of Indians to Europeans varies considerably in different classes of factories. The great majority of the larger concerns are financed by European capital, and in such cases management or direction is generally European, and the Indians shown under this head are engaged for the most part on supervision and clerical work. In Assam where 549 tea gardens are owned by Europeans and 60 by Indians, there are 536 European and 73 Indian managers. In the coffee plantations of Madras and Mysore the same principle is apparent. The jute mills of Bengal are financed by European capital and the managers are all Europeans; while in Bombay where Indians own 110 of the cotton spinning and weaving mills, and share 25 with Europeans, and the latter own exclusively only 12, all but 43 of the managers are Indians. Sometimes the proportion of Europeans employed in supervision, etc., varies with the character of the work. In the gold mines where the planning and control of the deep underground workings require a high degree of skill, Europeans outnumber Indians in the ratio of nearly 4 to 1, whereas in the collieries Indians are twelve times as numerous as Europeans.

Anglo-Indians.—Anglo-Indian is used at the census as the designation of the mixed race, descended usually from European fathers and Indian mothers, which was formerly known as Eurasian. The total number of persons returned under this head, excluding Feringis, is now 100,451 or 15 per cent. more than in 1901. Anglo-Indians are most numerous in Madras (26,000) and Bengal (20,000). In the United Provinces, Bombay and Burma the number ranges from 8 to 11 thousand, and in Bihar and Orissa, the Central Provinces and Berar and the Punjab, it is about 3,500. In the States and Agencies Anglo-Indians aggregate only 14,000, more than half being found in Mysore and Hyderabad. The increase in their number as compared with 1901 may be due partly to some Anglo-Indians having returned themselves under their new designation who would have claimed to be Europeans if Eurasian had been the only alternative, and it is also perhaps due in part to a growing tendency amongst certain classes of Indian Christians to pass themselves off as Anglo-Indians. The Punjab Superintendent accounts in this way for the greater part of the increase of 42 per cent. in the number returned as Anglo-Indians in his province. The proportional increase is also large in the United Provinces, Bombay, Burma, the Central Provinces and Berar and the Cochin State. Although Madras still has the largest number of Anglo-Indians, the total is slightly less now than it was twenty years ago. Possibly this is because more careful enumeration has reduced the number of Indian Christians who thus returned themselves. The number of Anglo-Indians in Burma is remarkably large in view of the comparatively short time that has elapsed since it became a British possession and the strength of its European population. In this community there are 984 females per thousand males, or slightly more than the corresponding proportions in the general population of India. More than half of the persons returned as Anglo-Indians are Roman Catholics, and one-third are Anglicans; the number of Presbyterians, Baptists, and Methodists ranges from 2 to 2½ per cent.

THE CENSUS OF 1921.

The Census of India was taken on the night of March 18th. The total population of India as thus ascertained is 319,075,132, *viz.*, British Territory 247,138,396 and Indian States 71,936,736, giving an increase of 3,205,218 in British Territory and 713,518 in Indian States. These figures are provisional, but the experience of previous censuses shows that the difference between the population according to the provisional totals and that as finally ascertained does not amount to more than about 1 in 2,500 persons and the figures are therefore sufficiently accurate for practical purposes.

The proportional variations at each of the last two censuses are given below.—

Variations per cent. since 1901.

	1891 to 1901.	1901 to 1911.	1911 to 1921.
India	+1·5	+6·5	+1·2
Provinces	+3·9	+5·4	+1·3
States	-6·6	+10·3	+1·0

These ratios differ slightly from those in the statements appended, as allowance has been made in the former for the inclusion of new areas. The areas now dealt with for the first time have an estimated population of 86,145 persons.

Unfavourable Features:—The agricultural conditions of the early and middle years of the decade were not unfavourable to the growth of the population. There was some local scarcity but no widespread famine, while the birth rate and survival rate both stood high in 1913 but declined slightly in the subsequent four years. The war, which gave a notable stimulus to the agriculture, industry and trade of the country, had little direct effect on the population figures. The influenza epidemic of 1918 dominates all other direct influences on the movement of the population during the decade. The epidemic left no part of India unvisited. The death rate was nearly double that of the previous year and the direct loss of life due to the ravages of the disease during a few months in 1918 alone is put at about 7 millions in British India, while the indirect effects are shown in the heavy fall in the birth rate in 1919, the births being less than the deaths in both 1918 and 1919. Apart from the influenza epidemic, the later years of the decade were generally unhealthy. Plague which had been virulent in 1915 in the Northern and Western portions of the country again took a heavy toll in 1917 and 1918. The general failure of the rains of 1918 caused widespread distress over a large part of the country and the mortality from cholera in 1918-19 was exceptionally high. In the last year of the decade a large part of the country had again to face a serious failure of the monsoon. Further analysis of the conditions affecting the movement of the population must be postponed till the Census figures are available in their final form; but the figures given in the statements show the extent to which the normal growth of the population has, in the greater part of the country, been set back by the terrible visitation of 1918 and the subsequent unhealthy season.

POPULATION OF PROVINCES AND STATES AND VARIATION SINCE 1891.

The population returned at previous Censuses has been corrected, as far as possible, in order to allow for subsequent inter-provincial transfers.

The population of Benares State (total 357,838, males 177,869, females 179,969), which was included under the head "British territory" in 1911, has now been included under the head "Indian States." Delhi and Gwalior, which in 1911 were classed under the Punjab and Central India Agency respectively, are now shown separately. The figures for the Madras States include those of Cochin and Travancore, the figures of these States being also shown separately.

The political control of Aden, which is still technically a part of the Bombay Presidency, is with the British Government, but as its general administration is still directly under the Government of Bombay, Aden has been shown for the purpose of the Census as part of the Bombay Presidency.

The population of the French Settlements in India which is not included in this table is according to the Provisional Totals 269,579 (Males 133,251, Females 136,328).

Province, State or Agency.	Population, 1921.			Variation, 1911—21. Increase (+). Decrease (—).

POPULATION OF PRINCIPAL TOWNS.

In the towns noted below, where plague was prevalent at the time of the Census of 1911, many of the inhabitants were absent from their homes and the population shown in this table is far less than it would otherwise have been. The population of these towns for 1911 according to the returns of a fresh Census taken after the epidemic had subsided is noted below :—

Province.	Town.	Persons	Males.	Females.
Bihar and Orissa	Gaya	70,423	38,717	31,706
Central Provinces	Nagpur	134,008	70,441	63,567
United Provinces	Cawnpore	195,498	115,243	80,255
Central India	Indore	68,733	37,910	30,823
Gwalior	Lashkar	72,409	39,945	32,464

Domestic Servants.

The relationship of master to servant in India is a subject to which attention is frequently directed in the Press by complaints about the alleged deterioration of domestic servants and the hardships to which employers are subjected by the boycotting action of discharged servants. The remedy most commonly propounded for misbehaviour on the part of servants is registration with a view to checking the use of false testimonials, or "chits," and to enabling masters to obtain certain information as to the character of the persons they employ. This mode of procedure is of German origin, for the old Prussian Servants' Ordinances (Gesindeordnung) were supplemented in 1854 by a law, applying only to agricultural labourers and domestic servants, which punishes breach of contract, and since then various State laws dealing with domestic servants have been passed in Germany. The conditions are not, however, analogous for the servant keeping class in India is proportionately larger than in Europe, as also is the number of servants kept by each individual.

The first attempt in the East to deal with the problem by legislation was made in **Ceylon.** The act dealing with the registration of domestic servants in that Colony is comprised in Ordinance No. 28 of 1871. It extends to all classes of domestic servants, hired by the month or receiving monthly wages, and the word 'servant' means and includes head and under-servants, female servants, cooks, coachman, horsekeepers and house and garden coolies The Act came into operation in 1871 and empowered the Governor to appoint for the whole of the Island or for any town or district, to which the Ordinance is made applicable, a registrar of domestic servants, who is to be under the general supervision and control of the Inspector-General of Police. A registry is kept by the registrar of all domestic servants employed within his town or district, and he has to enter therein the names of all the servants, the capacities in which they are employed at the time of such registration, the dates of their several engagements and such memorandum of their previous services or antecedents as they may desire to have recorded in the register. But the registrar must, previous to his entering all these details, satisfy himself as to the credibility of the statements made to him. Any person, who may not have been a domestic servant before, but who is desirous of entering domestic service, has to submit an application to the registrar, and if the registrar is satisfied that there are reasonable grounds to believe that the applicant is a fit and proper person to enter domestic service he shall enter his name in the register, recording what he has been able to learn respecting the person's antecedents together with the names of any persons who are willing to certify as to his respectability. If the applicant is unable to produce satisfactory or sufficient evidence as to his fitness for domestic service, the registrar may grant him "provisional" registration, to be thereafter converted into "confirmed" registration according to the result of his subsequent service. If the registrar is satisfied that the applicant is not a fit and proper person he should withhold registration altogether, but in such a case he must report his refusal to register to the Inspector-General of Police.

Every person whose name has been registered in the general registry is given a pocket register containing the full particulars of the record made in the general registry. No person can engage a servant who fails to produce his pocket register or whose pocket register does not record the termination of his last previous service, if any. On engaging a servant the master has to enter forthwith in the pocket register the date and capacity in which such servant is engaged and cause the servant to attend personally at the registrar's office to have such entry inserted in the general registry. Similarly, in case the master discharges a servant he must insert in the pocket register the date and cause of his discharge and the character of the servant. Provided that if for any reason he be unwilling to give the servant a character or to state the cause of his discharge he may decline to do so. But in such a case he must furnish to the registrar in writing his reasons for so refusing. If the servant on dismissal fails to produce his pocket register the master must notify that fact to the registrar. Whenever any fresh entry is made in the pocket register the servant is bound to attend the registrar's office to have such an entry recorded in the general registry. Every servant whose name is registered shall, if he subsequently enters service in any place not under the operation of the Ordinance, attend personally at the nearest police station on his entering or leaving such service and produce his pocket register to the principal officer of police at such station in order to enable the police officer to record the commencement or termination of the service. The police officer has then to communicate it to the registrar of the town or district in which such servant was originally registered.

Various **penalties of fine** as well as of imprisonment are imposed for violation of any of the acts required to be done or duties imposed by the Act on the various persons mentioned below. As respects masters if they fail to fulfil any of the duties imposed on them by the Act they expose themselves to a liability of their being fined to the extent of Rs. 20. Similarly a servant, who fails to fulfil any of the duties imposed on him by the Act is liable to pay a fine not exceeding Rs. 20. But in case he gives any false information to the registrar or to any other person on matters in which he is required by this Ordinance to give information, he is liable to a fine not exceeding Rs. 50 or to imprisonment, with or without hard labour, not exceeding 3 months. A fee of 25 cents is charged to the master on engaging a new servant, a like fee of 25 cents is charged to the servant on his provisional registration, or on registration being confirmed, or for registration of previous service or antecedents. But in case of loss or destruction of the pocket register the servant has to pay one rupee for the issue of a duplicate pocket register.

A similar Ordinance (No. 17 of 1914) has been introduced in the **Straits Settlements,** where its operation has been limited to such local areas as may be declared by the Governor in Council, and its application within such areas has been restricted to the class of householders who are expected to desire the benefit of the provisions.

Education.

Indian education is unintelligible except through its history. Seen thus, it affords the spectacle of a growth which, while to one it will appear as a blunder based on an initial error easily avoided, to another it stands out as a symbol of sincerity and honest endeavour on the part of a far-sighted race of rulers whose aim has been to guide a people alien in sentiments and prejudices into the channels of thought and attitude best calculated to fit them for the needs of modern life and western ideals. There is to-day no subject in the whole area of administrative activity in India which presents greater complexities and differences of opinion than education. The Indian, stung to the quick by the illiteracy around him, demands a very rapid expansion of educational facilities, with perhaps an insufficient regard for the formulation of a policy to regulate such an expansion; the official, overweighted by his responsibility for the maintenance of law and order, is apt to look with disfavour upon the activities of private enterprise in the field of education and, in his efforts to improve the quality, to disregard the quantity of training to be provided in the schools and colleges and the teacher, harassed by annoying restrictions on his freedom and disheartened by his poverty, is disinclined for changes lest they make his lot even more intolerable than before.

The Introduction of Western Learning—In the early days of its dominion in India, the East India Company had little inclination for the doubtful experiment of introducing western learning into India. Warren Hastings, the dominating figure of the time, was a genuine admirer of the laws and literature of the East. His policy was to enable the ancient learning to revive and flourish under the protection of a stable government, and to interfere as little as possible with the habits and customs of the people. Even the Act of 1813 which set apart a lakh of rupees for the introduction and promotion of a knowledge of the sciences was interpreted as a scheme for the encouragement of Sanskrit and Arabic. In the following year the Court of Directors instructed the Governor-General to leave the Hindus "to the practice of usage, long established among them, of giving instruction in their own homes, and to encourage them in the exercise and cultivation of their talents by the stimulus of honorary marks of distinction and in some cases by grants of pecuniary assistance."

It was from sources other than Government that the **desire for western knowledge** arose in India. In 1816, David Hare, an English watchmaker in Calcutta, joined hands with the enlightened Brahmin, Mohan Roy, to institute the Hindu College for the promotion of western secular learning. The new institution was distrusted both by Christian missionaries and by orthodox Hindus, but its influence grew apace. Fifteen years later, the Committee of Public Instruction in Bengal reported that a taste for English had been widely disseminated and that independent schools, conducted by young men reared in the Hindu College, were springing up in every direction. In Bombay, the Elphinstone Institution was founded in memory of the great ruler who left India in 1827. A still more remarkable innovation was made in 1835 by the establishment of the Calcutta Medical College, whose object was to teach "the principles and practice of medical science in strict accordance with the mode adopted in Europe." Many pronounced the failure of the undertaking to be inevitable; for, under the Hindu custom the higher castes were forbidden to touch the dead. This obstacle was surmounted by Madusudan Gupta who, with a few courageous pupils, began the dissection of a human body. From that time onward Indians of the highest castes have devoted themselves with enthusiasm and with success to the study of medicine in all its branches.

Another impetus to the introduction of western learning was the devotion of **Christian missionaries.** The humanitarian spirit, which had been kindled in England by Wesley, Burke and Wilberforce, influenced action also in India. Carey, Marshman and Ward opened the first missionary College at Serampore in 1818; and twelve years later, Alexander Duff reversed the whole trend of missionary policy in India by his insistence on teaching rather than on preaching, and by the foundation of his school and College in Calcutta. In Madras, the missionaries had been still earlier in the field; for as early as in 1787 a small group of missionary schools were being directed by Mr. Schwarz. The Madras Christian College was opened in 1837. In Bombay, the Wilson School (afterwards College) was founded in 1834.

Lord W. Bentinck's minute of 1835 (based upon Macaulay's famous minute) marks the somewhat tardy acceptance by Government of the new policy. Government then determined, while observing a neutrality in religious matters to devote its available funds to the maintenance of secondary schools and colleges of western learning to be taught through the medium of English. But this decision did not entail that Oriental learning should be neglected: still less that the development of the vernaculars should be discouraged. Other changes powerfully contributed to the success of the new system. The freedom of the press was established in 1835; English was substituted for Persian as the language of the Courts in 1837 and in 1841 Sir Henry Hardinge ordained that preference in Government appointments should be given to those who had received a western education. In the following decade the new learning took firm root in India; and, though he Muhammadans still held aloof, the demand for English schools outstripped the means of Government for providing them.

GROWTH AND ORGANISATION OF ENGLISH EDUCATION.

An epoch in Indian educational history is marked by Sir Charles Wood's despatch in 1854. Perhaps its most notable feature was the emphasis which it laid on the importance of primary education. The old idea that the education imparted to the higher classes of society would filter down to the lower classes was discarded. The new policy was boldly "to combat the ignorance of the people which may be considered the greatest curse of the country." For this purpose Departments of Public Instructions were created on lines which do not differ very materially from the Departments of the present day. The despatch also broke away from the practice followed since 1835 whereby most of the available public funds had been expended upon a few Government schools and colleges, and instituted a policy of grants-in-aid to private institutions "Such a system as this placed in all its degrees under efficient inspection, beginning from the humblest elementary institution and ending with the university test of a liberal education would impart life and energy to education in India, and lead to a gradual but steady extension of its benefits to all classes of people." Another feature of the despatch was an outline of a university system which resulted in the foundation of the Universities of Calcutta, Madras and Bombay three years later. The affiliating type of university then became the pivot of the Indian education system. It has undoubtedly been of value in several ways. It enabled Government to select recruits for its service on an impartial basis : it did much, through the agency of its Colleges to develop backward places ; it accelerated the conversion of Hindus to a zeal for western education ; and it cost little at a time when money was scarce. On the other hand, the new universities were not corporations of scholars, but corporations of administrators ; they did not deal directly with the training of men, but with the examination of candidates; they were not concerned with learning, except in so far as learning can be tested by examination. The colleges were fettered by examination requirements and by uniform courses; their teachers were denied that freedom which teachers should enjoy ; and their students were encouraged not to value training for its own sake but as a means for obtaining marketable qualifications. In certain important respects the recommendations in the despatch were not followed. The Directors did not intend that university tests, as such, should become the sole tests qualifying for public posts: they also recommend the institution of civil service examinations. They did not desire the universities to be deprived of all teaching functions: they recommend the establishment of university chairs for advanced study. They were aware of the dangers of a too literary course of instruction : they hoped that the system of education would rouse the people of India to develope " the vast resources of their country.....and gradually, but certainly, confer upon them all the advantages which accompany the healthy increase of wealth and commerce. The encouragement of the grant-in-aid system was advocated to an even greater extent by the Education Commission of 1882, which favoured the policy of withdrawing higher education from the control of Government within certain limits and of stimulating private effort. In theory the decision was correct, but in practice it was irretrievably wrong. In its fatal desire to save money, Government deliberately accepted the mistaken belief that schools and colleges could be maintained on the low fees which the Indian parent could be expected to pay. And, in the course of time, an unworkable system of dual control grew up, whereby the Universities with no funds at their disposal were entrusted with the duty of granting recognition to schools and the Departments of Public Instruction were encouraged to cast a blind eye on the private institutions and to be content with the development of a few favoured Government institutions. There can be little wonder that, under such a system of neglect and short-sightedness, evils crept in which can now only be removed by drastic changes and by lavish expenditure.

The Reforms of 1902-4.

In 1902, the Universities Commission was appointed by Lord Curzon's Government, and its investigation was followed by the Universities Act of 1904. The main object of the Act was to tighten up control, on the part of Government over the universities, and on the part of the universities over the schools and colleges. The Chancellors of the Universities were empowered to nominate 80 *per cent.* of the ordinary members of the Senates and to approve the election of the remainder ; the Government retained the power of cancelling any appointment, and all university resolutions and proposals for the affiliation or disaffiliation of colleges were to be subject to Government sanction The universities were given the responsibility of granting recognition to schools and of inspecting all schools and colleges, the inspection of schools being ordinarily conducted by the officers of the Department of Public Instruction. Permission was also given to the universities to undertake direct teaching functions and to make appointments, subject to Government sanction, for these objects: but their scope was in practice limited to post-graduate work and research. The territorial limits of each university were defined, so that universities were precluded from any connexion with institutions lying outside those boundaries. Neither the Commission nor the Government discussed the fundamental problems of university organisation, but dealt only with the immediate difficulties of the Indian system. They did not inquire whether the affiliating system could be replaced by any other mode of organisation, nor whether all schools might be placed under some public authority which would be representative of the universities and of the departments. They assumed the permanent validity of the existing system, in its main features, and set themselves only to improve and to strengthen it.

Recent Developments.

Since the passing of the Universities Act of 1904, there has been a considerable expansion of the educational system. The two tables given below afford useful comparisons with previous years and serve to illustrate the growth and expansion of education in India.

(*a*) STUDENTS.

Year.	In Public Institutions.			In All Institutions (Public & Private).		
	Males.	Girls.	Total.	Males.	Girls.	Total.
1891-92	3,041,510	307,400	3,348,910	3,517,778	339,043	3,856,821

(*b*) EXPENDITURE.

Year.	Direct Expenditure.		Direct and Indirect.	
	Public Funds.	Total.	Public Funds.	Total.
	Rs.	Rs.	Rs.	Rs.
1891-92	1,07,55,368	2,40,93,149	1,56,18,184	3,05,19,632
1896-97	1,19,85,647	2,77,38,737	1,67,65,650	3,52,44,900
1901-02	1,26,28,586	3,06,37,633	1,77,03,968	4,01,21,462
1906-07	1,88,31,204	3,88,67,352	2,96,34,574	5,59,03,673
1911-12	2,57,57,212	5,39,41,277	4,05,23,072	7,85,92,605
1915-16	3,96,61,135	7,47,43,004	6,21,68,904	11,08,29,249
1916-17	4,18,12,109	7,92,86,819	6,14,80,471	11,28,83,068
1917-18	4,41,73,343	8,36,68,551	6,46,01,690	11,82,09,137
1918-19	5,02,71,231	9,18,49,130	7,17,26,292	12,98,83,073
1919-20	5,91,69,207	10,34,29,768	8,44,63,472	14,88,91,960

In 1919-20 the total expenditure on education amounted to Rs. 14,88,96,960, of which Rs. 8,44,63,472 came from public funds. In spite of this marked advance, there is much lee-way to make up, as in the last census report the literate population of India was only 59 per thousand (males 186 and females 10 per thousand).

Imperial Grants —No new imperial grants were made during the year 1919-20, but a lakh was given to the Benares Hindu University and a lakh to the Sir J. C. Bose Institute at Calcutta from the Education Department's reserve The annual assignment now amounts to 21¼ lakhs, apart from the capital grants.

Primary Education.—The primary schools are mainly under the direction of the local boards and municipalities. In 1911, the late Mr. G. K. Gokhale pleaded in the Imperial Legislative Council for a modified system of compulsory primary education, but Government was unable to accept the proposal. In recent years, legislation has been approved by certain of the provincial legislative councils whereby municipalities are empowered to impose a system of compulsory primary education within their areas. Primary Education Acts have now been passed in Bombay, Bengal Madras, the United Provinces, the Punjab, Bihar and Orissa and the Central Provinces.

The main characteristic of these bills is that the adoption of compulsion is left to the local bodies. Compulsory education is to be free in *Bombay*, the *United Provinces* and the *Punjab*, but in other provinces remission of fees is provided for under certain conditions. Parents and employers preventing children from complying with the Acts are liable to be fined, but provision is made for the exemption from the operation of the Acts of particular classes or communities. Additional taxation is also provided for. The Bengal Act goes somewhat further than the other Acts in requiring all municipalities to undertake at once a survey of the condition of primary education in municipal areas.

Secondary and High School Education. —The policy of Government is to maintain a small number of high schools (roughly one for each revenue district) which are to be regarded as models for private enterprise, and to aid private institutions. In 1911-12 there were 1,219 high schools for boys in India and in 1919-20 the number had risen to 1,910, the number of scholars in the former year being 390,881, and in the latter year 598,785. Some attempts have been made to give a greater bias towards a more practical form of instruction in these schools. The Commission of 1882 suggested that there should be two sides in secondary schools," one leading to the entrance examination of the universities, the other of a more practical character, intended to fit youths for commercial and other non-literary pursuits." Some years later, what were called B and C classes were started in some schools in Bengal, but, as they did not lead to a university course, they have not been successful. In more recent years, the Government of India have advocated the institution of a school *final* examination in which the more practical subjects may be included. Efforts have also been made to improve the conduct of the matriculation and to emphasise the importance of oral tests and of school records. In Madras, this examination, which was placed under the direction of a Board representative of the University and of Government, has proved somewhat cumbrous and certain modifications are being made In the United Provinces, only the better schools are privileged to prepare for the School Final Examination so that better results have been achieved. In the Punjab and in Bombay, the school leaving examination is conducted by Boards. But the main difficulty has not yet been touched. The University which recognises the schools has no money wherewith to improve them: and the Department of Public Instruction, which allots the Government grants, has no responsibility for the recognition of schools, and no connexion whatever with the private unaided schools. This dual authority and thus division of responsibility have had unhappy effects. The standard of the schools also is very low so that the matriculates are often unable to benefit by the college courses. In Mysore, the standard of the schools has been raised by withdrawing from the University the first year's classes and by placing them in a number of the better schools in the State.

There are schools for Europeans and Eurasians which are placed under the control of special inspectors for European Schools. The education of the domiciled community has proved to be a perplexing problem, and in 1912 a conference was summoned at Simla to consider the matter. The difficulty is that European Schools are very remote from the general system of education in India.

Intermediate Colleges —The Calcutta University Commission recommended that the intermediate section of University education should be recognised as part of school education and should be separated from the University organisation Certain provinces (*e. g.*, Bombay, the United Provinces, and the Punjab) are taking steps towards the fulfilment of this suggestion and the experiment is being watched with interest. The suggestion of the Commission has also been incorporated in the schemes for the new universities at Aligarh and Lucknow.

The Arts Colleges.—Affiliated to the universities are colleges which the University concerned has the power under the Act of 1904 to inspect and to regulate. In 1920, there were 150 arts colleges in British India; and there were in these 51,680 male, and 802 female students. The increase in the number of students during the quinquennium (1912-1917) was 58·9 per cent. The universities are empowered to make regulations for the residence of students, but, owing to the limited provision of hostels, it is difficult for the colleges to comply with these regulations. With the assistance of Imperial grants many new hostels have been built in Calcutta. The main weakness of the arts colleges is that they vary much in efficiency with the result that the standard and scope of their work tends to be regulated by the weaker colleges. In many cases the pay and conditions of service of the teachers are very unsatisfactory. Each college again forms a water-tight compartment, there being very little co-operation among the colleges.

(e) " " " " " Rs. 33,39,703 and Rs. 6,53,466 .

Professional and Technical Education.—There are eight medical colleges (in addition to a number of medical schools) with 3,446 students; twenty-one law colleges with 5,991 students; a number of agricultural colleges of which two only (Poona and Lyallpur) are affiliated to a university. A research institute in agriculture, was started by Lord Curzon at Pusa in Bihar, which has done valuable work. Conferences have recently been held at Pusa, Simla and Poona, with the object of providing a suitable training in agriculture. There are training colleges for secondary teachers in various parts of India, and normal schools for the training of vernacular teachers. In 1917, the Government of India made a recurring grant of 30 lakhs for the improvement of training facilities and for increased pay to teachers. Very little has been done to provide suitable instruction in commerce. The Sydenham College of Commerce in Bombay has recently been instituted for this purpose. Industrial institutions are dotted about India, some maintained by Government, others by municipalities or local boards, and others by private bodies. One of the most important is the Victoria Jubilee Technical Institute in Bombay. The tendency in recent years has been to place these institutions under the control of the Departments of Industries. In this connexion should be mentioned the Indian Institute of Science at Bangalore, the product of generous donations by the Tata family. In addition to a number of engineering schools, there are engineering colleges at Roorkee, Sibpur, Poona and Madras, each of which is affiliated to a university. There are schools of art in the larger towns, where not only architecture and the fine arts are studied, but also practical crafts like pottery and ironwork. There is also a school of forestry at Dehra Dun. Many inquiries have been made in the matter of technical education, by Colonel Atkinson, and Mr. Dawson, by the Public Works Committee and by the Industrial Commission, but as yet little progress has been made.

Universities.

There are 13 universities in India, namely:—

No.	University.	Dates of Acts.	Territorial jurisdiction.
1	CALCUTTA	1857, 1904 1905, & 1921.	Bengal and Assam and certain adjacent Indian States
2	MADRAS	1857, 1904 & 1905 ..	The Presidency of Madras and Coorg and certain Indian States.
3	BOMBAY .. .	1857, 1904 & 1905 ..	The Presidency of Bombay and cerain Indian States (Baroda, &c.)
4	PUNJAB	1882, 1904 & 1905 ..	The Punjab, the North West Frontier Province, Delhi, Baluchistan and adjacent Indian States (Kashmir, Patiala, &c.).
5	ALLAHABAD	1887, 1904 & 1905 ..	The United Provinces, the Central Provinces, Ajmere, Merwara and adjacent States
6	BENARES HINDU ..	Oct. 1915	Benares State.
7	MYSORE . ..	July 1916	Mysore State
8	PATNA	Sept. 1917	Bihar & Orissa and adjacent Indian States
9	DACCA	April 1920	Radius of 5 miles
10	ALIGARH MUSLIM ..	Sept 1920	Radius of 10 miles
11	RANGOON	Oct 1920	Burma.
12	LUCKNOW	Nov. 1920	Local
13	OSMANIAH	.. . .	Hyderabad State.
..	DELHI	Projected	Delhi.
..	NAGPUR	,, ...	The Central Provinces.

On the 27th March 1921 an amending Act was passed by which the Governor-General ceased to be the Chancellor of the Calcutta University and now the head of the provincial government is the Chancellor of each of the older universities. The Vice-Chancellor is nominated by the Government concerned. The executive body is the Syndicate which is now organised so as to include a larger educational element. Over this body the Vice-Chancellor presides, all other members being elected by the Faculties, except the Director of Public Instruction who is a member *ex officio*. The secretarial work is under the direction of the Registrar. The legislative body is the Senate which consists of from 75 to 100 members, 80 per cent. of whom are nominated by the Chancellor, the rest being elected by the Senate, or by its Faculties, or by the body of registered graduates. The Senate is divided into Faculties, which are in most cases those of arts, science, law, medicine, and engineering. There is an oriental faculty in the Punjab University alone. There are also Boards of Studies, whose duties are to recommend text-books or books which represent the standard of knowledge required in the various examinations. The newer universities differ considerably from the older universities in constitution.

Apart from the general tightening up of university control over its colleges, the chief feature of university development since the passing of the Act of 1904 has been the participation by the universities in post-graduate teaching and research. In Madras and Allahabad a small number of university professors have been appointed; in the Punjab the services of a certain number of temporary professors from overseas have been engaged during the cold weather. In Bombay a certain number of college professors and others have delivered lectures to post-graduate students under the auspices of the University. But the most notable advance has been made in Calcutta, owing to the energy of Sir Asutosh Mookerjee and to the liberality of Sir Tarak Nath Palit and of Sir Rash Behari Ghosh. In 1916, a committee was appointed to investigate the matter. In accordance with its report, new regulations have been passed by the Senate, whereby all post-graduate teaching and research in arts and science in Calcutta is now conducted directly by the University, though many of the college teachers have been invited to take part in the work. Post-graduate councils in arts and science have also been constituted, which comprise all the teachers engaged in the work and a very small number of additional members appointed by the Senate.

Patna University—Much thought has also been given to the evolution of a new type of university which will run abreast of the old., Patna University, which was constituted in 1917, is in most of its features a university of the old type, but certain innovations have been made. The Chancellor, who is the Lieutenant Governor of the province, may annul any proceeding of the University which is not in conformity with the Act and the Regulations. In the Senate the application of the elective principle has been extended, by increasing both the proportion of the elected Fellows and the categories of electing bodies, and the Senate includes representatives of the teaching staff and of the graduate teachers of recognised schools. Further, all colleges are given statutory representation on the Senate in the persons of their principals. The Syndicate is the ultimate authority in academic matters, subject to the proviso that any six of its members have the power to refer such matters to the Senate for review. The Vice-Chancellor is a paid officer and is appointed by the local Government. In addition to other duties, he has the power to inspect all colleges of the University. The colleges affiliated to the University are of two kinds; colleges of the University, whose buildings are situated within a specified area, and external colleges, whose buildings are situated in one of the four following towns: Muzuffarpur, Bhagalpur, Cuttack and Hazaribagh.

Mysore University was constituted under Regulation V of 1916, for the better encouragement and organisation of education in the State. His Highness the Maharaja is the Chancellor. The University is very similar in its constitution to the older Indian universities, having a Senate of not less than fifty and not more than sixty members; but, unlike the older Universities, it gives seats on the Senate to the university professors *ex officio*. It departs from existing practice by centralising university instruction in Mysore and Bangalore, and by conducting the work of the first year of the old colleges course in a few specially selected high schools.

Hindu University, Benares—The creation of the Hindu University, Benares, forms a landmark in the history of the Indian university system. The university is not designed to meet the needs of one province alone, but to draw students from all parts of India.

It has no monopoly, no privilege. Its energies are not diffused by the necessity of supervising distant colleges nor is its vitality impaired by the embarrassment of administrative duties other than those of organising its own teaching. It is therefore the first Indian university which is primarily a seat of learning and not an administrative organisation. Its constitution is therefore very different from those of the other Indian universities. A dividing line is made between administrative matters, entrusted to a large body called the Court, with an executive committee called the Council, and academic matters, entrusted primarily to a Senate, with an executive body called the Syndicate. The Court which is the supreme governing body besides its administrative powers, has the right to review the acts of the Senate, except where the Senate has acted in accordance with the Act, statutes and regulations. The Senate has the entire charge of the organisation of instruction in the University and the colleges, the courses of study, and the examination and discipline of students and the conferment of ordinary and honorary degrees.

The University of Dacca.—With the modification of the Partition of Bengal in 1911, Dacca ceased to be the capital of the Separate province of Eastern Bengal and Assam. Shortly afterwards, the Government of India conveyed their decision to establish a university of Dacca in their letter to the Government of Bengal, dated the 4th April 1912, and the latter Government appointed a committee to frame a scheme for the new University. The committee was instructed that the University should be of the teaching and residential and not of the federal type, and that it should be a self-contained organism unconnected with any colleges outside the limits of the city of Dacca. The Committee, which was presided over by the late Mr. R Nathan, presented its report later in the year. The report is of great value and in it certain new principles are enunciated. Great emphasis was attached to physical training and education and also to the tutorial guidance of the students. The University was to be very largely a State institution, and practically all its teachers and those of its colleges were to be Government servants. Though the colleges were to be separate units, each with its separate staff and buildings, they were to be linked together and with the University by a close form of co-operation. The executive body, to be called the Council, was to have very considerable powers, subject to the sanction of Government. The Council, which was to be a large and representative body, was to be the legislative authority, subject to the control of

Government, and in other respects an advisory authority. The total cost of the full scheme was estimated at 53 lakhs, but deducting certain sums which were available from other sources the net cost was put down at nearly 40 lakhs, exclusive of recurring charges. These were expected to involve a net total of about 6½ lakhs annually. Before the scheme thus elaborated (which had received the Secretary of State's sanction) could be taken in hand, the war broke out. The Act constituting the University was passed in April 1920 and Mr. P. J. Hartog, C.I.E., was appointed the first Vice-Chancellor.

The Aligarh Muslim University.—It was the aim of Sir Syed Ahmed Khan years ago to place the benefits of a liberal education within the reach of the Muhammadan community; and in 1875 a school was opened which three years later was converted into the Aligarh College. The movement in favour of transforming this college into a teaching and residential university started as early as the end of last century. In 1911, during the visit of His Majesty the King-Emperor to India, His Highness the Aga Khan made an appeal which resulted in the collection of some thirty lakhs of rupees. A draft constitution was drawn up and a consultative committee was formed. But the draft constitution was not approved by the Secretary of State, and on the question of the right of affiliating colleges outside Aligarh in particular, there was a sharp difference of opinion. Government laid down, as in the case of the proposed Hindu University, that the new university should not have the power of affiliating Moslem institutions in other parts of India.

On October 15th, 1915, a meeting of the Moslem University association was held at Aligarh, under the presidency of the Raja of Mahmudabad, when it was proposed that the meeting recommends the Moslem University Foundation Committee the acceptance of the Moslem University on the lines of the Hindu University. It was evident at the meeting that a large number of Indian Moslems are not prepared to accept a constitution for their university similar to that of the Hindu University.

In April, 1917, at a meeting of the Foundation Committee the following resolution was passed:—

"That this meeting of the Moslem University Foundation Committee hereby resolves with reference to the letter of the Government of India, Education Department, dated Delhi, 17th February 1917, D. O. No. 66, that the Committee is prepared to accept the best University on the lines of the Hindu University. It further authorises the Regulation Committee appointed at its Lucknow meeting, with the President and Honorary Secretary of the Moslem University Association as its ex-officio members, to take necessary steps in consultation with the Hon. the Education Member for the introduction of the Moslem University Bill in the Imperial Legislative Council."

The bill referred to above was ultimately introduced into the Council and was passed in September 1920. The act came into force on December 1st, 1920, and the Hon'ble Raja Sir Muhammad Ali Muhammad Khan, K.C.I.E. Khan Bahadur, of Mahmudabad, was appointed the first Vice-Chancellor of the University.

The University of Rangoon.—Plans for a university in Burma have been under consideration for some years. After his arrival in Burma as Lieutenant Governor Sir Harcourt Butler thought that, on general grounds and with some reference to the needs of the province, the Rangoon University might usefully be of a more practical type than any yet attempted in India with courses in arts and science, pure and applied, technology, medicine, engineering, agriculture, law, forestry, veterinary, science and training, commerce and architecture. It might perhaps combine with university instruction practical studies at the Chief Court, the Pasteur Institute and the hospitals; and also at the Museum which the local Government was committed to build as soon as funds were available. It is possible in Burma to a greater extent than in any of the older and more advanced provinces in India to concentrate the intellectual energies of the province in one immediate neighbourhood and to develop a really many-sided university. An Act to establish a teaching and residential college at Rangoon was passed on the 24th October 1920. The University authorities are the Chancellor, Vice-Chancellor, the Council (with an executive committee) and the Senate. The Council is the supreme administrative body while the Senate is an academic body with entire control of studies, examination and discipline. The Governor-General, as Visitor, has the right to cause inspection to be made.

The Lucknow University.—An Act was passed on the 25th November 1920 to establish a unitary teaching and residential University at Lucknow. The University authorities are (1) the Court, with powers of making statutes, (2) the Executive Council, which administers the property of the University and appoints examiners, (3) the Academic Council, which controls the teaching and advises the Executive Council on all academic matters, (4) a Committee of Reference (a Sub-Committee of the Court) deals with items of new expenditure only. The Governor-General, as Visitor, has the same power as in the case of the Rangoon University.

Proposed Universities.—Universities at Delhi and at Nagpur are projected, and it is expected that the Delhi University will be incorporated in 1922.

Education of Women and Girls.—Hitherto little attention has been paid to this important branch of education, as in many places social restrictions are still strong. In Madras and Calcutta there are two colleges each for girls: and there are in India a number of schools for girls maintained by Government or by private agency. In 1919-20, there were 1,024 female students in arts colleges and 33,247 in high schools. Arts colleges, medical colleges, and the like admit students of both sexes, and a few girls attend them. The Lady Hardinge Medical College for Women at Delhi, which has just been started, gives a full medical course for medical students.

Administration.—The educational services are divided into (*a*) the Indian Educational Service, (*b*) the Provincial Educational Service, (*c*) the Subordinate Educational Service

(*a*) **The Indian Educational Service** comprises officers in three branches, inspectors, principals and professors of colleges, headmasters of high schools, all of whom are appointed by the Secretary of State. All, with a few exceptions, start at the pay of Rs. 500 *per mensem*, with an annual increment of Rs. 50 *per mensem*, and go up to Rs. 1,000 *per mensem*, directors of public instruction receiving from Rs. 1,500 to Rs. 2,500 according to the province in which they serve. A small number of personal allowances was arranged in 1896, when the service was reorganised and received its title. There is no short service pension, but officers of 30 years' service or of 55 years of age or over receive a pension of about £400 a year.

(*b*) **The Provincial Educational Service.**—In this service also are found principals and professors of colleges, headmasters and inspectors of schools. This service is composed of Indians and is recruited in India, the pay scheme being on a much lower scale than that of the Indian service. The maximum pay is Rs. 700 and the minimum Rs. 200.

(*c*) **The Subordinate Educational Service.**—In this service are found a few headmasters,college professors assistant inspectors and assistant masters in schools. In Bengal a number of poorly paid teachers have been converted into a lower subordinate service. The pay and prospects of this service are very poor.

Recently the pay of all the educational services has been improved The Indian Educational Service scale is Rs. 400 to Rs 1,250 by annual increments of Rs. 50 and an 'overseas' allowance ranging from Rs. 150 to Rs 250 is given to those whose domicile is not India The pay of Directors of Public Instruction has also been improved The scales of the other services have also been revised but they still differ in the several provinces

In 1910 a **Department of Education** was established in the Government of India with an office of its own and a Member to represent it in the Executive Council. The first Member was Sir Harcourt Butler: and the present Member is Sir. Mian Muhamad Shafi At the same time the Bureau of Education was re-established and placed under the charge of an officer styled the Educational Commissioner. The Educational Commissioner is not an executive officer of the Department But he is kept in touch with all its proceedings; he gives advice: and he collects and correlates information in regard to the progress of education in India and elsewhere.

Board of Education.—In 1920 a Central Advisory Board of Education was constituted The present members of the Board are Mr P. J Hartog, Vice-Chancellor of the Dacca University; Mr C. F. de la Fosse; the Right Hon Mr S. Sastri of Madras; Mr. Patwardhan, Principal of the Fergusson College, Poona; The Hon'ble Mian Fazl Hussain; Mr. A. J. Mayhew; Dr. Zia-ud-Din Ahmad; Mr. G. Anderson and the Hon'ble Mr. J. A. Richey (President) The functions of the Board are purely advisory and it meets once a quarter.

Calcutta University Commission.—The Report of the Calcutta University Commission was published in August 1919 and in the following January the Government of India issued a Resolution summarising the main features of the Report and the recommendations of the Commissioners.

The Government of India drew special attention to the following points in the Report:—

(*i*) High schools fail to give that breadth of training which the developments of the country and new avenues of employment demand

(*ii*) The intermediate section of University education should be recognized as part of school education and should be separated from the University organisation

(*iii*) The defects of the present system of affiliated colleges may be mitigated by the establishment of a strong central teaching body, the incorporation of unitary universities (as occasion arises), a modification of the administrative machinery which will admit of fuller representation of local interests, and supervision of different classes of institutions by several appropriately constituted bodies.

The Commission gave detailed suggestions for the reorganisation of the Calcutta University, for the control of secondary and intermediate education in Bengal and for the establishment of a unitary teaching University in Dacca. These measures concerned only Bengal: but it was generally recognised that some of the criticisms made by the Commissioners admit of a wider application Committees were consequently appointed by the Universities of Madras, Bombay, Patna and the Punjab to consider the findings of the Commission. In the United Provinces two committees were appointed, one to prepare a scheme for a unitary teaching University at Lucknow, the second to consider measures for the reorganisation of the Allahabad University and the creation of a Board to control secondary and intermediate education

In Bengal the first outcome of the Commission's Report was the passing of the Dacca University Act in the Imperial Legislative Council in March 1920 "But," writes the Director "the outcome of the Commission's report, as far as it affects the general University and secondary education system of the Presidency, is still, in spite of the Government of India resolution, a mere matter for speculation."

The Reforms Act The Reforms Act of 1919 has altered the conditions of educational administration in India. Education is now a 'transferred' subject, and is, in each Province, under the charge of a 'Minister' There are, however, some exceptions to this new order of things The education of Europeans is a 'Provincial reserved' subject, *i. e*, it is not within the charge of the Minister of Education; and to the Government of India are still reserved matters relating to the non-Provincial Universities like Aligarh and Benares and all new universities, and university legislation generally.

Local Self-Government.

Throughout the greater part of India, the village constitutes the primary territorial unit of Government organisation, and from the villages are built up the larger administrative entities—tahsils, sub-divisions, and districts.

"The typical Indian village has its central residential site, with an open space for a pond and a cattle stand. Stretching around this nucleus lie the village lands, consisting of a cultivated area and (very often) grounds for grazing and wood-cutting.... The inhabitants of such a village pass their life in the midst of these simple surroundings, welded together in a little community with its own organisation and government, which differ in character in the various types of villages, its body of detailed customary rules and its little staff of functionaries, artisans and traders. It should be noted, however, that in certain portions of India, *e g*, in the greater part of Assam, in Eastern Bengal, and on the west coast of the Madras Presidency, the village as here described does not exist, the people living in small collections of houses or in separate homesteads".—(*Gazetteer of India.*)

The villages above described fall under two main classes, *viz.*—

Types of Villages.—"(1) The 'severalty' or raiyatwari village, which is the prevalent form outside Northern India. Here the revenue is assessed on individual cultivators. There is no joint responsibility among the villagers, though some of the non-cultivated lands may be set apart for a common purpose, such as grazing, and waste land may be brought under the plough only with the permission of the Revenue authorities, and on payment of assessment. The village government vests in a hereditary headman, known by an old vernacular name, such as *patel* or *reddi*, who is responsible for law and order, and for the collection of the Government revenue. He represents the primitive headship of the tribe or clan by which the village was originally settled.

"(2) The joint or landlord village, the type prevalent in the United Provinces, the Punjab and the Frontier Province. Here the revenue was formerly assessed on the village as a whole, its incidence being distributed by the body of superior proprietors, and a certain amount of collective responsibility still, as a rule, remains. The village site is owned by the proprietary body, who allow residences to the tenantry, artisans, traders and others. The waste land is allotted to the village, and, it wanted for cultivation, is partitioned among the shareholders. The village government was originally by the *panchayet* or group of heads of superior families. In later times one or more headmen have been added to the organisation to represent the village in its dealings with the local authorities; but the artificial character of this appointment, as compared with that which obtains in a raiyatwari village, is evidenced by the title of its holder, which is generally *lambardar*, a vernacular derivative from the English word 'number.' It is this type of village to which the well-known description in Sir H. Maine's *Village Communities* is alone applicable, and here the co-proprietors are in general a local oligarchy with the bulk of the village population as tenants of labourers under them."

Village Autonomy.—The Indian village formerly possessed a large degree of local autonomy, since the native dynasties and their local representatives did not, as a rule, concern themselves with the individual cultivators, but regarded the village as a whole, or some large landholder as responsible for the payment of the Government revenues, and the maintenance of local order. This autonomy has now disappeared owing to the establishment of local, civil and criminal courts, the present revenue and police organisation, the increase of communications, the growth of individualism, and the operation of the individual *raiyatwari* system, which is extending even in the north of India. Nevertheless, the village remains the first unit of administration; the principal village functionaries—the headman, the accountant, and the village watchman—are largely utilised and paid by Government, and there is still a certain amount of common village feeling and interests.

Punchayets—For some years there was an active propaganda in favour of reviving the village council-tribunal, or *Punchayet* and the Decentralisation Commission of 1908 made the following special recommendations:—

"While, therefore, we desire the development of a *punchayet* system, and consider that the objections urged thereto are far from insurmountable, we recognise that such a system can only be gradually and tentatively applied, and that it is impossible to suggest any uniform and definite method of procedure We think that a commencement should be made by giving certain limited powers to *Punchayats* in those villages in which circumstances are most favourable by reason of homogeneity, natural intelligence, and freedom from internal feuds. These powers might be increased gradually as results warrant, and with success here, it will become easier to apply the system in other villages. Such a policy, which must be the work of many years, will require great care and discretion, much patience, and judicious discrimination between the circumstances of different villages; and there is a considerable consensus of opinion that this new departure should be made under the special guidance of sympathetic officers."

This is, however, still mainly a question of future possibilities and for present purposes it is unnecessary to refer at greater length to the subject of village self-government. An Act was passed in 1912 to provide for the establishment of *panchayets* in the Punjab; but it was contemplated that the areas for which these bodies would be established would be larger than villages, and their functions are limited to the disposal of petty civil suits. In the Punjab, it may be mentioned, village self-government survives to a considerable extent, on a basis of custom, and the desirability of bringing it under statutory regulation has been questioned.

Municipalities.—The Presidency towns had some form of Municipal administration, first under Royal Charters and later under statute, from comparatively early times, but outside of them there was practically no attempt at municipal legislation before 1842. An Act passed in that year for Bengal, which was practically inoperative, was followed in 1850 by an Act applying to the whole of India. Under

this Act and subsequent Provincial Acts a large number of municipalities was formed in all provinces. The Acts provided for the appointment of commissioners to manage municipal affairs, and authorised the levy of various taxes, but in most Provinces the commissioners were all nominated, and from the point of view of self-government, these Acts did not proceed far. It was not until after 1870 that much progress was made. Lord Mayo's Government, in their Resolution of that year introducing the system of provincial finance, referred to the necessity of taking further steps to bring local interest and supervision to bear on the management of funds devoted to education, sanitation, medical charity, and local public works. New Municipal Acts were passed for the various Provinces between 1871 and 1874, which, among other things, extended the elective principle, but only in the Central Provinces was popular representation generally and successfully introduced. In 1881-2 Lord Ripon's Government issued orders which had the effect of greatly extending the principle of local self-government. Acts were passed in 1883-4 that greatly altered the constitution, powers, and functions of municipal bodies, a wide extension being given to the elective system, while independence and responsibility were conferred on the committees of many towns by permitting them to elect a private citizen as chairman. Arrangements were made also to increase municipal resources and financial responsibility, some items of provincial revenue suited to and capable of development under local management being transferred, with a proportionate amount of provincial expenditure, for local objects. The general principles thus laid down have continued to govern the administration of municipalities down to the present day. In several Provinces there are, besides municipalities, "notified areas," *i.e.*, small towns which are not fit for full municipal institutions, but to which parts of the Municipal Acts are applied, their affairs being administered by nominated committees. These are to be regarded as embryo municipalities.

Local Boards.—The establishment of boards for dealing with local affairs in rural areas is a relatively recent development. No such boards existed in 1858, though some semi-voluntary funds for local improvements had been raised in Madras and Bombay, while in Bengal and the United Provinces consultative committees assisted the district officers in the management of funds devoted to local schools, roads and dispensaries. The system of raising cesses on land for purposes of this description was introduced by legislation in Madras and Bombay between 1865 and 1869; in the case of Bombay, nominated committees were to administer the proceeds of the cess. The year 1871 saw a wide development of legislation for local administrative purposes, partly due to growing needs, and partly the result of the financial decentralisation scheme of Lord Mayo's Government, various Acts being passed in different Provinces providing for the levy of rates and the constitution of local bodies, in some cases with an elected element, to administer the funds. The whole system was reorganised in accordance with the policy of Lord Ripon's Government. Under the Orders of 1881-2 the existing local committees were to be replaced by a system of boards extending all over the country. The lowest administrative unit was to be small enough to secure local knowledge and interest on the part of each member of the board, and the various minor boards of the district were to be under the control of a general district board, and to send delegates to a district council for the settlement of measures common to all. The non-official element was to preponderate, and the elective principle was to be recognised, as in the case of municipalities, while the resources and financial responsibilities of the boards were to be increased by transferring items of provincial revenue and expenditure. It was, however, recognised that conditions were not sufficiently advanced or uniform to permit of one general system being imposed in all provinces, and a large discretion was left to Local Governments. The systems introduced in different parts of India by the Acts of 1883-5 (most of which are still in force) consequently varied greatly.

Mofussil Municipalities.—The total number of municipalities has altered little for many years past. New municipalities have been formed from time to time, but there have also been removals from the list. There was, indeed, a rather marked decrease according to the last decennial review (1902-12) and the number in 1911-12 was actually less than it was thirty years earlier. This result was brought about by the reduction to "notified areas" of a considerable number of the smaller municipalities in the Punjab and United Provinces. Taking the municipalities individually, some of the commissioners are elected in the great majority of cases. Representation in the larger municipalities is in general by wards or classes of the community, or both. Voters must be residents not below a specified age, and property or status qualifications are generally laid down. The Chairman or President of the Municipal Corporation is sometimes nominated under the orders of the Local Government, but more often chosen by the commissioners from among themselves. Various provisions exist as to the exercise of control by Government, particularly as regards finance and appointments. No loans can be raised without Government sanction, and generally speaking municipal budgets, and alterations in taxation require the sanction of the Local Government, or of a Commissioner. Proposals for giving municipal committees a larger degree of independence were put forward by the Decentralisation Commission, and some action on these lines has been taken. Government may provide for the performance of any duty which the commissioners neglect, and may suspend them in case of incompetence, default, or abuse of powers.

Municipal Revenues.—In the provinces in which octroi is levied generally, it is the most important source of income. The octroi duties have admitted disadvantages, but they are familiar through long usage to the inhabitants of the North and West of India. The possibility of abolishing them was under consideration during the last decade, and it was decided in the United Provinces to take this step in many municipalities, but the alternative of direct taxation is not a popular one. Precautions are taken to limit the tax to articles actually consumed in a town, and to prevent it from becoming a transit duty. The list of dutiable

articles contains in each case only staple articles of local consumption and goods in transit are allowed to pass in bond or receive a refund of the duties on leaving the town. Articles of food are the most important class of goods subject to octroi taxation.

Incidence of Taxation.—A tax on houses and lands is levied to some extent in all provinces, and is the main source of municipal revenue where there is no octroi. Taxes on professions and trades, and on animals and vehicles, are generally levied, as also is a water-rate in the large towns that have been furnished with water works. Tolls on road and ferries and lighting and conservancy rates contribute to the receipts in most provinces.

Municipal Functions.—Municipal functions are classified under the heads of public safety, health, convenience and instruction. Within these heads the duties are many and varied. Expenditure, apart from that on general administration and collection, which amounts to something less than 10 per cent. of the total, is similarly classified. The principal normal functions of municipalities now are the construction, upkeep, and lighting of streets and roads, and the provision and maintenance of public and municipal buildings; the preservation of the public health, principally with reference to the provision of medical relief, vaccination, sanitation, drainage and water-supply, and measures against epidemics; and education, particularly primary education. Money is raised by loan for water-supply and drainage schemes, the cost of which is too large to be defrayed from ordinary revenues.

THE PRESIDENCY TOWNS.

The corporations of the Presidency towns occupy a special position, and are constituted under special Acts.

Calcutta.—The municipal administration of Calcutta is regulated by the Calcutta Municipal Act of 1899, which replaced an Act of 1888, the working of which had not been altogether satisfactory. The Corporation, as remodelled by the Act of 1899, consists of a Chairman, appointed by the local Government, and fifty commissioners, half of whom are elected at triennial ward elections, while the remainder are appointed, four each by the Bengal Chamber of Commerce and the Calcutta Trades Association, two by the Port Commissioners, and fifteen by the local Government. The Act also constitutes a smaller body, the General Committee, consisting of the Chairman with twelve of the commissioners, four elected by the ward commissioners, four elected by the other commissioners and four appointed by the local Government. There are various special committees and sub-committees. An amending Bill has been published.

The entire executive power is vested in the Chairman, to be exercised subject to the approval or sanction of the Corporation or General Committee, whenever this is expressly directed in the Act. To the Corporation are reserved the right of fixing the rates of taxation and such general functions as can be efficiently performed by a large body, while the General Committee stands between the deliberative and executive authorities, and deals with those matters that are ill-adapted for discussion by the whole Corporation but too important to be left to the disposal of the Chairman alone. Power is reserved to the local Government to require the municipal authorities to take action in certain circumstances, and their sanction is required to large projects. A new Municipal Act is now before the Bengal Legislative Council.

Bombay.—The Municipal Corporation of Bombay, which formed the model for the new Calcutta constitution, dates in its main features from 1872 and continues to be regulated by the Act of 1888 as amended. Some important changes were made by the City of Bombay Police Charges Act of 1907 which relieved the Corporation of the police charges of the city, and made over to them in exchange further responsibility for primary education, medical relief and vaccination.

The Corporation consists of 72 councillors, of whom 36 are elected by wards, 16 by the Justices of the Peace, 2 by the Fellows of the University, and 2 by the Bombay Chamber of Commerce, the remaining 16 being appointed by Government. The general municipal government is vested in the Corporation, while the ordinary business is transacted by a Standing Committee of 12 councillors, 8 appointed by the Corporation and 4 by Government. The president of the corporation is elected by the councillors but is not, like the chairman of the Calcutta Corporation, an executive officer. The chief executive authority is vested in a separate officer, appointed by Government, usually from the ranks of the Indian Civil Service, styled the Municipal Commissioner, who can, however, be removed by a vote of 45 councillors.

Steps are now being taken to amend the Bombay Municipal Act in the direction of greater popular control and a lower franchise.

Madras.—A new Municipal Act for the City of Madras was passed in 1904. By this Act the number of the municipal commissioners, to whom as a body the name Corporation was now applied, was increased from 32 to 36, besides the President, and provision was made for the appointment of three commissioners each by the Madras Chamber of Commerce and the Madras Trades Association, and of two by such other associations, corporate bodies, or classes of persons, as the Local Government might direct, while the number to be elected as divisional elections was fixed at 20. Under the Act previously in force the total number of elected commissioners was not more than 24. The remaining commissioners were appointed, as they are under the new Act, by the Local Government, who also appoint the President. The Act of 1904 also introduced various other changes in the law which need not be specially noticed; it was modelled to a large extent on the Calcutta Act of 1899.

DISTRICT AND LOCAL BOARDS.

The duties and functions assigned to the municipalities in urban areas are in rural areas entrusted to District and Local Boards. The systems of rural local government in the various provinces differ widely. The Madras organisation, which provides for three grades of local boards, most nearly resembles the pattern set in the original orders. Throughout the greater part of that province important villages and groups of villages are organised as 'Unions", each controlled by a PANCHAYAT. These bodies receive the proceeds of a light tax on houses, and spend them mainly on sanitation. Next come the Taluk Boards, which form the agency for local works in the administrative sections into which the districts are divided. Finally, there is the District Board, with general control over the local administration of the district. In Bombay there are only two classes of boards, for districts and TALUKAS respectively. In Bengal, the Punjab, and the North-West Frontier Province the law requires a District Board to be established in each district, but leaves the establishment of subordinate local boards to the discretion of the Local Government. The Bengal Act authorises the establishment of village Unions also, but this provision has not been very largely used. The United Provinces Act formerly in force directed the establishment of district and sub-district boards, but the latter were abolished, as mentioned below, in 1906. The system in the Central Provinces bears some resemblance to that which prevails in Madras, the villages being aggregated into "circles", and the circles into "groups", each of which has a Local Board, while for each district there is a District Council having authority over the Local Boards. In Assam district boards have not been introduced, and independent boards are established in each sub-division. Neither district nor sub-district boards exist in Burma, or in Baluchistan. District boards were started in Lower Burma in accordance with Lord Ripon's Local Self-Government Resolution of 1882, but the members took no active interest in them, and they died out after a few years. The district funds are now administered by the Deputy Commissioners of districts.

Elective Principle.—The degree to which the elective principle has been introduced varies greatly in different parts of India; but there is a considerable proportion of elected members everywhere, except in the North-West Frontier Province, where the system of election was abolished in 1903. On the whole, however, the principle of representation is much less developed in rural than in municipal areas. In Madras the elective system, previously applied to the district boards only, was extended to the Taluk Boards in 1909. In the United Provinces and the Central Provinces there is a substantial majority of elected members.

Chairmen.—The various Acts usually leave it to the Local Government to decide whether the Chairman of the district board shall be elected or nominated. In most provinces the Collector was, as a general rule, appointed, though in the Central Provinces the president is elected, and is usually a non-official. In the United Provinces election, subject to the veto of the Local Government, was prescribed by the Act of 1906, but in practice the Collector is chosen. As regards the subordinate boards, the law and practice vary. Generally speaking, the sub-district boards are on the footing of subordinate committees or agencies of the district boards, with very limited powers and resources; but in Madras they exercise independent authority, subject to the general control of the district boards, in regard to the less important roads, primary education, medical work, and sanitation.

Provision is made, on much the same lines as in the case of municipalities, for the exercise of control in certain directions by Government or its officers.

Sub-District Boards.—The Decentralisation Commission, having in view the admitted failure of sub-district boards as a whole, under existing arrangements, except in Madras and Assam, put forward proposals for making them the principal agencies of rural board administration by giving them independent resources, separate spheres of duty, and large responsibilities. Proposals for giving the district boards a larger measure of independence were also put forward.

Revenue and Expenditure.—The sources of income open to rural boards are much narrower and less elastic than those of the municipalities. The greater part of their revenue is derived from a cess which they are empowered to levy on the land, and which usually does not exceed one anna in the rupee on the annual rent value (or, in ryatwari provinces, the Government assessment). The cess is ordinarily collected by Government agency along with the land revenue, and varies in amount with the latter. Since 1905 the income derived from the land cess has been supplemented by a special Government contribution calculated at the rate of 25 per cent. of that income. Substantial amounts, apart from this special contribution, are granted to the district boards by the Local Governments for various purposes. Apart from receipts in connection with their educational and medical institutions, and markets, the only other important sources of independent revenue are pounds and ferries, and, in Madras, road tolls. Except in Madras, the sub-district boards have generally no independent sources of income, and merely receive such moneys as the District Boards may allot to them. In Madras the Taluk Boards receive half the land cess levied in their areas, as well as certain miscellaneous revenues.

THE PRESENT POSITION.

A brief survey of the progress of municipalities and district boards during 1920 reveals first, the gradual awakening of a new spirit in response to the altered policy of the administration; and secondly the amount of leeway which has to be made up before the institutions, of local self-government in India can range themselves on a footing equal to that of corresponding institutions in the West. Taking first municipalities there are some 730 municipalities in British India, with something under 18 million people resident within their limits. Of these municipalities roughly 530 have a population of less than 20,000 persons and the remainder a population of 20,000 and over. As compared with the total population of particular provinces the population resident within municipal limits is largest in Bombay where it amounts to 17 per cent. and is smallest in Assam where it amounts only to 2 per cent. In other provinces it varies from 3 to 9 per cent. of the total population Turning to the composition of the municipalities considerably more than half of the total members are elected. *Ex-officio* members are roughly 13 per cent. and nominated 32 per cent. Elected members are almost everywhere in a majority. Taking all municipalities together, the non-officials outnumber the officials by nearly five to one. The functions of municipalities are classed under the heads of Public Safety, Health, Convenience and Instruction. For the discharge of these responsibilities, there is a municipal income of just under £ 10 6 millions, two-thirds of which is derived from taxation and the remainder from municipal property, contributions from provincial revenues and miscellaneous resources. Generally speaking, the income of municipalities is small, the four cities of Calcutta, Bombay, Madras and Rangoon together providing nearly 38 per cent. of the total. The average income of all municipalities other than the four mentioned above is only some £ 9,000 The total expenditure of municipalities excluding that debited to the head "Extraordinary and Debt" amounted in 1918-19 to £ 9 9 millions. The heaviest items of this expenditure come under the heads of "Conservancy" and "Public Works" which amount to 17 per cent. and 15 per cent. respectively. "Water-Supply" comes to 8 per cent, "Drainage" roughly to 6 per cent and "Education" to no more than 7·6 per cent. In some localities the expenditure on education is considerably in excess of the average. In the Bombay Presidency excluding Bombay City, for example, the expenditure on education amounts to more than 18 per cent of the total funds while in the Central Provinces and Berar it is over 15 per cent.

District Boards.—In view of the fact that only 10 per cent of the population of British India lives in towns, municipal administration, however efficient, cannot affect in any large degree the great mass of the people. Hence it is that particular importance attaches in India to the working and constitution of the district boards, which perform in rural areas those functions which in Urban areas are assigned to the municipalities In almost every district of British India there is a board, subordinate to which are two or more sub-district boards, while in Bengal, Madras and Bihar and Orissa, there are also Union Committees. Throughout India at large there are some 200 District Boards with roughly 550 sub-district boards subordinate to them There are also more than 850 Union Committees This machinery has jurisdiction over a population which was some 212 millions in 1918-19. The members of the Boards numbered more than 13,000 in 1918–19, of whom 52 per cent. were elected During 1920, the tendency has been throughout India to increase the elected members of the District Boards at the expense of the nominated and the official members The boards are practically manned by Indians who constitute 94 per cent of the whole membership. Only 19 per cent of the total members of all boards are officials of any kind. The total income of the Boards in 1918 19—the latest figures available—amounted to £ 8 7 millions the average income of each district board together with subordinate boards being £47,000 The most important item of revenue is provincial rates, which represent a proportion of the total income varying from 20 per cent in the Central Provinces to 58 per cent. in Bihar and Orissa. This income is mainly expended upon civil works, such as roads and bridges (£ 3·6 millions) the other principal objects of expenditure being education (£ 2·3 millions) medical and sanitary works (£ 0 8 millions) and general administration.

Civic Improvement—One interesting feature of 1920 is the activity displayed by the great cities of British India in the direction of civic improvement Mention has been made of the beneficent activities of the Improvemrnt Trusts of Bombay and Calcutta, in ameliorating the conditions under which the masses live. Particular attention has been paid in both places to the housing problem which indeed cries aloud for urgent solution. Development Commissioners called trustees, have been appointed with the object of accelerating the work of the trusts; the funds available which have during the year been augmented by civic loans, are very large. Improvement Trusts have recently been constituted in Cawnpore and Lucknow in the United Provinces; important schemes have been sanctioned and are in the course of execution. These projects, however, are naturally of less magnitude than the operations of the Trusts of Bombay, Calcutta, and Rangoon, the cost of which runs into millions sterling. The scheme, which has now been projected for the reclamation of Back Bay in Bombay will challenge comparison both in its magnitude and in the results which its success may achieve, with municipal operations almost anywhere else in the world. In the case of Calcutta, the clearing of congested districts, the development of suburban areas, and the institution of far-reaching drainage schemes, indicate a breadth of vision and command over the resources which would be a source of pride to the inhabitants of any city within the British Empire.

Greater Independence.—The general relaxation of Governmental control over local bodies is steadily proceeding, and there have been notable signs that the additional responsibility thrown upon members both of the municipalities and the district boards is inducing them to take a greater interest in their work. In Bengal there are 115 municipalities outside Calcutta, and the interest taken in civic affairs continues to increase. In most towns the ordinary municipal services are moderately efficient On the other hand, only 46 of these municipalities have an income of over £ 3,000 a year, while 26 have actually to carry on their work on less than £ 1,000 a year. Considering that the total municipal population, leaving Calcutta out of consideration, is some 2 millions, calculation shows that the expenses of municipal administration amount only to some seven shillings per head of the population. Roads and public works, conservancy, water-supply and general administration consume more than half the total revenue, and the remainder has to carry the charges for education, medical relief, sanitation and the like. In spite of revised assessments, the income of the majority of municipalities in **Bengal** remains practically stationary. The reluctance of the district boards to tax themselves is a feature which is not confined to Bengal. The reports of the administration of district boards up and down India reveal the fact that while the majority of those who serve upon them are quite alive to the advantages of improved administration, they are unwilling to face the corresponding financial obligations. The general impression still remains abroad that the Provincial and Central Governments possess an inexhaustible purse, from which they are only prevented by contumacy from relieving all the financial embarrassments and limitations under which the district boards labour.

Up to the end of 1920, about 1,500 **Union Boards** had been established in Bengal, and many more were in the process of creation. Already these new institutions are displaying a keen sense of responsibility and corporate activity, and it is believed that a wide extension of the scheme will result in the development of a strong sense of communal interest accompanied by a progressive, if modest policy of village improvement through the promotion of public health and general well-being. A similar development may be noticed in Bombay, where an act for constituting or increasing the powers of village communities has been passed by the Legislative Council. In this Presidency some 75 out of 157 municipalities had a two-thirds elected majority of Councillors in the year 1919-20; and a distinct step forward has been projected by the administration in the direction of liberalising the constitution of the municipalities. The policy of appointing non-official Presidents has been extended both to district and sub-district boards, with the result that 12 out of 26 district boards and 29 out of 219 sub-district boards in the Presidency possessed non-official Presidents by the end of the year. All the district boards and most of the sub-district boards have non-official vice-Presidents.

In **Madras** also, the institutions of local self-government continued to progress in an encouraging manner. In the year 1919-20, 41 municipal councils consisted entirely of Indian members as against 32 in the previous year; and out of the actual number of councillors amounting to just over 1,000, nearly 700 were elected directly by the ratepayers. The average imposition of taxation per head of population although still very low, rose from three shillings and ten pence to four shillings. Expenditure, a substantial proportion of which was devoted to public works, rose in a comparatively satisfactory manner by £ 100,000 to a figure of over a million sterling. The net educational charges amounted to nearly 6 per cent. of the income from general taxation; and the number of educational institutions maintained by municipalities increased to 895, a figure which represents an increase of 82 over that of previous year. In the United Provinces there was considerable if unostentatious progress during the year 1920. While it would appear that some of the boards still display defects and weaknesses, there are signs in others of the growth of stronger public spirit and a clearer realisation of the evils which arise from undue indulgence in dissension Some of the Boards, whose financial position is admittedly unsatisfactory are making determined efforts to put their house in order by imposition of additional taxation.

The total municipal income fell from £ 1,19 million to £ 1,14 million, a decrease entirely accounted for by a reduction in Government contributions. On the whole the income from municipal resources was much the same as last year, and is still inadequate for a satisfactory programme of municipal improvement. In the **Punjab** Municipal administration continues to show improvement. Certain municipalities are reported to be conspicuously lacking in public spirit or swayed entirely by personal interest and party factions. But in the majority there are distinct signs of the awakening of civic responsibility. In four municipalities, non-official Presidents have been elected in place of officials, and this policy of the withdrawal of official control has undoubtedly increased interest in municipal affairs and strengthened the desire among the generality of citizens to become members of the municipal committees. Conscientious efforts are being made in many places to deal with overcrowding; and there has also been further attention to medical institutions. Education has also received a full share of attention, particularly in Lahore and in Multan; and a number of municipalities throughout the Punjab are taking steps to carry out comprehensive schemes of drainage and water supply. Turning to District Board administration the event of outstanding importance during this period has been the **reconstruction** of all the district boards in the Punjab and the institution of new electoral rules. The financial resources of the district boards show satisfactory increase. During 1920, the gross income from district boards in the Punjab amounted to £1·07 millions—double the gross income of ten years ago. So far as expenditure is concerned, we find that the total figure for district boards in the Punjab was £ 0·98 millions, representing an increases of £ 170·000 over the figure for 1918-19. Considerable increases in expenditure are to be noticed under the heads of medical, education and sanitation. District Boards are also devoting attention to

the opening of demonstration farms to sheep breeding and to sericulture.

In the **Central Provinces** the year witnessed the passing of a Local Self-Government Act which only awaits the framing of rules to guide into proper channels the undoubtedly growing interest in public matters. The continued reduction of official members and chairmen, and the wider powers of control given to local bodies will afford an incentive to the development of local self-government leading to an increased sense of public duty and responsibility. Village self-government was also stimulated by the passing of the **Village Panchayat Act**. But municipalities and district councils alike require development upon the financial side before they can realise the opportunities which lie before them. At present they are mainly dependent upon Government grants, and before their position can be pronounced satisfactory local sources of revenue must be expanded.

In the **North-West** Frontier Province, the institutions of local self-government are somewhat of a foreign growth. Certain of the municipal committees are very lax in the discharge of their responsibility, and meetings are reported to be infrequent. None the less the attendance of non-official members at meetings increased in every municipal committee during the year 1919-20, although the attitude of members towards their duties continued in the case of several municipalities to be disappointing and unsatisfactory.

Local Government Statistics.

Municipalities.—With this general introduction we can now turn to the statistical results of the working of Local Self-Government. The following table gives information as to the constitution of municipal committees, taxation, &c., in the chief provinces in 1918-19:—

	Population within Municipal Limits.	Number of Municipalities.	Total Number of Members	By Qualification.		By Employment.		By Race.		Incidence of Municipal Taxation per head.
				Ex-Officio.	Nominated	Elected	Officials	Non-Officials.	Europeans.	Indians.

Sanitation.

The history of the sanitary departments in India goes back for about fifty years. During that period great improvements have been effected in the sanitary condition of the towns, though much remains to be done; but the progress of rural sanitation which involves the health of the great bulk of the population has been slow, and incommensurate with the thought and labour bestowed on the subject. "The reason lies in the apathy of the people and the tenacity with which they cling to domestic customs injurious to health. While the inhabitants of the plains of India are on the whole distinguished for personal cleanliness, the sense of public cleanliness has ever been wanting. Great improvements have been effected in many places; but the village house is still often ill-ventilated and over-populated; the village site dirty, crowded with cattle, choked with rank vegetation, and poisoned by stagnant pools; and the village tanks polluted, and used indiscriminately for bathing, cooking and drinking That the way to improvement lies through the education of the people has always been recognised"

Of recent years the pace has been speeded up as education progressed, education developed, and funds were available. In a resolution issued in May 23rd, 1914, the Government of India summarised the position at that time, and laid down the general lines of advance. This resolution (*Gazette of India*, May 25th, 1914) should be studied by all who desire to understand the present position and policy: its main features are summarised here.

The governments in India have moved more rapidly of late. In 1898, the Government of India issued an important statement of policy. In 1908, imperial grants amounting to Rs 30,00,000 (£200,000) a year were made to local Governments. A new department of the Government of India was created in 1910 in order to relieve the Home Department of education, sanitation and some other branches of the administration. In addition to sanitary conferences held by local Governments, three All-India sanitary conferences were convened at Bombay, Madras and Lucknow, respectively, over which the Hon'ble Sir Harcourt Butler presided as Member of the Governor-General's Council in charge of the department concerned These conferences were attended by non-officials as well as officials, by laymen as well as professional sanitarians. Again, the **Indian Research Fund Association** has been founded to further the prosecution of research, and the propagation of knowledge and experimental measures generally in connection with the causation, mode of spread and prevention of communicable diseases. To this fund the Government of India make an annually recurring grant of 5 lakhs of rupees (£33,333). Moreover since the constitution of the new department of the Government of India, imperial grants have been made to local Governments and Administrations to the amount of Rs. 4,61,47,000 (£3,076,466), of which Rs. 55 23,000 (£368,200) are recurring, and Rs. 4,06,24,000 (£2,708,266) non-recurring. In addition, grants amounting to Rs. 82·33 lakhs (£548,866) a year have been made to district boards in certain provinces, a substantial portion of which will, it is hoped, be expended on rural sanitation. These grants have rendered practicable the execution of schemes which a few years ago seemed beyond the limits of financial possibility; and there can be little doubt that the movement for sanitary reform is now well established and progressive throughout the country.

Organisation.—As a result of the Plague Commission's Report Lord Curzon's Government took up with vigour the reorganisation of the sanitary department. Research institutes were started and an appointment of Sanitary Commissioner with the Government of India was created. The functions of this officer were to advise the Government of India upon sanitary and bacteriological questions to settle with local Governments the principles on which an advance should be made and to organise and direct research throughout India. The arrangement was not completely successful. Among the disadvantages, the separation of research from clinical work deterred men from entering the department, and the office work in connection with research prevented the Sanitary Commissioner from undertaking wide and constant touring. The organisation was accordingly modified in 1912. The Sanitary Commissioner is now the independent adviser to the Government of India in all technical and sanitary matters, but all questions of personnel as well as the administration of the bacteriological department and research generally have been placed under the control of the Director-General, Indian Medical Service, with the Sanitary Commissioner as his staff officer.

The Sanitary Organisation.

The sanctioned strength of the superior sanitary organisation in India now is

(*a*) A Sanitary Commissioner with the Government of India.

(*b*) A bacteriological department comprising—

(*i*) thirteen laboratory appointments distributed as follows:—

Central Research Institute	1 Director and 3 Assistants.
Bombay Bacteriological Laboratory . ..	1 Director and 2 Assistants
King Institute of Preventive Medicine, Madras .	1 Director and 1 Assistant.
Pasteur Institute, Kasauli	1 Director and 1 Assistant
Pasteur Institute, Coonoor	1 Director and 1 Assistant.

(*ii*) fifteen new appointments recently sanctioned for the prosecution of research work and direct investigation in the field.

(c) The following establishments under local Governments :—

Provincial Agency.—In their resolution, dated the 23rd May 1912, the Government of India provided for a large increase in the number of Deputy Sanitary Commissioners and for the appointment of health officers (of the first-class for larger municipalities and of the second-class for the smaller towns) on the lines of detailed proposals received from local Governments. Twelve additional appointments of Deputy Sanitary Commissioner, thirty-five appointments of health officer of the first-class and a large addition to the number of second-class health officers were sanctioned in 1912 and 1913, the entire cost of the additional Deputy Sanitary Commissioners on the basis of the scale of pay fixed for Indians and half the cost of the health officers being met by imperial grants. The Government of India also advised local Governments to take powers, where these did not exist, to require a municipality to appoint a health officer and to veto the appointment of an unfit person. Such powers already exist in the Bombay Presidency, and have recently been taken by legislation in Bengal. Simultaneously, the Government of India recommended the system in force in Madras whereby every municipality is required to employ one or more trained sanitary inspectors in proportion to population. Sanitary inspectors are now being employed in large numbers in towns. In addition, the civil surgeon in every district is the sanitary adviser of the local authorities and in most provinces controls the vaccination staff. The provision of an increased staff of sanitary engineers is engaging urgent attention.

Voluntary Agency.—The Government of India attach great importance to the organisation of voluntary agencies and have recently made a grant of Rs. 20,000 (£1,333) a sum equivalent to that given by the Bombay Government to the BOMBAY SANITARY ASSOCIATION, which was founded in 1903, and now has corresponding branches in several districts and Native States.

Research.—The policy of the Government of India is to keep the control of research under itself, but to decentralise other branches of sanitation. The creation of an imperial department is no departure from that policy, and the large imperial grants already mentioned have been made without any interference with provincial Governments. While the general direction of a policy of public health must remain with the central Government, all detailed control and executive action are, and will be, left to local Governments. The Sanitary Commissioner with the Government of India is a touring officer empowered to consult and confer informally with local Governments and their officers upon matters connected with sanitation. He is not permitted to encroach upon the authority of Local Governments over the officers under their control.

Provincial Officers.—The position of Provincial Sanitary Commissioners towards the administrative heads of the medical department varies somewhat in different provinces. The Government of India do not wish to interfere with the arrangements which local Governments may consider best suited to local conditions but they desire to insist on the importance of defining the functions of the two officers and securing to the Sanitary Commissioner the position of responsible technical adviser to the local Government in all matters affecting public health.

Sanitary Boards.—In every province, sanitary boards have been composed with varying powers, some being merely advisory, others having authority to sanction schemes and allot funds. These boards are composed of officers belonging to the medical, sanitary, engineering and other branches of the civil services with the

addition of non-officials. The Government of India view with favour and confidence the devolution of financial authority and responsibility to these boards, and they commend to local Governments the appointment of a permanent salaried secretary to the board where this has not been done. They believe that such an appointment, wherever made, has resulted in an increase of efficiency.

Training.—Arrangements for training the superior sanitary staff are now engaging the attention of the Government of India. The chief difficulty at present is to provide courses in practical hygiene and in the study of the bacteriology and etiology of tropical diseases. It is hoped in the near future to make arrangements in India for the former and to utilise the schools of tropical medicine at Calcutta and elsewhere for the latter. Meanwhile, a British diploma in public health is required from candidates for the post of Deputy Sanitary Commissioners and health officers of the first class. The problems of public health in India are vitally complicated by the fact that biting insects are a prominent factor in the dissemination of disease and it is obviously desirable to provide in India, as soon as possible, a complete course of training for sanitary officers.

Training classes for sanitary inspectors are now held in all the more important provinces.

Department of Public Health.—A substantial beginning has thus been made for the development of a department of public health and Indians have been freely enlisted for it. The posts of Deputy Sanitary Commissioner and health officer are now open to Indians. Nine Deputy Sanitary Commissioners out of 26 and the majority of health officers are Indians. The new bacteriological department consisting of 28 officers is also open to duly qualified Indians

As health officers and Sanitary Engineers gradually relieve Deputy Sanitary Commissioners of much of the drudgery of inspection and routine work, it is hoped that the latter will be set free to deal with epidemics and communicable diseases from a higher plane, and to consider issues of public health wider than those which they are able to review to-day. It is therefore important to provide in advance free interchange between them, the laboratory workers and those carrying out practical research in the field.

Progress of Research.—Research is slowly lifting the veil which hides the secrets of disease and mortality and opening up fields of inquiry scarcely thought of a generation ago. The discovery by Sir Ronald Ross of the part played by the mosquito in the communication of malaria and the appointment of the Plague Commission in 1898 are landmarks in the history of Indian Sanitation. In 1902, a research institute was founded at Guindy in Madras, named the King Institute after Lieutenant-Colonel King, C.I.E., I.M.S, in view of his devoted efforts in the cause of sanitation in that presidency. In 1905 Lord Curzon's Government summed up the position and the policy of the Government of India in regard to the establishment of laboratories for the study of problems of public health in India. The functions of the central-laboratory were original research, the preparation of curative sera and the training of scientific workers. The functions of the provincial laboratories were diagnosis and special research connected with local conditions. This policy has been steadily developed. The Central Research Institute has been established at Kasauli. The Plague Research Laboratory at Parel has been extended and re-equipped and is now the bacteriological laboratory for the Bombay Presidency; and a proposal is under consideration to attach to it a school of tropical medicine. A research laboratory and school of tropical medicine are under construction at Calcutta. Pasteur Institutes exist at Kasauli, Coonoor, Shillong and Rangoon.

Besides the routine work connected with the bacteriological diagnosis of disease, antirabic treatment, the manufacture of various vaccines and sera and general research, these laboratories at different times have been the centres of many special investigations, notable amongst which are those on plague and enteric fever. It is hoped that before long each province in India will have a laboratory fully equipped for research.

Research Fund Association.—The foundation of the Indian Research Fund Association in 1911 has marked an important era in sanitary progress. The control and management of the association are vested in a governing body, the president of which is the Member in charge of the Education Department of the Government of India. The governing body is assisted by a scientific advisory board, of which not less than three members have seats on the governing body. They examine all proposals for work in connection with the scientific objects of the association and report as to their importance and feasibility. The members of this board are appointed for one year, but are eligible for re-election, and they have power to add to their number. The present members are the Director-General, Indian Medical Service, the Sanitary Commissioner with the Government of India, the Director of the Central Research Institute at Kasauli, the Officer in charge of the Central Malarial Bureau and the Assistant Director-General, Indian Medical Service (Sanitary). Sir Ronald Ross has been elected an honorary consulting member. The membership of the Indian Research Fund Association is open to non-officials. Every donor of Rs. 5,000 is entitled to become a permanent member, while every subscriber of Rs. 100 per annum can be a temporary member. Members of the association are entitled to attend and take part in the annual general meeting of the association and to receive copies of the reports and other publications issued from time to time by the association. Although, so far, the fund has been financed solely by the Government of India, it is hoped that in time Indian philanthropists will contribute towards the expansion of the association by founding chairs of research by financing experimental research measures and otherwise.

The association has also started a journal for the publication of medical research work done in India—the "INDIAN JOURNAL OF MEDICAL RESEARCH"—published quarterly. The favourable reception which has been accorded to

the first three numbers is evidence of the increased interest that is being taken in sanitary science in India to-day.

Water Supply.—Few subjects have received more attention of late than the provision of a piped supply of filtered water in towns. Complete figures are not available but sums amounting to at least Rs. 3,51,58,297 (£2,343,886) have been spent during the last 20 years on completed schemes. Projects costing Rs. 1,10,03,433 (£933,562) are under construction and projects costing Rs. 1,14,44,750 (£762,983) have been prepared and sanctioned. These figures are exclusive of the expenditure in the Presidency towns and Rangoon.

Drainage.—Drainage schemes on modern lines, are the basis of all sanitary improvement in urban areas. The demand for them is scarcely less than that for piped water and is steadily on the increase. As in the case of water supply complete figures are not available but the known expenditure during the last twenty years has been considerable and is now rapidly increasing. The expenditure on completed works outside the Presidency towns and Rangoon during that period amounted to Rs. 97,65,049 (£651,003), whereas the cost of the works under construction is estimated at Rs. 1,54,20,502 (£1,028,033). In the beginning precedence over drainage was given to piped water-supply but experience has demonstrated the advantage of introducing both concurrently. Without drainage there is no means of carrying off the surplus water and without piped water-supply it is difficult to flush the drains properly.

When drainage schemes on modern lines were first started in this country, there seems to have been a bias against the use of sewers, and, wherever possible, open drains were adopted. Experience has shown that the preference for the open drain and the fear that sewers would give excessive trouble were not well founded. On the contrary, much of the advantage of a drainage system is lost if only open drains are used, as the old system of hand-carriage latrines has to be continued. Moreover, economy in establishment is possible only in the case of a sewage system.

Pilgrimages.—Pilgrimages necessitating as they do the collection of large numbers of persons, often more than a million, at one place at one time have an important sanitary aspect mainly in connection with cholera and other communicable diseases. The Government of India recently decided to examine the sanitary arrangements at the chief places of pilgrimage throughout India and local Governments were asked to appoint provincial committees for this purpose under the presidency of the Sanitary Commissioner with the Government of India with a view to formulate practical schemes of improvement. The inquiry is still in progress but the Government of India have already made a grant of Rs. 2 lakhs (£13,333) and promised an additional grant of 4 lakhs of rupees (£26,666) spread over four years towards the improvement of the pilgrim route to Badrinath; and they have made a further recurring grant of Rs. 20,000 (£1,333) a year for the same object. The important question of improving the conditions of the pilgrimage to the Hedjaz by Indian Musulmans has undergone close scrutiny. A grant of Rs. 4½ lakhs was made in 1918-19 for the improvement of sanitary arrangements in connexion with various pilgrim centres.

Rural Sanitation.—The following observations are based on practical experience of rural sanitation:—

(*a*) Travelling dispensaries may be used to spread a knowledge of the simple facts regarding the more common diseases. For this purpose the sub-assistant surgeons in charge should be given a special training in hygiene. Once they become known to the people as healers of the sick their advice as sanitarians may become more acceptable.

(*b*) The improvement of the village water-supply is as important as it is difficult. Apparently, excellent results have been obtained by disinfection of wells with permanganate of potash. Experiments are being made in different parts of India in the use of tube-wells, etc. It might serve as an useful object lesson to use pumps and tube-wells for the provision of water at fairs, schools, hospitals, and local public offices. In some localities, a tank supply alone is possible and the difficulty is to protect even new tanks from pollution.

(*c*) In several provinces, notably in Madras, village unions or circles have been formed and their committees entrusted with small grants for the improvement of the sanitation of the village site. This measure might be extended experimentally elsewhere. It is calculated to encourage discussion and inquiry regarding sanitary work.

(*d*) Village midwives are, in some districts, encouraged by small grants of money and rewards to attend at the head-quarters hospital for a short and simple course of training. These measures open up possibilities with reference to a reduction in infantile mortality and children's diseases generally.

(*e*) In most districts in India, the civil surgeon is also in theory the sanitary officer of the district. His duties at head-quarters, however, do not allow him to tour and inspect in the district to the extent that is necessary; even in the case of epidemics in the district it is sometimes not possible for him to leave headquarters. In some provinces, district sanitary officers have been appointed and there can be little doubt that many more such appointments are required and that one of the most urgent and hopeful measures for promoting rural sanitation is the appointment of well qualified and whole-time district health officers to control and organise all sanitary arrangements and experiments in the district.

Birth and Death Rates.—The population of the areas in which births and deaths were registered in 1919 was 238,482,205. 7,212,415 births and 8,554,178 deaths were registered; the rates per mille being 29·54 and 35·87 as compared with an average of 37·31 and 36·84 respectively for the previous five years.

The lowest birth rates were recorded in Madras 25·5; Coorg 26·35, Bengal 27·5 and Bombay 27·9; but an excess of deaths over births was noticed in almost all the provinces, except the Punjab, Delhi, North-West Frontier Province and Ajmer-Merwara. The death-rates were lower in all the Provinces excepting Assam than in the preceding year

Province.	Birth Rates (per mille).		Death Rates (per mille).	
	1918.	1919.	1918.	1919.
Delhi	47·9	15·8	93·17	12·00

Total	35·35	30·24	62·46	35·87

Chief Diseases.—There are three main classes of fatal disease: specific fevers, diseases affecting the abdominal organs, and lung diseases. Intestinal and skin parasites, ulcers and other indication of scurvy widely prevail. The table below shows the number of deaths from all causes and from each of the principal diseases in British India and death-rates per 1,000:—

Years.	Deaths from all Causes.	Cholera.	Small-pox.	Fevers.	Dysentery and Diarrhœa.	Plague.	Respiratory Diseases.
1914 ..	7,155,771	280,730	76,590	4,092,345	278,225	266,588	261,149
		1·18	·32	17·16	1·17	1·12	1·09
1915 ..	7,142,412	404,472	83,282	3,990,287	261,800	380,501	257,721
		1·70	·35	16·73	1·10	1·60	1·08
1916 ..	6,940,436	288,047	60,642	4,085,784	248,381	205,527	286,247
		1·21	·25	17·13	1·04	·86	1·20
1917 ..	7,803,832	267,002	62,277	4,555,221	260,984	437,036	316,821
		1·12	·26	19·10	1·10	1·83	1·33
1918 ..	14,895,801	560,802	93,076	11,134,441	276,618	440,752	430,935
		2·35	·39	46·69	1·16	1·85	1·81
1919 ..	8,554,178	578,426	136,077	5,468,181	291,643	74,284	350,133
		2·43	·57	22·93	1·22	·31	1·47

Mortality.—There is no method by which the deaths actually due to influenza in 1918 can be calculated. If it be assumed that the excess in the deaths in 1918 over the mean of the previous 5 years was the result—direct or indirect—of influenza, the figure would come to 7,718,307. This is an overestimate owing to the disturbing factor of other epidemic diseases, such as plague, cholera, malaria and relapsing fever, which raised the mortality in various parts of India during the first half of the year. There is no certain evidence that influenza was present in India before June 1st: it is, however, probable that if it were, it had no appreciable influence on the death rate for India as a whole. This suggests that the excess in the mortality from all causes between June 1st and December 31st over the 5 years mean—6,812,633—may be a more reliable index. This may, however, be a slight underestimate, for, in the last half of 1918 the mortality from plague was exceptionally low as compared with the quinquennial mean.

Another estimate may be obtained by subtracting from the total mortality from all causes the deaths registered as due to the chief epidemic diseases—plague, cholera and small-pox, and comparing this figure with one similarly obtained for the previous quinquennium. On this basis the estimate would be 7,304,478. A fourth figure may be estimated by taking the excess in the mortality from "fevers" and respiratory diseases over the average for 5 years. In 1918 this excess came to 7,151,971.

Without any claim to accuracy it is suggested that the mortality directly and indirectly due to influenza was in the neighbourhood of the mean of the last three figures, 7,089,694.

Cholera.—578,426 deaths were registered in 1919 against 560,802 in 1918 404,303 of the deaths occurred in the four provinces of Bengal, Bihar and Orissa, Madras and United Provinces. The death-rate from cholera for India was 2·43 against 2·35 in 1918. No part of India was absolutely free from the disease during the year, but in Delhi Province, the Punjab, Coorg and Ajmer-Merwara the death rate was 0.90 or less.

Dysentery and Diarrhœa.—A year in which cholera is prevalent means a rise in the number of deaths ascribed to these diseases. In 1919, 291,643 deaths were recorded as compared with 267,648 in 1917. The death rate was 1·22, against 1·11, the quinquennial mean. The highest death rates were returned by the Central Provinces and Assam.

Small-pox—caused 136,077 deaths, of these 41,732 occurred in the Madras Presidency. The death rate was 0·57 as compared with a quinquennial mean of 0·31

Plague.—74,284 deaths were registered against 440,752 in 1918. 414,170 of the deaths occurred in the first half of the year and 26,582 in the second half In 1917 the corresponding figures were 241,757 and 195,279. The plague year does not correspond with the calendar year. it runs from July 1st of one year to June 30th of the next. The low mortality in the second half of 1918 corresponds with the first half of 1918-19 epidemic and is about one-fifth of the mean mortality from plague during the corresponding period of the past twenty years. It cannot be claimed that this reduction in mortality is due to plague preventive measures, although there are signs that popular appreciation of such measures is growing: the low incidence of plague was probably directly connected with the meteorological and agricultural conditions of the year

The most satisfactory symptom of the growing public confidence in anti-plague measures is the increased demand or inoculation with anti-plague vaccine. The greatest reliance is placed on evacuation. Valuable as this measure undoubtedly is, it may spread infection. Refugees from a plague infected town or village in some cases go with their goods and chattels to uninfected towns or villages, the epidemics in which are sometimes traceable to this immigration

Rat destruction is not popular There is no doubt that an efficiently conducted rat campaign is of great value, but the co-operation of the people is difficult to secure.

Fevers.—It is perhaps more difficult than usual to analyse the deaths ascribed to "fevers." 5,468 181 deaths, or 63·9 per cent. of the total deaths were included under this head. 7,402,076 fever deaths were registered during the last quarter of the year when influenza was prevalent, a figure in excess of the annual mortality from all causes recorded in six out of the previous ten years. The decennial mean for mortality from fevers is 4,979,432.

THE HEALTH OF THE ARMY.

British.—The average strength of European Troops, Regulars and Territorials, in India during 1918 was 87,982 as compared with 80,825 in 1917. The following table shows the main facts as regards the health:—

Period.	Average strength.	Admissions.	Deaths.	Invalids sent home.	Average constantly sick.
1910-14 average	69,440	39,389	303	488	2,094·57
1915	44,891	36,952	267	889	1,754·19
1916	60,737	46,892	397	1,343	2,414·56
1917	80,825	62,372	390	1,337	3,686·45
1918	87,982	90,637	1.424	2,007	5,286·61

Period.	Ratio per 1,000 of strength.				Average period of illness of each soldier calculated on average strength.	Average duration of each case of sickness.
	Admissions.	Deaths.	Invalids sent home.	Average constantly sick.		
1910-14 average	567·2	4·51	7·03	30·13	*10·00	*19·39
1915	823·1	5·95	19·80	39 08	14·26	17·33
1916	772·0	6·54	22 11	39·75	14·55	18·85
1917	771·7	4·83	16·54	45·60	16·65	21·57
1918	1,030·2	16·19	22·81	60 00	21·93	21·29

* Worked out on quinquennium aggregates.

The high admission and death ratios were in great measure contributed to by the pandemic of Influenza, the admission and death ratios for which alone were 219·5 and 8·81. Heatstroke caused ratios of 10·4 and 1 10, respectively, which were considerably above the normal, whilst venereal diseases again showed an increased incidence.

Indian.—The average strength of Indian troops including those on duty in China and other stations outside India, but excluding those under field service conditions, was 341,458 in 1918 as compared with 191,242 in 1917.

The following table gives the actuals and ratios of sickness, deaths, and invaliding for the years 1918, 1917, 1916, 1915 and the averages for the quinquennial period 1910-14 :—

Period.	Average strength.	Admissions.	Deaths.	Invalids.	Average constantly sick.	Ratio per 1,000 of strength.			
						Admissions.	Deaths.	Invalids.	Average constantly sick.
1910–14 (average) .	130,261	71,213	573	699	2,662	544 6*	4 39*	5·4*	20·7*
1915.. ..	119,985	89,315	1,026	5,415	4,065	744·4	8·55	45·1	33·9
1916.. ..	139,076	105,333	1,248	3,745	5,250	757·4	8·97	26·9	37·7
1917.. ..	191,242	141,787	2,201	3,421	6,556	741·4	11·51	17·9	34·3
1918.. ..	341,458	292,393	9,959	6,539	13,897	856·3	29·17	19·2	40·7

* Worked out on quinquennial aggregates.

There were 292,393 admissions for all causes as compared with 141,787 in 1917, the corresponding ratios being 856 3 and 741 4. This great increase in the admission rate is accounted for by the pandemic of influenza which occurred during 1918. The admission ratio for influenza alone was 136 8 as compared with 1 8 for 1917. Venereal diseases, respiratory diseases, diarrhœa and sandfly fever also show increased ratios. Against these increases there has been a considerable reduction in the admission ratios for malaria and pyrexia of uncertain origin, compared with 1917 and 1916.

HEALTH OF THE GENERAL POPULATION.

Births.—The births in 1919 numbered 7,212,415, less by 1,218,145 than the number recorded in 1918. The birth rate was 30·24 as compared with a quinquennial mean of 37·85. The fall in the birth rate is due mainly to interference with registration caused by the widespread epidemic of influenza. The death of many expectant mothers was naturally a contributory cause, as may also have been the absence from India of many men on military service. The full effect of influenza on the birth rate, unless it be masked by more perfect registration, should be more apparent in subsequent years. All provinces excepting the Punjab and Ajmer-Merwara shared in the reduced birth rate.

Every year in each part of India a great divergence is noted between the maximum and minimum birth rate for each registration unit. The discrepancy is so wide that it can only be explained by difference in the accuracy of registration. Speaking generally the inaccuracy is more apparent in municipal than in rural areas.

Deaths —8,554,178 deaths were registered as compared with 14,895,801 in 1918; a decrease of 6,341,623. The death rate was 35·87 as compared with a quinquennial mean of 36·84. The rural death rates for India as a whole have always been below the urban, but in 1918 it was in excess by 6·22. The excess in the rural death rate was especially marked in Delhi Province (43·54), Punjab (11·73), North-West Frontier Province (17·11), Central Provinces (27·53) and Bombay (25·54). In Burma alone the urban death rate exceeded the rural. In Bengal, Bihar and Orissa and Assam the rural death rates are usually in excess of the urban: the excess during 1918 was more marked than usual.

MEDICAL INSTITUTIONS.

Hospitals, Dispensaries, &c.—There were 2,991 of these institutions in existence at the end of 1917; during 1918 the number increased by 120, giving a total at the end of 1918 of 3,111.

The total number of patients treated has decreased from 35,588,432 in 1917 to 35,154,165 in 1918. The number of operations has decreased from 1,371,536 in 1917 to 1 326,182 in 1918, a decrease of 45,354.

The diminished number of in-patients and out-patients and operations performed is purely attributable to the lack of subordinate personnel owing to the heavy demands on their services for war purposes.

Medical Colleges.—There are five medical colleges (Bombay, Madras, Calcutta, Lahore and Lucknow), the students in which numbered in 1916, 2,730 including a few women. There are also 15 medical schools, the students in which numbered 2,936. There is an X-ray institution at Dehra-Dun where a class of instruction was attended by 20 students. Branch installations opened at Delhi and Simla are obtaining a large number of patients.

Pasteur Institutes.—There were Past ur Institutes for anti-rabic treatment at Kasauli (Punjab), Coonoor (Madras), Shillong (Assam) and Rangoon (Burma). In these four institutes 8,632 patients were treated during the year.

Lunatic Asylums.—The treatment of lunatics at asylums prevails on a comparatively small scale; but the asylum population is steadily increasing. The number of asylums in 1919 was 23. The number of patients admitted was 2,608 as against 3 093 in 1918. The total asylum population of the year was 10,262.

Leper Asylums.—There are many leper asylums among which may be mentioned the Madras Government Leper Asylum, the Matunga Leper Home, Bombay, the Trivandrum State Leper Asylum and the Calcutta Leper Asylum. There are also many asylums or homes, frequently under some sort of Government supervision, including about 50 asylums of the Mission to Lepers.

CHILD WELFARE MOVEMENT.

An increasing interest in the welfare of the child is one of the outstanding features of social life in the twentieth century. All the more progressive countries are doing something to improve the conditions of child life, and India has fallen into line with a scheme which, though it is still in its infancy, has caught the imagination of the more advanced Indian women The movement differs from previous efforts to help women and children in that it deals with the normal healthy child rather than with the already ailing baby. It has for its object the preservation of health rather than its restoration. It stresses preventive rather than remedial measures.

The movement in India is confronted with a formidable array of obstacles. Mothers in all countries believe themselves possessed of a heaven-born wisdom as far as their own babies are concerned, but in countries where there is compulsory education it is at least possible to get the girls at school and teach them something of the laws of domestic hygiene. The immense majority of Indian mothers have never been to school They know nothing about sanitation, elementary precautions against tetanus, dysentery or incipient blindness. They have no fear of dirt, and the midwives who attend them share their ignorance and are held fast by the same bonds of superstitions.

Dr. M. I. Balfour, C.M.O., W.M.S, writes "The *dais* (native midwives) are often old, usually ignorant and always dirty. They have, however, a very high opinion of themselves, resent any interference especially in normal labour, and love to spread alarming reports of the wicked practices of doctors. The women of the country have great faith in these *dais* and cling to them even when trained midwives are available." Thus the organisers of the movement found themselves confronted with twin gints in the path, the absence of any machinery such as elementary schools for reaching future mothers, the apathy and ignorance of the mothers, amounting even to hostility when approached.

Nevertheless the movement is making noticeable progress here and there along its somewhat ragged line of advance. Sporadically, in every province attempts to meet the problem of an appalling infant mortality had been made for ten years or more, when the movement gained impetus and cohesion from the establishment in 1919 of **The Lady Chelmsford All India League for Maternity and Child Welfare**, with its headquarters at Viceregal Lodge, Simla. (Its organising secretary is willing to give information and advice to all inquirers). This League is not intended to supersede provincial efforts, but to act as a Central Agency collecting information regarding child welfare in many centres, both in India and other countries and disseminating the same by every means in its power to those institutions affiliated to it. To this end it published a magazine *Maternity and Child Welfare in India* and undertakes propaganda work such as health exhibitions, lectures, and the formation of new branches.

The most live part of its work so far is the **Training School for Midwife Supervisors and Health Visitors** in Delhi. This school offers an (A) and (B) grade course of training. (A) course is for candidates who have matriculated. (B) course is for candidates who have passed Standard VII. Both grades have one year's training but (A) grade works to a higher standard, that of the Board of Education, Whitehall, and then supervises the work of untrained midwives and *dais*; while (B) grade visits women in their own homes and instructs the mothers and *dais* in child welfare and sanitation. The (A) Class "Midwife Supervisor" is herself a trained and practised midwife. She is employed by the Health Department of the Municipality, or in some cases by a special Infant WelfareCommittee. She is allowed no private practice, or she at once becomes a rival to the *dais*, feared and hated in proportion to the qualities she possesses leading to success. She is a teacher, not a nurse. The school has been at work for three years. So far twelve students, mostly Indian, but in one or two cases European or Anglo-Indian have passed through the course and are now practising in different cities of India. These workers require infinite tact and patience in their work, as the *dais* are independent and suspicious, but gradually they are winning their way, especially among the younger women, partly by little gifts of outfits, clean clothes and occasional treats, partly by their superior skill, which shows the *dais*, that it is worth while to be clean and competent, since, if the babies live, their own reputation and gains are increased. One or two Englishwomen of wide experience and high attainment have settled down, *e.g.*, in Delhi and Lahore to give of their best to the movement. It is clear that their services will have far-reaching results.

Centres of Activity.—The Child Welfare Directory of June, 1921, gives the following list of places where the movement is already at work:

Bombay.—The centre of much active and enthusiastic welfare work; the Lady Willingdon Maternity Homes near the people's chawls being unique of their kind in India. A handsome endowment fund collected under Her Excellency Lady Lloyd will ensure steady advance.

Surat.—The Henderson Ophthalmic Scheme for treating Ophthalmia Neonatorum and stemming "the enormous amount of preventible and curable blindness that is laying its shadow over the health, happiness and usefulness of this great portion of our Empire."

Bijapur.—Mr Henderson, I.C.S., has now started the same beneficent work for blind babies as in Surat.

Dharwar.—

Delhi.—There are four Health Visitors and two Infant Welfare Centres as well as the school already described.

Ahmedabad.—Three Maternity Homes, and five creches in mills.

Calcutta.—Six Midwife Supervisors and six Health Visitors with subordinate assistants and six welfare centres.

Dacca.—

Lahore.—Baby Welcome and 2 English Health Visitors.

Lyallpur.—1 Welfare Centre.

Simla.—1 Welfare Centre and Health Visitor.

Ludhiana.—Much good work under W. C. M. College.

Sudkot.—

Dehra Ismail Khan.—

Lucknow.—Municipal Scheme and Midwife Supervisor.

Agra.—Training of *dais* under Victoria Memorial Scholarship Fund.

Bareilly.—

Shahjahanpur.—

Gorakhpur, Hardwar, Almora.—

Jubbulpore, Nagpur, Bhopal, Kapurthala.

Medak.—

Bangalore.—Creche, two English Health Visitors and 7 Midwives.

So far all the schemes have devoted their attention to combating the prejudices of the mothers in respect of new-born children. In a land of so many languages and superstitions progress will necessarily be slow and India has yet to decide whether she will work intensively and try to rear a few well developed children as far as adolescence or extensively attempt to bring a large number of infants through the first critical months, only to have them perish at a later stage from the many ills that childhood is heir to in a land of great poverty, under-nourishment, epidemics and famine. In Western lands the Child Welfare Movement has no more marked characteristic than its inability to stop expanding. Its ramifications know no bounds its inevitable corollaries are endless, and like the banyan tree it will no doubt in India also develop innumerable fresh roots, medical supervision, dental clinics, better housing, open air playgrounds, etc., etc. But these are not yet. Its preliminary task is to educate the mothers of India to the enormity of allowing two million babies to perish every year and to convince them of the equally important fact that a high death rate always spells also a high damage rate of sickly, under-developed, incompetent citizens.

INDIAN RED CROSS SOCIETY.

When the war first broke out, what is generally termed Red Cross work was undertaken in India and Mesopotamia by the St. John Ambulance Association and by a number of provincial organisations working on independent lines. From August 1916, the central work was taken over by the Indian Branch of the Joint War Committee of the Order of St. John of Jerusalem and the British Red Cross Society. The final report of that Committee shows that up to June 1920 its total receipts amounted to Rs. 1,77,85,716 of which some 17 lakhs had been contributed by the British Red Cross Society. It had spent about 67 lakhs in Mesopotamia; nine lakhs on the Afghan War and Waziristan Expedition; in Mesopotamia and India combined it had spent on Red Cross objects in all about 117 lakhs.

It closed its career in June 1920 under the following circumstances. In the summer of 1919, an invitation had been received to join the International league of Red Cross Societies, having for its object the extension of Red Cross work in the sphere of purely civil activity. Though there was then no formally constituted Red Cross Society in India, the invitation was accepted, thus giving India a distinct position in a world wide League of humanitarian societies. A Bill to constitute an Indian Red Cross Society was introduced by Sir Claude Hill in the Imperial Legislative Council in March 1920, and duly passed into law as Act XV of 1920. This Act handed over the balance of the Joint War Committee to the new Society, and authorised it not only to direct the utilization for war purposes of the capital funds at its disposal but also to devote the interest, as far as possible, for civil purposes. The Act allows the constitution of autonomous provincial societies affiliated to the main Society, and it is with these branches that the task lies of organising and stimulating the new civil activities of the Red Cross throughout India. Provincial Societies have now been constituted in all provinces, except Burma, Central India and Delhi; in Bengal the Society was constituted by a special Act of the Bengal Legislature..

The **objects** on which the funds of the Society may be spent are—

1. The care of the sick and wounded men of His Majesty's Forces, whether still on the active list or demobilised.

2. The care of those suffering from Tuberculosis, having regard in the first place to soldiers and sailors, whether they have contracted the disease on active service or not.

3. Child welfare.

4. Work parties to provide the necessary garments, etc., for hospitals and health institutions in need of them.

5. Assistance required in all branches of nursing, health and welfare work, ancillary to any organisations which have or may come into being in India and which are recognised by the Society.

6. Home Service Ambulance Work.

7. Provision of comforts and assistance to members of His Majesty's Forces, whether on the active list or demobilised.

Constitution.—His Excellency the Viceroy is President of the Society. The Managing Body ordinarily consists of a Chairman to be nominated by the President and 25 members of the Society of whom 12 are the Vice-Presidents nominated by Provincial or State Branches; 8 elected by the Society at the Annual General Meeting from among the members of the Society and 5 nominated by the President.

The present Chairman of the Managing Body is the Hon'ble Sir W. M. Hailey, C.S.I., C.I.E., I.C.S., and the Honorary Secretary Lieut.-Colonel H. Rose, O.B.E., I.M.S.

Finances.—The operations of the Joint War Committee were brought to a close in June 1920 with a capital investment of the face value of Rs. 56,33,000 and Rs. 8,01,509-8-6 in floating and fixed deposit accounts. The Society has since invested further funds in various securities and its finances in July 1921 stood at a capital investment of the face value of Rs. 64,33,000 and about Rs. 65,000 in fixed and floating accounts. The income derived from the capital of the Society (which is 3½ lakhs at present after providing for certain liabilities of the Central Society, is distributable under the Act to the Provincial Branches in proportion to their contributions to the Central "Our Day" Fund. In the year 1920, partly owing to the Central Society's heavy commitments on the North West Frontier, and partly due to the fact that the Provincial Branches had not been fully formed, only a sum of Rs. 32,000 was distributed. In the year 1921, however, 1½ lakh has been set aside for distribution to Branch Societies.

The Tropical Diseases.

This account of the chief tropical diseases was written by Lt.-Col. E. F. Gordon Tucker, I.M.S., of Grant Medical College :—

If the principal scourges of the European in the tropics, namely, malaria, dysentery, and typhoid, could be removed, there would still remain the strain of climate as a source of disease and a cause of deteriorated health, not amounting for a time to actual illness, but eventually showing its effects in lessened resistance to the wear and tear of life, premature senility of the tissues, and diminished fertility This results mainly from the transfer to a hot climate of an individual whose heat-regulating mechanism has previously adapted itself to conditions where the body temperature has to be maintained some 40° above that of the surrounding air. On arrival in a country where the temperature of the air is perhaps the same as that of the living tissues, it is obvious that there must be a sudden and violent disturbance of such mechanism. This mechanism is very complex and exists for the purpose of striking a balance between the heat formed by the changes in the tissues, and the heat lost from the lungs and by radiation from the surface of the skin. But beyond this there is no doubt a regulation of the temperature dependent in some way on the normal working of the central nervous system, as is shown by the remarkable alteration which may take place in the temperature of parts of the body when the brain has been subjected to some gross lesion.

In the tropics the amount of carbonic acid given off by the lungs is reduced about twenty per cent., the number of respirations per minute is reduced, and there is lessened activity of the lungs. This shows that there is less tissue change (or combustion) going on in the tissues, that is to say, diminished heat-production. The same is shown in the diminished amount of work done by the kidneys. As regards heat-loss, this is almost entirely effected through the skin, 70 per cent. of the heat of the body in temperate climates going off by radiation and conduction, and 15 per cent. by evaporation. When however the temperature of the tropical atmosphere rises, the loss by radiation falls to nothing, and all the heat has to be dissipated by evaporation from the surface. Consequently, practically all the work of losing heat, which strikes the balance with the heat production and maintains the body at a normal temperature, falls upon the sweat glands which are therefore in a state of continued and abnormal activity. In hot dry atmospheres the water evaporates as soon as formed, but in conditions of heat with great humidity, such as obtain during the worst months of the year in Calcutta and Bombay, the skin is kept continually moist by trickling beads of perspiration. Herein lies the comfort and healthiness of the punkah which removes excessive moisture. But it is obvious that in order to keep the temperature of the body normal there must be increased flow of blood to the surface of the body, a state quite different from the conditions under which the organs of the European have been trained. This favours those sudden chills to which Europeans are so subject, and acts prejudicially to the working of the internal organs, especially those subserving digestion. A blast of cold air coming on the congested skin in the early hours of the morning must chill the surface, causing a sudden contraction of the cutaneous vessels, and tending to produce a rapid flux of blood to the deeper parts, inducing a congestion of the mucous membrane of the bowels, and from that results the "morning diarrhœa" which is occasionally severe and exhausting. Such a state of affairs may become chronic, and so lead up to one of the climatic diarrhœas which are a frequent cause of invaliding. Moreover a sudden congestion of the liver and spleen in a person who has had malaria, may be followed by a malarial hepatitis or splenitis, and repeated attacks of these conditions may result in permanent enlargement of these organs; or at any rate, in the case of the stomach and liver, to derangement of function and so to chronic dyspepsia or insufficient manufacture of bile.

Again, the chronic hyperæmia of the skin favours the development of fungi and microbes. Hence the existence of ringworm of various kinds from which Europeans frequently suffer. There are microbes which, even in temperate climates, are found within the layers of the skin or on the surface. On account of the chronic congestion and moisture of the skin in tropical climates these microbes not only become abundant but virulent, and hence the BOILS which are often a serious affliction in the hot months. We frequently come across most distressing cases where the patient is covered from head to foot with them. When the boil comes to a head and softens it is easy to afford relief by opening each, and so relieving tension, but the worst kind is the "blind boil" which forms as a hard red mass, intensely painful and not coming to a head, and here an incision gives little relief. Until lately these cases were very unsatisfactory to treat, and patients would recover after weeks of pain and much reduced in health. Fortunately we have in the vaccine treatment a most successful method, the vaccine used being either a stock one and generally acting like magic: or, in a small percentage of cases requiring to be made from the boils themselves. In still other cases the infection of the skin causes the formation of CARBUNCLES, which are more serious but require treatment on the same lines.

Another more common condition resulting from the congestion of the skin is PRICKLY HEAT. This results from acute inflammation about the sweat glands and distention of their orifices, producing red papules and little vesicles, the site of intense itching. The trouble is believed to result from the proliferation of a particular microbe in the skin, which alters the reaction of the perspiration. Be this as it may, inoculation of the skin is likely to take place through scratching, and so to the formation of boils. In some cases the skin is so intensely inflamed that the region of the shoulders and neck feels like leather, or the surface gives the impression of sand-paper. It is a serious condition in young infants, as

the irritation prevents sleep, interferes with digestion and so promotes diarrhœa, so that this simple malady may be the starting point of a dangerous illness. Flannel next to the skin should be avoided in the hot weather as it is so liable to start the irritation. A good lotion consists of two teaspoonfuls of Eau-de-cologne in ten ounces of a 1 in 2000 solution of perchloride of mercury, dabbed on the skin and allowed to dry: followed by dusting with equal parts of boric acid powder and talc.

To avoid the heat the European flies to the punkah. The electric punkah has been one of the greatest blessings introduced during recent years into Indian towns as its use insures a good night's rest in place of the weary hours of sleeplessness which formerly wore out the temper and the mental energy of the European during the hottest months. Still this blessing is not without its attendant dangers. Most common are attacks of muscular rheumatism, sudden internal chills causing diarrhœa, attacks of colic, ordinary nasal catarrh, and sometimes bronchitis or pneumonia. The electric punkah does away with the mosquito curtain, which does not conduce to the free circulation of air, and gives good ventilation in its place.

Finally, we have the effects of a continued high temperature on the working of the nervous system. As has been remarked by the late Lt.-Col. Crombie, I.M.S., (in a valuable paper on "The measure of physical fitness for life in the Tropics," to which the writer is much indebted). "In the tropics there is going on continually and unconsciously a tax on the nervous system which is absent in temperate climates. The nervous system, especially those parts of it which regulate the temperature of the body, are always on the strain, and the result is that in time it suffers from more or less exhaustion." The mean temperature of a European in India is always about half a degree higher than it is in a temperate climate, and it may be raised to 99° or 100° after severe bodily exertion. When, under the strain of a severe hot moist and sultry season, the heat-centre gives out, or as it is said is "inhibited," we have all the serious phenomena of HEAT STROKE. But in the less marked but long drawn out process of nervous exhaustion we have the common tropical effect of deficient mental energy, generally commencing with unnatural drowsiness or loss of appetite and a yearning for stimulants, which culminate in that lowering of nerve potential which we know so well as NEURASTHENIA. This nervous disturbance due to climate is likely to be most marked, as Crombie points out, in two classes of persons, namely those who suffer from obesity, and those who are members of families which may be designated as "neuropathic," that is whose nervous systems are naturally unstable. To these may be added persons with naturally defective digestion and those who have a predisposition to gout.

To sum up, it will be seen that the effects of long residence in the tropics are real and permanent, not only in the direction of lowered bodily health, but in undue wear of the nervous system, which may not only be apparent during active service in duties involving strain, anxiety or responsibility, but also after retirement; so that the chances of longevity of the retired Indian official are not up to the normal, and the "extra" which the Insurance Office puts on such lives is not only to cover the risk incidental to life in the tropics, but also the diminished vitality of those who have survived to enjoy their pension and ease.

But there are other Indian risks, and these are most likely to affect traveller, due to the effects of heat on food. Microbes multiply with profusion in milk, and decomposition is liable to occur in meat within a very short time after killing. Milk should always be boiled; and owing to the dirt in railway dining-rooms, and in many hotels, and the carelessness of the lower type of native servant employed therein, it would be better to rely on tinned milk or on a supply of Horlick's milk tablets, when travelling long journeys by rail and in the smaller towns. Beef should never be eaten underdone, as it is a prolific source of tape-worm in India. There is also liability to contamination of food by flies and dust. Indian cooks, though among the best, have little regard for sanitation, and consequently the state of the cook-house should be carefully supervised.

MALARIA.

Attacks of malaria, dysentery, and enteric represent the principal risks to the European travelling in India. Malaria is the commonest cause of fever in the tropics and subtropics, but the risks therefrom have been greatly diminished by our complete knowledge of its causation which now permits an intelligent prophylaxis, that is, taking adequate precautions against infection. The connection of certain kinds of fever with marshy soils has been recognised from ancient times, whence its old name of paludism; and the word "malaria" itself implies the belief in the existence of an emanation of poisonous air from the water-logged ground. It is now realised that the poison is conveyed solely by mosquitoes, and by the anopheline species. There are only a few of the many anophelines which carry malaria, but all are to be regarded as dangerous.

The parasite of malaria is a delicate jelly-like body which invades the red cells of the blood, and lives at their expense. It has two life-cycles, one within the blood of the human host, (endogenous and sexual), the other in the stomach and tissues of the mosquito (exogenous and sexual). But the first part of the sexual cycle is prepared for in the blood of the human host.

If the blood of a patient be taken about an hour before the occurrence of the "rigor," (the shivering-fit which marks the commencement of the attack), and examined in a thin film under a high power of the microscope, some of the red corpuscles will be found to contain bodies composed of delicate proto-

plasm showing minute granules of dark pigment in their substance. These bodies are the parasites. The granules represent the result of the destruction by the parasite of the red colouring-matter of the blood-cell. The latter consequently appears paler than natural and is enlarged. In the parasite of the so-called benign tertian fever, if the blood be again examined when the rigor is commencing, the little mass of jelly is found to have divided into from twelve to twenty minute spheres still held together by the remains of the degenerated red cell, and with minute masses of pigment in the centre. Later the group of spherules has burst through the envelope that held them, and has appeared free in the blood-fluid. Many of these free spherules are attacked and absorbed by the phagocytes, but those which escape destruction effect their entrance into other red blood cells and go through the same process of sexual division, taking forty-eight hours for the process. On the time taken for this cycle to occur depends the periodicity of the fever, the attack appearing every third day, whence the name tertian fever. Another variety of malarial parasite, not very common in India, takes seventy-two hours to complete its cycle, hence called the "quartan" variety.

There is also a third kind of parasite called the "malignant tertian," called by the Italians the aestivo-autumnal parasite, which also takes forty-eight hours to go through its cycle, but which gives rise to a more irregular fever, and has more pernicious effects on the system and is also liable to produce severe nervous symptoms, such as unconsciousness, often ending in death with very high fever. Each kind of parasite has its special characteristics which can be observed by microscopical examination. Consequently expert examination of the blood is always advisable in cases of fever, not only to show that malaria is present, but also to distinguish the particular kind which is causing the trouble.

Within the blood there also appears the first stage of the sexual life of the parasite in the shape of male and female elements, which result from some of the parasites which do not undergo the usual segmentation described above, and which exist for the purpose of allowing further development in the non-human host, which in the case of this particular parasite is the mosquito. These sexual elements are especially in evidence in the blood of cases of the pernicious variety of malaria, in the form of crescentic bodies which obtain considerable protection from the phagocytes, and many therefore persist for some time in such blood. "Crescents" appear only in malignant fevers, and persons who harbour them are of course a danger to the community, inasmuch as the mosquitoes of the locality are infected from them, thus rendering such village or street unhealthy from malaria.

The sexual elements of the malarial parasites when taken into the stomach of the mosquito which sucks up the blood of its victim, undergo certain changes, the male element extruding flagellate or hair-like processes which fertilise the female. The latter thereupon changes into a body endowed with the property of locomotion, which makes its way into the coats of the stomach of the insect, and becomes divided up into a vast number of minute cysts, each of the latter becoming packed with minute rod-like bodies. The cysts rupture into the body-cavity of the mosquito, and the rods, thereby set free, become collected within the substance of the salivary glands, and ultimately make their way to the base of the proboscis. On such an infected mosquito pushing its proboscis into the human skin when it wishes to draw blood some of the rods are injected into the blood stream. They then enter red blood corpuscles and go through the various cycles described above.

From three to five days, or as long as a fortnight, after being bitten by such a mosquito the patient has an attack of fever, sometimes preceded by pains in the limbs, headache, and malaise. This is soon succeeded by a feeling of intense chill, perhaps associated with vomiting. The skin becomes cold and blue the shivering is excessive and prolonged, constituting the "rigor" stage. In this state the patient is in great distress, and obtains little sense of relief from the blankets which he heaps up over himself. Although the surface of the body is very cold, the temperature, taken in the arm-pit or mouth, shows a rise to 103° or higher. In a quarter of an hour or more the "hot stage" comes on, the face becoming flushed, the surface of the body red and warm, the small quick pulse becoming full and bounding, and perhaps the patient complains of throbbing headache. He remains thus for a few hours and then occurs the "sweating stage," perspiration breaking out about the head and face, and soon extending to the whole body. Great relief is experienced when this is entered on, and is likely to be followed by a refreshing sleep. During the paroxysm the spleen is often enlarged and may be the seat of considerable pain. There is also often troublesome cough from a concomitant bronchitis. With repeated attacks the enlargement of the spleen is liable to become permanent, the organ coming to form a large heavy tumour with special characteristics, the so-called "ague cake," which is common among the children of malarious districts. Europeans who suffer from severe or repeated malaria are likely to suffer from permanent ill-health in the shape of anæmia, dyspepsia, or easily-induced mental fatigue.

Treatment.

The traveller in India should endeavour to guard himself against the bites of mosquitoes. This can be done to a great extent by the use of mosquito curtains, the mosquito seeking the blood of its victim mainly at night. But when travelling by train protection is difficult. There are some odours which mosquitoes appear to dislike. Sprinkling the pillows with lavender water is sometimes efficacious, or smearing the hands with lemon-grass oil. Camps should not be pitched in the neighbourhood of native villages, if it can be avoided. Travellers should provide themselves with thermometer and a supply of quinine tabloids.

During the cold stage the patient should be well covered, and hot fluids administered, unless vomiting is present. Quinine should not be taken in this stage as it increases the distress. A diaphoretic, or sweating mixture, should be administered every two or three hours until the skin becomes moist, and throughout the hot stage: this soon gives relief, and when the stage of perspiration has been reached, the grains of quinine should be given, and repeated in five grain doses every six hours until the temperature becomes normal. Thereafter the drug should be continued for a few days in doses of five grains twice a day. This is calculated to ward off a second attack, or, at any rate, to reduce its severity and prevent a third. If there is vomiting, quinine tabloids are not likely to be digested and absorbed; in such cases the drug should be given in a mixture dissolved in a dilute acid. The advantage of quinine tabloids is that the unpleasant taste is avoided.

There are some severe continuous malarial fevers which appear to resist the action of quinine. These are the pernicious tertian fevers, which so often cause difficulty in diagnosis inasmuch as for a few days they may suggest enteric fever, especially to those inexperienced in tropical diseases. In such cases large doses of quinine are required, the skin being kept moist meanwhile by a diaphoretic mixture. Some of these fevers last for a week or longer, but the majority of them yield to quinine in three or four days. It is in such that an early examination of the blood is so useful. In certain cases of profound malarial poisoning or where, for any reason, quinine does not appear to be acting when administered by the mouth, recourse must be had to the injection of quinine into the tissues. This should always be done by a skilful physician, and with special precautions, as some cases of tetanus have occurred after quinine injections taken from stock solutions, even when apparently given with every care. The "vaporoles" prepared by Messrs. Burroughs Wellcome & Co., which consist of little glass capsules containing preparations of the drug dissolved in sterile and non-irritating fluid, appear to be absolutely devoid of risk and are very efficacious.

TYPHOID FEVER.

By Typhoid or Enteric Fever is meant a continued fever, lasting for three weeks or longer, due to the entrance into the intestinal canal of a particular bacillus (the typhoid bacillus), which not only produces serious abdominal trouble but also symptoms referable to a generalised infection of the blood by the bacillus and the poisons which it engenders. Formerly the scourge of the British Army in India, especially among the younger soldiers, it has been reduced to a very low point, through the prophylactic use of Sir Almroth Wright's vaccine, continuous attention to the sanitary condition of the soldiers' quarters, improvement of water supplies, and skilful medical treatment.

"Paratyphoid" is a term applied to certain fevers which have all the characters of typhoid, but with a rather lower mortality, and which are due to infection by bacilli which are closely related to the typhoid bacillus.

The fact that typhoid more frequently attacks the new arrivals to the tropics renders this disease one of the risks which tourists have to face, but this can be minimised by knowledge of the manner in which the typhoid bacillus affects an entrance into the system.

Typhoid Fever has now been shown to be a common affection among Indians, contrary to what was held some fifteen years ago. In Bengal and the Punjab, according to Leonard Rogers (Fevers in the Tropics), the maximum of cases for all classes occurs during the hot months, while the maximum for Bombay is in the rainy season. But taking the European cases only he finds that the largest number of cases falls within the dry, cold and hot seasons, and considers that this is due to the European being most frequently infected through contaminated dust this class of person paying greater attention now-a-days to the condition of the water which he drinks: unlike the Indian who will drink water out of the nearest tap.

As is well known, infection of typhoid is most commonly produced by contamination of drinking water. Great care is therefore necessary in boiling and filtering drinking water and in protecting the vessels in which it is kept from contamination by dust. In the neighbourhood of all native villages the soil is laden with animal dejecta which, of course, is very likely to be associated with disease-producing microbes. Hence infection of the food in cook-houses and shops is easily produced by the wind carrying the dust from latrines and other foul areas. Uncooked vegetables produced from gardens watered by sewage-containing fluid are also very dangerous, and should be avoided by the Indian traveller Lastly oysters taken from estuaries which receive rivers laden with organic matter from the villages on the banks are believed to afford special protection to the typhoid bacillus, and when eaten raw are dangerous.

In many cases the onset of the disease is sudden, with headache, shivering and vomiting; but in a little less than half the onset is insidious, the patient being out of sorts, slightly feverish, perhaps with occasional looseness of the bowels, loss of appetite and a little sickness. He ultimately takes to his bed, generally dating the commencement of his illness from this event, and there forthwith begins a period of at least three weeks of anxiety for his friends and relatives, inasmuch as enteric fever, as seen among Europeans in India, is characterised by its greater severity and longer duration. The temperature rises gradually day by day during the first week, remains at a fairly constant high level during the second, becomes

irregular with daily remissions during the third, and in the majority of cases is succeeded by a period of convalescence, during the first part of which the greatest care in dealing with the patient is required. The bacillus produces its most important effects on the lower portion of the small intestine, certain glandular structures in the wall of the bowel becoming inflamed, enlarged, and finally ulcerated. It is on the formation of these intestinal ulcers that many of the worst complications depend. The ulcerative process favours, first a looseness of the bowels, later an exhausting diarrhœa. Moreover the destruction of some of the coats of the bowel may open up an adjacent blood vessel and produce alarming or even fatal hemorrhage. And again the whole thickness of the bowel may be perforated, causing death from collapse and peritonitis. This is the danger which the physician has in view throughout the case. It can only be guarded against by the most careful nursing and attention to the dietary. Other dangers are bronchitis and failure of the heart, especially during the third week. During the stage of convalescence the same care has to be taken with the dietary as the ulcers are undergoing healing, and an error might lead to the rupture of one of them when all danger may well be expected to have passed. Finally, owing to the depressing effects of climate, convalescence is often attended with prolonged mental depression.

In the matter of treatment it is absolutely essential that the patient should have the benefit of skilled nursing. Fortunately highly-trained European nurses can now be obtained from any populous centre, though occasions arise when the demand exceeds the supply. If possible two nurses should be obtained for day and night duty respectively. Unless it is absolutely necessary to remove him, the patient should be nursed where he falls ill and not sent long distances by train. At the most he should travel to the nearest large town where there is a Civil Surgeon. Treatment mainly consists in keeping the fever within bounds, and thereby sparing the strain on the heart which is great during the three weeks of continued fever. This is effected in great part by the system of hydrotherapy, that is, treating the patient by continued tepid baths or by frequent sponging with tepid water to which a little toilet vinegar should be added. There is no special drug which is of any use in aborting the fever, but this does not mean that drugs are of no use in typhoid. On the contrary the complications, which are many, will be detected as they arise by the careful physician, and there is no disease which tries more than this the skill of the doctor and the care of the nurse, who will frequently bring to convalescence what seems to be an almost hopeless case. Abdominal distension, for instance, is a frequent and serious complication in Indian typhoid, and should be treated as soon as detected. It results partly from the decomposition of the intestinal contents, partly from loss of the muscular tone of the bowel. It hinders the respiration and the action of the heart, and favours the occurrence of perforation. Diet consists almost entirely of milk, either pure, diluted with barley water or whey, or as a jelly.

Lastly a word should be said about the importance of typhoid inoculation to those intending to travel in India or the tropics. It is better to have Wright's prophylactic vaccine injected before leaving home, but if this is not done, it should be submitted to on arrival in Bombay. In the majority of cases the only discomfort resulting is a little passing tenderness at the site of inoculation: in some cases there are a few hours of fever: and in the worst the patient feels out-of-sorts for twenty-four hours. The inoculation (with a larger dose) should be repeated on the eighth day. Attention to this small precaution as a routine measure would obviate most of the catastrophes which we witness on occasions among "globe-trotters" who have come to the country for pleasure or health.

DYSENTERY.

The term Dysentery is applied to several forms of infective inflammation of the large bowel, in which the principal symptoms are griping, abdominal pain, frequent straining, and the passage of a large number of evacuations characterised by the presence of blood and mucus. The changes which take place occur in the mucous membrane of the large bowel, and are first an acute catarrh succeeded by ulceration more or less extensive, and sometimes going on to gangrene.

The disease is endemic in India, and is in fact common in Eastern countries, and in Egypt. It is liable to arise in epidemic form especially among armies in the field. It is caused by a contaminated water supply, and by the infection of food by dust and flies. Dysentery is probably caused by several varieties of micro-organisms but for all practical purposes may be said to be divided into two great groups, one due to the amœba of dysentery, and the other caused by a bacillus described by Shiga and known as bacillary dysentery. The latter form is more common in Japan and in the north-eastern side of the Indian peninsula; the amœbic form being that most commonly seen in the Bombay Presidency. The bacillary form is characterised by the presence of a very large number of evacuations perhaps as many as a hundred or even more in the twenty-four hours. In the amœbic form there are seldom more than twenty evacuations in the day, and there is less fever and general depression than in the bacillary variety. In the amœbic form there is greater tendency to thickening of the bowel wall, and to the dangerous complication or sequel of abscess of the liver.

After a few days of severe illness should the patient recover there is a danger that the disease may become chronic, a condition which is associated with emaciation and profound

weakness. The chronic form is also more likely to eventuate from the amœbic type.

The frequency with which it attacks Europeans in India may be judged from the admissions of the European soldiers into hospital, the figures of admissions for each of the years 1910 and 1911 being 7·7 per thousand of strength.

The treatment of the bacillary form with an anti-dysenteric serum has had good results. In the amœbic form most Indian physicians still rely, and rightly so, on the use of ipecacuanha. This has to be given with particular precautions and with a previous dose of opium to diminish the liability to vomiting. Recently, thanks to the work of Leonard Rogers, a valuable drug has been placed in our hands, in the form of emetine, an alkaloid derived from the ipecacuanha root; and which when injected into the deeper layers of the skin, gives all the good results of ipecacuanha without its unpleasant effects. It is of special value in the case of children in whom acute dysentery is a very serious disease. We have hereby obtained one more efficient weapon in the contest with one of the common diseases of India.

ABSCESS OF THE LIVER.

There are several varieties and causes of abscess of the liver but the term is applied in India to the single abscess which frequently forms as the result of amœbic dysentery, the latter generally preceding but sometimes being concomitant with the formation of the abscess. It is one of the scourges of the European in India, and is especially to be dreaded on account of the high mortality. Taking all the cases together, including the acute and chronic and all classes of the community, the death rate is about sixty per cent., but this will probably be reduced by recent improvements in the methods of diagnosis and treatment. The latest annual report of the Sanitary Commissioner with the Government of India states that next to enteric fever, hepatic abscess is the most frequent cause of death among European troops, but the admissions and deaths on account of it have decreased greatly during recent years. The report also notes that the decrease in the number of cases of liver abscess is coincident with an equally steady fall in the number of admissions to hospital for alcoholism.

The disease is most liable to attack those who, in addition to having had an attack of dysentery, have indulged, not necessarily to excess, in alcohol and general good living, and are at the same time somewhat sluggish in their habits. It is often preceded by continued fever, malaise, dyspepsia, and more or less uneasiness in the liver region, or the latter organ may be acutely enlarged and very tender, in many cases the exact diagnosis is often a matter of anxiety, but greater precision is now possible as we have come to recognise what Rogers has called the presuppurative stage of amœbic hepatitis, which is very amenable to treatment by ipecacuanha or injections of emetine. The use of this method will often prevent the case going on to the dangerous condition of abscess, which when it has once definitely formed can only be dealt with by prompt operation, which in itself has a high mortality. Further aid is now obtained by special examination of the blood and by the use of the X-rays, which will often clear up a doubtful case.

The abscess generally forms in the right lobe of the liver. Should it form on the left side it is especially liable to rupture into one of the internal organs.

The same complication may eventuate when the abscess forms on the right side. Here the principal point of rupture is into the right lung, the contents of the abscess being suddenly evacuated, in some cases without much warning, and nature thereby effecting a cure. Such a termination however is not desirable as healing will take place quicker by surgical means.

There are some abscesses which are exceedingly insidious, it often happening that patients are sent home with a fever associated with general loss of health and weight, where the existence of a deep seated abscess may not even be suspected, but in which the symptoms of hepatic abscess suddenly occur and clear up the case: or the correct diagnosis may obtrude itself by the sudden rupture as above described.

PLAGUE.

Plague is a disease of very great antiquity; its ravages and symptoms have been described with remarkable accuracy by the old historians, such as Procopius. Not many years ago it appeared to be a disease of historical interest only, but the present pandemic, which commenced about 1894, has made it a subject of the greatest importance to the inhabitants of the British Empire. It was in March 1894 that it first became prominent in Canton, and thereafter it spread to Hongkong, Macao and Pakhoi, and so along the whole of the Southern China Coast. It probably arrived in Bombay in March 1896, but it was not until the end of September that it became noticeable in that part of the native city known as Mandvi, in which the great grain supplies are collected, and wherein consequently there is an enormous rat population. In October of the same year the presence of the pestilence was officially acknowledged. Everything which the limited knowledge of the subject at that time suggested, was done to check its spread; but, in spite of all efforts, the pestilence spread from the infected city throughout the greater portion of the Peninsula, and while its ravages of late years have not been so terrible as at its first appearance, yet the disease still takes its annual toll of human life, and it has

apparently become one of the endemic diseases of India. According to the official figures Plague since its appearance has been responsible for more than seven and a half million deaths within the limits of the Indian Empire These figures should perhaps be increased by about fifteen to twenty per cent., due to defect in the registration of the causes of deaths and also to the fact that the disease often simulates other maladies for which it is likely to be mistaken by an uneducated population.

Plague is an acute infection of the blood by a bacillus which was discovered by Kitasato in Hongkong in 1894. It generally affects its entry by the skin, on which it is deposited by the rat-flea. At the site of deposit a small pustule is occasionally found which soon forms a superficial ulcer. In such cases inflammation and distention of the lymphatics may be noticed running from the neighbourhood of the small and painful ulcer to the nearest group of glands. These will be found to be enlarged and exquisitely tender, the tenderness being out of all proportion to the size of the glandular enlargement and to the amount of local inflammation. This glandular enlargement is called the Bubo, which has given the name to the most common form of the pest—Bubonic Plague.

With the appearance of the Bubo, or even a day or so before it, there is evidence of a general infection of the system, in the shape of extreme prostration, mental confusion, a furred tongue, and fever which is generally high. The pulse is accelerated, and while at the outset, especially in full-blooded muscular adults, it is likely to be full and bounding, there is sooner or later, generally soon, evidence of early failure of the strength of the cardio-vascular system. The pulse becomes quicker, smaller, and the heart sounds feeble. As the case progresses, the primary ulcer will enlarge and become of an angry appearance, the Bubo will also enlarge and the tissues around the inflamed lymphatics will be swollen and œdematous. To this variety the term "cellulo-cutaneous plague" has been applied. The spreading ulcer, which is really a local gangrene, has been described as the plague "carbuncle"; these forming on the skin of those affected were often referred to by old historians as a prominent feature in many ancient epidemics.

These cases however are somewhat uncommon. The usual variety met with is the Acute Bubonic Plague. In this the patient is attacked with fever, and all the general symptoms of an acute infection, and on the first, second or sometimes the third day of the illness the characteristic bubo appears. The common site is among the glands of the groin, for the reason that these glands receive the lymphatics from the lower limbs and from the lower portion of the trunk up to the level of the navel, a larger area than that drained by any other group of glands. Other sites for Bubo formation are the arm-pits, the glands of the neck, those about the angle of the jaw and below the chin, and very rarely the little gland on the inner side and just above the elbow, and the small glands behind the knee joint. In some cases, generally in association with Buboes in the groin, the deep glands of the abdomen can be felt to be enlarged.

These Plague Buboes are of different kinds and it is a matter of some importance in connection with treatment and the outlook as regards recovery, to recognise the type of Bubo present in each particular case. The common variety is the "softening bubo." The enlargement increases somewhat rapidly and the hard swelling gives place to a soft doughy mass around which is a limited amount of serous effusion into the subcutaneous tissues. If the patient lives till the fifth day or thereabouts this bubo will feel like a tightly stuffed pincushion, or may give the experienced examiner the signs that the contents are of a fluid nature. On incision, pus and shreds of the disorganised gland will be evacuated, and under suitable treatment the cavity, though large, will heal up within a week or so. When these softening Buboes are allowed to rupture spontaneously a large foul cavity is produced; such are not unfrequently encountered among the poor, who have not received adequate attention during the stress of a plague epidemic.

Another variety of bubo obtains when the glands inflame and harden, the inflammation being so acute that the blood supply of the part is obstructed and the whole of the affected area sloughs out, leaving a large superficial ulcer of a very unpleasant appearance. These buboes are found where the inflamed glands are bound down beneath tense tissues, as in front of the ears and in the region of the groin. To this kind the term "indurated bubo" has been applied. Another variety the "œdomatous bubo" occurs in the neck and the arm-pit and in them the serous effusion into the tissues around the glands, present to a less extent in the common type is the essential feature. The whole arm-pit or the side of the neck may be distended by the accumulation of fluid under the skin. It is an extremely distressing kind of bubo, as the pain is great and nearly all the patients die. Also there is a rare kind the "hard late bubo," which appears after about a fortnight in cases simulating typhoid fever, and lastly there are some soft buboes which abort and shrink with the rapid subsidence of the fever—the "shrinking bubo." The fever continues from the outset with slight emissions; it is generally about 103° to 104°, but it may rise to a great height from almost the initial rigor. On the third day the temperature tends to approach the normal, and almost immediately rises again. Should it rise to a point above that of the maximum temperature preceding the remission the outlook is bad; but in cases which are likely to do well it rises to a point which is less than that of the preceding maximum, and after about three days gradually falls to normal, with slight daily oscillations depending on the amount of the suppuration in the buboes and their local condition.

It is to be understood that this disease is of such great virulence to human beings, on account of the early appearance of the plague bacillus in the blood-stream, that there are many instances in which death occurs before the bubo has had time to undergo the changes described above or even to form. The more acute cases are also liable to be a typical in their mode of onset. Some are taken with a wild delirium in which they are likely to attack those about

them, others suffer from vomiting of blood followed by rapid failure of the heart and death: pregnant women miscarry and practically all of them die; and lastly there are cases where the general and local symptoms are slight and yet failure of the heart may suddenly ensue within a few hours of the onset. These so-called "fulminant" cases are generally met with at the commencement of every epidemic: in some of the descriptions of mediæval epidemics they seem to have been in the majority, and it is on account of these that plague epidemics appear so terrible to the occupants of the plague-stricken town. Fortunately, however, there is a large majority of cases which allow some scope for medical skill. The condition of the patient after the full development of the symptoms is always one which gives rise to great anxiety. The mental condition becomes dulled, which, while it mitigates considerably the distress of the sufferer, is nevertheless an indication of the action of the plague poison on the nerve centres. The eyes are suffused and often acutely congested. There may be cough, which is a bad sign as it indicates either a secondary pneumonia or the onset of an acute bronchitis, the direct result of the failure of the heart. If the latter progresses the breathing becomes more rapid, the pulse weak and almost uncountable at the wrist, the skin cold and clammy, and towards the end covered by profuse perspiration: finally, the breathing becomes irregular, and after several long-drawn gasps the patient breathes his last.

In other cases however improvement starts about the fourth day, the temperature gradually falls, and the mind clears: the bubo suppurates in due course and heals up, and the patient passes into a slow convalescence, but which is sometimes retarded by the formation of chronic abscesses, boils, attacks of heart failure or of palpitation: or ulcers of the eyeball with infection of the whole globe and consequent loss of sight. Some recover with permanent mental enfeeblement, or persistent tremors of the limbs with difficulty in speaking with clearness.

Septicaemic Plague.

This term is applied to certain forms of acute plague where buboes do not form, or where there is uniform but slight enlargement of glands in various parts of the body with symptoms of a general blood infection. The term is misleading, inasmuch as most cases of acute bubonic plague are really septicaemic from the outset. These cases are either acute, ending fatally about the third day or sooner: or are sub-acute, with symptoms simulating typhoid fever, ending fatally in about a fortnight. In the acute cases large dusky patches of blood-effusions beneath the skin, the so-called plague spots, are sometimes found; and there may be hæmorrhages from the stomach or bowels.

Pneumonic Plague.

In this variety the plague bacillus proliferates in the lung and causes rapid consolidation of large patches of the lung tissue scattered irregularly throughout the organs; with a considerable amount of œdema, so that the lungs are engorged with blood, are large and heavy, and the bronchial tubes filled with reddish frothy fluid which contains the plague bacillus in almost pure culture. The fever is very high and the interference with respiration immediate, and death occurs from the second to the fourth day. A curious fact about pneumonic plague is that one such case is liable to give rise to others of the same type.

Treatment of the Disease.

No serum or antitoxin has so far proved of value in diminishing the mortality of the sick. Much can, however, be done by medical treatment. Absolute rest is required and the patient should not even be allowed to sit up in bed. Drugs which act as heart stimulants are required almost from the outset, and frequently these have to be administered by the skin as well as the mouth. The buboes should be fomented till they soften, and incised as soon as fluid is formed. For the pneumonic condition the administration of oxygen gas gives relief. This can be obtained in India without much difficulty. Careful nursing is essential, and fluid nourishment must be given regularly in an easily assimilable form, and complications have to be met as they arise. As regards prophylaxis by means of Haffkine's Plague prophylactic which is manufactured in enormous quantities at the Bacteriological Government Laboratory at Parel, it may be said that its use gives a threefold chance of escape from attack and a reduction of case mortality by fifty per cent.

DENGUE FEVER.

Dengue fever, otherwise known as Dandy fever or Breakbone fever, is rather common in India and is generally present in the larger towns, but as it appears in manifold forms and various writers describe it differently, its identity is not always recognised; and, therefore, by many medical men is thought to be less common than it really is. On occasions it gives rise to very wide-spread epidemics. In 1902 there was an extensive epidemic on the eastern side of the Indian Peninsula, and quite recently there has been a bad outbreak in Calcutta. It is more common during the rainy season.

The onset is abrupt, with fever, slight sore throat producing cough, rapidity of the pulse, sometimes a red rash which is so fugitive that it is often overlooked, and intense pain. These pains constitute the patient's chief complaint. They are generally pains in the bones, or in the small of the back, or in some of the joints either large or small. Sometimes there is no complaint of pain in the limbs, but there is intense pain behind the eyes. The fever lasts for three or four days, during which in rare cases there may be further symptoms due to the appearance of a pleurisy or even a pericarditis Sometimes there is intense shooting pain into the little finger. Though the intensity of the symptoms may give a very serious aspect to the case, yet a fatal issue is almost unknown. After the

four days of intense suffering the fever subsides somewhat abruptly, and at about this time a second rash appears, most marked over the shoulders and neck, and on the backs of the arms, or else an universal rash. It is of a dark red colour, often very like the rash of scarlet fever, or it may be like that of measles. With its appearance the more severe symptoms subside. During convalescence the patient is much depressed, and the pulse remains unduly rapid. Sometimes also pain starts again in one of the joints, or he is crippled by stiffness of the back or of several of the joints. After a shorter or longer period, from two days to ten, a second attack of fever and pain comes on which runs the same course but as a rule less severe and prolonged; in very rare cases there is a third attack.

There is no drug which will cut short the disease. From its likeness to rheumatism the salicylates are generally used, and perhaps relieve the pains. This drug should be combined with an ordinary fever mixture: large doses of bromide should be given for the headache, and the excruciating pains must be treated with morphia.

It is often impossible to distinguish the malady from influenza until the appearance of the rash.

It is believed that the poison is conveyed by the bites of a mosquito, and that this poison has characters which are analogous to the virus of Yellow Fever.

CHOLERA.

This is one of the most important diseases of India, having been endemic therein for many hundreds of years. It is always present in the country, and sometimes extends over large districts generally from some crowded centre such as the site of a pilgrimage, from which it is dispersed over the country-side by the returning bands of pilgrims. The deaths in British India from this disease in 1911 numbered three hundred and fifty-four thousand and in the following year four hundred and seven thousand. The disease is of special importance to the numerous pilgrims both on going to and returning from Mecca.

It is essentially a water-borne disease and the exciting cause is the "comma bacillus" discovered by Koch, so called from its shape when isolated and stained. The dejecta of a person suffering from the disease, when contaminating the soil, are liable to get washed by the rains into some water-supply, which may become the source of almost unlimited infection. Such contaminated drinking water is rendered innocuous by boiling, or filtration through a Pasteur-Chamberland filter. The importance of Koch's discovery, therefore, lay in the recognition of the fact that the poison was essentially water-borne. It can also be conveyed by flies settling on food.

The disease has an incubation period of from two to seven days. After a premonitory diarrhœa with colicky pains lasting for half a day or longer, the nature of the illness is announced by violent purging and vomiting, the former having the peculiar character of rice-water. The poison may be so intense that death takes place before the purging appears, the so-called "cholera sicca." In the common form collapse is early and marked, the extremities are blue and cold, the skin shrunken, the heart weak, the surface temperature below normal, though the temperature taken in the mouth shows high fever to be present. There is a curious pinched expression of the face with deeply sunken eyes, and the patient endeavours to communicate his wishes or fears in a hoarse whisper. He is further distressed by painful cramps in the muscles of the calf and abdomen, and there is suppression of the functions of the kidneys. Death generally takes place in this the algid state. Should the patient survive he passes into the stage of reaction, the unfavourable symptoms disappearing and gradually passing into convalescence. In some of these cases which give hopes of recovery there is a relapse, the conditions of the algid state re-appearing and death taking place. It has recently been recognised as a cause of the dissemination of the disease, that patients who have recovered will continue to discharge the bacillus for many weeks.

The prevention of cholera lies in attention to water supplies, and in boiling and filtering as a matter of routine in Indian life. All the discharges from the sick should be treated with disinfectants, and soiled clothing and linen destroyed. People who have to tour in cholera-stricken districts, or who go on shooting excursions, or who find themselves in the midst of a cholera outbreak should undergo inoculation with Haffkine's preventive vaccine. Two inoculations are required, the second being more intense in its effects. The temporary symptoms which may arise after the inoculation are sometimes severe, being always more marked than after inoculation against typhoid, but the protection afforded more than makes up for the temporary inconvenience endured.

During the cholera season the mildest cases of diarrhœa should be brought for treatment to a physician, as such persons are more liable than others to contract the disease.

Treatment mainly resolves itself into meeting the extreme collapse with stimulants and warmth. There is great temptation to administer opium but in some cases this is not unattended with danger, and in others there is no capacity left in the patient for the absorption of drugs administered by the mouth. The mortality has, however, been reduced by the injection of saline fluid into the skin or directly into the veins, and also by the introduction of saline fluid of particular strength into the abdominal cavity,

KALA-AZAR.

This is a slowly progressive disease associated with great enlargement of the spleen and some enlargement of the liver, extreme emaciation, and a fever of a peculiar type characterised by remissions for short periods and due to infection by a parasite of remarkable characters which have only recently been worked out. It is attended with a very high mortality, about 96 per cent., and has up to the present resisted all methods of treatment, although some patients appear to improve for a time, only in the majority of cases to relapse later.

It is endemic in Assam, from which it has invaded Bengal, and is now often seen in Calcutta. It is also fairly often met with in Madras, though it is said that the cases are imported ones. It is very rarely seen in Bombay, and then only in immigrants from infected localities, though there appears to be a mild endemic centre in Jabalpur in the Central Provinces; so it is likely to be more frequently met with on the western side of India. It has caused great mortality among the coolies on the tea-plantations of Assam, especially among the children; but under the recent measures of prophylaxis which have been put into force since knowledge has been acquired about its real nature and method of spread, the ravages of the disease are likely to be limited. It is very rare among Europeans and then almost entirely among those who have been long in India or who have been born and bred in the country.

Infection seems generally to start in the cold weather. There is fever with rigors, and progressive wasting and loss of energy. The temperature chart is a curious one, the fever showing two remissions during the twenty-four hours. Diarrhœa is common, especially during the later stages of the disease. The spleen enlarges early and is generally of enormous size producing bulging of the abdomen. A remarkable feature is the tendency to the formation of ulcers, which in many cases, especially in children, takes the form of a gangrenous ulceration of the mouth and cheek. Death usually occurs from some intercurrent inflammatory condition, often pneumonia.

The parasite is found in the spleen and liver during life, and can be obtained by puncture of these organs. As thus obtained it is a minute round body of special characters. In this state it is known as the Leishman-Donovan body from its discoverers. This small body has been cultivated by Leonard Rogers in suitable media and under low temperatures, and found to develop into a flagellated, that is tail-possessing, organism. How this peculiar organism develops outside the human host is not yet completely known. It is certainly a house-infection, which accounts for the manner in which whole families have been swept off, one member after another. Its progress has been stayed by moving families from their infected houses and burning down their former quarters. This, and other facts connected with its spread, have suggested that the agent for conveying the poison from man to man is the common bed-bug, and Patton has succeeded in developing the flagellate stage in this creature when fed on the blood of the sick.

There is a severe form of ulceration of the skin known as "Delhi Boil" from which organisms very similar to the Leishman-Donovan body were obtained many years ago. These bodies have also been cultivated outside the human host and found to develop into a flagellated organism. The two parasites, though closely allied, are nevertheless distinct.

INFLUENZA.

During 1918 a peculiar and exceptionally widespread epidemic of influenza appeared, which affected the inhabitants of practically every continent. This epidemic not only caused, directly or indirectly, a very large number of deaths, which in India alone were computed to exceed five millions, but left behind it a legacy of minor ailments with consequent national debility. The economic effect through the disorganization of trade cannot be estimated but must have been very great. Although previously severe and worldwide epidemics have been known to occur, in none were the spread and mortality so alarming as in the epidemic of 1918. So far as it affected India, the epidemic of the Summer months assumed a mild form of the disease. After an apparent departure it reappeared in a virulent and very fatal form during the Autumn months and then seemingly disappeared at the end of the year. In fact this was not so as small localised epidemics have occurred and sporadic cases have continued throughout 1919.

A report on the outbreak by Major Norman White, I.M.S., Sanitary Commissioner with the Government of India, states that there is no doubt whatever that the virus of influenza is a living germ capable of being transmitted directly from man to man. The nature of this germ is still a matter about which dogmatic assertions are unwarranted. The so-called influenza bacillus was certainly, almost constantly present in the cases investigated during the second severe epidemic wave in India; It does not appear to have been demonstrated so frequently during the early mild stages of the epidemic. Whether the influenza bacillus is the true cause of the disease or merely a constant concomitant is a question that is open to doubt. Recent observations that have been made in France indicate the possibility that the true cause of the disease is in some stage of its life history ultramicroscopic, or in other words a germ so infinitely minute that the highest powers of the microscope are unable to demonstrate it. Be the primary cause of in

fluenza what it may, the mortality of the recent outbreak was almost entirely due to secondary infections with other disease-producing germs, notably the pneumococcus, the germ which commonly causes pneumonia. The pneumococcus was constantly associated with fatal cases in India. Much of the mortality in England and other European countries was ascribed to secondary infection with a streptococcus—another disease-producing germ. No constant association of germs of this latter class with severe influenza cases was noted in India though its occurrence has been reported, for example for Assam. With regard to the relative incidence of the disease among various classes of the population, our information is at present meagre. Among troops serving in India, the incidence of the disease was greater among British than among Indians, though the Indian mortality rate was very considerably in excess of the British. For British troops the hospital admission rate per thousand of strength was 218·2 for influenza and 3·1 for pneumonia, as compared with 135·6 and 20·2 for Indian troops. The death-rates for British troops were 8·96 for influenza and 0·65 for pneumonia, as compared with 15·21 and 6·18 respectively, for Indian troops. The normal incidence of pneumonia among Indian troops is nearly four times that among British troops. A study of the figures hitherto received indicates that influenza as experienced in India was especially fatal between the ages of 10 and 40, and that females suffered to a somewhat greater degree than males.

Influenza is a disease, which exhibits an intense infectivity and an incubation period which is relatively very short, *i.e.*, from 6 to 48 hours. It is commonly believed that the disease is spread by the infected secretions of the throat and nose of infected persons, finding lodgment in the nose and throat of uninfected people. The commonest means by which this occurs is by coughing and sneezing, especially in confined spaces. Methods of prevention then consist of preventing communication of infection by these channels.

LUNACY AND ASYLUMS IN INDIA.

The accommodation for mentally afflicted persons in British India is, like that for those afflicted bodily, very inadequate. In the Native States, the condition of affairs as regards the provision of institutions for the care and treatment of the insane, is still worse as no Asylums exist there at all, so that those whose malady is such as to render their freedom a public menace, are for the most part confined in the local jails.

According to the Census Reports of 1911 out of a total population of 315,156,396 (India and Burma), there are 81,006 persons insane, making a proportion of insane to sane of 5 per every 10,000.

In the United Kingdom the proportion of insane to sane is roughly 40 per 10,000, while in New Zealand it is as much as 45 per 10,000. In reviewing these figures it must be borne in mind that those of the United Kingdom and New Zealand include the "feeble-minded," an item that is not included in the figures for British India.

INDIA.

Provinces, States and Agencies.	General population.			Insane population.		
	Male.	Female.	Total.	Male.	Female.	Total.
Provinces under British Administration.	124,872,691	119,393,851	244,267,542	42,064	26,094	68,158
States and Agencies ..	36,465,244	34,423,610	70,888,854	7,979	4,869	12,848
Total for all India ..	161,338,935	153,817,461	315,156,396	50,043	30,963	81,006

For the care of the 81,006 insanes of India and Burma, there exists accommodation in Asylums for roughly 8,000, hence only one person in ten out of the total insane population of the country, can be afforded accommodation in the institutions that exist especially for their care and treatment.

The distribution of the Asylums in British India and their respective capacities are shewn in the following table :—

Province.	Total number of Asylums.	Names of Asylums.	Sanctioned capacity of the Asylums.			Total population during the year 1919.		
			Male.	Female.	Total.	Male.	Female.	Total.

The Asylum at Ranchi in the province of Bihar and Orissa is an Asylum for Europeans and Americans only The term "Europeans" includes "Anglo-Indians." It was opened in 1918. Under orders of Government this Institution admits European and American patients from (1) Bengal, (2) Bihar and Orissa, (3) United Provinces of Agra and Oudh, (4) Punjab, (5) Central Provinces and Berar, (6) Assam and (7) in addition military insanes from the North-West Frontier Provinces and British Beluchistan. In association with this Asylum there is now under process of construction a large Asylum for natives of India The proposed accommodation is for 1,200 males and 300 females. As soon as this Asylum is completed the Indian insanes from the existing Asylums in the Provinces of Bengal and Bihar and Orissa will be transferred thither

At present there exists no special department either with the Provincial Governments or with the Government of India for the purpose of exercising supervision and control over Asylums, but quite recently the Government of India has approached the Provincial Governments with a view to ascertain their respective opinions as to the advisability of establishing a special Alienist Department.

The **administration of Asylums** is under the direct control of the Provincial administrative Medical Officers. In the case of the so called "Central" Asylums, that is to say, the Asylums at Madras, North Yeravda (Bombay Presidency), Lahore (Punjab), Agra United Provinces of Agra and Oudh), Berhampore (Bengal), and Rangoon (Burma) as well as the Asylum at Ranchi the charge of the institution is in the hands of a wholetime medical officer who is termed the "Superintendent". He is usually, but by no means always, a trained alienist The remaining Asylums are in the charge of the Civil Surgeon of the locality in which they happen to be situated. Not one of the existing Asylums in British India can be said to be up-to-date as regards construction, organisation, staffing or equipment. In every instance, even including the new Asylum for Burma which is now under construction in Rangoon, the custodial aspect of the Institution has received the greatest amount of consideration with the result that only a very little attention has been paid to all that goes towards the remedial requirements of the institution. It will probably take some years yet to obtain in India proper recognition of the fact that an Asylum for persons suffering from mental diseases should be a "hospital" in every sense of the term, hence its main raison d'être is to treat and to cure, and that every other consideration must be made secondary to this fundamental concept. Indeed, in almost every country in the world which makes any pretension to be regarded as civilised, the term "Asylum" has now been abolished for all institutions dedicated to the care and treatment of the insane. Owing to the lack of interest in Psychiatry and all that this term generally connotes in Europe and America, the nomenclatures that is still followed in the classification of mental diseases renders all official returns that are supposed to deal with the types of insanity occurring in the various Asylums in India, comparatively worthless. Even were a less obsolete classification of the varieties of mental diseases introduced it would not be possible in the existing absence of properly trained alienists to render information that would be of any great statistical value from a psychiatric stand-point.

The following table shews the classification of the **types of insanity** recorded in the reports published by every Province in India in the year 1919:

The principal types of insanity treated during the year 1919 in the Lunatic Asylums, in the Provinces of—

——	Bengal.	Assam.	Bihar & Orissa.	United Provinces.	Bombay.	Madras.	Punjab.	Central Provinces.	Burma.	Total.
Idiocy .. .	56	5	20	73	92	48	88	24	64	470
Mania	381	215	194	727	979	495	491	312	430	4,224
Melancholia	295	180	63	189	359	190	232	90	261	1,859
Mental Stupor	7	..	13	54	35	21	5	..	32	167
Delusional Insanity .	75	7	70	58	238	106	26	14	87	681
Insanity caused by *Cannabis indica* or its preparations .	173	68	30	205	69	85	126	1	3	760
Dementia .. .	82	..	107	228	244	235	170	32	146	1,214

It will be seen from the foregoing that the largest number of cases in the Asylums are shewn as "Mania" and "Melancholia." These terms "Mania" and "Melancholia" are now-a-days regarded as obsolete. For purposes of comparison of the terms that are nowadays employed to distinguish psychopathic states with those that are still permitted to hold good in India the following extract has been made from a recent report published by the Union of South Africa :—

Infection Psychoses.
Exhaustion Psychoses.
Intoxication Psychoses.
Thywigenous Psychoses.
Dementia Præcox.
Dementia Paralytica.
Organic Dementras.
Involution Psychoses.
Manic-depressive Psychosis.
Paranoia.
Epileptic Psychoses.
Psychogenic Neurosis.
Constitutional Psychopathic State.
Psychopathic Personalities.
Defective Mental Development.

As regards the **incidence of insanity** among the various races of India as well as the incidence of insanity in relation to occupation no really reliable information is obtainable in view of the comparative paucity of cases in proportion to the general population that come under observation. On the other the incidence by age is shown fairly well in the Census Report of 1911 to be as follows :

INDIA.

AGE.	Insane.		Distribution of the insane by age per 10,000 of each sex.	
	Male.	Female.	Male.	Female.
YEARS.				
0– 5	508	427	102	139
5–10	2,715	1,750	547	568
10–15	4,131	2,696	833	876
15–20	4,663	3,165	940	1,028
20–25	5,543	3,392	1,118	1,095
25–30	6,298	3,120	1,270	1,013
30–35	6,528	3,466	1,316	1,126
35–40	4,839	2,431	976	790
40–45	4,760	3,067	960	996
45–50	2,849	1,759	574	571
50–55	2,765	2,174	558	706
55–60	1,187	915	239	297

65–70	486	371		
70 and over age unspecified	853	751		
	446	174		
Total for all India	50,043	30,963	....	....

A further result of the general apathy, both official and non-official, towards matters pertaining to psychiatry, the subject of "feeble mindedness" has not yet come to be recognised as one that has any practical bearing on the welfare of the state as a whole with the result that there is no official institution for the care and education of feeble-minded children.

As regards the relation of insanity to crime, and more especially as regards the confinement of criminal insanes in jails, the report of the recent Commission of Enquiry into the subject of Indian Jails (published in 1920) contains some valuable suggestions. As things are the ideas both as regards the theory and the practice of dealing with insanity and crime in India, embodied in the existing legislation can only be described as archaic.

(See also "Insanity in India" by Colonel G. F. W. Ewens, I.M.S., and "Lunacy in India" by Major A. W. Overbeck-Wright, M.D., D.P.H., I.M.S.)

Drug Culture.

Two monographs on the cultivation of drugs in India, by Mr. David Hooper, of the Indian Museum; Calcutta, and by Mr. Puran Singh, of the Indian Forest Department, Dehra Dun, have lately been published. Mr. Hooper, in his paper, states that one-half of the drugs in the British Pharmacopœia are indigenous to the East Indies, and nearly the whole of the rest could be cultivated or exploited. The following are given as those that could be grown in quantity and as worthy of the attention of cultivators and capitalists: —

Belladonna, most of which is still imported, grows well in the Western Himalayas from Simla to Kashmir, the Indian-grown plant containing 0·4 to 0·45 per cent. of alkaloid.

Digitalis is quite acclimatised on the Nilgiris, growing there without any attention. The Madras Store Department obtains all its requirements from Ootacamund, and the leaf has been found equally active to that grown in England.

Henbane is a native of the temperate Himalayas from 8,000 to 11,000 ft. It was introduced into the Botanic Gardens, Saharanpur, in 1840, and it has been steadily cultivated there up to the present time, and the products supplied to medical depots satisfy the annual demand.

Ipecacuanha has been raised with a small measure of success in the hilly parts of India, and it only requires care and attention to raise it in sufficient amount to make it commercially remunerative.

Jalap-root grows as easily as potatoes in the Nilgiris, and there is no reason why the annual requirements (about 4,000 lbs.) for the Medical Stores of Bengal, Bombay and Madras should not be obtained from Ootacamund.

Mr. Puran Singh discussed the subject in a number of the "Indian Forester in 1914": he states that most of the drugs in the British Pharmacopœia grow wild in India, and that there is already a large export trade for some of them He adds, however, that materials collected at random cannot be expected to fetch full prices as they seldom come up to standard quality, and he adds: "The few drugs that are not indigenous to India could easily be made to grow in some part or other of this vast land. The great advantage accruing from the systematic cultivation of drugs is that a regular supply of genuine drugs of standard quality is assured. The variation in the quality of wild-grown drugs is sometimes a very serious drawback to finding a profitable market for them. The quality of *Podophyllum Emodi* growing wild in India is an illustration in point. This plant was discovered by Sir George Watt in the year 1888, and now, even after twenty-four years, in which it has been shown to be identical with the American drug that is being employed for pharmaceutical purposes, it still remains unrecognised by the British Pharmacopœia, which, as explained by the "Chemist and Druggist" some time ago, is solely due to the uncertainty which still exists as to its physiological activity".

Mr. Singh also points out that the Indian consumers of medicine depend mostly on herbs growing wild in the Forests, the more important of these probably numbering at least 1,000 This inland trade is very large; the possibilities in the Punjab alone being put at Rs. 50,00,000. He mentions saffron, liquorice, and salep as products exotic to India, whose cultivation in this country looks full of promise. Mr. Singh suggests that a complete survey be made of the extent of the inland trade in medicinal products found growing wild in Indian forests in order to arrive at the figures of annual consumption, and that the forest areas where the most important drugs grow should be preserved. Inquiries should be instituted as to the best methods of cultivation, and if need be, the means of extending the artificial propagation. It is to provide data to nduce the private capitalist to embark on such enterprises that Mr. Singh advocates the formation of some body to go into the matter. He suggests that India is well worthy of attention by those in this country who are interested in extending the culture of drugs in the British Empire. The Forest Department has already begun the cultivation of Indian podophyllum-root in the Punjab, United Provinces and the North-Western Frontier, and several maunds of dried rhizome are sold annually for local consumption. Mr. Hooper also shows that a start has been made in regard to the cultivation of belladonna, henbane and digitalis. One of the principal difficulties to be overcome is to ensure a ready market, and there is also always the danger of overproduction to be considered.

Essential Oils.

SANDALWOOD OIL is, by far the most, important perfumery product of India. The sandalwood tree is a root parasite, obtaining its nourishment from the roots of other trees by means of suckers. It grows best in loose volcanic soil mixed with rocks, and preferably ferruginous in character. Although in rich soil it grows more luxuriantly, less scented wood is formed, and at an altitude of 700 feet t is said to be totally devoid of scent. The best yield of oil is obtained from trees growing at an altitude of 1,500 to 4,000 feet, but the tree requires plenty of room so as to enable it to select vigorous hosts to feed it.

PALMAROSA OIL, also known as Indian geranium or "Turkish geranium oil" is another of the principal perfume products of India. It is derived from the grass, *Cymbopogon Martini*, which is widely distributed in India, where it is known as "Motya." Gingergrass is an oil of inferior quality, possibly derived from older grasses or from a different variety of the same species. Both oils contain geraniol, the proportion in palmarosa being from 75 to 95 per cent. and in gingergrass generally less than 70 per cent. These oils are used in soap, perfumery, and for scenting hair oils and pomades.

LEMONGRASS OIL is derived from *Cymbopogon citratus* and *Cymbopogon flexuosus*. The former is a native of Bengal, and is largely cultivated all over India, but the oil distilled on the Malabar Coast and Cochin is derived principally from *C. flexuosus*.

VETIVER, OR CUS-CUS, is a perennial grass, *Vetivera zizanoides*, found along the Coromandel Coast and in Mysore, Bengal and Burma, in

most heavy soil along the banks of rivers. The leaves are practically odourless and only used for thatching and weaving purposes. The roots are used in perfumery and in the manufacture of mats and baskets.

THE MALABAR CARDAMOM, *Elettaria cardamomum*, is the source of the seeds official in the British and other Pharmacopœias. Cardamom oil of commerce is, however, not distilled from this variety on account of the high price, but is obtained almost exclusively from the long cardamom found growing wild and cultivated in Ceylon. The oil is used medicinally as a carminative and is also employed by perfumers in France and America.

COSTUS ROOT (the root of *Saussurea lappa*) is a native of Kashmir, where about 2,000,000 lbs. are collected annually. It is exported in large quantities to China where it is used for incense. It is also used to protect shawls and clothes from the attacks of insects. Its odour resembles that of orris root.

BLUMEA BALSAMIFERA is the source of the Nagai camphor used in China for ritualistic and medicinal purposes. This shrubby composite is found in the Himalayas and is indigenous to India. It is widely distributed in India and is used by the natives against flies and other insects.

EUCALYPTUS plantations are situated chiefly in the neighbourhood of Ootacamund, Coonoor and Wellington, at elevations varying from 5,500 to 8,400 feet, the best being at from 7,200 to 8,000 feet. The climate of this region is fairly cool, equable and moist, with a well-distributed rainfall of about 50 to 80 inches; although frosts occur, the winters are mild on the whole, and snow is unknown. The soil, a red clay overlying gneissose rock, is rich and deep in some parts, shallow and poorer in others. A large factory is being built for the distillation of eucalyptus oil at Ootacamund. It is believed there is a considerable future for the undertaking, provided a sufficient supply of the leaves is available.

Manufacture of Quinine.

Government Cinchona plantations were started in India in 1862 from seed introduced by Sir Clements Markham from South America, of which the plant is a native. There are two main centres, Darjeeling and the Nilgiri Hills. In both localities a portion of the area is owned by tea or coffee planters, and the bark they produce is either sold to the Government or exported. Several species of cinchona are cultivated in India: namely, *Cinchona succirubra* (red bark), *C. calisaya* and *ledgeriana* (yellow bark), and *C. officinalis* (crown bark). The commonest species in Darjeeling is *C. ledgeriana*, and in Southern India *C officinalis*. A hybrid form is also largely grown and yields a good bark. At the Government factories both cinchona febrifuge and quinine are made. Thanks to these factories, practically no quinine is nowadays imported for Government purposes.

THE REPORT OF THE GOVERNMENT CINCHONA plantations and factory in Bengal for 1919-20 notes the re-establishment of the Dutch Combine on lines similar to those existing in pre-war days, the formation of a British Quinine Corporation for purposes of co-operative buying from the Dutch, and the release towards the end of 1919 of Government control of the quinine market in London. On decontrol, prices in the English market soon reached continental and American levels; fluctuations in rates of exchange, however, still leaving opportunity for speculation. The British Quinine Corporation working in harmony with the Dutch Combine now practically controls the English quinine market. Prices have of late shown a tendency to decline, but the production of bark and quinine as a lucrative, commercial proposition is established on a sounder foundation than ever. This position, no less than the lesson the last five years have taught of the advisability of relying on home industries for essentials, may be responsible for the growing interest various countries now evince in cinchona cultivation. In particular, is this true of America, Japan and —within the British Empire—India The year 1919-20 has witnessed the beginnings of a scheme for the supply from within the Empire of a larger proportion of its quinine requirements than has hitherto been possible. It is much too early yet to predict that Burma will prove an important source of the drug for India or the Empire, but work has started and, so far, the signs are hopeful. In the Bengal plantations the strain of war years is now evident in greatly reduced harvests. During 1919-20 513,043 lbs. only were cropped and there will be a still smaller harvest during 1920-21.

The total area under a full complement of cinchona is 3,080 acres, of which 2,319 acres are comparatively young. The approximate number of cinchona trees is 5,090,000, of which about 3,610,000 are on Munsong and 1,480,000 on Mungpoo.

DRUGS MANUFACTURE COMMITTEE.

In 1918 the Board of Scientific Advice accepted a proposal for the formation of a Drugs Manufacture Committee to investigate the possibilities of the cultivation of medicinal plants in India and the manufacture of drugs from them on a commercial scale. The Government of India acted on this recommendation and appointed a Committee whose primary functions will be to investigate. (1) the possibilities of the cultivation of medicinal plants in India, and (2) the manufacture of drugs from them on a commercial scale.

With regard to (1), the Committee will consider the various lines on which the investigation can best be undertaken, while, in connection with (2), it will consider the present position as regard the manufacture of drugs in India from indigenous products and the Indian requirements of such drugs as have until now been imported from abroad. As soon as experience has proved that any drugs can be manufactured at Government Medical Store Depots at a sufficiently low cost, private enterprise will be invited to undertake its manufacture. It

was announced in February 1920, that considerable progress had been made and that several articles which before the war were imported were being manufactured in India.

The Secretary of the Drugs Manufacture Committee should be addressed at the office of the Director-General, Indian Medical Service.

Intoxicating Drugs.

Among the drugs which are of great medicinal value, but of which the misuse has been a source of crime and disease among the people of India, there are, in addition to cocaine, **Opium** (for details of the trade see article on opium) which is the oldest and the best known. A resolution of the Government of India, dated August 19, 1912, adopted the policy of suppressing all public gatherings for the purpose of smoking opium and of prohibiting all manufacture of opium smoking preparations save by an individual of a small quantity for his own private consumption. The form which legislation should take was left to the local Governments, provided that an assembly of three or more persons for the purpose of smoking opium should be made illegal. In adopting this policy Government distinguished between opium smoking and opium eating. "Opium, said the Resolution, as taken in moderation by the average Indian is eaten either as a mild stimulant, or as a prophylactic against malaria, or for the relief of pain or in the treatment of diabetes. It is in fact a household remedy for many ills, and it is safe to say that as a national habit the eating of opium is less injurious than is the consumption of alcohol in many other countries. Centuries of inherited experience have taught the people of India discretion in the use of the drug, and its misuse is a negligible feature in Indian life. These conclusions were accepted by the Shanghai Commission (of 1909) who, while they recommended the gradual suppression of the practice of opium smoking, refrained from advising the abandonment of the policy of regulation by which the practice of opium eating in the country has hitherto been successfully kept under restraint."

Next to opium and cocaine, the most common drugs are the three **hemp** products which are freely used throughout British India. The Indian hemp is a shrub growing wild in the hills and lower elevations, and cultivated in the plains. The leaves of the wild plants, collected and dried in the sun, constitute **bhang**, a sort of green tea, which is mixed with boiling water and drunk as an infusion. This has an exhilarating effect, followed by a feeling of intoxication. When the female plants are cultivated they exude a resinous juice, which causes the flowering tops to stick together. Collected under these conditions the tops are rolled in the hands or pressed under foot; the first process produces "round ganja," and the second "flat ganja." **Ganja** is a stronger form of hemp than bhang, and is used for smoking. The third form of Indian hemp is **charas**, the resinous secretion of the plant that develops when it is grown at certain altitudes. Large quantities of charas are produced in Chinese Turkestan, and enter India by way of Leh. This is sold over the northern part of the country, and used for smoking purposes.

The Cocaine Traffic.

The form of cocaine chiefly used in India is Cocaine Hydrochloride. This salt forms light shining crystals, with a bitterish taste, and is soluble in half its weight of water. The alkaloid cocaine—of which this is a salt—is obtained from the dried leaves of the Erythroxylon Cocaine which grows in Bolivia, Peru, Java, Brazil and other parts of South America. The leaves are most active when freshly dried and are much used by the Natives as a stimulant. Tea made from them has a taste similar to green tea and is said to be very effectual in keeping people awake. In India the Coca plant seems never to have been cultivated on a commercial scale It has been grown experimentally in the tea districts of Ceylon, Bengal and Southern India and has been found to produce a good quality and quantity of cocaine. As the plant has not been seriously cultivated and as there is no possibility for the present of the drug being manufactured in India, no restrictions have as yet been placed on its cultivation.

Spread of the habit.—The cocaine traffic in India which seems to be reaching alarming proportion in spite of legislation and strict preventive measures is of comparatively recent growth; though it is impossible to estimate how widespread it was in 1903 when the Bombay High Court for the first time decided that cocaine was a drug included within the definition of an intoxicating drug in the Bombay Abkari Act. Since that date the illegal sale of cocaine in India has largely increased and the various provincial Excise Reports bear witness to the spread of the "Cocaine habit." The consumers of the drug, which is notoriously harmful, are to be found in all classes of society and in Burma even school children are reported to be its victims; but in India as in Paris the drug is mostly used by prostitutes or by men as an aphrodisiac. The habit has spread chiefly to those classes which are prohibited by religion or caste rules from partaking of liquor and the well known Indian intoxicating drugs.

Imports from Europe.—Cocaine and its allied drugs are not manufactured in India, but are imported. Most of the drug which is smuggled into India, comes from Germany and bears the mark of the well-known house of E. Merck, Darmstadt. This firm issues cocaine in flat packets of various sizes ranging from 1 to 3 ounces which are easily packed away with other articles and greatly favour the methods of smugglers. Owing to its strength and purity cocaine eaters prefer this brand to any other in the market. Restrictions on export from Europe have been under consideration for some time but as yet no international scheme devised so that end has been agreed upon. That trade was stopped during the war but Japanese imports into India became an almost equal danger.

Smuggling.—So far as the cases already detected show, the persons who smuggle the drug by sea from Europe and places outside India, into India, are chiefly sailors, stewards, firemen and sometimes engineers and officers of foreign ships. The ports through which cocaine enters India are Bombay, Karachi, Calcutta, Madras, Marmagoa and Pondicherry. The main inland distributing centres are Delhi, Lucknow, Meerut, Lahore, Mooltan, Surat and Ahmedabad. Delhi especially is notorious for the cocaine trade. Great ingenuity is employed in smuggling cocaine through the Custom houses. It is packed in parcels of newspapers, books, toys and piece-goods and in trunks which have secret compartments. The retail trade in the towns is very cunningly organized and controlled. In addition to the actual retailers, there is a whole army of watchmen and patrols whose duty is to shadow the Excise and Police Officials and give the alarm when a raid is contemplated. Since the commencement of the war several cases of importation of Japanese cocaine have been detected, the importers being Chinese and Japanese sailors. Chinese opium smugglers bring cocaine from Japan here to exchange it for Indian opium, which is smuggled into China. Most of the cocaine seized bears the mark "Sansedo & Co., Kobe." In 1919-20 the largest seizure of cocaine made by the Excise Department in Bombay was one of 5,712 grains.

Price.—The amount seized is either given to Hospitals in India or destroyed. It is no longer possible to buy cocaine from any betelnut seller as it was ten years ago, but scores of cases in the Police Courts show that the retail trade thrives, though to a diminished extent, in Bombay. High profits ensure the continuance of the trade. At present the English quotation varies from 36 to 40 shillings per oz. and the price as sold by licensed chemists in India varies from Rs 27 to Rs. 31 per oz. Owing to the war and the consequent stoppage of illicit importations from Austria and Germany it is not possible to buy the smuggled drug from the wholesale dealers for less than Rs. 100 to 120 per ounce and when sold by the grain the price realized varies from Rs. 400 to 425 per ounce. These profits are further enhanced by adulteration with phenacetin and inferior quinine.

The law in regard to Cocaine.—This varies in different provinces. A summary of the law in Bombay is as follows: No cocaine can be imported except by a licensed dealer and importation by means of the post is entirely prohibited. The sale, possession, transport and export of cocaine are prohibited except under a license or permit from the Collector of the District. A duly qualified and licensed Medical practitioner is allowed to transport or remove 20 grains in the exercise of his profession; and as far as 6 grains may be possessed by any person if covered by a *bona fide* prescription from a duly qualified Medical practitioner. The maximum punishment for illegal sale, possession, transport, etc., under Act V of 1878 as amended by Act XII of 1912 is as follows: Imprisonment for a term which may extend to one year or fine which may extend to Rs. 2,000 or both and on any subsequent conviction imprisonment for a term which may extend to 2 years or fine which may extend to Rs. 4,000 or both. The law in Bombay has been further amended so as to enable security to be taken from persons who have been convicted of cocaine offences. The new Act also contains a section for the punishment of house owners who let their houses to habitual cocaine sellers.

INDIAN TOBACCO.

The tobacco plant was introduced into India by the Portuguese about the year 1605. As in other parts of the world, it passed through a period of persecution, but its ultimate distribution over India is one of the numerous examples of the avidity with which advantageous new crops or appliances are adopted by the Indian agriculturist. Five or six species of *Nicotiana* are cultivated, but only two are found in India, namely, *N. Tabacum* and *N. rustica*. The former is a native of South or Central America, and is the common tobacco of India. About the year 1829 experiments were conducted by the East India Company towards improving the quality of leaf and perfecting the native methods of curing and manufacturing tobacco. These were often repeated, and gradually the industry became identified with three great centres: namely, (1) Eastern and Northern Bengal (more especially the District of Rangpur); (2) Madras, Trichinopoly, Dindigul, Coconada and Calicut in Southern India; and (3) Rangoon and Moulmein in Burma. Bengal is the chief tobacco growing Province, but little or no tobacco is manufactured there. The chief factories are near Dindigul in the Madras Presidency, though, owing to the imposition of heavy import duties on the foreign leaf used as a cigar wrapper, some cigar factories have been moved to the French territory of Pondicherry.

The Monghyr factory, which commenced business in 1908, had an output in 1918-19 of 2,024 million cigarettes and 144,000 lbs. of smoking tobacco.

The question of improving the quality of Indian tobaccos has received the attention of the Botanical section of the Agricultural Research Institute, Pusa, and three Memoirs have been published recording the results of investigations in that direction. The immediate problem at Pusa is the production of a good cigarette tobacco. Many attempts have been made in the past to introduce into India the best varieties of cigarette tobacco from America, but the results have been disappointing. It is now hoped to build up by hybridization new kinds of tobacco, suited to Indian conditions of growth, which possess in addition the qualities necessary to obtain a better price.

Area under Cultivation.—The cultivation of tobacco is very widespread in Burma. The two main varieties are called "Burmese tobacco" and "Havana tobacco" Of the Burmese tobacco there are two main varieties "Seywet-gyi," the large-leaved variety and "Seywet-gyun," a smaller-leaved variety with pointed leaves. The former yields a heavier crop, but the latter gives better quality. There is always a great demand on the market for both the Havana and the Burma tobacco. The smooth leaves of the Havana plant are used for the wrappers and the coarser Burmese leaf for the filling.

The most important tobacco tracts in British India are:—(*i*) the Combatore and Dindigal tract of Madras, where the *Usi-Kappal* and *Wara Kappal* varieties are largely grown, the former supplying the Trichinopoly cigar; (*ii*) the Godavari Delta of Madras; (*iii*) the Rangpur tract of Bengal; (*iv*) the Districts of Bihar and Orissa; (*v*) Guzerat in Bombay and (*vi*) the delta tract of Burma.

The season for harvesting varies in different localities ranging from December to June, but the bulk of the crop is harvested during the months of February, March and April. The leaves when quite dry, are assorted and placed in heaps in stacks to ferment They are then tied into bundles of 25 or 30, a useless leaf being employed for tying each bundle. The leaves are laid perfectly flat, the bundles being fan-shaped. In this condition they are baled, the broom-like ends projecting outwards. By varying the degree of fermentation of the leaves, different qualities of tobacco are obtained. A black variety is used in India for cake tobacco, and this is the most common product, but a certain amount of yellow leaf is grown for cigar making. The yield of tobacco varies in different localities ranging ordinarily from 160 lbs. to 800 lbs per acre, the return under high cultivation being from 800 lbs. to even 3,200 lbs. per acre.

Exports.—The bulk of the Indian tobacco exported consists of leaf, the kinds chiefly shipped being the "Bispath" (cheap country tobacco) and "Poolah" varieties of the Rangpore kind "Bispath" has no market in the United Kingdom, but is largely used by the Dutch. Twenty-three million lbs of unmanufactured tobacco were exported in 1920-21 as against 29 million in 1919 20. The United Kingdom took a little over 1¼ million lbs. as against 12½ million in 1919-20. China over 9 million, and Aden 6 million, against 2½ million and 873,000 lbs. respectively in the previous year. Exports to France were reduced to 361,950 lbs against 4½ millions in 1919-20. The enormous drop in exports to the United Kingdom and France was chiefly due to a slump caused by the unloading of munitions stocks in both countries.

Imports.—Imports of cigarettes increased from over 4 to over 6 million lbs. in quantity and from over Rs 1,68½ to over Rs. 2,56½ lakhs in value. The share of the United Kingdom in the total increased from Rs. 1,21 to Rs. 1,35 lakhs although the quantity imported therefrom decreased to 2,864,000 lbs. from 2,960,000 lbs. in 1919-20 and that of the United States from Rs. 13 to Rs. 1,05¼ lakhs.

Calcutta Improvement Trust.

The Calcutta Improvement Trust was instituted by Government in January, 1912, with a view to making provision for the improvement and expansion of Calcutta by opening up congested areas, laying out or altering streets, providing open spaces for purposes of ventilation or recreation, demolishing or constructing buildings and re-housing the poorer and working classes displaced by the execution of improvement schemes.

The origin of the Calcutta Improvement Trust must, as in the case of the corresponding Bombay body, upon which the Calcutta Trust was to a large extent modelled, be looked for in a medical enquiry which was instituted into the sanitary condition of the town in 1896, owing to the outbreak of plague. It was estimated that the Trust might in the ensuing 30 years have to provide for the housing of 225,000 persons. The population of Calcutta proper, which includes all the most crowded areas, was 649,995 in 1891, and increased to 801,251, or by 25 per cent, by 1901. The corresponding figure according to the 1911 Census was 896,067 and this had increased by 1921 to 993,508.

The problem of expansion was difficult, because of the peculiar situation of Calcutta, which is shut in on one side by the Hooghly and on the other by the Salt Lakes.

Preliminary investigations continued for several years, so that it was only in 1910 that legislation was eventually introduced in the provincial legislature and the Trust instituted by it. The Bill provided for a scheme involving the expenditure of Rs 8,22,00,000, and for special local taxation to this end. It also provided for the appointment of a whole time chairman of the board of trustees and the membership of the Trust was fixed at eleven.

The following formed the Board of Trustees in 1920-21; Mr. C. H. Bompas, C.S.I., I.C.S., M.L.C., *Chairman*; Mr. J. Donald, C.I.E., I.C.S., M.L.C., Chairman of the Corporation of Calcutta, *ex-officio*; Raja Reshee Case Law, C.I.E., M.L.C., elected by the Corporation of Calcutta; Rai Radha Charan Pal Bahadur, M.L.C., elected by the Ward Commissioners; Mr. W. H. Phelps, elected by the Commissioners appointed under Section 8 (2) of the Calcutta Municipal Act, 1899; Mr. S. G. L. Eustace, elected by the Bengal Chamber of Commerce, Babu Amulyadhon Addy, M.L.C., elected by the Bengal National Chamber of Commerce; Sir R. N. Mookerjee, K.C.I.E., Mr. W. D. R. Prentice, I.C.S., Rai Annada Prosad Sarkar, Bahadur and Mr. W. K. Dods, appointed by Local Government.

The work upon which the Trust definitely embarked may be divided into three classes as follows:—

Many parts of Calcutta are overcrowded with buildings and ill-provided with roads. These areas are to be re-arranged both on the ground of sanitation and for convenience of traffic;

Population will continue to throng into the overcrowded parts unless it can live on the outskirts and at the same time have speedy access to the business centres of the town. Quick traffic can only take place along broad roads. These are almost wanting in Calcutta. The construction of broad roads will at the same time ventilate the overcrowded parts of the town and it has been recognised from the outset that the construction of broad roads running both north and south and east and west will thus secure a double object;

There is the question of providing for the population displaced by improvements, and still more important of providing for the natural growth of population by laying-out roads and building sites on sparsely populated areas on the outskirts of the town. When persons of the working class are displaced or likely to be displaced the Trust can build dwellings for them if private enterprise does not undertake the work.

The Annual Report of the Trust for 1920-21 in running the work already accomplished said:—

At the end of the year 1919-20, the Trust had made over to the Corporation 5.18 miles of roads with an area of 159,521 square yards. At the beginning of the year 1920-21, 11·75 miles of roads were in hand and during the year an additional 6.31 miles of roads were commenced, giving a total of 18.06 miles in progress, out of which 6·89 miles were completed, but only 3·18 miles with an area of 103,153 square yards were handed over to the Corporation.

The total mileage handed over to the Corporation up to date is 8.36 miles with an area of 262,674 square yards. The length of roads remaining in hand is 14.88 miles of which 3·71 miles have been completed, but not handed over to the Corporation, and 11·17 miles are still in progress. The total mileage, which has been taken in hand, is 23·24 miles.

The after-effects of the war still seriously affect the progress of work, want of coal hampered the manufacture of bricks, and stone-metal, lime and paving stones were obtained with difficulty and in insufficient quantities. The extraordinary rise in the price of bricks in the season 1919-20 restricted private building operations and this indirectly has seriously upset the programme of the Trust.

The Board has reviewed its programme in view of the altered financial position caused by the rise in the rate of interest at which money must be borrowed and by the enhanced cost of materials. It is obvious that for a given income, the Trust will be able to accomplish very much less work than would have been the case under pre-war conditions and the decision of the Board was that as a matter of general principle it should proceed with those schemes, such as the construction of main roads in the centre of Calcutta, which no other local authority would be in a position to undertake.

BOMBAY IMPROVEMENT TRUST.

Bombay is an island twelve miles long, but very narrow and containing only 22 square miles altogether, but in the city, occupying little more than half the island, there lives a population enumerated at 972,892 at the Census in 1911, and actually totalling at the present time, according to conservative estimates, over a million and a quarter. Bombay is, in point of population, the second city of the British Empire. Seventy-six per cent. of its people live in one-roomed tenements. A terrible visitation of plague in 1896 harshly directed attention to the insanitary conditions arising from overcrowding and as it was recognised that the task of effecting the required improvements was too great for the Municipality, a special body, termed the Trustees for the Improvement of the City of Bombay, was appointed It consists of 14 members, of whom four are elected by the Municipality and one each by the Chamber of Commerce, the Millowners' Association and the Port Trust, and the balance nominated by Government, or sit *ex-officio* as officers of Government. The Board is presided over by a whole-time chairman (who has hitherto always been either a covenanted civilian or an officer of the Public Works Department) and he is also head of the executive. The present chairman and members of the Trust are as follow .—

Chairman—

Mr. E. G. Turner, I C.S., J.P.

Ex-officio Trustees—

Major-Genl. William Bernard James. C.B., C.I E , M V.O., Officer Commanding Bombay District.

Mr. J. P. Brander, I.C.S., J.P., Collector of Bombay.

Mr. H. B. Clayton, I.C.S., J.P., Municipal Commissioner for the City of Bombay.

Elected by the Corporation—

Dr. K. E. Dadachanji, J.P.
Mr. V. A. Pabholkar, O.B.E., J. P.
Mr. Naoroji M. Dumasia, J. P.
The Hon. Mr. P. C. Sethna, O.B.E., J.P.

Elected by the Chamber of Commerce—

Mr. Harry T. Gorrie, J P. (on leave) ; Mr. A. B. Morrison, J. P. (Actg.)

Elected by the Port Trustees—

Mr. G. W. Hatch, I.C.S., J.P.

Elected by the Millowners' Association—

Sir Vithaldas D. Thackersey, Kt.

Nominated by Government—

Sir Lawless Hepper, Kt., J.P.

Mr. Mirza Ali Mahomedkhan, M.A., LL.B , J.P.

Mr. H. P. Mody, M.A., LLB.

The specific duties of the Trust are to construct new and widen old streets, open out crowded localities, reclaim lands from the sea to provide room for expansion, and construct sanitary dwellings for the poor (including the Presidency Police) and also at the cost of employers of labour for the labourers employed.

Bombay city grew on haphazard lines, houses being added as population poured in with the growth of trade and without any regard to town planning or the sanitary requirements of a great town. The price of land was always comparatively high, owing to the small area of the island, and while the builder had only one object in view, namely, to collect as many rent paying tenants as possible on the smallest possible piece of land, there were no proper restraints to compel him to observe the most ordinary rules of hygiene. The result was the erection of great houses, sometimes five and six storeys high, constituting mere nests of rooms. There was no adequate restriction as to the height of these chawls, or the provision of surrounding open space, so that the elementary rules as to the admission of light and air went unobserved and the house builder invariably erected a building extending right up to the margins of his site. Consequently, great houses accommodating from a few hundred to as many as four thousand tenants were built with no more than two or three feet between any two of them and with hundreds of rooms having no opening at all into the outer air.

The Trust has practically reconstructed large areas on modern sanitary lines, but the old municipal by-laws having until within the past year remained quite inadequate for the due control of private building operations by the Municipality, the Trust have spent millions sterling of public money in sweeping away abuses, while unscrupulous landlords, still unchecked, added in the same old manner to the insanitary conditions of the place. It is hoped that the amendment of the by-laws, as recently settled, will overcome this evil of bad building.

Certain Government and Municipal lands were vested in the Trust, the usufruct of which it enjoys, and the Trust receives a contribution from municipal revenues amounting to a definite share in the general tax receipts, approximating to 2 per cent. on assessments and subject to no maximum. Works were financed out of 4 per cent. loans, until the war stopped borrowing by the Trust, the loans being guaranteed by the Municipality and Government, and the revenue of the Trust being used to meet interest and sinking fund charges. Short term loans were raised in 1919 and 1920 at 6 per cent. interest and recently the Trust was given a portion of the Bombay Development Loan proceeds (on which the rate of interest amounts to nearly 7 per cent.)

The salient features of the Trust's programme of 66 schemes as completed or sanctioned up to 1920-21 may be summarised as follows

The total capital expenditure up to 31st March 1921 was Rs. 955 lakhs. The margin for expansion is about Rs. 72 lakhs. The total borrowings stand at Rs. 953 lakhs, involving interest and sinking fund charges of Rs. 53 lakhs per annum

Plan of operations.

The work of the Trust, as epitomised by these figures, can be divided into two parts. The first concerned the immediate alleviation o

the worst burdens of insanitation and the second consisted of opening up new residential areas. The Trust began by attacking the most insanitary areas, cutting broad roads through them. Meanwhile, large areas of good building land, lying idle for want of development works, were developed and brought on the market, sold at remunerative rates and largely built upon. Instances of this development are the Chaupati and Gamdevi estates, the land overhung by Malabar Hill, between it and the native city. These were cut up with fine new roads and are now nearly covered with modern suburban dwellings. Two of the most insanitary quarters in the midst of the city have been level led to the ground and rebuilt in accordance with hygienic principles. Sanitary chawls have been built for over 21,000 persons.

The death-rate in the Trust's permanent chawls has always been considerably below the general death-rate in the vicinity. The smallest one room tenement on the Trust Estate is large enough for a family of five.

The second phase of the Trust's work, arising gradually out of the first and advancing along with its later stages, consists of the development of a new suburban area in the north of the island, beyond the present city, and the construction of great arterial thoroughfares traversing the island from north to south.

During the past few years there has been an important movement towards the establishment of co-partnership housing societies on the Board's Estate. The Board regard the new departure as one deserving every encouragement at their hands, especially in connection with the disposal of land in their suburbs in the north of the island and sites have been given to societies on specially favourable terms, and have granted valuable concessions to the Society which approached them for plots on the latter agreeing to limit their dividends. The Board have prevented, as far as possible, profiteering on their estates, by preventing the transfer of plots before completion of buildings.

But in recent years the Improvement Trust have perpetually been subjected to fierce criticism, based upon the undoubted fact that their operations dishoused population more quickly than they provided new accommodation. This evil has been aggravated by the great influx of new population into the city during the past five or six years. The result has been a gross increase of overcrowding in all kinds of housing accommodation throughout the city and a violent increase in rents. Criticism of the Trust assumed such proportions and received such general support that the abolition of that body and the absorption of its duties by the Municipality was formulated into definite proposals by Government two years ago. The great difficulty of the housing problem, however, meanwhile compelled Government to pass Rent Acts for the protection of tenants and to tackle on a large scale the problem of providing further housing accommodation. It was recognized that vast housebuilding operations must be undertaken and this involved the supervision of the work by a special body. Consequently, the Trust from being moribund has suddenly obtained a new lease of life.

Enormous schemes for the expansion of housing in the city are now passing through the final stages before being put into execution. Government, the Improvement Trust and the great employers of labour will all be concerned in the work and the Improvement Trust have floated a huge new programme, their new schemes sanctioned representing a greater undertaking than all their former schemes put together.

The new schemes of the Trust concern the northern part of Bombay Island, where large opportunities for suburban development offer themselves. At Worli on the north-west of the Island, at Dharavi on the north, and at Sewri and Wadala on the north-east, the Trust have undertaken development schemes involving the acquisition and development of 1,558 acres, or 2·43 square miles, that is, between 1/9th and 1/10th of the whole area of the Bombay Island. A considerable amount of filling of lowlying land is involved and for this purpose material from the hills on the north-east and north-west of the Island will be utilised, the hills being lowered in such a manner as to level them into desirable building sites. Room will be provided for more than a quarter of a million new population, equal to nearly ¼th of the present total population of the city, in the three new estates when they are fully developed and the recoupment which the Trust will derive from the disposal of building sites upon them will repay almost the whole of the enormous capital outlay.

A good commencement has been made of the Worli scheme where several thousands of labourers are now engaged. The Board have resolved to complete all their schemes so far sanctioned, within the next 5 years.

Government have decided to transfer the functions of the Trust to the Municipality and the necessary formalities and legislation to effect the transfer are receividg attention at their hands.

The Indian Ports.

The administration of the affairs of the larger ports (*Calcutta, Bombay, Madras, Karachi, Rangoon and Chittagong*) is vested by law in bodies specially constituted for the purpose. They have wide powers, but their proceedings are subject in a greater degree than those of municipal bodies to the control of Government. Except in Calcutta, the elected members are fewer in number than the nominated members. At all the ports the European members constitute the majority and the Board for Rangoon consists mainly of European members.

The income, expenditure and capital debt, according to the latest figures obtainable from the Department of Statistics (India) of the five principal ports managed by Trusts (Aden is excluded from the tables) are shown in the following table :—

—	Income.	Expenditure.	Capital Debt.
	£	£	£
Calcutta ..	1,270,568	1,227,628	6,852,030
Bombay ..	1,311,202	1,242,194	10,317,716
Karachi ..	371,112	331,348	1,717,108
Madras ..	131,463	134,529	907,510
Rangoon ..	348,481	283,727	1,990,800

In the Department of Statistics, India, the following returns have been compiled, showing the ratios borne by the income and the expenditure of each port to the total income and the total expenditure, respectively, of all the chief Indian ports during the year 1918-19, the latest period for which the returns are obtainable :—

—	Income per cent.	Expenditure per cent.
Calcutta	36·7	37 8
Bombay	37·8	38 2
Madras .. .	3·8	4·1
Karachi	10·7	10·2
Rangoon .. .	10 0	8·7
Chittagong	1·0	1 0

The latest return of the Department of Statistics shows that in the ten years ending 1918-19, the income and expenditure of each port have increased as shown in the following table. The total income of all the ports has increased in the decade by 91·0 per cent. and the total expenditure by 79·9 per cent. :—

—	Increase per cent.	
	Income.	Expenditure.
Calcutta	61·0	53·5
Bombay	158·7	158·7
Madras	45·7	40·3
Karachi .. .	65·7	70·3
Rangoon	78·3	27·2
Chittagong . ..	280·3	133·2

The war has affected the trade of all the ports in a manner which makes it useless to continue comparisons up to date on the lines of the foregoing figures.

CALCUTTA.

The Commissioners for the Port of Calcutta are as follows :—

Appointed by Government.—Mr. D. H. Lees, I.C.S., Chairman, Mr. S. C. Stuart-Williams, Vice-Chairman.

Elected by the Bengal Chamber of Commerce.—Mr. R. O. Law (Messrs. Birkmyre Bros.), Mr. W. F. Reynolds (Messrs. Macneill & Co.), Mr. J. H. Pattinson (Messrs. H. V. Low & Co.), Mr. F. C. Danger, C.B.E. (Messrs. Hoare Miller & Co.), Mr. J. Campbell (Messrs. Mackinnon Mackenzie & Co.) and Mr. R. M. Watson Smyth (Messrs. Turner Morrison & Co.)

Elected by the Calcutta Trades Association.—Mr. W. H. Phelps (Williams, Heath & Co.)

Elected by the Bengal National Chamber of Commerce.—Babu Woomesh Chandra Banerjee.

Elected by the Municipal Corporation of Calcutta.—Raja Reshee Case Law, C.I.E., M.L.C.

Nominated by Government.—Mr A. M. Clark (Agent, Bengal-Nagpur Railway), Mr. C. D. M. Hindley (Agent, East Indian Rly.), Mr. J. Coates (Agent, Eastern Bengal Rly.), Mr. A. H. Lloyd, I.C.S. (Collector of Customs) and Captain C. R. Campbell, D.S.O., R.I.M. (Superintendent of Kidderpore Dockyard).

The principal officers of the Trust are—

Secretary.—Mr. T. H. Elderton.

Traffic Manager.—Mr. W. A. Burns.

Chief Accountant.—Mr. N. G. Park, C.A.

Chief Engineer.—Mr. J. McGlashan, M. INST. C.E.

Deputy Conservator.—Commander E. A. Constable, R.N.

Medical Officer.—Lt.-Col. R. P. Wilson F.R.C.S., I.M.S.

Consulting Engineer and London Agent.—Mr J. Angus, M. INST. C.E.

The traffic figures and the income of the Trust for the last eight years are as follows :—

Year.	Docks.			Jetties.	Nett tonnage of shipping entering the Port.	Income.
	General Export.	Coal Export.	Imports.	Imports.		
	Tons	Tons.				Rs.
1913-14 ..	1,231,589	3,017,180	613,876	1,186,797	4,256,987	1,51,28,435
1914-15 ..	920,659	2,633,805	700,133	917,978	3,714,344	1,44,50,349
1915-16 ..	1,054,985	1,610,645	570,997	788,481	2,967,798	1,59,35,456
1916-17 ..	1,185,159	1,994,528	444,210	686,010	2,804,680	1,57,23,432
1917-18 ..	995,112	1,014,993	363,383	633,693	2,094,011	1,58,39,175
1918-19 ..	1,097,562	1,333,285	482,403	575,833	2,292,462	1,90,53,513
1919-20 ..	1,116,479	2,261,976	653,066	713,746	2,941,846	2,23,55,614
1920-21 ..	1,133,719	3,046,400	413,357	684,990	4,017,514	2,66,08,032

BOMBAY.

The Board of the Trustees of the Port of Bombay is constituted of 17 members as follows :—

Appointed by Government.—Mr G. W. Hatch, I.C.S. (Chairman), Mr. Mahomedbhoy Currimbhoy Ebrahim (Messrs. Currimbhoy Ebrahim & Co.), The Hon'ble Mr. Phiroze C. Sethna, O.B.E. (Messrs Phiroze C. Sethna), Major-General W. B. James, C.B., C.I.E., M.V.O. (The Officer Commanding, Bombay District), Mr. H. B Clayton, I.C.S. (Municipal Commissioner, Bombay), Major-General Sir Henry Freeland, K.C.I.E., C.B., D.S.O., M.V.O. (Agent, B. B & C. I Railway), Rear Admiral H. L. Mawbey, C.B (Director, Royal Indian Marine), Mr Fazul Ibrahim Rahimtulla (Messrs. Fazulbhai Ebrahim & Co.), Mr. C. A. Hawes (Agent, G. I. P. Railway), Mr J. A. Stevens, C.I.E., O.B.E., V.D. (Collector of Customs, Bombay).

Elected by the Chamber of Commerce —The Hon'ble Sir A. H. Froom (Messrs. Mackinnon Mackenzie & Co.). Mr. T W. Dowding (Messrs. Turner Morrison & Co), Mr H. T. Gorrie (South British Insurance Co), Mr. A K. Graham (Messrs. W & A. Graham & Co.). Mr F. C. Annesley (Messrs. Killick Nixon & Co.)

Elected by the Millowners' Association.—Sir Vithaldas D. Thackersey, Kt. (Messrs. Vithaldas Damodar Thackersey & Co.)

Elected by the Native Piece-goods Merchants' Association.—Mr. Vithaldas Damodar Govindji (Messrs. Vithaldas Damodar Govindji & Co. and Damodar Govindji.)

The following are the principal officers of the Trust :—

Secretary, W. R. S. Sharpe ; *Deputy Secretaries*, C. M. Hanson and N. M. Morris.

Chief Accountant.—J. Tyers.

Chief Engineer.—Mr. A. C W. Fosbery, M.I C.E.; *Deputy Chief Engineers.*—Messrs. C. G. Stileman and C. W. Wales, M.I.C.E.

Port Officer.—Capt. A. S. Baltour, O.B.E., R.I.M.

The revenue of the Trust in 1920-21 amounted to Rs 2,22,97,561. The expenditure amounted to Rs. 2,21,57,968, which included a special appropriation of Rs. 3,50,000 towards a newly formed depreciation fund for the intermediate replacement of engines, wagons, rails, and sleepers on the Port Trust Railway. The net surplus on the year's working was Rs. 1,83,110, which was transferred to the Revenue Reserve Fund, the balance of which at the close of the year amounted to Rs. 72,35,498. The aggregate capital expenditure during the year was Rs. 76,01,827. The total debt of the Trust at the end of the year amounted to Rs. 16,76,84,767

The trade of the Port of Bombay during the last official year aggregated 289 crores in value.

The number of steam and square-rigged vessels which entered the docks or were berthed at the harbour walls and paid dues, excluding those which remained for unloading and loading in the harbour stream during recent years, including last year, is shown by the following statement :—

Year.	Number.	Tonnage.
1907-08	1,477	2,678,345
1908 09	1.474	2,633,303
1909-10	1,611	2,747,779
1910-11	1 589	2,866,623
1911-12	1,519	2,767,913
1912 13	1,566	2,926,566
1913-14	1,579	3,135,597
1914-15	1,880	4,417,035
1915-16	1,794	3,939,721
1916 17	2,112	5,031,572
1917-18	2,069	4,746,578
1918-19	2,058	4,526,846
1919-20	2,164	4,874,820
1920-21	2,029	4,589,627

The two dry docks were occupied by 248 vessels, the total tonnage amounting to 918,798 tons which was less than the previous year by 66,359 tons.

KARACHI.

The members of the Board of Trustees of the Port of Karachi are as follows :—

Chairman.—Mr. J. B. S. Thubron, C.I.E.

Appointed by Government—Mr. H. H. Hood (Chief Collector of Customs in Sind), Mr. F. R. Hawkes, O.B.E. (District Traffic Superintendent, North Western Railway, Karachi Port), Lt.-Col. G. F. Perkins, D.S.O. (General Staff Officer, Sind-Rajputana District), Major C. L. Whitaker (Embarkation Commandant, Keamari), Mr. E. Miller (Anglo-Siam Corporation Ltd.) (on leave), Mr. D. J. MacGillivray (Mackinnon Mackenzie & Co.) (acting), Mr. Gidumal Lekhraj (Representative Indian Merchant) and Khan Bahadur K. H. Katrak (Katrak & Co.)

Elected by the Chamber of Commerce—Sir Montagu Webb, Kt., C.I.E., C.B.E. (Forbes Forbes Campbell & Co., Ltd.) (on leave), Mr. C. C. Demetriadi (Ralli Bros.) (acting), Mr. A. O. Brown (Mackinnon Mackenzie & Co.) (on leave), Mr. H. G. Houghton (Donald Graham & Co.) (acting) and Mr. S. E. Woodward (Clements Robson & Co.).

Elected by the Municipality—Mr. Wadhumal Oodharam, B.A., LL.B., M.L.C.

The principal officers of the Trust are :—

Port Officer.—Captain G. N. Forteath, R.I.M.

Assistant Port Officer and Harbour Master.—Commander H. Tronson, R.N.R. (Retired).

Secretary and Traffic Manager.—Mr. T. S. Downie, O.B.E.

Chief Accountant.—Mr. B. A. Inglet, B.A., C.A.

Chief Engineer.—Mr. W. H. Neilson, O.B.E., M.A., M. Inst. C.E., M.I.M.E.

Deputy Chief Engineer.—Mr. T. H. E. Coad, M. Inst. C.E.

The revenue receipts and expenditure of the Port of Karachi for the year 1920-21 were as under :—

Revenue receipts (excluding the Port Fund Account) Rs. 55,33,192. Expenditure Rs. 53,26,102. Surplus Rs. 2,07,090. Reserve Fund Rs. 27,07,321.

The number of vessels which entered the Port during the year 1920-21 exclusive of vessels put back and fishing boats, was 3,358 with a tonnage of 2,108,346 against 3,578 with a tonnage of 1,85,02,121 in 1919-20. 880 steamers of all kinds entered the Port with a tonnage of 1,962,414 against 822 and 1,688,031, respectively, in the previous year. Of the above 813 were of British nationality.

Imports landed at the ship wharves during the year totalled 330,357 tons against 263,308 in the previous year. Total shipments from the ship wharves were 820,641 tons in 1920-21 against 582,755 tons in 1919-20.

MADRAS.

The following gentlemen are the Trustees of the Port of Madras —

Officials.—Mr. H. H. G. Mitchell, O.B.E., M. Inst., C.E., M.I.E. (Ind.) (Chairman), Mr. A. M. Green, I.C.S. (Collector of Customs), Capt. E. W. Huddleston, C.I.E., C.B.E., R.I.M. (Presidency Port Officer) and M.R.Ry. Rao Bahadur A. V. Ramalinga Ayyar Avargal, B.A., B.C.E. (Superintending Engineer, V Circle, Madras).

Non-Officials.—(1) *Nominated by Government.*—A. A. Biggs, M. Inst. C.E., Mr. C. Crighton, Mr. Abdul Hussain Khaleeli. (2) *Representing Chamber of Commerce, Madras.*—Mr. J. F. Simpson, M.L.C., Mr. W. A. Turner, Mr. W. Alexander, M.L.C., Mr. T. M. Ross. (3) *Representing Southern India Chamber of Commerce, Madras*—M.R.Ry. Divan Bahadur Govindass Chatterbhoojadoss, M.L.C., and M.R.Ry. M. Venugopaul Naidu Avergal. (4) *Representing Madras Trades Association.*—Mr. S. J. Green and Mr. R. J. C. Robertson.

The receipts during the year of the Port Trust on Revenue account from all sources were Rs. 29,58,786 as against 25,49,667 in 1919-20 and the gross expenditure out of revenue was 25,10,082. During the year 648 vessels with an aggregate tonnage of 1,662,444 tons, including 351 from foreign ports, 171 from coast ports and 103 country sailing craft, called at the port against last year's figure of 521 vessels of 1,166,352 tons.

RANGOON.

The personal of the Commissioners for the Port of Rangoon is comprised of the following thirteen members :—

Appointed by Government.—Messrs. J. A. Cherry, C.I.E., M.I.C. (Chairman), A. E. Boyd (Officiating Chief Collector of Customs, Burma), G. Scott, M.A., I.C.S. (President, Rangoon Municipality), Captain A. Hamilton, D.S.O., R.I.M. (Principal Port Officer, Burma), Major R. W. Macdonald, D.S.O., I.A. (Commissioner of Police), Maung Po Yee, Messrs. R. Graham and J. R. D. Glascott.

Elected by the Burma Chamber of Commerce.—Messrs. J. A. Swan (Vice-Chairman), J. Hogg, A. B. Ritchie and A. J. Anderson, C.S.I.

Elected by the Rangoon Trades Association.—Mr. G. S. Clark.

Principal Officers are :—

Deputy Chairman.—Mr. I. Cowling.

Secretary.—Mr. H. Leonard.

Chief Engineer—Mr. E. C. Niven, M. Inst. C.E.

Deputy Conservator.—Mr. H. G. G. Ashton, D.S.O.

Port Health Officer.—Dr. C. G. Crow, K.I.H.

The receipts and expenditure on revenue account of the port of Rangoon in 1920-21 were as follows :—

	Rs.
Receipts	54,61,738
Expenditure	54,12,048

The capital debt of the port at the end of the year was Rs. 2,98,62,000. Against this should be set the total of the balance (including investments at cost) at the credit of the different sinking funds, namely, Rs. 83,50,520.

The total imports (landed or sent inland in river craft) from sea-going vessels amounted to 1,120,279 tons. The tonnage of goods dealt with at the jetties and foreshore for inland vessels during the year amounted to 1,319,392 tons. The total number of steamers (excluding Government vessels) entering the port was 1,303 with a total net registered tonnage of 2,767,816 being an increase of 249 steamers and 518,065 tons over the previous year.

CHITTAGONG.

Chittagong, in Eastern Bengal, on the right bank of the Karnaphuli river 12 miles from its mouth, was already an important place of trade in the sixteenth century, when the Portuguese merchants gave it the name of Porto Grando. The construction of the Assam Bengal Railway has made it the natural outlet for the trade of Assam and part of Eastern Bengal. The chief business is the export of the Piecegoods, salt and kerosene oil are imported, and jute and tea are the principal exports.

The chief business is the export of tea, piecegoods, salt and kerosine oil are imported, and tea and jute are the principal exports—

Foreign Trade, 1920-21. Rs. (in lakhs.)	
Imports	111·12
Exports	295·92

Coasting Trade, 1920-21.	
Imports	269·24
Exports	108·98

Port Commissioners.—Messrs. A. H. Clayton, I.C.S. (Chairman), F. W. Strong, I.C.S. (Vice-Chairman), T. R. Nolan, P. T. Moore, J. A. Stein, R. Brodie, J. B. Dickie and Rai Upendralal Roy Bahadur, M.L.C.

Port Officer and Secretary to the Port Commissioners.—Commander E. C. Withers, C.I.E., R.I.M.

Port Engineer.—Mr. W. P. Barron, A.M. Inst. C.E.

Vessels of 6,000 tons can ascend the river Karnafuli to the town, where there are four jetties, mooring accommodation and four 10-ton hydraulic cranes and seventeen to lift 35 cwt.

VIZAGAPATAM HARBOUR PROJECT.

The question of the creation of a harbour at Vizagapatam, to supply an outlet for a large area of fertile country hitherto undeveloped and without suitable access to the outside world, was lately brought to the fore through a report to the Bengal-Nagpur Railway Company by their consulting engineers, Sir John Wolfe Barry, Lyster and partners. This report, which was based on personal inspection, upholds the practicability of creating, at no very extravagant cost, an inland harbour to which access would be maintained by two breakwaters projecting into the sea, and by dredging a channel to the depth (in the first instance) of 24 feet. A deep-water quay would be provided, 1,500 feet in length, with a possibility of supplying further accommodation in the future. The proposals made in this report were carefully gone into at site by representatives both of the consulting Engineer and of the Bengal Nagpur Railway and working plans have been prepared so that there might be no delay in starting work when funds became available for the purpose.

The question received sympathetic consideration on the part of the Indian Government and the Bengal-Nagpur Railway will probably be given powers to raise capital for the construction and working of the port as part of their railway system. That the creation of such a port would have a beneficial influence on the development of a large area in East Central India seems unquestioned. It is pointed out that Vizagapatam, lying as it does in front of the only practicable gap in the barrier of the Eastern Ghats, is formed by nature to be the outlet of the Central Provinces, from which a considerable amount of trade has taken this route in the past, even with the imperfect communications hitherto available. A necessary complement of the scheme would be the construction of the proposed railway by Parvatipuram to Raipur, which with the existing coast line of the Bengal Nagpur Railway, would make a large and rich area tributary to the proposed port, and obviate the long and expensive circuit by Calcutta. A link would also be supplied in the most direct route to Rangoon from Europe by way of Bombay, while from an imperial point of view the possible provision of a fortified port on the long and almost unprotected stretch of coast between Colombo and Calcutta is held to be a consideration of great importance. The lofty projecting headland of the Dolphin's Nose would, it is pointed out, offer facilities for this purpose as well as protecting the entrance to the Port from the effects of south and south-westerly gales.

The necessary steps are being taken by the Government of India to achieve this end 12 square miles of land are being acquired for the purposes of the harbour.

Famine.

Famine in India is the inevitable accompaniment of economic conditions which leave the bulk of the people dependent on the soil for their means of livelihood. It is intensified, because the produce of the soil over the greater part of India is independent on a short rainy season, and the rains are erratic and subject to violent fluctuations. It falls with exceptional severity on India because the soil is divided into a multitude of petty holdings, tilled by people without any capital, living for the most part from hand to mouth, and amongst whom credit ceases to exist as soon as the rains fail. In other agricultural countries there are good seasons and bad; but there is none other, with the possible exception of China, where in a famine year millions of acres may not yield so much as a blade of grass, except under artificial irrigation. The conclusion to be drawn from these conditions is that for many years to come India must be susceptible to famine. The shock of famine may be mitigated by the spread of railways, by the development of irrigation, the growth of manufacturing industry and the improvement of rural credit. There is evidence that all these forces are tending greatly to reduce the social and economic disturbance caused by a failure of the rains But they cannot entirely remove it.

Famine Under Native Rule.

At one time there was a general tendency to attribute famine in India entirely to the effect of British rule. In the golden age of India, we were told—whenever it may have been—famine was unknown. But India had been drained of its resources of food by the railways, the people had been impoverished by the land revenue demand and the country as a whole had been rendered less capable of meeting a failure of rains by the "Drain" caused by the Home Charges (*qv*). These fallacies have disappeared under the inexorable logic of facts. A better knowledge of Indian history has shown that famines were frequent under Native rule, and frightful when they came. "In 1630" says Sir William Hunter, in the History of British India, "a calamity fell upon Gujarat which enables us to realise the terrible meaning of the word famine in India under Native rule. Whole cities and districts were left bare of inhabitants." In 1631 a Dutch merchant reported that only eleven of the 260 families at Swally survived. He found the road thence to Surat covered with bodies decaying on the highway where they died, there being none to bury them. In Surat, that great and crowded city, he could hardly see any living persons; but "the corpses at the corner of the streets lie twenty together, nobody burying them. Thirty thousand had perished in the town alone. Pestilence followed famine." Further historical evidence was adduced by Sir Theodore Morrison in his volume on the Economic Transition of India. The "Drain" theory has been exploded. It has come to be seen that whilst railways have checked the old-fashioned practice of storing grain in the villages they have made the reserves, where they exist, available for the whole of India. In India there is now no such a thing as a food famine; the country always produces enough food for the whole of the population; famine when it comes is a money famine, and the task of the State is confined to providing the means for those affected by drought to earn enough to buy food. The machinery whereby this is done will be examined after we have seen the experiences through which it was evolved.

History of Recent Famines.

The Orissa famine of 1865-67 may be taken as the starting point because that induced to first great and organised effort to combat distress through State agency. It affected 180,000 square miles and 47,500,000 people. The Bengal Government was a little slow in appreciating the need for action, but later food was poured into the district in prodigious quantities. Thirty-five million units were relieved (a unit is one person supported for one day) at a cost 95 lakhs. The mortality was very heavy, and it is estimated that a million people, or one-third of the population, died in Orissa alone. This was followed by the Madras famine of 1866, and the famine in Western India of 1868-70. The latter famine introduced India to the great migration from Marwar which was such a distinguishing feature of the famine of 1899-1900; it is estimated that out of a total population of a million and a half in Marwar, one million emigrated. There was famine in Behar in 1873-74, then came the great South Indian Famine of 1876-78. This affected Madras, Mysore, Hyderabad and Bombay for two years and in the second year extended to parts of the Central and United Provinces and to a small tract in the Punjab. The total area affected was 257,000 square miles and the population 58,500,000. Warned by the excessive expenditure in Behar and actuated by the desire to secure economy the Government relief programme was not entirely successful. The excess mortality in this famine is said to have been 5,250,000 in British territory alone. Throughout British India 700,000,000 units were relieved at a cost of Rs. 8½ crores. Charitable contributions from Great Britain and the Colonies aggregated Rs. 84 lakhs.

The Famine Codes.

The experiences of this famine showed the necessity of placing relief on an organised basis. The first great Famine Commission which sat under the presidency of Sir Richard Strachey, elaborated the Famine Codes, which amended to meet later experience, form the basis of the famine relief system to-day. They recommended (1) that employment should be given on the relief works to the able-bodied, at a wage sufficient for support, on the condition of performing a suitable task; and (2) that gratuitous relief should be given in their villages or in poor houses to those who are unable to work. They recommended that the food supply should be left to private agency; except where that was unequal to the demands upon it. They advised that the land-owning classes should be assisted by loans, and by general suspensions of revenue in proportion to the crop failure. In sending a

Famine Code to the provincial governments, the Government of India laid down as the cardinal feature of their policy that the famine wage "is the lowest amount sufficient to maintain health under given circumstances. Whilst the duty of Government is to save life, it is not bound to maintain the labouring population at its normal level of comfort." Provincial codes were drawn up, and were tested by the famine of 1896 97. In that 307,000 square miles were affected, with a population of 69,500,000. The numbers relieved exceeded 4,000,000 at the time of greatest distress. The cost of famine relief was Rs. 7¼ crores, revenue was remitted to the extent of Rs. 1¼ crore, and loans given aggregating Rs. 1¼ crore. The charitable relief fund amounted to about Rs. 1¾ crore, of which Rs. 1¼ crore was subscribed in the United Kingdom. The actual famine mortality in British India was estimated at 750,000. The experiences of this famine were examined by a Commission under Sir James Lyall, which reported that the success attained in saving life and the relief of distress was greater than had ever been recorded in famines, comparable with it in severity, and that the expense was moderate. But before the Local Governments had been given time to digest the proposals of this Commission or the people to recover from the shock, the great famine of 1899-1900 supervened.

The Famine of 1899-1900.

This famine affected 475,000 square miles with a population of 59,500,000. In the Central Provinces, Berar, Bombay, Ajmer, and the Hissar district of the Punjab famine was acute. It was intense in Rajputana, Baroda, Central India, Hyderabad and Kathiawar. It was marked by several distinctive features. The rainfall over the whole of India was in extreme defect, being eleven inches below the mean. In several localities there was practically no rain. There was in consequence a great fodder famine, with a terrible mortality amongst the cattle. The water supply was deficient, and brought a crop of difficulties in its train. Then districts like Gujarat, where famine had been unknown for so many years that the locality was thought to be famine immune, were affected; the people here being softened by prosperity, clung to their villages, in the hope of saving their cattle, and came within the scope of the relief works when it was too late to save life. A very large area in the Native States was affected, and the Marwaris swept from their impoverished land right through Central India like a horde of locusts, leaving desolation in their train. For these reasons relief had to be given on an unprecedented scale. At the end of July 4,500,000 persons were supported by the State, Rs. 10 crores were spent on relief, and the total cost was estimated at Rs. 15 crores. The famine was also marked by a widespread acceptance by Native States of the duty hitherto shouldered by the Government of India alone—the supreme responsibility of saving human life. Aided by loans to the extent of Rs. 3½ crores, the Native States did a great deal to bring their administration into line with that in British India. Although actual deaths from starvation were insignificant, the extensive outbreaks of cholera, and the devastating epidemic of malaria which followed the advent of the rains induced a famine mortality of approximately a million. The experiences of this famine were collated by the Commission presided over by Sir Antony MacDonnell. This Commission reported that taking the famine period as a whole the relief given was excessive, and laid down certain modified lines. The cardinal feature of their policy was moral strategy. Pointing out that if the people were assisted at the start they would help themselves, whilst if their condition were allowed to deteriorate it proceeded on a declining scale, they placed in the forefront of their programme the necessity of "putting heart into the people." The machinery suggested for this purpose was the prompt and liberal distribution of tagai loans, the early suspension of revenue, and a policy of prudent boldness, starting from the preparation of a large and expansive plan of relief and secured by liberal preparations, constant vigilance, and a full enlistment of non-official help. The wage scale was revised; the minimum wage was abolished in the case of able-bodied workers; payments by results were recommended; and proposals were made for saving cattle.

Success of the new policy.

The effectiveness of this machinery was partly demonstrated during the three lean years which followed the great famine in the Bombay Presidency. But it received its most conspicuous demonstration when the rains failed in the United Provinces in 1907-08. Moral strategy was practised here on an unprecedented scale, tagai loans being granted with the greatest liberality. The effect of these measures was succinctly indicated by the Lieutenant-Governor of the United Provinces, Sir John Hewett, in a speech in summarising his administration prior to his departure in England in March 1912. He showed that in the autumn harvest of 1907 there was a shortage of 4 million tons of food grains and in the spring harvest a shortage of 3 million tons, giving a total of seven million tons, or the food supplies for the Province for nine months and an economic loss of £38 million pounds. The Government advanced £1¼ million to cultivators for temporary purposes and large sums for wells and permanent irrigation. The whole of this sum was repaid except fifty-four thousand pounds remitted owing to a second bad season and twenty-five thousand pounds then outstanding. By common consent a great famine had never been met with less loss and suffering to the people, and two years later hardly a trace of it remained. In 1911 the rainfall failed over a considerable area in Gujarat in the Bombay Presidency and again in 1912 in the Ahmednagar District of the Bombay Deccan and both these partial failures demonstrated that the shock of famine is far less severe now, owing to the increased resourcefulness of the people, than it was so late as 1899. Still further evidence in the same direction was furnished when the rains failed over large areas in the United Provinces in 1913-14. This famine affected 17,000 square miles with a population of 5½ millions, whilst distress was grave in 30,000 square miles with a population of 14 millions.

Three points soon emerged from the year—the people showed greater resisting power owing to their improved economic condition; they met the emergency with wonderful courage and resource; and the application of the relief programme brought the numbers on public works within manageable proportions, and induced the speedy return of the people to their normal avocations when the advent of bountiful rains in 1914 enabled agricultural operations to be generally resumed.

The Government of India is now in possession of complete machinery to combat the effects of drought. In ordinary times Government is kept informed of the meteorological conditions and the state of the crops; programmes of suitable relief works are kept up to date, the country is mapped into relief circles, reserves of tools and plant are stocked. If the rains fail, policy is at once declared, non-officials are enlisted, revenue suspended and loans for agricultural purposes made. Test works are then opened, and if labour in considerable quantities is attracted, they are converted into relief works on Code principles. Poor houses are opened and gratuitous relief given to the infirm. On the advent of the rains the people are moved from the large works to small works near their villages, liberal advances are made to agriculturists for the purchase of plough, cattle and seed. When the principal autumn crop is ripe, the few remaining works are gradually closed and gratuitous relief ceases. All this time the medical staff is kept in readiness to deal with cholera, which so often accompanies famine, and malaria, which generally supervenes when the rains break.

Famine Protection.

Side by side with the perfection of the machinery for the relief of famine has gone the development of famine protection. The Famine Commission of 1880 stated that the best, and often the only means of securing protection from the extreme effects of famine and drought, are railways and irrigation. These are of two classes, productive and protective. Productive works being estimated to yield profits which will pay interest and sinking fund charges are met from loans; protective works, which do not pay, directly from revenue. In order to guarantee that there should be continuous progress with protective works, the Famine Insurance Grant was instituted in 1876. It was decided to set apart from the general revenues Rs. 1½ crores annually or one million sterling. The first charge on this grant is famine relief, the second protective works, the third the avoidance of debt. The chain of protective railways is now practically complete. Great progress is being made with protective irrigation. Acting on the advice of the Irrigation Commission (*q v*) an elaborate programme of protective irrigation works is being constructed, particularly in the Bombay Deccan—the most famine susceptible district in India—and in the Central Provinces. When these are completed, the shock of drought will be immensely reduced.

The Outlook.

Such in brief is the official programme and organisation which has been built up out of the experience and practice of the past. Yet everything goes to show that Government activity to save human life will never be wanted in the future on the colossal scale of former times, even so recently as 1899-1900. Each succeeding failure of the rains indicates that there has been in silent progress an economic revolution in India. Reference has been made to the powerful protective effect of tagavi in the last famine in the United Provinces. These lessons were driven home when the rains failed in the same Province in 1913. But a far more striking demonstration was given. In the year 1918 the rains failed more seriously and over a wider area than during any monsoon in the recent history of India. The deficiency in the rainfall was more marked than in the great famine of 1899. Yet such was the increased resisting power of the people that instead of a demand for State relief from over five millions, the maximum number at any time in receipt of public assistance was never so large as six hundred thousand. The shock to the social life of the community was insignificant; the effects of the drought completely disappeared with the good rains of the following year.

Increased Resisting Power.

The causes of this economic change in the conditions of India, whose influence is widespread, are many. We can only briefly indicate them here. There is a much greater mobility in Indian labour. Formerly when the rains failed the ryot clung to his village until State relief in one form or another was brought almost to his doors. Now at the first sign of the failure of the rains he girds up his loins and goes in search of employment in one of the industrial centres, where the supply of labour is rarely equal to the demand, or on the constructional works which are always in progress either through State or private agency in the country. Then the ryot generally commands some store of value, often mistermed a hoard. The prices of agricultural produce have enormously increased of recent years, especially of export crops like cotton, and as three quarters of the people are directly or indirectly dependent on the soil, they have proportionately benefited. The balance of exports in favour of India in normal times is approximately £ 50 millions a year. The gold and silver bullion in which this is largely liquidated is distributed all over the country, in small sums or in ornaments, which can be drawn upon in an emergency. The prodigious coining of rupees during the last two years of the war, and the continuous absorption of gold by India, represent small diffused savings, which take this form owing to the absence of banking institutions and lack of confidence in the banking system. There has been a large extension of irrigation. More than one-third of the land in the Punjab is now under irrigation, and in other Provinces, particularly in the famine-susceptible tracts of the Bombay Deccan, irrigation works have been constructed, which break the shock of a failure of the rains. Then the natural growth of the population has been reduced by plague and famine diseases, followed by the great influenza pandemic of 1918-19, which swept off five millions of people. This has not only prevented the increase of congestion, but has brought some areas particularly in the Native States below their former population supporting capa-

city. The increase of railways distributes the resources of the country with ease. Finally, there is the considerable development of manufacturing industry, which is generally short of labour and helps to absorb the surplus of a famine year. Whilst the Government is completely equipped with a famine code, there is no reason to suppose that there will ever recur such an emergency as that of 1899. Famine can now be efficiently met by the liberal distribution of tagavi, the suspension and remission of the land revenue demand, the relief of the aged and others who cannot work, with possibly some assistance in transporting the affected population of the famine-affected tract to the industrial centres.

The Indian Famine Trust.

Outside the Government programme there is always scope for private philanthropy, especially in the provision of clothes, help for the superior class poor who cannot accept Government aid, and in assisting in the rehabilitation of the cultivators when the rains break. At every great famine large sums have been subscribed, particularly in the United Kingdom, for this purpose, and in 1899-1900 the people of the United States gave generous help. With the idea of providing a permanent famine fund, the Maharaja of Jaipur gave in 1900 a sum of Rs. 16 lakhs, in Government securities, to be held in trust for the relief of the needy in time of famine. This Trust has now swollen to Rs. 30 lakhs, chiefly from gifts by the founder's family. It is vested in trustees drawn from all parts of India, and is freely used in an emergency.

BOY SCOUTS.

The Boy Scouts movement, initiated in England by Lt.-Gen. Sir Robert Baden Powell (the Chief Scout), has spread widely in India, both among Europeans and Indians. The Viceroy is Chief Scout of India and the heads of Provinces. Chief Scouts in their own areas. The aim of the Association is to develop good citizenship among boys by forming their character—training them in habits of observation, obedience and self-reliance—inculcating loyalty and thoughtfulness for others—and teaching them services useful to the public and handicrafts useful to themselves.

It is confidently anticipated that in the Boy Scout Movement will be found a natural mean, of bridging the gulf between the different races existing in India. The movement is non-official, non-military, non-political and non-sectarian. Its attitude towards religion is to encourage every boy to follow the faith he professes. Every boy admitted as a Scout makes a threefold promise to do his best: (1) to be loyal to God and the King; (2) to help others at all times; and (3) to obey the Scout law. The law referred to lays down—

1. That a Scout's honour is to be trusted;
2. That he is loyal to God and the King, his parents, teachers, employers, his comrades, his country and those under him;
3. That he is to be useful and to help others;
4. That he is a friend to all and a brother to every other scout, no matter to what social class the other belongs,
5. That he is courteous;
6. That he is a friend to animals;
7. That he obeys orders;
8. That he smiles and whistles under all difficulties;
9. That he is thrifty;
10. That he is clean in thought, word, and deed.

During the war a number of independent organisations sprang up. These have mostly been amalgamated under the parent body and complete amalgamation is hoped for. The number of scouts is probably about 15,000 of all races.

HEADQUARTERS STAFF IN INDIA.

Chief Commissioner—Sir A. D. Pickford, 2, Hare Street, Calcutta.

Hony. General Secretary—D. N. Basu, 14, Balaram Ghose's Street, Calcutta.

Hony. Treasurer—E. E. Savi, Alliance Bank of Simla, Calcutta.

Hony. Quarter-Master—H. S. Suhrawardy, 3, Wellesley 1st Lane, Calcutta.

Bankers.—The Alliance Bank of Simla, Calcutta.

More than sixty per cent. of the vast population of India subsists on agriculture and the majority of these millions generally live, under present conditions, from hand to mouth. The ryot's occupation is healthy and productive, and he is proverbially honest and straightforward in his dealings, except when years of famine and hardship make him at times crafty and recalcitrant. Owing to his poverty, combined with deficiency in education and consequent lack of foresight, he has to incur heavy debts to meet occasional expenses for current seasonal purposes, the improvement of his land, or for ceremonial objects, and he has therefore to seek the assistance of the local money-lender, known as the Sowkar or the Mahajan. The rate of interest on such advances though varying from province to province and even in different parts of a province is generally very high. In addition to charging excessive rates the Sowkar extorts money under various pretexts and takes from the needy borrower bonds on which heavy stamp duties are payable. One of the chief causes of the ryot's poverty is, that owing to the absence of security and his short-sightedness due to want of education, he does not as a rule collect and lay by his savings, but fritters away his small earnings in extravagant and unproductive expenditure on the purchase of trinkets and ornaments and on marriage and other ceremonies. In some cases, he hoards coins under the ground with the likelihood that on his death the money is lost to his family for good. This absence of thrift and the habit of dependence, in case of difficulty, on the Government or on the Sowkar are the bane of his life. There is besides a total absence of ideals or desire for progress. A co-operative society would change all this, inasmuch as it would provide him with a suitable institution in which to lay by his savings and would teach him the valuable lesson of self-help through the sense of responsibility he would feel in being its member. Thus the chronic poverty and indebtedness of the Indian agriculturist afford a very good field for the introduction of co-operative methods, especially as his work is of a productive character likely to enable him to earn a better living under circumstances more favourable than they are at present.

Genesis of the Scheme.—The question of improving rural credit by the establishment of agricultural banks was first taken up in the early nineties when Sir W. Wedderburn, with the assistance of the late Mr. Ranade, prepared a scheme of Agricultural Banks which was approved of by Lord Ripon's Government but was not sanctioned by the Secretary of State. The matter was not again taken up until about fifteen years later when Lord Wenlock's Government in Madras deputed Mr. F. A. (now Sir Frederick) Nicholson, to report on the advisability of starting Agricultural and other Land Banks in the Presidency for the relief of the agriculturists. There was an indigenous system of banking available for the person of small means. This institution called the Nidhi, corresponded in some respects to the Provident Funds and Friendly Societies in European countries. Though these institutions provided cheap capital to the agriculturists the spirit of co-operation was lacking in them. Sir Frederick submitted an exhaustive report to Government suggesting that the formation of co-operative societies afforded an excellent means for relieving rural indebtedness. The report surveyed the growth of the co-operative movement in European countries, the conditions favourable to its development in India, if introduced, and the difficulties to be encountered in introducing it and making it a success here. Finally, it contained, for the consideration of Government, a draft Bill for the organization of Co-operative Societies. Sir Frederick pleaded for concessions to be given to the societies—such as exemption from the income-tax and remission of the stamp duty—as he felt that it would be possible to attract the people to the new movement only if Government showed its active sympathy towards it at the commencement. He ended with a fervent appeal to the non-official community "to find a Raiffeisen" who would help the ryots of this country in achieving results equal to those obtained by Raiffeisen's noble efforts in Germany. Unfortunately the report was not received favourably either by the non-official public or by the Government of Madras, and no action was taken on its suggestions.

Famine Commission of 1901.—The next few years saw two of the worst famines that India had ever suffered from, and in 1901, Lord Curzon appointed a Commission to report on the measures to be adopted in future to prevent famines and to protect the ryot from their ravages. The Commission laid stress on the proper working of the Agriculturists' Loans and the Land Improvement Loans Acts under which *takavi* advances are made to cultivators. This system was given a long trial in the years previous to the great famines as well as during the ten years succeeding the 1899-1900 famines. But it is acknowledged on all hands that the system has not been successful in solving the problem of rural stagnation as it is clear that it is not facility for obtaining cheap capital alone which will raise the agriculturists and relieve him from his debts, but the provision of capital combined with the inculcation of habits of thrift and self-help. The Commission also recommended that the principal means of resisting famines was by strengthening the moral backbone of the agriculturist and it expressed its view that the introduction of co-operation in rural areas might be useful in securing this end.

Co-operative Credit Societies' Act.—These recommendations induced Lord Curzon to appoint a Committee with Sir Edward Law at its head to investigate the question and a Report was submitted to Government recommending that co-operative societies were worthy of every encouragement and of a prolonged trial. Sir Anthony (now Lord) Macdonell and others were at the same time making experiments on similar lines in the United Provinces and the Punjab with satisfactory results. All these activities, however, took an organized shape only when Lord Curzon's Government introduced in the Supreme Legislative Council a Bill to provide for the constitution and control of Co-operative Credit Societies. The main provisions of the Bill which became the Co-operative Credit Societies' Act (Act X of 1904) were:—

(1) That any ten persons living in the same village or town or belonging to the same class or caste might be registered as a Co-operative

Society for the encouragement of thrift and self-help among the members.

(2) The main business of a Society was to raise funds by deposits from members and loans from non-members, Government and other Co-operative Societies, and to distribute money thus obtained by way of loans to members, or with the special permission of the Registrar, to other Co-operative Credit Societies.

(3) The organization and control of Co-operative Credit Societies in every Presidency were put under the charge of a Special Government Officer called the Registrar of Co-operative Credit Societies.

(4) The accounts of every society were to be audited by the Registrar or by a member of his staff free of charge.

(5) The liability of a member of a society was to be unlimited in the case of a Rural Society.

(6) No dividends were to be paid on the profits of a rural society, but the profits were to be carried at the end of the year to the Reserve Fund, although when this fund had grown beyond certain limits fixed under the bye-laws, a bonus might be distributed to the members.

(7) In the case of Urban Societies no dividend was payable until one-fourth of the profits in a year were carried to the Reserve Fund.

Soon after the passing of the Act the local Governments in all the Presidencies and major provinces appointed Registrars with full powers to organise, register, and control the Management of societies. In the early stages of the working of this Act, Government loans were freely given, and the response to the organising work of the Registrars was gradual and steady throughout most parts of the country.

Co-operative Societies' Act—As co-operation progressed in the country defects were noticed in the Co-operative Credit Societies' Act and these were brought to the notice of Government by the Provincial Conferences held under the auspices of Local Governments in various Presidencies, as well as by the Annual Conferences of the Registrars. In two directions the need for improved legislation was especially felt. In the first place, the success of credit societies had led to the introduction of co-operative societies for distribution and for purposes other than credit for which no legislative protection could be secured under the then existing law. And in the second place, the need for a freer supply of capital and for an improved system of supervision had led to the formation of various central agencies to finance and control the original credit societies and these central agencies ran all the risks attendant on a status unprotected by legislation. The Government of India, recognising the need for removing these defects, decided to amend the old Act, and a Bill embodying the essential alterations proposed was introduced in the Imperial Legislative Council, and after a few amendments it emerged from the Council as the Co-operative Societies' Act (II of 1912) replacing Act X of 1904. The outstanding features of the new Act were as follows:—

(*a*) It authorised the formation of societies for purposes other than credit, which was possible under the old Act only with the special permission of the Local Government. This extension of Co-operation to purposes other than credit marks an important stage in its development in India.

(*b*) It defined in precise terms the objects for which Co-operative Societies could be organised.

(*c*) It removed the arbitrary division of societies into Rural and Urban and substituted the more scientific division in accordance with the form of liability adopted.

(*d*) It facilitated the growth of central agencies by insisting on a limited liability by means of a special clause about the registration of a society one of whose members is a registered society.

(*e*) It empowered the Local Government to frame rules and alter bye-laws so as to put restrictions on the dividends to be declared by societies and allowed them the discretion to sanction distribution of profits to their members by unlimited liability societies.

(*f*) It allowed societies with the permission of the Registrar to contribute from their net profits, after the Reserve Fund was provided for amounts up to 10 per cent. of their remaining profits to any charitable purpose as defined in the Charitable Endowments' Act. This kept the movement in touch with local life by permitting societies to lend assistance to local educational and charitable institutions.

(*g*) It prohibited the use of the word "Co-operative" as part of the title of any business concern except a registered society.

Composition of the Capital of Agricultural Societies.—On the organization of agricultural credit was necessarily concentrated the attention of the promoters, for it presented a far more important and far more difficult problem than industrial credit. There was a great variety of types among the agricultural societies started in different provinces, and some Registrars adopted the "Schulze-Delitzsch," some the "Raiffeisen," and some the "Luzzatti" methods in their entirety. The commonest type, as in the Punjab, Burma, and the United Provinces, is the unlimited liability society with a fee for membership and a small share capital, the share payments to be made in instalments. In some cases the system insists on compulsory deposits from members before entitling them to enjoy the full privileges of membership. The system in Bombay, Bengal, and the Central Provinces is entirely different, there being no share-capital but only a membership-fee. Part of the working capital is raised by deposits from members and other local sympathisers, but the bulk of it in all provinces is obtained by loans from Central and other co-operative societies. In all the Presidencies, the Government set apart in the initial stages every year a certain sum to be advanced as loans to newly started co-operative societies, usually up to an amount equal to the deposits from members, raised by a society. State aid in the form of money doles has now become an exception rather than the rule, and this withdrawal in no way hampers the development of the movement on account of the rapid increase of Co-operative financing agencies and the growth of public confidence in the primary societies. For agricultural societies generally, the main sources of capital

are shares, deposits of members, deposits from non-members and loans from central Societies. Out of a total working capital of nine and a half crores, shares and reserves each amounted to a crore and a quarter, members' and non-members' deposits to half a crore each, State aid to a quarter crore and loans and deposits from societies and banks five and three quarter crores.

Constitution of Agricultural Societies.—The typical Agricultural Society in India corresponds to the "Raiffeisen" society, the management being gratuitous, the profits indivisible, and the area of work limited. In the Punjab, the United Provinces and Burma where shares form an integral part of the system, the distribution of a portion of the profits after ten years working is permitted under certain restrictions. Usually, the secretary gets a monthly pay of Re. 1 to Rs. 5 with a bonus at the end of the year equal to a fourth of annual profits. In parts of the country there are villages where a few literate men may be found but most of these are hardly fit enough to undertake the responsible work of a secretary, being practically ignorant of account keeping. In such villages either the village school-master or the village accountant is appointed secretary. In some places, where a suitable person is not available on this low pay neighbouring societies are grouped together with a whole-time, well-paid secretary. This arrangement, which has its advantages, involves the drawback that the outsider working as secretary does not naturally take as much interest in the society's working as a *bona-fide* member does and is less amenable to the control of the members. As the work of societies develops, the need for trained secretaries is being felt more keenly for it is now realized that the function of a secretary does not consist merely in writing the accounts correctly. With a view to meet the demand for trained secretaries, training classes have been organized in Bombay and elsewhere during the last few years and education in co-operation has been placed on a systematic basis by the new educational and propagandist associations which have been organized in all the major provinces. In Bombay and Bengal arrangements have also been devised to educate the members of managing committees in the principles of the movement through peripatetic instructors and courses of simple lectures

Internal Management of Societies—The managing committee of a society consists of 5 to 9 members of the society, the chairman being usually the leading person in the village. The daily work of the society is carried on by the secretary, but the managing committee supervises the work and has alone the power to admit new members, to receive deposits, arrange for outside loans, grant loans to members and take notice of defaulters. The accounts of the society are kept by the secretary and the necessary forms, papers, and books are usually supplied from the Registrar's office to simplify the work of the secretary. The books are kept according to the rules framed by the Local Governments and are open to inspection by important local officials and the Registrar and his staff. The accounts are audited, at least once a year by the auditors working under the Registrars of Co-operative Societies and the Societies are inspected from time to time by honorary or paid Inspectors. In Burma and Madras the inspection is carried out by unions, while in the United Provinces, Bihar and Orissa, Ajmere-Merwara and Bengal the responsibility for supervision rests with the central banks. In the Central Provinces, the inspection is controlled by the Provincial Federation working through the Central Bank. In Bombay supervision is exercised partly by unions, partly by Central Banks and partly by honorary organizers. In the Punjab, while paid for by societies, the inspecting staff works under the direct orders of the Registrar. The loans are mostly given on the security of two co-members. Under the Act, Societies are allowed under certain conditions to advance loans on the hypothecation of moveable or immoveable property, and there is nothing unco-operative in this so long as personal security which is the central principle of co-operation is given and the borrower's property is recognized as only a secondary or collateral protection. Mortgages are taken occasionally, especially in the case of long term loans and loans for the liquidation of old debts.

The supreme seat of authority in co-operative societies is the general body of members assembled in general meetings. At the annual general meeting held at the close of the co-operative year the accounts are submitted, the balance-sheet passed, and the managing committees with the chairmen and secretaries are elected. The general meeting fixes in some provinces the borrowing limit of individual members, lays down the maximum amount up to which the Managing Committee may borrow during the ensuing year dismisses members for misconduct or serious default, and settles the rates of interest for loans and deposits. All the net profits of the society are annually carried to the Reserve Fund, which is indivisible, that is, incapable of distribution as dividend or bonus, which cannot be drawn upon without the sanction of the Registrar, and which must be invested in such a manner as the rules framed under the Act prescribed. It is intended to meet unforeseen losses and to serve as an asset or security in borrowings. Except in the Central Provinces and Madras, the Reserve Funds of primary societies are generally utilised as an addition to their working capital, though steps are being taken in some parts of the country to stop this practice and to insist on the Reserve being kept entirely apart from the working capital and invested in Government securities or placed as floating deposits in Central Banks. The Government of India state in their Resolution of 17th June 1914 "that while there may be advantages in the earlier stages in using the Reserve as part of the working capital of the society, it should gradually, as it becomes more important, be set apart for separate investments." The Eighth Conference of Registrars held in 1918 has also accepted this view. The general trend of opinion seems to be that primary societies should be free to utilize their reserve funds as part of the working capital except when they have considerable outside deposits and have not made special arrange-

ments in respect of fluid resource to cover such borrowings.

Main defects.—The main defects of primary societies may be summarized. The most prominent is the evil of unpunctuality. This is due more to easy going ways of life and the narrowness of margin between income and expenditure than to recalcitrancy. Next is the frequent apathy of the members in the work of the societies owing to lack of education and absence of higher ideals. The general body leaves affairs at the mercy of the committee and the committee transfers its powers to the chairman, secretary or some other member. Then there is the objectionable practice of making book-adjustments and taking *benami* loans. A grave defect is the inability of the societies to act as real banks, accepting for deposit money when presented meeting withdrawals of such savings, deposits or temporary surplus funds without delay and granting loans on demand according to actual requirements. In many a society, activity is displayed only twice in the year, once during the cultivation season when loans are advanced and again after harvest time when recoveries are collected. In several provinces members have to wait for weeks before they can get funds for agricultural operations, and as such operations must be proceeded with resort to the money-lender is not uncommon. To provide for members who want large loans on the security of land for clearance of debt or agricultural improvement, separate land mortgage societies have been started in the Punjab, and will be found necessary in other Provinces if the members are to be financed adequately for all approved objects. Moreover, as the bye-laws place a limitation on the amount of loan that can be advanced to an individual and the financing agencies often cut down the loan requirements, the Society has, in no sense, supplanted the money-lender. Owing to absence of banking facilities the societies are further unable to meet emergent demands, and to receive repayments in small sums at the convenience of members.

Non-agricultural Societies.—Non-agricultural credit societies have grown up in towns and cities for improving the economic and moral condition of persons engaged in handicrafts and cottage industries, of artisans and small traders, members of particular castes and employees of big firms and Government departments. Non-agricultural societies, except those for handicraftsmen, artisans, and persons of the poorer classes, referred to later, have usually a limited liability. This is due partly to the absence of any assets in real property among their members, but mainly to the field of their work not being compact as in the case of agricultural societies, where every member may be expected to know every other member. Their constitution is based on the 'Schulze Delitzsche' model and in most cases the management is honorary, though sometimes, when the sphere of a society's work is extended, a paid staff is employed. There is in all societies a substantial share capital, payments being made in monthly instalments, and the rest of the working capital is obtained by local deposits from members and others. Loans from co-operative and Joint Stock Banks usually form only a meagre portion of the capital. Of the total working capital of roughly Rs. 2,90,00,000, Rs. 65,00,000 represent loans and deposits from non-members, Rs. 5,000 loans and deposits from other societies, Rs. 21,00,000 loans from Provincial or Central Bank, Rs. 78,00,000 deposits from members, Rs. 1,00,000 share capital, Rs. 16,00,000 reserve fund and Rs. 3,00,000 State aid. At the end of every year one-fourth of the net profits must be carried to the reserve fund and the balance may be distributed as dividend or bonus. There are a few drawbacks in the working of these societies. The most serious of these complaints are that the spirit of co-operation is lacking in many non-agricultural societies, that there is too great a desire to go in for profits and dividends and a growing tendency to make the societies close preserves once they have started running on profitable lines. The rates of interest on loans are at times higher than they ought to be, and the men at the head of the societies are loth to admit new members who are in need of loans for fear of the latter cutting down the profits.

Included in this group are communal societies, and societies of employees of firms, railway companies and Government offices. There are again, a few societies organized on the lines of the People's Banks of Europe to assist small traders and artisans in towns and there are also some societies comprising members of particular communities. These give promise of developing a truly non-capitalist system of banking run for the people and by the people, providing for the person of small means those modern banking facilities which have so largely assisted in developing trade and industries in other countries. Some of the larger non-agricultural societies, after meeting the needs of their members, have large balances on hand, which they are allowed, with the previous sanction of the Registrar, to advance to smaller primary societies.

With the growth of industries and the development of cities an important labouring class has grown up in big industrial towns and this class is as deeply indebted and as badly remunerated as the agriculturists. Co-operation, if introduced among people of this class, would open a new life to them besides being the means of their economic regeneration. No systematic efforts have hitherto been made in this direction, as urban co-operation has so far been confined more or less to middle class people. The first experiment was initiated in Bombay under the auspices of an organization known as the Debt Redemption Committee. Some work in this direction has also been done in Madras, particularly among the depressed classes and among the low-paid employees of municipal bodies. The Social Service League of Bombay has also lately started several promising societies among factory workers and the starting of co-operative credit societies for workers in factories has come to be recognized as an essential feature of every well-considered scheme of welfare work.

Loans advanced.—The total amount of loans advanced to members by agricultural and non-agricultural societies during the year 1919-20 were Rs. 4,96,32,640 and Rs. 2,54,75,665, respectively, as against the total of less than Rs. 25 lakhs issued by both these classes of societies

in the year 1906-7. As the movement progresses, it is being more and more realised that the early clearance of a member from previous debts after his admission to a society is very desirable and greater attention is being bestowed by co-operative workers on this question. It is impossible to insist on the restriction of loans to productive objects and there are circumstances under which unproductive loans are permissible and even advisable. What should be and generally is borne in mind is that precautions are taken by societies that the expenditure is inevitable and that it is not excessive in amount. The chief objects of the loans advanced are cultivation expenses, purchase of live-stock, fodder, seed, manure and agricultural implements, payment of rent, revenue or irrigation dues, land improvement and sinking of wells, purchase of new lands, and personal maintenance in times of scarcity in agricultural societies, and for purchase of raw materials for industries, for trade, for house-building and for food and other necessaries of life in non-agricultural societies. The terms of the loans are one year or less on those for current needs, whether for agriculture or petty trade, and up to five years or so on loans for liquidation of old debts or for land improvement. An unsatisfactory feature of the co-operative system in some of the Provinces is the laxity and unpunctuality in the matter of repayment of loans by members and a general apathy in the matter on the part of societies. As co-operation is both financially and educationally a failure unless promptitude of payment is ensured, no efforts are spared by organizers to educate societies in this respect. The Co-operative Societies' Act grants to societies priority of claim over other creditors (except the State or the landlord) to enforce any outstanding demand due to the societies from members or past members upon the crops or other agricultural produce, and upon the cattle, fodder or agricultural implements, in cases where loans have been advanced for the purposes specified. Law Courts have ruled that such claim is not valid unless a decree is obtained by a society in its favour in advance. To carry out the intention of the framers of the legislation it is proposed to convert this claim into a lien and thus get over the legal difficulty. But not content with this, some co-operators have pleaded for special powers of recovery of loans under which overdue loans may be recovered as arrears of land revenue. Most local Governments have framed rules under the Act enabling the Registrar to refer disputed claims to arbitration and to enforce the award of the Registrar in the same manner as a decree of the Civil Court. It is not likely that Government will sanction a special process under which claims against defaulting members may be recovered according to procedure allowed for the recovery of arrears of land revenue. For the existence of a special privilege of this character cannot but lead to laxity in the selection of members and carelessness in the granting of loans and in securing regular repayments on them. Demand for a special procedure for the recovery of the dues of a cancelled society stands on a somewhat different footing and the Local Governments of Bengal, and Bihar and Orissa have already passed enactments enabling the contribution levied by the liquidator of a cancelled society to be collected in the same manner as arrears of land revenue on an application being made in that behalf by the Registrar of Co-operative Societies. Legislation on similar lines has been adopted in Madras Bombay, the Central Provinces and the United Provinces.

The Financing of Agricultural Societies.—As soon as the initial stage of the movement had passed, a very urgent problem had to be faced. This was to finance the agricultural societies that were growing in all directions. And the problem was solved in different provinces according to the special conditions and the stages of development the movement had attained therein. In Madras, a Central Bank, which lent to Co-operative Societies all over the Presidency, was started without Government aid as early as in 1907. This was followed by the starting of banks at district head-quarters. In other Presidencies, district and taluka banks were established making good the deficiency in the local capital of the societies within their districts, and in some places Joint Stock Banks were persuaded to make advances direct to agricultural societies or through the medium of local Central Banks. A large number of prosperous non-agricultural societies, as stated above, could afford to lend to agricultural societies. Government aid was also freely given. With the progress of the movement, however, this aid was discontinued. In Bombay there was no movement to start local financing agencies and the very slow progress of the movement made it difficult for central banks with a restricted area of operations to work successfully. Accordingly the Bombay Central Co-operative Bank was founded in 1911, with a share capital of Rs. 7 lakhs and with power to issue debentures at 4 per cent. up to three times the amount of the paid-up share capital, the Government guaranteeing payment of interest on the debentures till their repayment.

Neither of these was organized as a co-operative Apex Bank in the true sense of the term. In the Bombay Central Bank, co-operative societies are members and may be expected gradually to assist in shaping its general policy. The Madras Central Bank has been recently converted into a Provincial Bank working in harmony with district banks. A Provincial Bank with Central Banks and societies affiliated to it is in existence in Upper Burma, and this Bank finances primary societies either through the affiliated local banks or through the guaranteeing unions composed of societies. An Apex Bank was started in the Central Provinces in 1913 to form an immediate link between the district banks in the Province and the Joint Stock Banks in Allahabad and elsewhere. It has worked well and its success led to the establishment of a Provincial Bank with a similar constitution in Bihar and Orissa. A scheme has also been set afoot for having a Provincial Apex Bank in Bengal, where, as also in Bihar and Orissa, the primary societies are at present financed by Central Banks at district or *taluka* head-quarters. A Provincial Federation of Central Banks has for the present been started transferring to itself the deposit liabilities of local banks, and distributing these according to requirements. The Federation also acts as the balancing centre for the pro-

vince and provides fluid resource to affiliated banks. In the United Provinces primary societies are financed on the same system, and there, too, the starting of a Provincial Apex Bank under which Central Banks will be federated is under contemplation. The Punjab has a local central banking system and though sooner or later it, too, will have an Apex Bank, no definite proposal for the establishment of such a Bank has yet matured. A provincial union has, however, been recently started which will work as a financial federation for the local banks in the province and facilitate mutual aid between them till an Apex Bank comes into being.

The constitution of Central Banks is not uniform, but the existing Banks may be classified under three general heads :—(1) Banks of which the membership is confined to individuals or where societies are admitted as members on exactly the same footing as individuals, (2) Banks of which the membership is confined to societies, and (3) Banks which include societies and individuals as their members and secure to societies separate representation on the Board of Directors. The bulk of the Central Banks are of the mixed type and there are hardly any of them which now adhere to the old capitalist constitution. The federal type is theoretically the best, but the paucity of the resources of the constituent primary societies, the lack of personnel and the need for enlisting the support of the urban middle classes have all combined to make the mixed type the most popular in almost all provinces

Functions of Central Banks :—The functions of Central Banks are to balance the funds of Societies and to supply capital. But their duties are not limited to the provision of banking facilities only, but often include the organisation and supervision of societies. Hence where the Central Banks are not formed on a capitalistic basis, they perform the functions of supervision and control of the Societies affiliated to them, and in some Provinces they also organise new Societies and even take up the entire educational work now done by the Registrar. Usually the unit of area for Central Banks is fixed as coterminous with the whole of a revenue district, as the personnel necessary for its successful working may be difficult to secure in a smaller area. However, in different parts of the country we notice the existence of Central Societies for *talukas* and occasionally for smaller tracts. An important class of institutions included under the statistics of central societies are unions. These may be described as federations of societies which are maintained for supervision, either combined or not with the assessment or guarantee of loans to primary societies They do not, however, undertake banking business. These unions have a very restricted area of operations, within a radius of five to eight miles from a central village. They are accepted as integral parts of the provincial organization in Burma and the Central Provinces, in one case serving as a link between primary societies and the provincial bank and in the other between primary societies and local banks. The system has also been extended to Bombay and to Madras, though in the last named province no guarantee is undertaken by those bodies.

Organization and Propaganda :—It may be mentioned that in most of the provinces the work of organising and looking after the societies is done by the Registrar with the help of a staff of assistant registrars, auditors and other officers and a few honorary non-official workers. Where the Central Bank system has properly developed, the Directors of the Central Bank either themselves or through a paid agency organise societies and, as stated above, supervise their working. The number of honorary workers is steadily increasing and in some Presidencies there is a staff of specially-appointed honorary organisers who regularly assist the Registrars. The activities of the honorary workers are often, however, spasmodic and unorganized, and in most of the major provinces the need has been felt for some co-operative institution which will co-ordinate and systematize the efforts of non-official workers, and place them on a responsible basis. The objective is to have the movement directed and controlled through self-governing representative bodies like organisation societies or federations on the lines of similar institutions in Germany, England and Ireland. Such institutions carry on active educational propaganda, and through the agency of local committees and groups of workers, assist in the organization of new societies and attend to their supervision. Arrangements can also be possible for the carrying on the audit of societies—for which Government cannot continue to increase the official staff to an unlimited extent—on payment of some fixed contributions. Finally, such federations should have the final voice in the determination of policy, and subject to the statutory powers of the Registrar gradually take over the control of the co-operative organization in a province. In the Central Provinces, there has been for some years a federation of Co-operative Banks and Societies which promises to develop into a co-operative organising and controlling agency. The federation provides a regular and efficient system of supervision, audit and control, arranges for the training of the federation staff, attempts to secure uniformity of practice among co-operative institutions and to promote their interest and fosters the spread of co-operation by active propaganda. A Provincial Union has also been started in Madras, but its objects are mainly educational and propagandist. Its activities are at present confined to the issuing of co-operative journals and the holding of conferences. Its constitution and its lines of work have now been revised so as to make it the central self-governing organization in the movement. A Central Institute to focus the efforts of co-operative workers and to carry on propagandist work was established in Bombay in 1918. The objects of this institution are to develop the movement in the Presidency, by promoting the study of co-operation and by co-ordinating the activities of several existing propagandist and organization agencies. The Institute has no powers of control, though it is expected to ascertain and represent the views of co-operators on questions affecting the movement. Organization will be undertaken primarily in the City of Bombay. The activities of the Institute in the mofussil are carried on

through its three divisional branches and some of these have already done much to educate public opinion on the aims and ideals of the movement. In Bengal, a similar propagandist organization has been started with identical aims. The Society has undertaken much of the educational and propagandist work hitherto performed by the Co-operative Department, and has assisted in the organization of co-operative stores among students in colleges. It has opened branch centres and projected a comprehensive scheme for the training of members of village societies and their Secretaries. A federation with a constitution more or less similar to that of the Central Provinces Federation is also in existence in Bihar and Orissa, while in the Punjab a provincial union has been organized for conducting the audit of primary societies and undertaking general propagandist work. In Burma, the audit of primary societies is conducted by a central committee consisting of important Departmental officials and representatives of co-operative institutions. This also assists in the organization of the Provincial Conference and acts as an advisory body to the Registrar. Organization, supervision and propaganda are furthered by district federations of unions of primary societies. These are all recent developments and it is still too early to forecast on what lines the transfer of control to representative co-operative agencies will be carried out.

Other forms of Co-operation.—After the passing of the amended Co-operative Societies Act the application of co-operation to purposes other than credit was greatly extended, but it is only during the last few years that a general demand for producers, and consumers' purchase and sale co-operative societies has exhibited itself. Before the year 1918-19, there were only a few store societies all over the country. In all provinces, particularly in Madras, some beginning had been made in the direction of distributive co-operation among the middle classes, while in Bengal and the United Provinces some attention had been devoted to the starting of stores for students living in hostels attached to Colleges. The movement has, however, now begun to obtain popular favour in view of the increasing prices of the daily necessaries of life, and the profiteering which assumed serious proportions at the close of the War. Co-operators in the provinces of Madras, Bombay, and the Punjab have attempted earnestly to tackle the evil by organizing supply unions, store societies, and distributive departments attached to credit societies, and in all the three provinces some steps are contemplated for obtaining cheap, wholesale supplies for the various distributive organizations. A Wholesale Society is projected in Bengal. In Madras the premier store works as a wholesale supplier to the smaller stores.

In some Provinces efforts have been made to revive the ancient handicrafts of the country and cottage industries by organising co-operative societies for the workers. Many of these societies merely provide cheap credit, but in some places they undertake the supply of raw material and the sale of manufactured goods. An important industry which flourished in India before the introduction of machinery was handloom weaving and efforts have been made to revive it by the formation of productive co-operative societies of handloom weavers. Most of the weavers' societies are not merely credit societies, but undertake the purchase of good yarn for members, and in some cases have store branches to sell the cloth produced by them. They have also been instrumental in introducing improved looms and methods amongst the conservative weaving classes. Other industrial societies to be found in very small numbers here and there are those for "gaolees" or milkmen, dyers, basket and brass workers in the Central Provinces, "Chammars" and "Dhers" in Bombay and Punjab, lacquerware workers, carpenters, wood carvers, blacksmith and potters. The Indian Industrial Commission in the course of their inquiries devoted some attention to the development of small and cottage industries and the possibility of reviving them by the introduction of co-operation. Their recommendations on this subject are not very definite. State loans for purchase of costly plant or machinery are, however, recommended, and emphasis is laid on the necessity of arranging facilities for the marketing of products of home industries. The first step to industrial co-operation is to be taken by familiarizing workers with the principles of co-operative credit, though later on separate non-credit institutions would become necessary. Suggestions are made for technical guidance to workers, and the local departments of industries are advised to keep workers constantly informed about the demands of the markets. Organization of industrial societies is to be a function of local departments of industries, but as these will be engaged with problems of big industries, it is doubtful of the cottage and small industries will have much scope for development under the new regime.

An interesting development of recent years in the provision of housing through co-operative societies. A good number of Housing Societies have been started in Bombay City and also in a few other centres. They are organized on the co-partnership system, under which the Society owns the houses and lets them to members at fixed rents. The scheme is feasible for such section of the middle classes as can provide a certain proportion of the initial capitals. Tenants ownership societies have also been started. There are some Building Societies in Madras and a few more in Mysore, but their activities are confined mainly to the provision of capital for building schemes and only occasionally extend to the joint purchase of land or of building materials.

The province of Burma is a pioneer in the matter of cattle insurance, and to support the village insurance societies which have been started in the province, there has been organized a central re-insurance society, which receives some financial backing from Government. In other provinces co-operative insurance for cattle has made only slight progress with the exception of the Punjab where the movement has developed enough to necessitate the starting of a reinsurance society.

Agricultural Co-operation.—Agricultural societies have until recently been engaged only

in supplying cheap credit to their members, but there are various other fields of work to which they may extend their activities. Grain Banks have, in some provinces, been started with advantage, receiving deposits in kind and allowing these to accumulate to be sold at profitable rates or distributed to the members in times of scarcity. Such banks have been started in Bombay, Madras, and Bengal, Mysore and Coorg. Societies on a similar principle for the storage of fodder may assist in solving what is likely to become in the near future an important problem in rural economy. Another direction in which the co-operative principle is being adopted is the starting of societies for purchase of and distribution among members of good unadulterated seed. A number of small seed societies have been organized in the Bombay Presidency, and in the Central Provinces and Berar, the work appears to have been particularly well organized. Societies for the co-operative purchase and sale of manure will also prove a great boon, and a few such stores have been established in Madras, Bengal and Bombay. In the Punjab and in Madras the supply of agricultural requisites has been undertaken either by the credit societies on the commission-indent system or special supply unions are organized for bulky orders, making contracts, distributing goods, and collecting payments.

The joint sale of produce are becoming popular as co-operative credit thrives and agriculturists become less dependent on local traders. While Burma led the way by starting societies for the joint sale of paddy, the most interesting developments in the direction have taken place in Bombay. Societies for the sale of agricultural commodities, chiefly cotton and jaggery have been started in several districts in the Deccan and the Karnatak. This aspect of co-operation has lately attracted considerable attention and attempts similar to those made in Bombay are contemplated in Madras and the Punjab. It will indeed be a great achievement if these efforts are successful and the cultivator obtains adequate returns for his produce. At present he buys in the dearest market and sells in the cheapest. But if co-operative purchase and sale show good progress, his economic position will be much improved. Apart from separate societies for the purpose, credit societies and central banks, in many parts of the country arrange for the joint sale of produce. In some places credit societies undertake the joint purchase of agricultural implements for members, while in others separate registered societies are started for the purpose. In some provinces in Upper India, this work is performed by central Banks for the Societies affiliated to them.

Efforts have been made in some parts of the country to solve the problem of milk-supply—to reduce the price and increase the purity—by starting co-operative dairies, composed either totally of gaolis or milkmen or the producers and the consumers together. Co-operative creameries and ghee producing societies have also been started in one or two provinces. Another interesting development is the starting of cattle-breeding societies in the Central Provinces and elsewhere. It is anticipated that these societies will assist in supplying the keen demand that exists for bulls of good stock. In several provinces there are Societies for rice-hulling, the manufacture of jaggery and for lift irrigation. Ginning on co-operative lines has also been attempted. An interesting experiment is the starting in the Punjab of societies for the consolidation of small and scattered holdings. These propose to regroup and reallot the holdings of members, and if this voluntary action proves sufficient for the purpose, one of the gravest evils of modern India agriculture will be solved without the aid of State help or legislation.

Government has of late made attempts to bring the co-operative movement in close touch with the Agricultural Department. Co-operation has already been successful to a considerable extent in redeeming the chronic indebtedness of the agriculturist, but if the improvement in his economic condition is to be permanent it is essential that he should be prevailed upon to adopt improved methods of production. The Agricultural Department does undertake propagandist work with this object, but its efforts have not proved as successful as they ought to be. A co-operative society provides an effective agency for reaching the agriculturist, and in many places societies have been the means of bringing home to him the need for improved methods and have been made the centres for the propagandist activities of the Agricultural Department and District Agricultural Associations. As a result, a few societies have been enterprising enough to purchase modern agricultural implements, and the machinery recommended by the Department and to use the proper manures and the certified varieties of seeds. "Wherever agriculture and co-operation have experienced the assistance which each can derive from association with the other they are fast developing a truly organic connection."

Committee on Co-operation in India.—In July 1914, the Government of India issued a lengthy Resolution on co-operation in India, surveying its progress in the country during the last ten years. It particularly emphasised the urgency of a proper financial organisation of societies and stated that "the responsibilities introduced by the addition to the co-operative organization of the central and provincial banks are of a serious character. To supervise the relations of such institutions with the money market on the one hand, and with their constituent societies on the other, is a task which requires a considerable degree of technical skill, and the administration of the whole co-operative movement in the stages above that of the individual society is a matter which must in the immediate future engage the serious attention of Government and of the people." In October, the Imperial Government appointed a Committee under Sir Edward Maclagan to examine whether the movement especially in its higher stages and in its financial aspect was progressing on sound lines and to suggest any measures of improvement which seemed to be required. The enquiry was to be directed primarily to an examination of such matters

as the constitution and working of Central and Provincial Banks, the financial connection between the various parts of the co-operative organization, the audit, inspection, and management of all classes of societies, and the utilization of the reserve funds. The scope of the enquiry was, however, in no way rigidly limited by the Government of India In its report, which was issued in September 1915, the Committee stated that it had not confined its enquiries to the subjects referred to it, for it had to recognise that the financial welfare of the higher stages of the co-operative system was largely based on the soundness of the foundation.

Government Action on Committee's Report.—The minor recommendations made have already been given effect to, but the opinions of the Local Governments were invited on the important ones. These opinions were published by the Government of India in September 1917. The Government of India has now passed orders on the recommendations in the light of the opinions of the Local Governments. The views of the Local Government differ widely and clearly show that a uniform system cannot be introduced in provinces with diverse conditions. The prescribed standard of fluid resources is condemned by some provinces, others object to the use of the Reserve Funds by societies in their own business, and a majority disapprove of the proposed appointment of an expert co-operator with the Government of India, while practically all approve of a summary process of recovery for the dues of members of societies in liquidation. Several provinces have already decided to take action on such of the recommendations as are approved of by the Registrars and are suitable to local conditions, and the co-operative organization in most provinces has been modified more or less on the lines suggested. With a view further to elicit opinion on the recommendations, a special conference of the Registrars was convened in August 1918, to which all the Registrars and a few selected non-official co-operators were invited. The Conference passed several important resolutions, adopting the Committee's suggestions about the utilization of reserve funds and the acceptance of savings deposits by primary societies and disapproving generally of the recommendation about the standard of fluid resource to be maintained by central institutions The Conference also had under consideration the suggestion made by the Committee on Co-operation that as the financing of the movement involved grave difficulties which baffled solution unless the discounting of pro-notes arranged through an Imperial State Bank or the several Presidency Banks, a careful examination of the question was immediately called for. A proposal was made for the appointment of an expert Committee, but the Government of India have practically shelved it by insisting that they would assemble the Committee at some date convenient to them.

Effect of Crisis on Co-operation.—It is hardly possible to appreciate the effect of the co-operative movement in enabling the agriculturists to resist the rigours of a famine as also to judge the reaction of the latter on the co-operative organisation. For, after the introduction of the co-operative movement in India, the country has not been affected by any widespread famines like those through which the greater portion of the country passed in 1898-1900. The agricultural season of 1918-19, however, put the co-operative organisation in most provinces to a very severe test and the reports for the next few years should afford some indication of the resisting power of the co-operative organization. There has occasionally been scarcity verging on famine in Bombay, Bengal, and the Punjab and the United Provinces but in neither of the two provinces was the distress sufficiently crushing or widespread to render the assistance provided by the societies inadequate for the needs of members. In the Central Provinces, owing to the drying up of recoveries and the issue of large advances to agriculturists to tide over a bad season, the furtherance of the movement was seriously depleted and the Apex Bank was able to meet its liabilities only with the financial assistance of Government. In Bengal and the Punjab, the return of favourable seasons has averted any breakdown of the system, but the same cannot be asserted of the United Provinces, where there appears to be some danger of the strain not being quite successfully withstood. With a better appreciation of the dependence of the agriculturist on seasons, and a more systematic management of the funds of central societies it is anticipated that in future the situation arising out of a failure of rains will be satisfactorily met. In 1913 and the following months practically the whole of the country was subjected to a banking crisis of considerable magnitude, but a marked feature of this crisis was a tendency to withdraw deposits from non-co-operative institutions and place them in co-operative banks. The outbreak of the War brought another set of influences into play and there was a temporary tendency to withdraw deposits and a temporary cessation of new deposits. The disturbance was not serious except in two or three provinces and by the end of the year 1914-15, the situation became practically normal. In two of the provinces where the situation caused some anxiety owing to the cessation of fresh deposits in Central Banks, the Government sanctioned advances to the extent of Rs. 5,00,000 to Central Societies to be utilized in case of urgent loans to agricultural societies or to meet withdrawals of deposits. On the whole, therefore, the movement appears to have stood the test of the War much better than might have been expected. While, therefore, the co-operative movement as a whole has been the cause of little or no anxiety to the public as well as to the State, Co-operative institutions in several provinces have borne their share of the burden of the War to the best of their ability. Large subscriptions to the War Loan and relief funds were made in Bengal, Bombay, the Central Provinces, the Punjab and the United Provinces.

Social Reform.—Co-operation has, in some places, stimulated the desire for education and members of rural societies have been known even at advanced ages to receive the

elements of education to enable them to put their signatures on the society's papers, and to take a lively interest in the internal work of their societies. In Bombay, night schools for adults have been started with the aid of a splendid donation made by Sir Vithaldas D Thackersey, while in the Punjab, Bihar, Bengal and elsewhere much expenditure on education is incurred by co-operative institutions themselves. There are not few cases where a society has set its face against drunkenness, expelled members notorious for their intemperate habits and has in other ways worked for a better morality by insisting on a high standard of life. Societies have occasionally condemned excessive and even heavy expenditure on marriages, and have thus indirectly trained members to the habit of thrift. Liquidation of old debts again has been rendered possible to a great extent and many an agriculturist who was formerly in a state of chronic indebtedness has been relieved of all his debts and freed from the necessity of incurring new ones. Credit has been much cheapened and it is now possible for the agriculturist to borrow at 9 to 18 per cent. what he could not borrow at less than 20 to 75 per cent. formerly. It has been calculated that in interest alone the agriculturists of India, by taking loans from Co-operative Credit Societies instead of from the village money-lenders, are even now saving themselves from an unnecessary burden of at least 20 to 30 lakhs of rupees. The village rates of interest have naturally gone down considerably and the Sowkar is, in most places, not the terror and the force that he was. Business habits have been inculcated with the beneficial result that the agriculturist has learnt to conduct his own work more efficiently. Thrift has been encouraged and the value of savings better appreciated. Participation in the management of societies has brought home to the members the important lessons of self-help and self-reliance ; but the most important achievement of co-operation has been the instilling of a sense of communal life—a feeling of "all for each and each for all" amongst the members of a co-operative body. If these signs become as common as they are now rare, and if, over and above the economic benefits achieved by it, co-operation succeeds in its true aim—the building up of the character of the people and the promotion of their welfare by the inculcation of the ideas of thrift and the principles of self-help, and, above all, by showing the wisdom of mutual help and brotherliness amongst neighbours—a resuscitation of rural life such as is conducive to more quickened national progress will not be far off.

The following statements show the progress of the Co-operative movement in different provinces, and contain some information about their detailed working till the end of the official year 1919-20 :—

Provinces.		Agricultural Societies.		Non-agricultural Societies.		Central Societies.		REMARKS.
		Credit.	Non-credit.	Credit.	Non-credit.	Banks.	Unions.	
Madras ..	Number ..	4,156	62	478	163	(1) 50	(2) 136	(1) Includes Provincial Bank. (2) Includes Provincial Union.

The Women's Medical Service for India.

This Service is included in the National Association for supplying female medical aid to the Women of India, generally known as the Countess of Dufferin's Fund and is administered by the Central Committee of that Fund. The Government of India has so far allotted the sum of £10,000 per annum towards its maintenance. The present sanctioned cadre is twenty-five first class medical women, but it is hoped that this number will shortly be augmented. Recruitment of the service is made (*a*) in India by a medical sub-committee of the Central Committee which includes the Director-General, Indian Medical Service, the Honorary Secretary to the Central Committee, and a first-class medical woman; (*b*) in England, by a sub-committee, consisting of a medical man and two medical women conversant with conditions in India, to be nominated by the Home Committee of the Countess of Dufferin's Fund. These sub-committees perform the duties of a medical board examining candidates for physical fitness, and for return to duty after invaliding.

The Central Committee determines what proportions of the members of the Service is to be recruited in England and in India respectively. In the original constitution of the Service, duly qualified medical women who are in the service of, or who have rendered approved service to, the Countess of Dufferin's Fund, are to have the first claim to appointment, and thereafter special consideration is to be paid to the claims of candidates who have qualified in local institutions and of those who are natives of India.

Qualifications.—The qualifications are that the candidate must be (*a*) a British Subject resident in the United Kingdom or in a British Colony or in British India, or a person resident in any territory of any Native Prince or Chief under the suzerainty of His Majesty exercised through the Governor-General of India or through any Governor or other officer subordinate to the Governor-General of India. (*b*) Must be between the ages of twenty-four and thirty at entry. (*c*) She must be a first-class Medical Woman, *i.e.*, she must possess a medical qualification registerable in the United Kingdom under the Medical Act, or an Indian or Colonial qualification registerable in the United Kingdom under that Act: but this condition does not apply at the original constitution of the Service to medical women in charge of hospitals who, in the opinion of the Central Committee, are of proved experience and ability. (*d*) The candidate must produce a certificate of health and character. But the Central Committee reserves the power to promote to the service ladies not possessing the above qualifications, but who have shown marked capacity. Members of the Service are required to engage for duty anywhere in India or Burma. Those recruited in England serve for six months, and those recruited in India for three months, in a General Hospital of the Province to which they are deputed. After this period of probation has been satisfactorily passed their appointments are confirmed. The services of Members may be lent to Local or Municipal bodies, or to special institutions, which may be responsible for whole or part of the pay.

Pay.—The rates of pay are as follows:—During probation Rs. 350 per month, thereafter Rs. 400 up to the end of the 4th year: Rs. 450 from the 5th to the 7th year; Rs. 500 from the 8th to the 10th year; and Rs. 550 after the 10th year. But no member can be confirmed in the 400 rupee grade unless she has passed an examination in such vernacular as the Provincial Committee shall prescribe, within one year of her appointment. In addition suitable quarters are provided free of rent: or a house rent allowance to be determined by the Provincial Committee may be granted in lieu of it.

Members of the Service are permitted to engage in private practice provided it does not interfere with their official duties, and the Provincial Committee has the power to determine whether such duties are thus interfered with. Except in very special cases retirement is compulsory at the age of forty-eight. A member whose appointment is not confirmed, or who is dismissed, is granted an allowance sufficient to pay her passage to England.

Leave Rules.—(*a*) Casual Leave, which is occasional leave on full pay for a few days, and is not supposed to interrupt duty. (*b*) Privilege Leave, which is leave on full pay and is meant to provide a month's holiday in the year. If it cannot be granted during the year, it can be accumulated up to a limit of three months. (*c*) Furlough, at the rate of two months for each year of duty, the latter including privilege leave and casual leave. First furlough is not granted till after four years of duty, and more than eight months furlough is not granted at one time. Study leave may also be granted not exceeding three months at a time and up to twelve months during the whole service. (*d*) Sick leave, up to a maximum of two years. (*e*) Extraordinary leave at any time at the discretion of the Central Committee. When on furlough or sick leave the allowances are half the average monthly pay of the six months presence on duty immediately preceding the taking of the leave. There are no allowances during extraordinary leave. A Lady appointed in England receives a sum of £70 to cover her passage and incidental expenses. There are also allowances to cover the cost of journeys by rail and road.

There is also to be a Provident Fund, each member contributing monthly thereto five per cent. of her salary, the Association contributing an equal amount, and each subscriber's account being granted interest on the amount standing to credit at the rate of 4 per cent. per annum, "or at such rate as the Central Committee can invest without risk to the funds of the Association."

The Member loses her contributions if she resigns (except on account of ill-health) before completing five years' service, or in the event of dismissal. On retirement after approved service the sum which has accumulated to the credit of the subscriber is handed over to her.

The Lady Hardinge Medical College was opened by His Excellency Lord Hardinge on February 17th, 1916. This College was established in commemoration of the visit of their Imperial Majesties to Delhi in 1911, with the object of providing a complete medical education for women of India. The initial cost was defrayed by subscriptions collected by the late Lady Hardinge mainly from Indian Princes and Chiefs. After her death in 1914, it was decided to complete the institution as a memorial to Lady Hardinge.

The College and Hospital buildings together with hostels for medical students and nurses, and residences for the medical and teaching staff, are grouped in a large compound, situated in the Imperial enclave in close proximity to the city of Delhi. The College buildings consist of three blocks containing Library, Museum, Lecture Rooms, Offices and Laboratories. Separate hostels with kitchens and dining rooms are provided for Hindu, Muhammadan, Sikh, Parsee, Indian Christian and European students. The total cost of the completed buildings and equipment will be about 25 lacs. The College is supported by a grant from Government. It is designed to accommodate 100 students and to provide a full medical curriculum as required by the General Medical Council of Great Britain. At present it is affiliated in the Faculty of Medicine of the University of the Punjab up to the First Professional Examination. The staff are all women.

Principal and Professor of Medicine, Miss K A. Platt, M D. (LOND.), Women's Medical Service, India; Professor of Surgery, Miss H. M. Franklin, M.B B S. (LOND.); Vice-Principal and Professor of Gynæcology and Midwifery, Miss C. L Houlton, M D., B S., (LOND.) Cert. Trop. Medicine (LOND.), Women's Medical Service, India; Professor of Pathology, Miss M. B. Stoddon, L.R C P, M.R.C S; Professor of Anatomy, Miss M. C. Murphy, M.B (CAL.), L.R.C.P. (LOND.), M R C S. (ENG.), Women's Medical Service, India; Professor of Physiology, Miss M. R. N. Holmer, M A. (DUBLIN) Nat. Sc. Tripos Class I (Cantab) Diploma (Distinction, Oxon.); Professor of Chemistry, Miss A. M. BAIN, M.A., B. SC, (Aberdeen), Special Distinction in Chemistry; Professor of Botany and Zoology, Miss Hett; Professor of Mathematics and Physics, Miss P. M Borthwick, B Sc (LOND.), M. Sc. (Bristol), Warden and Secretary, Miss M. W. Jesson, Maths Tripos (Cantab.).

The Lady Hardinge **Training School for Nurses.**—Attached to the Hospital which is designed to hold 168 beds is a training school for nurses and midwives. It is intended to train Indian girls as nurses, who will be available for nursing in private families as well as in hospitals Nursing Superintendent, Miss L. E. Mackenzie.

THE COUNTESS OF DUFFERIN'S FUND.

The National Association for supplying female medical aid to the women of India at once one of the most efficient as it is among the most useful and benevolent institutions in India, is the outcome of the work of the Countess of Dufferin and Ava during the time of her husband's Viceroyalty. The late Queen Victoria drew the attention of the Countess, on the departure of the latter for India, to the question of supplying medical aid to women in this country, and asked her to take a practical interest in the subject. As the result of her enquiries she found that, though certain great efforts were being made in a few places to provide female attendance in hospitals, training schools, and dispensaries for women, and although missionary effort had done much, and had indeed for many years been sending out pioneers into the field, yet taking India as a whole, its women, owing to the "purdah" system, were undoubtedly without that medical aid which European women were accustomed to consider as absolutely necessary. In the Countess' own words written in 1886 after the movement had been started: "I found that even in cases where nature, if left to herself, would be the best doctor, the ignorant practice of the so-called midwife led to infinite mischief, which might often be characterised as abominably cruel. It seemed to me, then, that if only the people of India could be made to realise that their women have to bear more than their necessary share of human suffering, and that it rests with the men of this country and with the women of other nationalities to relieve them of that unnecessary burden, then surely the men would put their shoulders to the wheel and would determine that wives, mothers and sisters, and daughters dependent upon them should, in times of sickness and pain, have every relief that human skill and tender nursing could afford them.....I thought that if an association could be formed which should set before itself this one single object, to bring medical knowledge and medical relief to the women of India, and which should carefully avoid compromising the simplicity of its aim by keeping clear of all controversial subjects and by working in a strictly unsectarian spirit, then it might become national, and ought to command the support and sympathy of every one in the country who has women dependent upon him."

Initiation of the Scheme.—Lady Dufferin's plans were warmly received by the public all over India. The scheme was drawn out and published in the different dialects. The association was named "The National Association for Supplying Female Medical Aid to the Women of India," and the money for its support, as it was received, was credited to the "Countess of Dufferin's Fund." The affairs of the Association were managed by a central committee of which the Countess of Dufferin during her stay in India was President. Branch Associations, each independent for financial and administrative purposes, but linked with the central committee, were formed in most parts of the country, and the work may be said to have started from August 1885. The objects of the Association are thus set-forth in its publications.—I. Medical tuition, including the teaching and training in India of women as doctors, hospital assistants, nurses, and midwives. II. Medical relief, including the estab-

lishing under female superintendence, of dispensaries and hospitals for the treatment of women and children; the opening of female wards under women superintendents in the existing hospitals and dispensaries; the provision of female medical officers and attendants for existing female wards; and the founding of hospitals for women where special funds or endowments are forthcoming. III. The supply of trained female nurses and midwives for women, and nurses for children in hospitals and private houses.

Within four years from its inception there were in existence twelve hospitals for women and fifteen dispensaries, most of which were officered by women, and all more or less closely connected with the Association. From the subscriptions collected there was enough to set aside a substantial sum as an endowment fund; and also six medical, twelve nursing and two hospital assistant scholarships had been provided for.

Growth of Scheme.—The first regular training school in India for the instruction of native pupils in medical and surgical nursing, and in midwifery was established in 1886 by the Bombay Branch of the Association in connection with the Cama Hospital in Bombay. This is a civil institution under Government management, and is solely for women and children of all castes and denominations. In connection therewith is the Allbless Obstetric Hospital and the Jaffer Sulciman Dispensary for women and children. The present physician-in-charge is Miss A. Turner Watts, M.D. (Lond).

There are thirteen Provincial Branches working under the central committee; and attached in some manner, or affiliated to the provincial branches, there are about one hundred and forty Local and District Associations or Committees engaged in furthering the work of the Association. There are one hundred and fifty-eight hospitals, wards, or dispensaries of various kinds for the medical relief of close on one and a quarter million women and children; and the value of the institutions engaged in the work of the Association was estimated at over 56 lakhs of rupees.

Annual Report.—The Report of the Association is published annually, and can be obtained either from the Superintendent of Government Printing, Calcutta, or from the leading booksellers, the price being one rupee and eight annas. The map of India published therewith shows the women's Hospitals officered by women in India. The Honorary Secretary is Colonel R. Heard, I.M.S. and the Joint Secretary, Dr. M. I. Balfour, M.B., Women's Medical Service. The Headquarters of the Central Committee are Viceregal Lodge, Delhi and Simla.

NURSING.

Whilst India cannot show the complete chain of efficiently-nursed hospitals which exists in England, there has been a great development of skilled nursing of recent years. This activity is principally centred in the Bengal, Madras, and Bombay Presidencies, where the chief hospitals in the Presidency towns are well nursed, and where large private staffs are maintained, available to the general public on payment of a prescribed scale of fees. These hospitals also act as training institutions, and turn out a yearly supply of fully trained nurses, both to meet their own demands and those of outside institutions and private agencies. In this way the supply of trained nurses, English, Anglo-Indian and Indian, is being steadily increased. In Bombay the organisation has gone a step further, through the establishment of the Bombay Presidency Nursing Association, c/o St. George's Hospital, Bombay. This is composed of representatives of the various Nursing Associations in charge of individual hospitals, and works under the Government. The principle on which the relations of this Association with the Local Associations is governed is that there shall be central examination and control combined with complete individual autonomy in administration.

Nursing Bodies.—The Honorary Secretary of the Calcutta Nursing Association is Mr. R. A. B. Reynolds, the Presidency General Hospital. The address of the Mayo Hospital Nursing Association is in Strand Road. In **Madras** there is the General Hospital, with a staff of 62 nurses, the Government Maternity Hospital, the Caste and Gosha Hospital at Kilpauk, the Royappeta Hospital and the Ophthalmic Hospital.

Bombay Presidency.—The Bombay Presidency was amongst the first in India to realise the value of nursing in connection with hospital work. The first steps were taken on the initiative of Mr. L. R. W. Forrest at St. George's Hospital, Bombay, where a regular nursing cadre for the hospital was established together with a small staff of nurses for private cases. This was followed by a similar movement at the J. J. and Allied Hospitals and afterwards spread to other hospitals in the Presidency. Ultimately, the Government laid down a definite principle with regard to the financial aid which they would give to such institutions, agreeing to contribute a sum equal to that raised from private sources. Afterwards, as the work grew, it was decided by Government that each nursing association attached to a hospital should have a definite constitution, and consequently these bodies have all been registered as Associations under Act 21 of 1860. By degrees substantial endowments have been built up, although the Associations are still largely dependent upon annual subscriptions towards the maintenance of their work. The chief of these Associations are:—

St. George's Hospital Nursing Association. Hon. Secretary: F. B. Thornely, Esq. St. George's Hospital, Bombay.

J. J. Hospital Nursing Association. Hon. Secretary: W. Turner Green, Esq., Jamsetji Jijibhoy Hospital, Bombay.

Goculdas Tejpal Hospital Nursing Association. Secretary: J. P. Brander, Esq., I.C.S., Old Custom House, Bombay.

Cama Hospital Nursing Association. Hon. Secretary: H. C. B. Mitchell, Esq. Cama Hospital, Bombay.

Sassoon Hospital Nursing Association Hon. Secretary: Civil Surgeon, Sassoon Hospital, Poona.

Karachi Civil Hospital Nursing Association. Hon Secretary: G. Birch, Esq. Civil Hospital, Karachi.

Nasik Civil Hospital Nursing Association Hon Secretary: Civil Surgeon, Nasik Hospital, Nasik.

Ahmedabad and Lely Memorial Nursing Association. Hon. Secretary: Civil Surgeon, Ahmedabad.

Bijapur Civil Hospital Nursing Association. Hon. Secretary: Civil Surgeon, Bijapur

Belgaum Civil Hospital Nursing Association. Hon. Secretary: Civil Surgeon, Belgaum.

Ahmednagar Civil Hospital Nursing Association. Hon. Secretary: Civil Surgeon, Ahmednagar.

After further experience it was felt that it is undesirable to have a considerable number of detached and independent nursing associations, training and certifying nurses, without any common standard of entrance examination, or certification. It was therefore decided to establish the Bombay Presidency Nursing Association which came into existence in the year 1910. This is an Association formed partly of representatives of all affiliated associations and partly of direct representatives of Government, the Surgeon-General with the Government of Bombay always being the chairman. It is financed partly from the product of endowments and partly from contributions from the Government of India. If subsequently further funds are needed they are to be provided by contributions from the affiliated Associations.

The principle on which the Bombay Presidency Nursing Association works is a central system of examination, certification, registration and control. It is now the only nursing, examining, registering and certifying body in the Bombay Presidency. At the same time, the local associations retain entire charge of their local funds excepting Provident funds which have been transferred to the Central fund, and also entire control of the nurses when they are in their employment. Proposals are now before Government for absorbing the personnel of the local associations into a Presidency Nursing Association. This will not however affect the individuality of local associations which will continue to control their own funds and to exercise control over local establishments, subject in the latter case to such limitations as a revision of the nature in question will require.

The Association commenced its operations on the 1st April 1911. The institutions recognized under the by-laws for the training of nurses at present are—St. George's Hospital, J.J. Hospital, Cama and Albless Hospital, Bai Motlabai Hospital, Bombay; Huttesing and Premabai Civil Hospital, Victoria Jubilee and King Edward VII Hospital, Ahmedabad; Civil Hospital, Belgaum; Morarbhai Vrijbhukhandas Hospital, Surat; Karachi Civil Hospital, Karachi; Sassoon Hospital, Poona; State General Hospital, Baroda; and the following for the training of Midwives: M. V. Hospital, Civil Hospital, Surat; Victoria Jubille and King Edward VII Hospital, Ahmedabad; Bai Motlecbai Hospital, J. J. Hospital, Cama and Albless Hospital, St, George's Hospital, Bombay; Dufferin Hospital, Karachi; Sassoon Hospital, St. Margaret's Hospital, King Edward Memorial Hospital, Poona; Civil Hospital, Belgaum.

Provision for retiring allowances is made for all members on the basis of a Provident Fund and a Nursing Reserve has been established for employment in emergencies such as war, pestilence or public danger or calamity.

Address—The Secretary, Bombay Presidency Nursing Association, St. George's Hospital, Bombay.

Lady Minto Nursing Service.—In 1905, there was one organisation existing in the Punjab and the United Provinces called the Up-Country Nursing Association for Europeans in India, which was established in 1892. This Association carried out very useful work in certain parts of India but was hampered by want of funds. For this reason it was found impossible to extend their organization and the urgent need for a larger number of trained nurses at charges within the reach of all classes was much required. The late Lady Curzon worked energetically to provide an enlarged nursing organization, but principally for financial reasons, was unable before leaving India to bring her scheme to fruition. The Home Committee of the existing Association recognizing the need of expansion approached Lady Minto before she left England in 1905 and begged her assistance and co-operation. After much consideration and discussion with the Government of India, Lieutenant-Governors and Commissioners of Provinces, the present Association was established. In 1906 an appeal was made by Lady Minto to the public both in England and India to start an endowment fund. This appeal was most generously responded to. Each year the endowment fund has gradually increased, and with the assistance of a Government grant, homes for nurses have been established in seven Provinces of India and Burma, of which the original Association formed the nucleus. To avoid confusion with other Associations, the enlarged organisation, by request of the Home Committee, was named "Lady Minto's Indian Nursing Association," carrying on the same work as before, namely, that of selecting suitably trained nurses in England, and making the necessary arrangements for their transfer to India. Hon. Secretary, Colonel R. Heard, I.M.S., Simla; Hon. Secretary, Home Branch, Lieut-Col. Sir Warren R. Crooke-Lawless, C.B., C.I.E., C.B.E., LL.D., M.D, House Governor, Osborne, Isle of Wight.

Nurses' Organizations.—The Trained Nurses' Association of India and the Association of Nursing Superintendents of India are not Associations to employ or to supply nurses, but are organizations with a membership wholly of nurses with the avowed objects of improving and unifying nursing education, promoting *esprit de corps* among nurses, and upholding the dignity and honour of the nursing profession. The Associations have a membership of 202, including nurses trained in ten or more different countries, Europeans, Americans, New Zea-

anders, Australians and Indians. The Association of Superintendents was started in 1905 as the Association of Nursing Superintendents of the United Provinces and the Punjab, but by the next year its membership had spread over the country to such an extent that the name was changed to include the whole of India. The Trained Nurses' Association was started in 1908, and a monthly Journal of Nursing began to be published by the two Associations in February, 1910. The Associations have since become affiliated with the International Council of Nurses.

Below are given names of Officers of the Associations :—

Trained Nurses' Association of India.

President: Miss Darbyshire, R.R.C., L.M.N.A., Viceregal Lodge, Simla *Hon., Secretary, and Treasurer.* Miss Rawson, Palwal, S. Punjab.

Association of Nursing Superintendents.

Hon. Secretary and Treasurer : Miss Lamb S. Catherine's Hospital, Amritsar.

THE WOMAN SUFFRAGE MOVEMENT.

Within the abnormally short period of three and a half years the Woman Suffrage movement has risen in India, swept through the country sympathetically and achieved the political enfranchisement of women in two of its most progressive Provinces and in three Indian States.

Three fundamental causes have led to this remarkable success: first, the deep veneration that is given by the Hindu and Muhammadan religions to the feminine aspect of life equally with the masculine as shown by the importance of goddesses, by the necessity for the presence of the wife at all ceremonies performed by a Brahman, by the idea of the sacred mystery of womanhood implied by the purdah, and by the general veneration of motherhood. Secondly the time was psychological, for a new era was beginning for the Indian people by the introduction of a Scheme of Reforms in Indian government which was planned to give a basis of representative government on a much extended scale. The door was being opened to complete Self-government and only men were being invited to enter through it, although women compose half the people of the country and it had been by the joint efforts of men and women that the agitation for reform in the government had been made. The men and women of India were too awake and too just to allow this injustice to remain unredressed. Thirdly, the long and strenuous agitation for the vote by women in Britain and America and their recent victories had brought vividly to the consciousness of all educated Indian men and women the whole question of the inclusion of women in public life, and it was also a national and international necessity that Indian women should be given as high a status as women in other parts of the Empire.

Though the **Municipal franchise** had been granted to the women of the Bombay and Madras Presidencies over fifteen years ago it was so limited in numbers that it did not make a large impact on women's consciousness and indeed no protest was made when it was suddenly withdrawn from Madras women some years later. Over 1,700 women are qualified to vote for the Bombay Corporation and a fair percentage of these have polled at each election, and similarly in other Municipalities in that Presidency women have exercised their vote responsibly and intelligently. It was, however, only with the rise of the political agitation for Home Rule between 1914 and 1917 that women began to wake up to their position of exclusion by British law from any share in representative government. The internment of one of their own sex, Mrs. Besant, stimulated political activity and political self-consciousness amongst women to a very great extent. The moment for the ripe public expression of their feelings came when the Secretary of State for India came to India to investigate and study Indian affairs at first hand in 1917.

During the Hon E. S. Montagu's visit only one Women's Deputation waited on him but it was representative of womanhood in all parts of India, and it brought to his notice the various reforms which women were specially desirous of recommending the Government to carry out.

The first claim for women suffrage for Indian women was made in the Address presented to Mr. Montagu at this historic **All-India Women's Deputation** which waited upon him in Madras on the 18th December 1917. The section referring to enfranchisement merits full quotation:

Our interests, as one half of the people, are directly affected by the demand in the united (Hindu-Muslim Reform) scheme (I. 3) that "the Members of the Council should be elected directly by the people on as broad a franchise as possible," and in the Memorandum (3) that "the franchise should be broadened and extended directly to the people." We pray that, when such a franchise is being drawn up, women may be recognized as "people," and that it may be worded in such terms as will not disqualify our sex, but allow our women the same opportunities of representation as our men. In agreeing with the demand of the abovementioned Memorandum that "a full measure of Local Self-Government should be immediately granted," we request that it shall include the representation of our women, a policy that has been admittedly successful for the past twenty years in Local Self-Government elsewhere in the British Empire. The precedent for including women in modern Indian political life has been a marked feature of the Indian National Congress, in which since its inception women have voted and been delegates and speakers, and which this year finds its climax in the election of a woman as its President. Thus the voice of India approves of its women being considered responsible and acknowledged citizens; and we urgently claim that, in the drawing up of all provisions regarding representation, our sex shall not be made a disqualification for the exercise of the franchise or for service in public life.

The All-India Women's Deputation was organised by the women members of the Senate of the Indian Women's University, Hingne, Poona, namely, Mrs Sarala Devi Choudhuri, B.A., Mrs. M. E. Cousins, B. Mus, Mrs. Saralabai Naik, M.A., Mrs. Ramabai Nilkanth, B.A. and Mrs. Srirangamma, B. A. The additional members who took part in the Deputation and supported it were Mrs. Sarojini Naidu, Dr Miss Nagutai Joshi, Mrs. Besant, Mrs. Dalvi, Mrs, Chandrasekhra Iyer, Mrs. Guruswamy Chetty, Mrs. Lazarus, Mrs. Jinarajadasa, Mrs. Kibe, Mrs. Herabai A. Tata, Begum Hasrat Mohani, Mrs. Ranade, Lady Bose, Mrs. Sanjiva Rao, B.A. Mrs. U. Nehru, Miss Hemabai Petit. Mrs Sarojini Naidu acted as the spokeswoman and to her and three of the Deputation Mr. Montagu accorded a further private interview.

Immediately after this event a Resolution on Woman Suffrage appeared on the Agenda of the **Indian National Congress** for the first time at Calcutta, but it was withdrawn for want of time as it came at the end of the Congress. Following up the terms of the Suffrage request to Mr. Montagu the Women's Indian Association took up the direction of the Woman Suffrage work in India, and placed Woman Suffrage as one of the objects of the Association which up to then had been entirely of an educational character only. **The Women's Indian Association** is still the only organisation in India which has definitely identified itself with Woman Suffrage propaganda and the gaining of political equality for women. Its Headquarters are in Adyar, Madras, and it has 50 Branches and about 2,000 members.

This Association concentrated during the whole of 1918 on getting the public support of prominent political bodies for the inclusion of Woman Suffrage in any scheme of Reforms which might be drawn up for India. Requisitions were got up in April by its branches in Madras and Bombay asking the Madras and Bombay Provincial Councils to pass resolutions in favour of the removal of sex disqualification from the Reform Bill. These Resolutions were enthusiastically passed. The same happened later in the Andhra Provincial Conference and in the Malabar District Conference. In each case the requisitions were signed by a large number of women's societies and prominent women of the Presidencies, and the Resolutions were proposed and seconded in the Conferences by Indian women speakers.

The National Home Rule League (President, Mrs. Besant) and the Indian Home Rule League (President, Mr. Tilak) agreed to make woman suffrage a plank in their party platform. Woman Suffrage Resolutions were passed also by the Provincial Congress Committees of the Madras and Bombay Presidencies, the Central Provinces, the Punjab and the United Provinces, leading up to the introduction of the subject into the Indian National Congress that took place in Bombay in September of that same year. The whole question was then discussed at length and the resolution in favour of woman suffrage proposed by Mrs. Sarojini Naidu, passed by a three-fourths majority. The Muslim League, meeting at the same time also voted in favour of extending the franchise to women. Later National Congresses at Delhi and Bijapur reiterated their support of the inclusion of women on the same terms as men in the Reform Scheme. The Resolutions were as follows: "That women possessing the same qualifications as are laid down for men in any part of the (Reform) scheme shall not be disqualified on account of sex."

It will thus be seen that organised **Indian political opinion** stood solidly in favour of the extension to women of political opportunity for service. It was seen that Indian men as a body were not opposed to voting by women, nor prejudiced against extending women's sphere of influence. It has been the tradition of Indian history that a woman should be allowed to do whatever she proved herself capable of doing and political prohibitions had not been erected against women under the ancient regimes. Probably this traditional custom was the chief cause of the ready sympathy which has been accorded to the requests of Indian suffragists by their brothers throughout India.

The year 1919 was devoted to converting the Government forces to the justice and expediency of Indian Woman Suffrage, but this proved a more difficult matter. It was a disappointment first that though the Secretary of State had given a sympathetic reply to the All India Women's Deputation yet when the Scheme of Reforms, drawn up by him and Lord Chelmsford as the outcome of his visit to India, was published no mention of women was made, though the widening of the electorate was one of the reforms suggested. When the Southborough Franchise Committee was formed to investigate the suggestions regarding the franchise in this Scheme, the women suffragists took every means to bring to the notice of the Committee all the evidence which showed the need for, and the country's support of, including women in the new franchise.

Requisitions from the All India Women's Deputation, the many branches of the Women's Indian Association, the Women's Branches of the Home Rule Leagues, the Bharata Stree Mandal, and a special Memorandum signed by over 800 educated women of the Bombay Presidency were submitted to the Southborough Franchise Committee all expressing the desire of women for the vote. Two Indian ladies also appeared personally before the Committee to express the views of the Bengal and Punjab Provinces. Various Men's Associations also supported the claims of the women to the vote. Notwithstanding all this the Committee recommended the retention of the sex disqualification considering it "premature" to grant voting powers to women owing to what they considered the "social customs" of India. Sir Sankaran Nair, of the Government of India, dissented strongly from these views and urged that qualified women could and should be enfranchised in the Reform Scheme.

As the women who had previously claimed the suffrage were those who best knew whether or no the conditions were practicable for exercising the vote it was natural that this recommendation of the Franchise Committee evoked a storm of protest and denial. Large and repre-

sentative meetings of women were held in the important towns in the Madras and Bombay Presidencies, and a number of cablegrams were despatched to prominent persons in England all protesting vigorously against the postponement of women suffrage.

After the introduction of the **Government of India Bill** into Parliament in July 1919, a number of Indian deputations proceeded to London to give evidence before the Joint Select Committee of Members of both Houses of Parliament which had been appointed to place the Reforms on a workable basis. Mrs. Annie Besant and Mrs. Sarojini Naidu gave striking and weighty evidence on behalf of woman suffrage They were supported by the members of the India Men's Deputations without exception. Lord Southborough however gave the astounding evidence that Indian women did not themselves desire enfranchisement. Immediately from the Women's Indian Association the following cablegram was sent by the General Secretary, Mrs Jinarajadasa, to the Joint Committee." Forty-five branches of the Women's Indian Association controvert Southborough's evidence; they claim votes and protest against sex disqualification." Bombay women also cabled how they had read his evidence with pain and surprise and they proved how his belief was not founded on fact. The following cablegram sent on the same occasion by the Bombay Presidency Social Reform Association (President, Sir Narayan Chandavarkar) showed the strong feeling that existed: The Bombay Presidency Social Reform Association desires me as President to represent to you respectfully the Association's great disappointment at recommendation of Southborough Committee against franchise to women in India in Reform Scheme; cause of social reform much discouraged thereby, and among women in India and large class of social reformers also there is growing feeling of dissatisfaction Franchise to women will greatly help cause of sanitation and education on which India's future greatly depends. Educated women by reason of intelligence and sound practical sense more deserving of franchise than uneducated classes to whom Southborough Committee have recommended elective right."

It was felt that a representative must go directly from India to strengthen the women's position and accordingly a Woman's Committee, consisting of representatives of the different communities of the Bombay Presidency, selected Mrs. H. A. Tata and her daughter Miss M. A. Tata, B A., as their direct representatives to the Joint Committee. Mrs. Tata had been the Secretary of the Bombay Branch of the Women's Indian Association thus she was an ideal exponent on the Franchise movement in India. She had been the pioneer and hardest worker for woman suffrage in Bombay and by her work there and later in England sowed the seed and ploughed the ground that brought later the desired result in Bombay Presidency.

During the latter half of 1919 the **propaganda** for Indian woman suffrage was worked up chiefly in England as it was from Parliament that the grant of the claim was expected. Public meetings were held in many cities of Great Britain and the Women's Associations in England took a great interest in the cause of their Indian sisters and expressed their sympathetic support in every possible way. These meetings were addressed by Mrs. Besant, Mrs. Naidu and Mrs. and Miss Tata as well as by Indian ladies as resident in the West.

The result of all this agitation was but a partial success. The House of Commons decided that the question was one for Indians to answer for themselves and while retaining the sex disqualification in the Reform Bill they framed the Electoral Rules in such terms that if any Provincial Legislative Council should decide by a Resolution in favour of women's franchise, women should be put on the electoral register of that Province. Thus was the only provision regarding franchise matters which might be changed before a 10 years' time limit.

In 1920 back came the burden of the responsibility for the success of their cause to the Indian women in their own country. Again the Women's Indian Association took up the definite work of gaining the support of those who would have them late in their hands, and in the Madras and Bombay Presidencies the candidates for election to the new Reformed Councils were written to and asked to pledge themselves to support a Woman Suffrage Resolution in the New Councils, in return for which promise the members of the Association would give their influence to secure their election. Letters in the Press and appeals from Australian and British women suffragists to the new Councillors brought strongly before the latter their responsibility regarding women and the eagerness with which their Indian sisters were looking to them to turn their former Resolutions of support at Indian Conferences and Congresses into practice and law now that the power to do so had been accorded to them.

Travancore, a very progressive Indian State, was the first to grant the Legislative vote to women at the close of 1920, and it was promptly followed by the Indian State of Jhalawar. In the first session of the Legislative Councils in 1921 it is gratifying to record that a motion was tabled by Dewan Bahadur Krishnan Nair of Malabar that he would bring forward a Resolution in the **Madras** Legislative Council to remove the disqualification of sex existing in regard to the Legislative Council franchise. During the month that must legally intervene between the tabling of a Woman Suffrage motion and its introduction for Debate the Madras women under the leadership of the Women's Indian Association carried on all forms of public propaganda and canvasses the important members of the Council. The Debate took place on April 1st and after a short discussion in which it was evident that opposition came only from the Muhammadan members the debate itself became only an accumulation of appreciation of womanhood and an expression of faith in its future, when the division was taken, it resulted in the Resolution being carried by a majority of 34. Madras has thus the honour of being the first Province in British India to enfranchise its women, and it has done it ungrudgingly and unhesitatingly and in the broad spirit of the equality of the sexes, as it grants the vote to women on the same terms as it has been granted to men.

Mr. Trivedi brought forward a Woman Suffrage Resolution in the **Bombay** Legislative Council during the same session, but some irregularity in its wording caused it to be pronounced out of order. In June that subject was tabled again and championed by Rao Saheb Harilal Desaibhai Desai of Ahmedabad, Deputy President of the Council. As in Madras the intervening month was filled with suffrage activity by the women of the Presidency and was remarkable for a large joint meeting of Bombay city women at which 19 Women's Societies took part, and for a suffrage meeting of Marathi and Gujerati women in Poona when over 800 women showed the greatest enthusiasm for the movement.

The **Bombay** Council Debate on Woman Suffrage took three days and the subject was very fully discussed most by over 40 members The result was satisfactory to the suffragists, the voting being 52 in favour, 25 against and 12 neutral Thus Madras and Bombay Presidencies have given the lead to the other Provinces and it expected that before very long Bengal and the Punjab will also have enfranchised their qualified women as the latter are bringing the matter before the public and the members of their Councils. The women of Mysore State are also seeking the same rights as their sisters in their neighbouring Indian States, Travancore and Cochin, and after holding a number of meetings, went in Deputation, led by Mrs. Chandrasekera Iyer, to the Dewan, who promised to introduce the matter in the coming Legislative Council There is little doubt that it will be only a few years at most before all the provinces of India will have granted woman suffrage, and the right to vote will advance the interests of women immensely along the lines, of education, health, housing, morality and social customs.

The Indian Native States of Cochin is the only place in India where the sex disqualification has been completely removed from the statute book. It has allowed women the right to stand for election for the Legislative Council as well as the right to vote for it, and the Dewan has promised to consider sympathetically the Government nomination of women to the Council. In British India by the terms of the Reform Bill the Councils have no power to alter the disqualification of sex which remains against the rights to stand as candidates for election to the Councils. This can only be changed by the vote of the British Parliament, and the gaining of this right remains as a further objective of the women suffragists. The Imperial Legislative Assembly and the Council of State have been accorded the power to grant women the franchise for their assemblies also by resolution but only for those provinces which already have granted women the Legislative franchise.

The number of women who are likely to be enfranchised by the grant of the vote throughout India will not be more than a million under the present qualifications. Property and not literacy is the basis of the franchise, though the grant of the vote to every graduate of seven years' standing ensures that the best educated women of the country as well as those who have to shoulder the largest property responsibilities will be those who rightly will be the legislating influence on behalf of womanhood. As regards the custom of purdah prevailing in parts of India special provisions have been made in Municipal voting for purdah recording stations for purdah women in which a woman is returning officer and this has been found quite satisfactory and will be adopted also where desired in connection with Legislative Council elections.

Though the Women's Indian Association is the only defined Suffrage Society almost all other women's organisations have combined in special efforts for the gaining of municipal and legislative rights and the following ladies have identified themselves specially with the movement: Lady D Tata, Lady A. Bose, Lady T. Sadasivaier, the Begum of Cambay, Mrs. Sarojini Naidu, Mrs Jaiji Jehangir Petit, Mrs. Tata, Mrs. Wadia, Mrs. Jinarajadasa, Mrs. A. Besant, Mrs M. E Cousins, Mrs Ranade, Mrs Srirangamma, Mrs. Chandrasakehra Iyer, Miss Sorabji, Mrs. Khedkar, Dr. Mistry, Dr. Muthulakshmi Ammal, Mrs. Palmer, Mrs. Kumubini Basu, etc.

The rapid growth in the number of Women's Samajains and Women's Clubs in India ensures the organisation and education of the women who will be enfranchised, and through these Societies the women's vote will become a potent factor in influencing legislation

Indians Abroad.

The Indian is naturally averse from emigration beyond the seas. Nevertheless there are some hundreds of thousands of Indians resident in other lands as labourers, shopkeepers or professional men. Their total number relatively to the population of the Indian Empire is very small being something under two million. In itself, however, it is considerable; and it acquires an extrinsic importance from the social and political issues involved in the settlement of Indians, either as indentured labourers in Crown Colonies, or as free residents in self-governing countries.

The right to migrate.—From the Imperial standpoint the case of Indian migration to the self-governing Dominions is much the more important, and for a time the problems arising therefrom became acute. There were two centres of difficulty in 1914—South Africa and British Columbia; and in South Africa the old trouble has recrudesced since 1918 in a form that threatens once again to become acute, while during the past eighteen months the grievances of Indians in British East Africa have given rise to a situation of considerable gravity. In each country the situation involved particular local problems of extreme difficulty. But before passing to a discussion of them it is necessary to refer to the larger question of the right of migration within the Empire. The intense feeling aroused in India by the disabilities suffered by Indians in the countries named was primarily due to the belief that Indians were being denied the common rights of British citizenship. Without attempting to define the term "British citizenship," which is not so easily susceptible of definition as may be imagined, it must suffice to observe unrestricted migration within the empire does not appear to be the common right of His Majesty's subjects. The laws of the Dominion of Canada and the Commonwealth of Australia confer powers of exclusion of would-be immigrants hailing from any part of the Empire. These laws have been enforced against Englishmen on various grounds. The ground of exclusion is usually economic, and it is on that ground that the Dominion objection to unrestricted immigration from India operates. It is unfortunately inevitable that the problem assumes in the popular mind a racial complexion. But in actual experience it is the clash of economic interests and the possible political difficulties involved in the settlement of Indians in large numbers in the self-governing Dominions which the statesmen of the Empire have to take into account.

The first attempt to deal with the right of migration from a universal and Imperial standpoint was made by Lord Hardinge. In his address to the Imperial Legislative Council on September 8, 1914, he suggested that an endeavour should be made to lay down a principle of **reciprocal treatment** acceptable to all the Dominions, whereby emigration might be restricted in India itself by a system of passports, while the Dominions might give facilities to a moderate number of immigrants under certain conditions. This suggestion met with general approval in and out of India, and eventually bore fruit at the deliberations of the Imperial Conference and War Cabinet in 1917 and 1918. In the former year a Memorandum was presented on behalf of the India Office setting forth in detail Lord Hardinge's system of reciprocity, and in the latter year the following resolution was agreed to unanimously by India and all the self-governing Dominions:—

"(1) It is an inherent function of the Governments of the several communities of the British Commonwealth, including India, that each should enjoy complete control of the composition of its own population by means of restriction on immigration from any of the other communities.

"(2) British citizens domiciled in any British country, including India, should be admitted into any other British country for visits, for the purpose of pleasure or commerce, including temporary residence for the purpose of education. The conditions of such visits should be regulated on the principle of reciprocity as follows.—(*a*) The right of the Government of India is recognised to enact laws which shall have the effect of subjecting British citizens domiciled in any other British country to the same conditions in visiting India as those imposed on Indians desiring to visit such country; (*b*) such right of visit or temporary residence shall in each individual case be embodied in a passport or written permit issued by the country of domicile and subject to *vise* there by an officer appointed by and acting on behalf of the country to be visited if such country so desires; (*c*) such right shall not extend to a visit or temporary residence for labour purposes or to permanent settlement.

"(3) Indians already permanently domiciled in the other British countries should be allowed to bring in their wives and minor children on condition: (*a*) That not more than one wife and her children shall be admitted for each such Indian; and (*b*) that each individual so admitted shall be certified by the Government of India as being the lawful wife or child of such Indian."

Between 1918 and 1921 Canada and Australia took the necessary legislative steps to carry into effect the terms of this resolution. In New Zealand, Newfoundland, and South Africa, no legislation was necessary inasmuch as in the first two mentioned Dominions Indians resident therein are subject to no disabilities, while in the case of South Africa the resolution was merely a re-statement of the policy embodied in the Immigrants' Regulation (Restriction) Act of 1913, and the Indians Relief Act No. 22 of 1914.

The 1921 IMPERIAL CONFERENCE saw a big stride, taken by the Dominions in the direction of the grant of complete political equality to British Indian subjects within the Empire. The Indian delegates reiterated the willingness of India to stand by the Reciprocity Agreement arrived at in 1918, but at the same time they urged the Conference to grant

to those Indians who were legally domiciled within the Dominions such political freedom as was implied in the equal partnership of India in the British Commonwealth of Nations. In response to these representations the Imperial Conference passed the following resolution:—"This Conference has reaffirmed that each Community of the British Commonwealth should enjoy complete control over the composition of its own population by restricting immigration from any other communities, but recognises that there is incongruity between the position of India, as an equal member of the Empire, and the existence of disabilities upon British Indians lawfully domiciled in some other parts of the Empire, and this Conference, therefore, is of opinion that in the interests of the solidarity of the Commonwealth it is desirable that the rights of such Indians to citizenship should be recognised. The representatives of South Africa regret their inability to accept this resolution in view of the exceptional circumstances of the greater part of the Union. The representatives of India, while appreciating the acceptance of this resolution, nevertheless feel bound to record their profound concern at the position of Indians in South Africa and hope that by negotiations between India and South Africa a way can be found as soon as may be to reach a more satisfactory position."

The passage of this resolution was received with great satisfaction in India but much regret was felt at the abstention of South Africa but, as we shall presently see, the situation in South Africa is peculiar and the state of public feeling there against Indians is of an acuteness which rendered it not surprising that General Smuts was unable to join the other Dominion Premiers in signing the resolution.

In South Africa the trouble gathered round the disabilities of Indians already settled there. The question of immigration restrictions, though important, held a less prominent place in the agitation. The most acute point of the controversy was the annual £3 head tax in Natal. While the controversy was at its height, an Act was passsd in the Union Parliament, restricting entry into South Africa to the wife or child of a lawful immigrant or resident who was the wife or child of a monogamous marriage. In a case brought before the courts it was decided that the only wife of a marriage solemnised according to the rites of a religion permitting polygamous marriages could not be admitted. The leaders of the agitation in South Africa adopted passive resistance tactics, which brought large bodies of Indian workmen in Natal into conflict with the police. The situation became acute, and a strong demand arose in India for the appointment of a Government Commission to enquire into the whole question. The Union Government appointed a Commission, and invited the Government of India to send a representative. Sir Benjamin Robertson, Chief Commissioner of the Central Provinces, was selected. The Commission reported on the whole favourably to the Indians.

The Indians' Relief Act, 1914, gives effect to those five of the 14 recommendations made by the Commission which necessitated legislation. First by the deletion of certain words from the Immigrants' Regulation Act, 1913, an Indian, married in accordance with the rites of a religion by the tenets whereof polygamy is recognised, is enabled to introduce into the Union one wife as well as her minor children by him, provided the Indian has in the Union no other wife. Another recommendation of the commission to which effect is given is as follows: An Indian man and an Indian woman may, on a joint application to a magistrate or marriage officer, and on complying with certain prescribed formalities, obtain registration of such a union between them as is *de facto* a monogamous union, and such registration will constitute a valid and binding marriage between them with all the incidents thereof, and will be recognised in the Union as such, notwithstanding that, by the tenets of the religion which they profess, polygamous marriages are recognised.

The third recommendation of the Commission to which effect is given is a provision for the appointment of Indian priests as marriage officers under the marriage laws of the several provinces of the Union. So far as Cape Colony is concerned this had been possible, as regards the Mohammedan religion, under Act No. 1 of 1860, while Law No. 19 of 1891 of Natal contained a similar provision. Under the new Act any Indian priest may be appointed a marriage officer for the purpose of the marriage laws of any province of the Union, and a marriage solemnised by him will, if solemnised in accordance with the rites and formularies of his religion and without any prescribed statutory words signifying the binding nature of the ceremony, be recognised as valid.

Another provision provides for the repeal of that section of the Natal Indian Immigration Laws which imposed an annual licence of £3 on Indians who, introduced as indentured labourers, failed to reindenture at the termination of their contracts.

The Smuts-Gandhi Agreement.—With the measure of relief afforded by the Act of 1914 Mr. M. K. Gandhi, who had gone to South Africa in connection with the passive resistance movement, expressed himself as satisfied; and certain correspondence passed between him and General Smuts, who was then the Minister of the Interior, in which an agreement was arrived at with regard to Indian traders in the Transvaal. The following extracts from the correspondence summarise the agreement and are of importance because of the part they played in 1919 when the controversy was revived:—

(*a*) From a letter of the Secretary for the Interior to Mr. Gandhi, dated June 30, 1914: "With regard to the administration of existing laws, the Minister desires me to say that it always has been, and will continue to be, the desire of the Government to see that they are administered in a just manner with due regard to vested rights."

(*b*) From the same letter: "In conclusion General Smuts desires me to say that it is, of course, understood and he wishes no doubts on the subject to remain, that the placing of the Indians' Relief Bill on the Statute Book of the Union, coupled with the fulfilment of the assurance he is giving in this letter in regard to the other matters referred to herein touched upon at the recent interviews, will constitute a complete and final settlement of the controversy

which has unfortunately existed for so long, and will be unreservedly accepted as such by the Indian community."

(*c*) From a letter of Mr. Gandhi to the Secretary for the Interior, dated July 7, 1914: "By vested rights I understand the right of an Indian and his successors to live and trade in the township in which he was living and trading, no matter how often he shifts his residence or business from place to place in the same township."

(*d*) From a letter of Mr. Gandhi to the Secretary of the Interior, dated June 30, 1914: "The passing of the Indians' Relief Bill and this correspondence finally closes the passive resistance struggle. .... As the Minister is aware, some of my countrymen have wished me to go further. They are dissatisfied that the trade licenses laws of the different Provinces, the Transvaal Gold Law, the Transvaal Townships Act, the Transvaal Law 3 of 1885, have not been altered so as to give them full rights of residence, trade and ownership of land. Some of them are dissatisfied that full interprovincial migration is not permitted, and some are dissatisfied that on the marriage question the Relief Bill goes no further than it does. They have asked me that all the above matters might be included in the passive resistance struggle. I have been unable to comply with their wishes. Whilst therefore they have not been included in the programme of passive resistance, it will not be denied that some day or other these matters will require further and sympathetic consideration by the Government. Complete satisfaction cannot be expected until full civic rights have been conceded to the resident Indian population."

In 1919.—The controversy again broke out, and this time it was confined to the Transvaal The points at issue were as follows:—

(1) The interpretation of Mr. Gandhi's definition of "vested rights" was disputed. On the one hand it was held that "vested rights" meant "the rights existing at the time of the agreement", and it was accordingly alleged that the Indians who opened shops and carried on businesses in townships in which they were not licensed to trade in 1914 had broken the terms of Smuts-Gandhi agreement. It was further contended that the word "successor" in the definition meant "legal successor or heir," and that those Indians who had sold their businesses to other Indians had in that respect also infringed the agreement. On behalf of the Indians, on the other hand, it was argued that "vested rights" meant the inherent rights of the whole Asiatic community—the right to trade—whether the rights were being exercised by any particular man at the time of the agreement or not, and included even the inherent rights of the unborn. As regards "successor", that, the Indian community maintained, meant "any successor in title, no matter how he acquired his right to succession, whether he purchases it or otherwise."

(2) The Transvaal Gold Law of 1908 (No 35) as interpreted in the judgment of Krugersdorp Municipality *versus* Beckett provides in Section 130 that no right under that law may be acquired by a coloured person, and that no holder of a right may permit any coloured person other than his *bona fide* servant to reside on or occupy ground held under such right. Under Section 131 no coloured person is permitted to reside on proclaimed land in the Mining Districts of Johannesburg, Boksburg, and Krugersdorp except in locations, etc., appointed by the Mining Commissioner. To obtain relief from the provisions of this Act as thus interpreted the Transvaal British Indian Association petitioned Parliament in February, 1919.

(3) Although it was decided in the case of Motan *versus* the Transvaal Government that the Commissioner of Inland Revenue cannot refuse to issue general dealers licenses to coloured persons, yet as far as licenses for grocery shops, eating-houses, etc., are concerned, these are controlled by the municipalities, who have the right to withhold licenses if in the opinion of the Councils the applicant is not a desirable person to hold such license. Under this power Transvaal municipalities, especially that of Krugersdorp, consistently refused licenses to Indians on the sole ground that they were Indians. In several cases the Magistrate of Krugersdorp overruled the decision of the Council, and the municipalities have denied that they refused licenses to Indians as such. From this alleged systematic refusal of licenses by the municipalities the British Indian Association also petitioned Parliament for relief.

(4) By the Transvaal Law 3 of 1885 it was provided that Indians and Asiatics generally "may not be the owners of fixed property (*i.e.*, land) in the Republic." This law is still in force. But by Act 31 of 1909 two or more persons may form a private limited liability company, and there was no provision of the law preventing such a company from owning land. Profiting by this state of the law, it became the practice of Indians to form such companies and by this means obtain that ownership of land which was denied them by the law of 1885. This was alleged to be a contravention of the spirit of the Smuts-Gandhi agreement, and aroused considerable feeling in the Transvaal.

In March 1919, in consequence of the petition mentioned above and of the acute bitterness that had arisen as a result of the controversy, the Union Parliament appointed a Select Committee to report on the matter. The Committee reported on April 30 and recommended (*a*) That the vested rights of Indians who were carrying on business in proclaimed Mining Areas in June 1914 should be respected. (*b*) That the vested rights of Indians who since that date obtained trading licenses and are carrying on business on such areas should also be respected. (*c*) That Indians should have the right to transfer their existing businesses to other Indians legally residing in the Transvaal. (*d*) That steps should immediately be taken to render it impossible for any Asiatic in the future to obtain a license for a new business. (*e*) That Transvaal law 3 of 1885 should be amended so as to extend the land-owning disabilities therein to any companies of which the controlling interest is possessed by Asiatics. Thus, "vested rights" were held to be actual existing, and not potential, rights, while "successors" were defined as "successors in title."

The Asiatics (Land and Trading) Amendment Act, 1919, gives effect to the recommendations of the Committee. It had a

stormy passage through the House and entirely satisfied neither the Indians nor those whose feelings are anti-Indian. The Indians objected to the recommendations (*c*) and (*d*) above, and the anti-Indians fought hard against recommendation (*c*). To placate the anti-Indians and to obtain the passage of the Bill through the House, the Government had to promise to appoint a Parliamentary Commission to go into "the whole Asiatic question in the Transvaal." The Bill also aroused considerable feeling in India, and Mr. Montagu, the Secretary of State for India, suggested to the Union Government that India should be represented on the Commission by one official and one non-official. After negotiations between the Union Government and the Government of India, it was announced that India was to be represented "not on but before" the Commission by Sir William Robertson; and in February 1920 the personnel of the Commission was announced as consisting of the following four members:—Sir Johannes Lange, Puisne Judge of the Supreme Court, Griqualand West, chairman; Lieutenant-Colonel Scott Wylie, of Durban, Natal; Mr. William Duncan Baxter, M. L. A., of Cape Town; and Mr. Henry John Hofmeyr, of Johanesburg, Transvaal. At the same time the terms of reference were announced, as follows—To enquire and report on the provisions of law affecting:—(a) The acquisition of land and rights affecting land in the Union by Asiatics and persons of Asiatic descent for trading or other purposes. (b) The trading or carrying on of business by such persons generally or in specified localities. (c) To consider whether it is in the public interest to alter the law in any respect, and (d) To make recommendations with regard to any difficulties and grievances which may have arisen in connection with (a) and (b).

During the latter part of 1919 both sides were busy preparing their cases for presentation before the Commission. On the one hand a South African League (it was orginally called the Anti-Asiatic League) was formed in the Transvaal to combat "the Asiatic menace", to urge "the stringent application" of all laws imposing disabilities on Asiatics, and to collect evidence for submission to the Commission. A large and influential congress at which were present delegates representing trade unions, Chambers of Commerce, and political, commercial and industrial interests in general, was held in Pretoria on September 4 and 5 to inaugurate the league. Violent anti-Indian speeches were delivered, and extreme resolutions were passed, including one which urged the Government to repatriate all Indians in the Transvaal, after paying them monetary compensation. On the other hand, in August an Indian National Congress was held at Johannesburg, which was attended by Indian delegates from all parts of the Union. Twenty-three resolutions were passed demanding the abolition of all disabilities, the granting of full civic rights, including political franchise and the right of interprovincial migration, and the provision of more liberal educational facilities.

Voluntary Repatriation.—The Commission began taking evidence at Capetown about the middle of March 1920. The greater part of April was spent in the Transvaal, where not only Pretoria and Johannesburg were visited but also many of the smaller towns and villages, in which the Asiatic "menace" was supposed to be most pronounced. The concluding sittings took place in Natal in the early part of May. Sir Benjamin Robertson attended all the sittings of the Commission on behalf of the Government of India; and in all three Provinces the Indian case was ably presented by eminent counsel whose services the Indian communities had retained. The case for the anti-Indians was as ably, if not as temperately, urged by the South Africans' League in the Transvaal and by the farmers' organisations in Natal. The Commission also took pains to examine a large number of independent witnesses.

Almost immediately after the concluding sittings in Natal the Commission surprised every body by bringing in an *ad interim* report recommending the Union Government to take immediate steps to encourage as many Indians as possible to consent to be repatriated; and to this end the Commission urged the Government:—

(*a*) to appoint an official not connected with the Protector's Department to organise the return of such Indians as are prepared to go, (*b*) to provide frequent shipping facilities at short intervals, (*c*) to relax restrictions on the export of gold in so far as necessary in order to allow returning Indians to take their legitimate savings and jewellery with them to India, (*d*) to make provision where necessary for enabling Indians and their families to reach their homes after arrival in India.

In making this report the Commission exceeded the strict letter of their terms of reference; but inasmuch as the recommendation involved no fresh legislation to carry it into effect and had both the support of Mr. C. F. Andrews, who gave evidence before the Commission in Capetown, and the approval of Sir Benjamin Robertson, the Union Government lost no time in intimating their intention of accepting the suggestion. The Government possessed ample powers for this purpose under the Relief Act of 1914, in accordance with the provisions of which 18,000 Indians had already been voluntarily repatriated; and they now proceeded to increase the inducements and facilities for further repatriation, and appointed as Repatriation Officer to undertake the work of organisation Mr. Wynne Cole, who, as Licensing Officer in Natal had had considerable experience among the Indian community. At first the still-existing war-time regulation forbidding anyone to take, either in the form of jewelry or money, more than £ 5 worth of gold out of the country caused the repatriation scheme to hang fire; but this matter was soon put right by allowing Indians who were being repatriated to take with them all their ornaments and jewelry and £ 25 in gold, any money they might possess over £ 25 being given back to them in the form of currency notes or drafts. Free passages to India were provided and those who were destitute were given slight financial aid. The first batch of Indians to be voluntarily repatriated under this new scheme numbered 95. They sailed from Durban on September 2 and arrived in Bombay on September 22. There was some

slight opposition to the scheme both in India and in the Union. In India it was regarded with suspicion, first because it was made a condition of the grant of a free passage that the repatriated Indians should sign a declaration relinquishing their South African domicile and their right to return to South Africa; and, secondly, because it was imagined that voluntary repatriation might be the harbinger of compulsory repatriation. In South Africa, on the other hand, it was argued that the scheme deprived the sugar and tea plantations of desirable labourers and left behind the prosperous traders and the skilled workers who constituted the Asiatic "menace."

While awaiting the final report of the Commission, the South Africans' League redoubled the intensity of their propaganda campaign. They circulated a monster petition throughout the Transvaal, praying for relief from the Asiatic "menace," and obtained no fewer than 80,443 signatures, including those of 28 municipalities, six Chambers of Commerce, five Trade Unions, and Eleven Farmers' Associations. This petition was presented to the Union House of Assembly by Sir Abe Bailey shortly after the General Election. Later on in the year, the South Africans' League, having spread throughout the Transvaal, extended its operations to Natal, and numerous branches were established in that Province.

The Commission's Final Report.—Although the Committee finished its sittings early in 1920, its final report was not published until March 1921. The report was of very great length, and a large number of recommendations was made of which the following is a summary:—

(1) Law 3 of 1885 (Transvaal), the Gold Law of the Transvaal (Act No. 35 of 1908) and Act No. 37 of 1919 should not be repealed (paragraph 198).

(2) There should be no compulsory repatriation of Asiatics (paragraph 118); but

(3) Voluntary repatriation should be encouraged as outlined in our Interim Report submitted in May 1920 (paragraph 119).

(4) There should be no compulsory segregation of Asiatics; but

(5) A system of voluntary separation should be introduced under which municipalities should have the right, subject to certain conditions—

(*a*) to lay out residential areas for Asiatics;

(*b*) to set aside certain streets or portions of the town for Asiatic traders, to which existing license-holders should gradually be attracted.

(6) These areas should be selected and allocated by a board of independent persons, in consultation with the Municipal Council and Asiatic community (paragraphs 120 to 131 and 200-201).

(7) In Natal the right of Asiatics to acquire and own land for farming or agricultural purposes, outside townships, should be confined to the coast belt, say, 20 to 30 miles inland (paragraph 199).

(8) Law 3 of 1885 (Transvaal) should remain applicable to the Vryeid, Utrecht and Paulpietersburg districts of Natal (paragraph 178).

(9) The existing laws relating to Asiatics in Zululand and the Transkeian Territories should remain unaltered (paragraphs 179 and 189).

(10) A uniform "Licence Law" applicable to all the provinces of the Union should, if possible, be enacted. If that is impracticable, the laws relating to the issue of Trade License in the Cape Province, the Transvaal and Natal should be assimilated in a comprehensive consolidating Act of Parliament providing, *inter-alia*:—

(*a*) That the granting of all licences to trade (not being liquor licences) shall be entrusted to municipal bodies within the area of their jurisdiction, outside those areas, to Divisional Councils in the Cape Province, and in the other Provinces to special Licensing Officers appointed by the administrator.

(*b*) The grounds upon which an application for the grant of a new license may be refused.

(*c*) That the reasons for the refusal to grant any license shall be recorded, together with any evidence tendered for or against the application.

(*d*) That in the case of the refusal of a license on the ground that the applicant is not a fit and proper person to hold the same or to carry on the proposed business, there shall be final appeal to a Special Appeal Board, appointed by the Administrator.

(*e*) That municipal bodies shall have the right to prohibit the license-holder, or any other person, from residing in any shop, store or other place of business (paragraphs 204 to 211).

(11) There should be no relaxation in the enforcement of the Immigration Laws, and more active steps should be taken to deal with prohibited immigrants who have evaded the provisions of those laws (paragraphs 219 to 223).

(12) The administration of the Asiatic policy of the Government should be placed in the hands of one official with duties as set out in paragraph 222.

Appended to the report was Mr Duncan Baxter's reservation which was as follows:—

I dissent from the recommendation contained in paragraph 199 of this report, *viz.*, that the right of Asiatics to acquire land in Natal for farming and agricultural purposes should be restricted to the Coast Belt. It seems to me a retrogade proposal, inconsistent with other recommendations in the report, which are founded on the idea of voluntary separation and not compulsory. It is also a restriction of existing rights of ownership, and, in the case of ex-indentured Indians and their descendants, a breach of the conditions of recruitment, which I think should be scrupulous adhered to in the interests of good feeling and the sense of fair-play, so necessary in our relations with the Indians in South Africa and the Government of India.

With the policy of attracting Indians to the Coast Belt by good treatment and security of tenure I am in agreement. I go further and

believe that it would be an act of wisdom on the part of the Government to acquire land in the part of Natal and lease it on favourable terms to Indians. The climate and agriculture of the Coast Belt are admittedly those best suited to Indian enterprise, and it such a policy were effectively carried out, it would not only be to the advantage of the Indian cultivators and the consuming public, but it would tend also to relieve the fear of an Indian "invasion" held by European farmers in the uplands of Natal.

The reception of the report—The report of the Commission,like that of the 1919 Preliminary Committee, had a very mixed reception. The anti-Indians were not satisfied, because they were told that the so-called "Asiatic Menace" was greatly exaggerated, and because the Committee definitely decided against both compulsory repatriation and compulsory segregation. The Indians, on the other hand, were dissatisfied first because they had hoped for some alleviation of their disabilities, while not one of their disabilities was removed, and because the Commission recommended the imposition of at least one additional disability—namely, the restriction of the right of Indians to own land for agricultural purposes in Natal to the Coastal Belt. And not only were the Extremists on both sides dissatisfied, but even the moderate-minded would not give their support to the report because it was felt that the Commission had failed to fulfil the real purpose for which it had been appointed, namely, to grapple with the whole Indian question throughout the Union and to settle it definitely by the enunciation of definite principles and a definite policy. So far from enunciating a definite policy, the Commission has dealt with the problem in a timorous and piecemeal fashion, so that the position has not only not been bettered by the labours of the Commission but is now in a far more critical and unsettled condition than it was before the Commission sat.

The Commission's report was laid before Parliament during the March session but for some time the Government did not declare their intentions with regard to it Finally, however, as the result of motions moved by Natal members with a view to forcing the hands of the Government, the Minister of the Interior announced that the Government had decided to take time to consider what their action should be in regard to the report and that no legislation would be introduced during their session. As a matter of fact, no legislation based upon the report has yet been introduced up to the moment when this *Year Book* went to press. This was due chiefly to the supervention of the Imperial Conference at which the status of Indians throughout the Empire was discussed (*vide* p. 538).

Natal Anti-Indian Legislation vetoed—During the year 1921 the Indian question in South Africa was taken out of the category of a local question and elevated to that of an Imperial problem. Striking proof of this fact was given by the vetoing by the Governor-General in Council, Prince Arthur of Connaught, of two Ordinances of the Natal Provincial Council, both of which were designed to add to the disabilities of Indians in the Province. One of the Ordinances aimed at depriving the Indian of his right to elect candidates to Township Boards, and the other affected his right to obtain municipal trading licenses. The first ordinance was the result of the success of an Indian ticket at a township election The ticket consisted of Europeans who sought the suffrage of the Indian voters, but after their victory the Indians declared their intention at the next election of putting up a ticket consisting entirely of their own countrymen The second ordinance was a protest against the recommendations of the Asiatic Commission with regard to the unification of the laws of municipal licenses. Both ordinances were vetoed by the Governor-General in Council on the express ground that the Government was pledged to protect the vested rights of Indians throughout the Union

In British Columbia, the trouble over Indian immigration came to a head in the early part of 1914, when a ship-load of Indians was despatched direct from the Far East to Vancouver. It was held up in the harbour there for several weeks. The passengers were not allowed to land. An appeal to the Canadian courts resulted in the rejection of their claim, and eventually they were shipped back to India. (For further details, see the *Times of India Year Book* for 1920, p. 496).

There are some 4,000 Indians already settled in British Columbia, chiefly Sikhs. They work as agricultural labourers, in factories and lumber yards, and also on the railways. The desire amongst them to bring their wives and families out from India points to the fact that they are fairly prosperous and find the conditions of life in the Colony agreeable. The attitude of the Colonial authorities towards them is governed by the general objection to Asiatic immigration. It is felt that the unrestricted entry of Asiatics would threaten the existence of British Columbia as a "White man's country." The immigration of Japanese and Chinese is regulated by special treaties with their Governments. The number of Japanese is limited to a few hundreds annually. Chinese immigrants pay a head tax of 500 dollars on entry.

In British East Africa.—The beginnings of the present trouble in British East Africa must be dated back to 1902, for it was about then that it was first realised that the Nairobi Uplands were fit for European settlement, and it was then that a Land Ordinance became law wherein the policy was embodied of allotting lands in the Uplands to Europeans and lands in the Lowlands around Mombassa to Indians. European allotments were unlimited, while those to Indians were restricted to 100 acres per person. But it was not till about the middle of 1918 that the Indians were able to make their voice heard in defence of their rights. Previous to the war the encroachments had been so gradual that the Indians hardly realised what was happening, and during the war British East Africa was under Martial Law from August 5, 1914, to February 25th, 1919, which had the effect of rendering the Indians compulsorily dumb except for the last few months of the military regime when the strictness of the administration of Martial Law was

somewhat relaxed. These conditions, which were necessarily imposed by the fact of war, were taken advantage of by the East African Government; and the Legislative Council, upon which the Indians were unrepresented, passed a Land Ordinance in 1915 giving the Governor a veto on the sale of all Crown Lands by Europeans to Indians. Nor was this all In 1915 Professor W. J Simpsom on July 2nd, 1912, made a report to the Colonial Office, which had sent him to East Africa for the purpose at the request of the Administration, upon the general conditions of the Colony. His report recommended *inter alia*, a scheme of **racial segregation** whereby Indians were to be excluded from inhabiting certain portions of the town of Nairobi and certain portions of other towns under a Town Planning Scheme This report was kept secret until 1916, and in 1919 was put in operation by the Segregation of Races Rules and the Town Planning Scheme Ordinance. By these laws definite residential and commercial areas in towns are demarcated with strict rules segregating the races. Immediately after the war the Administration allotted land to ex-British soldiers, but none was given to ex-Indian soldiers During July, 1920, a change took place in the constitution of the Government What had hitherto been known as the British East African Protectorate was divided into two portions, Mombassa, the Lowlands around Mombassa, and the continental territories of the Sultan of Zanzibar were named **Kenia Protectorate**, while the rest of the country, which included Nairobi and the Uplands, was termed **Kenia Colony** with the status of a Crown Colony. The object of this was to confine the Indians as far as possible to the Mombassa districts and reserve the delectable Uplands around Nairobi for Europeans.

The Indians did not remain inactive under these increasing disabilities. The British East Africa Indian Association was formed, and made strong representations to the Home Government. A deputation was also sent to India, to enlist the sympathy and help of the Government and people. In the latter part of 1919 it became known that Lord Milner, the Colonial Secretary, was taking steps to enquire and act in the matter; and in February of the following year he met the Governor of British East Africa, General Northey, in London and conferred with him. At this conference the Government of India was represented The result was the passing of the Town Planning Ordinance and the Segregation of Races Rules mentioned above; but the position of the Indians was alleviated to this extent that with the renaming of the colony it was enacted that the Legislative Council of Kenia Colony should consist of 11 elected European members and three members to be nominated by the Governor, two to represent the Indians and one to represent the Arabs. Meantime the Government of India had clearly defined its attitude in regard to the treatment of Indians in East Africa. Speaking at the opening of the Imperial Legislative Council on January 30th, 1920, the Viceroy, Lord Chelmsford, declared that the Government took its stand upon the constitutional principle that in a Crown Colony or Protectorate British Indian subjects ought not to be given a lower status than any other British subjects. Later in the year a deputation of Indians from Kenia was received most sympathetically by the Viceroy, and in his address to the Imperial Legislative Council on September 1920 he announced that the Government had strongly pressed, and was continuing strongly to press its views of the justice of the Indian case upon the Home Government; and that if the Indian Government's efforts should prove unavailing with the Home Government, serious consideration would be given as to the steps to be taken by the Government of India to protect the rights of its subjects resident in Kenia Colony and Protectorate.

The result of the Government of India's representations and of the continued agitation on the part of Indians in East Africa, and also to some extent of the numerous resolutions of protest passed in India by various public meetings, Merchants' Associations and other bodies, was that **Lord Milner** addressed on May 21st, 1920, a **despatch** to the Governor of Kenia Colony in which all the grievances of the Indians were exhaustively discussed. The despatch met the Indian view to the extent of prescribing that the two Indian members of the Legislative Council should cease to be nominated by the Governor and should be elected by the Indians themselves. But the obnoxious segregation measures were left untouched! This despatch was not acceptable to the Government of India, but it made no announcement upon the matter pending the receipt of the report upon the whole question which the Government had instructed Sir Benjamin Robertson to make after a sufficient stay in East Africa on his way back from South Africa. During November it was announced that the report had been received and that, together with a despatch upon it by the Government of India, it had been forwarded to the Secretary of State; and that no public statement would be made until the reply of the Secretary of State had been received. Meanwhile in Kenia the Indians had grown more desperate. Lord Milner's despatch was regarded as highly unsatisfactory, and during November and December the Indians held many public meetings of protest. A large number of Indians resigned their public offices, and resolutions were sent to the Home Government threatening a campaign of boycott and non-co-operation unless adequate parliamentary and municipal franchise was granted and on the segregation laws repealed.

Other Grievances.—So far mention has been made only of the segregation and franchise grievances, for these are by far the most important But there were others: for example the denial to Indians of the right of trial by jury, the exclusion of members of the Indian legal and medical professions from the right to practise, the inadequacy of educational facilities, and the threatened passing of the Removal of Undesirables Ordinance. This Ordinance would not only have given power to the East African Government to deport any Indians they desired to get rid of, but would have been the thin edge of the wedge of the restriction of Indian immigration. It was, however, never passed, owing to the strength of the opposition to it; and Lord Milner's last despatch definitely safeguards to the right of immigration. The

despatch also gives the right of trial by jury to Indians; contains some rather ambiguous references to the rights of Indian medical and legal practitions which are capable of favourable interpretation; and promises increased educational facilities.

IN 1921 THE SITUATION IN KENIA increased in gravity. Mr. Churchill took the place of Lord Milner at the Colonial Office, and at once made it clear that his policy with regard to the Indian question in Kenia was to differ considerably from that of his predecessor Several utterances of Mr. Churchill's seemed to indicate that he was in substantial agreement with the view of the Government of India—namely, that in a Crown Colony there was no justification for allotting to Indians a lower political status than that enjoyed by any other British subjects in that Colony. Mr. Churchill, however, added a proviso that such a state of affairs should be brought about in Kenia by successive stages which would occupy some time for their passage. Despite this proviso, the Europeans in Kenia were thrown into a state of great excitement by Mr Churchill's utterances, and widespread opposition to the Indian demands was hastily organised. Speeches were delivered from time to time by prominent Europeans in the Colony of an extremely heated and intemperate nature; and at numerous public meetings held throughout the Colony resolutions were passed declaring that the Europeans intended to oppose by every means in their power the Indian claims. This agitation amongst the Europeans stimulated the Indian community to similar measures, and public meetings of Indians were held at which resolutions were passed reiterating the determination of the Indians to win complete political equality and the right of unrestricted landownership, and as a threat the Indians declared their intention, if their claims were not granted, to refuse to pay taxes and to commence a campaign of passive resistance. Both sides sent deputations to England to urge their views before the Colonial Office, and the Government of India continued to press its championship of the Indian case upon the Secretary of State and Mr. Churchill. During the latter half of the year the situation in Kenia had become so grave and the state of feeling had risen to such a pitch that Sir E. Northey, the Governor, was called to London to discuss the situation with the Colonial Secretary. At about the same time the Europeans in Kenia despatched a deputation to tour throughout Rhodesia and the Union of South Africa and to interview General Smuts with a view to invoking his sympathy. General Smuts, being forbidden by his position to receive the deputation officially, consented, however, to receive it unofficially, and assured the deputation of his unofficial sympathy. He added that he had urged upon the Imperial Conference the view that as regards the Indian question Africa should be treated as a whole. The deputation, after the interview with General Smuts, toured the Union, and everywhere received expressions of sympathy. Meantime the natives in Kenia had not remained silent, and at several public meetings had expressed the view that they regarded the Indians as their best friends after the English missionaries, and that the influence of the Indian upon the native was all to the good. It was alleged by the Europeans, however, that these native resolutions had been engineered by the Indians as a reply to the allegations made by the Europeans that the influence of the Indians upon the natives was evil and corrupting. In October Sir. E. Northey returned from England but, contrary to expectation, he made no immediate pronouncement of policy. In a speech delivered shortly after his return he declared that his intention was to endeavour to bring about a better state of feeling between Indians and Europeans, as, in the present whirlpool of emotions, it was impossible that any reasonable compromise could be effected. In addition to making this public speech, it is known that Sir E Northey has had several interviews, with Indian and European leaders with a view to bringing about that more promising atmosphere to which he referred in his speech, and Indians accepted seats in the Executive and Legislative Councils.

TANGANYIKA.—In August 1919, the Secretary of State for India, in a despatch addressed to the Indian Government, conveyed an offer made by Lord Milner in April of the same year, to discuss the possibility of encouraging the settlement of Indians, preferably agriculturists and ex-service men, in some parts of Tanganyika Territory In the course of the despatch the India Office asked the Government of India to discover the general view of the country upon the following points: (1) Whether from the point of view of India an organised scheme of settlement in Tanganyika was regarded as desirable and practicable. (2) How far a suitable type of agriculturists, ex-service men or others would be attracted by the prospects of free settlement in the territory. (3) Whether the Government of India would be prepared to encourage such colonisation and how far it would be willing to go in giving financial assistance. In order to be able to answer these questions the Government of India arranged that on his way from South Africa Sir Benjamin Robertson should go to Tanganyika Territory for the purpose of eliciting the views of the Tanganyika Administration in the matter and in order to survey the local conditions in the territory. The Government of India has now published Sir Benjamin Robertson's Report upon his visit to Tanganyika and also the Government Despatch to the Secretary of State conveying the Government's answers to the three questions put by the India Office.

In the course of his report Sir Benjamin Robertson came to the following conclusions:

(1) There is no vacant land suitable for an Indian reserve. The land which is now vacant is generally vacant because it has some defect. (2) Small settlers with only a moderate amount of capital, whether white or coloured, face grave risk of disaster in a country where capital for the employment of native labour is essential. (3) It would be inconsistent with article 22 of the Covenant of the League of Nations to exclude the Native peoples from part of the Tanganyika Territory in order to form an Indian reserve. In regard to (1) Sir Benjamin Robertson found that the land which was suggested to be set aside for Indians was extremely difficult to work agriculturally, that the climate was un-

healthy and malarious and that in a great part of the territory it was impossible for cattle, horses or any domestic animals to live. With regard to (2) Sir Benjamin Robertson said that unless the Indian Government were prepared to give Indian settlers close supervision and liberal financial support, it would be impossible for Indians to make a success of small holdings. With regard to (3) Sir Benjamin Robertson pointed out that it would only be possible to form an Indian reserve by excluding the natives, which would be a clear breach of the terms under which the mandate for Tanganyika was granted by the League of Nations. Sir Benjamin Robertson concludes: "The proposal to settle small cultivators in a special Indian reserve is, in my opinion, unsound both politically and economically, and I recommend that it should now be dropped."

In its despatch the GOVERNMENT OF INDIA accepted the findings of Sir Benjamin Robertson's report, and informed the Secretary of State that it was of the opinion that the proposed colonisation by small cultivators should be dropped. The Government was led to that view not only by the report but also by the replies made by the Local Governments of India to whom the Government of India referred the three questions asked by the India Office. In detailing the replies, which were almost entirely unfavourable, the Government of India pointed out that if preferential treatment were granted to Indians in one part of East Africa, it would give a handle to the opponents of Indians in other parts of East Africa to urge preferential treatment for Indians in the shape of disabilities. The Government continued: "We have opposed and will continue to oppose unfair discrimination against our nationals overseas. We desire no discrimination in their favour. We ask for no more than equal rights. We can be satisfied with nothing less." And in conclusion the Government of India reiterated its suggestion for a Royal Commission to go into the whole question of the status of Indians throughout East Africa.

An exaggerated danger.—Making every allowance for the Dominion standpoint, those acquainted with the internal condition of India cannot but feel that the fears that the self-governing colonies may be deluged by Indian immigration are greatly exaggerated. The total number of Indians resident out of India is under two millions, and of these the majority are to be found in tropical countries. Ceylon alone has 900,000 of them. There is a quarter of a million in Mauritius, about another quarter of a million in British Guiana and the West Indies, 230,000 in the Straits Settlements and Malay States, and 35,000 in British East Africa (Kenia). Of the self-governing Dominions South Africa has by far the largest share, her Indian population being a little under 160,000, Natal alone accounting for 133,000. But this is not the result of ordinary migration. The nucleus of the South African Indian community was formed artificially by Natal herself. Until 1911, when it was stopped by the Government of India, there was for many years a steady stream of indentured immigration into Natal to supply labour to the sugar and other industries of that colony. The natural increase of the Indian population in South Africa is now much larger than the increase by immigration. In the whole Australian Commonwealth there are not more than 7,000 Indians. The principal movement of Indians to the Dominions occurred in 1907-8 the total immigration being under 7,000. Of this number it is estimated that not more than 1,200 now remain in Canada, there having been a heavy exodus to the United States, while quite a number have returned to India. The significance of these trifling totals must be viewed in the light of the conditions prevailing in India. Here, it is true, there is a vast population. Were these 319 millions subjected to the economic conditions of Europe and were they imbued by the adventurous and ambitious spirit of Europeans, there would be good ground for alarm in the Dominions at the possibility of an overwhelming influx of Indians. But those are precisely the conditions that do not obtain in the Indian Empire. The demand for labour in India is always greatly in excess of the supply. The tea-planters of Assam are obliged to compete with the Crown Colonies in an elaborate system of cooly recruitment. Labour-shortage is a chronic difficulty with the cotton mills of Bombay. As industrial expansion proceeds and agricultural methods improve, as more land is brought under cultivation, there must be a diminishing likelihood of emigration from India on any large scale. Add to this the inherent reluctance of the Indian to go far from home, and it will be apparent that the danger of "white men's countries" being swamped by Indian immigrants is at the least remote. It is never likely to assume such proportions as would pass the wit of statesmen to control. As a matter of fact, as has already been made clear above, the Imperial Conference has recognised the right of Self-governing Dominions to restrict and even to prohibit immigrations from other portions of the Empire. The question of immigration, then, now concerns only Crown Colonies, Protectorates, and similarly governed territories.

The fear of **Economic Competition** which has occasioned the present controversy in the Transvaal is equally unfounded. The Indian trader in the Transvaal caters for a very limited portion of the community—chiefly natives, "coloured" persons, and what in South Africa are called "poor whites" (that is, white unemployed)—though a certain number of respectable Europeans with small incomes visits his emporiums surreptitiously. In this sphere the Indian succeeds because the white trader who caters for the same classes of the community is usually neither as industrious, as thrifty, as honest, nor as skilful as the Indian. The truth is that the Indian problem does not in the eyes of the South African stand alone. It is a part, and a minor part, of the larger problems of race and colour that he has to deal with in his endeavour to make South Africa a white man's country. He is not actuated by malice against the Indian as such; it is merely that the Indian problem, coming as it does on the top of the many other similar problems, is regarded by him as an extremely annoying and unnecessary "last straw." On the other hand, the Indian views the disabilities under which he is put as so many stigmata of inferiority. There is thus considerable emotion on either side, and the problem is accord-

ingly difficult of solution. General Smuts is known to be favourably disposed towards Indians and his services to India as the only Dominion statesman in the War Cabinet have been many and conspicuous He may be relied upon to do as much to alleviate the position of the Transvaal Indian as the very strong anti-Indian feeling in the North of the Union will allow. On their side, the Transvaal Indian and his sympathisers in India would do well to recognise that this feeling exists, and refrain from weakening General Smuts's hands by demanding at the present juncture full civic rights and complete political equality. Such demands are construed by the anti-Indians as being a breach of the Smuts Gandhi agreement of 1914 (see above), which General Smuts offered as "a complete and final settlement;" and though a glance at the correspondence shows that Mr. Gandhi replied specifically that "some day or other these matters will require further and sympathetic consideration by the Government," yet nothing could be more unwise than to prosecute extreme demands at a time when the strength of anti-Indian feeling in the North makes it impossible for those demands to receive logical, much less sympathetic, consideration. For instance, it was doubtless the extremeness of the demands made by the Government of India in the resolution it prevailed upon the Imperial Conference to pass, which led to the South African delegates'' refusal to sign that resolution *(vide* earlier page). But while it was necessary for the Government of India officially to claim complete political equality for Indians throughout the Empire, including South Africa, the Indian public would be well-advised, in view of the state of popular feeling in South Africa, to accept for the time being from the South African Government as satisfactory something considerably short of complete political equality. If the South African people are made to feel that the Indians in South Africa and in India will not be satisfied with anything but complete political equality, the position of General Smuts will be rendered extremely difficult, and he will be unable to extract from his Parliament such concessions as might be possible if the Indian people were to recognise that progress must be slow, and that it will take time to educate the South African people to the state of political liberality demanded by the Indian Government. On the other hand, the Indian people have every reason to be dissatisfied with the report of the Asiatic Commission and to bring home to South African legislatures the realisation that India will not tolerate the imposition of further disabilities upon their countrymen in South Africa.

It is not so easy to advise moderation and forbearance to the INDIANS IN KENIA. There are 35,000 Indians in Kenia and only 11,000 Europeans, yet it is proposed as a generous concession, to grant two seats on the Legislative Council to Indians, while the Europeans have eleven seats. The idea of racial segregation wounds the Indians in their pride and honour, especially because it is openly based on "sanitary grounds." They have declared their willingness to submit to the severest, possible sanitary legislation, provided it is made to apply to both races. Compared with these two grievances the remaining causes of complaint sink to insignificance. By all the rights of prescription, Constitutional Law and natural justice, the Indians' case is good. India has had intimate connections with the East coast of Africa since the first century of the Christian era, and for over three hundred years Indians have been living and trading in Zanzibar. They were the pioneers of civilisation, trade and agriculture in what is now known as Kenia; they were the first to establish links with the interior; their labour constructed the railway from the coast to Lake Victoria Nyanza; and they have proved that, except in certain chosen spots, they are better able to endure the climate than Europeans. From the point of view of Constitutional Law the claim of the Indian is equally strong. The Indian Government is perfectly sound in its contention that in a Crown Colony or Protectorate all British subjects must be held to possess equal status. Kenia is not a Self-Governing Dominion, and arguments drawn from the analogy of Self-Governing Dominions are false. So long as Kenia is governed from Dowing-street, the Indian settlers have as much right to be heard and as much right to have their votes counted as the European settlers. As for natural justice, that surely dictates that the men who have done the work of pioneers, who have made the country their own for over three hundred years, and who have given that country prosperity, should not be deprived of their rights and the fruits of their labours by late comers in the Colony.

Indentured Emigration.—The institution of indentured labour in the tropical colonies of the Empire is one of long-standing. As far back as 1864 indentured emigration from India to the British West Indies was in progress under Government control. In the case of several of the tropical colonies there has been no interruption since then in the steady inflow of several thousands of Indian labourers annually. In Mauritius, the Straits Settlements, the Federated Malay States, British Guiana, Natal and Fiji the system for various reasons has come to an end; but in all those countries there is now a large population of Indians, permanent or temporary, engaged as free labourers or in independent positions.

The indentured system has been the subject of much controversy. But as much as indentures were abolished in Fiji on February 2nd, 1920, and in British Guiana in December 1919, the controversy has now only an historical interest. For a full account of the matter the reader is referred to pp. 467-8 of the Indian Year Book of 1916 to pp. 497-500 of the Indian Year Book of 1920.

Indians in the Colonies.—Statement shewing approximately the number of British Indian subjects in the various colonies and Dominions—

Trinidad	117,100
British Guiana	129,389
Jamaica	20,000
Fiji	60,000
Surinam	26,919
Reunion	3,012
Mauritius	257,697
Federated Malay States ..	210,000

Straits Settlements ..	.. Figures not available.
Kenia	.. 35,000
Tanganyika	.. 15,000
Cape Colony	.. 6,006
Natal .. .	.. 133,031
Transvaal	.. 10,048
Orange Free State ..	.. 106
Southern Rhodesia ..	.. Figures not available.
Australia	.. Do.
New Zealand	.. Do.
Canada	.. Under 2,000 (the number is uncertain).

Protected Emigration.—In a speech delivered in Council on September 5, 1916, H. E. the Viceroy stated that the Government of India were contemplating the control of the operations of persons engaged in supplying labour to the Colonies. "Labourers," said His Excellency, "have a right to emigrate if they wish, and it would be very unwise and very undesirable on our part to prevent them, and we are, therefore, trying to devise arrangements which will secure that recruitment in this country is conducted under decent conditions, that a proper sex ratio will be maintained and that on arrival in the country of their destination they will be properly treated and allowed to engage themselves on terms at least as free as those obtaining at present in the Malay Peninsula, where a labourer can leave his employer by giving a month's notice. I think it will be clear to all who have studied the question that the Government of India would be departing gravely from its duty if it allowed emigrant labour to leave this country without proper protection and safeguards. There are a certain number of labourers, I believe a very small number, who emigrate as genuine free labourers, that is to say unassisted by pecuniary help and uninvited by any interested agency. But, if we confine ourselves to the abolition of our existing indentured emigration, a position will arise in which the parties interested in procuring Indian labour will be free to induce labour to emigrate by pecuniary help under any conditions they like, so long as the labourer does not go under indenture. The abuses likely to arise out of such a state of things would be very serious. I need only refer to the state of affairs which existed before the amendment of the **Assam Labour and Emigration Act**, in connection with so-called free labour. The consequence of this system was, as Sir Charles Rivaz put it in his speech before the Legislative Council in 1901, that a horde of unlicensed and uncontrolled labour purveyors and recruiters sprang into existence, who under the guise of assisting free emigration made large illicit gains by inducing, under false pretences, ignorant men and women to allow themselves to be conveyed to Assam. These emigrants were, it is true, placed under labour contracts on arriving in that province, but the abuses complained of arose in connection with the recruitment and not with the contract. Similarly when the system of indentured emigration first arose in India the only caution required was that intending emigrants should appear before a magistrate and satisfy him as to their freedom of choice and their knowledge of the conditions they were accepting. It was shown, in a report submitted in 1840, that abuses undoubtedly did exist in connection with recruitment in India, abuses which the constantly increased safeguards provided by successive Acts of the legislature where designed to correct. Uncontrolled recruitment cannot, it is clear, be permitted under any circumstances."

Assisted Emigration.—In 1918 a committee sat in London to consider what form of assisted emigration should take the place of the indentures. Its report was issued about the middle of the year and the chief recommendations are here summarised.

Under this scheme the Indian will arrive in the colony entirely free from debt and of any liability for the cost of his introduction. He will be in no sense restricted to service under a particular employer, except that, for his own protection, a selected employer will be chosen for him for the first six months. This employer can be changed, with the approval of the Protector of Immigrants, if substantial reason can be adduced. From the time of his arrival the immigrant will be given land to cultivate for his own benefit. Each male adult employed in an agricultural industry will be granted for his personal use and cultivation a garden plot of one-tenth of an acre after six months' service and a larger plot of one-third of an acre will be made available whenever practicable by way of reward. At the end of three years' employment under any of the employers on the register steps will be taken to ensure that land is available for settlement in the simplest and cheapest manner. In each colony there will be a department responsible for the provision of sufficient land to meet all *bona fide* applications and for rendering it suitable for agriculture by adequate clearing, irrigation and drainage. These holdings will be up to five acres in extent, they will be subject to a reasonable annual rent in the case of lease-holds, and the settlements will be for a period of thirty years. Under the proposed system the immigrant can be proceeded against only by way of a civil suit in the ordinary course of law and will not be liable to any criminal penalties A minimum wage will be fixed, subject to periodical revision. During the first twelve months the children under eleven years will be entitled to free rations while children under five will be given a face milk ration during the whole time that their parents remain in the service of an employer on the register. The provision of married quarters separate from the "single" quarters will be made compulsory upon all employers of more than twenty adult Indian immigrants and will be insisted upon so far as possible in the case of all other employers on the register. This register will contain the names of only "approved employers" that is to say of persons desirous of employing assisted emigrants, who have applied to the Protector of Immigrants and who have been found on inquiry to be suitable. Repatriation will be assisted when it is desired. The emigrants will receive for himself and his dependents half the passage money after three years' service and a larger proportion up to the whole cost after seven years' service.

With regard to recruitment, Emigration Agents will be licensed and paid fixed salaries, with possibly additional money grants for meritorious work. Their work will be supervised by Inspectors of Emigration, who will be men of stand-

ing on a graded scale of pay. Over them will be an Emigration Commissioner, who will be a Colonial Civil Service official, and a Protector of Immigrants, appointed by each Local Government to supervise emigration in the province affected. In each colony will be a Protector of Immigrants. The Emigration Depots will be visited by non-official gentlemen of standing in the district as also will be the Central Depot. The emigration of whole families will be encouraged but persons below the age of eighteen will be assisted to emigrate only when accompanied by their parents or guardians. Women unaccompanied by their families will not be assisted and the rule requiring a certain proportion of women to men will be abolished.

The report was published at a time when the political energies of India were concentrated on the development of the Indian constitution and the pending visit of the Secretary of State to discuss these questions on the spot. It attracted little attention. So far as opinion was expressed, whilst recognising that the system was an immense advance on the system of indenture, it was thought undesirable for Government to take so large a part in the direction of emigration to distant lands.

British Guiana and Fiji Emigration Schemes.—During 1920 the Indian Government had the opportunity to apply the policy of assisting and controlling emigration outlined in the two preceding paragraphs; for early in the year deputations from British Guiana and Fiji visited India for the purpose of obtaining the consent and sympathy of the Government with regard to schemes for recruting free labour from India. A Committee was appointed by the Imperial Legislative Council to give hearings to the deputations and to report upon the schemes. The Committee sat for several days in Delhi, and subjected the deputations to exhaustive cross-examination. The British Guiana deputation stated that the recent change in Imperial policy as regards preference and the urgent demand for food stuffs all over the world made it incumbent upon them to set aside £ 6,000,000 to be offered as inducements to emigrants. For the first three years not more than five thousand adults a year would be given free passages. On arriving in British Guiana, they could, if desirous of working, obtain land of their own, either agricultural or pastoral, on easy terms in small or large holdings. If the settlers preferred employment, the Guiana Government guaranteed local rates of pay, which, for piece work on a sugar estate on a seven hours' day, amounted to three rupees for males and for females at lighter work about half of that. Housing accommodation would also be provided. The cost of living was under 40 per cent. of the ordinary male wage. The earner could save at least a rupee a day. Wages would be controlled by official arbitration boards to prevent variation unfair to the wage-earner. Reward grants of five acres of coast or river land specially protected by embankment from flood prepared for irrigation, drainage and cultivation would be given to families after three years' agricultural work in the Colony. The Indian Government was asked to appoint its own official, at the cost of the Colony, to watch the interests of the settlers, At the request of the Indian Government's supervising officer, any individual or family would be repatriated free of charge at any time while if such a request emanated from the individual or family, the Guianese Government would pay half the estimated cost of repatriation at the end of three years' residences three-fourth of the cost at the end of five years, and free of charge at the end of seven years. Repatriation would not affect any land or other rights fully acquired. Cheap return tickets would be provided to those wishing to return on family reasons. This would secure a regular commercial intercourse between two countries. A limited number of professional men such as doctors, engineers, clerks, school masters, etc., would be given passages, either free or at very low rates. One priest or minister of religion for each religious group would be taken free on each voyage. Guarantees of continuance of the existing privileges could be furnished by the Colony, and the Colonial Office stating that their definite policy was the continuance of political and commercial equality of all races. If necessary, a Declaration Ordinance could be passed in Guiana, recording the actual position.

The scheme put forward by the **Fijian deputation** was a system of free and voluntary State aided emigration, the object being the encouragement of the settlement of Indians. The emigrant would be free of any financial liability connected with the cost of his introduction in Fiji and would in no way be restricted to service under any particular employer. A Protector of Emigrants would be appointed by local Governments in India to exercise supreme control of emigration in the Province. At the ports of departure, Colonial camps would be started which could be visited by Indians of standing nominated by the Provincial Governments. The Colonial Government would bear half the cost in the case of those wishing to return to India if they had stayed in the Colony at least three years, three-fourth of the cost, if it was five years, and the whole cost if seven years. Land suitable for settlement would be available for all who desire it. Indians in Fiji already enjoy the same facilities for primary education as were possessed by other inhabitants of the Colony. Under the Education Ordinance of 1916 provision was made for grants in aid to any private or vernacular school for Indians. Government schools were being established at necessary centres of the settlement where assisted schools did not exist. The deputation expressed itself as unable to give guarantees similar to those offered by the Guiana deputation with regard to equality of political status, but it assured the Committee that there was no racial animosity in Fiji towards Indians, and that there was no reason to anticipate that any such animosity would arise in the future.

The Committee in its Report pronounced favourably upon the two schemes, but suggested that, before definitely consenting to further the proposed emigration, the Government of India should appoint Commissions of three Indians to go to British Guiana and Fiji to investigate the conditions there. This report was accepted by the Imperial Legislative Council, but during 1920 it was not possible to appoint the two Commissions as a satisfactory *personnel* could

not be found owing to the reluctance of leading Indians to leave India so shortly before the coming into being of the new Indian constitution.

Unrest in Fiji.—It was unfortunate for the success of the Fiji free immigration scheme that just about the time when the deputation was doing its best favourably to impress the Indian Government, news reached India of wholesale unrest, strikes, and rioting among the Indians in Fiji. The whole story was published later in the year in the official despatches of the Fijian Government, and it then became apparent that the tales that had reached India had greatly exaggerated the seriousness of the affair. It was early in February that the Indians went on strike, for purely economic reasons. The Government displayed a judicial attitude and suggested the appointment of a Commission to examine the Indians' grievances. There was at first a tendency on the part of the Indians to accept the suggestion and await the report of the Commission; but a certain Indian named Dr. Manilal, who was under sentence of banishment from certain portions of the Island owing to his defiance of the Government in regard to a law suit, succeeded in stirring up the racial passions of a large number of the Indians, and from then onwards the unrest was more racial in its character than economic. Rioting took place during the latter part of February. It was not of a serious nature, but this was due largely to the preventive measures taken by the authorities and to the tact and restraint shown by the police and military. The riots were quelled practically without bloodshed; but numerous Indians were arrested. The Government then took steps to ensure the banishment of Dr. Manilal, to whom they ascribed the trouble, from those parts of the Island where his influence was greatest. For the rest of the year the Indians agitated for his return, and eventually towards the end of the year 30,000 Indians demanded to be repatriated. To this demand the Fiji Government expressed its willingness to accede as soon as shipping could be provided for the purpose. In making this demand the Indians were also actuated, so they declared, by certain economic and political grievances; but reliable information from Fiji was difficult to obtain, and while it is known that the sugar companies have not been generous in the matter of increasing wages to meet the increased cost of living, and while the absence of adequate representation upon the Fijian Legislature is a sore point with the Indians, it is not possible to say whether the grievances under which they suffer are of so serious a nature as to justify 30,000 Indians out of about 60,000 in selling up their homes and returning to India. The attitude of the Fijian Government is that they are prepared to consider seriously the economic grievances of the Indians provided that they co-operate loyally with the Government in the matter; that it was intended, and is still intended to provide proper representation for Indians in the Fijian Legislature, but that the unrest throughout the past year has prevented the Government from taking the necessary steps to that end; and that the main cause of the trouble is the personally embittered and recalcitrant Dr. Manilal, who is repudiated as a leader by the loyaler and better-class Indians in the Island.

During 1921.—The Government of India entered into negotiations with the Fijian Government with regard to the state of unrest in Fiji and the Fijian Government's immigration scheme. The negotiations were rendered extremely difficult owing to the precipitate and ill-advised return to India of a large number of Indians from Fiji. When these Indians arrived in India they found that, so far from labour conditions being favourable, as they had been told, there was no work obtainable for them. Moreover, many of these Indian had lost caste during their sojourn in Fiji, and found themselves treated as pariahs by their relatives and caste brethren in India. These returned immigrants were soon reduced to a state extreme penury and hardship, and committees of relief had to be formed to help them to return to Fiji. The Fijian Government, however, generously refrained from making capital out of the desire of these people to return to Fiji when they discovered that the rosy tales concerning India told by agitators in Fiji were false; and towards the end of the year the negotiations between the two Governments terminated in complete agreement. The Fijian Government undertook to introduce an Ordinance into the Legislative Council giving Indians political equality, and the Government of India at the same time, undertook to appoint at once the committee, which had been recommended by the Commission of the Indian Legislative Council, "to inquire into the conditions of life in Fiji and advise the Government whether Fiji offers a suitable field for Indian colonisation." The *personnel* of the Committee, as selected by the Government of India, was Pandit Harday Nath Kunzru, Mr. Corbett, and Mr. Sastri. At the same time the British Guiana Government entered into a similar agreement with the Government of India whereby the British Guiana Government undertook to introduce legislation assuring Indian immigrants, in the Colony of equal political rights, while the Government of India undertook to send a deputation to British Guiana to investigate local conditions with regard to their suitability for colonisation by Indians.

Indians in Great Britain.

More than sixty years have gone by since the Parsi community, in the persons of the late Dadabhai Naoroji and other members of the firm of Cama & Co., led the way in the sojourn of Indians in England for business purposes. This lead it has since maintained, though there are both Hindu and Mahommedan business men firmly established there Nor are the professions unrepresented, for there are in London and elsewhere practising barristers, solicitors and medical men of Indian birth. Two Indians have sat in the House of Commons. An Indian has served since 1910 on the Judicial Committee of the Privy Council, and others are to be appointed. Three Indians are on the Secretary of State's Council; and in 1919 another in the person of Lord Sinha led the way as the first Indian to be raised to the peerage and to be appointed a member of the Home Government. An Indian member of the I. C. S. is Secretary to the High Commissioner. The early years of the present century saw the gathering of a new Indian element in permanent residence—that of retired officials and business men, or people of independent means who from preference or in order to have their children educated in England, leave the land of their birth and seldom if ever visit it again Further, the stream of Indian summer visitors includes wealthy people who come regularly. In the first years of the war, thousands of our valiant Indian soldiers. wounded or invalided from Flanders, went to England to be nursed back to health in the well-equipped and admirably administered Indian hospitals, some in Hampshire but chiefly at Brighton where the fact has been commemorated by a *chattri* on the site of the burning ground on the South Downs and an Oriental gateway to the Royal Pavilion, the latter provided by Indian subscribers. There is an Indian Social Club, founded in 1912, with Sir M. M. Bhownaggree as president, which arranges for dinners and other functions to celebrate Indian festivals or to honour Indian visitors of special distinction. Sectionally, however, the only Indian community to be fully organised is that of the Parsis. They have an incorporated and well-endowed Parsi Association of Europe, and have established " Zoroastrian House " (168, Cromwell-road, S.W. 5) as a communal centre.

The Students.

Under normal conditions it is the student community which constitutes the greatly preponderating element and creates an Indian problem. Its numbers multiplied ten or twelvefold in the quarter of a century before the war. After a very considerable temporary check caused by the Great War the number rapidly expanded from 1919 in spite of pressure in college accommodation. In addition to the ordinary graduate or under-graduate student, there are many youths of good family, some of them heirs of Native States, admitted into our public schools, such as Eton and Harrow. There are some 600 Indians at the Inns of Court. Since the war there has been a welcome and remarkable increase in the number of technical and industrial students. Altogether including technical and medical students, there must be well over 2,000 young Indians in London, Edinburgh, Cambridge, Oxford, Glasgow, Manchester, Birmingham, Leeds, Sheffield and Liverpool and a few other centres.

The Advisers.

It is well known that until a few years ago the young Indians, apart from inadequately supported unofficial effort and the chance of coming under the influence of English friends of their families, were practically left to their own devices. But in April 1909 Lord Morley, created for their benefit a Bureau of Information and appointed Dr. (now Sir) T. W. Arnold to the charge of it under the title of Educational Adviser. The Bureau was located at 21, Cromwell Road, together with the National Indian Assiociation and the Northbrook Society, which were thus given spacious quarters for their social work among the young men. (For Burmese students distinct club accommodation is provided, partly by subventions from Indian revenues, in the commodious Albion House, St. Peter's Square, Hammersmith, W. 6. In India provincial advisory committees exist to help and advise intending students. The work of the Bureau rapidly expanded, and in consequence Lord Crewe in 1912 re-organised the arrangements under the general charge of a Secretary for Indian students, Mr. (now Sir) C. E. Mallet who resigned at the close of 1916. He was succeeded by Dr. Arnold under the designation of Educational Adviser for Indian Students to the Secretary of State. Mr. N. C. Sen followed Dr. Arnold as Local Adviser in London, and there are corresponding officers at the modern provincial universities.

These arrangements underwent far reaching revision in the autumn of 1920 in connection with the setting up, under the Act of the previous year of a High Commissionership for India in the United Kingdom. The "agency work" Sir William Meyer, took over from the Secretary of State included that connected with Indian students. Sir T. W. Arnold accepted an appointment long pressed upon him as Professor of Arabic at the School of Oriental Studies, and the High Commissioner appointed Mr. N. C. Sen and Dr. T. Quayle as Joint Secretaries for the Indian Students' Department. The administrative work hitherto divided between the India Office and 21 Cromwell Road was consolidated at the offices of the High Commissioner in Grosvenor Gardens, S. W. 1, thereby obviating a good deal of duplication of files and papers.

Though the organization has many hard things said of it by young Indians when they foregather it has been of the greatest service to them in almost all cases of individual difficulty in educational matters, and is freely resorted to by some of its most pronounced critics. There are some 80 Government scholars under the care of the department. The whole situation was investigated by a committee of inquiry which sat in 1921 under the chairmanship of Lord Lytton.

The Bureau has been singularly successful in opening closed doors and mitigating grievances.

At Oxford and Cambridge, where naturally the difficulties of admission have been most pronounced, it has paved the way to the creation of University machinery to replace its own operations. The Oriental Delegacy at Oxford and the Inter-collegiate Indian Students' Committee at Cambridge now undertake all the work formerly carried on by the Local Advisers, and thus Indian undergraduates are given a welcome *locus standi*. Nowhere is the problem arising from applications for admission far exceeding the possible accommodation more acute than at the older universities. Quite irrespective of the nationality of applicants many hundreds have to be turned away, owing to the deficiency of accommodation in lecture rooms and laboratories and there is a still more marked lack of lodging. Hence the university authorities are compelled to select those applicants most likely to benefit by their opportunities. It can at least be said that to the full extent of the accommodation with due regard to other responsibilities, the British universities are always ready to admit Indian students of approved ability and attainment, what they cannot stand is the lazy, incompetent and untrained man. A matter still requiring adjustment is the admission of Indians to the O. T. C. Generally speaking, however, we may accept the conclusion of Sir T. Morison's Committee on State Technical Scholarships in 1913 that the difficulties encountered by young Indians in supplementing academic instruction by technical experience in factories and workshops are general in character, being also applicable to their English contemporaries, and that there is "on the whole very little evidence of a racial prejudice against Indians." Nor need any youth go to England under misapprehension as to the facilities for his education and their limitations. The excellent "Handbook of Information for Indian Students" issued by the National Indian Association and the Advisory Committee, now in its seventeenth edition (1920) supplies all relevent facts and advice; and on personal details, the Indian Advisory Committees can be consulted. A general point strongly urged in the "Report of the Indian Students' Department" to March 31st, 1921, by Mr. N. C. Sen is that, save in exceptional cases "it is practically useless to come to England to join a university with less than an intermediate examination pass, as that is the minimum qualification from the entrance examination....." Students not adequately qualified for admissions before arriving in England are obliged to spend time and money in preparing for a qualifying examination which might well have been taken before they left their homes.

The students have hosts of non-official friends and helpers. Under the presidency of Lord Hawke and the chairmanship of Lord Carmichael, an Indian Gymkhana Club in 1921 acquired its own sports ground at Osterley, the total cost of purchase and equipment being estimated at £15,000. Generous gifts were made by some Ruling Princes and others, particularly the Maharaja of Patiala, but further help is required. The cricket eleven of the Club has an excellent record in matches at Lords and the Oval and with suburban clubs.

A notable development of 1920 was the opening of the "Red Triangle" Shakespeare Hut in Bloomsbury, off Gower Street, as a union and hostel for Indian and Ceylonese students up to the number of 500. The hostel helps to meet a need that has long been felt and has become more acute with the post-war inadequacy and expensiveness of housing accommodation. Some of the 130 beds are reserved for students of British parentage, in order to guard against the danger of Indians forming a colony segregated, save in the classroom, from their English contemporaries. The hostel is Indian both in conception and control, the general secretary, Mr. P. A. Kunganadhan, being responsible not to the National Council of Y. M. C. A.'s in London but to the Indian National Council in Calcutta. While the organization has a definitely moral and spiritual, as well as a social purpose, it is not a proselytizing agency.

Lately there has been considerable growth of the number of Indian girls and women studying in Great Britain, and at least one is reading at the Inns of Court. But it is chiefly for medical or teaching training that Indian ladies come. The Secretary of State has given financial help to an additional hostel connected with the London School of Medicine for Women on conditions 'providing for the reception of Indian women students.' Real need exists for a hostel of a more general character, possibly on lines similar to those maintained for Indian men at 21, Cromwell Road.

Appointments to the Indian Services.

Full details of the regulations governing appointments to the Indian Services are published in the India Office List. The more essential particulars, except as regards the Civil Service and Police,—of which fuller details are given elsewhere in this book—are given below.

Indian Agricultural Service.

The appointments in the Indian Agricultural Service include those of Deputy Director of Agriculture, Agricultural Chemist, Economic Botanist, Mycologist, Entomologist, Bacteriologist, Professors of Agriculture, Chemistry and Botany at Agricultural Colleges, and the like. Some of these are included in the Imperial Department of Agriculture under the direct control of the Government of India, but the majority are included in the Departments of Agriculture of the several provinces of India. In some cases candidates will be appointed direct to these posts, but in most cases they will undergo a further course of training in India in Indian agriculture, and will be appointed to posts, for which in the opinion of the Government they are considered suitable, on the regular establishment as vacancies occur. Appointments are made by the Secretary of State for India as occasion may require and inquiries regarding them should be addressed to the Revenue Secretary, India Office, London, S. W. 1. Candidates must, as a rule, be not less than 23, nor more than 30 years of age. In selecting candidates for appointment, weight will be given to the possession of (*a*) a University degree in honours in science or the diploma of a recognised school of agriculture or other like distinction; (*b*) practical experience of farming. Candidates for research and teaching posts must possess a University degree or other similar qualification in the special science concerned, and preference will ordinarily be given to those who have spent a period of two years in research work under a scientist of established reputation and have studied the science from an agricultural point of view. Importance is also attached to bodily activity and ability to ride, and selected candidates have to undergo an examination by the Medical Board of the India Office as to their physical fitness for service in India.

The salary attached to posts in the Indian Agricultural Service will ordinarily be:—

	Rs.	
For the first year	.. 500	per mensem.
,, second year	.. 550	,,
,, third year	.. 600	,,
,, fourth and subsequent years	.. 650	rising by annual increments of Rs. 50 a month to Rs. 1,750 a month.

Candidates who are required to undergo a further course of training in India as explained above will be appointed on this scale of salary, commencing on a pay of Rs. 400 Where, for special reasons, a candidate is recruited for direct appointment to one of the regular posts under paragraph 1, his initial pay will be determined with reference to the special qualifications on the length of European experience required for the appointment for which he is specially selected, but his subsequent increments of salary will be regulated by the foregoing scale. In addition to this scale of pay, officers filling appointments directly under the Government of India, as distinguished from appointments under Local Governments (but not including officers holding supernumerary posts, the post of Inspector-General, or the post of Director of the Pusa Institute) will be eligible for local allowances conditional on approved good work, and the Government reserves to itself the fullest discretion as to granting, withholding, or withdrawing them.

Indian Civil Veterinary Department.

The officers of the Indian Civil Veterinary Department perform or supervise all official veterinary work in India, other than that of the Army.

The work of the Department includes—

(*a*) Educational work in veterinary colleges;
(*b*) Horse and mule breeding;
(*c*) Cattle disease and cattle breeding.

Appointments to this Department are made, as vacancies occur, by the Secretary of State for India. Candidates must not (except on special grounds to be approved by the Secretary of State) be over 30 years of age but this does not apply to candidates who have served for at least one year during the war in His Majesty's Forces, or who have been discharged, after less than one year's service, on account of wounds or sickness resulting from such service and must possess a diploma from the Royal College of Veterinary Surgeons. Evidence of a knowledge of bacteriology, and of capacity for carrying out original research, will be specially taken into account in estimating the claims of candidates. Good health, a sound constitution, and active habits are essential, and candidates must be certified by the Medical Board of the India Office to be physically fit for service in India.

Pay will be as follows:—On arrival in India Rs. 500 a month, rising by Rs. 50 each year to Rs 1,200, which rate will continue from the beginning of the 16th to the end of the 20th year of service; after the beginning of the 21st year Rs. 1,500 a month.

Ecclesiastical Establishments (Church of England).

Appointments of Chaplains on Probation are made from time to time by the Secretary of State for India, as vacancies occur. Candidates for these appointments must be Priests who are between the ages of twenty-seven and thirty-four years, and have been for three years altogether in Holy Orders. Applications for nominations should be submitted to the Indian Chaplaincies Board of the Church of England. (Chairman Rev. Canon B. K. Cunningham, M. A., O.B E., Chaplain to His Majesty the King Westcott House, Cambridge.)

A Chaplain serves on probation for two years (*a*); if confirmed in his appointment at the end of that period, he will be admitted as a Junior Chaplain.

The salaries of Chaplains are :—

For the first year ..600 per mensem.
„ second year ..625 „
„ third year ..650 „
„ fourth and subsequent years ..700 rising by annual increments of Rs. 25 to Rs 800 per mensem in the ninth year.
For the tenth and subsequent years ..850 rising by annual increments of Rs. 50 to Rs. 3,250 in the eighteenth year
„ Nineteenth and subsequent years ..1,350 per mensem.

The retiring pay of Chaplains is regulated by the following scale :—

	Per annum £	s.	d
After 23 years' service, with an actual residence in India of 20 years	480	0	0
On Medical Certificate.			
After 19 years' actual residence in India, including the period of probation	430	0	0
After 13 years' ditto	250	0	0
After 10 years' ditto	160	0	0

Ecclesiastical Establishments (Church of Scotland).

The appointments of Chaplains of the Church of Scotland on probation are made from time to time by the Secretary of State for India, according as vacancies occur. Candidates for these appointments must have been licensed for three years and be under thirty-four years of age. Applications for nominations should be submitted to the General Assembly's Committee on Indian Churches along with testimonials based on a personal knowledge of the candidate's qualifications. Chaplains serve on probation for two years (*a*); if confirmed in their appointment at the end of that period, they will be admitted as Junior Chaplains.

The salaries of Chaplains are :—

For the first year ..Rs 600 per mensem rising by annual increments of Rs. 25 to Rs. 800 in the ninth year.
For the tenth year ..Rs. 850 per mensem rising by annual increments of Rs. 50 to Rs. 1,250 in the eighteenth years and thereafter Rs. 1,300.

The retiring pay of Chaplains is regulated by the following scale :—

	Per annual. £	s.	d.
After 23 years' service, with an actual residence in India of 20 years	480	0	0
On Medical Certificate.			
After 19 years' actual residence in India, including the period of probation	430	0	0
After 13 years' ditto	250	0	0
After 10 years' ditto	160	0	0

Educational Appointments.

The Indian Educational Service comprises those posts in the Educational Department to which appointments are made in England by the Secretary of State, and is thus distinguished from the Provincial Educational Services which are recruited exclusively in India. It consists of two branches, the teaching, including Principalships and Professorships in the various Government Colleges and Head masterships in certain High Schools; and the administration including Inspectorships of Schools; but officers may be transferred at the discretion of Government from one branch to the other, and the conditions of pay and service are the same for both. It also includes certain special appointments, such as those of Superintendents of Schools of Art, for which special qualifications are required and special terms of engagement are prescribed. Officers of the teaching branch may be required to undertake duties in connection with the supervision of students in hostels or boarding houses, and with the direction of their studies and recreations. Appointments are made by the Secretary of State as occasion may require. Only laymen are eligible, candidates must as a rule be not less than 23, nor more than 30 years of age, but exceptions are sometimes made as regards the maximum limit only. Candidates must be British subjects, and must furnish evidence of having received a liberal education.

In selecting candidates for appointment, weight will be given to the possession of (*a*) a University degree in Honours, or equivalent distinction; and (*b*) qualifications in special subjects, depending on the nature of the vacancy to be filled. In selecting candidates for inspecting appointments, weight is given to injustice

talent, capacity for organization and knowledge practical or theoretical, of educational methods.

There is in every Province a Director of Public Instruction. The posts of Director of Public Instruction are reserved for the Indian Educational Service so long as members of that Service can be found well qualified to fill them. Their pay differs in different Provinces:—

Three receive a salary of Rs. 2,500—100—3,000 a month.
Four receive a salary of Rs. 2,250—100—2,750 a month.
One receives a salary of Rs. 2,000—100—2,500 a month.
One receives a salary of Rs. 1,500—100—2,000 a month.
One receives a salary of Rs. 1,500 a month.

Indian Forest Service.

The Secretary of State for India in Council makes appointments of Probationers for the Indian Forest Service, according to the numbers annually required.

Candidates must be not less than 19 but under the age of 22 years.

Candidates must have obtained a degree with Honours in some branch of Natural Science in a University of England, Wales or Ireland, or have passed the Final Bachelor of Science Examination in Pure Science in one of the Universities of Scotland. A degree in Applied Science will not be considered as fulfilling these conditions. Candidates are required to produce evidence that they have a fair knowledge of either German or French.

The ordinary period of probation will be two years. During that time probationers will be required to pass through the Forestry course at one of the following Universities—Oxford, Cambridge or Edinburgh (subject to the arrangement of a suitable course)—becoming members of that University, if not so already; to obtain the Degree or Diploma in Forestry which it grants; and to satisfy such other tests of proficiency as may be deemed necessary.

During the vacations, the Probationers will, under the direction and supervision of the Director of Indian Forest Studies appointed by the Secretary of State for India in Council, receive practical instruction in such British and Continental forests as may be selected for the purpose.

The Secretary of State for India in Council will make payments to each Probationer at the rate of £200 annually, not exceeding a total of £400.

Probationers who obtain a Degree or Diploma in Forestry, and also satisfy such other tests of proficiency as may be prescribed, will be appointed Assistant Conservators in the Indian Forest Department, provided they are of sound constitution and free from physical defects which would render them unsuitable for employment in the Indian Forest Service.

The sanctioned scale of the service at present is:—

	Rs.
1 Inspector-General of Forests	3,250 a month.
1 Assistant Inspector-General of Forests	
5 Chief Conservators (Bombay, United Provinces, Burma and Central Provinces) ..	2,500-125-2,750 a month.
25 Conservators, in three grades (including President, Forest Research Institute and College and one temporary post of Conservator for Kumaun Circle, United Provinces)	1,750-50-2,000 a month.
227 Deputy and Assistant Conservators	Initial salary Rs. 450, rising by annual increments of Rs. 50 to Rs. 850 in ninth year. Efficiency bar here. Then Rs. 1,000 in tenth year with annual increments of Rs. 50 to Rs. 1,500 in 20th year, Rs. 1,500 for 21st year and 22nd years, Rs. 1,600 in twenty-third year.

After a service of not less than 20 years, a retiring pension is granted not exceeding the following amounts:—

Scale of Pension.		
Years of Completed Service.	Sixtieths of Average Emoluments.	Maximum Limit of Pension.
20 to 24		Rs. 4,000 a year
25		„ 5,000 „
26		„ 5,200 „
27		„ 5,400 „
28		„ 5,600 „
29		„ 5,800 „
30		„ 6,000 „

Forest Engineering Service.—A Press *communique*, dated Delhi, the 29th January, 1920, states:—It has long been recognised that the development of the Forest Resources of India is hampered by the inaccessibility and isolation of forest bearing tracts and the absence of up-to-date methods of extracting and utilising timber. The question of obtaining experts to deal with these problems has recently been considered by the Government of India, and it has now been decided, with the approval of His Majesty's Secretary of State for India, to create a Forest Engineering Service, paid on the same scale as the Imperial Forest Service. It is proposed that the recruits to the new service should be trained in Canada and America, where the subject of timber extraction and utilisation has long been studied and improved methods have been introduced under conditions approximating to those to be encountered in many parts of India and Burma.

Indian Geological Survey.

The Geological Survey Department is at present constituted as follows:—

	Monthly Salary. Rs.
1 Director	3,000.
6 Superintendents	From Rs. 1,500 to Rs. 2,000.
22 Assistant Superintendents	From Rs. 550 to Rs. 1,450.
1 Chemist	550 rising to Rs. 1,450 per mensem.

Appointments to the Department are made by the Secretary of State for India. The age of candidates should not exceed 25. Besides a good general education, a sound education in geology is essential: a University degree and a knowledge of French or German will be regarded as important qualifications; and certificates of a high moral character will be required. Candidates must also have had one or two years' practical training in mines, or in technical laboratories, as may be required by the Government of India. First appointments are probationary for two years.

India Office.

Vacancies in the clerical establishment of the Secretary of State for India are filled from among the successful candidates at the General Examinations (Class I, and Second Division), which are held from time to time by the Civil Service Commissioners for appointments in the Home Civil Service. The Examination for Class I. Clerkships is the same as the open Competitive Examination for the Civil Service of India. Further particulars may be obtained upon application to the Secretary, Civil Service Commission, Burlington Gardens, London, W.

Indian Public Works Department.

The Secretary of State for India in Council makes appointments of Assistant Engineers in the Public Works Department of the Government of India.

Candidates must have attained the age of 21, and not attained the age of 24 years.

Candidates must produce evidence that they have (1) obtained one of the University degrees mentioned in Appendix I., or (2) passed the A.M.I.C.E. examination, or (3) obtained such diploma or other distinction in Engineering as may, in the opinion of the Selection Committee, be accepted as approximately equivalent to the degrees mentioned.

The Engineer Establishment of the Indian Public Works Department consists of a staff of engineers, military and civil, engaged on the construction and maintenance of the various public works undertaken by the State in India.

2. The permanent establishment of the Department is recruited from the following sources:—

(1) Officers of Royal Engineers.

(2) Persons appointed by the Secretary of State by selection from the United Kingdom.

(3) Persons educated at the Government Civil Engineering Colleges in India, and appointed by the Government of India.

(4) Occasional admission of other qualified persons.

3. The various ranks of the department are as follows:—

Superintending Engineers—Rs. 1,750 rising by annual increments of Rs. 100 a month to Rs. 2,150 a month.

Chief Engineers—Rs. 2,750 rising by annual increments of Rs. 125 a month to Rs. 3,000 a month.

Executive Engineers Senior—From Rs. 775 to Rs. 1,625 per month.

Assistant Executive Engineers—Rs. 525 to Rs. 1,225 per month.

The increments will be given for approved service only and in accordance with the rules of the Department.

Exchange compensation allowance will not be granted to future entrants.

Promotions above the grade of Executive Engineer are dependent on the occurrence of vacancies in the sanctioned establishment, and are made wholly by selection; mere seniority is considered to confer no claim to promotion.

State Railways.

The Secretary of State for India in Council will, from time to time as may be required, make appointments of Assistant Traffic Superintendent on Indian State Railways.

Candidates must possess one or other of the following qualifications, *viz.*:—

(*a*) Not less than two years' practical experience of work in the Traffic Department of a British or Colonial Railway or of a military railway, together with evidence of a sound general education.

(*b*) A degree or diploma of any teaching University in the United Kingdom granted after not less than three years' study in that University, or a technical diploma or certificate recognized by the Secretary of State.

(*c*) Or produce evidence that they had entered with reasonable prospects of success, upon the course leading to such degree or diploma, but were prevented from continuing it by the fact of joining His Majesty's Forces.

The establishment of the Superior Traffic Department of Indian State Railways consists of a staff of officers, military and civil, engaged on the various railways administered by the State in India. This establishment is recruited from the following sources:—

(i) Officers of Royal Engineers;

(ii) Persons appointed by the Secretary of State by selection from the United Kingdom;

(iii) Persons appointed in India;

(iv) Occasional admission of other qualified persons.

The various ranks of the Department are as follows:—

Traffic Managers .. Rs 2,300—100—2,500 and Rs 2,500 fixed.

Deputy Traffic Managers .. Rs. 1,750—50—2,100

District Superintendents:—

Class II.—Rs. 700 rising up to Rs. 1,550 per mensem.

Assistant Superintendents:—

Class III.—Rs. 450 rising up to Rs. 1,150 per mensem.

The establishments of the Superior Locomotive and Carriage and Wagon Departments of Indian State Railways consist of officers engaged on the various railways administered by the State in India. These establishments are recruited from the following sources:—

(i) Persons appointed by the Secretary of State by selection from the United Kingdom;

(ii) Persons appointed in India;

(iii) Occasional admission of other qualified persons.

The various ranks of the Departments are as follows:—

	Salary per mensem
Locomotive Superintendents ..	Rs. 2,300—100—2,500 and 2,500 fixed.
Deputy Locomotive Superintendent ..	1,750—50—2,000
Carriage and Wagon Superintendents	2,000—100—2,300
Deputy Carriage and Wagon Superintendents	1,750 fixed.

Both Departments.

District Superintendents:—

Class II.—Rs. 775 rising to Rs. 1,625.

Assistant Superintendents:—

Class III.—Rs. 525 rising to Rs. 1,225.

Telegraph Department.

There are not at present any vacancies in the Superior Establishment of the Indian Telegraph Department, and it is considered unnecessary for the present to recruit any Assistant Superintendents from the United Kingdom. The arrangements for the future recruiting of the Department have not been finally settled The various ranks of the superior establishment are as follows:—

	Maximum Salary per mensem Rs.
Director-General..	3,000
Deputy Director-General	2,000
Directors	1,800
Deputy Directors	1,600
Chief Superintendents, 1st Class ..	1,400
Chief Superintendents, 2nd class ..	1,250
Superintendents, 1st Grade	1,000
„ 2nd Grade	850
Assistant Superintendents, 1st Grade .	700
„ „ 2nd Grade.	550
„ „ 3rd Grade .	450
„ „ 4th Grade .	350

His Majesty's Indian Army.

A certain number of appointments to the Indian Army are offered to Cadets of the Royal Military College, and a certain number to candidates from the Universities. All King's Cadets (British and Indian) and Honorary King's Cadets nominated by the Secretary of State for India in Council have the option, during their last term at the Royal Military College, of electing for appointment to the Unattached List for the Indian Army, or for appointment to commissions in British Cavalry or Infantry. The appointments to the Unattached List for the Indian Army remaining after the claims of the King's Cadets and Honorary King's Cadets (Indian) have been satisfied are allotted in order of merit to Cadets who satisfy the requirements of the Regulations respecting admission to the Royal Military College, and who elect to compete for such appointments, at each final Examination at Sandhurst.

King's India Cadetships.

Twenty King's India Cadets are nominated each year from among the sons of persons who have served in India in the Military or Civil Service of His Majesty or of the East India Company. A Candidate is not eligible for nomination as a King's India Cadet if he be under 17 or over 19½.

A candidate is not eligible for nomination, and his claims will in no circumstances be considered until he (*a*) has qualified at the Army Entrance Examination; or (*b*) is prepared to attend the next examination. The fees of King's India Cadets at the Royal Military College are not payable by the State, except in cases where, after due inquiry, their pecuniary circumstances are ascertained to be such as to justify the payment.

Honorary King's India Cadetships.

Three Honorary King's India Cadets are nominated annually by the Secretary of State for India. Such Cadets are appointed from—

(*a*) The sons of officers of the Indian Army who where killed in action, or who have died of wounds received in action within six

months of such wounds having been received, or from illness brought on by fatigue, privation or exposure, incident to active operations in the field before an enemy, within six months after their having been first certified to be ill.

(*b*) The sons of officers of the Indian Army, who have obtained the brevet substantive rank of Major or Lieutenant-Colonel, and have performed long or distinguished service.

An Honorary King's Cadetship carries with it no pecuniary advantage.

Queen Alexandra's Military Nursing Service for India.

The Nursing establishment is for duty with British officers and soldiers, and at present consists of:—

4 Lady Superintendents

16 Senior Nursing Sisters.

71 Nursing Sisters.

The numbers in these grades are subject to alteration.

Nursing Sisters at the time of appointment must be over 27 and under 32 years of age. Candidates for the Service must have had at least three years' preliminary training and service combined in the wards of a British general hospital or hospitals of not less than 100 beds in which adult male patients receive medical and surgical treatment, and in which a staff of Nursing Sisters is maintained.

The duration of a term of service, for all grades of lady nurses, is five years. A lady nurse who has been pronounced by a Medical Board to be physically fit for further service in India, may be permitted to re-engage for a second and third term at the option of the Government, and again for a fourth term, or until the age of compulsory retirement, if in all respects efficient and if specially recommended by the Commander-in-Chief in India. But a lady nurse will not under any circumstances be permitted to remain in the service in the grade of Lady Superintendent beyond the age of 55 years, or in either of the other grades beyond the age of 50 years.

Rates of Pay.

(In addition to free quarters, fuel, light, and punkah-pullers.)

	Rs. per mensem.
Chief Lady Superintendent (including allowance of Rs. 100)	750 ,,
Lady Superintendent ..	450 ,,
Lady Superintendent, if not provided with free quarters, etc.	520 ,,
Senior Nursing Sister after five years in grade.. ..	350 ,,
Senior Nursing Sister on promotion	325 ,,
Nursing Sister after 11 years in service	300 ,,
Nursing Sister after 5 years in service	275 ,,
Nursing Sister on appointment	250 ,,

Royal Indian Marine.

All first appointments of executive officers in the Royal Indian Marine are made by the Secretary of State for India

The limits of age for appointment to the junior executive rank, that of Sub-Lieutenant, are 17 and 22 years, and no candidate will be appointed who does not possess the full ordinary Board of Trade certificate of a Second Mate; certificates for foreign-going *steamships* will not be accepted.

PAY AND ALLOWANCES.

The present establishment of officers of the Royal Indian Marine and their allowances are as follows:—

	Grade pay.	Per mensem Rs.
33	Nine Captains ..	900
	Eleven Commanders ..	800
	The remainder (13) ..	700
72	Lieutenants of 14 years' seniority (Lieut.-Commanders of 6 years' seniority) ..	625
	Lieutenants of 12 years' seniority (Lieut.-Commanders of 4 years' seniority) ..	600
	Lieutenants of 10 years' seniority (Lieut.-Commanders of 2 years' seniority) ..	575
	Lieutenants of 8 years' seniority (Lieut.-Commanders)	550
	Lieutenants of 6 years' seniority	450
	Lieutenants of 4 years' seniority	400
	Lieutenants under 4 years' seniority	300
	Sub-Lieutenants	250
	Cadets (without certificate) .	200

Total 105

In addition, 3 Commanders and 7 Lieutenants are at present employed in the Marine Survey of India.

A certain number of Shore, Port, and Marine Survey appointments are usually reserved for officers of the Royal Indian Marine. The numbers so reserved and the allowances attached (in addition to pay of grade), are as follows:—

	Allowances per mensem. Rs.
4 Shore appointments ..	400—1,000
16 Port appointments	320— 870 per diem.
11 Marine Survey appointments	4—20

The sanctioned establishment of the Engineers' branch of the Marine numbers 82, of whom at present two are Engineer Captains, Eight Engineer Commanders and the remainder Engineer Lieutenant Commanders, Engineer Lieutenants and Engineer Sub-Lieutenants.

The Indian Civil Service.

In the early years of the eighteenth century the East India Company was still little more than a body of traders. The genesis of the Indian Civil Service is to be sought in the modifications which the Company underwent as it found itself year by year more involved in the government of the country with which it was trading. It was gradually realised that neither the pay nor the training of the Writers, Factors and Merchants of the Company was adequate to the administrative work which they were called on to perform. As a result this work was often indifferently done, and corruption was rife. To Lord Cornwallis is due the credit of having reorganized the administrative branch of the Company's service, in accordance with **three main principles** from which there has been hitherto no deviation. These were that every civil servant should covenant neither to engage in trade nor to receive presents, that the Company on their side should provide salaries sufficiently handsome to remove the temptation to supplement them by illegitimate means, and that, in order that the best men might be attracted the principal administrative posts under the Council should be reserved for members of the Covenanted Civil Service as it was called. The first of these principles is embodied not only in the covenant which every member of the service still has to sign on appointment, but also in the "Government Servants' Conduct Rules," which are applicable to every civil department, however recruited. As regards the second, the scale of salaries originally prescribed was so handsome that it has not yet been considered expedient to undertake any general revision of it. The list of reserved posts remains, too much the same as in 1793, though certain modifications have been introduced to meet Indian aspirations.

At first nominations to the service were made by the Directors, but this right was withdrawn by Act of Parliament in 1853, and since 1855 **appointments** have been open to public competition, all natural-born subjects of the Crown being eligible. The age-limits and other conditions of examination have varied considerably from time to time, but at present candidates are examined between the ages of 22 and 24. At first young officers were sent straight to their appointments on recruitment, but in 1800 Lord Wellesley established a college at Fort William for their preliminary training. This was not a success and in 1805 a college at Haileybury was substituted, and for 53 years nominees underwent a two years' training there before proceeding to India. At present a year's course at a British University is prescribed, and at the close of this year there is a further examination. Failure to pass this means final loss of appointment, and seniority in the service is determined by combining the result of the open competition and this final compulsory examination.

The Statute of 1793 (33 Geo. cap. 52) modified in 1861, sets forth the list of **offices reserved** for members of the Indian Civil Service. It includes among others the offices of secretaries and under-secretaries to governments, commissioners of revenue, Civil and Sessions Judges, Magistrates and Collectors* of Districts (in the regulation provinces) and joint and assistant Magistrates and Collectors. In the non-regulation provinces, many of the above posts are held by military officers. In addition to these reserved posts there are many other appointments which the Indian Civilian can hold. He is now, however, debarred from permanent appointment as Governor-General or Governor, the highest office he can attain being those of Lieutenant-Governor and Member of the Viceroy's Council.

Despite the complete eligibility of **natives of India**, and despite the numbers of Indians who now seek their education in England, comparatively few have succeeded in obtaining appointments by open competition. On the 1st of April 1913 only 46 of the 1,319 civilians on the cadre were natives of India. In 1870 an important Act (33 Vict. cap. 33) was added to the statute book which allowed the appointment of "natives of India of proved merit and ability" to any of the offices reserved by law to members of the Covenanted Civil Service, such officers were known as Statutory or Uncovenanted Civilians. This method of appointment was dropped in 1889, and facilities were afforded to Indians for promotion through the ranks of the Provincial Service.

The young civilian, on joining his appointment in India, is attached to a district as **assistant to the Collector.** He is given limited magisterial powers, and after passing examinations in the vernacular and in departmental matters he attains to full magisterial powers and holds charge of a revenue subdivision. During this period he is liable to be selected for the judicial branch and become an Assistant Judge. In course of time promotion occurs and he becomes either Collector and District Magistrate, or District and Sessions Judge: this promotion does not generally occur before he has served for at least ten years. The District Judge is the principal civil tribunal of the district and wields extensive appellate powers. In his capacity as Sessions Judge he tries the more important criminal cases of the district.

The **Collector** is not merely chief magistrate and revenue officer of his district. He also forms a court of appeal from subordinate magistrates, supervises municipalities and local boards, is chief excise officer and district registrar, and in general represents Government in the eyes of the people. The Collector and his assistants are expected to travel over their

* The Chief Revenue Officer of a District is known as the Collector in the "regulation provinces" of Bengal, Madras, Bombay, Agra and Behar and Orissa. Elsewhere he is the Deputy Commissioner, and his assistants are Assistant Commissioners.

charges; touring rules vary in different provinces, but in Bombay the Collector spends four and his assistants seven months in the year on tour.

By the time the highest grades in the offices of Collector or Judge are reached the Civilian has, as a rule, nearly completed the 25 years which are necessary before he can retire. Should he elect to continue in service, there are still posts to which he can look forward for promotion. On the one hand, he may become a Commissioner or even a Member of Council, and on the other, there are Judicial Commissionerships and seats on High Court Benches. Such is the normal career of a Civilian, but this, by no means, completes the account of his prospects, for nearly one-fourth of the service is, as a rule, employed in posts—some reserved and some not—out of the regular line. A number of Civilians are employed in the Imperial and Provincial Secretariats, some are in political employ in the Native States, others hold responsible positions in the Customs, Police, Salt, Post Office and other departments, or supervise big municipalities and public trusts.

The Civilian may retire after 25 years' service and in the ordinary way must retire on reaching the age of 55. He contributes throughout his service to a pension which is fixed, regardless of whether he has risen to be a Lieutenant-Governor, or has remained at the foot of the ladder. Every Civilian, moreover, married or single, subscribes to an annuity fund which provides for the widows and orphans of deceased members of the service.

Public Services Commission.

In July, 1912, it was announced that the King had been pleased to approve the appointment of a Royal Commission to examine and report upon the Public Services in India. The Royal Commission was constituted as follows:—

Chairman.—The Right Hon. Lord Islington, K.C.M.G.

The Earl of Ronaldshay, M.P.

Sir Murray Hammick, K.C.S.I., C.I.E., Indian Civil Service.

Sir Theodore Morison, K.C.I.E., Member of the Council of India.

Sir Valentine Chirol.

Frank George Sly, Esq., C.S.I., Indian Civil Service.

Mahadev Bhaskar Chaubal, Esq., C.S.I., Member of the Governor of Bombay's Executive Council.

Gopal Krishna Gokhale, Esq., C.I.E., Member of the Viceroy's Legislative Council.

Walter Culley Madge, Esq., C.I.E., Member of the Viceroy's Legislative Council.

Abdur Rahim, Esq., Judge of the Madras High Court.

James Ramsay MacDonald, Esq., M.P.

Herbert Albert Laurens Fisher, Esq., Fellow and Tutor of New College, Oxford.

The Terms of Reference were as follows:—

To examine and report upon the following matters in connexion with the Indian Civil Service, and other civil services, Imperial and Provincial:—

(1) The methods of recruitment and the systems of training and probation;

(2) The conditions of service, salary, leave and pension.

(3) Such limitations as still exist in the employment of non-Europeans and the working of the existing system of division of services into Imperial and Provincial;

and generally to consider the requirements of the Public Service, and to recommend such changes as may seem expedient.

Work of the Commission.—The Royal Commission visited India in the cold weather of 1912-13, and toured extensively in India, including Burma, confining their attention mostly to hearing the evidence of and relating to the Indian Civil Service. They subsequently sat in London and in October, 1913, again left for India to enquire into 28 Services other than the Indian Civil and the Provincial Services. They assembled first at Delhi on November 3rd, and examined Imperial officers and witnesses from the United Provinces, the Punjab and the North-West Frontier Province. They then assembled at Calcutta in the middle of December, to hear witnesses from Bengal, Bihar and Orissa, and Burma.

Early in February the Royal Commission went to Madras, and completed the tour at Bombay, where witnesses from Western India and the Central Provinces were heard.

The Commission returned to England in the spring of 1914, and drew up a report of which publication was delayed on account of the war, until January, 1917. This report is a large blue book of 529 pages. The actual report of the Commissioners, with their recommendations, runs to 65 pages, but the annexures covering the various departments occupy 300 pages. Special minutes relating to the report by members who sign it take up 22 pages while a long minute, which really constitutes a separate report, by Mr. Abdur Rahim, of the Madras High Court, who regrets he has been unable to agree in the tenor of report or accept the more important of the conclusions of the commissioners, runs to no fewer than 94 pages.

Conclusions.—The Commission at the end of their report thus sum up their conclusions:—

At the end of the various annexures to our report we have summarised in detail the recommendations which we have made with regard to each service. The proposals we have put forward for increased expenditure have been framed without regard to the prior claims of the present war on the resources of the country, and may need to be given effect to gradually. Otherwise we have taken into account the existing situation. The main conclusions to which we have come are as follows:—

(i) Where it is necessary to organise the public services into higher and lower branches

this should be arranged on the basis of the work which they are required to do, and not, as is now in some instances the case, of the race of, or the salaries drawn by, their members, or any such artificial distinction (paragraphs 24 to 26).

(*ii*) Officers promoted from a lower into a higher service should ordinarily be given the same opportunities as officers who have been directly recruited and should be eligible on their merits for appointment to any post in their service. Both classes of officers should be shown on the same list and should take seniority amongst themselves from their date of entry on the list. Except in the case of the Indian civil service all promoted officers should also be made full members of the service into which they are promoted (paragraph 27).

(*iii*) The practice of employing military officers on civil duties should be continued in the medical, public works, railway, and survey of India departments, and subject to the conditions stated Military officers should also be eligible for appointment to the mint department. Elsewhere the practice of recruiting them should be allowed to die out, but this should take place gradually in the case of the civil service in Burma (paragraph 28).

(*iv*) The practice of employing members of the Indian civil service in other departments should be continued in the post office, and in the Northern India salt revenue, Indian finance and customs departments. Such officers should also continue to supervise the work of the land records (Burma), registration, salt and excise, and survey (Madras) departments. They should no longer be appointed directors of agriculture but rural commissionerships should be created and be manned from their ranks. The Inspector-generalships of police should no more be recruited for in the Indian civil service, but Indian civil servants, should continue to be eligible for these appointments subject to the claims of qualified police officers (paragraph 29).

(*v*) The services which lie between the higher and the subordinate services should no longer be designated "provincial" Services. If they are organised provincially they should ordinarily bear the name of their province; for example, the Madras civil service, the Bombay police service, and so on. If they are under the Government of India the terms class I and class II should be used for the two services. These terms should also be used in the education department (paragraph 30).

(*vi*) The services for which recruitment is now made normally in India should continue to be recruited for in that country. The Indian finance department should be added to this category. The military finance department should be similarly treated, if there are no military considerations to the contrary. Eventually, similar action should be taken with the customs department, but for the present some recruitment in Europe for this department should be permitted. The remaining services for which recruitment is now made wholly in Europe, or partly in Europe and partly in India, should be divided into three main groups. In the first should be placed the Indian civil service and the police department, in which it should be recognised that a preponderating proportion of the officers should be recruited in Europe. In the second should come services like the education, medical, public works and so on, in which there are grounds of policy for continuing to have in the personnel an admixture of both western and eastern elements. For these services arrangements should be made for recruitment in both countries. In the third should be placed certain scientific and technical services, such as the agricultural and civil veterinary departments, etc., for the normal requirements of which it should be the aim to recruit eventually in India. To this end educational institutions should be developed in India on a level with those now existing in Europe so as to produce the necessary supply of candidates (paragraphs 31 and 32).

(*vii*) No system of state scholarships will provide a suitable method for increasing the number of non-Europeans in the public services (paragraph 35).

(*viii*) In certain services arrangements should be made for the appointment of a minimum number of Indians, but this should not be made a general practice for fear that the minimum may come to be regarded as a maximum (paragraph 35).

(*ix*) To secure an increase in the number of non-Europeans employed, so far as this is not obtained automatically by the proposals made with regard to organization and the place of appointment, different methods should be followed in different services, as detailed in the annexures. Speaking generally, technical institutions in India should be created or expanded; provision should be made for advertising vacancies; Indian members should be appointed to serve on the committees which will advise on the selection of recruits; and, finally, the statistics relating to the employment of members of the various communities should be published every ten years (paragraph 36).

(*x*) The question of the extent to which the services should be manned by the direct recruitment of untried officers and by the promotion of experienced officers from an inferior service should be settled separately for each service, as explained in the various annexures. But in every case opportunities should be created for young men, and direct recruitment should be encouraged wherever possible (paragraph 37).

(*xi*) In the present conditions of India no general system of competitive examinations as a means of entry to the public services is suitable, but where such a method exists it should ordinarily be maintained (paragraph 42).

(*xii*) When nominating direct recruits for admission to the services the authorities in India should act with the advice of committees which should not be purely departmental in character, but should contain persons in touch with educational institutions, and should also have a non-official and an Indian element. Publicity should be given to all vacancies, and applicants should be forbidden to bring outside pressure to bear on individual members of the committees. A similar procedure should be followed in England. Candidates for services recruited in India should ordinarily possess minimum educational qualification. This need not be identical for all candidates, but the standard for all should be the same (paragraph 44).

(*xiii*) In recruiting specialists care should be taken to draw upon the widest possible field (paragraph 45).

(*xiv*) Arrangements can best be made for communal representation in India by the exercise of the powers of Government under the system of nomination proposed. No hard and fast rule or proportion is suitable (paragraph 46).

(*xv*) Except where otherwise provided, direct recruits should be on probation for two years. A probationary course in England should be given only to recruits for the Indian civil and forest services, and in the latter only for so long as recruits are taken from Europe. As the schools of forestry of the United Kingdom are developed, recruits from Europe should be taken from them (paragraph 47).

(*xvi*) The question of training requires to be considered for each service separately, as explained in the various annexures. Inter-provincial conferences of officers responsible for the training of recruits should be encouraged (paragraph 48).

(*xvii*) In fixing the salaries of their employes, Government should pay so much and so much only as is necessary to obtain recruits of the right stamp, and to maintain them in such a degree of comfort and dignity as will shield them from temptation and keep them efficient for the term of their service (paragraph 49).

(*xviii*) Except where otherwise expressly provided, officers should be remunerated by an incremental scale of salaries on the compartment system. Where this is done the rules with regard to acting allowances should be revised (paragraphs 50 and 51).

(*xix*) Exchange compensation allowance should no longer be paid, but generally speaking the amounts now drawn on this account should be added to the salaries of officers (paragraph 52).

(*xx*) The salaries to be paid to Europeans and statutory natives of India respectively should be settled for each service separately and ordinarily in accordance with the principle set out in item xvii above, and not on any general consideration of race or place of recruitment. In services in which different rates are found to be suitable they should be fixed on the merits of each case, and no proportion should be laid down generally as between the amounts payable to the two classes of officers. In services the normal requirements of which will eventually be met in India, the standard scale of salaries should be that considered suitable for statutory natives of India, and special rates should be fixed for Europeans for so long as they are recruited. In certain services in which equality of pay has long been an established practice this should be maintained. In other services officers should be brought to an equality in the administrative ranks, and earlier in the education department. As a special case statutory natives of India recruited in Europe should be paid as Europeans (paragraphs 53 to 57).

(*xxi*) The salaries to be paid to officers should be as stated in the various annexures. For recruits in India from the ordinary graduate class, or their equivalent amongst members of the domiciled community, a general scale rising from Rs. 250 to Rs. 500 a month should be introduced. Beyond this there should be selection scales of posts suitable to the circumstance of each service. For services requiring higher initial qualifications higher rates should be adopted (paragraph 58).

(*xxii*) The necessary steps should be taken to keep the cadres of the services up to a strength sufficient to cope with the work to be done (paragraph 61).

(*xxiii*) The calculations in accordance with which recruitment is made should be worked out with greater precision, and should be revised periodically with due regard to the requirements of leave and training. More precision is needed in fixing the annual rate of recruitment, and service tables should be prepared and kept up to date for each service or group of services. Distribution lists should be maintained for all services, which are recruited on a system, to show by groups of years the theoretical and actual number of officers present. Excesses or defects should be dealt with at the point where they occur. If in spite of these measures blocks in promotion are experienced, special allowances should be given on the merits of each case (paragraphs 61 to 65).

(*xxiv*) An expert committee should be appointed to simplify the present travelling allowance rules, to consider their sufficiency for everyday purposes, and to revise the classification of officers. Immediate measures should be taken to reimburse officers for all reasonable charges incurred by them on transfer from one station to another, whether personal to themselves or on behalf of their families and household establishments (paragraphs 66 to 68).

(*xxv*) The rules as to house allowance should be revised on the lines indicated (paragraph 69).

(*xxvi*) A Burma allowance should be given on the terms stated (paragraph 70).

(*xxvii*) Free passages should be given to officers of the services specified (paragraph 71).

(*xxviii*) Inefficient officer should be compulsorily retired (paragraph 72).

(*xxix*) Officers who are subject to the operation of article 459 of the civil service regulations should be retired at the age of 55, unless Government, in their sole discretion, decide to grant an extension of service (paragraph 73).

(*xxx*) There should be separate European service and Indian service leave rules to regulate the taking of long leave. Speaking generally, officers recruited under European conditions of salary should be subject to the European, and others to the Indian service leave rules (paragraphs 77 and 78).

(*xxxi*) The European service leave rules should be simplified, and greater facilities for leave on higher pay should be given by allowing privilege leave to be accumulated up to four months and furlough to be commuted subject to the restrictions stated (paragraphs 79 and 80).

(*xxxii*) The sterling amounts of the allowances payable under the European service

leave rules should stand to the rupee amounts in the proportion of 18 to 16 (paragraph 81).

(*xxxiii*) The Indian service leave rules should be simplified; officers subject to them should be allowed to accumulate privilege leave up to four months, and the allowances permissible should be increased to the extent stated (paragraphs 82 and 83).

(*xxxiv*) The rules relating to study leave should be revised; the arrangements for deputing officers to study particular problems should be made more elastic, and facilities should be given to officers on leave to study voluntarily such problems as interest them (paragraphs 84 to 86).

(*xxxv*) With the exceptions specified all officers should be under the same pension rules; all should serve normally for thirty years, but those recruited after the age of twenty-five in the services noted should be granted the concessions indicated, and all should be able to retire optionally on a reduced pension after twenty-five years' service. Government should be able to retire any officer after this period (paragraphs 87 to 91).

(*xxxvi*) The maximum limits of pension should be increased on the conditions stated and special additional pensions of amount stated should be drawn by the officers noted (paragraphs 92 and 93).

(*xxxvii*) A scheme for a general family pension fund, or for separate funds for different classes of officers, should be worked out on a self-supporting basis (paragraph 96).

REVISED METHOD OF RECRUITMENT.

Orders were issued from time to time regarding the recommendations of the Public Services Commissions, the last being one dated in December 1920, when decisions were taken regarding the organisation and recruitment of the service which are as follows:—The organisation which has been decided on, as recommended by the Public Services Commission to maintain the existing organisation of the Civil Services, and its division into imperial service and a provincial service, is based on the work for the performance of which the two services are recruited and not on any artificial distinction The evidence recorded by the Commission disclosed no desire for any change. In future the Imperial branch will be known as the Indian Civil Service and the Provinical will bear the name of the province in which its members are serving.

The recruitment of military officers to fill Civil Service posts in Burma will cease from the date of the present resolution. A revised list of superior appointments is annexed to the resolution, it has been approved by the Secretary of State but it has been compiled primarily for recruitment purposes and does not purport to be final in any way.

Recruitments for the Indian Civil Service (including appointments to the posts ordinarily held by members of the Indian Civil Service) will in future be affected by five methods: (1) Open competitive examination in London; (2) separate competitive examination in India; (3) nomination in India; (4) promotion from the Provincial Civil Service; and (5) appointment from the Bar.

The open competitive examination in London will be the main channel of entry to the service and will be open to all as heretofore, subject to the reservation that in future Indians successful in this examination will not be allotted to Burma, nor successful Burmans to India. The exact conditions of the future examinations cannot at present be announced as the details of the syllabus are still under consideration, but the Secretary of State has been in consultation with the Civil Service Commissioners and with the Universities in the United Kingdom with regard to the age of entry and the period of probation and has arrived at the conclusion that it is the best interests of India that the age limits for admission to the examination shall be 21 to 23 (reckoned from 1st August in the year in which the examination is held) and that the period of probation shall be two years. Before arriving at this decision, the Secretary of State in Council carefully considered other possible alternatives and in particular: (*a*) the proposal of the Royal Commission on the Public Services in India that the age-limits should be 17 to 19, on the 1st January followed by three years' probation; and (*b*) a proposal that the age-limits should be 17 to 20 followed by two years' probation.

The reasons for and against the various alternatives are distinctly stated in the extract from the report of the Civil Service Commissioners. In deciding on the adoption of the age-limits of 21 to 23, followed by two years' probation, the Secretary of State in Council has been influenced by the facts: (1) that it is the solution which was favoured by the Government of India in referring the question for the consideration of local Government in January 1919, and by a majority of the local Governments in reply to that reference; (2) that it is recommended by the Civil Service Commissioners, who are his statutory advisers in such matters; and (3) that the Universities in the United Kingdom are practically unanimous in favour of it, moreover public opinion in India is decidedly against the adoption of the school leaving age limits, which would in practice exclude many Indians from the open competition in England; and in favour of the higher limits, as was evident from the discussion in the Imperial Legislative Council on 24th September 1917, on a resolution deprecating acceptance of the Royal Commissioners' proposal.

The decisive consideration is the paramount necessity of securing for the Indian Civil Service officers of the highest possible quality. For this it is necessary to obtain men who have completed their University education and have had in addition a thorough special training such as a well organised course of probation lasting for two years will afford. The details of the course of probation are now under consideration by the Civil Service Commissioners but it has been decided that law and jurisprudence shall form an important part of the training. The study of the Indian languages, vernacular and classical, of Indian history and of economies, with

special reference to Indian conditions, will also be included in the course. The details both of the probationary course and of the syllabus of the open competition, will be announced later when they have been finally settled.

A separate competitive examination in India has been accepted as the **main source of Indian recruitment**. The institution of such an examination is provided for by Section 97 of the Government of India Act. The conditions under which the examination will be held were announced in 1921 and it was arranged that the first Examinations would be held in 1922. The candidates thus selected as well as any who may be nominated in India under paragraph 8 of this resolution, will be sent to the United Kingdom to join the candidates selected at the open competition in London in their two years course of probation. It has been decided that of the recruits selected in India for the service, exclusive of those promoted from the provincial service or directly appointed from the bar, at least 67 per cent. will be obtained through this examination.

Nomination is provided for in Section 97 (6) of the Government of India Act in order to secure to some extent, representation of the various provinces and communities in India It will not of necessity take every year, but only when the results of the competitive examination in India fails to give the representation required. The following procedure will be adopted:—When the number of vacancies to be filled in India in any year, by direct recruitment, exclusive of promotions from the provincial service and appointments from the bar, has been settled 67 per cent. of these will be announced as open for competition. If the distribution of success in the examination turns out to be such as will meet the requirements of the various provinces and communities resort to nomination will be unnecessary. The vacancies held in reserve will be filled as far as possible by selection from among the candidates who sat for the competitive examination and attained a certain qualifying standard. Failing this they will be filled by nomination. Rules relating to nomination are being framed, under Section 97 (*b*) of the Government of India Act and will be announced as early as possible.

Promotion from the provincial service.—The Commission recommended some reduction in the number of listed posts, but the Government of India have decided not to reduce the chances of promotion open to officers of the Provincial Service until they are in a position to appreciate more accurately, than is possible at present, the effect of the rules now framed. Regarding direct recruitment to the Indian Civil Service in India it is probable indeed that in some provinces the number of such appointments will actually be increased. Officers promoted from the ProvincialCivil Service to hold posts ordinarily held by members of the Indian Civil Service will in future, have the same opportunities of promotion as those who have been directly recruited. In regard to their status, *vis-a-vis* the regular members of the Indian Civil Service, the Government of India have decided to institute, or where they exist, to retain the provincial commissions on the lines recommended by the Public Services Commission in paragraph 3 of annexture X. of their report and to include in such commissions not only all members of the Indian Civil Service, however selected, but also promoted members of the Provincial Civil Service and members of the bar appointed to hold superior appointments, ordinarily held by members of the Indian Civil Service. The two latter classes of officers cannot be admitted to the Civil Service itself but will, from the date of their appointment, take rank with the Civil Service officers and will be eligible with them, on their merits, for all posts on the Civil Service cadre appointments.

The Bar.—The local Governments already have power under the rules laid down in the Home Department notification No. 598, dated the 21st June, 1918, to appoint persons who are not members of the Provincial Service, up to one-fourth of the total number of listed appointments, this power will be utilised by them as an experimental measure to appoint district judges direct from the Bar. It is hoped ultimately to fill not less than 40 posts in this way should the qualified men be available. Members of the Bar will, however, be appointed to posts in excess of 25 per cent. of the total number of such appointments only as new posts are created and with due regard to the claims of existing members of the Civil Services, thus the rights of these officers will be duly safeguarded as was expressly provided for by Section 36 (2), of the Government of India Act, 1919. At the same time, there will be no reduction in the number of posts open to men promoted from the Provincial Civil Services. Should the experiment prove successful (and on this point the opinion of High Courts will be ascertained from time to time) the full number, *i.e.*, 40 will eventually be made available for persons from the Bar for the purposes of these appointments. The Vakils and Advocates of High Courts and pleaders of Chief Courts will be eligible as well as barristers.

Percentage of Indians in the service.—After full consideration with the approval of the Secretary of State, the Government of India have decided to adopt the proportion suggested in paragraph 317 of the Joint Report on Indian Constitutional Reforms. This proportion of 33 per cent., rising by 1½ per cent., annually for ten years to a maximum of 48 per cent., will be taken as an all round figure to cover the total Indian recruitment from all sources, including promotion from the Provincial Service and appointment from the Bar.

The number of Indians to be recruited in India by examination and nominations will be fixed each year, after taking into account the number of Indians recruited in other ways, including the open competitions in London. The direct recruitment of Indians for 1920, has already been partially given effect to by the nominations already made under the rules issued under the Indian Civil Service (temporary provisions) Act and the candidates selected are already undergoing their probation in England. Although the candidates under these rules were selected at the end of 1919, the calculation of the number to be appointed was based on a consideration of vacancies that had accumulated from 1915 to 1920, inclusive.

These candidates were selected by nomination. It was intended that any further appointment to be made in India should so far as possible be effected by means of a competitive examination as explained in paragraph 7 above, but the Civil Service Commissioners, who are engaged in working out the scheme for this examination, have reported that it will not be possible to hold the examination in 1921 in time for candidates selected to commence their probation in England in October 1921. It has been decided, therefore, in that the number of Indians required to be recruited for 1921, according to the percentages approved above, should be obtained by nomination as in 1919. The rules required to effect this are under consideration, and will be published as soon as possible. It is hoped that the scheme of the examination in India will have been settled and rules under Section 97 (6), referred to in paragraph 8 above, approved in time to enable the first competition in India to be held in the cold weather of 1921-22 and the candidates selected to commence their probation in England in October 1922.

Training in India.—Subject to the general considerations mentioned below full discretion is left to the local Governments and administration in the matter of framing rules for departmental examinations and training on arrival in India. Officers should be trained under the supervision of a suitable district officer, with special qualities required for training junior officers but also having the time to devote to this object. Much valuable assistance can often be given him in this matter by a senior assistant.

For the first years too much court work should not be prescribed and departmental examination should be more practical. The test of proficiency in law should be more and more limited to an examination of a man's ability, with the act and rules at his disposal, readily to find the law governing a particular case and to apply it intelligently. The test in the vernaculars should be stiffened and should be directed chiefly to ensuring that officers are able to converse in them with fluency and to read and write them with accuracy.

Special training of officers for the JUDICIAL BRANCH.—Officers may be definitely selected for the judicial branch at any stage between five and eight years' service. As soon as they are so selected they should undergo a period of training for 18 months in the posts of munsif and subordinate judge, or additional district judge, and thereafter, if the High Court so recommends, they may be granted study leave to the United Kingdom for the purpose of reading in Barristers' Chambers and passing the Bar examinations, under such rules as may from time to time be prescribed by the Government. Ordinarily this leave will not be granted to any officer after the twelfth year of service.

REVISED RATES OF PAY.

In January 1920 it was announced that sanction had been given to revised rates of pay for officers of the Indian Civil Service holding executive posts with effect from the 1st December 1919. From that date onward there will be two scales of pay, a senior and a junior scale. Officers will draw pay in the senior or the junior scale according as they are holding superior appointments or not. The scale will be as follows:—

	Year of service.	Inferior scale per mensem.	Superior scale per mensem.	For Madras Collectors only.
		Rs.	Rs.	Rs.
Or any earlier year	1st	450	.....	.....
	2nd	500	.....	.....
	3rd	550	.....	.....
	4th	600	.....	.....
	5th	650	1,000	.....
	6th	700	1,050	.....
	7th	750	1,100	.....
	8th	800	1,150	.....
	9th	900	1,200	.....
	10th	1,000	1,275	.....
	11th	1,100	1,350	.....
Efficiency Bar	12th	1,200	1,425	.....
	13th	1,300	1,500	.....
	14th	1,300	1,600	.....
	15th	1,350	1,700	.....
	16th	.....	1,800	.....
	17th	.....	1,900	.....
	18th	.....	2,000	.....
	19th	.....	2,050	.....
	20th	.....	2,100	2,150
	21st	.....	2,150	2,200
	22nd	.....	2,200	2,350
	23rd	.....	2,250	2,400
	24th	.....	2,250	2,500
	25th	.....	2,250	2,500

Overseas Allowances—Note 1. Every officer drawing pay on the time scale will also receive, if he be of non-Indian domicile, an overseas allowance as follows:—Rs. 150 from the 1st to 7th year of service inclusive, Rs. 200 from the 8th to 11th years inclusive, Rs. 250 from the 12th year to the end of the time scale Beyond the time scale overseas allownace will cease and the pay sanctioned will be the same for all incumbents.

As an exception to this general rule, all Indians now in the Indian Civil Service and those appointed as the result of the next five open competitions in the United Kingdom will be regarded as eligible for the overseas allowance.

The term 'emoluments' is used hereinafter to express pay plus overseas allowance.

Note 2. Officers will become eligible for the increments of Rs. 50 shown in the 2nd and 3rd years of the time scale on passing the first and second departmental examinations respectively, and will remain on Rs. 700 (or Rs 550 if not eligible for the overseas allowance) till the completion of their 3rd year.

Note 3. The above time scales will cover appointments now graded as Assistant Commissioners, Assistant Collectors and Joint Magistrate or Sub-Collectors, all of which, with the exception named in paragraph 3 below, will be classed as inferior, and Deputy Commissioners or Magistrate Collectors, and District and Sessions Judges or Divisional Judges, Additional Magistrates and Additional Judges and such appointments as are graded with Magistrates and Collectors or Deputy Commissioners and District and Sessions Judges which will be classed as superior.

2. Except as provided below, all officers on the general time scale holding superior judicial appointments, will draw a duty allowance of Rs. 150 a month in addition to their emoluments under that scale. Judicial Officers serving in the Madras Presidency will draw this allowance in addition to the emoluments permissible under the general time scale and not in addition to admissible those under the scale sanctioned for Madras Collectors.

JUDGES' AND COMMISSIONERS' PAY.

The following numbers of District and Sessions Judges will draw pay outside the time scale of Rs. 3,000 a month: -Madras, 2; Bombay, 1; Bengal, 3; United Provinces, 2; Punjab 2; Burma, 1; Bihar and Orissa, 2.

2. They will not draw the overseas allowance or the judicial allowance of Rs. 150.

3. First grade Sub-Collectors in Madras will draw emoluments in accordance with the superior time scale, subject to a maximum of Rs. 2,000.

4. The pay of first grade Commissioners in Bombay will remain unchanged. The pay of the Municipal Commissioner in Bombay will continue to be regulated as at present. All other Commissioners except the Commissioner of Kumaon will in future draw Rs. 3,000. No change has been made in the pay of Financial Commissioners and Members of the Boards of Revenue.

5. The Chief Secretaries to the Governments of Madras and Bombay and Bengal will continue to draw their existing pay. The Chief Secretaries to the Governments of the United Provinces, the Punjab, Burma, Bihar and Orissa and the Central Provinces will receive Commissioner's pay. The Chief Secretary to the Chief Commissioner, Assam, will be paid on the superior time scale plus a duty allowance of Rs 400.

6. Proposals relating to the pay of special appointments (other than those dealt with above) and the pay to be drawn by officers promoted from the Provincial Civil Service and recruited from the Bar have recently been submitted to the Secretary of State.

7. In bringing officers at present in service on to the revised rates of pay, Articles 156 to 158 of the Civil Service Regulations will not be held to apply. Existing incumbents of officers will be protected against any immediate loss of pay due to the introduction of the revised rates.

8. Exchange compensation allowance is withdrawn with effect from the 1st December 1919.

THE INDIAN MEDICAL SERVICE.

The Medical Service under the control of the Government of India consists of some 803 medical men recruited in England by competitive examination; and has as its primary duty the care of the native troops and of the British officers and their families, attached to them. But in the course of rather more than a century and a half other duties and responsibilities have accrued to it, so that there are in addition the provision of medical aid to Civil Servants and their families, the administration of the civil hospitals of the large towns, and

the supervision of the numerous small dispensaries provided either by the Government or private charity for the inhabitants of the larger villages. Moreover, the Service provides for the sanitary control of large areas, dealing with the sanitation of towns, protection of water supplies and the prevention of epidemic disease. It is also represented in the Native States by the Residency Surgeon, and in Persia by the Medical Officers to the British Consulates. The Jail Department is also administered in great part by Indian Medical Officers, generally in the dual capacity of Medical Officer and Superintendent; and up to quite recently the Officers in the Mints have been recruited from members of the medical profession. Lastly, the Service provides the men who are engaged in original research on diseases of tropical importance at the Bacteriological Laboratories which have arisen in India during the last fifteen years, and others who as Professors at the large medical schools have had the task of creating an indigenous medical profession which will make permanent throughout the Indian Empire the civilising influence of Western Medicine.

This remarkable combination of duties and responsibilities in a single Service has slowly evolved from the system, initiated in quite early days by the old East India Company, of providing "Chirurgeons" from England, on the nomination of the Board of Directors in London, for the care of the people and soldiers in the Indian "Factories," and on the ships trading with the East. Besides these men the Company maintained several medical services, including those of St. Helena, the West Coast of Sumatra, Prince of Wales Island, and the China Coast. The Surgeons on the Company's Indiamen were frequently utilised for emergent work in India, as in the case of the Mahratta War of 1780 and other military operations of that time, for duty with troops, and sometimes to fill vacancies occurring among those who would now be styled "civil surgeons."

Organisation.—The Indian Medical Service practically dates from the year 1764 when the scattered medical officers serving in India were united into one body: later, this was divided into the three medical "Establishments" of Bengal, Madras, and Bombay. In 1766, the Medical Service was divided into two branches, military and civil, the latter being regarded as primarily army medical officers, lent temporarily for civil duties, in which they formed a reserve for the Indian Army, and were consequently liable to recall at any time. This position was confirmed by the Council of Lord Cornwallis in 1788; and has been in existence ever since with great advantage to the military authorities in times of military stress. In 1898, the officers of the Service were given military rank, and since 1906 all the names have been borne on one list, though men on entering the service are allowed to elect a Presidency in which they will serve on entering the Civil Department.

The Service was thrown **open to Indians** by the India Act of 1853, the first competitive examination being held in January 1855, when the list was headed by a Bengalee student who subsequently attained distinction. It was calculated by Lt.-Col. Crawford, I.M.S., (the talented historian of the Service) that from January 1855 to the end of 1910, eighty-nine men of pure Indian extraction had entered the Service. The proportion now shows signs of yearly increase. The total number of Indians at present in the Service is a little more than five per cent. of the whole: while, of the successful candidates during the past five years, 17·6 per cent. have been men born and bred in the country.

Method of Entry.—Entrance into the Service before 1914 was determined on the results of competitive examinations held twice a year in London, the Regulations regarding which, and the rates of pay, rules for promotion and pension relating thereto, may be obtained on application to the Military Secretary at the India Office. Candidates must be natural-born subjects of His Majesty, of European or East Indian descent, of sound bodily health, and, in the opinion of the Secretary of State for India in Council, in all respects suitable to hold commissions in the Indian Medical Service. They may be married or unmarried. They must possess, under the Medical Acts in force at the time of their appointment, a qualification registrable in Great Britain and Ireland. No candidate will be permitted to compete more than three times. Candidates for the January examination in each year must be between 21 and 28 years of age on the 1st February in that year, and candidates for the July examination must be between 21 and 28 years of age on the 1st August.

The candidate is examined by the Examining Board in the following subjects, and the highest number of marks obtainable will be distributed as follows:—

(1) Medicine, including Therapeutics	1,200 Marks.
(2) Surgery, including diseases of the eye	1,200
(3) Applied Anatomy and Physiology	600
(4) Pathology and Bacteriology	900
(5) Midwifery and Diseases of Women and Children ..	600
(6) Materia Medica, Pharmacology and Toxicology..	600

N.B.—The Examination in Medicine and Surgery will be in part practical, and will include operations on the dead body, the application of surgical apparatus, and the examination of medical and surgical patients at the bedside.

Having gained a place at the entrance examination, the successful candidates will be commissioned as Lieutenants on probation, and will be granted about a month's leave. They will then be required to attend two successive

courses of two months each at the Royal Army Medical College, and at Aldershot respectively.

Officers appointed to the Indian Medical Service will be placed on one list, their position on it being determined by the combined results of the preliminary and final examinations. They will be liable for military employment in any part of India, but with a view to future transfers to civil employment, they will stand posted to one of the following civil areas:—(1) Madras and Burma, (2) Bombay, with Aden; (3) Upper Provinces, *i.e.*, United Provinces, Punjab and Central Provinces; (4) Lower Provinces, *i.e.*, Bengal, Bihar and Orissa and Assam.

The allocation of officers to these areas of employment will be determined upon a consideration of all the circumstances, including as far as possible the candidate's own wishes.

The whole course lasts for four months, after which the duly gazetted Lieutenants proceed to India, and prior to December 1918 were attached to Indian regiments In December 1918 Station Hospitals for Indian Troops were instituted, a much needed reform which has been under consideration for a number of years. Indian Medical service officers are now attached to these hospitals for duty, and for the first years of their service are attached to native regiments in any part of the country. The doctor is an officer of the regiment, as was the case in the old days of the Army Medical Department. Of late years it has been proposed to form the members of the Service into a corps on the lines of the British Medical Service, by forming station hospitals for native troops, thereby releasing the doctor from regimental life. This reform appears to have fallen through for the present, but is likely to be brought into operation within a very few years.

Organisation.—The Head of the Service is the Director General, who is an official of the Government of India and its adviser on medical matters. He is also concerned with questions of promotion of officers to administrative rank, and of the selection of men for admission to the civil department. Attached to his office and under his general supervision is the Sanitary Commissioner with the Government of India. In each Presidency or Province there is a local head of the civil medical service and medical adviser of the local administration, who is either a Surgeon General, or an Inspector of Civil Hospitals of the rank of Colonel. The medical service in each province consists of the Sanitary Branch and the purely professional. The former is composed of Sanitary Commissioners of Districts, who by keeping large tracts of country under observation are in a position to advise their respective governments of the existence of epidemics, and on the proper methods of dealing with them and of preventing their spread. It is, however, through the Civil Surgeon that the visitor to India will come in contact with the Service. This official is something more than a general practitioner, as he is expected to be the leading medical and surgical authority in a large district consisting of a million or more of souls. Owing to the varied experience obtained in India by the members of the Civil Medical Department, this official is generally a man of the highest professional attainments, especially so in the case of those senior men holding appointments in the larger towns. His duties are to give medical aid to the civil servants and treat families, and to administer the hospital which has been provided by Government in each headquarter town. In many cases too he will have the additional charge of the local jail, and be the Sanitary Adviser of the Municipality. Accustomed to meet the most serious emergencies of his profession, and to rely entirely on his own skill and judgment, the Civil Surgeon in India has given to the Indian Medical Service a reputation for professional efficiency which cannot be excelled by any other public medical service. Travellers in India falling sick within call of any of the larger towns can therefore rely on obtaining the highest professional skill in the shape of the ordinary Civil Surgeon of the I. M. S. During the last few years the service has not been popular amongst graduates of the Medical Schools of the United Kingdom and a variety of disturbing factors have contributed towards this unpopularity. These have now been dealt with or are under consideration, and with the increased rates of pay which have been sanctioned the grant of better concessions in the matter of study, leave and facilities for research, etc. It is hoped that the service will soon regain its former popularity, and that it will attract men of the highest attainments. The Secretary of State for India has realised the necessity for an Indian Medical Service of the highest possible efficiency and has stated that he considered the I. M. S. the pivotal service of all services in India.

A Parliamentary Paper containing correspondence between the Government of India and the Secretary of State, on the promotion of an **independent medical profession** in India and the possibility of limiting or reducing the cadre of the Indian Medical Service, was published during 1914. Writing in 1910, the Government of India said that it was impracticable to make any reduction in the number of Indian Medical Service officers employed solely on civil duties, that is to say, those not belonging to the war reserve. An independent profession trained on western lines was growing up in India but had to overcome its universal rival in the shape of *hakims* and others trained in indigenous methods: Government could do much to encourage the growth of this profession by making provision for the registration of medical practitioners qualified according to western methods. The Secretary of State, replying in November 1912, said that he was unable to contemplate any substantial reduction in the Indian Medical Service. As for the independent profession, he trusted that the experience of the working of the Bombay Registration Act might justify the introduction of similar legislation for other Provinces. He considered that the Indian Medical Service should be restricted to the military needs of the country both on account of economy and in order to increase as far as possible the number of important posts held by Indians; he was prepared to consider each new appointment on its merits, but any proposal for an

increase in the civil posts included in the cadre of the Indian Medical Service would be subjected to the closest scrutiny. In reply to that despatch, the Government of India wrote in March, 1914 :—"In view of the growing medical needs of the country which necessitate the employment of a larger staff of medical officers, some expansion of the Indian Medical Service is inevitable, and such expansion should not, in our opinion, be regarded from a different standpoint from the enlargement of any other cadre in response to the development of the work to be performed." In connexion with the growing needs of the Service the Government of India appointed a Committee to examine and report on the question of the reorganization of the Medical Services in India, both Civil and Military. The Committee were to examine the question from the standpoint that it is desirable that there should be a unified Medical Service in India. The Report of the Medical Services Committee has been submitted and the recommendations made therein for the improvement of the various branches of the services are under the consideration of Government

Pay and Allowance.—The following are the monthly rates of Indian pay (payable from the date of arrival in India) drawn by European Officers of the Indian Medical Service. Indian officers will draw pay in accordance with the basic scale set forth below, without overseas allowances :—

Rank.	Basic Pay.	Overseas Allowances for officers of Non-Indian domicile	Total Basic Pay and Overseas Allowance.
	Rs.	Rs.	Rs.
Lieutenant	500	150	650
Captain, first 3 years in rank	650	150	800
Captain, next 3 years in rank	750	200	950
Captain, next 3 years in rank or until promotion to Major	850	200	1,050
Major, first 3 years in rank	950	250	1,200
Major next 3 years in rank	1,100	250	1,350
Major, next 2 years in rank or until promotion to Lt. Colonel	1,250	250	1,500
Lieut. Colonel, first 3 years in rank	1,500	250	1,750
Lt.Col next 2 years in rank	1,600	250	1,850
Lt.-Col. next year in rank and afterwards	1,700	250	1,950
Lt.-Col, when selected for increased pay	1,850	250	2,100

Pensions and Half-Pay.—Officers are allowed to retire on pension on completing 17 years, service, the amount they receive varying with the precise number of years they have served. The lowest rate for 17 years' service is £300 per annum, and the rate for 30 years £700 per annum. The increases in pension for each additional year's service over 17 are somewhat higher in the last 5 than in the first 8 of the 13 years between the shortest and longest periods of pensionable service. All officers of the rank of lieutenant-colonel and major are placed on the retired list on attaining the age of 55 years : the greatest age to which any officer can serve being 60.

In accordance with the orders received from the Right Honourable the Secretary of State for India, sanctioning an increase in the pay of officers of the Indian Medical Service in civil employment, the pay of the various appointments concerned will, when they are held by officers of that service, be fixed at the rates shown in the accompanying statement with effect from the 1st December 1918.

2. Exchange compensation allowance, when admissible, is payable in addition to the rate referred to above.

3. The present classification of Civil and Agency Surgeons as "1st class" and " 2nd class' is abolished with effect from the 1st December 1918.

4. The object of the revision is to attract to the service European candidates with the highest professional qualifications, and the question whether Indian candidates entering permanent service after 1st December 1918, shall be eligible for these increased rates of pay, and, if so,

to what extent and under what conditions, has been reserved for further consideration. All Indian officers already in permanent service of 1st December 1918, will be eligible for the rates of pay now sanctioned.

Appointments.	Pay Consolidated.
	Rs.
Director-General, Indian Medical Service	3,500
Surgeon-General to the Government of Madras, Bombay and Bengal ..	3,000
Inspector-General of Civil Hospitals, Bihar and Orissa, Assam, United Provinces, Punjab, Central Provinces and Burma.	2,600
Deputy Director-General, Indian Medical Service	2,150
Assistant Director-General, Indian Medical Service (Sanitary).	1,700
Assistant Director-General, Indian Medical Service (Stores)	1,700
Inspector-General of Prisons, Bengal, Bombay, Madras, Burma and United Provinces.	2,100— 50— 2,300
Inspector-General of Prisons, Punjab and Bihar and Orissa	2,100

Surgeon to His Excellency the Viceroy	1,800
Surgeons to Governors, Bombay, Madras and Bengal	1,200
Police Surgeon, Rangoon	1,250

* Present incumbents. Lieut. Colonels after 25 years' service Rs. 1,850 Lieut.-Colonels specially selected for increased pay, Rs. 2,000.

Pilot Services.

Appointments to the Bengal Pilot Service are made by the Secretary of State for India and by the Government of Bengal. In the case of appointments made by the Secretary of State, preference is given; *caeteris paribus*, to candidates who have passed through one of the training ships "Worcester" and "Conway", on the Pangbourne Nautical College.

Candidates for the Secretary of State's appointments must not be less than 18 and not more than 22 years of age. They must produce a Board of Trade or Colonial Certificate of Competency as a Second Mate, or any higher grade, for a foreign-going ship, and evidence of having served at sea not less than two years in a square-rigged sailing vessel of over 300 tons. The rates of pay and allowances of Leadsmen Apprentices while on duty are as follows, without exchange compensation allowance:—

When on the running list:—

	Rs.	
Junior Leadsmen ..	..107 a month	} Plus 50 per cent. of the lead money collected from the ships on which they do duty.
Second Mate Leadsmen	..135 a month	
First Mate Leadsmen ..	..160 a month	

When employed as Chief and Second Officer:—Chief Officers of pilot vessels, Rs. 160 a month.

As Second Officers of pilot vessels .. Rs. 135 a month

Plus a mess allowance of Rs. 40 a month

After five years' service a **Leadsman** Apprentice is allowed to appear at an examination to qualify him for appointment as **Mate Pilot**, but if he shows exceptional ability, and has passed each previous examination on his first attempt, bears a very good character, and is otherwise well reported on, this period may, with the special sanction of Government, be reduced to 4½ years. After three years' service as Mate Pilot, he is permitted to go up for an examination to qualify for appointment as **Master Pilot**, and, if successful, is promoted to that grade on the occurrence of a vacancy. Vacancies which occur in the grade of Branch Pilot are filled by promotion from the Master Pilots' grade, of men who have passed the Branch Pilots' examination. If the Local Government has reason to believe that a Pilot is, owing to physical unfitness of any kind, incapable of discharging his duties properly, it arranges for his medical examination and takes such action as may seem desirable when the results of that examination are communicated. In particular, Pilots are medically examined after the occurrence of any accident to the vessel in their pilotage charge, if the circumstances tend to show that the accident was in any way attributable to physical unfitness on the part of the Pilot.

Pilots are not entitled to any salary while on pilotage duty, but receive as their remuneration a share, at present 50 per cent., but liable to alteration at the discretion of the Government of Bengal, of the pilotage dues paid by ships piloted by them. The Government of Bengal reserves to itself the right to require all Pilots to obtain a Home Trade Master Mariner's Certificate before they are promoted to be Senior Master Pilots. Every member of the Pilot Service is subject to such rules as the Government of India or as the Government of Bengal under the control of the Government of India, may from time to time, respectively, make in regard to discipline, leave, leave allowances, number of officers in the service, distribution into grades, tonnage of ships to be allotted to the several grades, etc., and in all respects he is amenable to such orders as may be passed by the Government of Bengal, and is liable to degradation, suspension and dismissal by the Government of Bengal for any breach of such rules or orders, or for misconduct.

Other Pilot Services.—Bengal is the only province that has a covenanted pilot service: elsewhere pilotage is under the control of the local Port Trust. In **Bombay**, for example, the Port Trust have drawn up the following rules for entry into the service:

To be eligible for admission to the Bombay Pilot Service, candidates must be British subjects, and at least 21 years of age but not more than 30. They must hold certificates of competency as Master and excellent testimonials as regards conduct, character and ability. They will be examined in the Port Office for form and colour vision as prescribed by the Board of Trade, and also an extra form vision test of each eye separately and must undergo an examination by, and produce a certificate from, the Medical Officer appointed by the Port Trustees that they are physically fit, and are of a sufficiently hardy and strong constitution to perform a Pilot's duty and that they, to all appearance, enjoy good health. Any Probationer may, with the sanction of the Port Officer, go before the Examining Committee, and if he passes he will be eligible for appointment as a Pilot when a vacancy occurs. A Probationer, not passing the required examination to qualify for performing a Pilot's duties within six months after the date of his appointment, is liable to be struck off the list. Promotion to the various grades in the Pilot service is generally given by seniority, but the Port Trustees reserve to themselves the right of passing over any Pilot. There are 2 Master Pilots and 15 Pilots who are paid fixed Salaries commencing at Rs. 750 per mensem and rising by yearly increments of Rs. 30 to Rs. 1,230.

The Press.

The newspaper Press in India is an essentially English institution and was introduced soon after the task of organising the administration was seriously taken in hand by the English in Bengal. In 1773 was passed the Regulating Act creating the Governor-Generalship and the Supreme Court in Bengal and within seven years at the end of the same decade, the first newspaper was started in Calcutta by an Englishman in January 1780 Exactly a century and a third has elapsed since, not a very long period certainly, a period almost measured by the life of a single newspaper, *The Times*, which came into existence only five years later in 1785; but then the period of British supremacy is not much longer, having commenced at Plassey, only twenty-three years earlier. Bombay followed Calcutta closely, and Madras did not lag much behind. In 1789 the first Bombay newspaper appeared, *The Bombay Herald*, followed next year by *The Bombay Courier*, a paper now represented by *The Times of India* with which it was amalgamated in 1861. In Bombay the advent of the press may be said to have followed the British occupation of the island much later than was the case in Calcutta. In Calcutta the English were on sufferance before Plassey, but in Bombay they were absolute masters after 1665, and it is somewhat strange that no Englishman should have thought of starting a newspaper during all those hundred and twenty-five years before the actual advent of *The Herald*.

The first newspaper was called *The Bengal Gazette* which is better known from the name of its founder as *Hicky's Gazette* or *Journal*. Hicky like most pioneers had to suffer for his enterprising spirit, though the fault was entirely his own, as he made his paper a medium of publishing gross scandal, and he and his journal disappeared from public view in 1782. Several journals rapidly followed Hicky's, though they did not fortunately copy its bad example. *The Indian Gazette* had a career of over half a century, when in 1833 it was merged into the *Bengal Harkaru*, which came into existence only a little later, and both are now represented by *The Indian Daily News* with which they were amalgamated in 1866. No fewer than five papers followed in as many years, the *Bengal Gazette* of 1780, and one of these, *The Calcutta Gazette*, started in February 1784, under the avowed patronage of Government, flourishes still as the official gazette of the Bengal Government.

In 1821 a syndicate of European merchants and officials commenced the publication of *John Bull in the East*, a daily paper which was intended to reflect Tory opinion in India and set an example to the Press generally in the matter of moderation and restraint. The name of this journal was altered to *The Englishman* by the famous Stocqueler in 1836.

From its commencement the press was jealously watched by the authorities, who put serious restraints upon its independence and pursued a policy of discouragement and rigorous control. Government objected to news of apparently the most trivial character affecting its servants. From 1791 to 1799 several editors were deported to Europe without trial and on short notice, whilst several more were censured and had to apologise. At the commencement of the rule of Wellesley Government promulgated stringent rules for the public press and instituted an official censor to whom everything was to be submitted before publication, the penalty for offending against these rules to be immediate deportation. These regulations continued in force till the time of the Marquis of Hastings who in 1818 abolished the censorship and substituted milder rules.

This change proved beneficial to the status of the press, for henceforward self-respecting and able men began slowly but steadily to join the ranks of journalism, which had till then been considered a low profession. Silk Buckingham, one of the ablest and best known of Anglo-Indian journalists of those days, availed himself of this comparative freedom to criticise the authorities, and under the short administration of Adam, a civilian who temporarily occupied Hastings' place, he was deported under rules specially passed. But Lord Amherst and still more Lord William Bentinck were persons of broad and liberal views, and under them the press was left practically free, though there existed certain regulations which were not enforced, though Lord Clare, who was Governor of Bombay from 1831 to 1835, once strongly but in vain urged the latter to enforce them. Metcalfe who succeeded for a brief period Bentinck, removed even these regulations, and brought about what is called the emancipation of the press in India in 1835, which was the beginning of a new era in the history of the Indian press. Among papers that came into being, was the *Bombay Times* which was started towards the close of 1838 by the leading merchants of Bombay, and which in 1861 changed its name to the *Times of India*. *The Bombay Gazette*, founded in 1791 ceased publication in 1914.

The liberal spirit in which Lord Hastings had begun to deal with the press led not only to the improvement in the tone and status of the Anglo-Indian press, but also to the rise of the Native or Indian Press. The first newspaper in any Indian language was the *Samachar Durpan* started by the famous Serampore Missionaries Ward, Carey and Marshman in 1818 in Bengali, and it received encouragement from Hastings who allowed it to circulate through the post office at one-fourth the usual rates. This was followed in 1822 by a purely native paper in Bombay called the *Bombay Samachar* which still exists, and thus was laid the foundation of the Native Indian Press which at the present day is by far the largest part of the press in India, numbering over 650 papers.

From 1835 to the Mutiny the press spread to other cities like Delhi, Agra, Gwalior, and even Lahore, whereas formerly it was chiefly confined to the Presidency towns. During

the Mutiny its freedom had to be temporarily controlled by the Gagging Act which Canning passed in June 1857 on account of the license of a very few papers, and owing still more to the fears of its circulating intelligence which might be prejudicial to public interests. The Act was passed only for a year at the end of which the press was once more free.

On India passing to the Crown in 1858, an era of prosperity and progress opened for the whole country in which the press participated. There were 19 Anglo-Indian papers at the beginning of this period in 1858 and 25 Native papers and the circulation of all was very small. The number of the former did not show a great rise in the next generation, but the rise in influence and also circulation was satisfactory. Famous journalists like Robert Knight, James Maclean and Hurris Mookerji flourished in this generation. The *Civil and Military Gazette* was originally published in Simla as a weekly paper, the first issue being dated June 22nd, 1872. Prior to and in the days of the Mutiny the most famous paper in Northern India was the *Mofussilite*, originally published at Meerut, but afterwards at Agra and then at Ambala. After a lively existence for a few years in Simla the *Civil and Military Gazette* acquired and incorporated the *Mofussilite*, and in 1876 the office of the paper was transferred from Simla to Lahore, and the *Gazette* began to be published daily.

INDIAN PRESS LAW.

Before 1835 all printing of books and papers was subject to licence by the Governor-General in Council, and the licences were issued or refused at the discretion of Government. Act XI of 1835 repealed the old Regulations and merely required registration of the printer and made a few minor requirements. That Act was replaced in 1867 by the present Press and Registration of Books Act, and, except for an Act which was in force for one year during the Mutiny, there was no further legislation directly affecting the Press until 1878 when the Vernacular Press Act was passed. That Act was repealed during the Viceroyalty of Lord Ripon in 1882. From that date until 1907 Government made no attempt to interfere directly with the liberty of the Press, the growth of sedition being dealt with in other ways by the passing in 1898 of section 124A of the Penal Code in its present form, which had been originally enacted in 1870, and by the introduction into the Penal Code of section 153A and into the Criminal Procedure Code of section 108. There were a certain number of prosecutions under those sections up to 1907, but the dissemination of sedition through the Press continued. In 1908 the Newspaper (Incitement to Offences) Act was passed which dealt with papers inciting to murder or to acts of violence. This Act failed to have the desired effect.

The Indian Press Act, 1910, was a measure of wider scope, the main object of which was to ensure that the Indian press generally should be kept within the limits of legitimate discussion.

The Act deals, not only with incitements to murder and acts of violence, but also with other specified classes of published matter, including any words or signs tending to seduce soldiers or sailors from their allegiance or duty, to bring into hatred or contempt the British Government, any Native Prince, or any section of His Majesty's subjects in India, or to intimidate public servants or private individuals.

The different sections of the Act have in view (i) Control over presses and means of publication; (ii) control over publishers of newspapers; (iii) control over the importation into British India and the transmission by the post of objectionable matter; (iv) the suppression of seditious or objectionable newspapers, books, or other documents wherever found.

Repeal of Press Legislation.—By the autumn of 1917 the Government of India had begun to consider the desirability of modifying at least one section of the Press Act to which great exception had been taken on account of the wide powers that it gave. Finally, after more than once consulting Local Governments, a Committee was appointed in February 1921 after a debate in the Legislative Assembly, to examine the Press and Registration of Books Act, 1867, and the Indian Press Act, 1910, and report what modifications were required in the existing law. That Committee made an unanimous report in July 1921, recommending :—

(1) The Press Act should be repealed.

(2) The Newspapers Incitements to Offences Act should be repealed.

(3) The Press and Registration of Books Act and the Post Office Act should be amended where necessary to meet the conclusion noted below: (*a*). The name of the editor should be inscribed on every issue of a newspaper and the editor should be subject to the same liabilities as the printer and publisher, as regards criminal and civil responsibilities; (*b*) any person registering under the Press and Registration of Books Act should be a major as defined by the Indian Majority Act; (*c*) local Governments should retain the power of confiscating openly seditious leaflets, subject to the owner of the press or any other person aggrieved being able to protest before a court and challenge the seizure of such document, in which case the local Government ordering the confiscation should be called upon to prove the seditious character of the documents. The powers conferred by Sections 13 to 15 of the Press Act should be retained. Customs and Postal officers being empowered to seize seditious literature within the meaning of Section 124A of the I. P. C. subject to review on the part of the local Government and challenge by any persons interested in the courts; (*e*) any person challenging the orders of Government should do so in the local High Court; (*f*) the term of imprisonment prescribed in Sections 12, 13, 14 and 15 of the Press and Registration of Books Act should be reduced to six months; (*g*) the provisions of Section 16 of the Press Act should be reproduced in the Press and Registration of Books Act.

Press Association of India.—At the end of 1915 this Association was formed in Bombay. According to the articles of constitution "Its objects shall be to protect the press of the country by all lawful means from arbitrary laws and their administration, from all attempts of the Legislature to encroach on its liberty or of the executive authorities to interfere with the free exercise of their calling by journalists and press proprietors, and for all other purposes of mutual help and protection which may be deemed advisable from time to time." Members pay a minimum subscription of Rs. 10 annually. The affairs of the Association are managed by a Council.

AGRI-HORTICULTURAL SOCIETY OF MADRAS.—Established 1835. Quarterly subscription for members in Class A Rs. 7, in Class B Rs. 3. *Secretary*, E. R. Osborne, Teynampett, S. W., Madras.

ANTHROPOLOGICAL SOCIETY OF BOMBAY.—Founded 1886, to promote the prosecution of Anthropological research in India; to correspond with Anthropological Societies throughout the world; to hold monthly meetings for reading and discussing papers; and to publish a journal containing the transactions of the Society. Annual subscription Rs. 10. *Secretary*, Shams-ul-Ulma Dr. Jivanji Jamshedji Modi, B.A., Ph.D., C.I.E., Town Hall, Bombay.

ASIATIC SOCIETY OF BENGAL (Calcutta).—*Secretary*, A. H. Harley, M.A., 1, Park Street, Calcutta.

BHANDARKAR ORIENTAL RESEARCH INSTITUTE, POONA.—The Institute was inaugurated on the 6th of July 1917, the 80th birthday of Sir R. G. Bhandarkar, at the hands of H. E. Lord Willingdon, who became its first President. Its objects are to provide an up-to-date Oriental Library, to train students in the methods of research and to act as an information bureau on all points connected with Oriental Studies. Sir R. G. Bhandarkar has already bequeathed to the Institute his valuable private library of Oriental books. Since the 1st of April 1918 the Government of Bombay have transferred to the Institute the unique collection of manuscripts at the Deccan College together with a maintenance grant of Rs. 3,000 a year. Government have likewise entrusted to the Institute for the next five years the sole administration of the Budget grant of Rs. 12,000 a year on account of publication. The Institute has undertaken to edit the *Mahabharata* critically at the request of the Chief of Aundh who has promised a grant of Rs. 6,000 annually for that purpose. Grants have also been promised by the University of Bombay, and the Governments of Burma and Mysore. The Institute has started a journal called "Annals of the Bhandarkar Institute" published twice a year. The Institute also held under its auspices the First Oriental Conference on the 5th, 6th and 7th of November 1919, under the patronage of H. E. Sir George Lloyd and the presidency of Sir R. G. Bhandarkar. Minimum membership dues Rs. 10 a year or Rs. 100 compounded for life. *Secretary*, Prof. R. D. Karmarker, M.A., Fergusson College Road, Poona City.

BOMBAY ART SOCIETY.—Founded 1888, to promote and encourage Art by exhibitions of Pictures and Applied Arts, and to assist in the establishment and maintenance of a permanent gallery for pictures and other works of Art. Annual exhibition usually every February. Annual subscription Rs. 10; Life member Rs. 100. *Secretary*, S. V. Bhandarkar, Bandra, Bombay.

BOMBAY BRANCH OF THE ROYAL ASIATIC SOCIETY.—Founded 1804, to investigate and encourage Oriental Arts, Sciences and Literature. Annual subscription Rs. 50. *Secretary*, A. F. Kindersley, I.C.S., Town Hall, Bombay.

BOMBAY NATURAL HISTORY SOCIETY.—Founded 1883, to promote the study of Natural History in all its branches. The Society has a membership of about 1,700 and a small museum with a representative collection of the different vertebrates and invertebrates found in the Indian Empire and Ceylon. A Journal is published quarterly which contains articles on different natural history subjects as well as descriptions of new species and local lists of different orders. In the more recent numbers, serial articles on game birds, common snakes, and common butterflies have been appearing. Annual subscription Rs. 25. Entrance fee Rs. 20 (*President*, H. E. Sir George Lloyd, G.C.I.E., *Vice-Presidents*, Mr. J. D. Inverarity, The Hon. Sir Norman Macleod, and H. H. the Maharao of Cutch, G.C.S.I. (*Honorary Secretary*, R. A. Spence, M.L.A., F.Z.S., *Curator*, B. C. Ellison, *Asstt. Curator*, S. H. Prater. Office and Museum, 6, Apollo Street, Bombay.

BRITISH AND FOREIGN BIBLE SOCIETY.—Since 1811 the British and Foreign Bible Society has been at work in this country. It has 6 Auxiliaries in India and an Agency in Burma. The first Auxiliary was established in Calcutta, in 1811, then followed the Bombay Auxiliary in 1813, the Madras Auxiliary in 1820, the North India Auxiliary in 1845, the Punjab Auxiliary in 1863, the Bangalore Auxiliary in 1875, while the Burma Agency was founded in 1899. The Bible or some portion of it is now to be had in nearly 100 different Indian languages and dialects and the circulation throughout India and Burma reached over 1½ million copies in 1920. The Bibles, Testaments, and Portions in the various Vernaculars are sold at rates which the very poorest can pay, and at considerable loss to the Society. Grants of English Scriptures are made to Students who pass the various University examinations, whose applications are countersigned by their Principals, as under:—

The 4 Gospels and the Book of Acts in 1 Vol. to Matriculates.

The New Testament and Psalms to Intermediates.

The Bible to Graduates.

Last year over 12,000 volumes were so distributed. Portions of Scriptures in the important vernaculars have been prepared in

raised type for the use of the Blind and large grants of money are annually given to the different Missions, to enable them to carry on Colportage and Bible Women's work. Besides the British and Foreign Bible Society, there is Bible work carried on in India, Assam and Burma in a much smaller way by the Bible Translation Society—which is connected with the Baptist Missionary Society—the American and Canadian Baptist Mission, the National Bible Society of Scotland, and the Tranquebar Tamil Bible Society.

The following table shows the growth in the British & Foreign Bible Society's work during the past few years in India and Burma:—

CIRCULATION OF THE B.F.B.S. IN INDIA.

Auxiliaries.	1920.	1919.	1918.	1917.	1916.
Calcutta	177,963	207,634	182,436	172,734	139,499
Bombay	416,061	313,272	230,499	202,407	189,594
Madras	312.484	322,630	290,650	275,802	275,264
Bangalore	67,482	66,114	Not to hand.	32,974	34,265
North India	458,204	297,509	213,460	226,546	189,564
Punjab	104,595	109,774	98,296	150,366	157,680
Burma	117,968	124,170	101,003	107,623	105,127
Total copies of Scriptures ..	1,654,757	1,441,403	1,116,344	1,168,452	1,090,993

These returns do not include the copies which any Auxiliary has supplied to London or to other Auxiliaries and agencies during the year.

BRITISH MEDICAL ASSOCIATION (Bombay Branch).—Founded 1886, to promote Medical and the Allied Sciences and the maintenance of the honour and interests of the Medical Profession. *Secretary*, Dr. D. R. Bardi, Bombay.

BOMBAY MEDICAL UNION.—Founded 1883 to promote friendly intercourse and exchange of views and experiences between its members and to maintain the interest and status of the medical profession in Bombay. The entrance fee for Resident members Rs. 5, monthly subscription Rs. 2. Absent members Re. 1, and non-resident members yearly subscription Rs. 5. *President*, Dr. S. K. Engineer. *Secretaries*: Dr. R. D. Mody and Dr. F. A. K. Contractor. *Hon. Librarians*, Dr. B. P. Sabawalla and Dr. K. S. Patel. *Treasurer*, Dr S. P. Kapadia, 123, Esplanade Road, Bombay.

BOMBAY SANITARY ASSOCIATION.—Founded to create an educated public opinion with regard to sanitary matters in general; (*b*) to diffuse the knowledge of sanitation and hygiene generally, and of the prevention of the spread of disease amongst all classes of people by means of lectures, leaflets and practical demonstrations and, if possible, by holding classes and examinations; (*c*) to promote sanitary science by giving prizes, rewards or medals to those who may by diligent application add to our knowledge in sanitary science by original research or otherwise; (*d*) to arrange for homely talk or simple practical lectures for mothers and girls in the various localities and different chawls, provided the people in such localities or chawls give facilities. The Sanitary Institute Building in Princess Street, which has lately been built by the Association, at a cost of nearly Rs. 1,00,000 the foundation stone of which was laid by Lady Willingdon in March, 1914, and opened in March, 1915, is a large and handsome structure with a large Lecture Hall, Library, Museum, etc., and also provides accommodation for King George V. Anti-Tuberculosis League Dispensary and Museum and the Office of the Assistant Health Officer C and D Wards and the Vaccination Station and Eye Dispensary. *Hon. Secretary*, Dr. J. E Sandilands, M.D., D.P.H., Executive Health Officer, Bombay.

EUROPEAN ASSOCIATION.—The European Association was established in 1883 under the title of the European and Anglo-Indian Defence Association and was re-established in 1912 under the title of the European Defence Association, but the present title was adopted in 1913. The Association has for its objects the general protection of European interests and the promotion of European welfare. The Association numbers 8,261. The Head Offices are at Dalhousie Square, Calcutta. *President*, Mr. G. Morgan.

BRANCHES OF THE EUROPEAN ASSOCIATION.

The library is located in the Fergusson College, Poona, whence the journals and books are circulated to members by post. The journal of the Society is published in Madras. There are about 150 members from all parts of India. *President*, Balak Ram, I.C.S., District Judge, Sukkur, *Secretarries*, Prof. D. D. Kapadia, Poona, and Prof. M. T. Naraniengar, Bangalore. *Librarian*, The Hon. Mr. R. P. Paranjpye, Poona.

INDIAN SOCIETY OF ORIENTAL ART (Calcutta.) —*Joint Hon. Secretaries*. C.W.E. Cotton, and G. N. Tagore, *Assistant Secretary* : P. Chatterjee. *Office* :—Suite, 12, Samavaya Mansions, Calcutta.

INDIA SUNDAY SCHOOL UNION.—The India Sunday School Union is a large indigenous interdenominational Society having the sympathy and co-operation of the greater number of Missionary Societies in India. The chief objects of the Union are the promotion of systematic and careful Bible study, and the increased efficiency of Sunday Schools in India. Its operations extend beyond the borders of India itself to Mesopotamia, Siam and Borneo. Approximately 750,000 Sunday School scholars and teachers and 13,944 Sunday Schools are connected with the Union, speaking 45 vernaculars. One Central and 60 Provincial and Mission Committees control its Indian work, which forms part of a world-wide movement with a membership of 35,000,000. Her Excellency Lady Chelmsford, C.I., G.B.E, is the Patroness.

The India Union was founded in Allahabad in 1876. Yearly examinations are held for both teachers and scholars in thousands of centres, for which medals, prizes, scripture awards, and certificates are granted to successful candidates. Upwards of 276,000 candidates have been examined in six months' Bible study since 1896, no less than 250,000 granted illummated certificates and in 1920 nearly 54 medals were awarded. Notes on the daily portions of the Interdenominational Bible Reading Association are published by the I. S. S. U. in English and 14 Vernaculars, and 50 editions of the S. S. Lesson Expositions are published in 20 Vernaculars. In addition, there is a large publication of literature dealing with all phases of child study and moral and religious training. The monthly publication of the Union is the *India Sunday School Journal*. The Teachers, Training Department is under the care of Mr. E. A. Annett, supported by the W. S. S. A.
General Secretary of the Union, the Rev. R. Burges, India Sunday School Union, Jubbulpore.

INSTITUTION OF ENGINEERS (INDIA).—The organisations of the Institution commenced in 1919 and it was inaugurated by H. E. Lord Chelmsford early in 1921. Its object is to promote and advance the science, practice and business of engineering in India on the same lines as are adopted by the Institutions of Civil, Mechanical and Electrical Engineers in the United Kingdom. The standard of qualification is the same. Membership is divided into three classes, *viz.*, Members, Associate Members and Associates, and there is an additional class for students. *Offices*.—Clive Buildings, Calcutta.

MADRAS FINE ARTS SOCIETY.—*Patron* :—H. E. the Rt. Hon. Lord Willingdon ; *President* :—The Hon. Mr. Justice F. D. Oldfield, I.C.S., *Secretary* :—A. R. Loftus Tottenham, I.C.S., Snowdon, Adyar P. O., Madras.

MADRAS LITERARY SOCIETY AND AUXILIARY OF THE ROYAL ASIATIC SOCIETY.—*Secretary*, S. J. Crawford, M.A., B. Litt., Wingate, Mylapore, Madras.

NATIONAL INDIAN ASSOCIATION.—Founded in 1870. Its objects are :—(*a*) To extend in England, knowledge of India, and interest in the people of that country. (*b*) To co-operate with all efforts made for advancing Education and Social Reform in India. (*c*) To promote friendly intercourse between English people

and the people of India. In all the proceedings of the Association the principle of non-interference in religion and avoidance of political controversy is strictly maintained. It has branches in Bombay, Madras, Ahmedabad, Nagpur, Calcutta, Rangpur, Poona & Lahore. *Hon. Secretary*, Miss Beck, 21, Cromwell Road, London. Publication, *The Indian Magazine and Review*, a monthly Journal which chronicles the doings of the Association in England and in India, and takes note of movements for educational and social progress. It publishes articles about the East to interest Western readers, and articles about the West to interest readers in the East.

LIFE MEMBERS.—Ten Guineas Annual Subscriptions: Members one Guinea; County Members, Ten Shillings; Associates (Students), Seven shillings and Six pence.

PHILATELIC SOCIETY OF INDIA.—Annual subscription Rs. 15. *Secretary*: Jno. Godinho, 15, Burrow's Street, Bombay

PHOTOGRAPHIC SOCIETY OF INDIA (Calcutta). —Annual subscription Rs. 24 (Town Members) and Rs. 12 (Mofussil members). Entrance fee Rs. 20 and Rs. 10. The Society distributes a monthly journal to members, and undertakes developing, printing and enlarging work. There are excellent workrooms, apparatus and reading rooms at the Society's Headquarters at 40, Chowringhee Road, Calcutta, *Hon. Secretary*: E. Rogers, 40, Chowringhee Road, Calcutta.

POONA SEVA SADAN SOCIETY.—This Institution was started in 1909 by Mrs. Ramabai Ranade, Mr. G. K. Devadhar and a few other ladies and gentlemen in Poona and registered in 1917. It is now working independently, though for a part of the intervening period it was conducted as a branch of the Bombay Seva Sadan. Its main object is to make women self-reliant and to train them for missionary work undertaking educational and medical activities for their sisters and brethren, especially the former in backward areas and working on a non-sectarian basis The instruction is free except for the Music Classes and for Special Classes in English, etc. There are seven different departments sub-divided into 46 classes Arrangements are made for training Nurses and Midwives and Sub-Assistant Surgeons at the Sassoon Hospital, Poona, and a hostel is maintained for the former and another for those attending the Sub-assistant Surgeon's Class. There is a full-fledged Training College with 130 students for training Mistresses for vernacular schools. This College is probably the only college in India maintained by a non-official, non-Christian missionary body teaching the full course. The results of the Certificate Examinations held last year under the authority of the local Government Training College for Women were as follows: III year 9, II year 11, and I year 21, thus working up the percentage of 60. The Practising School for little girls attached to the Training College has now ten classes with 240 students reading up to the Marathi VI Standard, English being taught in the top three standards Primary Classes for grown up women teaching up to the Marathi V Standard are attended by 165 women. It is here that poor women are recruited for the work of teacher, nurse, midwife, or doctor. Special classes for teaching English, First Aid, Home Nursing were attended by 54 students; the Music Classes by 76 students, and the Workroom Classes for teaching Sewing, Embroidery, Hostery and Weaving by 160 students. Thus the total number of pupils is 874 to-day (including about 150 duplications). There are four hostels, two of which are located at the headquarters and the other two in the Raste's Peth and the Somwar Peth for Nurses, etc., under training at the Sassoon Hospital. The number of resident students is above 150 in these four hostels. In connection with the medical branch a Committee has been formed in England, which will enable the Society to send fully qualified Nurses there to undergo further training. Now Her Excellency the Hon'ble Lady Lloyd is the Honorary Patroness along with Lady Willingdon, Lady Sydenham and Lady Chelmsford. The institution is largely supported by public contributions and Government assistance. The annual expenditure roughly comes up now to Rs. 75,000, *President*: Mrs. Ramabai Ranade; *Honorary Organiser and General Secretary*: Mr. Gopal Kishna Devadhar, M.A.; *Local Secretary and Treasurer*: Mrs. Yamunabai Bhat; *Lady Superintendent and Secretary for Development and Collection*: Mrs. Janakibai Bhat; *Secretary, Nursing Committee*: Rao Bahadur Dr. P. V. Shikhare, L. M. & S.

PRESS-OWNERS' ASSOCIATION, Bombay—Started on 30th April 1919 to promote the interests of the printing and litho presses and alike trades, to bring about harmony and co-operation among press owners and proprietors of alike trades and to take such steps as may be necessary in furtherance of the above objects.

Office:—Servants of India Society, Sandhurst Road, Bombay 4.

President:—Shet Pandurang Javjee.

Secretaries:—Mr. Manilal Desai and Mr. C. S. Deole, B.A.

RANGOON LITERARY SOCIETY.—*President*: Dr. T. F. Pedley; *Hon. Secretary*: Mr. Hunter, 17, York Road.

ROYAL SOCIETY OF ARTS, INDIAN SECTION.—This Society was founded in London in 1754. Its recently published history by Sir Henry Trueman Wood, late Secretary of the Society, gives the following account of the Indian Section. In 1857, a proposition was made by Mr. Hyde Clarke, who wrote to the Council suggesting that "a special section be formed for India, another for Australia, one for English, America and so on." It was suggested that the Indian Section should meet once a fortnight for the reading of papers. Nothing came of the suggestion until ten years later when Mr. Hyde Clarke returned to England, and in 1868 he renewed his proposal, but only proposing the formation of a committee which should organise conferences on Indian subjects. This time the suggestion was taken up more warmly. Mr. Hyde Clarke himself was placed on the Council, and the Indian Conferences, which soon developed

into the Indian Section, were started. "The Indian Section thus established became a most important department of the Society. It has had great results in India by spreading information as to the directions which the development of Indian manufactures and Indian products could most usefully take, and in England by giving similar information as to the industrial resources and progress of India itself. The Section has received great help from the Indian press and it has in return been of service to the Indian press in supplying useful information to it. It has been of great value to the Society itself as the means by which many members have been added to its list, so that in fact, thanks to a very large extent to the work of the Indian Section and of the allied section for the Colonies, a large proportion of the present number of members come from the dependencies of the Empire abroad." *Secretary of the Society*: G. K. Menzies, M.A.; *Secretary of the Indian and Colonial Sections*: S. Digby, C.I.E., 18, John Street, Adelphi, London, W. C. 2.

SERVANTS OF INDIA SOCIETY.—The Servants of India Society which was founded by the late Hon'ble Mr. Gopal Krishna Gokhale, C.I.E., in 1905, has its Head-quarters in Poona and its objects are "to train national missionaries for the service of India and to promote by all constitutional means the true interests of the Indian people." Its government is vested in the First member or President and a Council. On the death of Mr. Gokhale in February, 1915, the Hon'ble Mr. V. S. Srinivasa Sastri was elected President. He has again been re-elected for a further term of three years. It has at present four branches, *viz.*, (1) in Bombay, (2) in Madras, (3) in the United Provinces, (4) in the Central Provinces. Each Branch consists of ordinary members, members under training and permanent assistants who work under the direction of a Senior Member. The branches engage both in propagandist and active work of political, educational, social, agricultural and philanthropic character in which they secure the help of a large number of voluntary workers, both men and women. A fair idea of the work of a branch can be had from a brief description of the operations of the BombayBranch whose members have so far undertaken activities in various fields. (1) Social purity like the Holika Sammelan of Bombay, (2) Social reform organization under the auspices of the National Social Conference, (3) rousing public opinion about elementary education, (4) promotion of the cause of elevation and education of Indian women by building up institutions like thePoona Seva Sadan, with 875 (including duplications of about 125) women and girl pupils in nearly 50 classes of its 8 departments and four hostels in the city. Mr. G. K. Devadhar, M.A., is its Hon. Organiser and General Secretary. (5) Social Service as carried out by the Social Service League of Bombay of which Mr. N. M. Joshi, B.A., M.L.A., is the Honorary General Secretary,(6) spread of co-operative movement among the agriculturists, compositors in the city of Poona and mill-hands in Bombay. The co-operative societies, as at Hadapsar and other villages around Poona, started for the benefit of these poor people, number over 35 with a total membership of over 1,800, capital of nearly three lakhs and a total turn-over of five lakhs per year. Nineteen of these societies which are in Bombay for poor labouring classes are so conducted as to free their members entirely from their chronic indebtedness. Their membership consists of sweepers, scavengers, mill-hands numbering above 550 and debts amounting to nearly three lakhs of rupees have been cleared off Moreover, educational work was organized by starting a Co-operative Quarterly and by starting a Co-operative Secretaries, Training Class in Bombay for 60 Secretaries from the various districts for three years. These are now transferred to the Central Co-operative Institute, Bombay. These three experiments on such a scale were the first of their kind in India, (7) relief work connected with widespread calamities by organizing the Plague Relief Committee of Poona, which succeeded in making inoculation popular in the Deccan, the Salumbra Fire Relief Committee which arranged for the Relief to sufferers for five years and by undertaking a scheme of non-official relief during the famines of 1907-08 and 1914 in the United Provinces, the famine in Gujarat and Kathiawar of 1911-12 and the famine of 1913 in the district of Ahmednagar, and that of 1918-1919 in Gujerat and the Deccan; and in 1920 in Orissa near Puri, (8) Influenza relief was well organized by members of these associations in Bombay and Poona, (9) organizing public opinion on the question of Indians in South Africa, (10) its political work is conducted strictly on constitutional lines and thus it was able to start District Congress Committees in several wards of the city of Bombay. These conducted a political quarterly, (11) it has started in Bombay an organisation called the Indian Economic Society with a view to promoting the study of Indian economics on right lines and also conducts a vernacular class. Mr. C. S. Deole, B.A., is one of the Hon. Secretaries. (12) A new association called the Liberal Club has been started to carry on political propaganda. Besides, the Society was engaged in conducting a scheme of welfare work to supply cheap grain, cheap cloth and cheap credit at Jamshedpur, which may be resumed again by the Branch getting it worked on behalf of one of its organisations. One of its Members has started a Gujarati ladies' organisation called the Bhagini Samaj for work among women in Gujarat and Kathiawar. Quite recently the United Provinces Branch organised a band of volunteers who rendered assistance, in a manner that drew general approbation, to the pilgrims at the Kumbha Mela in Hardwar and Allahabad, the ladies of the Poona Seva Sadan assisting in this work. The Society engages in journalistic work also, having in its control the *Hitavada*, an English weekly in Nagpur, the *Dnyan Prakash*, a Marathi daily and Weekly in Poona, and the *Hindustani* an Urdu weekly in Lucknow. The Society has been conducting, with Mr. Vaze as editor, an English weekly called *The Servant of India*. The U. P. Branch has in addition undertaken the publication of

pamphlets on public questions and has sent out three such publications together with a large quantity of leaflets. This Branch has taken lead in organising the *Boy Scout Movement* all over the province through the local Seva Samitis. The Madras Branch engages itself principally with co-operative organisation, publishing in three languages Co-operative Bulletin, Co-operative Industrial Societies and the Social Service League activities in the city of Madras.

The expenses incurred by the Central Home of the Society in Poona and its four branches exceed Rs. 45,000 a year and this amount is made up by contributions from Indians, rich as well as poor. The present number of workers enlisted by the Society is about 25, most of whom are University men of considerable standing. Besides, there is a large number of devoted associates.

President.—The Hon'ble Mr. V. S. Srinivasa Sastri, B A, L.T., Triplicane, Madras, Senior Member, Madras Branch, Mr Gopal Krishna Devdhar, M.A, Vice-President, Senior Member, Bombay Branch, Mr. Natesh Appaji Dravid, M.A, M.L.C., Senior Member, Central Provinces Branch, Mr. Hirdayanath Kunzru, B.A., B.S.C., M L C, Senior Member, Upper India Branch, Mr. A. V. Patwardhan, B A., Senior Member, Business Branch, Poona. Messrs. Joshi, Kunzru and Vaze together with the senior members constitute the Council of the Society with the Hon ble Mr. Sastri as its President. Mr. Anant Vinayak Patwardhan is the Secretary of the Council and also of the Society. Six young men, nearly all graduates, have been admitted this year on probation.

SEVA SADAN.—The Seva Sadan Society was started on the 11th of July, 1908, by the late Mr. B. M. Malabari. It is the pioneer Indian ladies' society for training Indian sisters ministrant and serving (through them) the poor, the sick and the distressed. The society has a habitation in Gamdevi, Bombay. One-half of the Building and Endowment Fund of Rs. 82,000 has been spent mainly in building at Gamdevi, and partly in the purchase of two acres of land at Santa Cruz for a "Sisters' Home" and other purposes

The Society maintains the following institutions for training its probationers and for doing its other work. 1. A home for the Homeless. 2. An Industrial Home with various departments. 3. A Dispensary for Women and Children. 4. Ashrams. 5. Free educational classes and a Library and Reading-room. 6. Home-Classes in the quarters of the poor, and normal classes for training Marathi women for the teacher's profession. All these are for the benefit of poor women. *Secretary,* Miss B. A. Engineer, M.B.E., M.A., LL.B.; *President,* Mrs. Ramabai Ranade, *Hon. Gen. Secretary,* the Hon. Mr. Lalubhai Samaldas, C.I.E., *Treasurers,* Sister Sushilabai and the Hon'ble Mr. Lalubhai Samaldas; *Trustees,* Sir Narayan Chandavarkar, Sir Bhalchandra Krishna, Sir V. D. Thackersey, the Hon. Sir G. K. Parekh and the Hon. Mr. Lalubhai Samaldas, C.I.E.

CONSUMPTIVES' HOME SOCIETY.—This Society was started by the late Mr. B. M. Malabari on the 1st of June 1909 It was registered under Act XXI of 1860. Mr. Malabari secured a large grant of land in a Himalayan pine forest in Dharampur (Simla Hills) from H. H. the Maharaja of Patiala, for a Sanitorium for Consumptives. His Highness also gave a donation of Rs. one lakh The Sanitorium has its special water works known as the Lady Hardinge Water Works, presented by the late Sir Chinubhai Madhav lal, Bart. of Ahmedabad. The Sanitorium has a Guest House: The Noshirwan Adul Guest House for visitors to Dharampore. It has accommodation for 75 patients. The Sanitorium was started on June 1, 1909, and has been in existence ever since. Mr. Malabari collected an Endowment Fund of about Rs 67,000 lodged with the Treasurer, Charitable Endowments, under Act VI of 1890. Nearly Rs. 1,37,000 have been spent on buildings, etc., and the current annual expenditure is about Rs. 34,000. Capt. R. B Spencer, M B B.S, is in charge of the Sanitorium. The office of this Society is situated at the Seva Sadan Buildings, Gamdevi, Bombay.

SOCIETY FOR THE PROMOTION OF NATIONAL EDUCATION.—This Society stands for an Indian education for Indian boys and girls, its general policy being embodied in "Principles of Education" by Mrs. Besant. *Treasurer and Registrar* :—D. K. Telang, Adyar, Madras.

SOCIETY FOR THE PROTECTION OF CHILDREN IN WESTERN INDIA.—*Office and Refuge :* Girgaon Back Road, Bombay.

Founded.—To prevent the public and private wrongs of children and the corruption of their morals; to take action for the enforcement of the laws for their protection, and, if necessary, to suggest new laws or amendments of the existing laws; to provide and maintain an organisation for these objects; and to do all other lawful things incidental or conducive to the attainment of the foregoing objects.

Subscription for annual membership, Rs. 10; for Life Membership, Rs. 100.

Honorary Secretaries : Mr. Mahomedbhoy Currimbhoy, Mr. N. V. Mandlik, B.A., LL.B., Mr. R. P. Masani, M.A.

WEST OF INDIA ANGLING ASSOCIATION.—The Association was started in 1912 at Poona, the head-quarters were transferred to Bombay in 1915, and the membership has increased considerably since then. The rights for stocking, preserving and angling in Lake Sydenham at Walwhan, near Lonavla, have been obtained by the Association from the Tata Hydro-Electric Power and Supply Co. and a commencement has been made with stocking the lake with sporting fish which as far as can be ascertained are doing well. Bottom fishing for indigenous fish is only allowed at present but it is hoped that the lake will be open this year for fly fishing and spinning. A journal is published which contains articles on fishing, experiences in the rivers and lakes and on the coasts of India,

the sporting fishes of the country and notes of general interest to Indian anglers.

Entrance fee Rs. 15. Annual subscription Rs. 10. *Patron*, H. E. Lord Willingdon. *President*. E. Comber, *Hon. Secretary*: G. V. E. Wesche-Dart, Bombay Club, and *Hon. Treasurer*: G. B. Adamson, C/o Russo-Asiatic Bank, Bombay.

MEN'S INDIAN ASSOCIATION.—This Association was started in Adyar, Madras, in 1917, with aims of service to women similar to those of the Seva Sadan in Bombay. In four years it has been able to start branches in 48 different towns and it has now 2,000 members. It establishes classes, meeting places, and regular lecture programmes for women in each of these branches. Each branch is autonomous and works according to the need of the locality. Classes are held to teach the vernaculars, English, needle-work—plain and fancy—first-aid, rattan-work and music. Weekly lectures are given on subjects of general interest relating to women such as health, education, religion, civic responsibilities, woman suffrage, etc. Though started entirely as an educational institution, the movement for the Reform Bill proved that a most necessary part of work for the advancement of woman was propaganda in support of woman suffrage. Accordingly the gaining of the vote for women was added to the objects of the Association and the Association specialises on woman suffrage and the removal of sex disqualification from all franchises and candidatureship for local boards, municipal and legislative councils. Valuable work along these lines has been done by the Association as this is the only woman suffrage organisation in India. The Association publishes a monthly magazine, *Stri-Dharma*, in English with Tamil and Telugu articles. (Rs. 4 to non-members, Rs 3 to members). It is an all-India Association. Its largest branch is in Bombay, its greatest number of branches in South India, but yearly more branches are being started in other provinces, and there are flourishing branches as far north as Gwalior and Lashkar. The prospects of rapid growth of the Association are very bright as it has been found that women everywhere welcome the self-development which the establishments of these branches brings.

Objects :—

To present to women their responsibility as daughters of India.

To help them to realise that the future of India lies largely in their hands; for as wives and mothers they have the task of training and guiding and forming the character of the future rulers of India.

To secure for women the vote for Municipal and Legislative Councils as it is or may be granted to men.

To secure for women the right to be elected as members on all Municipal and Legislative Councils.

To band women into groups for the purpose of self-development, education and for the definite service of others.

Headquarters : Adyar, Madras. *President*—Mrs. A. Besant. *Hon. General Secretary*—Mrs. Jinarajadasa. *Joint Secretary*—Mrs. M. E. Cousins, B. Mus.

YOUNG WOMEN'S CHRISTIAN ASSOCIATION OF INDIA, BURMA AND CEYLON.—This was started in India in an organized and National way in 1896. The aim of the Association is to meet the needs of the girls and women who live in India from an Intellectual, Spiritual, Social and Physical standpoint. This is done in many ways in the local Associations that now flourish under the auspices of the National Young Women's Christian Association. The Associations in the big cities have a large membership and include all classes of the community. Clubs, Classes, Lectures, Commercial Courses, Music, Languages, Bible and Mission Study, Social Intercourse, Physical Training, and all kinds of physical recreation are carried on as need arises in these City Associations. Boarding Homes are established in all the principal cities where teachers, nurses, business girls, students, apprentices, etc., can have a comfortable home with good wholesome food and congenial companionship for a sum based on their wages. Travellers' Aid work is done and many travellers, especially in the port cities, find accommodation as they pass through. Employment is also found for women and girls. A useful feature of the Association is the Holiday Homes that are conducted in the hills, where girls from the plains can find inexpensive accommodation and regain health and strength. Some of the homes accommodate as many as forty-five at one time and hundreds benefit during the season. The work of the Association in the large cities is managed by a staff of Y. W. C. A. Secretaries, who are fully trained and equipped to meet the many demands that are made on them. These Secretaries are supplied from America, Britain, Australia, Canada and India.

Many of the Associations are in small up-country stations where a handful of members constitute the Branch, led by some lady in the station who is glad of this opportunity for service. The members of these small stations may be transferred, in the ever-changing life of India, into the larger cities and then they learn in a fuller way what the Association can do to help them in all-round development. In addition to the work of the City Department described above, the student department (which is affiliated to the World's Christian Student Federation) has branches in schools and colleges, while the Vernacular Department is carrying on valuable work in co-operation with Missionary societies in five different languages. The National Headquarters are in Calcutta. The inter-denominational character of the Association is clearly kept in the forefront and ladies of many Christian denominations are on the Committee. The National Committee consists of resident and non-resident members, representative of the City, Student and Vernacular Departments in various sections of the country.

The Patroness of the Association is H. E. Lady Chelmsford, who is also President of the Simla-Delhi Branch. On November 1st, 1920, a Training school for secretaries recruited in India, Burma and Ceylon was opened in Calcutta, with a strong staff (resident and non-resident) of lecturers on the Bible, Christian Doctrine, Economics, Religious Psychology and

Pedagogy, History and current movements in India, Association administration and Hygiene Recreation.

Copies of the annual report and other printed matter can be obtained from the National Office which is at 5, Russell Street, Calcutta. The Official Organ of the Association is "Woman's Outlook in India," an illustrated monthly magazine, which supplies women living in India with a good review at the price of Rs. 2-0-0 post free a year.

YOUNG MEN'S CHRISTIAN ASSOCIATION.—This Association, which was founded by the late Sir George Williams on June 6, 1844, seeks to unite those young men who, regarding Jesus Christ as their God and Saviour according to the Holy Scriptures, desire to be His disciples, in their doctrine and in their life, and to associate their efforts for the extension of His kingdom among young men. The above is known as the "Paris Basis" and it is world-wide. It was adopted at the first World's Convention in Paris in 1855 and re-affirmed at the Jubilee World's Convention in Paris in 1905. The Triennial National Convention of Y. M. C. A.'s of India, Burma and Ceylon adopted this in November 1920. The aim of the Association is through its religious, social, educational, and physical work to answer the fourfold—spiritual, social, mental and physical—needs of young men, and its policy is one of intense loyalty to the Church.

There are, as a rule, two classes of members. Any young man who subscribes personally to the "Paris Basis" may be an active or voting member and any young man of good character may be an associate.

The Young Men's Christian Association though relatively new to India, is spreading rapidly. The local Associations are autonomous and governed by local Boards of Directors. These Associations in convention elect a National Council of European and Indian laymen, who are responsible for the supervision and expansion of all forms of the Association work. Both the National Council and the local Associations employ specially trained full time Secretaries. One hundred and seven out of 172 Secretaries are Indians and are supported from funds raised in India and Ceylon. The remaining Secretaries are supported by the Associations of North America, Australasia, and Great Britain, but their work is directed by committees in India, to whom their services are loaned. The first paid Secretary came to India over thirty years ago, in response to an appeal from Madras. Soon afterwards the National Council was organised, and has become increasingly an indigenous institution.

There are now approximately 250 Associations with 12,000 members. Of these about one-eighth are Europeans and seven-eighths are Indians, of whom over two-thirds are non-Christians. The following Associations own one or more buildings which serve as the local headquarters :—Allahabad, 3 ; Bangalore, 6 ; Alleppey, 1 ; Bombay, 6 ; Calcutta, 6 ; Calicut, 2; Coimbatore, 1 ; Colombo, 1; Galle, 1; Hyderabad, 2; Jubbulpore, 2 Kandy, 1 ; Karachi, 2; Kunnamkulam, 1; Kottayam, 1 ; Lahore, 2; Madras, 4; Maymyo, 1; Nagpur 2 ; Naini Tal, 1; Palamcottah, 1; Poona, 2 ; Rangoon, 4 ; Secunderabad, 1 ; Simla, 1 ; Ootacamund, 1 ; Wellington, 1 ; Delhi, 1 , Dinapore, 1 ; Ferozepore, 1 ; Jaffna, 1 ; Jhansi; 1 ; Madura, 1 ; 1 ; Murree, 3 ; Midnapore, 1 ; Poona, 2 ; Risalpur, 1.

In Addition to buildings owned by the Association, bungalows have been rented to serve as headquarters in the following stations:—Colombo, 4; Hyderabad, 1; Jamalpur, 1; Jubbulpore, 1; Lahore, 2; Lucknow, 1 ; Madras, 1; Multan, 1; Poona, 1; Rangoon, 1 ; Kirkee, 1 ; Matale, 1 ; Maymyo, 1 ; Nowshera, 1.

The Association also has rent-free quarters in stations as follows :—

Bombay, 1 ; Calcutta, 3 ; Darasamand, 1 ; Delhi, 6; Ferozepore, 5; Jhansi, 2; Jullunder, 1; Karachi, 1; Kohat, 4 ; Lahore, 1; Lucknow, 4; Madras, 2 ; Nowshera, 1 ; Secunderabad, 2 ; Trichinopoly, 2 ; Trivandrum, 1.

The departments of the National Council are Student, Rural, Literary, High School, Architectural, Publication, Physical, British Army, Indian Army, Revenue, Publicity, Lecture, Business, Religious Work. The Student Christian Association is an independent movement affiliated to the National Council and has branches in more than two score colleges. The Rural Department is organising village Y. M. C. A.'s and co-operative credit societies and promoting cottage industries in over 200 centres. The Literary Department of which Dr. J. N. Farquhar is Senior Secretary, endeavours to promote a proper and sympathetic understanding of the non-Christian religions and show their relationship to Christianity. At the beginning of the war there were but three Army Associations and five Army Secretaries in the whole of India. Now Association privileges are provided for British and Indian Troops in 37 cantonments under the direction of seventy Secretaries and Assistants. In addition to organising school boys' Y. M. C. A.'s the High School Department arranges for holiday camps for boys and High School teachers. The National Council employs its own architects who plan and construct its buildings, hostels, and playgrounds. The Physical Department specialises on physical education and is promoting the playground movement. A National Training School is established at Bangalore for the training of Indian Secretaries.

The "Association Press" is the Publication Department. A monthly magazine, the YOUNG MEN OF INDIA, is issued, and many books and pamphlets, both on Association subjects and on those of more general interest. Some of the latter, *e.g.*, the Heritage of India Series, have been issued in conjunction with the Oxford Press.

The Headquarters of the National Council is 5, Russell Street, Calcutta. The officers are :—

Patron :—His Excellency Lord Reading, Viceroy and Governor-General of India.

Chairman :—K. Mathan, Esq., (Mysore Civil Service).

Chairman of Executive :—The Hon'ble Mr. Justice W. E. Greaves, Bar.-at-Law.

Treasurer:—H. A. F. Lindsay, Esq., C.B.E., I.C.S., 1, Council House Street, Calcutta.
General Secretaries:—K. T. Paul, and F. V. Slack.

The Bombay Association now possesses four well-equipped buildings:—Wodehouse Road, Lamington Road, Rebsch Street, and Reynolds Road. The President is the Hon'ble Mr. G. Carmichael, C.S.I., I.C.S., and the General Secretary is Mr. Conyers Baker. In connection with each building there is a well managed hostel, one for Anglo-Indian apprentices, one for Indian students, one primarily for European business men, and one for Indians. The Elton Hockey Tournament and the Condor Tennis Tournament are held annually under the auspices of the Bombay Association.

ASSOCIATION OF BRITISH UNIVERSITY WOMEN IN INDIA.

The Association of British University Women in India was established in 1913. Its objects are:—

(1) To facilitate intercommunication and co-operation between women belonging to the universities of the United Kingdom, resident in India.

(2) To provide a means of keeping in touch with the universities of the United Kingdom, by communication with the Federation of University Women, and otherwise as may seem expedient.

(3) To act as an organisation which shall afford opportunity for the expression of united opinion and for concerted action by university women on matters especially affecting them.

Membership is open only to those women who hold degrees in any university in the United Kingdom, or hold Oxford or Cambridge Honours Certificates. But as it was soon felt that a Society to include the many graduate women in India who have graduated elsewhere than in the United Kingdom, was desirable and could do useful work, a kindred association, to include Indian and Colonial graduates, promptly sprang into existence in Bombay. This association is confined to Bombay Presidency and is known as the **Bombay Presidency Women Graduates' Union.**

Joint Secretaries—Miss Rustomjee, 162, Hornby Road, and Miss Natarajan, Pali Hill, Bandra.

The Association of British University Women has four branches. The addresses of the Honorary Secretaries are as follows:—

Hony. General Secretary.—Miss C. Sorabji, 9, Army and Navy Chambers, Calcutta.

Hony. Local Secretaries.

Bombay	..Mrs. McKenzie, Wilson College House.
Calcutta	..Miss Alton, 11, Chowringhee Mansions.
Delhi and Punjab	..Miss Harrison, Queen Mary's College, Lahore.
United Provinces	..Mrs. Daniels, Tehri Kothi, Lucknow.

The Delhi Branch came into existence in 1918. The United Provinces Branch is somewhat scattered. The Calcutta and Bombay Branches are influential, and have repeatedly intervened with good effect to educate public opinion with regard to subjects affecting women. They have, for instance, made investigations on behalf of the Education Department, Government of India, the Calcutta University Commission, etc. They have been the means of introducing women on to University Senates and Municipalities. The Calcutta Branch carried through an important exhibition of Food Products with the double object of discovering:—

(1) What were the exact resources of the country.

(2) How firms and individuals could be induced to develop these resources, to find substitutes for imported goods and to improve existing methods of preparation of indigenous food products.

The most valuable part of the work of the Association has been the establishment of **Women's Employment Bureaux** in Calcutta and Bombay. The work of mobilising women has been difficult in every country, not for want of goodwill on women's part but for want of machinery and organisation. The Association of University Women realised that, as the only body of educated Englishwomen in this country, it was called upon to provide the necessary organisation. Bureaux were formed and were the means of (1) helping many employers to get into touch with the available reserve of women labour; (2) showing trained women where their services were most needed and (3) training inexperienced workers who had nothing but their goodwill to offer. The Bureaux have been remarkably successful. In its last month's working, the Bombay Bureau was able to place as many as 40 per cent. of its fresh applicants, but in June, 1918, it closed down as the National Service Bureau, a department of the War Purposes Board, Government of Bombay, was opened in order to mobilise more successfully the man-power of the Presidency.

As a means of promoting friendships between women from various parts of the United Kingdom, with widely differing tastes and interests and spheres of life in India, and as an instrument for affording opportunities for usefulness to educated women, the Association of University Women has a useful function to perform.

Federation of Indian University Women.—The Federation of Indian University Women was founded in Calcutta in July 1920. The effort was an outcome of the discovery that to find a common factor and co-operate upon that basis, was our best chance of achievement in a world which needed the work of women. The women of Great Britain made this discovery during the war when the British Universities Mission to America helped solve a large political problem, and the International Federation of University

Women has embodied the memory of that discovery in a Federation which aimed at including all the Universities of the world. It is in fact a League of Nations, in which the University is the unit. Most of the countries of Europe, America, Canada, China and Japan belong to this International Body. The Federation of Indian University Women is the Indian unit.

In the International Federation there are opportunities for better understanding and world-friendship, for admittance to the privileges of the International Federation, plans for the foundation of scholarships, for the care of students going to foreign countries, for the exchange of Lectureships, and other privileges as between country and in short the benefit of all attempts made to better the postion of women.

The aims and object of the Indian Federation are (1) To act as an organisation which shall afford opportunity for the expression of united opinion and for concerted action by University Women. (2) To facilitate intercourse and co-operation between University Women and maintain their interest in, and connection with, academic life. 3) To encourage post-graduate study, and to stimulate the interest of women in public life. The annual subscription is Rs. 2.

Membership is open to graduates of Indian Universities only: but a limited number (five in Calcutta) of women of other Universities may be admitted as Associate Members. During the one year of its existence, the Indian Federation has collected over 200 members, and has Branches in Bombay, Calcutta and Orissa. Other Branches are in process of formation.

The aim of the Federation is to have Branches eventually in all Indian University Towns- Members in Districts belonging to the nearest branch

OFFICE-BEARERS FOR 1921-22.

Bombay—	*President*	Miss Mistri, L. M. & S.
	Secretary	Miss Rustomjee, M A, 162, Hornby Road, Fort, Bombay.
Calcutta—	*President*	Mrs. P Chaudhuri.
	Secretary	Miss Chatterjee, 2, Wood Street, Calcutta.
Orissa—	*Secretary*	Miss C. Roy, Ravenshaw Girls' School, Cuttack.

The Church.

In the ordinary acceptance of the term there is no established Church in India. An Ecclesiastical Establishment is maintained for providing religious ministrations, primarily, to British troops, secondarily to the European civil officials of Government and their families. Seven out of the eleven **Anglican Bishops** in India are officers of the Establishment, though their episcopal jurisdiction far transcends the limits of the Ecclesiastical Establishment. The stipends of the three Presidency Bishops are paid entirely by Government, and they hold an official status which is clearly defined. The Bishops of Lahore, Lucknow, Nagpur and Rangoon draw from Government the stipends of Senior Chaplains only but their episcopal rank and territorial titles are officially recognised. The Bishops of Chota Nagpur, Tinnevelly-Madura, Travancore-Cochin, Dornakal and Assam are not on the establishment. The new Bishopric of Assam was created in 1915. In its relations with Government it is subordinate to the see of Calcutta. But the maintenance of the Bishopric is met entirely from voluntary funds.

The **ecclesiastical establishment** includes four denominations—Anglican, Scottish, Roman and Wesleyan. Of these, the first two enjoy a distinctive position, in that the Chaplains of those denominations (and in the case of the first-named the Bishops) are individually appointed by the Secretary of State and rank as gazetted officers of Government. Throughout the Indian Empire there are 134 Anglican and 18 Church of Scotland chaplains whose appointments have been confirmed. The Roman Catholics and Wesleyans receive block-grants from Government for the provision of clergy to minister to troops and others belonging to their respective denominations. The Wesleyan Methodist Church has a staff of military chaplains in India who receive a fixed salary from Government and 25 chaplains working on a capitation basis of payment by Government. Churches of all four denominations may be built, furnished and repaired, wholly or partly at Government expense.

In the Anglican Communion a movement towards **Synodical Government** was making great progress, when, in the course of the year 1914, serious legal difficulties were encountered The Bishops were advised that their relations with Canterbury and the Crown precluded the establishment of synods on the basis adopted by the Anglican Church in America, Japan, South Africa and other countries where it is not established by the State. It is stated that in course of time those relations may be modified so as to admit of the establishment of synodical government in India. Meanwhile Diocesan Councils are being adopted as a make-shift measure. These Councils possess synodical characteristics, but are devoid of any coercive power.

They have been constituted in all the individual dioceses, but the attempt made in 1920 to round off the system by the formation of a Provincial Council failed. Delegates from all the dioceses except Madras were sent to a Provincial Assembly at Calcutta. Madras abstained on the ground that India is too vast a country to be organised as one Province of the Church, and that there ought to be at least two Provinces, a Northern and a Southern. The Assembly, because the absence of Madras delegates caused it to have less than complete Provincial authority, refrained from resolving itself into the First Provincial Council of the Anglican Church in India. There is, however, good reason to hope that the objection of the Madras diocese has been overcome, and that the conciliar system of Church government will be completed by the formation of a Provincial Council early in 1922.

So far as the European and Anglo-Indian communities are concerned the activities of the Church are not confined to public worship and pastoral functions. The **education** of the children of those communities is very largely in the hands of the Christian denominations. There are a few institutions such as the La Martiniere Schools, on a non-denominational basis; but they are exceptional. In all the large centres there exist schools of various grades as well as orphanages, for the education of Europeans and Anglo-Indians under the control of various Christian bodies. The Roman Catholic Church is honourably distinguished by much activity and financial generosity in this respect. Her schools are to be found throughout the length and breadth of the Indian Empire; and they maintain a high standard of efficiency. The Anglican Church comes next, and the American Methodists have established some excellent schools in the larger hill-stations. The Presbyterians are also well-represented in this field, particularly by the admirable institution for destitut children at Kalimpong, near Darjeeling. Schools of all denominations receive liberal grants-in-aid from Government, and are regularly inspected by the Education Departments of the various provinces. Thanks to the free operation of the denominational principle and its frank recognition by Government, there is no "religious difficulty" in the schools of the European and Anglo-Indian communities

Christian Missions.

The tradition that St. Thomas, the Apostle was the first Christian missionary in India is by no means improbable. History, however, carries us no further back than the sixth century, when a community of Christians is known to have existed in Malabar. Since then the so-called **Syrian Church** in south-west India has had a continuous life. Except in its infancy this Church (or rather these Churches for the Syrian Christians are now divided into four communions) has displayed little of the missionary spirit until quite recent times. Western Christianity was first introduced into India by the Portuguese, who established their hierarchy throughout their sphere of influence, Goa being the metropolitical see of the Indies. St. Francis Xavier, a Spaniard by race, took full advantage of the Portuguese power in Western India to carry on his Christian propaganda. His almost super-human zeal was rewarded with much success, but many of the fruits of his labour were lost with

the shrinkage of the Portuguese Empire. It is really to the work of the missionaries of the **Propaganda** in the 17th century that the Papacy owes its large and powerful following in India to-day. The Roman Catholics in India number 1,904,006, of whom 379,251 were added during the decade 1901-1911. The total of "Syrian" Christians (exclusive of those who while using the Syrian liturgy, are of the Roman obedience) is 315,612, as against 248,741 in 1901. Protestant Christians (the term throughout this article includes Anglicans) number 1,636,731, an increase of 486,986 since 1901. Thus, the total number of Christians of all denominations in India is now close on four millions. In fact it probably exceeds that figure at the present moment, as these statistics are taken from the Census Report of 1911, and the rate of increase during the previous decade was nearly 100,000 per annum.

The Protestant Churches made no serious attempt to evangelise India till the beginning of the nineteenth century. They have thus been at work in the Indian mission field for something over 100 years, and the statistical results of their efforts are given above. It is now, however, generally recognised that Christian missions are producing indirect effects in India which lend themselves only incompletely to any sort of tabulation. The main agency of this more diffusive influence of Christianity is the missionary school and college. The **Protestant missions** fill a considerable part in the elementary education of the country. According to the *Year Book of Missions in India*, 1912, they are teaching 446,000 children in 13,204 elementary schools, mostly situated in villages. This represents one-ninth of the total of elementary schools and scholars throughout the Empire. The majority of children in these schools are non-Christians. The same is true also of the high schools and in a still greater degree of the colleges. The former number 283 with 62,600 male and 8,400 female pupils. There are 38 colleges affiliated to Universities, containing 5,488 male and 61 female students. Of these as many as 5,241 are non-Christians. From the standpoint of missionary policy much importance is attached to these agencies for the indirect propagation of the Christian faith. The statesman and the publicist are chiefly interested in the excellent moral effect produced by these institutions amongst the educated classes, and the higher educational ideals maintained by their staffs. The principal **University colleges** under Protestant auspices are the Madras Christian College; the Duff College, Calcutta; the Wilson College, Bombay; and the Foreman College, Lahore. All these are maintained by Presbyterian societies, either British or American. The Roman Catholics have a large number of educational institutions, ranging from small village schools to great colleges preparing students for University degrees. But the proportion of Christian students in their institutions is very much larger than in those of the Protestant bodies. The proportion of literates amongst native Roman Catholics is probably lower than amongst the Protestant converts; but compared with Hindus and Mahomedans it is conspicuously higher. The Roman Catholics have some 3,000 elementary schools in which 98,000 boys and 41,000 girls are receiving instruction. In middle and high schools they have 143,000 boys and 73,000 girls and in University colleges about 5,000 students of both sexes. These figures, however include a large proportion of Europeans and Eurasians, who are an almost negligible quantity in Protestant mission schools and colleges.

More recent, but producing even more widespread results, is the **Philanthropic work** of Christian missions. Before the great famine of 1878, missionaries confined themselves almost exclusively to evangelistic and educational activity. The famine threw crowds of destitute people and orphan children upon their hands. Orphanages and industrial schools became an urgent necessity. But the philanthropic spirit is never satisfied with one kind of organisation or method. A great stimulus was also given to medical missions. **Hospitals and dispensaries** have sprung up in all parts of the mission field; and leper asylums are almost a monopoly of Christian missionary effort. In 1911 the total number of medical missionaries working under Protestant societies in India was 118 men and 217 women, the majority of the former being also ordained ministers of religion. There are 184 industrial institutions in which 59 different arts and crafts are taught, ranging from agriculture to type-writing. In this department the **Salvation Army** hold a prominent place; and the confidence of Government in their methods has been shown by their being officially entrusted with the difficult work of winning over certain criminal tribes to a life of industry. The indirect effect of all this philanthropic activity under missionary auspices has been most marked. It has awakened the social conscience of the non-Christian public, and such movements as "The Servants of India" and the mission to the Depressed Classes are merely the outward and visible sign of a great stirring of the philanthropic spirit far beyond the sphere of Christian missionary operations.

Reunion.—For very many years Indian Christians have shown that they felt much more acutely than Europeans the scandal and disadvantage of the divisions of Christendom. These divisions are due to a very much greater extent than is always recognised to political causes, and in the political conflicts of the sixteenth and seventeenth centuries, when they became crystallised, India had no part. Even those differences amongst Christians which have a purely religious origin and foundation seem to be of very little account to Indian converts. For them the great dividing line is that between Christ and Mahommed or Shiva and Vishnu. Standing before a background of paganism they are conscious of a real fundamental unity in Christ. Compared with the greatness of the gulf which separates Christian from non-Christian, the differences of "confession" and "order" which separate Christian from Christian seem to be wholly artificial and negligible. In consequence the reunion movement, which is noticeable all over the world, is nowhere so strong as in India.

In South India it has already resulted in the formation of the South India United Church, which is a group union of five of the principal Protestant communions, and as these bodies are in communion individually with all, or almost all, the other Protestant bodies at work in India the Union may be regarded as a Pan-Protestant Union. The S.I.U.C. is at present negotiating with the Anglican Church. If as seems probable the negotiations are successful the result will amount to a union of all the Christian bodies in South India, except the Roman Catholics, on the basis of the last Lambeth encyclical This will mean that a real National Indian Church will come into being. Although it will be tolerant of almost every expression of Evangelical opinion and will retain the freedom of development characteristic of Protestantism, by its acceptance of the Catholic creeds and the Historic Episcopate, it will be linked up with the Catholic tradition of the Anglican Church.

Anglican Missionary Societies.

The Church Missionary Society carries on work in India in seven different missions—the United Provinces, South India, Travancore and Cochin, Bengal, Western India, Punjab and Sind and the Central Provinces and Rajputana. The names are in order of seniority. Work was begun in what are now called the United Provinces in 1813, in Bombay in 1820, in the Punjab in 1851, and in the Central Provinces in 1851. The Society has always kept Evangelistic work well to the fore; but it also has important medical missions, especially on the N.-W. Frontier, and many schools of the Primary, Middle and High standards. The Church of England Zenana Missionary Society is an offshoot of the C. M. S. controlling the work of 162 missionary ladies. The number of ordained European missionaries of the C. M. S. in India and Ceylon is 160, European laymen 30 and European laywomen 258. The Society claims a Christian community of 2,21,359 of whom 63,655 are adult communicants.

Society for the propagation of the Gospel. Statistics of the work of this Society are not easily ascertained, as much of it is done through Diocesan institutions, which, while financed and in many cases manned by the S. P. G., are entirely controlled by the Diocesan authorities. The best known of the S. P. G. missions is that at Delhi, commonly called the Cambridge Mission to Delhi, carrying on educational work at St. Stephen's College and School. At the College there are about 200 students under instruction, and at the High School 800. The College hostels accommodate 100 students. Missions to the depressed classes exist in Burma, in the Ahmednagar District and in several parts of South India, especially in the Diocese of Tinnevelly-Madura. There are 1,16,000 Indian Christians under the ægis of the S. P. G.; 90 ordained European missionaries and 98 European lady workers.

Other Anglican Societies.—The Oxford Mission to Calcutta was started in 1880. It works in the poorest parts of Calcutta and also at Barisal. There are 11 mission-priests of this Society, and 16 Sisters. In addition to its work amongst the poor, the Oxford Mission addresses itself to the educated classes in Bengal and issues a periodical called *Epiphany*, which is known all over India.

The Society of St. John the Evangelist (commonly known as the Cowley Fathers) has houses at Bombay and Poona, and small stations in the Bombay Konkan. In Bombay its missionary work centres round the Church of Holy Cross, Umarkhadi, where there is a school and a dispensary. The Christians are chiefly drawn from the very poorest classes of the Bombay population. At Poona the Society co-operates with the Wantage Sisters and in Bombay with the All-Saints' Sisters. Other Anglican sisterhoods represented in India are the Clewer Sisters at Calcutta and the Sisters of the Church (Kilburn) at Madras. The St. Hilda's Deaconesses' Association of Lahore carries on important educational work (chiefly amongst the domiciled community) in the Punjab. The mission of the Scottish Episcopal Church at Nagpur, the Dublin University Mission at Hazaribagh, and the Mission of the Church of England in Canada working at Kangra and Palampur (Punjab) should also be mentioned under the head of Anglican Missions.

Bengal Ecclesiastical Department.

Westcott, The Right Reverend Foss, D.D. ..	.. Lord Bishop of Calcutta and Metropolitan of India.
SENIOR CHAPLAINS.

Irwin, Rev. Ronald J. Beresford, M.A. .. .. Naini Tal, Offg. Archdeacon of Lucknow.

And 15 Junior Chaplains with 7 Additional Clergy.

CHURCH OF SCOTLAND;

Four Senior Chaplains.

THE ROMAN CATHOLIC CHURCH.

With regard to numbers, the *Catholic Directory of India*, 1913, gives the following discrepant tables:—

	Civil Census, 1911.	Ecclesiastical Estimate.
British India { Latin rite	1,430,582	1,535,820
British India { Syriac rite	413,142	364,660
Total, British India and Prot. States	1,843,724	1,900,480
Burma	60,282	88,447
Ceylon	339,300	322,163
Total, India, Burma and Ceylon	2,243,306	2,311,090
French India	....	25,918
Portuguese India	....	296,148
Ecclesiastical Grand Total ..	....	2,663,156*

* After trying to rectify discrepancies the *Directory* fixes as probable the following numbers:—

European and Anglo-Indian Catholics	114,512
Baptised Indian Catholics	2,423,286
Total ..	2,537 798

The Catholic community as thus existing is composed of the following elements:—

(1) The "Syrian" Christians of the Malabar Coast, traditionally said to have been converted by the Apostle St. Thomas. They were brought under allegiance to the Pope by the Portuguese in 1599, and placed first under Jesuit bishops and then under Carmelite Vicars Apostolic. They are at present ruled by four Vicars Apostolic of their own Syriac rite.

(2) Converts of the Portuguese missionaries from 1500 and onwards, starting from Goa and working in the south of the peninsula and up the west coast, Ceylon, Bengal, etc.

(3) European immigrants at all times, including British troops.

(4) Modern converts from Hinduism and Animism in recent mission centres

The Portuguese mission enterprise starting after 1500, continued for about 200 years, after which it began to decline. To meet this decline fresh missionaries were sent out by the Congregation *de propaganda fide*, till by the middle of the 19th century the whole country was divided out among them except such portions as were occupied by the Goa clergy. Hence arose a conflict of jurisdiction in many parts between the Portuguese clergy of the "padroado" or royal patronage, and the propaganda clergy. This conflict was set at rest by the Concordat of 1886. At the same time the whole country was placed under a regular hierarchy, which after subsequent adjustments now stands as follows:—

Of the **Portuguese Jurisdiction**:—

The archbishopric of Goa (having some extension into British territory) with suffragan bishoprics at Cochin, Mylapore and Damaun (all three covering British territory).

Of the **Propaganda Jurisdiction**:—

The archbishopric of Agra with suffragan bishoprics of Allahabad and Rajputana and the Prefecture Apostolic of Bettiah.

The archbishopric of Bombay, with suffragan bishoprics of Poona, Mangalore and Trichinopoly.

The archbishopric of Calcutta, with suffragan bishoprics of Dacca and Krishnagar, and the Prefecture Apostolic of Assam.

The archbishopric of Madras, with suffragan bishoprics of Hyderabad, Vizagapatam and Fagpur.

The archbishopric of Pondicherry (French) with suffragan bishoprics of Mysore, Coimbatore and Kumbakonam.

The archbishopric of Simla with suffragan bishopric of Lahore and the Prefecture Apostolic of Kashmere.

The archbishopric of Colombo (Ceylon) with suffragan bishoprics at Kandy, Galle, Jaffna and Trincomalee.

The archbishopric of Verapoly, with suffragan bishopric of Quilon.

Four Vicariates Apostolic of the Syriac rite for the Syrian Christians of Malabar.

Three Vicariates Apostolic of Burma.

The European clergy engaged in India almost all belong to religious orders, congregations or mission seminaries, and with a few exceptions are either French, Belgian, Dutch; Swiss, Spanish or Italian by nationality. They number about 1,000 besides which there is a body of secular clergy mostly native to the country, numbering about 2,000 and probably about 2,000 nuns. The first work of the clergy is parochial ministration to existing Christians, including railway people and British troops. Second comes education, which is not confined to their own people; their schools being frequented by large numbers of Hindus, Mahomedans, Parsis, etc. Among the most important institutions are St. Xavier's College, Calcutta, St. Peter's College, Agra, St. Xavier's College, Bombay, St. Joseph's College, Trichinopoly, St. Aloysius College, Mangalore, teaching university courses; besides a large number of high schools and elementary schools. The education of girls is supplied for by numerous convent schools worked by religious congregations of nuns to say nothing of orphanages and other charitable institutions. The total number under education amounted in 1904 to 143,051 boys and 73,164 girls, later figures being unavailable. As to missionary work proper, the country is covered with numerous mission centres, among which those in Chota Nagpur, Gujerat, Orissa, the Nizam's Dominions, the Ahmednagar district and the Telugu coasts may be mentioned. (Full particulars on all points will be found in the Catholic Directory already quoted.) The mission work is limited solely by shortage of men and money, which if forthcoming would give the means to an indefinite extension. The resources of the clergy after the ordinary church collections and pay of a few military and railway chaplaincies are derived mainly from Europe, that is, from the collections of *the Society for the Propagation of the Faith* and of *the Holy Childhood*, helped out by private or other donations secured from home by the different local missionaries. In mission work the fathers count as enrolled only those who are baptised and persevering as Christians, and no baptism, except for infants or at point of death, is administered except after careful instruction and probation. This, while keeping down the record, has the advantage of guaranteeing solid results.

The Holy See is represented by a Delegate Apostolic of the East Indies who resides at Bangalore.

THE SCOTTISH CHURCHES.

The Church of Scotland.—The Chaplaincy work of the Church of Scotland dates from 1814, when the Rev. Dr. Bryce landed in Calcutta, and organised a congregation of his Scottish fellow countrymen. The centenary of the churches in the three Presidency towns was celebrated: Calcutta, 1914; Bombay, 1919; Madras, 1921. Since 1903 there have been eighteen chaplains on the staff, of whom nine belong to the Bengal

Presidency, five to Bombay, and four to Madras. These minister both to the Scottish troops and to the civil population of the towns where they are stationed, but when there is a Scottish regiment the chaplain is attached to the regiment, instead of being posted to the station where the regiment happens to be placed and as a rule moves with the regiment. There are three Presidency senior Chaplains in charge of Bengal, Bombay, and Madras respectively. There are churches in the chief towns of the Presidencies, and churches have also been built, in all considerable military stations, *e.g.*, Chakrata, Lucknow, Peshawar, Ranikhet, Rawalpindi, Sialkot, Umballa and Jubbulpore. In addition to the regular establishment there are a number of acting Chaplains sent out by the Colonial Committee of the Church of Scotland, and these are serving in such stations as Rawalpindi, Lahore, Cawnpore, Meerut, Mhow and Quetta. The Additional Clergy Societies in India contribute towards the cost of this additional establishment. In other places such as Sialkot, Murree, Dalhousie, and Darjeeling, regular services are provided by Scottish Missionaries. Simla has a minister of its own sent out from Scotland.

The Mission work of the Church of Scotland dates from 1829, when Alexander Duff, one of the greatest of modern missionaries, was sent to Calcutta. He was the first to open schools where English was made the medium for instruction, and where religious teaching was given daily. Similar educational missions were soon afterwards started in Bombay and Madras. Educational work is still an important branch of the mission work of the Church, but the Bombay College was closed in 1891, and in 1907 the College in Calcutta was united with the College of the United Free Church of Scotland, to form the "Calcutta Christian College." In the Punjab Evangelistic work is being carried on from eight centres under seventeen missionaries. The baptised Christian community now numbers over 14,000. Work commenced in Darjeeling in 1870 is now carried on throughout the whole Eastern Himalayan district, and there is a Christian community there of over 8,000. In the five mission districts of Calcutta, the Eastern Himalayas, Madras, Poona, and the Punjab there were at the end of 1919 over 24,787 baptised Indian Christians. In connection with these missions the Women's Association of Foreign Missions does invaluable service in school, medical and zenana work, having in India 41 European missionaries, 103 teachers, over 50 schools, three hospitals and six dispensaries.

The Church of Scotland has also done much to provide education for European children in India. Together with the United Free Church St. Andrew's Church provides the governing body of the Bombay Scottish High Schools, which have always held a high place among such institutions, and exercises pastoral supervision over the Bombay Scottish Orphanage. In Bangalore there is the St. Andrew's High School, and both in Bangalore and in Madras the local congregation supports a school for poor children. The Ayrcliffe Girls' Boarding and High school is under the care of the Kirk-Session of St. Andrew's Church, Simla The now well known St. Andrew's Colonial Homes at Kalimpong, Bengal, though not directly part of the work of the Church of Scotland, were initiated by and are being locally managed by missionaries of that Church. The homes exist for the benefit of the domiciled European Community, and are doing magnificent work. There are now twenty cottages, and about 600 children in residence. Further information may be found in "Reports of the Schemes of the Church of Scotland," Blackwood & Sons; "The Church of Scotland Year Book" and "The Handbook of the Church of Scotland in India and Ceylon" a new edition of which is being prepared.

The United Free Church of Scotland.—This branch of the Scottish Church has only three purely European congregations in India, two in Calcutta, Wellesley Square, and Howrah and one in Bombay, Wandby Road. In Calcutta the Howrah Church is in the district of the mills, and every effort is made to minister to the Scottish Engineers and other workers in the mills. As noted above members of these congregations co-operate with the Established Church of Scotland in providing education for European children.

The Church carries on Mission work in seven different areas. They are Bengal (Calcutta, Kalna and Chinsura); the Santal Parganas, with five stations; Western India (Bombay, Poona and Alibag); Hyderabad State (Jalna, Bethel and Parbhani); Madras (Madras City, Chingleput, Sriperumbudur and Conjeeveram); the Central Provinces (Nagpur, Bhandara, Wardha, and Amraoti); Rajputana, where the extensive work instituted by the United Presbyterian Church in 1860 is now carried on from eleven centres.

The work falls into three main divisions, evangelistic, medical, and educational. The Christian community has been organised in all the chief centres into congregations which form part of the Indian Presbyterian Church, and this Church is seeking to take an increasing share in the work of evangelism. There are nineteen Mission Hospitals, among which are four excellently equipped and staffed Women's Hospitals, in Madras, Nagpur, Ajmer, and Jaipur. From the days of Duff in Calcutta and Wilson in Bombay the Mission has given a prominent place to education. It has many schools in all parts of its field and it has also made a large contribution to the work of higher education through four Christian Colleges. The Scottish Churches College, Calcutta, is under the joint management of the Church of Scotland and the United Free Church. The Madras Christian College, which owes so much to the work of Dr. William Miller, is now under the direction of a Board representing several Missionary Societies. Wilson College, Bombay, with which the names of Wilson and Dr. Mackichan are specially associated and Hislop College, Nagpur, are under the direct management of the United Free Church.

BAPTIST SOCIETIES.

THE BAPTIST MISSIONARY SOCIETY OF GREAT BRITAIN.—Formed in 1792, largely through the efforts of Dr. Wm. Carey, operates mainly in Bengal, Bihar, the United Provinces, the Punjab, and Ceylon. The Baptist Zenana Mission has recently been united with this Society. The staff of the united Mission numbers 234 missionaries and about 1,000 Indian workers. Connected with the Society are 228 Indian Churches, 300 Day Schools, 22 Middle and High Schools, and 4 Theological Training Colleges. The Church membership at the close of 1920 stood at 15,278 and the Christian Community at 40,664. In the methods of the Society, the chief place is given to Bazaar and Village preaching. Increase in membership during the past ten years, about 60 per cent. and in the community 50 per cent. for the same period. Amongst the non-caste people great progress has been made in recent years, and Churches formed from amongst these peoples are self-supporting.

Special work amongst students is carried on in Calcutta, Dacca, Baukipore, Cuttack and Delhi, where hostels have been erected for the prosecution of this form of work.

EDUCATIONAL WORK.—Ranges from Primary School to Colleges. Serampore College, the only College in India able to bestow a theological degree granted under Royal Charter by His Danish Majesty in 1827, and confirmed by the British Government in the Treaty of purchase of the Settlement of Serampore in 1845, and placed in 1856 by the College Council at the disposal of the Baptist Missionary Society to become a part of its Missionary Educational operations, Arts and Theological. It was affiliated in 1857 to the newly-formed Calcutta University; reorganised in 1910 on the lines of its original foundation with the appointment of a qualified Theological Staff on an Inter-denominational basis for the granting of Theological Degrees to qualified students of all Churches.

As the only College in India granting a Theological Degree a large number of students are now resident in the splendid College Buildings. In Arts, the College prepares for the Calcutta Arts Examinations. *Principal* : Rev. G. Howells, M.A., B.D., B.LITT., PH. D.

A Vernacular Theological Institute, and High School likewise attaches to Serampore. There are institutes also at Delhi and Cuttack, for the training of Indian preachers.

There are 9 or 10 purely English Baptist Churches connected with the Society, but English services are carried on in many of the stations where an European population obtains. Medical work connected with the Society reported 5 Hospitals, 8 Dispensaries, and about 45,000 out-patients for the year 1920. Two large Printing Presses for both English and Vernacular work are conducted at Calcutta and Cuttack. The Secretaries of the Mission are the Rev. Herbert Anderson and the Rev. William Carey, 48, Ripon Street, Calcutta.

The Headquarters of the Mission are at 19, Furnival Street, Holborn, London. The total income for 1920 of the Society amounted to £291,183.

THE CANADIAN BAPTIST MISSION.—Was commenced in 1873, and is located in the Eastern Telugu District to the north of Madras, in the Kistna, Godavari, Vizagapatam, and Ganjam Districts. There are 22 stations and 313 outstations with a staff of 96 missionaries, including 9 qualified physicians, and 725 Indian workers, with Gospel preaching in 1,400 villages. Organised Churches number 76, communicants 12,742 and adherents 20,409 for the past year. Thirteen Churches are entirely self-supporting. In the Educational department are 355 village day schools, with12,326 children, 11 boarding schools, 2 High schools, a Normal Training school, a Theological Seminary providing in all for 900 pupils, and an Industrial school. There are 6 Hospitals and two leper asylums. The Mission publishes a Telugu newspaper. Village Evangelisation is the central feature of the Mission, and stress is laid upon the work amongst women and children. During the last decade membership has increased by 52 per cent., the Christian community by 50 per cent., and scholars by 500 per cent. The Indian Secretary is the Rev. Gordon P. Barss, Tekkali, Ganjam District.

THE AMERICAN BAPTIST TELUGU MISSION.—Was commenced in the year 1836, and covers large parts of Nellore, Guntur, Kistna, and Kurnool Districts, and parts of the Deccan. Its main work is evangelism, but there is large Educational and Medical work in addition. There is an English Church in Madras. A large industrial Yerukala settlement is carried on at Kavali under the charge of one of the missionaries. Organized Telugu Churches, number 176, with 72,178 baptised communicants. There has been a net increase of 1,000 per annum for the past twenty years. There are 108 Missionaries and 2,051 Indian Workers. There is a large Theological Seminary at Ramapatnam for the training of Indian preachers and a Bible School at Vinukonda for training Bible Women. In ordinary educational work 848 primary schools, 26 Boarding Schools, 4 High Schools, 3 Training Schools and 1 Theological Seminary give training to 24,362. In Medical work 6 hospitals report 2,187 in-patients and 19,583 out-patients for the year.

Secretary: A. M. Boggs, Narasaravupet, Guntur District.

AMERICAN BAPTIST FOREIGN MISSION SOCIETY, organized in 1814, has Missions in Burma begun 1814; Assam 1836; Bengal and Orissa 1836; South India 1840. It owes its rise to the celebrated Adoniram Judson. Until 1910 the Society was known as the American Baptist Missionary Union. There are 33 main stations in Burma, 12 in Assam, 10 in Bengal and Orissa, 25 in South India, besides hundreds of outstations. All forms of missionary enterprise come within the scope of the Society.

The missionary staff numbers 418 in all, with an Indian workers' staff of 5,382. Communicants number 171,093. Organized churches number 1,481 of which 981 are self-supporting. Educational work is conducted on a large scale, the total number of schools of all grades being 2,105 with over 65,000 pupils. The Christian College has 74 students in coll-

ege classes. There are nineteen High Schools with 2,813 pupils.

Medical work embraces 13 Hospitals and 35 Dispensaries, in which 78,020 out-patients and 1,832 in-patients were treated last year.

Indian Christians contribute annually more than Rs. 3,03,463 for religious and benevolent work within the Mission.

The great work of the Mission continues to be evangelistic and the training of the native preachers and Bible-women, and extends to many races and languages, the most important of which, in Burma, has been the practical transformation of the Karens, whose language has been reduced to writing by the Mission The work in Assam embraces 9 different languages, and large efforts are made amongst the employers on the tea plantations. The Mission Press at Rangoon is the largest and finest in Burma.

Assam Secretary, Rev. A. J. Tuttle, Gauhati, Assam.

Burma Secretary, Rev. Walter E. Wiatt, 15, Mission Road, Rangoon, Burma.

Bengal and Orissa Secretary, Rev. Harold I. Frost, Balasore, Orissa.

South India (or Telugu) Secretary, Rev. W. J. Longley, Ramapatnam, S. India.

THE TASMANIAN BAPTIST MISSION.—With 3 missionaries, established at Serajgunge, E. Bengal.

Secretary: Rev. T. C. Kelly, Mission House, Serajgunge.

THE AUSTRALIAN BOARD OF BAPTIST FOREIGN MISSIONS.—Embracing the societies representing the Baptist Churches of the States of the Australian Commonwealth. The field of operations is in East Bengal. The staff numbers 38 Australian workers. There are 1,878 communicants and a Christian community of 3,937.

Secretary Field Council: Rev. H. J. Sutton, M. A., Mymensingh.

THE STRICT BAPTIST MISSION.—Has 11 Missionaries, and 95 Indian Workers in Madras, W. and the Salem District. Communicants number 225; organised Churches 4; elementary schools 32, with 1,500 pupils.

Secretary: Rev. E. A. Booth, Kilpauk, Madras, W.

AMERICAN BAPTIST, BENGAL-ORISSA MISSION commenced in 1836. Area of operation: Midnapore district of Lower Bengal and Balasore district of Orissa. Mission staff 38, Indian workers 364. One English Church and 22 Vernacular Churches, Christian Community 5,000: One hospital and two dispensaries. Educational: One Theological and one High School, and 150 Elementary schools, pupils 4,405. One Industrial school for weaving and carpentering, &c The Vernacular Press of this mission printed the first literature in the Santali language.

Secretary: Rev. Harold I. Frost, Balasore, Orissa.

PRESBYTERIAN SOCIETIES.

THE IRISH PRESBYTERIAN CHURCH MISSION.—Operates in Gujerat and Kathiawar with a staff of 33 Missionaries of whom 4 are qualified doctors and an Indian staff of 460 including school teachers. There are 11 Organised Churches, a communicant roll of 1,618, and a Christian community of 6,309. In Medical work there are 3 Hospitals, 5 Dispensaries, with 460 in-patients and 13,543 out-patients. The Mission conducts 2 High schools, 1 Anglo-Vernacular school, and 124 vernacular schools affording tuition for 6,273 pupils, 4 Orphanages, a Divinity College at Ahmedabad, a Teachers' Training College for men, a Teachers' Training College for women, both at Ahmedabad, and a Mission Press at Surat. The Mission has made a speciality of farm colonies, of which there are about a score in connection with it, most of them thriving.

The Jungle Tribes Mission with 5 missionaries is a branch of the activities of the above, working in the Panch Mahals and Rewa Kantha districts, with farm colonies attached.

Secretary: Rev. H. Martin, B.A., Mission House, Anand.

THE UNITED PRESBYTERIAN CHURCH OF NORTH AMERICA. The Sialkot Mission of the above Church was opened at Sialkot, Punjab, in 1855. It is now carrying on work in ten districts of the province. Its missionaries number 91, and its Indian workers 779. Its educational work comprises one Theological Seminary, one College, five High Schools, one Industrial School, eight Middle Schools, and 197 Primary Schools. The total enrolment in all schools was 14,304 in 1920. The Mission is also carrying on Medical work through four hospitals and eight dispensaries. The total Christian Community in connection with the Mission is 58,599.

Secretary: W. H. Merriam, M.A., Gujranwala, Punjab.

THE AMERICAN PRESBYTERIAN MISSION operates in 3 main sections known as the Punjab, North India and Western India Missions. The American Staff numbers 241 and Indian Staff 1,191. There are 31 main stations and 162 out-stations. Organized churches number 75, 19 of which are self-supporting. There are 10,951 communicants and a total baptized community of 35,572. Educational work as follows: 3 Christian Colleges, and an interest in two other Colleges for women; students 1,322; Theological Schools 2, students 43; Training Schools for village workers 2, High Schools 14, pupils 1,113, Industrial Schools 6, Agricultural Demonstration Farms 4, Teachers' Training Departments 7, Medical students at Miraj 38, Elementary Schools 268; Schools of all grades 325; pupils 12,697. Medical Work: Hospitals 6; Dispensaries 19. Sunday Schools 400 with 12,228 pupils. Contributions for Church and Evangelistic work on the part of the Indian Church Rs. 49,907.

The Hospital at Miraj, under the care of Dr. W. J. Wanless and Dr. C E. Vail is well known throughout the whole of S. W. India, and the Forman Christian College at Lahore under the principalship of Rev. E. D. Lucas, D.D.,

is equally well-known and valued in the Punjab. The Ewing Christian College (Dr. C. A. R. Janvier, Principal) has grown rapidly in numbers and influence. Woodstock College for Women at Mussoorie, Principal Rev. E. E. Fife, D.D., is one of the largest and most valuable institutions of this description in Northern India.

Secretary of Council of A.P. Missions in India: Rev. Dr. J. C. R. Ewing, D.D., LL. D., Litt. D., C.I.E, Lahore.

Secretary, Punjab Mission: Rev. Walter J. Clark, M. A., Lahore.

Secretary, North India Mission: Rev. R. C. Smith, M. A., Fatehpur, U. P.

Secretary, Western India Mission. Rev. H K. Wright, B.A., Vengurla.

THE NEW ZEALAND PRESBYTERIAN MISSION.—Commenced as recently as 1910 at Jagadhri, Punjab.

Secretary: Miss M. Salmond, M. A., Jagadhri.

THE CANADIAN PRESBYTERIAN MISSION.—Commenced in 1877, has 14 main Stations in the Indore, Gwalior, Rutlam, Dhar, Ahrajpur, Jaora, Sitamau, Banswara, &c. Native States—The Mission staff numbers 75, Indian workers 288, Organized Churches 13, Communicants (September 30, 1918) 1,160, Baptised non-communicants 2,404, Unbaptised infants and catechumens 193. Total Christian Community 3,859; Educational work comprises Elementary and Middle Schools, High Schools for boys and girls, College, Theological Seminary and Classes. Industrial teaching and work are done in three Girls' Orphanages, in the Women's Industrial Home, and at Rasalpura which last includes the Mission Press and the School for the Blind. The Medical work is large, chiefly among women.

Secretary: Rev. J. Fraser Campbell, D.D., Rutlam C. I.

THE WELSH CALVINISTIC METHODIST MISSION (OR WELSH PRESBYTERIAN MISSION) established in 1840 with a staff of 32 Missionaries, 600 Native workers occupies stations in Assam in the Khassia and Jaintia Hills, the Lushai Hills and at Sylhet and Cachar. The Khassia language has been reduced to writing, the Bible translated, and many books published in that language by the Mission. A large amount of literature has been produced in the Lushai language also. Communicants number 18,114; the total Christian community 58,500; organised Churches 554; self-supporting Churches 35. Elementary schools number 512, scholars 15,000; Boarding schools 3, scholars 820, in addition to 1 Industrial school, 4 Training institutions and 1 Theological Seminary. Two Hospitals and 3 Dispensaries provided for 10,000 patients in 1920.

Secretary: Rev. E. H. Williams, Shillong.

THE ARCOT MISSION of the Reformed Church in America (Dutch), organised in 1853 occupies the Arcot and Chittoor districts in S. India with a staff of 29 Missionaries, and 504 Indian ministers and workers. Churches number 19, Communicants 3,936, total Christian community 11,298; Boarding schools 11, scholars 528; Theological school 1, students 37; High schools 4, scholars 1,219; Training schools 2, students 44; Industrial schools 2, pupils 95; Elementary schools 181, scholars 6,945. Three Hospitals, 7 Dispensaries with staff of 38, provided for 2,217 in-patients and 82,052 out-patients for the past year.

Secretary: Rev. H. J. Scudder, M.A., & B. D., Punganur, S. India.

CONGREGATIONAL SOCIETIES.

THE AMERICAN BOARD OF COMMISSIONERS FOR FOREIGN MISSIONS.—Has two large Missions, the American Marathi Mission, and the Madura Mission. The Marathi Mission includes a large part of the Bombay Presidency, with centres at Bombay, Ahmednagar, Satara and Sholapur, and was commenced in 1813, the first American Mission in India. Its activities are large and varied. The staff at the beginning of 1921 consisted of 45 missionaries and 608 Indian workers operating in 152 outstations exclusive of Bombay City. Organised Churches number 66 with 8,720 communicants, and 6,950 adherents. There is a Leper work at Sholapur. The Educational work embraces 14 training and secondary schools, with 863 pupils and 179 primary schools, with 7,197 pupils, three-fifths of whom are non-Christians. A Theological College at Ahmednagar trains for the Indian Ministry. Zenana work and Industrial work are vigorously carried on, the latter embracing carpentry, lace work and carpet weaving. A school for the blind is conducted on both Educational and Industrial lines 33,000 patients were treated in the Hospitals and Dispensaries of the Mission last year. Special evangelistic work is carried on amongst the tribes known as the Bhils and Mangs. This Mission was the first to translate the Christian scriptures into the Marathi tongue. At Sholapur, a settlement for Criminal Tribes is carried on under the supervision of Government. *Secretary*: Rev. William Hazen, Byculla, Bombay.

THE MADURA MISSION.—In the S. Madras District, commenced in 1834, has a staff of 61 missionaries and 930 Indian workers, operates in the Madura and Ramnad districts and has a communicant roll of 8,712 with 16,386 adherents and 34 organised churches, many of which are entirely self-supporting and self-governing. Schools number 270 with 10,529 pupils. There is a Christian College at Madura, as also Hospitals for men and women; at Pasumalai are a High School, Theological Institution, Industrial School, Teachers' Training School and Printing Press. The Secretary is the Rev. W. W. Wallace, Madura.

The ARCOT MISSION commenced under the American Board was transferred to the Reformed Church of America in 1851.

THE SCANDINAVIAN ALLIANCE MISSION OF NORTH AMERICA—Embraces two Branches, one in Bengal and the other in Khandesh. The total mission staff is represented by 12 missionaries and 20 Indian workers. There are 62 communicants and a Christian community of 158. Ten Elementary Schools provide for 160 pupils.

Secretaries: Rev. J. S. Otteson, Navapur, Khandesh, and Miss H. Abrahamson, Domar, Bengal.

THE SWEDISH ALLIANCE MISSION.—Working among the Bhils in West Khandesh has 25 missionaries and 37 Indian workers. There are 5 congregations with a total membership of 550, of whom 189 are communicants. There are 10 Elementary Schools, and 2 Boarding Schools. The pupils in Aid Schools are 355.

Secretary: Rev. Enok Hedberg, D. Litt. Dhanora. Nandurbar, Khandesh.

THE FREE CHURCH MISSION OF FINLAND – The total Mission Staff is represented by six Missionaries and 14 Native workers. There are about 120 communicants, five Churches and a Christian Community of about 200. There is one middle school and three day schools. Medical work is carried on, also industrial work (weaving).

Acting Secretary: Miss Kronguist, Lachung *via* Gangtok, Sikkim.

THE LONDON MISSIONARY SOCIETY.—Commenced work in India in 1798 and occupies 10 centres in N. India, 12 in S. India and 7 in Travancore. The Mission engages in every form of Missionary activity. The European staff numbers 160, Indian workers 2,123; Organised Churches 520; Communicants 17,456 and Christian Community 115,068. There are 4 Christian Colleges, students 159; 5 Theological Institutions, students 70; 4 Training Institutions, pupils 114; 22 High schools, pupils 4,849; 25 Boarding schools, scholars 1,167; 9 Industrial schools, pupils 116 and 862 Elementary schools with 36,775 scholars. In Medical work Hospitals number 23, Dispensaries 14, qualified doctors 9 (European), 41 Assistants and 3,971 in-patients and 174,898 out-patients for the year.

The main centres of the Mission in N. India are at Calcutta, Benares and Almora. The Bhowanipur Institution at Calcutta is now a Teacher Training College. Evangelistic work is carried on amongst the thousands of pilgrims visiting Benares, and Almora is noted for its Hospital and Leper Asylum. Special efforts are made amongst the Nama Sudras and the aboriginal tribes known as the Majhwars, Cheros and Pankas. The S. India district is divided into the Kanarese, Telugu, Tamil and Malayalam with 12 stations and 472 outstations. At Nagercoil (Travancore) is the Scott Memorial College with 985 students, a Church and congregation said to be the largest in India, and a large Printing Press, the centre of the S. Travancore Tract Society.

N India Secretary: Rev. J. H. Brown, B.A. B.D., Calcutta.

S. India Secretary: Rev. Geo Wilkins, Bangalore City.

ALL-INDIA MISSIONS.

THE CHRISTIAN AND MISSIONARY ALLIANCE—Dates from the year 1893 under the name of the International Missionary Alliance, but a number of its missionaries were at work in Berar Province much earlier. The work is confined to the provinces of Berar, Khandesh and Gujarat. There is a staff of 72 missionaries and 132 Indian workers. The number of Mission stations is 19, with additional outstations. There is a Christian Community of 2,870 people. There are 4 orphanages, 2 for boys and 2 for girls: 3 training schools for Indian workers, and 1 English congregation at Bhusawal. *Chairman, Treasurer* and *Secretary*:—Rev. W. Moyser, Akola, Berar, C. P.

THE CHURCH OF THE BRETHREN (AMERICAN)—Opened work in 1895, and operates in Broach, Surat, and Thana Districts. Its staff numbers 45 including missionaries' wives, and 146 Indian workers. The baptised (immersed) membership stands at 2,382 and adherents number 1,336; education is carried on in 6 Girls' Boarding schools, 8 Boarding schools for boys, and 70 Village Day schools and 22 Village Night schools. Females under instruction number 594, males 2,124, total under instruction 2,718. Of this number 79 are supported in Training Schools or higher institutions of learning. Industrial work is connected with six of the schools, and a Farm Colony is established at Umballa, Rajpipla State.

THE POONA AND INDIAN VILLAGE MISSION—Founded in 1893 and for 28 years directed by Mr. Charles F. Reeve. On his retirement in January 1921, a Board of Control took charge of operations and continue work in the Poona, Satara and Sholapur districts with an European and 38 Indian workers. Indian Christians associated with the work number 64. The main work is evangelistic in the villages, with women's zenana work and schools. Medical work is conducted at Pandharpur and Lonand and a hospital is now in use in Pandharpur. The Headquarters are at Nasrapur, Poona District. *Chairman of the Board*: N. L. Gooden. *Secretary*: J. W. Stothard, Nasrapur.

THE AMERICAN CHURCHES OF GOD MISSION—Has two missionaries at Bogra, Bengal.

THE INDIAN CHRISTIAN MISSION—Founded in 1897, has 31 Organised Churches, 10 Missionaries, 24 stations, 41 out-stations, 1,392 Communicants, 30 Primary schools and two Industrial Schools in the Ellore district, S. India, stations also in Berenag, Kumaon, N. India, and Nuwara Eliya, and Polgabawella, Ceylon. Total Christian Community 5,848. *Director*: A. S. Paynter, Nuwara Eliya, Ceylon.

THE CHURCH OF THE NAZARENE MISSION—Has its headquarters at Buldana, Berar, where it has a boys' boarding school for training Native preachers and a girls' school for training Bible women. This mission has 3 stations in Thana District, namely, Khardi, Vasind and Murbad. There is a total force of 12 missionaries at present in this part of India, also 28 native preachers and Bible Women.

This mission also works at Kishorganj, Mymensingh District with an orphanage and a force of 12 missionaries; also about 15 preachers and Bible women. This totals 24 missionaries and 43 native preachers and Bible women for the Church of the Nazarene in India.

District Superintendent. K. Hawley Jackson, Buldana, Berar.

THE SANARPUR AND LOHAGHAT DISTRICT BIBLE AND MEDICAL MISSION—Was established at Lohaghat, 48 miles from Almora, in 1910. Amongst the faith missions are the Vanguard Mission at Sanjan, Thana District, with 6 Missionaries; and the Church of God Mission with 7 Missionaries at Lahore. The Burning Bush Mission has a staff of 8 Missionaries at Allahabad. The Tehri Border Village Mission is the only Christian enterprise in the Himalayan Native State of that name, its agents are stationed at Landour, and have translated portions of the New Testament into the Tehri-Garhwali language. *Secretary*: Miss A. N. Budden.

THE HEPHZIBAH FAITH MISSIONARY ASSOCIATION-Has six missionaries. *Agent*: D. W. Zook, Adra, B. N. Ry.

THE TIBETAN MISSION—Has 4 Missionaries with headquarters at Darjeeling, and Tibet as its objective. *Secretary*: Miss J. Ferguson, Darjeeling.

THE INDIAN MISSIONARY SOCIETY OF TINNEVELLY (DORNAKAL MISSION)—Opened in 1904 operates in the Warangal District of the Nizam's Dominions. It is the missionary effort of the Tamil Christians of Tinnevelly. There are now 2,884 Christians in 69 villages *Secretary*: Mr. J. Anbudaiyan, B.A., L T., Palamcottah.

THE MISSION TO LEPERS—Founded in 1874, is an inter-denominational and international Society for the establishment and maintenance of Asylums for Lepers and Homes for their untainted children, working in 12 countries but largely in India, China and Japan. Its work in India is carried on through co-operation with 33 Missionary Societies. In India alone the Mission now has 42 Asylums of its own with over 5,000 inmates and is aiding or has some connection with work for lepers at 21 other places in India. Altogether in India 7,165 lepers are being helped. In the Mission's own and aided asylums in India there are nearly 4,000 Christians.

An important feature of the work of the Mission is the segregation of the untainted or healthy children of lepers from their diseased parents. Nearly 600 children are thus segregated and saved from becoming lepers.

Most of the Mission's income is received from voluntary contributions. In 1920 about Rs. 1,06,000 was raised in India, but the bulk of the money expended by the Mission in India, was received from Britain, although the Provincial Governments give regular maintenance grants.

There is an Indian Auxiliary of the Mission to Lepers, of which H. E. Lady Lloyd who represents the Bombay Presidency is a Vice-President.

The General Secretary of the Mission is Mr. W.H.P. Anderson, 33, Henrietta St., Covent Garden, London W. C. The Acting Secretary for India is the Rev. E. Cannon, Purulia, Behar, to whom all contributions and communications may be sent.

THE REGIONS BEYOND MISSIONARY UNION.—An interdenominational Society commenced work at Motihari, Behar, in 1900, and now occupies 4 stations and 7 outstations in the Champaran and Saran Districts, with a staff of 13 Europeans, and 34 Indian workers. There are 21 Elementary schools, with 517 pupils, a Girls' and a Boys' Orphanage and Boarding school, communicants number 50.

THE NATIONAL MISSIONARY SOCIETY OF INDIA—Established 1905, it has a staff of 25 Indian Missionaries and 45 helpers operates in Montgomery Distrit (the Punjab), Nukkar Thasil (U. P.), North Kanara (Bombay), Karjat-Karmala Talukas (Bombay), Omalur (Madras), Bhagalkund Agency (C.I) and Tirupattur (N. Arcot). Christian community over 4,000. Fifteen Elementary schools and one High School. Two Dispensaries and one Hospital. Organ: *The National Missionary Intelligencer* (a monthly journal in English sold at 12 as. per year post free).

General Secretary: Mr. P. O. Phillip, B.A., N.M.S. Office, Vepery, Madras.

Hon. Associate General Secretary: Rev. Dina Nath, B.A., St. Stephen's Church, Delhi.

THE SEVENTH DAY ADVENTISTS.—Established in India in 1895. Work carried on in English, Hindi, Urdu, Punjabi, Bengali, Santali, Tamil, Telugu, Malayalam, Marathi, Gujarati, Burmese and Karen, including schools, dispensaries and evangelical stations and a publishing house. *President*: W. W. Fletcher; *Secretary* and *Treasurer*: A. H. Williams, 17, Abbott Road, Lucknow.

THE AMERICAN MENNONITE MISSION.—Established 1899, works in the C. Provinces. Mission staff numbers 24, Indian workers 80, Church members 1050, 1 Industrial Training Institution, 1 High School, 2 Vernacular Middle Schools, 1 Men's Home, 2 Homes for untainted children of lepers, 1 Bible School, 2 Orphanages, 1 Widows' Home, 1 Leper Asylum; Elementary Schools, 8; Dispensaries, 4.

Secretary: Rev. J. N. Kaufman, Dhamtari, C. P.

THE GENERAL CONFERENCE—MENNONITE MISSION—Started in 1901 in the C. Provinces. Workers number 12; Leper, Medical, Orphan, Zenana, Evangelistic and educational work carried on. *Secretary*: Rev. E. B. Sterner Janjgir, C. P.

THE KURKU AND CENTRAL INDIA HILL MISSION—Established 1890 in the C. P. and Berar, has a mission staff of 14, Indian workers 22; Churches 6, Communicants 105; Christian community 209; 2 Boarding schools with 95 boarders and 5 Elementary schools. *Ag. Secretary*: Rev. A. S. Crowe, Ellichpur, Berar.

THE CEYLON AND INDIA GENERAL MISSION—Established 1893, occupies stations in India in the Coimbatore and Anantapur Districts. Mission staff 31; Indian workers 78; Churches 10, with Communicants 271, and Christian community 750; Orphanages 4; Elementary schools 30; pupils 682.

Secretary: Rev. H. Merriweather. Authizur, *via* Bhavani Coimbatore District.

THE BOYS' CHRISTIAN HOME MISSION—Owes its existence to a period of famine, was commenced in 1889. Mission staff 13, Indian workers 60. There are elementary schools with three orphanages, two boys and one girl, and a Widows' Home, where Industrial training is

given. There are four main stations—At Dhond, in the Poona District and at Bahraich, Orai and Benares in United Provinces. There are also 10 out-stations. *Director*: Rev. Albert Norton, Dhond, Poona District.

Ladies' Societies.

ZENANA BIBLE AND MEDICAL MISSION.—This is an interdenominational society, with headquarters, 33, Surrey Street, London, working among women and girls in seven stations in the Bombay Presidency, 10 in United Provinces, and 4 in the Punjab. There are 89 European Missionary ladies on the staff and 16 Assistant Missionaries, 243 Indian workers, teachers and nurses and 60 Bible women. During 1920 there were 2,198 in-patients in the five hospitals supported by the Society (Nasik, Benares, Jaunpur, Lucknow and Patna), but the Victoria Hospital, Benares, was closed in 1920. There were 23,019 out-patients, 80,657 attendances at the Dispensaries. In their 52 schools were 13,516 pupils, and there is a University Department at Lahore. The evangelistic side of the work is largely done by house to house visitations and teaching the women in Zenanas; 1,596 women were regularly taught and 2,215 houses were visited. The 60 Bible women visited 550 villages; the number of houses was 2,975.

THE LUDHIANA ZENANA AND MEDICAL MISSION removed their headquarters to Lahore 26 years ago. The North India School for Women with Dr. Brown at its head took its place, the name since being changed to that of the Women's Christian Medical College. The Memorial Hospital was opened in 1900 and in 1915 the name was again modified to its present title "The Women's Christian Medical College" with which is incorporated the Punjab Medical School for Women. In 25 years 335 women were trained for Medical Service, 61 Medical Students, 41 certificated Compounders, 53 Graduate Nurses while over 180 have become certificated Midwives and Dais. Plans are now on hand to enlarge both hospital and College considerably.

THE MISSIONARY SETTLEMENT FOR UNIVERSITY WOMEN was founded in Bombay in 1895 to reach the higher class of Indian ladies, its activities now include a hostel for women students, in addition to educational, social, and evangelistic work. *Warden*: Miss Gedge, Rebsch Street, Jacob Circle, P. O., Bombay.

THE MUKTI MISSION, the well-known work of Pandita Ramabai, enables upwards of 850 widows, deserted wives and orphans to earn a comfortable living by means of industrial work organised by the Pandita, supported by a good staff of Indian helpers. A staff of 12 European workers do evangelistic work in the surrounding Kedgaon, Poona District.

Disciple Societies.

The India Mission of the Disciples of Christ (Foreign Christian Missionary Society of Cincinnati, Ohio, and Christian Women's Board of Missions of Indianopolis combined) commenced work in 1882; its area Central and United Provinces; number of Indian Churches 14, and immersed communicants 18,450. The Christian Constituency numbers 2,945. Its staff, including Missionaries' wives, 76; Asst. missionaries 2 and Indian Workers' staff 319. There are 8 Hospitals, 13 Dispensaries, with 109,994 in-patients and out-patients for the past year. Two Orphanages and an Industrial Home show 536 inmates, and one Boarding School for girls and two hostels for boys, 664 inmates. Two leper asylums with 95 inmates. Tubercular Sanatarium at Pindra Road: 44 in-patients during year. In connection with the industrial work a farm of 400 acres has been taken at Damoh, an Industrial School at Damoh which teaches carpentry, needle work industry at Kulpahar which did Rs. 6,200 worth of business last year. Printing work at Jubbulpore 3,000,000 pages of Christian Literature last year. There are 8 Middle schools, 34 Primary schools with 2,917 scholars; 2 Boarding schools, with 300 students. An active zenana work is carried on, and there is a home for women and children.

The Australian branch has three Mission stations in Poona District. The Great Britain and Ireland branch has two mission stations, one in Mirzapur District, U. P., and one in Alamau District, Orissa. These have no organic connection with the India Mission of the Disciples of Christ.

Secretary: Rev. W. B. Alexander, Jubbulpore, C. P.

Undenominational Missions.

THE CENTRAL ASIAN MISSION, with a Church, Dispensary and School is found on the N.-W. Frontier, conducted on the lines of the China Inland Mission, and has Kafristan as its objective.

THE FRIENDS' FOREIGN MISSION ASSOCIATION works in five stations of the Hoshangabad Division of the Central Provinces, and in two of the adjacent Bhopal State, and has also some work going on in that of Gwalior. There are 6 Churches, 21 missionaries, 179 members, Boarding Schools for Boys and Girls, 1 Anglo-Vernacular School, 15 Day Schools, 1 High School, 1 Hospital, and 2 general dispensaries connected with the Mission, in addition to a self-supporting weaving community at Itarsi and a Farm Colony at Makoriya, in Hoshangabad District. *Secretary*: Mr. A. Taylor, Sehore Cantonment, C. I.

THE AMERICAN FRIENDS' MISSION with 5 Missionaries is working at Nowgong. *Secretary*: Miss E. E. Baird, Nowgong, C. I.

THE OLD CHURCH HEBREW MISSION was established in 1858, in Calcutta, and is said to be the only Hebrew Christian Agency in India. *Secretary*: J. W. Pringle, Esq., Calcutta.

THE OPEN BRETHREN—Occupy 46 stations in the U. Provinces, Bengal, S. Mahratta, Godaveri Delta, Kanarese, Tinnevelly, Malabar Coast, Coimbatore and Nilgiri Districts. They hold an annual Conference at Bangalore.

Lutheran Societies.

THE AMERICAN EVANGELICAN LUTHERAN MISSION. General Council, founded in 1844 for the Godaveri and Kistna Districts, has its Headquarters at Rajahmundry. Its staff consists of 24, including Missionaries' wives and Lady Doctors, with 1,692 Indian Workers. The membership is 34,901. There are Boys' and Girls

Central Schools, Mission Press, a well-equipped hospital and Book Depot at Rajahmundry, and a High School at Peddapur and another at Bhimavaram, since November 1918 the two American Lutheran Missions at Guntur and Rajahmundry have been amalgamated, existing as two Conferences now *Chairman*: The Rev. E. Neudoerfer, Bhimavaram

The General Synod Section of the above has its headquarters in Guntur, founded in 1842. Its Christian Community numbers 63,301 with 21,969 communicants, 32 missionaries inclusive of wives and 1,132 Indian workers The following institutions are connected with the Mission: a second grade College, High School for Girls, Hospital for women and children, School for the Blind, Normal Training School, and Industrial School. *Secretary*. The Rev. J. R. Strock, Guntur.

THE EVANGELICAL NATIONAL MISSIONARY SOCIETY OF SWEDEN, founded in 1856, occupies the districts of Betul, Chindwara and Saugor in the Central Provinces. There are 1,619 Church members and 11 Indian Congregations. The staff numbers 26, including women, with an Indian staff of 175. Schools number 41 with 1,455 children. Only two of the schools are Secondary, all the rest are Primary Schools There are small dispensaries at most of the stations. There are three Christian Colonies, 2 Workshops, one of them with an aided Carpentry School, 1 Female Industrial School, 1 Widows' Home, 6 Orphanage and Boarding Schools for Christian children. *Secretary* Rev. P. E. Froberg, Chindwara, C. P.

THE KANARESE EVANGELICAL MISSION with Headquarters at Mangalore, South Kanara, was organised on January 1st 1919 to take over the Mission work done formerly by the Basel German Evangelical Mission in two of her fields, namely, the Districts of South Kanara and South Mahratta. The majority of the missionaries and of the Funds come from Switzerland. Part contributions are received from the late Basel Mission Industrial Department, now under British ownership and management as the "Commonwealth Trust Limited." The Mission has 12 chief stations and 56 outstations with a total missionary staff of 23 and 360 Indian workers. There are 66 organised congregations with a total membership of 11,060, which gave last year Rs. 11,900 for church and mission work. Educational work embraces 66 schools, of which there are 4 High Schools. The students number 6,735.

Medical work is done at Betgeri with a full staff and a hospital and two branch hospitals and dispensaries.

The Mission maintains a Home-Industrial department for women's work, and a large Publishing department at Mangalore with a bookshop and a printing press occupying some 150 hands and doing work in many languages.

Secretary: Rev. W. E. Tomlinson, Mangalore.

THE CHURCH OF SWEDEN MISSION—Was founded in 1874. Operated till 1915 in the Madura, Tanjore, Trichinopoly and Ramnad Districts. Since 1915 the Mission having taken full charge of the former Leipzig Evangelical Lutheran Mission field, works also in the Madras, Chingleput, Coimbatore, Salem and S. Arcot Districts with diaspora congregations in Rangoon, Penang and Colombo. European staff numbers 14, Ordained Indian Ministers 31, Indian workers 112, Organised Churches 42, Baptised Membership 20,945, Schools 281, Pupils 13,134 (10,022 boys, 3,112 girls). Teaching staff 664. *Secretary*: Rev. E. Heuman, Ph.D., D.D., Mayavaram.

THE MISSOURI EVANGELICAL LUTHERAN MISSION—is located in North Arcot, Salem, Tinnevelly and Travancore with a staff of 11 Missionaries. Three Training Institutions, 166 pupils, 68 Elementary schools with 3,049 pupils are connected with the Mission. *Secretary*: Rev. Henry Hamann, Ambur, N. Arcot District.

THE DANISH EVANGELICAL LUTHERAN MISSION.—Established 1863 in South Arcot, working there and in North Arcot, on the Shevaroy Hills and in Madras, has a total staff of 214 Indian and 45 European workers, Communicants 1,050, Christian community 3,000, 1 High School, 2 Boarding Schools, 4 Industrial Schools, Elementary Schools 58, total scholars 3,484.

Chairman: Rev. J. Bittmann, 38, Broadway, Madras.

THE SANTAL MISSION OF THE NORTHERN CHURCHES (formerly known as the India Home Mission to the Santals)—Founded in 1867, works in the Santal Parganas, Goalpara (Assam), Malda and Dinajpur. Work is principally among the Santals. The mission staff numbers 27; Indian workers 480; communicants 4,000; Christian community 23,000; organised churches 36; boarding schools 4; pupils 508; elementary schools 69; pupils 1,035; industrial schools 2; Orphanage 1; children 29. *Secretary*: Rev. P. O. Bodding, Dumka, Santal Parganas.

MISSIONS AND ENEMY TRADING ACT.—In May 1918, the following notice regarding Missions was published in the "Gazette of India":—"The following missions or religious associations are declared companies under Act 2 (the Enemy Trading Act) of 1916:—The Leipzig Evangelical Lutheran Mission, Madras, the Hermansberg Evangelical Lutheran Mission, Madras, the Schleswig-Holstein Evangelical Lutheran Mission, Madras, the Gossner Evangelical Lutheran Mission of the United Provinces and Behar and Orissa, the German Evangelical Lutheran Mission of Ranchi, Bihar and Orissa. The Governor-General in Council notifies that the powers conferred under Section 7 of the said Act shall extend to the property, movable and immovable, of these missions or religious associations."

In June, 1919, the Government of India stated:—"Effect is already being given to the suggestion that enemy missions in India should be taken over by British societies. The properties and undertakings of hostile missions have been vested in the Provisional Custodian of Enemy Property with a view to their transfer to boards of trustees composed partly of non-official members nominated by the National Missionary Council of India with the approval of the Government of India and partly of Government officials, and those Boards of Trustees will in due course transfer the undertakings and properties to a missionary society to be selected by them with the approval of the Governor-General in Council.

Methodist Societies.

The Methodist Episcopal Church began its Indian Mission in 1857, and is now established in all the Provinces of India except Assam and the North West Frontier Province. It has 360,258 baptized Christians under the supervision of 349 foreign missionaries, 466 ordained and 2,117 unordained Indian ministers. The number of baptized Christians increased during the quadrennium 1916-1919 inclusive by 60,833.

The educational work of this Church is extensive. Schools of all grades number 1,819 of which 571 are for girls and young women. The students number 44,084, of which 26,254 are Christians and 10,029 are resident in hostels managed by the Church. Its best known educational institutions are the Isabella Thoburn College at Lucknow (for women), the Lucknow Christian College, the Philander Smith College at Naini Tal (for Europeans and Anglo-Indians), Collins Institute at Calcutta, the Bareilly Theological Seminary, and the Florence B. Nicholson School of Theology at Baroda. The Church maintains one College and ten High Schools for Europeans and Anglo-Indians.

In Burma there are 19 schools with an enrolment of 2,189 pupils. The Anglo-Burmese Boys' School is a large institution. There is a Boarding and Day School for European girls at Rangoon and another in the hill station of Thandaung. Work is carried on in Burma in Chinese, Burmese, Tamil, Telegu, Hindustani and English with organized Churches representing each of those communities.

Sunday Schools number 5,816 with 166,879 students. The young people's society is known as the Epworth League. It has 864 local organizations with 26,123 members.

There are large printing presses at Lucknow and Madras and the publishing of books, papers and tracts is one of the features of the Church's work in India. The Indian Witness, the Kaukab-i-Hind, the Woman's Friend, the Children's Friend, and various Sunday School periodicals are well known publications.

The Centenary of the founding of the Missionary Society occurred in 1919 and has been extensively celebrated in India. A commission with Rev. B. T. Badley of Shahjanpur, U. P., as Executive Secretary has conducted a campaign for extending and strengthening the work of the Church. Special attention has been given to the deepening of the spiritual life, to Non-Christian evangelization, to temperance, to sanitation, to schools and to the financial needs of the Church. A five-year effort is now in progress to achieve certain objectives among which are:—To double the number of Christian children in Methodist Schools, to assist poor converts to obtain freedom from economic oppression, and to raise the sum of Rupees fifty lakhs in India for education, support of pastors and numerous benevolences.

The supreme legislative authority of the Church is the quadrennial General Conference which has hitherto always met in the U. S. A. Delegates from all countries meet in this Conference on equal terms. The Church in India is subject to this General Conference in which however it has large representation. There are four Bishops as follows:—Bishop F. W. Warne, Lucknow; Bishop J. W. Robinson, Bombay; Bishop F. B. Fisher, Calcutta; and Bishop H. Lister Smith, Bangalore.

The American Wesleyan Mission, Sanjan, Thana District and Pardi, Surat District, has seven Missionaries on the field and three more under appointment, two main stations, six outstations, nine Schools, one orphanage and an industrial farm. *Superintendent*: C. B. Harvey, Sanjan, Thana District.

The Reformed Episcopal Church of American (Methodist) at Lalitpur and Lucknow, U. P., has 2 Missionaries, 4 Outstations, 2 Orphanages, and a membership of nearly 100.

THE WESLEYAN METHODIST MISSIONARY SOCIETY commenced work in India in 1817 (Ceylon in 1814). The Mission in India, apart from Ceylon, is organised into 8 District Synods with 2 Provincial Synods. There is a large English work connected with the Society, 20 ministers giving their whole time to Military work and English churches.

The districts occupied include 64 main stations in Bengal, Madras, Mysore, Bombay, Punjab, Central Provinces, Hyderabad (Nizam's Dominions), United Provinces and Burma. The European staff numbers 110 with 65 Indian Ministers and 742 Indian workers; Communicants 15,800, and total Christian community 63,304. There are 4 large numbers of organised Churches many of which are self-supporting.

Educational work comprises 3 Christian Colleges, students, 2,143; 5 Theological Institutions, Students, 238; 10 High Schools, pupils, 4,524; 14 Industrial schools, pupils, 500; 857 Elementary schools, with 27,189 scholars. In Medical work there are 3 hospitals, 6 dispensaries, 1,033 in-patients and 43,227 out-patients. The Society expended over £85,000 on its Indian Missions in 1920.

The Women's Auxiliary carry on an extensive work in the places occupied by the men's society. There are 71 women workers from Britain of whom 9 are qualified doctors. The Indian women workers number 274. There are 109 girls' day schools with 7,786pupils and 31 boarding schools with 1,979 boarders. There are several philanthropic institutions for the rescue and training of women. The women manage 12 hospitals and 3 dispensaries, which had 5,788 in-patients and 70,529 out-patients. The cost of the work to the Women's Auxiliary in 1920 was over £20,000.

The above particulars are those published for 1920.

Vice-Chairman of General Synod: Rev. D. A. Rees, Bangalore.

The Women's Foreign Missionary Society of the M. E. Mission is divided into 6 Conferences and is co-extensive with the main work of the Mission. 110 Lady Missionaries are engaged in Educational, Zenana, and Evangelistic and Medical work. The Secretary for the Bombay Conference is Miss C. H. Lawson, Talegaon-Dabhada, Poona District.

THE FREE METHODIST MISSION of North America—Established at Yeotmal, 1893, operates in Berar with a staff of 18 Missionaries and 26 Indian workers. Organised church 1, 1 Theological school and 6 Elementary schools, and 1 Anglo-Vernacular school with 280 pupils. *Secretary*: Miss H. J. Root, B. A., Wun, Berar.

THE SALVATION ARMY.

For many years the operations of the Salvation Army in India were under the immediate direction of eight Territorial Commanders, in part responsible to Commissioner Booth-Tucker, as Special Commissioner for India, and in part to International Headquarters. The General recently decided to divide the country into three distinct Commands, each under its own Territorial Commissioner and directly responsible to International Headquarters.

Northern India.—Included in this Territory are what were previously known as the Punjab Territory, United Provinces of Agra and Oudh Territory, also Bengal, Bihar and Orissa, and Rangoon.

In addition to the evangelistic work, there are Settlements for Criminal Tribes in the United Provinces (where this important work was first introduced), in the Punjab, Bihar and Orissa, and Bengal. The institutions include Naval and Military Homes, Agricultural, Dairy, and Fruit Farms, Silk-worm Rearing School and Weavery; Day and Boarding Schools, Industrial Homes for Women, Home for Stranded Europeans, Home for Youthful Released Prisoners, Hospital, etc. There is also a Training Garrison for Native Cadets.

Corps, 357; Outposts, 1,125; Officers, 318, of whom 228 are Indian, employees and teachers, 67; Social Institutions, 30.

Territorial Headquarters: S. A., Ferozepur Road, Lahore, Punjab.

Territorial Commander: Commissioner Jai Singh (Bullard).

Chief Secretary: Colonel Hira Singh (Hoc).

Western India.—The three Territories of Bombay, Guzerat, and Maratha now form the Territory of Western India.

Besides the distinctly evangelistic operations, there are established a large General Hospital—Thomas Emery Memorial—several Dispensaries, at which during the year about 20,000 patients are treated, over 240 Day and Boarding Schools, also a Boarding School and Hostel for Blnd Children, a Home for Juvenile Criminals, an Industrial Home for Women, a British Soldiers' and Sailors' Furlough Home, Weaving and Silk Schools; a Factory for Weaving, Warping, and Reeling Machines, and a Land Colony having a population of some hundreds of Salvationists. There is a Central Training Garrison at Bombay for English-speaking Cadets in addition to Vernacular Training Garrisons.

Corps, 289; Outposts, 528; Officers, 634, of whom 589 are Indian; employees and teachers, 123; Social Institutions, 15.

Territorial Headquarters: S. A., Sankli Street, Byculla, Bombay.

Territorial Commander: Colonel Horskins.

Chief Secretary: Colonel Jaya Veera (Ewens).

Southern India and Ceylon.—The newly-formed Territory comprises what until the end of 1919 were the three Territories, Madras and Telugu, South India (Travancore), and Ceylon. One of the earliest fields in India was the State of Travancore. Here whole communities have become Salvationists. In the villages around Nagercoil some hundreds of women have been taught lace-making and needlework. At Bangalore, what is generally acknowledged as the premier Silk School in India is established. Scores of Silk and Weaving Masters have been trained there, and due regard is paid to the spiritual welfare of the students. A Home of Rest for Sick Officers is situated in the Nilgiri Mountains. The Catherine Booth Hospital in Travancore, under the skilful direction of Brigadier (Dr.) Turner, has been the centre of the Medical Work in that part of India where Students and Nurses are trained, and where thousands of patients receive attention every year. There are other branch Hospitals and Dispensaries in Madras.

In **Ceylon** the Salvation Army has what is probably the first Beggars' Home in the East. An ordinance was passed and the Salvation Army requested to take charge of the beggars in Colombo. The work of the Home has been most successful. Men permanently incapable find a harbour where they may spend their days in peace, while the curable are medically treated and returned to the ranks of labour. Another special feature in Ceylon is the large proportion of Women-Officers, accounted for by the fact that, unlike their sisters in India, it is not thought strange if Singhalese women remain unmarried. Men's and Women's Training Garrisons regularly receive their quota of Native Cadets.

Corps, 419; Outposts, 636; Officers, 1,058, of whom 962 are natives of India or Ceylon; employees and teachers, 339; Social Institutions 25.

Territorial Headquarters S.A., The Broadway, Madras.

Acting Territorial Commander: Colonel Himmat Singh (Rauch).

A new command to be known as the Eastern Territory is now being formed with headquarters at Calcutta.

ROYAL ARMY TEMPERANCE ASSOCIATION.

In 1862 there was started among the British troops in Agra a small Society, under the leadership of Rev. G. Gregson, Baptist minister, which after a short time took the name of the Soldiers' Total Abstinence Society.

For some ten years the Society struggled with varying success, spreading to other Garrison stations, but at the end of that time, though it had obtained recognition from the Horse Guards, and was the first Society whose Pledge was so recognised, the membership was not more than 1,200. In the year 1873, however, through the influence of the then Commander-in-Chief, the work was placed on a firmer footing, the Rev. Gelson Gregson gave up his whole time to it, and by accompanying the troops through the Afghan War, making an extended tour through Egypt,

and bringing the work into close touch with troops, both during peace and war, in the year 1886, when he left the Society, it numbered about 11,000 members. He was followed by a Madras Chaplain, who after two years gave place to the Rev. J. H. Bateson. In 1886, the late Lord Roberts, Commander-in-Chief, organised his Scheme for Regimental Institutes, which have had a wonderful effect on the life of British soldiers in the East; and the Total Abstinence Society was so far incorporated into the scheme as to be allowed ample accommodation, and many practical benefits, in every Unit. At the same time the name was changed to that of the Army Temperance Association, and the work of various societies thus linked together, under one organisation. The effect has been more than even the inaugurator himself ever hoped for. The membership rose steadily from that date and still increases.

Growth of the Society.—In 1889 there were 12,140 members; in 1899, 20,688; in 1909, 30,220, while in 1913-14, the total was 35,000, or over 45 per cent. of the total garrison in India. In 1908, the Secretary having retired after 20 years' work, the Rev. H. C. Martin, M.A., a Chaplain in Bengal, was selected by H. E. Lord Kitchener, to the post of Secretary. Twenty years ago, the Association, which has now for some years been the Royal Army Temperance Association, with the Patronage of King Edward VII, and later of the King Emperor, George V., organised a similar Society in Great Britain, with headquarters in London, from which the troops in South Africa, the Mediterranean, etc., are controlled, so that the whole British Army receives the attention of the Association.

Varied Activities.—What primarily has been the effort of the Association, namely, the decrease of Intemperance, and promotion of sobriety among soldiers has gradually grown into work of every kind, in the interests of soldiers; promotion of sport, occupation of spare time, assistance towards employment in Civil Life, advice and information on the subject of Emigration, provision of Furlough Homes, all tend to enlist the support of officers and men in the Association, and add to its value to them, and to the efficiency of its work, generally. The wonderful change that in late years has taken place in the character of the British Army, in India especially, is due to various causes, including the increased interest in games and sports the spread of education, the different class of men enlisted, and so on, but the R. A. T. A. has always been given its due share among other causes, by all authorities and Blue Books, and particularly by Officers Commanding Divisions, Brigades and Units. These changes in conduct are seen most plainly in the increased good health of the Army in India.

Effect in the Army.—In the year 1889, 1,174 British soldiers died in India, and 1,800 were invalided unfit for further duty; in 1910, only 330 died, and 484 were invalided In 1889, 688 underwent treatment for Delirium tremens, in 1910, only 37. In conduct the same difference is to be found; as late as 1901 as many as 545 Courts Martial were held on men for offences due to excessive drinking; in 1906 only 217. In 1904, 2,231 good conduct medals were issued; in 1910, there were 4,581. In regard to the character of the men themselves, who become members of the Association, during their service, we find that in 1912, 59 per cent. on transfer from the Colours obtained Exemplary characters, and 93 per cent. either Exemplary or Very Good; the remainder were for the most part men who, after some years of heavy drinking, had towards the end of their service been persuaded to try and reform themselves, but not soon enough to avoid the consequences of previous excess.

Organisation.—The War has necessarily brought increased work upon this society, the results of which were very quickly apparent Capacious reception sheds fitted up in the Docks at Bombay and Karachi, proved of the greatest value to troops moving from India, and to the large number coming in: special arrangements aided by a loan from the Government of India, enabled the R. A. T. A. to organise branches in every Territorial unit immediately on arrival, special attention being paid to small detachments and to the Hill stations. In consequence there were, within a month of the completion of the Garrison, over 70 Territorial Branches, containing nearly 50 per cent. of the new arrivals, and this has increased consistently ever since. During the war in addition to covering all troops from Aden to Singapore, the R. A. T. A. was the only Society working in Mesopotamia. Institutes were opened and the cordial good will of the authorities enabled the R. A. T. A. to provide many amenities to the very trying experiences of that Force. The men relieved, and sent back to India for periodic rest, in addition, received a warm welcome and entertainment at the hands of the Association. The following is the organisation of the Council and management:—

Patron: His Majesty the King Emperor.

President: His Excellency the Commander-in-Chief.

Council

The General Officers, Heads of Departments, Army Headquarters.

The General Officers Commanding Division.

Two Officers Commanding Regiments.

Officers of the R. A. M. C. and I. M. S.

Two Regimental Quartermasters.

Representatives of the various Churches.

Executive Committee.

Major-General P. A. Bainbridge, C.B., C.M.G. President.

Lt.-Col. F. G. Moore.

Lt.-Col. R. Johnston, D. S. O.

General Secretary: Miss V. T. Blanchfield.

Auditor: Nelson, Dignasse & Co.

Bankers: Imperial Bank of India, Ltd. and Alliance Bank of Simla.

Head Office: Talbot House, Simla.

THE TEMPERANCE MOVEMENT.

(By the Rev. Herbert Anderson, Honorary Secretary, Calcutta Temperance Federation.)

The Temperance Movement in India has become, somewhat suddenly, a living political issue. Under the fostering care of the Imperial Government Excise administration had reached the position of being the most satisfactory department for the raising of provincial revenues. From the latest returns submitted to the House of Commons in May 1921, the percentage of Excise revenue collected, to total revenue collected in each Province in 1919-20, was given as follows:—

Province.	Per cent.
Assam	30·0
Central Provinces and Berar ..	26·0
Madras	25·3
Bihar and Orissa	25·6
United Provinces	12·4
Punjab	11·1
Bombay and Sind	11·9
Burma	8·4
Bengal	5·2 *

During the ten years ending 1918-1919 † the net receipts from Excise duties increased from Rs. 9,18,30,000 to Rs 16,37,33,000, the increase being at the rate of 78 per cent. The receipts from opium (consumed in India, not exported) rose from Rs. 1,48,72,000 to Rs. 2,42,25,000 being at the rate of 63 per cent. The net profits from drugs other than opium rose from Rs. 7,69,58,000 to Rs. 13,95,08,000, the increase being at the rate of 81 per cent Consumption as represented by taxation works out to 10 annas and 11 pies per head of the population in British India as against 6 annas 9 pies ten years ago. Under the Constitutional reforms this whole department is transferred to the representatives of the people, and in each Provincial Legislative Council excise administration has become a subject of keen debate. Indian sentiment is on the side of Temperance reform, and action more or less drastic is proposed by all those Councils that have already dealt with the subject.

The Government Policy in its Excise Administration, and the criticism of the Temperance workers are well known. Government permits and controls all manufacture of spirits and other liquors and the preparation of all drugs made in India. It controls all imports of the same commodities. It raises revenue by charging a duty on all intoxicating drugs and drinks and by collecting a licensing fee from every person permitted to engage in the sale of them. It keeps in touch with the demand everywhere of the moderate drinker and drug taker, and while supplying their needs seeks to obtain a maximum revenue from a minimum consumption. The chief matters with which the Excise officials have to deal are the duty and vend fees, the location of shops and hours of sale, the alcoholic strength of drinks and excise crimes.

* This is an error. The Bengal percentage is over 20 per cent.

† Quoted from Statistics of British India. Vol. II, Financial Statistics, 1920.

The Temperance movement aims to make India free from the evils associated with the drink and drug habit. It believes that the leaders of Indian thought and life are right in regarding prohibition as the only remedy. It realises that difficulties, social and financial, make the policy impracticable without some period of educational influence during which a consistent policy of the gradual restriction of consumption should take place. Recent years have shown that public opinion as expressed by Conferences, religious, social and political, is growingly demanding the limitation, with the ultimate abolition of the present system of Excise.

Temperance reformers were surprised at the British Government giving India control over Excise. It was an unexpected answer to thirty years of agitation, appealing for some form of local option. The action was a vindication of the Government of India's claim that the motive of its Excise policy has not been revenue, but aimed at making due provision for the needs of those who desire to take alcohol in moderation, minimizing temptation to those who drink, and discouraging excess among those who do. It also substantiated the democratic character of the political changes introduced under the Montagu-Chelmsford reforms—accepting the principle that in future the policy of Government in all Excise matters must be shaped to accord with the views of the majority of the people.

Organisation.—The Temperance movement, as an organisation in India, was founded thirty-three years ago. The late Mr. W. S. Caine visited India, got into touch with the few and scattered temperance societies then existing, established others, and founded, in 1888, the Anglo-Indian Temperance Association with head-quarters in London. Its last Annual Meeting was held on May 24, 1921. It re-elected as its President Lord Clwyd, who for more than 25 years as Sir Herbert Roberts, M.P., brought influence to bear upon the Indian Government by means of Parliamentary action in the House of Commons. The General Secretary of the Association and Editor of the quarterly magazine "Abkari", is Mr. F. Grubb of "Arkbrook", Home Park Road, Wimbledon, London. He visited India some years ago and has kept the Home Association in touch with the 220 branches of the association in India. Among the active members of the Association Council are the Right Hon'ble J. Herbert Lewis, the Right Hon'ble Lief Jones, Mr. Charles Roberts, Major-General Sir George J. H. Ewatt, K.C.B. Mr. A. Yussif Ali, C.B.E., and Mr. J. M. Parikh.

In India the organisation of Temperance Societies is not strong or efficiently developed. First of all there is affiliation to the Anglo-Indian Temperance Association, above referred to. In cities like Bombay, Calcutta, Lucknow, Madras and Rangoon, Federations and Unions of all Societies have been formed. The number of Societies are in Bombay 24, Calcutta 32, Madras 5, Rangoon 4. These

represent I.O.G.T. Lodges, and the Tenets of the Order of Rechabites, Societies connected with various Samajes, Churches and Missions, the W.C.T.U., Bands of Hope, and other Temperance Organisations. In addition to the City Federations there are Societies at work in about 120 other cities and towns, the most active being in Allahabad, Rangoon, Simla, Darjeeling, Bangalore, Benares, Chicacole, Amritsar, Poona, Ahmedabad, Hoshangabad and Gujranwalla. The **method of propaganda** are similar to those adopted in the West. There are organising lecturers, of whom the most successful during the last year or two has been Miss Mary J. Campbell of the Women's Christian Temperance Union. She has been successful in forming many new Societies, and of enrolling many individual adherents. Indian lecturers whose salaries are aided by the Anglo-Indian Temperance Association, work in Calcutta and one or two other cities, and there is a large number of voluntary workers who by speaking at public meetings, circulating literature in the vernacular and in English, and getting up dramatic entertainments and recitation contests, push Temperance progress in various parts of the country.

The second bond of union for all Temperance Societies in India is the **All India Temperence Conference** which grew out of the Anglo-Indian Temperance Association in 1903. For nearly twenty years it has met annually at the same time and place as the Indian National Congress, but has never had any official connection with it. Delegates are appointed from the various Societies to attend the Conference at which a review of the year's progress is made, and resolutions passed on matters of policy and propaganda. Owing to the split in the Congress Camp no meeting was held in December 1920. Preparations are being made for a meeting at Benares this year. The Hon'ble Pandit Madan Mohan Malaviya is President and Lala Nand Lal of the Amritsar Temperance Society is Secretary, and there is a Council of twenty members representing the Societies of various Provincial areas.

The **attitude of the new Councils** has been favourable to Temperance views. In the Punjab Council by a majority of 39 to 13, on the motion of Mr. K. L. Rallia Ram, it has been decided to apply the principle of local option to the sale of intoxicating liquors, the authority being exercised by Municipalities and District Boards. In the United Provinces Council a strong Committee was appointed to make recommendations. It has suggested such drastic changes as the substitution of a fixed fee system for the auction system of vend, the creation of Licensing Boards in several cities, reduction in the alcoholic strength of country liquor. Mr C. Y. Chintamani, the Minister responsible for the department, intends, he has said, to lose no time in giving effect to the recommendations. In Madras, the Dewan Bahadur M. Ramchandra Rao has introduced a local option bill modelled on the Scottish Temperance Act. Public meetings have been held to support the suggestion. In Bengal the Council is to be asked to appoint a committee to consider and amend the Excise Act with a view to introduce immediate restrictions in the traffic both of liquor and drugs. In Bihar and Orissa the Council would not accept the resolutions moving for the complete suppression of manufacture and sale within a year, but the Local Government, through its Commissioner of Excise, has stated that its policy is directed towards temperance. In other Provincial areas the subject is arousing public interest and the new Legislative Councils may be said generally to be animated by a desire to promote sobriety. The leaders of Indian thought appear to be heading for prohibition, if once the financial difficulties on taxation can be met.

Mr. Ghandhi's Campaign—The outstanding event of the Temperance Movement of 1921 has been Mr. Gandhi's attack on the liquor traffic in general, and on Excise revenue in particular. He claims it is a necessary part of his propaganda of self-purification. He calls the traffic one of the eight injustices the British Empire has done to India. He has interviewed vendors and has urged them to give up for ever the sale of drink. He has permitted his followers to adopt the policy of picketing drink shops in certain parts of the country with disastrous results. There seems little doubt that the object of the non-co-operation movement is not a genuine temperance movement, but an attempt to embarrass the existing Government by suddenly restricting its revenue. Should it succeed, those deprived of liquor against their will, will seek it illicitly, and as illicit liquor can be manufactured for about one-tenth of the price charged under Government control, consumption and drunkenness will be likely to increase. With such facilities as India possesses for illicit distillation, the preventative staff necessary would be large and expensive, and as incidents in the controversy so far have clearly shown, the breaking of Excise laws breeds a spirit of lawlessness and offences against persons and property inevitably follow. Temperance leaders have in the past sought to disassociate themselves from the political aspects of Mr. Gandhi's propaganda. Their methods of agitation have been peaceful and constitutional and will remain so. Any genuine movement—spontaneous or otherwise—among the masses in any part of the country for the promotion of complete abstinence from alcoholic liquors will be welcomed and assisted by those who sympathise with the Temperance Movement. But any resort to unconstitutional or violent action will hinder and not help the Temperance cause.

Warrant of Precedence.

(Corrected to the 1st April 1921.)

VICTORIA, by the Grace of God of the United Kingdom of Great Britain and Ireland Queen, Defender of the Faith, Empress of India,—

To all to whom these Presents shall come:

WHEREAS it hath been represented unto Us that it is advisable that the rank and precedence of persons holding appointments in the East Indies as regulated by Our Royal Warrant, dated the 18th day of October 1876, should be altered, We do therefore hereby declare that it is Our will and pleasure that in lieu of the table laid down in Our said recited Warrant, the following table be henceforth observed with respect to the rank and precedence of the persons hereinafter named, *viz.*:—

1. Governor-General and Viceroy of India.
2. Governors of Madras and Bombay.
3. President of the Council of the Governor-General.
4. The Governors of the United Provinces, the Punjab, Bihar and Orissa, the Central Provinces and Assam, when in their own territories. Lieutenant-Governor when in his own territories.
5. Commander-in-Chief in India.
6. The Governors of the United Provinces, the Punjab and Bihar and Orissa, when outside their own territories. Lieutenant-Governor when in his own territory, the Governors of the Central Provinces and Assam when outside their own territories.
7. Chief Justice of Bengal
8. Bishop of Calcutta, Metropolitan of India
9. Ordinary Members of the Council of the Governor-General.
10. Commander-in-Chief of His Majesty's Naval Forces in the East Indies. The Presidents of the Council of State and of the Legislative Assembly.
11. Chief Justice of a High Court other than that of Bengal.
12. Bishops of Madras and Bombay.
13. Ordinary Members of Council, in Madras, Bombay and Bengal. Members of Governor's Executive Councils and Ministers within their respective charges. Ministers of the Governors of Madras, Bombay and Bengal when outside their respective charges.
14. General Officers Commanding the Northern and Southern Armies. The Chief of the General Staff; Members of the Executive Councils and Ministers, United Provinces, the Punjab and Bihar and Orissa, when outside their respective charges.
15. Chief Commissioners of the Central Provinces and Assam, Residents at Hyderabad and in Mysore; Agents to the Governor-General in Rajputana, Central India, and Baluchistan. Executive Members of the Council of the Lieutenant-Governor of Bihar and Orissa; Agent to the Governor-General and Chief Commissioner, N. W. F. Province; Members of the Executive Council and Ministers of the Central Provinces and Assam when outside their respective charges; the Vice-President of each Executive Council appointed under Section 48 of the Government of India Act, Presidents of the Legislative Councils when within their respective Provinces.
16. Puisne Judges of a High Court.
17. Chief Judge of a Chief Court.
18. Military Officers above the rank of Major-General.
19. Comptroller and Auditor-General.
20. Additional Members of the Council of the Governor-General for making Laws and Regulations and the Chairman of the Railway Board; the President of the Indian Railway Committee, Mr. Ackworth, and Sir H Burt and Sir A Anderson Members of the Committee to take rank with but immediately after the President.
21. Bishops of Lahore, Rangoon and Lucknow.
22. Secretaries to the Government of India and Joint Secretary to the Government of India in the P. W. D.; the Members of the Railway Board and Joint Secretaries to the Government of India; the Secretary and Members of the Indian Railway Committee.
23. Commissioner in Sind.
24. Judges of a Chief Court, Recorder of Rangoon and Judicial Commissioners, Burma.
25. Chief Secretaries to the Governments of Madras and Bombay.
26. Majors-General, Members of a Board of Revenue, Commissioners of Revenue Customs, Bombay; and Financial Commissioners, Punjab and Burma; Inspector-General of Irrigation; Director-General, Indian Medical Service; the Director of Development, Bombay.
27. Judicial Commissioners, including Additional Judicial Commissioners of Oudh, the Central Provinces and Sind; the Financial Commissioner, Central Provinces.
28. Additional Members of the Councils of the Governors of Madras and Bombay for making Laws and Regulations, and Members of the Legislative Council of a Lieutenant-Governor.
29. Vice-Chancellors of Indian Universities.

FIRST CLASS.

30. Members of the Indian Civil Service of 30 years' standing.
31. Advocates-General, Calcutta, Madras and Bombay.
32. Commissioners of Divisions, the Superintendent of Port Blair, and Residents, Political Agents, and Superintendents drawing Rs. 2,000 a month and upwards (not being Collectors or Deputy Commissioners of British Districts) within their respective charge; the Revenue and Judicial Commissioner in Baluchistan within British Baluchistan and the Agency territories.
33. Chief Secretaries to Local Governments other than those of Madras and Bombay.

34. Surveyor-General of India, Directors-General of the Post Office, of Telegraphs in India and of Railways, Chief Engineers, first class, Accountant-General, Military and Public Works Departments; Director, Royal Indian Marine, and Manager, North-Western Railway, and Directors of Railway Construction and Railway Traffic.

35. Bishops (not territorial) under license from the Crown.

36. Archdeacons of Calcutta, Madras and Bombay.

37. Brigadiers-General; Consuls-General.

38. Commissioners of Divisions; Revenue and Judicial Commissioner in Baluchistan, when in Kalat or Las Bela or elsewhere outside the limits of his charge.

39. Commissioner of Northern India, Salt Revenue, and Opium Agents, Benares and Bihar and Director, Criminal Intelligence.

40. Secretaries and Joint Secretaries to Local Governments, the Private Secretary to the Viceroy, Members of the Council of a Chief Commissioner.

SECOND CLASS.

41. Members of the Indian Civil Service of 23 years' standing, Colonels and Consuls.

42. Military Secretary to the Viceroy.

43. Judicial Commissioners of the Hyderabad Assigned Districts and Baluchistan; the Superintendent of Port Blair; Residents, Political Agents, and Superintendents drawing Rs. 2,000 a month and upwards (not being Collectors or Deputy Commissioners of British Districts).

44. Inspector-General of Forests in India; Director of the Geological Survey; Director-General of Education in India; the Sanitary Commissioner with the Government of India.

45. Standing Counsel to the Government of India.

46. Directors of Public Instruction, and Inspectors-General of Police and Prisons under Local Governments, Accountants-General and the Director of the Indian Institute of Science.

47. Survey Commissioner and Director of Land Records and Agriculture, Bombay; Commissioners of Settlements, Controllers of Military Accounts; Military Deputy Auditors-General and Senior Controller of Military Supply Accounts.

48. Chief or Senior Civil Secretary to a Local Administration.

49. Chief Engineers, second and third classes; Deputy Surveyor-General; Deputy Director-General of Telegraphs in India, and Director-in-Chief, Indo-European Telegraph Department, and Secretary to the Railway Board.

50. Divisional and District and Sessions Judges, Collectors and Magistrates of Districts; Deputy Commissioners of Districts; Deputy Superintendent of Port Blair; the Chief Officer of each Presidency Municipality within their respective charges; Officers in charge of the Zhob, Quetta-Pishin and Thal-Chotiali Districts throughout their respective charges, whether British or Agency territory; Judicial Commissioner, Chota Nagpur; Chairmen of the Boards of Trustees for the improvement of the cities of Bombay and Calcutta and President, Rangoon Municipal Committee, within their respective charges.

51. Archdeacons of Lahore, Lucknow, Rangoon and Nagpur.

52. Deputy Secretaries to the Government of India and Director-General of Commercial Intelligence.

53. The Senior Chaplains of the Church of Scotland in Bengal, Madras, and Bombay.

54. Remembrancers of Legal Affairs and Government Advocates under Local Governments; President, Forest Research Institute and College, Dehra Dun, Chief Conservators of Forests.

55. Officers in the First Class Graded List of Civil Offices not reserved for Members of the Indian Civil Service. The Deputy Military Accountant-General and the Junior Controller of Military Supply Accounts.

THIRD CLASS.

56. Members of the Indian Civil Service of 18 years' standing and Lieutenant-Colonels.

57. The Deputy Director, Royal Indian Marine.

58. The Assistant Director, Royal Indian Marine.

59. Commanders and Inspectors of Machinery, Royal Indian Marine.

60. Political Agents and Superintendents drawing less than Rs. 2,000 a month (not being Collectors or Deputy Commissioners of British Districts), District Judges in Lower Burma and Judge of the Small Causes Court, Rangoon, within their respective charges; and Political Agent in Kalat.

61. Secretaries to Local Administrations other than those already specified. The First Assistant to Agent to the Governor-General in Baluchistan; First Assistant to the Resident at Hyderabad and in Mysore and to the Agents to the Governor-General in Rajputana and Central India.

62. Consulting Engineers to the Government of India for Railways; Chief Inspector of Explosives in India and Consulting Architect to the Government of India.

63. Private Secretaries to Governors.

64. Military Secretaries to Governors.

65. Administrators-General.

69. Vice-Chairman of the Port Trust, Calcutta; Directors of Traffic and Constructions, Indian Telegraph Department; Examiners of Accounts, Public Works Department, first class; Officers of the Superior Revenue Establish-

ment of State Railways, first class, first grade; Superintending Engineers, Public Works Department, first class; Superintendents of the Survey of India Department, first grade; Director of Telegraphs, first class; and Electrical Engineer-in-Chief, Telegraph Department; the Chief Examiners of Accounts, North-Western State Railway, Eastern Bengal State Railway and Oudh and Rohilkhand State Railway.

70. Inspectors-General of Registration and Directors of Land Records; Directors of Agriculture and Excise Commissioners under Local Governments, and Registrars of Co-operative Credit Societies under Local Governments, and Comptroller of Patents.

71. Senior Chaplains other than those already specified.

72. Sheriffs within their own charges.

73. Officers in the Second Class Graded List of Civil Offices not reserved for Members of the Indian Civil Service.

Political Agents and Superintendents in Baluchistan drawing less than Rs. 2,000 when outside their respective charges rank in Article 73 unless their Army rank or standing in the Civil Service gives them a higher place. The same is the case with the Political Agent in Harauti and Tonk. Principals of Government Colleges, Officers of the Indian Agricultural Service, or of the General List of the Indian Finance Department, or of the Public Works Engineer establishment, or of the Superior Revenue establishment of State Railways, or of the Civil Veterinary, Forest, Survey, Mines, Postal, Telegraph, Customs, or Scientific Departments, or officers of the Indian Institute of Science, or Sanitary Engineers, not being Superintending Engineers, or Consulting Architects to Local Governments, drawing Rs. 1,250 month and upwards, officers of the Police Department drawing Rs. 1,200 a month and upwards, Divisional Controllers of Military Accounts, Director of Survey, Madras Electrical Adviser to the Government of India, Judicial Commissioner, Chota Nagpur and Secretary to the Bengal Legislative Council and Assistant Secretary to the Government of Bengal in the Legislative Department; Director of Statistics, Consulting Surveyor to the Government of Bombay.

FOURTH CLASS.

74. Members of the Indian Civil Service of 12 years' standing, and Majors; District Judges in Lower Burma and Judge of the Small Cause Court, Rangoon, when without their respective charges; Vice-Consuls.

75. Lieutenants of over 8 years' standing and Chief Engineers of the Royal Indian Marine.

76. Government Solicitors.

77. Inspectors-General of Registration; Sanitary Commissioners; and Directors of Land Records and Agriculture under Local Administrations; the Chief Accountant and the Deputy Accountant in the office of the Director of Ordnance Factories; Registrars of Co-operative Credit Societies and Excise Commissioner under Local Administration.

78. Officers in the Third Class Graded List of Civil Offices not reserved for Members of the Indian Civil Service, Principals of Government Colleges, officers of the Indian Educational Service and the graded Educational Service or of the Indian Agricultural Service, or Sanitary Engineers or Consulting Architects, or Electrical Inspectors, drawing Rs. 1,000 a month and upwards; and officers of the General List of the Finance Department, or officers of the higher branch of the Military Accounts Department, or of the Public Works Engineer establishment, or of the Superior Revenue establishment of State Railways, or of the Civil Veterinary, Forest, Survey, Police, Mines, Postal, Telegraph, Customs, or Scientific Departments, drawing Rs. 900 a month and upwards; Assistant Commissioners, Northern India, Salt Revenue, drawing Rs. 800 a month and upwards; Chemical Examiner for Customs and Excise, Collector of Income-Tax, Calcutta, Director, Vaccine Institute, Belgaum; First Assistant Superintendent, Port Blair; Legal Assistant in the Legislative Department of the Government of India; officers of the Archæological Department, drawing Rs. 800 a month and upwards; officers of the Excise and Salt Departments, drawing Rs. 800 a month and upwards; officers of the Provincial Services of not less than 18 years' standing, drawing Rs. 600 a month and upwards; Registrar to the Chief Court, Lower Burma; and Secretary to the Board of Revenue in the Department of Revenue Settlement, Survey, Land Records and Agriculture, Madras, when a member of the Provincial Civil Service, in Article 78.

The entries in the above table apply exclusively to the persons entered therein, and, while regulating their relative precedence with each other, do not apply to the non-official community resident in India, the members of which shall take their place according to usage.

Officers in the above table will take precedence in order of the numbers of the entries. Those included in one number will take precedence *inter se* according to the date of entry into that number.

When an officer holds more than one position in the table, he will be entitled to the highest position accorded to him.

Officers who are temporarily officiating in any number in the table will rank in that number below permanent incumbents.

All officers not mentioned in the above table, whose rank is regulated by comparison with rank in the army, to have the same rank with reference to civil servants as is enjoyed by Military Officers of equal grades.

All other persons who may not be mentioned in this table, to take rank according to general usage, which is to be explained and determined by the Governor-General in Council in case any question shall arise.

Nothing in the foregoing Rules to disturb the existing practice relating to precedence at Native Courts, or on occasions of intercourse with Natives, and the Governor-General in Council to be empowered to make rules for such occasions in case any dispute shall arise.

All ladies to take place according to the rank herein assigned to their respective husbands

with the exception of wives of Peers, and of ladies having precedence in England independently of their husbands, and who are not in rank below the daughters of Barons; such ladies to take place according to their several ranks, with reference to such precedence in England, immediately after the wives of Members of the Council of the Governor-General.

Given at Our Court at Windsor this tenth day of December, in the year of Our Lord One thousand eight hundred and ninety-eight, and in the sixty-second year of Our Reign.

By Her Majesty's Command.

(Signed) GEORGE HAMILTON.

Eldest son of the Shaikh of Bahrain. Fired on occasions when he visits one of His Majesty's Ships as his father's representative.

Routes between India and Europe.

The Indian port for the direct journey to and from Europe is Bombay. There are ordinarily four lines of steamers by which the journey to and from the West *via* Bombay can be performed, either by sea all the way, or—and in some cases only—by sea part of the way and by rail across Europe. They are the P. & O., the Anchor Line, the City and Hall Line, and the Lloyd Triestino. The British India line also has an occasional service to London. The Natal line steamers are available for Western passages only, the steamers sailing round the Cape on their Eastward voyages. There are ordinarily other services between Calcutta and the West, by steamers sailing round Ceylon, and several lines connect Colombo with Europe. Of the latter the Orient, the Messageries Maritimes and the Bibby Lines are the chief, besides the P. & O. The Bibby and Henderson services extend to Rangoon. The new railway between India and Ceylon greatly increases the importance of the Colombo route for Southern India. The shortest time between London and Bombay is 14 days. The following are the fares which are convertible at approximately current rates of exchange:—

From Calcutta.	76	..	..	64	..

By the **British India S. N. Co.**, fares to London by sea from Bombay or Madras are:—single 1st saloon £72; 2nd saloon £60. Return £126 and £105. Bombay to Marseilles £68, and 2nd saloon £58. Return: £119 and £102.

By the **Anchor Line** fares to Liverpool from Bombay or Karachi are:—1st saloon £70 single and £122 return. To Marseilles:—£66 and (return from Liverpool) £118.

By Ellerman's "**City**" and "**Hall**" **Lines** fares from Bombay or Karachi to Liverpool, 1st saloon are:—single £73, return £128 2nd saloon single £58, return £101. From Bombay or Karachi to Marseilles 1st saloon single £69, return £121. 2nd saloon single £55, return £96. Calcutta to London, 1st saloon single £74, return £129. 2nd saloon single £60, return £105.

By **Bibby Line** fares from Rangoon to London, 1st saloon are:—single £82, return £142-10. Rangoon to Marseilles, 1st saloon single £78, return £135-10.

By **Henderson Line** fares from Rangoon to Liverpool, 1st saloon are:—single £70, return (available for 4 months) £105, (available for 2 years) £125.

By **Lloyd Triestino Line** fares from Bombay or Karachi to Brindisi, Venice or Trieste are:—1st class £74, 2nd class £64. Return rates available for 1 year at one and three-fourth fares.

By **Marittima Italiana** (Italian Mail S. N. Co.) fares from Bombay to Catania, Messina, Naples Leghorn and Genoa are:—Saloon class single £65, 3rd class £28.

INDIAN TRAIN SERVICE.

The distances and railway fares from Bombay to the principal centres of other parts of India are as follow :—

——	Miles.	1st Class.	2nd Class.

THE SUEZ CANAL.

The annual report of the **Suez Canal Company** published shows that during 1920 there were 4,009 passages, representing a net tonnage of 17,574,657 tons, an increase over the preceding year of 23, but still a decrease of 1,076 passages and 2,459,227 tons, or 12·27 per cent., compared with 1913. Three passages have been made by vessels of more than 23,000 tons gross, a figure that has never yet been reached, and one of the ships had a length of 204 metres, the longest ever registered in the Canal. The average time for the transit has risen from 16h. 13 min. to 16h. 28 min. due entirely to causes outside the canal's working. The number of passengers reached 500,147, about the same as the previous year. There were fewer military passengers by 127,675. The quantity of goods shipped increased by 22 per cent. over the year 1919, and is only 34 per cent. below the year 1913. The improvement has been exclusively from North to South, principally machinery, railway material, cement and cloth. The heavy decrease is most marked in English coal during 1919, and does not represent a tenth of the amount of pre-war times. The movement South to North progresses but slowly from 10,211,000 to 10,729,000 tons. Food stuffs, formerly passing in large quantities, have diminished sensibly, thus corn from India is scarcely seen, and Australian corn only totalled 600,000 tons against 1,100,000 tons during the preceding year. There is, however, a compensating traffic from other sources, corn from Manchuria and China, sugar, manganese, jute, India rubber, and particularly coal from South Africa and Australia, sent to make good the deficiency of the European supply.

Besides the resumption of commercial activity through the Canal a progressive re-establishment of the postal services has contributed appreciably to the growth of tonnage.

Apportionment of Tonnage.—Particulars published in the Report of the Suez Canal Company show that by far the largest users of the Canal in 1920 were vessels flying the British flag. Grouping associated lines together, the first places were taken by the P. and O. group, Messrs. Alfred Holt and Company, and the Ellerman Lines. The following table shows the tonnages and numbers of voyages of the first six users in point of tonnage :—

Name.	Tonnage.	No. of Voyages.
P. and O. .. .. British India .. .. Edward Hain and Mercantile Companies.. Other lines of the group	2,074,000	388
Alfred Holt and Co. (Ocean S. S. Company and China Mutual).	1,151,000	227
Ellerman { Hall Line, City Line, Bucknall Line, Wilson Line, Other Ships. }	1,112,000	223
T. and J. Brocklebank..	614,000	114
Nippon Yusen Kaisha ..	589,000	126
Stoomvaart Maatschappij Nederland	552,000	110

In all 36 groups and individual ownerships are mentioned. Finally, under the heading of "Other Lines and Government fleets" there is given a total of 5,582,000 tons, represented by 1,509 voyages.

Worthy of note was the ever-increasing number of ships flying the flags of Japan and the United States. The Japanese flag represented before the war 1·7 per cent. of the tonnage, and reached in 1920 9·1 per cent., passing thus from the sixth to the second rank, whilst the United States, formerly seen but merely, now takes fifth rank with 4·1 per cent. The British flag, still in the first rank, represents 61·7 per cent. of the total.

The dues which the Canal Company was authorised to charge by its concession of 1856 were 10 francs a ton, charged on the gross register tonnage. To these objections were soon raised and as the result of an international Conference at Constantinople in 1873 the dues were fixed at 10 francs per net register ton with a surtax of 4 francs—afterwards reduced to 3. British shipowners still found the dues excessive and a meeting of their representatives and those of the Canal Company in 1883 agreed that in 1885 the dues should be reduced to 9½ francs a ton, that subsequently they should be lowered on a sliding scale as the canal dividend increased, and that after the dividend reached 25 per cent. all the surplus profits should be applied in reducing the rates until they were lowered to 5 francs a ton. Under this arrangement dues were fixed at 7¾ francs per ton at the beginning of 1906, and at the outbreak of war were as low as 6¼ francs a ton, where they remained until October, 1916, when they were raised by ¼ franc a ton. An increase of 20c. per ton of 40 cubic feet in the dues of ships in ballast, took effect from 1st Jan. 1918, the effect of which was to bring the rates for laden and empty ships to the same level—81.50c. which as the dues are payable at the rate of 26f. 40c. to the £, is equivalent to 6s. 5d.

The report issued in 1920 stated that the receipts over expenses had attained the unusual sum of 191,472,665 f. The increase of transit receipts, compared with 1913, due to the higher tariff charges of 1916 and 1917, had barely covered the increase in expenses; the traffic, although showing further progress over the preceding year, was very much less than before the war. The situation would therefore not have been so good as then if it were not for an element of profit of a quite special character which showed itself on a lesser scale in 1919, viz., the benefits of the exchange. This in 1920 amounted to 101,772,711f. 76 c. This profit was made by the company in changing francs (notes) for money less depreciated in Egypt, where shipping dues are payable, and in payments made outside Egypt, particularly in London.

The total receipts for 1920 amounted to 267,460,679f., an increase over 1919 of 82,752,284f. The increase in transit dues was 6,824,706f., but receipts from accessory sources show a decrease of 458,323f.

Improvement Schemes.—It was announced in 1914 that from and after January 1st, 1915, **the maximum draught of water** allowed to ships going through the **Suez Canal** would be increased by 1ft., making it 30ft English.

The maximum permissible draught of ships using the Canal was 24·4 feet in 1870; in 1890 ships drawing 25·4 feet could make the passage; and during the following 24 years the increase has been at the average rate of about 1 foot every six years, thus bringing the maximum draught authorized to 29 feet.

The scheme of improvement adopted by the Company on the recommendation of the International Consultative Committee of Works, the British representatives on which are Sir William Matthews and Mr. Anthony Lister, is a comprehensive one, and the details suggest that it will meet the needs of the big ship.

A **40 feet Channel.**—The declared policy of the Canal Company in regard to the deepening of the Canal is to offer a slightly greater depth of water than that available in ports east of Suez. It is claimed that, with the exception of Sydney, there is no eastern port which at low tide has a greater depth of water than that now provided in the Canal throughout the full length of nearly 105 miles. In any case the work in hand should meet the needs of any ship likely to be built for the eastern trade during the next few years.

When the Canal was opened in 1869, the width was 72 feet and the depth about 26 feet 2 inches. In June, 1913, the width at a depth of 32 feet 8 inches had been increased to a minimum of 147 feet 6 inches over a length of about 85 miles, and to a width of 328 feet over a distance of about 20 miles. The latest scheme makes provision for a depth of 40 feet throughout and for a widening up to 196 feet 8 inches in the south section, and the cutting of an appropriate number of sidings in the north and central sections, where a minimum width of 147 feet 6 inches is believed to be sufficient for the requirements of the immediate future.

The work of enlarging the capacity of the Canal presents no special difficulty on the engineering side. A good deal of sand is occasionally driven into the channel at Port Said during storms, but a remedy for this will be found in extension of the west breakwater by about 2,700 yards at a cost of over £6,000,000. The construction of this extension, which has been in hand for the past two years, is making satisfactory progress. The Suez Roads are being adequately dredged in accordance with an agreement between the Egyptian Government and the Company.

Almost up to the end of 1915 the works for extending the jetty to the west of Port Said, works of capital importance for the **protection of the entry** to the Canal, were pushed on uninterruptedly. In November, however, for want of hydraulic lime, the manufacture of artificial rocks for this jetty was interrupted. The submarine foundations in stone and rubble of the new jetty were, as a matter of fact, completed to a length of 2,500 metres; the protective blocks were laid for 1,040 metres, and cemented for over 800 metres. The protection of the Channel is thus secured, and there is no need for any apprehension as to its future.

For many years Indian time was in a state of chaotic confusion. What was called Madras or Railway time was kept on all the railways: and each great centre of population kept its own local time, which was not based on any common scientific principle and was divorced from the standards of all other countries. It was with a view to remedying this confusion that the Government of India took the matter up in 1904, and addressed to the Local Governments, and through them to all local bodies, a long letter which reviewed the situation and made suggestions for the future. The essential points in this letter are indicated below:

"In India we have already a standard time, which is very generally, though by no means universally, recognised. It is the Madras local time, which is kept on all railway and telegraph lines throughout India and which is 5h. 21m. 10s. in advance of Greenwich. Similarly, Rangoon local time is used upon the railways and telegraphs of Burma, and is 6h. 24m. 47s. ahead of Greenwich. But neither of these standards bears a simple and easily remembered relation to Greenwich time.

"The Government of India have several times been addressed by Scientific Societies, both in India and in England, and urged to fall into line with the rest of the civilised world. And now the Royal Society has once more returned to the attack. The Committee of that Society which advises the Government of India upon matters connected with its observatories, writes:—'The Committee think that a change from Madras time to that corresponding to a longitude exactly 5½ hours east of Greenwich would be an improvement upon the existing arrangements; but that for international scientific purposes the hourly zone system, making the time 5 hours in advance of Greenwich in the west, and 6 hours in advance in the east of India, would be preferable.

"Now if India were connected with Europe by a continuous series of civilised nations with their continuous railway systems all of which had adopted the European hour-zone system, it would be imperative upon India to conform and to adopt the second suggestion. But as she is not, and as she is as much isolated by uncivilised States as Cape Colony is by the ocean, it is open to her to follow the example of that and some other similarly situated colonies and to adopt the first suggestion.

"It is believed that this will be the better solution. There are obvious objections to drawing an arbitrary line right across the richest and most populous portions of India, and so as to bisect all the main lines of communication, and keeping times differing by an hour on opposite sides of that line. India has become accustomed to a uniform standard in the Madras time of the railways; and the substitution for it of a double standard would appear to be a retrograde step; while it would, in all probability, be strongly opposed by the railway authorities. Moreover, it is very desirable that whatever system is adopted should be followed by all Europeans and Indians alike; and it is certain that the double standard would puzzle the latter greatly; while by emphasising the fact that railway differed from local time, it might postpone or even altogether prevent the acceptance of the former instead of the latter by people generally over a large part of India. The one great advantage which the second possesses over the first alternative is, that under the former, the difference between local and standard time can never exceed half an hour: whereas under the latter it will even exceed an hour in the extreme cases of Karachi and Quetta. But this inconvenience is believed to be smaller than that of keeping two different times on the Indian system of railways and telegraphs.

"It is proposed, therefore to put on all the railway and telegraph clocks in India by 8m. 50s. They would then represent a time 5½ hours faster than that of Greenwich, which would be known as **Indian Standard Time**: and the difference between standard and local time at the places mentioned below would be approximately as follows, the figures representing minutes, and F. and S. meaning that the standard time is in advance of or behind local time respectively:—Dibrugarh 51 S., Shillong 38 S., Calcutta 24 S., Allahabad 2 F., Madras 9 F., Lahore 33 F., Bombay 39 F., Peshawar 44 F., Karachi 62 F., Quetta 62 F.

"This standard time would be as much as 54 and 55 minutes behind local time at Mandalay and Rangoon, respectively; and since the railway system of Burma is not connected with that of India, and already keeps a time of its own, namely, Rangoon local time, it is not suggested that Indian Standard Time should be adopted in Burma. It is proposed, however, that instead of using Rangoon Standard Time as at present, which is 6h. 24m. 47s. in advance of Greenwich, a Burma Standard Time should be adopted on all the Burmese railways and telegraphs, which would be one hour in advance of Indian Standard Time, or 6½ hours ahead of Greenwich time, and would correspond with 97° 30' E. longitude. The change would bring Burma time into simple relation both with European and with Indian time, and would (among other things) simplify telegraphic communication with other countries.

"Standard time will thus have been fixed for railways and telegraphs for the whole of the Indian Empire. Its general adoption for all purposes, while eminently advisable, is a matter which must be left to the local community in each case."

It is difficult to recall, without a sense of bewilderment, the reception of this proposal by various local bodies. To read now the fears that were entertained if Standard Time was adopted is a study in the possibilities of human error. The Government scheme left local bodies to decide whether or not they would adopt it. Calcutta decided to retain its own local time, and to-day Calcutta time is still twenty-four minutes in advance of Standard Time. In Bombay the first reception of the proposal was hostile; but on reconsideration the Chamber of Commerce decided in favour of it and so did the Municipality. Subsequently the opposing element in the Municipality brought in a side resolution, by which the Municipal clocks were put at Bombay time which is thirty-nine minutes behind Standard Time. On the 1st January 1906 all the railway and telegraph clocks in India were put at Indian Standard Time; in Burma the Burma Standard Time became universal. Calcutta retains its former Calcutta time; but in Bombay local time is retained only in the clocks which are maintained by the Municipality and in the establishments of some orthodox Hindus. Elsewhere Standard Time is universal.

Industries Commission.

A resolution issued by the Government of India in May, 1916, announced the appointment of a Commission to examine and report upon the possibilities of further industrial development in India and to submit its recommendations with special reference to the following questions:—(*a*) Whether new openings for the profitable employment of Indian capital in commerce and industry can be indicated; (*b*) Whether and if so in what manner Government can usefully give direct encouragement to the industrial development: (1) By rendering technical advice more freely available; (2) by the demonstration of the practical possibility on a commercial scale of particular industries; (3) by affording directly or indirectly financial assistance to industrial enterprises, or (4) by any other means which are not incompatible with the existing fiscal policy of the Government of India.

Subjects Excluded.—The original Resolution expressly directed that certain matters should be excluded from consideration. In framing the terms of reference, said the Resolution, it has been found necessary to exclude two matters from the scope of the Commission's labours. In the first place any consideration of the present fiscal policy of the Government of India has been excluded from its enquiries. In the next place it was not proposed that the Commission should re-examine those aspects of technical and industrial education which have recently been dealt with by a committee working in England and India, whose reports are at present under the consideration of the Government of India.

Personnel.—The Commission, as originally appointed, consisted of the following gentlemen: President, Sir T. H. Holland. Members:—Mr. Chatterton, Sir Fazulbhoy Currimbhoy Ebrahim, Mr. E. Hopkinson, Mr. C. E. Low, C.S., Pandit Madan Mohan Malaviya, Sir R. N. Mukerjee, the Rt. Hon. Sir Horace Plunkett, Mr. F H. Stewart and Sir D. J. Tata.

Sir Horace Plunkett was unable to serve on account of ill-health.

Mr. E. Hopkinson was compelled for the same reason to retire.

The commission met in October 1916 and proceeded on tour, but in February 1917, the appointment of Sir Thomas Holland to the presidency of the newly constituted Indian Munitions Board necessitated an interruption of the Commission's work for some months. The tour was resumed in November, 1917. Sir Thomas Holland presided over the opening session in Bombay, after which he left the Commission and returned to his duties on the Munitions Board. The presidency of the commission was assumed by Sir Rajendranath Mukerji.

The Report.

The Report of the Commission, which was issued in October 1918, is summarised:—

It is important to note that the constructive proposals depend on the acceptance of two principles:—(1) that in future Government must play an active part in the industrial development of the country, with the aim of making India more self-contained in respect of men and material, and (2) that it is impossible for Government to undertake that part, unless provided with adequate administrative equipment and forearmed with reliable scientific and technical advice.

With these principles in mind, it will be convenient first to glance at the administrative machinery which the Commission proposes and then to examine the work which it is intended to do. The administrative proposals include the creation of imperial and provincial departments of Industries and of an Imperial Industrial Service. The imperial department would be in charge of a member of the Viceroy's Executive Council, assisted by a board of three members entitled the Indian Industries Board and be responsible for the industrial policy of Government and the inauguration and carrying out of a uniform programme of industrial development throughout the country. The actual administrative work would be almost entirely decentralised and would devolve on Local Governments. The performance of these duties would necessitate the employment of a large staff of officers whose qualifications would primarily depend upon a knowledge of mechanical engineering; and the formation of an Imperial Industrial Service is suggested in order to safeguard Government against the dangers and difficulties of casual recruiting. This service would consist mainly of mechanical engineers and engineering technologists the majority of whom would be employed under the Local Governments. The headquarters of the Department and of the Board should be with the Government of India.

The provincial departments would be administered by Directors of Industries, assisted by specialists and technical advisers who would usually be seconded from imperial services for work under the Local Government. A provincial Director would thus be able to develop the industries of his province with the help of competent engineers and scientists. He would be advised by a provincial Board of Industries composed mainly of non-officials and he should hold the post of a secretary to Government to secure expeditious and effective despatch of work.

Future Possibilities.—It now remains to consider the work which this organisation is to carry out and the conditions of India which render essential a policy of active intervention on the part of Government in the industrial affairs of the country. The first chapters of the report deal with India as an Industrial country, her present position and her potentialities. They show how little the march of modern industry has affected the great bulk of the Indian population, which remains engrossed in agriculture, winning a bare subsistence from the soil by antiquated methods of cultivation. Such changes as have been wrought in rural areas are the effects of economic rather than of industrial evolution. In certain centres the progress of western industrial methods is discernible; and a number of these are described in order to present a picture of the conditions

under which industries are carried on, attention being drawn to the shortage and to the general inefficiency of Indian labour and to the lack of an indigenous supervising agency. Proposals are made for the better exploitation of the forests and fisheries. In discussing the industrial deficiencies of India, the report shows how unequal the development of our industrial system has been. Money has been invested in commerce rather than industries, and only those industries have been taken up which appeared to offer safe and easy profits. Previous to the war, too ready reliance was placed on imports from overseas, and this habit was fostered by the Government practice of purchasing stores in England. India produces nearly all the raw materials necessary for the requirements of a modern community; but is unable to manufacture many of the articles and materials essential alike in times of peace and war. For instance, her great textile industries are dependent upon supplies of imported machinery and would have to shut down if command of the seas were lost. It is vital, therefore, for Government to ensure the establishment in India of those industries whose absence exposes us to grave danger in event of war. The report advocates the introduction of modern methods of agriculture and in particular of labour-saving machinery. Greater efficiency in cultivation, and in preparing produce for the market would follow, labour now wastefully employed would be set free for industries, and the establishment of shops for the manufacture and repair of machinery would lead to the growth of a huge engineering industry. After examining the resources for generating power, the report says the coal of India is generally of a poor quality and the radius within which it can be economically used is accordingly limited. Moreover, the extension of metallurgical industries already started involves a severe attack on our visible supplies of cooking coal. The Commission recommends a special survey of the coal position in India. The oil fields of Burma are being rapidly drained and no others of equal value have been proved. Wind power is too intermittent for industrial use. Attention should be directed to more economical methods of using wood fuel, and new materials for industrial alcohol should be investigated. The harnessing of water power appears, however, to afford a more reliable source of energy, especially with a view to the development of thermo-electric industries; and Government is urgently enjoined to undertake a hydrographic survey in order to determine the places which offer possibilities for the establishment of hydro-electric installations.

The Indian in Industries.—The next chapters deal with "The Indian in Industries." They discuss measures designed to improve the efficiency of the Indian artisan and to encourage the educated Indian to take part in industrial enterprise. It is shown that the relative lowness of wages paid to Indian labour is counter-balanced by the comparative inefficiency of the individual Indian workman. The Commission assigns three causes for this inefficiency, viz., the absence of education, the prevailing low standard of comfort and the effects of preventible disease. The Commission expressed itself in favour of universal primary education, but considers that it would be unfair and unjust to impose upon employers this duty, which devolves rather upon the State and local authorities. But education of a technical kind is also required and the method of instruction to be followed will vary for workers in organised and for workers in cottage industries, the latter of whom, it may be remarked, considerably exceed the former in numbers. For cottage industries the Commission proposes an efficient system of education in industrial schools administered by head masters with practical knowledge of the industries taught, and controlled by the Departments of Industries. The extension of marketing facilities must go hand in hand with the teaching of improved processes. In the case of organised industries mechanical engineering is taken as a typical instance, and the proposals include the establishment of a system of organised apprenticeship for a period of four or five years, with practical training in the workshops and theoretical instruction in attached teaching institutions.

The Commission places better housing in the forefront of its recommendations to raise the standard of comfort of the Indian artisan. Subject to certain safeguards, Government should use its powers under the Land Acquisition Act to acquire sites for industrial dwellings, and land so acquired should be leased to employers on easy terms. Special remedies are proposed in the case of Bombay, where the problems of congestion are unique. General measures of welfare work among factory employees are also suggested and special attention should be paid to the improvement of public health. The elimination of such diseases as hookworm and malaria, which are prevalent almost everywhere in India, would add enormously to the productive capacity of the Indian labourer.

The general aversion from industrial pursuits of the educated Indian is ascribed to hereditary predisposition accentuated by an unpractical system of education. A complete revolution in the existing methods of training is proposed. For manipulative industries, such as mechanical engineering, an apprenticeship system, similar to that suggested for artisans should be adopted. The youth who aspires to become a foreman or an engineer, must learn to take off his coat at the start and should serve a term of apprenticeship in the workshops, supplemented by courses of theoretical instruction. At the conclusion of this period of training he may be allowed to specialise in particular subjects. For non-manipulative or operative industries, on the other hand, the teaching institution should be the main training ground, though practical experience is also necessary. Special proposals are made for commercial and mining education; and the future establishment of two imperial colleges is adumbrated, one for the highest grade of engineering and the other for metallurgy. To ensure the maintenance of close relations between the training institutions and the world of industry the general control of technical education should be transferred to the Department of Industries.

Government Intervention.—The remaining chapters of the report deal more specifically with Government intervention in

industries. Government clung long to the tradition of *laissez faire* in industrial matters; but when in recent years it attempted to play a more active part in industrial development, its efforts were rendered futile by the absence of scientific and technical advice to assist it in estimating the value of industrial propositions, and by the lack of any suitable agency to carry out approved proposals. To remedy the first of these defects, a reorganisation of the existing scientific services is advocated, in such a way as to unite in imperial services, classified according to science subjects, all the scattered workers now engaged in the provinces on isolated tasks. Rules are suggested to govern the relations between the members of these services and private industrialists seeking advice. The situation of research institutes and the conditions and terms of employment of these services are questions for the decision of which the Commission considers that the appointment of a special committee is necessary.

The administrative machinery with which Government must be equipped and some of the functions which that machinery will enable it to perform have already been described; but there are many other directions in which the development of industries can be stimulated. Useful and up-to-date information on commercial and industrial matters is essential both for Government and for private merchants and industrialists. A scheme is propounded for collecting such information and for making it available to the public through officers of the Department of Industries. The purchase of Government stores in the past has been conducted in such a way as to handicap Indian manufactures in competing for orders and to retard industrial development in India. The Commission proposes that the Department of Industries should be in charge of this work and that orders should not be placed with the Stores Department of the India Office until the manufacturing capabilities of India have first been exhausted. A chapter is concerned with the law of land acquisition and enunciates principles in accordance with which Government might compulsorily acquire sites for industrial undertakings; in another, the various methods by which Government might render direct technical aid to industries are explained. The Commission considers that ordinarily Government itself should undertake manufacturing operations only for the production of lethal munitions. The administration of the Boiler Acts, the Mining Rules and the Electricity Act, the employment of jail labour, the prevention of adulteration, patents, and the registration of business names, of trade marks and of partnerships, are matters which are specifically dealt with. In the opinion of the Commission the compulsory registration of partnerships is practicable and the question should be examined by Government with a view to legislation.

Small and Cottage Industries.—Industrial co-operation is discussed with reference to small and cottage industries; and the vexed question of railway rates on industries is considered. The Commission thinks that reduced rates to and from ports have been prejudicial to industrial development and that the position requires careful examination with a view to the removal of existing anomalies. In particular it should be possible to increase the rates on raw produce for export and on imports other than machinery and stores for industrial use. The addition of a commercial member to the Railway Board and the better representation of commercial and industrial interests at the Railway Conference would help to secure a more equable system of rating. The improvement of waterways and the formation of a Waterways Trust at Calcutta are also proposed.

The Commission lays emphasis on the disorganisation of Indian capital and its shyness in coming forward for industrial development. There is no lack of money in the country, yet the industrialist cannot obtain the use of it except on terms so exorbitant as to devour a large part of his profits. There is a crying necessity for the extension of banking facilities in the mofussil. The Commission is disposed to favour the establishment of an industrial bank or banks; but it considers that the appointment of an expert committee is necessary to deal with this subject and ask Government to take action at an early date. As an 'interim' measure, a scheme is propounded for the provisions of current finance to middle class industrialists, by which the banks would open cash credits in favour of applicants approved by the Department of Industries on the guarantee of Government. Various other methods of financial assistance by Government are suggested, in particular the provision of plant for small and cottage industries on the hire-purchase system.

Position summed up.—To sum up, the Commission finds that India is a country rich in raw materials and in industrial possibilities, but poor in manufacturing accomplishment. The deficiencies in her industrial system are such as to render her liable to foreign penetration in time of peace and to serious dangers in time of war. Her labour is inefficient, but for this reason capable of vast improvement. She relies almost entirely on foreign sources for foremen and supervisors; and her *intelligentsia* have yet to develop a right tradition of industrialism. Her stores of money lie inert and idle. The necessity of securing the economic safety of the country and the inability of the people to secure it without the co-operation and stimulation of Government impose, therefore, on Government a policy of energetic intervention in industrial affairs, and to discharge the multifarious activities which this policy demands, Government must be provided with a suitable industrial equipment in the form of imperial and provincial departments of Industries.

The recurring cost of the proposals is estimated at Rs. 86 lakhs; they involve a capital expenditure of Rs. 150 lakhs, mainly on educational institutions, and a further capital outlay of Rs. 66 lakhs is anticipated for future developments. The Commission considers that this expenditure may be worked up to at the end of a period of 7 years

Pandit Malaviya appended a minute of dissent objecting to the appointment of an Industrial Service and recommending the enlistment of the necessary staff for a term of years.

DEPARTMENT OF INDUSTRIES.

By a resolution of the Government of India, Department of Commerce and Industry, dated February 26, 1920, a Board of Industries and Munitions was constituted as a temporary organization designed to close the war commitments of the Indian Munitions Board, to take over from the Commerce and Industry Department and the Public Works Department certain items of work, and to undertake the initial work of industrial organisation, and in particular to frame detailed proposals for a new Department of Industries.

Proposals formulated by the Board of Industries and Munitions for the creation of a Department of the Government of India to deal with industrial questions have now received the approval of Secretary of the State for India, and accordingly a permanent Department of Industries was created in 1921. The new Department will deal for the present with the heads of business detailed in the resolution. It will be under the charge of the Hon. Sir Thomas Holland, Member of the Governor-General's Executive Council.

Concurrently with the creation of the permanent Department of Industries, the Board of Industries and Munitions ceased to exist. The work connected with the closing of the war commitments of the late Indian Munitions Board and the disposal of surplus stores on behalf of His Majesty's Government has been entrusted to a separate temporary organisation under an officer designated Chief Controller (Surplus Stores) responsible to the Member-in-Charge of Industries.

On the retirement of Sir George Barnes in April 1921 Sir Thomas Holland became Member in charge of the portfolios of Industries and Commerce. This post he resigned later in the year on account of a difference of opinion with the Viceroy on the subject of what is called The Calcutta Munitions Case — a case where several individuals were under trial for fraud in connection with munitions contracts during the war. The case raised no little commotion at the time, not the least of the causes of this being the statement of the Advocate-General for the Crown that the Government knew the accused were guilty and could prove that they were guilty, but did not propose to proceed with the case. With the retirement of Sir Thomas Holland the activities connected with the Department, other than routine matters were suspended, as no successor had been appointed up to the close of the year and Mr C. A. Innes, the Secretary of the Department, acted as Member. But although there has not been any official pronouncement on the subject it is unlikely that the grandiose scheme prepared by the Industries Commission will come to fruition. There is not the money available, for the Government of India are faced by serious and continuing deficits, and there are grave doubts whether these recommendations can fit in with the new constitution, which remits Industrial to the Provinces for administration.

Indian Orders.

The Star of India.

The Order of the Star of India was instituted by Queen Victoria in 1861, and enlarged in 1866, 1876, 1897, 1902, and 1911, and the dignity of Knight Grand Commander may be conferred on Princes or Chiefs of India, or upon British subjects for important and loyal service rendered to the Indian Empire; the second and third classes for services in the Indian Empire of not less than thirty years in the department of the Secretary of State for India. It consists of the Sovereign, a Grand Master (the Viceroy of India), the first class of forty-four Knights Grand Commanders (22 British and 22 Indian), the second class of one hundred Knights Commanders, and the third class of two hundred Companions, exclusive of Extra and Honorary Members, as well as certain additional Knights and Companions.

The Insignia are (i) the Collar of gold, composed of the lotus of India, of palm branches tied together in satire, of the united red and white rose, and in the centre an Imperial Crown; all enamelled in their proper colours and linked together by gold chains. (ii) The Star of a Knight Grand Commander is composed of rays of gold issuing from a centre, having thereon a star of five points in diamonds resting upon a light blue enamelled circular riband, tied at the ends and inscribed with the motto of the Order, *Heaven's Light our Guide*, also in diamonds. That of a Knight Commander is somewhat different, and is described below. (iii) The Badge, an onyx cameo having Her Majesty Queen Victoria's Royal Effigy thereon, set in a perforated and ornamental oval, containing the motto of the Order surmounted by a star of five points, all in diamonds. (iv) The Mantle of light blue satin lined with white, and fastened with a cordon of white silk with blue and silver tassels. On the left side a representation of the Star of the Order.

The ribbon of the Order (four inches wide for Knights Grand Commanders) is sky-blue, having a narrow white stripe towards either edge, and is worn from the right shoulder to the left side. A Knight Commander wears (a) around his neck a ribbon two inches in width, of the same colours and pattern as a Knight Grand Commander, and pendent therefrom a badge of a smaller size, (b) on his left breast a Star composed of rays of silver issuing from a gold centre, having thereon a silver star of five points resting upon a light blue enamelled circular ribbon, tied at the ends, inscribed with the motto of the Order in diamonds. A Companion wears from his left breast a badge of the same form as appointed for a Knight Commander, but of a smaller size pendent to a like ribbon of the breadth of one and a half inches. All Insignia are returnable at death to the Central Chancery, or if the recipient was resident in India, to the Secretary of the Order at Calcutta.

Sovereign of the Order:—H. I. M. The King.

Grand Master of the Order:—His Excellency the Viceroy and Governor-General of India, the Right Honourable Lord Reading.

Honorary Knights Grand Commanders (G. C. S. I.)

Prince Louis Alberic D'Arenberg
Hon. General His Majesty Chowfa Maha Vajiravudh, King of Siam.

OFFICERS OF THE ORDER.

Secretary, Sir John Wood
Registrar, Col. Sir Douglas F. R. Dawson

The Most Eminent Order of the Indian Empire.

This Order, instituted by H. M. Queen Victoria, Empress of India, Jan. 1st, 1878, and extended and enlarged in 1886, 1887, 1892, 1897, and 1902 is conferred for services rendered to the Indian Empire, and consists of the Sovereign, a Grand Master, thirty-two Knights Grand Commanders (of whom the Grand Master is first and principal), ninety-two Knights Commanders, and an indefinite number of Companions (not exceeding, without special statute, 20 nominations in any one year); also Extra and Honorary Members over and above the vacancies caused by promotion to a higher class of the Order, as well as certain Additional Knights and Companions appointed by special statute Jan. 1st, 1909, commemorative of the 50th Anniversary of the assumption of Crown Govt. in India.

The Insignia are: (*i*) The COLLAR of gold formed of elephants, lotus flowers, peacocks in their pride, and Indian roses, in the centre the Imperial Crown, the whole linked together with chains; (*ii*) The STAR of the Knight Grand Commander, comprised of five rays of silver, having a small ray of gold between each of them, the whole alternately plain and scaled, issuing from a gold centre, having thereon Her Majesty Queen Victoria's Royal Effigy, within a purple circle, edged and lettered gold, inscribed *Imperatricis Auspiciis*, and surmounted by an Imperial Crown gold; (*iii*) The BADGE, consisting of a rose, enamelled gules, barbed vert, and having in the centre Her Majesty Queen Victoria's Royal Effigy, within a purple circle, edged and lettered gold, inscribed *Imperatricis Auspiciis*, surmounted by an Imperial Crown, also gold; (*iv*) The MANTLE is of Imperial purple satin, lined with and fastened by a cordon of white silk, with purple silk and gold tassels attached. On the left side a representation of the Star of the Order.

A Knight Commander wears: (*a*) around his neck a ribbon two inches in width, of the same colour (purple) and pattern as a Knight Grand Commander, pendent therefrom a badge of smaller size: (*b*) on his left breast a star, similar to that of the first class, but the rays of which are all of silver.

The above mentioned Insignia are returned at death to the Central Chancery, or if the Knight was resident in India to the Secretary of the Order at Calcutta.

A Companion wears from the left breast a badge (not returnable at death) of the same form as appointed for a Knight Commander, but of smaller size, pendent to a like ribbon of the breadth of one and a half inches.

Sovereign of the Order:—The King, Emperor of India.

Grand Master of the Order:—Lord Reading.

Honorary Knights Grand Commanders (G. C. I. E.)

The *ex*-Emperor of Korea.
Shaikh Sir Khazal Khan, Shaikh of Mohammerah and Dependencies.
Amir Sir Abdul Aziz bin Abdur Rahman, Ruler of Najd and Hassa and Kalif.

OFFICERS OF THE ORDER.

Secretary, Sir J. B. Wood.
Registrar, Col. Sir Douglas Dawson.

The Imperial Order of the Crown of India.

This Order was instituted Jan. 1, 1878, and for a like purpose with the simultaneously created Order of the Indian Empire. It consists of the Queen and Queen Mother with some Royal Princesses, and the female relatives of Indian Princes or of persons who have held conspicuous offices in connection with India. Badge, the royal cipher in jewels within an oval surmounted by an Heraldic Crown and attached to a bow of light blue watered ribbon, edged white. Designation, the letters C. I.

Sovereign of the Order.

THE KING-EMPEROR OF INDIA.

Ladies of the Order (C. I.)

Her Majesty The Queen
H. M. Queen Alexandra

Baroness Ampthill
The Lady Willingdon
Countess of Minto
Marchioness of Crewe
H. H. Begum of Bhopal

THE KAISAR-I-HIND MEDAL.

This decoration was instituted in 1900, the preamble to the Royal Warrant—which was amended in 1901 and 1912—being as follows:—"Whereas We, taking into Our Royal consideration that there do not exist adequate means whereby We can reward important and useful services rendered to Us in Our Indian Empire in the advancement of the public interests of Our said Empire, and taking also into consideration the expediency of distinguishing such services by some mark of Our Royal favour: Now for the purpose of attaining an end so desirable as that of thus distinguishing such services aforesaid, We have instituted and created, and by these presents for Us, Our Heirs and Successors, do institute and create a new Decoration." The decoration is styled "The Kaisar-i-Hind Medal for Public Service in India" and consists of two classes. The Medal is an oval shaped Badge or Decoration—in gold for the First Class and in silver for the Second Class—with the Royal Cypher on one side and on the reverse the words "Kaisar-i-Hind for Public Service in India;" it is suspended on the left breast by a dark blue ribbon.

Recipients of the 1st Class.

Indian Names and Titles.

There is a bewildering multiplicity of Indian titles, made all the more difficult inasmuch as there is a difference of nomenclature between the titles of Hindus and Mahomedans. Some titles are hereditary and represent ruling chiefs or those nominally such (and of these there are no less than some 620, whilst of the titles themselves some 200 are known); others are personal honours conferred on individuals by the Indian Government, and even then sometimes made hereditary. Yet again, there are numerous complimentary titles, or specifications of office, expressed in Hindu phrases, of which we have occasionally supplied the interpretations. It must be added that though *caste* is often figuring in the names it has nothing whatever to do with the titles. Amir, Khan, Mir, Sultan, Sri, &c., are confusingly used as both titles and names.

The order of rank is thus given by Sir R. Lethbridge in "The Golden Book of India."

Hindu—Maharaja Bahadur, Maharaja, Raja Bahadur, Raja, Rai Bahadur, Rai Saheb, Rai.

Mohammedan—Nizam, Nawab Bahadur, Nawab, Khan Bahadur, Khan Saheb, Khan.

Parsis and Bene-Israelites—Khan Bahadur, Khan Saheb.

Afsur—a corruption of the English "officer."

Ahluwalia—name of a princely family resident at the village of Ahlu, near Lahore.

Akhundzada—son of a Head Officer.

Alijah (Sindhi)—of exalted rank.

Ali Raja—Sea King (Laccadives).

Amir (corruptly *Emir*)—a Mohammedan Chief often also a personal name.

Asaf—a Minister.

Baba—lit. "father;" a respectful "Mr." Irish "Your Honour."

Babu—strictly a 5th or still younger son of a Raja, but often used of any son younger than the heir, whilst it has also grown into a term of address=Esquire. There are, however, one or two Rajas whose sons are known respectively as—1st, Kunwar; 2nd, Diwan; 3rd, Thakur; 4th, Lal; 5th, Babu.

Bahadur—lit. "brave" or "warrior:" a title used by both Hindus and Mohammedans, often bestowed by Government; added to other titles it increases their honour, but alone it designates an inferior ruler.

Bakhshi—a revenue officer or magistrate.

Begum or *Begam*—the feminine of "Nawab" combined in Bhopal as "Nawab Begum."

Besar—apparently a large land-owner.

Bhonsle—name of a Maratha dynasty.

Bhup—title of the ruler of Cooch Behar.

Bhugti—name of a Baluch tribe.

Chhatrapati—one of sufficient dignity to have an umbrella carried over him.

Dada—lit. "grandfather" (paternal); any venerable person.

Daula and *Daulat*—State, also one in office.

Deb—a Brahminical priestly title; taken from the name of a divinity.

Dhiraj—"Lord of the Lands:" added to "Raja," &c., it means "paramount."

Diwan—a Vizier or other First Minister to a native Chief, either Hindu or Mohammedan, and equal in rank with "Sardar," under which see other equivalents. The term is also used of a Council of State.

Elaya Raja—title given to the heir of the Maharaja of Travancore.

Farzand (with defining words added)—"favorite" or "beloved."

Fateh—"victory."

Fath Jeang—"Victorious in Battle" (a title of the Nizam).

Gaekwar (sometimes *Guicowar*)—title with "Maharaja" added of the ruler of Baroda. It was once a caste name and means "cowherd, *i.e.*, the protector of the sacred animal; but later on, in common with "Holkar" and "Sindhia," it came to be a dynastic appellation and consequently regarded as a title. Thus, a Prince becomes "Gaekwar" on succeeding to the estate of Baroda; "Holkar," to that of Indore and "Sindhia," to that of Gwalior.

Hafiz—guardian.

Haji—one who has made pilgrimage to Mecca.

Hiera Lal—"diamond ruby."

Holkar—see "Gaekwar."

Jah—a term denoting dignity.

Jam (Sindhi or Baluch)—Chief.

Kazi—(better written *Qazi*)—a Mohammedan magistrate.

Khan—originally the ruler of a small Mohammedan State, now a nearly empty title though prized. It is very frequently used as a name, especially by Afghans and Pathans.

Khwaja—a Persian word for "master," sometimes a name.

Kunwar or *Kumar*—the heir of a Raja.

Lal—a younger son of a Raja (strictly a 4th son, but see under "Babu").

Lokendra or *Lokindra*—"Protector of the World," title of the Chiefs of Dholpur and Dattia.

Mahant—a feudal title borne by the heads of a Hindu religious body.

Maharaja—the highest of hereditary rulers among the Hindus, or else a personal distinction conferred by Government. It has several variations as under "Raja," with the addition of *Maharaj Rana*; its feminine is *Maharani* (*maha*=great).

Malik—master, proprietor.

Mian—title of the son of a Rajput Nawab resembling the Scottish "Master."

Mir—a leader, an inferior title which, like "Khan," has grown into a name, especially used by descendants of the Chiefs of Sind.

Mirza—if prefixed, "Mr." or "Esquire."

Mong, Moung, or *Maung* (Arakanese)—leader.

Moulvi or *Maulvi*—a learned man or teacher.

Mudaliyar or *Mud-liar*—a personal proper name, but implying "steward of the lands."

Mumtaz-ud-Daula—distinguished in the State *Mulk,* in the country).

Munshi—president, or presiding official.

Myowun—"Mr."

Nawab—originally a Viceroy under the Moghal Government, now the regular leading title of a Mohammedan Prince, corresponding to "Maharaja" of the Hindus.

Nazim—a ruler (not to be confused with following).

Nizam—the title of the ruler of Hyderabad, the one Mohammedan Prince superior to Nawab.

Nono (Thibetan)—the ruler of Spitta.

Pandi or Pundi—a learned man.

Peshkup—manager or agent.

Prince—term used in English courtesy for "Shahzada," but specially conferred in the case of "Prince of Arcot" (called also "Armin-i-Arcot").

Raja—a Hindu Prince of exalted rank, but inferior to "Maharaja." The feminine is *Rani* (Princess or Queen), and it has the variations *Raj, Rana, Rao, Rai, Rawal, Rawat, Raikwar, Raikbar,* and *Raikat.* The form *Rai* is common in Bengal, *Rao* in S. & W. India.

Raj Rajeshwar— King of Kings.

Risaldar—commander of a troop of horses.

Saheb—the Native Hindu term used to or of a European ("Mr. Smith" would be mentioned as "Smith Saheb," and his wife "Smith Mem-Saheb," but in *addressing* it would be "Saheb," fem. "Saheba," without the name); occasionally appended to a title in the same way as "Bahadur," but inferior (=master). The unusual combination "Nawab Saheb" implies a mixed population of Hindus and Mohammedans.

Sahibzada—son of a person of consequence.

Said, Sayid, Saiyid, Sidi, Syed, Syud—various forms for a title adopted by those who claim direct male descent from Mohammed's grandson Husain.

Sardar (corrupted to *Sirdar*)—a leading Government official, either civil or military, even a Grand Vizier. Nearly all the Punjab Barons bear this title. It and "Diwan" are like in value and used by both Hindus and Mohammedans. So, but Mohammedans only, are "Wali," "Sultan," "Amir," "Mir," "Mirza," "Mian," and "Khan."

Sawai—a Hindu title implying a slight distinction (lit. one-fourth better than others).

Sawbwa (Burmese)—a Chief.

Shahzada—son of a King.

Shaikh or *Sheikh* (Arabic)—a Chief.

Shams-ul-Ulama—a Mohammedan title denoting "learned."

Shamshir-Jang—"Sword of Battle" (a title of the Maharaja of Travancore).

Sidi—a variation of "Said."

Sindhia—see under "Gaekwar."

Sri or *Shri*—lit. fortune, beauty: a Sanscrit term used by Hindus in speaking of a person much respected (never addressed *to* him; nearly="Esquire"); used also of divinities. The two forms of spelling are occasioned by the intermediate sound of the *s* (that of *s* in the German *Stadt*).

Subadar—Governor of a province.

Sultan—like "Sardar."

Syed, Syud—more variations of "Said."

Talukdar—an Oudh landlord.

Talpur—the name of a dynasty in Sind.

Thakur—a Hindu term equivalent to "Bahadur," whether as affix or alone.

Tumandar—a Persian word denoting some office.

Umara—term implying the Nobles collectively

Wali—like "Sardar." The Governor of Khelat is so termed, whilst the Chiefs of Cabul are both "Wali" and "Mir."

Zemindar or *Zamindar*—a landowner; orig. a Mohammedan collector of revenue.

Distinctive Badges.—An announcement was made at the Coronation Durbar in 1911, that a distinctive badge should be granted to present holders and future recipients of the titles of 'Diwan Bahadur', 'Sardar Bahadur', 'Khan Bahadur', 'Rai Bahadur', 'Rao Bahadur', 'Khan Sahib', Rai Sahib' and 'Rao Sahib'. Subsequently the following regulations in respect of these decorations were issued:—(1) The decoration to be worn by the holders of the titles above mentioned shall be a badge or medallion bearing the King's effigy crowned and the name of the title, both to be executed on a plaque or shield surrounded by a five-pointed star surmounted by the Imperial Crown, the plaque or shield being of silver gilt for the titles of Diwan, Sardar, Khan, Rai and Rao Bahadur, and of silver for the titles of Khan, Rai, and Rao Sahib. (2) The badge shall be worn suspended round the neck by a ribbon of one inch and a half in width, which for the titles of Diwan and Sardar Bahadur shall be light blue with a dark blue border, for the titles of Khan, Rai and Rao Bahadur light red with a dark red border, and for the titles of Khan, Rai and Rao Sahib dark blue with light blue border.

A Press Note issued in November, 1914, states:—The Government of India have recently had under consideration the question of the position in which **miniatures** of Indian titles should be worn, and have decided that they should be worn on the left breast fastened by a brooch, and not suspended round the neck by a ribbon as prescribed in the case of the Badge itself. When the miniatures are worn in conjunction with other decorations, they should be placed immediately after the Kaiser-i-Hind Medal.

Indian Distinguished Service Medal.—This medal was instituted on June 28th, 1907, by an Army Order published in Simla as a reward for both commissioned and non-commissioned officers of the regular and other forces in India. It bears on the obverse the bust of King Edward VII, and on the reverse a laurel wreath encircling the words For Distinguished Service. The

medal, 1⅜ inches in diameter, is ordered to be worn immediately to the right of all war medals suspended by a red ribbon 1¾ in. wide, with blue edges ¾ in. wide. This medal may be conferred by the Viceroy of India.

Indian Order of Merit.—This reward of valour was instituted by the H. E. I. Co. in 1837, to reward personal bravery without any reference to length of service or good conduct. It is divided into three classes and is awarded to native officers and men for distinguished conduct in the field. On the advancement from one class to another the star is surrendered to the Government, and the superior class substituted, but in the event of the death of the recipient his relatives retain the decoration. The order carries with it an increase of one-third in the pay of the recipient, and in the event of his death the allowance is continued to his widow for three years. The First Class consists of a star of eight points, 1⅝ in. in diameter, having in the centre a ground of dark blue enamel bearing crossed swords in gold, within a gold circle, and the inscription Reward of Valour, the whole being surmounted by two wreaths of laurel in gold. The Second Class star is of silver, with the wreaths of laurel in gold; and the Third Class entirely of silver The decoration is suspended from a simple loop and bar from a dark-blue ribbon 1¼ in. in width with red edges, bearing a gold or silver buckle according to class.

Order of British India.—This order was instituted at the same time as the Order of Merit, to reward native commissioned officers for long and faithful service in the Indian Army. Since 1878, however, any person European or native, holding a commission in a native regiment, became eligible for admission to the Order without reference to creed or colour The First Class consists of a gold eight-pointed radiated star 1¼ in. in diameter. The centre is occupied by a lion statant gardant upon a ground of light-blue enamel, within a dark-blue band inscribed Order of British India, and encircled by two laurel wreaths of gold. A gold loop and ring are attached to the crown for suspension from a broad ornamental band $\frac{5}{16}$ in. in diameter, through which the ribbon, once blue, now red, is passed for suspension from the neck. The Second Class is $1\frac{7}{16}$ in. in diameter with dark-blue enamelled centre: there is no crown on this class, and the suspender is formed of an ornamental gold loop. The reverse is plain in both classes. The First Class carries with it the title Sirdar Bahadur, and an additional allowance of two rupees a day: and the Second the title of Bahadur, and an extra allowance of one rupee per day.

Indian Meritorious Service Medal.—This was instituted on July 27th, 1888, and on receipt of the medal the order states "a non-commissioned officer must surrender his Long Service and Good Conduct medal": but on being promoted to a commission he may retain the M. S. medal, but the annuity attached to it will cease. On the obverse is the diademed bust of Queen Victoria facing left, with a veil falling over the crown behind, encircled by the legend Victoria Kaisar-i-Hind. On the reverse is a wreath of lotus leaves enclosing a wreath of palm tied at the base, having a star beneath; between the two wreaths is the inscription for meritorious service. Within the palm wreath is the word India. The medal, 1⅜ in. in diameter, is suspended from a scroll by means of a red ribbon 1¼ in. wide. The medals issued during the reigns of Queen Victoria's successors bear on the obverse their bust in profile with the legend altered to EDWARDVS or GEORGIVS.

Laws and the Administration of Justice.

The indigenous law of India is personal and divisible with reference to the two great classes of the population, Hindu and Mahomedan. Both systems claim divine origin and are inextricably interwoven with religion, and each exists in combination with a law based on custom. At first the tendency of the English was to make their law public and territorial, and on the establishment of the Supreme Court at Calcutta in 1773 and the advent of English lawyers as judges, they proceeded to apply it to Europeans and Indians alike. This error was rectified by the Declaratory Act of 1780, by which Parliament declared that as against a Hindu the Hindu law and usage, and as against a Mahomedan the laws and customs of Islam should be applied. The rules of the Shastras and the Koran have been in some cases altered and relaxed. Instances can be found in the Bengal Sati Regulation Act of 1829; the Indian Slavery Act, 1843; the Caste Disabilities Removal Act of 1850; the Hindu Widows' Remarriage Act, 1856; and other Acts and Codes. To quote the Imperial Gazetteer, "A certain number of the older English statutes and the English common law are to a limited extent still in force in the Presidency Towns as applicable to Europeans, while much of the old Hindu and Mahomedan law is everywhere personal to their native fellow subjects; but apart from these, and from the customary law, which is as far as possible recognised by the Courts, the law of British India is the creation of statutory enactments made for it either at Westminster or by the authorities in India to whom the necessary law-giving functions have from time to time been delegated."

Codification.

Before the transfer of India to the Crown the law was in a state of great confusion. Sir Henry Cunningham described it as "hopelessly unwieldy, entangled and confusing." The first steps toward general codification were taken in 1833, when a Commission was appointed, of which Lord Macaulay was the moving spirit, to prepare a penal code. Twenty-two years elapsed before it became law, during which period it underwent revision from his successors in the Law Membership, and especially by Sir Barnes Peacock, the last Chief Justice of the Supreme Court of Calcutta. The Penal Code, which became law in 1860, was followed in 1861 by a Code of Criminal Procedure. Substantially the whole criminal law of British India is contained in these two Codes. One of the most eminent lawyers who ever came to India, Sir James Stephen, said "The Indian penal code may be described as the criminal law of England freed from all technicalities and superfluities, systematically arranged and modified in some few particulars (they are surprisingly few) to suit the circumstances of British India. It is practically impossible to misunderstand the code." The rules of Civil Procedure have been embodied in the Code of Civil Procedure. The Indian Penal Code has from time to time been amended. The Code of Civil Procedure was remodelled in 1908 and the Code of Criminal Procedure in 1898. These Codes are now in force.

Statute Law Revision.

In October, 1921, a committee was appointed under the presidency of the Hon. Mr. A. P. Muddiman, I.C.S., to deal with the question of statute law revision. The functions of the Committee are to prepare for the consideration of Government such measures of consolidation and clarification, as may be necessary to secure the highest attaintable standard of formal perfection in the statute law of India. In several branches of the law consolidation has long been overdue, and it is suggested that the preparation of a Bill consolidating the existing law relating to merchant shipping, with such amendments therein as are necessitated or rendered desirable by the enactment of the English statutes since 1894 on the same subject should form the first duty undertaken by the Committee. Under the conditions resulting from the establishment of the reformed Constitution, increasing importance will attach hereafter to the periodical examination and revision of the Statute Book and the Government of India hope that the Committee will take its place as a permanent feature of the legislative machinery of the country.

European British Subjects.

Whilst the substantive criminal law is the same for all classes, certain distinctions of procedure have always been maintained in regard to criminal charges against European British subjects. Until 1872 European British subjects could only be tried or punished by one of the High Courts. It was then enacted that European British subjects should be liable to be tried for any offences by magistrates of the highest class, who were also justices of the peace, and by judges of the Sessions Courts; but it was necessary in both cases that the magistrate or judge should himself be a European British subject. In 1883 the Government of India announced that they had decided "to settle the question of jurisdiction over European subjects in such a way as to remove from the code at once and completely every judicial disqualification which is based merely on race distinctions." This decision, embodied in the Ilbert Bill, aroused a storm of indignation which is still remembered. The controversy ended in a compromise which is thus summarised by Sir John Strachey ("India"). "The controversy ended with the virtual, though not avowed, abandonment of the measure proposed by the Government. Act III of 1884, by which the law previously in force was amended, cannot be said to have diminished the privileges of European British subjects charged with offences, and it left their position as exceptional as before. The general disqualification of native judges and magistrates remains; but if a native of India be appointed to the post of district magistrate or sessions judge, his powers in regard to jurisdiction over European British subjects are the same as those of an Englishman holding the same office. This provision however is subject to the condition that every European British subject brought for trial before the district magistrate or sessions judge has the right, however trivial be the charge, to claim to be tried by a jury of which

not less than half the number shall be Europeans or Americans.....Whilst this change was made in the powers of district magistrates, the law in regard to other magistrates remained unaltered." Since 1836 no distinctions of race have been recognised in the civil courts throughout India.

After a dicussion on this subject in the Legislative Assembly in September 1921, the following motion was adopted:—That in order to remove all racial distinctions between Indians and Europeans in the matter of their trial and punishment for offences, a committee be appointed to consider what amendments should be made in the provisions of the Code of Criminal Procedure, 1898, which differentiate between Indians and European British subjects and American and Europeans who are not British subjects in criminal trials and proceedings and to report on the best methods of giving effect to their proposals."

High Courts.

The highest legal tribunals in India are the High Courts of Judicature. These were constituted by the Indian High Courts Act of 1861 for Bengal, Bombay and Madras, and later for the United Provinces and the Punjab superseding the old supreme and Sudder Courts. The Judges are appointed by the Crown; they hold office during the pleasure of the Sovereign; at least one-third of their number are barristers, one-third are recruited from the judicial branch of the Indian Civil Service, the remaining places being available for the appointment of Indian lawyers. Trial by jury is the rule in original criminal cases before the High Courts, but juries are never employed in civil suits in India.

For other parts of India High Courts have been formed under other names, the chief difference being that they derive their authority from the Government of India, not from Parliament. In Burma there is a Chief Court, with three or more judges; in the other provinces the chief appellate authority is an officer called the Judicial Commissioner. In Sind the Judicial Commissioner is termed Judge of the Sudder Court and has two colleagues.

The High Courts are the Courts of appeal from the superior courts in the districts, criminal and civil, and their decisions are final, except in cases in which an appeal lies to His Majesty in Council and is heard by the Judicial Committee of the Privy Council in England. The High Courts exercise supervision over all the subordinate courts. Returns are regularly sent to them at short intervals and the High Courts are able, by examining the returns, by sending for proceedings, and by calling for explanations, as well as from the cases that come before them in appeal, to keep themselves to some extent acquainted with the manner in which the courts generally are discharging their duties.

Lower Courts.

The Code of Criminal Procedure provides for the constitution of inferior criminal courts styled courts of session and courts of magistrates. Every province, outside the Presidency towns, is divided into sessions divisions, consisting of one or more districts, and every sessions division has a court of session and a sessions judge, with assistance if need be. These stationary sessions courts take the place of the English Assizes, and are competent to try all accused persons duly committed, and to inflict any punishment authorised by law, but sentences of death are subject to confirmation by the highest court of criminal appeal in the province. Magistrates' courts are of three classes with descending powers. Provision is made and largely utilised in the towns, for the appointment of honorary magistrates; in the Presidency towns Presidency magistrates deal with magisterial cases and benches of Justices of the Peace or honorary magistrates dispose of the less important cases.

Trials before courts of session are either with assessors or juries. Assessors assist, but do not bind the judge by their opinions; on juries the opinion of the majority prevails if accepted by the presiding Judge. The Indian law allows considerable latitude of appeal. The prerogative of mercy is exercised by the Governor-General-in-Council and the Local Government concerned without prejudice to the superior power of the Crown.

The constitution and jurisdiction of the inferior civil courts varies. Broadly speaking, one district and sessions judge is appointed for each district: as District Judge he presides in its principal civil court of original jurisdiction; his functions as Sessions Judge have been described. For these posts members of the Indian Civil Service are mainly selected though some appointments are made from the Provincial Service. Next come the Subordinate Judges and Munsiffs, the extent of whose original jurisdiction varies in different parts of India. The civil courts, below the grade of District Judge, are almost invariably presided over by Indians. There are in addition a number of Courts of Small Causes, with jurisdiction to try money suits up to Rs. 500. In the Presidency Towns, where the Chartered High Courts have original jurisdiction, Small Cause Courts dispose of money suits up to Rs. 2,000. As Insolvency Courts the chartered High Courts of Calcutta, Bombay and Madras have jurisdiction in the Presidency towns. In the mofussil similar powers were conferred on the District Courts by the Insolvency Act of 1906.

Coroners are appointed only for the Presidency Towns of Calcutta and Bombay. Elsewhere their duties are discharged by the ordinary staff of magistrates and police officers unaided by jurors.

Legal Practitioners.

Legal practitioners in India are divided into Barristers-at-Law, Advocates of the High Court, Vakils and Attorneys (Solicitors) of High Courts, and Pleaders, Mukhtiars and revenue agents. Barristers and Advocates are admitted by each High Court to practise in it and its subordinate courts; and they alone are admitted to practise on the original side of some of the chartered High Courts. Vakils are persons duly qualified who are admitted to practise on the appellate side of the chartered High Courts and in the Courts subordinate to the High Courts. Attorneys are required to qualify before admission to practise in much the same way as in England. The rule that a solicitor must instruct counse

prevails only on the original side of certain of the High Courts. Pleaders practise in the subordinate courts in accordance with rules framed by the High Courts.

Organisation of the Bar.

At Calcutta, Madras, and Bombay there is a Bar Committee presided over, *ex officio*, by the Advocate-General. This body is elected by the barristers practising in each High Court, and its functions are to watch the interests of the Bar and to regulate its etiquette. At Allahabad, Lahore, Nagpore, and Rangoon a similar Bar Committee exists, but the electorate is extended to include the vakils or native pleaders, and the president is either the senior practising member of the Bar or the Government Advocate. In the larger Districts and Sessions Courts, an organisation representing the Bar is usually to be found, and in the subordinate Courts, including the Revenue Courts, similar machinery is generally in use. Pending an opportunity of detailed inquiries in India, these general descriptions must suffice.

Composition of the Bar.

A considerable change is occurring in the composition of the Indian Bar. The following extract from an informing article in the *Times* (May 25, 1914) indicates the character and incidence of this development "During the last forty years, a striking change has taken place in the professional class. The bulk of practice has largely passed from British to Indian hands, while, at the same time, the profession has grown to an enormous extent. One typical illustration may be quoted. Attached to the Bombay High Court in 1871 there were 38 solicitors, of whom 10 were Indian and 28 English, and 24 advocates, of whom 7 were Indian and 17 English. In 1911, attached to the same High Court, there were 150 solicitors, of whom more than 130 were Indian and the remainder English, and 250 advocates, of whom 16 only were English and the remainder Indian."

Law Officers.

The Government of India has its own law colleague in the Legal Member of Council. All Government measures are drafted in this department. Outside the Council the principal law officer of the Government of India is the Advocate-General of Bengal, who is appointed by the Crown, is the leader of the local Bar, and is always nominated a member of the Provincial Legislative Council. In Calcutta he is assisted by the Standing Counsel and the Government Solicitor. There are Advocates-General and Government Solicitors for Bombay and Madras, and in Bombay there is attached to the Secretariat a Legal Remembrancer and an Assistant Legal Remembrancer, drawn from the Judicial Branch of the Indian Civil Service. The Government of Bengal consults the Bengal Advocate-General, the Standing Counsel and the Government Solicitor, and has besides a Legal Remembrancer (a Civil Servant) and a Deputy Legal Remembrancer (a practising barrister); the United Provinces are equipped with a civilian Legal Remembrancer and professional lawyers as Government Advocate and Assistant Government Advocate; the Punjab has a Legal Remembrancer, Government Advocate and a Junior Government Advocate; and Burma a Government Advocate, besides a Secretary to the Local Legislative Council.

Sheriffs are attached to the High Courts of Calcutta, Madras and Bombay. They are appointed by Government, selected from non-officials of standing, the detailed work being done by deputy sheriffs, who are officers of the Court.

Law Reports.

The Indian Law Reports are published in four series—Calcutta, Madras, Bombay, and Allahabad, under the authority of the Governor-General in Council. They contain cases determined by the High Court and by the Judicial Committee on appeal from the particular High Court. These appeals raise questions of very great importance, and the Council of Law Reporting for England and Wales show their appreciation by printing the Indian Appeals in a separate volume, and have also compiled a digest of Indian Appeals covering the period 1874-1893. The other Provinces and States have series of reports issued under the authority either of the Judiciary or the State.

Legislative Power.

The supreme power of Parliament to legislate for the whole of India cannot be questioned. In practice, however, this power is little used, there being a majority of officials on the Imperial Legislative Council—a majority deliberately reserved in the India Councils Act of 1909—the Secretary of State is able to impose his will on the Government of India and to secure the passage of any measure he may frame, regardless of the opinion of the Indian authorities. Legislative Councils have been established both for the whole of India and for the principal provinces. Their constitution and functions are fully described in detailing the powers of the Imperial and Provincial Councils (q. v.). To meet emergencies the Governor-General is vested with the power of issuing ordinances, having the same force as Acts of the Legislature, but they can remain in force for only six months. The power is very little used. The Governor-General-in-Council is also empowered to make regulations, having all the cogency of Acts, for the more backward parts of the country, the object being to bar the operation of the general law and permit the application of certain enactments only.

Bengal Judicial Department.

Sanderson, The Hon'ble Sir Lancelot	Chief Justice.
Teunon, The Hon'ble Mr. William, I.C.S.	Puisne Judge.
Woodroffe, The Hon'ble Sir John George, M.A., Bar.-at-Law.	Ditto.
Mukharji, The Hon'ble Sir Ashutosh, Kt., C.S.I., M.A., D.L.	Ditto.
Richardson, The Hon'ble Mr. Thomas William, I.C.S., Bar.-at-Law.	Ditto.

Bengal Judicial Department—*contd.*

Walmsley, The Hon'ble Mr. Hugh, I.C.S.	Puisne Judge.
Rankin, The Hon Mr. George Claus, Bar-at-Law ..	Ditto.
Greaves, The Hon'ble Mr. William Ewart	Ditto.
Chatarji, The Hon'ble Sir Nalini Ranjan, M.A., B.L. ..	Ditto.
Newbould, The Hon'ble Mr. B. B.	Ditto.
Beachcroft, The Hon'ble Mr. Charles Porten, I.C.S. ..	Ditto.
Ghosh, The Hon. Mr. Charu Chander, Bar.-at-Law ..	Ditto.
Buckland, The Hon. Mr. Justice Pullip Lindsay, Bar.-at-Law.	Ditto.
Pearson, The Hon. Mr. Justice Herbert Grayhurst, Bar.-at-Law.	Ditto. (Additional.)
Suhrawardy, The Hon. Mr Justice Zahhadur Rahim Zahid, Bar.-at-Law.	Ditto (do.)
Cunning, The Hon. Mr. Justice Arthur Herbert, I.C.S.	Ditto. (Acting).
Panton, The Hon. Mr. Justice Edward Brookes Henderson.	Ditto. (do.)
Gibbons, The Hon'ble Mr. Thomas Clarke Pilling, K.C.	Advocate-General.
Mitra, B. L., Bar.-at-Law	Standing Counsel.
Kesteven, The Hon'ble Mr. Charles Henry	Government Solicitor.
Duval, The Hon. Mr. H. P., I.C.S.	Superintendent and Remembrancer of Legal Affairs.
Orr, John Williams, Bar.-at-Law..	Deputy Superintendent and Remembrancer of Legal Affairs.
Ram Charan Mitra	Senior Government Pleader.
Sadhu, Rai Bahadur Tarak Nath	Public Prosecutor, Calcutta.
Hechle James, Herbert	Registrar, Keeper of Records, Taxing Officer, Accountant-General, and Sealer, etc., Original Jurisdiction.
Remfry, Maurice	Registrar in Insolvency, Original Side.
Nalini Mohan Chatarji, Bar.-at-Law	Master and Official Referee.
Ryper, George	Dy. Registrar.
Moses, O., Bar.-at-Law	Clerk of the Crown for Criminal Sessions.
Kirkham, Joseph Alfred	Secretary to the Chief Justice and Head Clerk, Decree Department.
Edgley, Norman George Armstrong, I.C.S.	Registrar and Taxing Officer, Appellate Jurisdiction
Counsell, Frank Bertram	Deputy Registrar.
Paulit, Peter Sydenham	Assistant Registrar.
Kinney, Alexander	Administrator-General and Officia Trustee.
Bonnerjee, K. K. Shelly, Bar.-at-Law	Official Receiver, sub. *pro tem.*
Dobbin, F. K., Bar.-at-Law	Coroner of Calcutta.
Falkner, George McDonald	Official Assignee.
Bose, B.D., Bar.-at-Law	Editor of Law Reports.

Bombay Judicial Department.

Macleod, The Hon. Sir Norman Cranstoun, Bar-at-Law.	Chief Justice.
Shah, The Hon'ble Sir Lallubhai Asharam, M.A., LL.B.	Puisne Judge.
Marten, The Hon. Mr. A. B.	Ditto. (On furlough).
Pratt, The Hon. Mr. Edward Millard, I.C.S.	Ditto.
Crump, The Hon'ble Mr. Louis Charles, I.C.S.	Ditto. (On furlough).
Fawcett, The Hon'ble Mr Charles Gordon Hill, I.C.S.	Ditto
Abdeali Muhammadali Kaziji, The Hon. Mr.	Ditto.
Kemp, The Hon. Mr. Norman Wright, Bar.-at-Law ..	Ditto.
Kincaid, The Hon. Mr. Charles Augustus	Ditto.
Strangman, The Hon'ble Sir T. J.	Advocate-General.
Wild, Arthur Clement, B.A., I.C.S.	Remembrancer of Legal Affairs.
Norman, Douglas Reay, B.A., I.C.S.	Assistant Remembrancer of Legal Affairs.
Bowen, J. C. G.	Government Solicitor and Public Prosecutor.
Campbell, Henry	Clerk of the Crown.
Kemp, K. Mac I., Bar.-at-Law	Reporter to the High Court.
Mitchell, H. C. B..	Administrator-General and Official Trustee.
Phirozshah Behramji Malbari, Bar.-at-Law	Prothonotary, Testamentary and Admiralty Registrar.
Hirjibhai Hormasji Wadia, M.A.	Master and Registrar in Equity and Commissioner for taking Accounts and Local Investigations, and Taxing Officer.
Currimbhoy, Mr. Mahomedbhai	Sheriff.
Arthur Fasken Kindersley, B.A., I.C.S.	Registrar, Appellate Side.

Bombay Judicial Department—*contd.*

Nasarwanji Dinshahji Gharda, B.A., LL.B.	Deputy Registrar and Sealer, Appellate Side.
King, A. R.	Sub. *pro tem.* Coroner.

COURT OF THE JUDICIAL COMMISSIONER OF SIND.

Kincaid, The Hon. Mr. Charles Augustus, C.V.O., I.C.S.	Judicial Commissioner (Acting High Court Judge.)
Calcraft-Kennedy, B.C.H., I.C.S.	Additional Judicial Commissioner (Acting Judicial Commissioner).
Madgaonkar, Govind Dinanath, B.A., I.C.S.	Addl. Judicial Commissioner (Ag.)
Kemp, Norman Wright	Ditto. (Acting High Court Judge).
Raymond, Edward	Ditto.
Aston, Arthur Henry Southcote, M.A., Bar-at-Law ..	Ditto. (Acting).

Madras Judicial Department.

Schwabe, Sir Walter	Chief Justice.
Oldfield, The Hon'ble Mr. Francis Du Pre, I.C.S. ..	Puisne Judge.
Spencer, The Hon'ble Mr. Charles Gordon, I.C.S. ..	Ditto.
Trotter, The Hon'ble Mr. Victor Murray Coults ..	Ditto.
Ayling, The Hon'ble Sir William Bock, I.C.S.	Ditto.
Ramesam Pantulu, The Hon. Mr. V.	Ditto.
Odgers, The Hon. Mr. Charles Edwin, M.A., B.C.L ..	Ditto.
Phillips, The Hon. Mr. William Watkin, I.C.S. ..	Ditto.
Kumarswami Shastri, The Hon'ble Diwan Bahadur C. V.	Ditto.
Napier, The Hon. Mr. Charles Frederick	Ditto.
Krishnan, The Hon. C. Dewan Bahadur, M.A., Bar-at-Law	Ditto.
Ramaswami Ayyar, C.P., B.A., B.L.	Advocate-General.
Brightwell, Henry	Government Solicitor.
Madhavan Nair, C., Bar.-at-Law	Government Pleader.
Adam, J. C., Bar-at-Law	Public Prosecutor.
Tirunarayana Achariyar, M.A.	Senior Law Reporter.
Cornish, H. D., Bar.-at-Law	Administrator-General and Official Trustee.

* Details not given of 42 Bombay suits in 1906; 56 Madras suits in 1906, 96 in 1907, 74 in 1908, 92 in 1909, 376 in 1910, 71 in 1911, 64 in 1912, 22 in 1913, and 28 suits in 1914: 370 Bengal suits in 1909: and 49 Delhi suits in 1913 and 84 in 1914.

(a) Excludes 4 suits before Village Panchayats in 1918, the information as to their value not being available.

THE INDIAN POLICE.

The Indian Government employ 202,792 (in 1918) Officers and men in the Indian Police The total cost of maintaining the Force is Rs. 4,330,890 according to the latest figures available, but this total has been considerably raised in the past year or two on account of increases of pay and allowances made on account of the increased cost of living. In large cities, the Force is concentrated and under direct European control; in the mofussil the men are scattered throughout each District and located at various Outposts and Police Stations. The smallest unit for administrative purposes is the Outpost which generally consists of 3 or 4 Constables under the control of a Head Constable. Outpost Police are maintained to patrol roads and villages and to report all matters of local interest to their superior, the Sub-Inspector. They have no powers to investigate offences and are a survival of the period when the country was in a disturbed state and small bodies of Police were required to keep open communications and afford protection against the raids of dacoits. It is an open question whether they are now of much use. Each Outpost is under a Police Station which is controlled by an officer known as a Sub-Inspector.

Distribution of Police.—The area of a Police Station varies according to local conditions. The latest figures available are: —

—	Average area per Police Station.	Average number of Regular Civil Police per 10,000 of Population.
	Square miles.	
Bengal *	126	4·8
Assam	616	5·3
United Provinces	127	7·7
Punjab	203	10 3
North-West Frontier Province	179	19·8
Central Provinces and Berar	242	8·6
Burma *	487	13·4
Madras	144	8·0
Bombay *	252	15·0

* Excluding the towns of Calcutta, Bombay and Rangoon. The figures include the Railway police, but not Military police.

Organisation of Police.

The Police Station Officer (the Sub-Inspector) is responsible for the investigation of all cognisable crimes, that is to say, all offences in which the Police can arrest without a warrant from a Magistrate, which occur within his jurisdiction; he is also held responsible for the maintenance of the public peace and the prevention of crime. From the point of view of the Indian Ryot, he is the most important Police Officer in the District and may rightly be considered the backbone of the Force.

Superior to the Sub-Inspector is the Inspector who holds charge of a Circle containing 4 or 5 Police Stations. His duties are chiefly those of supervision and inspection. He does not ordinarily interfere in the investigation of crime unless the conduct of his subordinates renders this necessary.

The Inspector is usually a selected and experienced Sub-Inspector. Each District contains 3 or 4 Circles, and in the case of large Districts, is divided into 2 Sub-divisions—one of which is given to an Assistant Superintendent of Police, a European gazetted Officer. The Police Force in each District is controlled by a District Superintendent of Police, who is responsible to the District Magistrate (Collector or Deputy Commissioner) for the detection and prevention of crime and for the maintenance of the public peace, and, to his Deputy Inspector-General and Inspector-General, for the internal administration of his Force. Eight or ten Districts form a Range administered by a Deputy Inspector-General, an officer selected from the ranks of the Superintendents. At the head of the Police of each Province is the Inspector-General who is responsible to the Local Government for the administration of the Provincial Police.

Separate but recruited from the District Force is the Criminal Investigation Department, which is under the control of a specially selected European Officer of the rank and

standing of a Deputy Inspector-General. The Criminal Investigation Department, usually called the C. I. D., is mainly concerned with political inquiries, sedition cases and crimes with ramifications over more than one District or which are considered too important to leave in the hands of the District Police. It is a small force of Sub-Inspectors and Inspectors who have shown their ability and intelligence when working in the mofussil and forms in each Province a local Scotland Yard.

The larger Cities of Calcutta, Bombay, and Madras have their own Police Force, independent of the Inspector-General of Police, and under the control of a Commissioner and 2 or more Deputies. For Police purposes each city is divided into divisions; in Calcutta each division is in charge of a Deputy Commissioner of Police; in Bombay and Madras of a Superintendent, these officers being selected from the European ranks of the City Force. In Bombay, however, the Superintendents are Gazetted Officers, and two of them are Indians. Each division is sub-divided into a small number of Police Stations, the station being in charge of an Inspector assisted by a Deputy Inspectors Indian Sub-Inspectors and European Sergeants

The Supreme Government at Delhi and Simla keeps in touch with the Provincial Police by means of the Director of Criminal Intelligence and his Staff. The latter do not interfere in the Local Administration and are mainly concerned with the publication of information regarding international criminals, inter-provincial crime and Political inquiries in which the Supreme Government is interested.

Recruitment.—The constable is enlisted locally. Certain castes are excluded from service and the formation of cliques by filling up the Force from any particular caste or locality is forbidden. In some Provinces a fixed percentage of foreigners must be enlisted. Recruits must produce certificates of good character and pass a medical test. They must be above certain standards of physical development. The constable rises by merit to the rank of Head Constable and, prior to the Police Commission, could rise to the highest Indian subordinate appointments. Since 1906, his chances of promotion have been greatly curtailed; this has certainly lowered the standard coming forward for service in the Force in the lower ranks.

The Sub-Inspector, until 1906, was a selected Head Constable, but Lord Curzon's Commission laid down that Sub-Inspectors should be recruited direct from a socially better class of Indians. In most Provinces, eighty per cent. of the Sub-Inspectors are selected by nomination, trained for a year or 18 months at a Central Police School, and, after examination, appointed direct to Police Stations to learn their work by actual experience. It is too early to judge this system by results, but it has no doubt great disadvantages and undetected crime in India is increasing rapidly.

An Inspector is generally a selected Sub-Inspector. Direct nomination is the exception, not the rule.

The Deputy Superintendent, a new class of officer, instituted on the recommendation of the Commission, is an Indian gazetted officer and is the native Assistant to the District Superintendent of Police. He is either selected by special promotion from the ranks of the Inspectors or is nominated direct, after a course at the Central Police School.

Prior to 1893, the gazetted ranks of the Force were filled either by nomination or by regimental officers seconded from the Army for certain periods. In 1893, this system was abandoned and Assistant Superintendents were recruited by examination in London. On arrival in India, they were placed on probation until they had passed their examinations in the vernacular, in law, and in riding and drill. The establishment of Police Training Schools in 1906 has done much to improve the training of the Police Probationer, and selection by examination has given Government a better educated officer, but open competition does not reveal the best administrators and should be tempered, as in the Navy, by selection.

Internal Administration.—The District Force is divided into 2 Branches—Armed and Unarmed. As the duties of the armed branch consist of guarding Treasuries, escorting treasure and prisoners and operating against dangerous gangs of dacoits, they are maintained and controlled on a military basis. They are armed and drilled and taught to shoot after military methods. The unarmed branch are called upon to collect fines magisterially inflicted, serve summonses and warrants, control traffic, destroy stray dogs, extinguish fires, enquire into accidents and non-cognizable offences. The lower grades are clothed and housed by Government without expense to the individual. The leave rules are fairly liberal, but every officer, European or Native, must serve for 30 years before he is entitled to any pension, unless he can obtain a medical certificate invaliding him from the service. This period of service in an Eastern climate is generally admitted to be too long and the efficiency of the Force would be considerably improved if Government allowed both the officers and men to retire after a shorter period of service.

STATISTICS OF POLICE WORK.

The undesirability of attaching undue importance to statistical results as a test of the merits of police work was a point upon which considerable stress was laid by the Indian Police Commission, who referred to the evils likely to result from the prevalence among subordinate officers of an impression that the advancement of an officer would depend upon his being able to show a high ratio of convictions, both to cases and to persons arrested, and a low ratio of crime. The objection applies more particularly to the use of statistics for small areas; but they cannot properly be used as a basis of comparison even for larger areas without taking into account the differences in the conditions under which the police work; and, it may be added, they can at the best indicate only very

imperfectly the degree of success with which the police carry out that important branch of their duties, which consists in the prevention of crime. These considerations have been emphasized in recent orders of the Government of India. Subject to these observations, the figures below may be given as some indication of the volume of work falling upon the police, and of the wide differences between the conditions and the statistical results in different provinces:—

Administrations	Number of Offences reported.	Number of Persons under Trial.	Persons whose cases were disposed of				Persons remaining under Trial at the end of the Year.

JAILS.

Jail administration in India is regulated generally by the Prisons Act of 1894, and by rules issued under it by the Government of India and the local governments. The punishments authorised by the Indian Penal Code for convicted offenders include transportation, penal servitude, rigorous imprisonment (which may include short periods of solitary confinement), and simple imprisonment. Accommodation has also to be provided in the jails for civil and under-trial prisoners.

The origin of all jail improvements in India in recent years was the Jail Commission of 1889. The report of the Commission, which consisted of only two members, both officials serving under the Government of India, is extremely long, and reviews the whole question of jail organization and administration in the minutest detail. In most matters the Commission's recommendations have been accepted and adopted by Local Governments, but in various matters, mainly of a minor character, their proposals have either been rejected *ab initio* as unsuited to local conditions, abandoned as unworkable after careful experiment or accepted in principle but postponed for the present as impossible.

The most important of all the recommendations of the Commission, the one that might in fact be described as the corner stone of their report, is that there should be in each Presidency three classes of jails: in the first place, large **central jails** for convicts sentenced to more than one year's imprisonment; secondly, **district jails**, at the head-quarters of districts; and, thirdly, **subsidiary jails** and "lock-ups" for under-trial prisoners and convicts sentenced to short terms of imprisonment. The jail department in each province is under the control of an Inspector-General; he is generally an officer of the Indian Medical Service with jail experience, and the Superintendents of certain jails are usually recruited from the same service. The district jail is under the charge of the civil surgeon, and is frequently inspected by the district magistrate. The staff under the Superintendent includes, in large central jails, a Deputy Superintendent to supervise the jail manufactures, and in all central and district jails one or more subordinate medical officers. The executive staff consists of jailors and warders, and convict petty officers are employed in all central and district jails, the prospect of promotion to one of these posts being a strong inducement to good behaviour. A Press Note issued by the Bombay Government in October, 1915, says:—"The cadre and emoluments of all ranks from Warder to Superintendent have been repeatedly revised and altered in recent years. But the Department is not at all attractive in its lower grades. The two weak spots in the jail administration at the moment are the insufficiency of Central Prisons and the difficulty of obtaining good and sufficient warders."

Employment of Prisoners.—The work on which convicts are employed is mostly carried on within the jail walls, but extra-mural employment on a large scale is sometimes allowed; as, for example, when a large number of convicts were employed in excavating the Jhelum Canal in the Punjab. Within the walls prisoners are employed on jail service and repairs, and in workshops. The main principle laid down with regard to jail manufactures is that the work must be penal and industrial. The industries are on a large scale, multifarious employment being condemned, while care is taken that the jail shall not compete with local traders. As far as possible industries are adapted to the requirements of the consuming public departments, and printing, tent-making, and the manufacture of clothing are among the commonest employments. Schooling is confined to juveniles; the experiment of teaching adults has been tried, but literary instruction is unsuitable for the class of persons who fill an Indian jail.

The conduct of convicts in jail is generally good, and the number of desperate characters among them is small. Failure to perform the allotted task is by far the most common offence. In a large majority of cases the punishment inflicted is one of those classed as "minor." Among the "major" punishments fetters take the first place. Corporal punishment is inflicted in relatively few cases, and the number is steadily falling. Punishments were revised as the result of the Commission of 1889. Two notable punishments then abolished were shaving the heads of female prisoners and the stocks. The latter, which was apparently much practised in Bombay, was described by the Commission as inflicting exquisite torture. Punishments are now scheduled and graded into major and minor. The most difficult of all jail problems is the internal maintenance of order among the prisoners, for which purpose paid warders and convict warders are employed. With this is bound up the question of a special class of well-behaved prisoners which was tried from 1905 onwards in the Thana Jail.

Juvenile Prisoners.—As regards "youthful offenders"—*i.e.*, those below the age of 15—the law provides alternatives to imprisonment, and it is strictly enjoined that boys shall not be sent to jail when they can be dealt with otherwise. The alternatives are detention in a reformatory school for a period of from three to seven years, but not beyond the age of 18; discharge after admonition; delivery to the parent or guardian on the latter executing a bond to be responsible for the good behaviour of the culprit; and whipping by way of school discipline.

The question of the treatment of "young adult" prisoners has in recent years received much attention. Under the Prisons Act, prisoners below the age of 18 must be kept separate from older prisoners, but the recognition of the principle that an ordinary jail is not a fitting place for adolescents (other than youthful habituals) who are over 15, and therefore ineligible for admission to the reformatory school, has led Local Governments to consider schemes for going beyond this by treating young adults on the lines followed at Borstal, and considerable progress has been made in this direction. In 1905, a special class for selected juveniles and young adults was established at the Dharwar

jail in Bombay; in 1908 a special juvenile jail was opened at Alipore in Bengal; in 1909 the Meiktila jail in Burma and the Tanjore jail in Madras were set aside for adolescents, and a new jail for juvenile and "juvenile adult" convicts was opened at Bareilly in the United Provinces; and in 1910 it was decided to concentrate adolescents in the Punjab at the Lahore District jail, which is now worked on Borstal lines. Other measures had previously been taken in some cases; a special reformatory system for "juvenile adults" had, for example, been in force in two central jails in the Punjab since the early years of the decade, and "Borstal enclosures" had been established in some jails in Bengal. But the public is slow to appreciate that it has a duty towards prisoners, and but little progress has been made in the formation of Prisoners' Aid Societies except in Bombay and Calcutta, though even in those cities much remains to be done.

Reformatory Schools.—These schools have been administered since 1899 by the Education department, and the authorities are directed to improve the industrial education of the inmates, to help the boys to obtain employment on leaving school, and as far as possible to keep a watch on their careers.

Transportation.—Transportation is an old punishment of the British Indian criminal law, and a number of places were formerly appointed for the reception of Indian transported convicts. The only penal settlement at the present time is Port Blair in the Andaman Islands.

Commission of Enquiry, 1919.—A committee was appointed to investigate the whole system of prison administration in India with special reference to recent legislation and experience in Western countries. The constitution of the committee is as follows: Chairman: the Hon'ble Sir Alexander Cardew, K.C.S.I., Member of the Executive Council, Madras. Members: the Hon'ble Sir James Du-Boulay, K.C.I.E., C.S.I., Secretary to the Government of India, Home Department; Lt.-Col. J. Jackson, C.I.E., I.M.S., Inspector-General of Prisons, Bombay; Lt.-Col. Sir Walter J. Buchanan, K.C.I.E., I.M.S., Inspector-General of Prisons, Bengal; Khan Bahadur Hamid Hussain, Delhi; Mr. D. M. Durai Raja, B.A., B.L., Madras; Mr. N. G. Mitchell-Innes, Inspector of Prisons, Home Office, London. Secretary: Mr. D. Johnston, I.C.S.

The Committee's inquiries had particular reference to the following subjects:—

(1) The efficiency and appropriateness of the existing systems of prison administration and restraint on liberty in India, including the Andamans and any settlements constituted under the Criminal Tribes Act, 1911; (2) the possibility of strengthening the reformatory influence of prison administration and discriminating in regard to the treatment of criminals of different classes and ages and, (3) the best means of assisting prisoners after release to regain a position in society.

[PROPOSED REFORMS.]

The report of the Committee was published in 1921 and is comprised in a bulky blue-book. Of the many recommendations made in it the following are the most important:—

General Propositions.—As far as possible, the superintendence of prisons should be in the hands of trained whole-time experts. The prison staff, from the jailor down to the warder, should be recruited with care, properly trained, and paid a salary sufficient to secure and retain faithful service. It is essential to provide that prisoners in jail shall be so classified and separated that the younger or less experienced shall not be contaminated and rendered worse by communication and association with the older or more hardened offenders. Prisoners, while in prison, should be brought under such influences as will not only defer them from committing further crime, but will also have a reforming influence on their character. It is very desirable, as far as practicable, to help such prisoners as may need assistance on their release from prison, so that they may be given a reasonable chance of securing an honest living,

Inspection and Superintendence.—A strict limit should be imposed on the number of prisoners collected in one prison; as a matter of principle the maximum should be fixed at 1,000 but for the present the maximum accommodation in any jail should not exceed 1,500. Subject to this maximum, the concentration of prisoners in central jails is desirable. In all Provinces the possibility of closing as many district jails as possible, and of collecting prisoners in central jails should be carefully considered.

Prison Establishment.—The present pay of the jailor class is insufficient and should in no case be less than Rs. 200 and should rise to at least Rs. 450 a month. In future, jailors should be gazetted officers.

A better class of warder is essential and therefore a higher scale of pay should be granted. The extent to which convict officers have been employed in Indian prisons is excessive and should be reduced. The duty of guarding prisoners in cells and dormitories at night should be entrusted only to paid officials and no convict officer should be outside his barrack at night. No convict officer should have independent charge of any file, gang, or other body of prisoners.

Classification.—Separate jails should be set apart for habitual prisoners. The existing definition of 'habitual' needs revision. The Inspector-General of Prisons should be empowered to confine with habituals any non-habituals of depraved or vicious character.

Simple Imprisonment.—This should be of two kinds (*a*) without liability to labour, and (*b*) with liability to light labour. All simple imprisonment should be of class (*b*) unless a court, not being of a lower grade than that of a first class magistrate, otherwise orders. Class (*a*) prisoners who do not elect to work should receive non-labouring diet, while other simple imprisonment prisoners should receive labouring diet.

Jail Labour and Manufactures.—In the selection of prison labour the main object to be kept in view should be the reformation of the criminal. The principal mode of employment for long-term prisoners should be intramural. The greater benefit to the prisoner will be conferred by giving him instruction in up-to-date methods of labour, and so fitting

him for free life under modern conditions. To enable this to be effectively carried out, it is necessary that, as far as possible, attention should be concentrated in each jail on one or two main industries. It is necessary to provide a market for the goods so produced and, therefore, jail industries should be adapted to meet the needs of the consuming departments of Government; those departments should be compelled to purchase articles of jail manufacture where they are similar in quality to, and not of greater price than, those obtainable in the open market To produce goods similar in quality to those obtainable in the open market, power-driven machinery in jails is essential and the existing restrictions on its use should be withdrawn. The use of power machinery in jails is justifiable, because it enables the prisoner to be given the class of labour best calculated to interest and instruct him, and to train him to habits of industry and application, and because it increases production and tends to give increased relief to the taxpayer. Jail manufactures should be carefully chosen so as to do the least possible injury to private enterprise, and with this object they should avoid competition with weak and unorganised trades or budding industries, and should be directed to those channels in which large and organised industries are already in existence.

Prison Discipline.—The principles established by the Conference of 1892 that every offence committed by a prisoner must be dealt with by the superintendent of the prison and not by any subordinate authority, and that every punishment must be recorded in the punishment book should be maintained. The award of corporal punishment should be restricted to mutiny or incitement to mutiny, and to serious assaults on public servants or visitors. The maximum period of separate confinement that may be awarded at one time should be reduced to three months. The prison punishment of solitary confinement should be abolished.

Reformatory Influences.—Remission should be extended to sentences of six months and over. The amount of remission which an ordinary convict can earn should be two days a month for conduct and two days a month for industry. Interviews and letters are a valuable reformative influence and the rules on the subject should be made as liberal as possible. Provision for education should be made in all central and district jails, but such education should be restricted for the present to prisoners not over the age of 25. The education provided should not go beyond the elementary stage, and should, wherever possible, include a certain amount of annual training. Endeavours should be made to provide religious and moral instruction for all prisoners in jail. A Hindu, Mahomedan, Buddhist or Christian Minister should be appointed to every central and district jail in which any considerable numbers of prisoners of those religions respectively are confined and should, if necessary, be paid a retaining fee.

Assistance on Release.—A central association for the assistance of released prisoners should be set up in the capital city of each Province; and local societies should be formed for each central or district jail outside the capital city. The societies should be mainly non-official in character, but the superintendent and medical officer of the prison and the sessions judge or magistrate of the district should be ex-officio members of the managing body of the local society, and the non-official visitors should be invited to join it. Financial assistance given to the societies from public funds should bear a certain proportion to the amount collected from the public; a statement of accounts should be submitted to Government each year through the central association.

The Child Offender.—The definitions of child and young person embodied in the English Children Act, 1908, and in the Madras Children Act, 1920, should be adopted generally in India, namely, (*a*) a child means a person under the age of fourteen and (*b*) a young person means a person who is fourteen but under sixteen. The commitment to prison of children and young persons, whether after conviction or while on remand or under trial is contrary to public policy and sentences of imprisonment should in the case of children and young persons be made illegal as in England. Remand homes should, as far as possible, be provided for children and young persons under remand or pending trial or inquiry. When there is no remand home, the court should endeavour to make suitable arrangements for the custody of any child or young person who is under remand. If any court finds it unavoidable to commit a child or young person to prison for safe custody, it should at once submit a special report to the district magistrate on the subject. The creation of children's courts for the hearing of all cases against children and young persons is desirable, and the procedure in such courts should be as informal and as elastic as possible. Probation officers should be appointed to aid the courts in obtaining information about children and to supervise them after release.

The Adolescent Criminal.—An adolescent means a person between the ages of sixteen and twenty-one, but power should be taken to extend the age to twenty-three. Adolescent offenders should not be sent to ordinary jails, but should be confined in separate jails or institutions to which no adult prisoners are sent.

Probation.—The proposal to amend section 562, Criminal Procedure Code, by rendering it applicable to offences punishable with imprisonment for not more than three years and extending it to offences under any special or local law, and the other proposals on this subject of the Committee appointed to revise the Code of Criminal Procedure, are generally suitable. In deciding whether a case is suitable for release on probation, the whole of the circumstances should be taken into account. Power should be taken to require a person placed on probation to pay a fine, damages, or compensation for injury or loss caused, and to be subject to such conditions as may be included in the probation order. Probation officers should be appointed as far as possible, and private individuals may also be recognised as probation workers. The Police should not be employed as probation officers, nor should they exercise supervision over, or interfere in any way with, a person placed on probation.

Fines and Short Sentences.—Those sections of the Indian Penal Code, under which imprisonment must be awarded when a conviction occurs, should be amended so as to give discretion to the court. Sentences of imprisonment for less than twenty-eight days should be prohibited.

The Indeterminate sentences.—The sentence of every long-term prisoner should be brought under revision, as soon as the prisoner has served half the sentence in the case of the non-habitual, and two-thirds of the sentence in the case of the habitual, remission earned being counted in each case. The revision should be carried out by a Revising Board, composed of the Inspector-General of Prisons, the Sessions Judge and a non-official. In all cases, the release of a prisoner on parole should be made subject to conditions, breach of which would render him liable to be remanded to undergo the full original sentence. The duty of seeing that a prisoner fulfils the conditions on which he was released should not be imposed upon the police or upon the village headman, but special officers, to be termed parole officers, should be appointed for the purpose. These parole officers should possess a good standard of education, though not necessarily a university degree, and should both protect and advise the released prisoner and report breaches of the conditions of release.

Transportation and the Andamans.—If any fresh attempt at colonisation is made, it should be in an entirely new locality. A fresh attempt at colonisation in the Middle Andaman is not recommended. The retention of the settlement at Port Blair on the present lines is not recommended. The entire abandonment of the Andamans as a place of deportation is not recommended. Deportation to the Andamans should cease, except in regard to specially dangerous prisoners and any others whose removal from Indian jails is considered by the Government to be in the public interests. The existing restrictions as to age and physical condition of prisoners sentenced to transportation to the Andamans should, unless special medical grounds exist in any particular case, cease to apply. The Indian Penal Code should be amended by the substitution of rigorous imprisonment for transportation. In provinces where the available prison accommodation will not permit of the immediate cessation of deportation of all but selected prisoners, the Star class should be the first, and the habitual the last, to be detained in Indian jails. No female should in future be deported to the Andamans, and those now there should be brought back to India and distributed among the Provinces to which they belong. In those Provinces where the jails are insufficient to detain prisoners now deported, additional accommodation should be provided as soon as possible.

Criminal Tribes.—The first essential of success in dealing with the criminal tribes is the provision of a reasonable degree of economic comfort for the people. It is therefore of paramount importance to locate settlements where sufficient work at remunerative rates is available. Large numbers of fresh settlers should never be sent to a settlement without first ascertaining whether there is work for them. Commitment to settlements should, as far as possible, be by gangs not by individuals. It is desirable to utilise both Government and private agency for the control of settlements.

The variations of the jail population in British India during the five years ending 1919 are shown in the following table :—

——	1919	1918	1917	1916.	1915.
Jail population of all classes on 1st January	122,158	115,589	115,731	122,282	112,015
Admissions during the year	696,568	605,242	547,810	550,971	568,280
Aggregate	818,726	720,831	663,541	673,253	680,295
Discharged during the year from all causes	698,591	598,673	547,931	557,525	558,008
Jail population on 31st December ..	120,135	122,158	115,610	115,728	122,287
Convict population on 1st January ..	100,220	95,468	102,208	107,806	98,963
Admissions during the year	200,442	166,303	160,556	173,441	180,466
Aggregate	300,662	261,771	262,764	281,247	279,429
Released during the year	195,164	156,373	165,575	175,587	168,508
Transported beyond seas	1,208	1,471	1,544	1,535	1,486
Casualties, &c.	3,584	4,590	2,452	2,900	2,618
Convict population on 31st December.	101,617	100,220	95,468	102,208	107,811

The daily average number of prisoners, which had steadily decreased since 1908, rose slightly in 1913 to nearly the figure of 1911. The fall in 1912 was, however, largely attributable to the release of convicts and civil prisoners on the occasion of the Delhi Durbar. The increase in 1913 was distributed among all provinces except the United Provinces of Agra and Oudh and Coorg, in which the figures continued to show decreases.

More than one-half of the total number of convicts received in jails during 1919 came from the classes engaged in agriculture and cattle tending, over 172,000 out of 200,000 are returned as illiterate.

The percentage of previously convicted prisoners was 14·10 as against 13·85 in 1918 while the number of youthful offenders rose from 364 to 471. The following table shows the **nature and length of sentences** of convicts admitted to jails in 1917 to 1919 :—

Nature and Length of Sentence.	1919.	1918.	1917.
Not exceeding one month	45,130	37,061	39,063
Above one month and not exceeding six months.	83,535	66,466	63,124
„ six months „ „ one year ..	37,979	34,018	31,488
„ one year „ „ five years ..	26,045	22,371	21,154
„ five years „ „ ten „ ..	3,866	2,966	2,564
Exceeding ten years	239	309	212
Transportation beyond seas—			
(*a*) for life	2,011	1,385	1,313
(*b*) for a term	828	859	705
Sentenced to death	863	763	752

The total daily average population for 1919 was 104,690 the total offences dealt with by criminal courts was 167, and by Superintendents 128,606. The corresponding figures for 1918 were 97,253,169 and 131,532 respectively.

The total number of corporal punishments again showed a decrease, *viz.*, from 217 to 189. The total number of cases in which penal diet (with and without solitary confinement) was prescribed was 5,687 as compared with 4,628 in the preceding year.

Total expenditure increased from £750,826 to £1,009,781, and total cash earnings from £96,450 to £167,854; there was, consequently, an increase of £186,326 in the net cost to Government.

The death rate decreased from 41·97 per mille in 1918 to 26·63 in 1919. The admissions to hospital were lower, and the daily average number of sick fell from 36·65 to 30·27. The chief causes of death were tubercle of the lungs, dysentery and pneumonia.

The Laws of 1921

BY

RATANLAL AND DHIRAJLAL

(*Editors, "Bombay Law Reporter"*).

1. Indian Tea Cess (Amendment) Act.—The object of the present amendment in the Indian Tea Cess Act (IX of 1903) is to raise the maximum rate of the cess levied on Indian tea from one-quarter of a pie per pound to eight annas per hundred pounds. The proceeds of the cess are, it will be remembered, devoted to the propaganda work in connection with the consumption of tea in India and abroad.

2. The Legislative Assembly (Deputy President's Salary) Act.—The Legislative Assembly of India, constituted under the New Reforms, required the services of a salaried Deputy President. An office has, therefore, been created ; and the salary of the incumbent is fixed at Rs. 1,000 *per mensem*, which becomes payable only for " the period during which he is engaged on work connected with the business " of the Assembly.

3. The Civil Procedure Code (Amendment) Act.—Under Section 55 of the Civil Procedure Code of 1908, as soon as a judgment-debtor arrested in execution of a decree for the payment of money, is brought before the Court and expresses his desire to apply to be declared insolvent, he is automatically released from custody. This provision conflicts with Section 23 of the Provincial Insolvency Act V of 1920, which makes such release depend on the discretion of the Court. This conflict is avoided by making the provision in the Code to depend on the discretion of the Court.

4. The Import and Export of Goods (Amendment) Act.—The provisions of the Import and Export of Goods Act XI of 1916 have been extended for another period of a year ending with the 31st March 1922.

5. The Indigo Cess (Amendment) Act.—The Indigo Cess Act III of 1918 levied cess on indigo at the rate of " one rupee per maund of 82-2/7 pounds avoirdupois." The maximum rate is now raised to "one rupee eight annas per hundredweight of one hundred and twelve pounds avoirdupois."

6. The Indian Finance Act, 1921.—The Indian Administration have every year to devise means to provide for the increased expenditure in almost all branches of its service. This increase presses heavily in two directions. First, the salaries have to be raised ; and the general costs and expenses have also proportionately grown. To meet these, the Legislature have to pass a measure permitting additional taxes. The increase has this year been divided into three branches : (1) tariff ; (2) post ; (3) income and super tax.

Under the first head of tariff, the general *ad valorem* import duty has been raised from 7½ per cent. to 11 per cent., except in the case of matches and certain articles of luxury. The machinery and stores imported for use in cotton mills are no longer free of duty, but amenable to the general tax. Hitherto match-boxes were liable to an import duty of 7½ per cent. That duty is replaced by a specific import duty of 12 annas per gross boxes of matches. Duty on liquors is increased to 3 annas per degree of proof per gallon. Certain articles of luxury, *e.g.*, confectionery, gun-powder, motor cars, clocks and watches, electroplated ware, musical instruments, glass bangles and beads, gold and silver plate, silk piece-goods, cinematograph films, fire-works, ivory, jewellery, prints engravings and pictures, pneumatic rubber tyres and tubes, smokers' requisites and toys, are all subjected to an *ad valorem* duty of 20 per cent. The import duty on sugar has been raised from 10 to 15 per cent.; while that on tobacco, by 50 per cent.

There are drastic changes in the second head of post. The intensely popular one-pice post card was almost guillotined, but escaped miraculously. It will remain the poor man's friend and the businessman's help. The rates on letters have undergone a change. Letters weighing ½ tola and under bear ½ an anna postage ; those weighing up to one tola can take 9 pies stamp ; and those weighing from one tola to 2½ tolas will bear 1 anna postage. The postage on book, pattern and sample packets has been raised so that half an anna is to be paid for every five tolas of weight In the case of registered newspapers, the lower rate of one pice per every eight tolas has remained unchanged ; but the maximum limit of weight for half-anna post has been cut down from 40 tolas to 20 tolas. The rate on parcels also is doubled. It is now two annas for every twenty tolas.

The changes in the income tax and super tax rates are equally great. The untaxable minimum is preserved at Rs. 2,000. The income from Rs. 2,000 to Rs. 5,000 is taxed at five pies in the rupee ; that from Rs. 5,000 to Rs. 10,000 at six pies in the rupee ; and the one from Rs. 10,000 to Rs. 20,000 at nine pies in the rupee. The income of Rs. 20,000 to Rs. 30,000 is taxed at one anna in the rupee ; the one of Rs. 30,000 to Rs. 40,000 at one anna and two pies in the rupee ; while that of Rs. 40,000 to Rs. 50,000 at one anna and four pies in the rupee. The rates of refund are also proportionately raised but in the reverse order. The super-tax up to income of Rs. 3,00,000 has remained stationery. The tax on incomes from Rs. 3,00,000 to Rs. 3,50,000 has been raised from 36 pies to 42 pies ; while incomes of Rs. 3½ lacs and above are subjected to a tax of 48 pies in place of 36 pies in the rupee.

7. The Calcutta University Act.—The change of the seat of Government of India from Calcutta to Delhi necessitated the change of

relationship between the Governor-General of India and the Calcutta University. The Calcutta University is brought into intimate touch with the Governor of Bengal, who is now to be its Chancellor.

8. **The Hindu Transfers and Bequests (City of Madras) Act.**—The lay mind is apt to revolt at the Rule of Perpetuity. The rule forbids the tying up by a person of his property, whether by a transfer in his own life-time or by a will to operate on his death, beyond the life-time of one or more persons living at the date of the transfer or the decease and minority of some person who shall be in existence at the expiration of that period. The rule is against the inborn sentiment of the Hindu or the Mahomedan. The Mahomedan has escaped from the rigour of the rule by the Mussulman Wakf (Validating) Act of 1914. The Hindu has been able to modify its effect by a provision that such transfer or disposition shall not be invalid merely by reason only that the transferee or legatee was an unborn person at the date of the transfer or the death of the testator This modification was effected in the Madras City by the enactment of Madras Act I of 1914, for the rest of India it was done by Act XV of 1916. The Madras High Court held recently that the Madras Act could not operate in the City of Madras, as the Madras Legislature had no power to curtail the rights of citizens in the City, which were governed by the Hindu Law as it stood when the Royal Charter Act, 24 and 25, Vic. c. 104 was passed. To remove this doubt, the present Act has been passed.

9. **The Enemy Missions Act.**—During The Great War it was found that a number of Missions were tainted by German influence or were in fact German Missions. The British Government transferred the management of those Missions to the various custodians of enemy property, during the existence of the War. The management has since been transferred to the Boards of Trustees in different parts of the country. The trustees have since been carrying on the educational, religious and charitable work of the displaced missions. The above arrangement has received legislative sanction by this Act.

10. **The Indian Marine (Amendment) Act.**—The object of this measure is to obviate a difficulty in procedure in the trial of a Royal Indian Marine Officer by an Indian Marine Court. Before the Court could be assembled, the sanction of the Governor-General in Council had to be obtained; this resulted in great delay of the trial. It is now provided that the sanction of the Director of Marine is sufficient. This will expedite hearing of cases by the Marine Court.

11. **The Indian Works of Defence (Amendment) Act.**—The Amendments sought to be made in the Indian Works of Defence Act VII of 1903 are of a formal nature and are necessitated by the recent change in the organisation of the Army in India.

12. **The Negotiable Instruments (Amendment) Act.**—The Negotiable Instruments Act XXVI of 1881 was amended last year by providing for excuse of delay in making presentment for payment when the delay was caused by circumstances beyond the control of the holder. This was embodied in Section 75-A, which was copied from Section 46 (i) of the English Bills of Exchange Act, 1882. The scope of Section 75-A is now extended so as to excuse delay in presentment for acceptance. Further, the time-limit within which bills are to be accepted for presentment is extended from twenty-four hours to forty-eight hours.

13. **The Carriers (Amendment) Act**—The liability of a common carrier in India is brought into a line with the liability of the Indian Railway. The present Act modifies the liability of the common carrier, in the case of scheduled articles not declared under Section 3 of the Act, for loss or damage arising from negligence on his part or on that of his agents or servants. The liability of the common carrier in this country is now similar to that in England.

14. **The Indian Lac Cess Act.**—An export duty is levied at the rate of four annas per maund in the case of lac and two annas per maund in the case of refuse lac, exported from any customs port to any port beyond the limits of British India (Section 3). The proceeds of the cess are to be handed over to the Lac Association, who are to apply it to measures for the promotion of improved methods of cultivation and manufacture of lac (Section 4). The proceeds of the lac cess remaining unexpended, when Sections 2 to 6 should cease to be in force shall vest in His Majesty (Section 8).

15. **The Indian Post Office (Amendment) Act.**—It has been found that dutiable articles received by post from beyond British India are not systematically appraised. It is therefore enacted by Section 24-A that any Officer of the Post Office may be empowered to deliver any postal article received from beyond British India and suspected to contain any thing liable to duty, to a Customs authority who shall deal with it under the provisions of the Customs Act, 1898.

16 **The Indian Penal Code (Amendment) Act.**—This Act purges the Indian Penal Code of a piece of barbaric penalty. The sentence of forfeiture, whatever fascination it might be deemed to possess in bye-gone ages, is now universally regarded as an offensive anacronism. On account of its apparent cruelty it is rarely put into practice. The Legislature has wisely removed a *brutum fulmen* by repealing Sections 61 and 62 of the Code. The offences under Sections 121, 121-A and 122, which were visited with orders of forfeiture, are now relieved of their burden and made punishable with fine instead.

17. **The Cattle Trespass (Amendment) Act.**—The scale of fines imposed for the cattle impounded has been fixed by the Cattle Trespass Act as far back as 1871. The fixed scale operates alike throughout the country, independent of the local conditions. In the case of habitual trespass, the fine is usually doubled. This system is now done away with; and the new Section 12 regulates the scale of fees according to the varying circumstances of each province by notifications to be issued from time to time, by the Local Government concerned.

18. **The Maintenance Orders Enforcement Act.**—One of evils of the War was the desertion of wives by their husbands, and of the children by their fathers at War. This led to orders passed by Courts for their maintenance. The orders required machinery to enforce them. But where the defaulting parent or husband went outside the jurisdiction of the Court, the matter was one for international convention Such a convention was held in 1916 and its resolutions were crystallised in an Act of the British Legislature. The present enactment is on the lines of the English Act. A provision is first of all made for reciprocal arrangements for enforcement of maintenance orders within the British Empire (Section 3). Maintenance orders passed in other parts of British Dominions are to be registered in British India(Section 4). Similarly, maintenance orders passed in British India can, where necessary, be transmitted to another reciprocating territory (Section 5). The Court of Summary Jurisdiction in British India has the power to make provisional maintenance orders against persons resident in His Majesty's Dominions outside British India (Section 6); and it has also the power to confirm maintenance order made out of British India (Section 7). Maintenance orders registered in British Indian Courts can be enforced as an order made by the Court itself (Section 8).

19. **Land Acquisition (Amendment) Act.**—The provisions of the Land Acquisition Act 1 of 1894 were, in their working, found deficient in not providing for sufficient appeals. It has been held by the High Court of Bombay in *Nathubhai* v. *Manordas* (14 Bombay Law Reporter, 325) and *Ahmedbhoy* v. *Waman* (16 Bombay Law Reporter, 72) that when a claim of less than Rs. 5,000 in value was decided by a lower Court, appeal from that decision lay, under Section 16 of the Bombay Civil Courts Act XIV of 1869, to the District Court. But there the right of appeal exhausted itself and no further appeal was permissible under the Act. It is now provided that in cases like these a further appeal lies to the High Court (Section 2). Again, it was held, by His Majesty's Privy Council, in *Rangoon Botatoung Company* v. *Collector of Rangoon* (14 Bombay Law Reporter, 833) and by the High Court of Bombay in *Special Officer, Salsette Building Sites* v. *Dosabhai* (14 Bombay Law Reporter, 1694) that when a claim valued at more than Rs. 10,000 has been decided by the High Court in appeal, no further appeal lay to the Privy Council from such decision. Section 2 now reenacts Section 54 in such a way as to provide appeals to the Privy Councils in all such cases.

The Legislative Session 1921.

The new Indian Legislature, consisting of Council of State and Legislative Assembly, was ceremoniously inaugurated by His Royal Highness the Duke of Connaught in Delhi on February 9.

Both Houses had held preliminary meetings.

The Council of State met on February 3, when the Hon. the President, Mr. A. P. Muddiman, C.S.I., C.I.E., first subscribed the oath and signed the roll and was followed in this duty by other Hon Members. The President announced that H E. the Governor-General had nominated the following members to be on the panel of chairmen.—The Hon. Mr V. S. Srinivasa Sastri, the Hon. Sir Alexander R Murray, the Hon. Mr. Maneckji Dadabhoy and the Hon Sir Dinshaw Wacha. The Council met again on February 5 for other formal business. The President announced that at the first meeting after the inauguration, Government proposed after minor Legislative business to take up the Hon Mr Srinivasa Sastri's Resolution for the appointment of a Committee to examine the Repressive Laws now on the Statute Book

The Legislative Assembly also met on February 3, when the President, the Hon. Mr. Alexander F. Whyte, led its Members in taking the oath and subscribing the roll. Nominations for the election of Deputy President were received and the names of Mr. Sachchidananda Sinha, Dr. Sir Deva Prasad Sarbadhikari and Dr. H. S Gour were duly proposed and seconded. The Assembly met again on February 5 when the ballot for the election of Deputy President was taken. The voting was Sir Sachchidananda Sinha 67, Dr. H. S. Gour 34, Sir Deva Prasad Sarbhadikari 22. The Government announced that at the first meeting of the Assembly after the inauguration a Resolution by Mr. Jamnadas Dwarkadas relating to the Administration of Martial Law in the Punjab would be taken up.

His Royal Highness the Duke of Connaught inaugurated the Legislature at a joint session in the Assembly Chamber. His Royal Highness entered the Chamber in procession and took his seat in a golden chair placed with a golden foot stool on a carpet of gold on a dais in the place duly occupied by the Presidential Chair.

H. E. the Viceroy, Baron Chelmsford, entered in procession immediately afterwards and took his seat in a similar chair immediately on the right of the Duke. The Presidents of the two Houses occupied chairs on the floor of the House facing the dais.

The Viceroy, who was wearing the robes of the Star of India, opened the proceedings with a lengthy speech in which he summarised the evolution of British Policy in India and in particular the gradual development of Constitutional Government. "The increasing association of the people of India with the work of Government," he said "has always been the aim of the British Government. In that sense a continuous thread of connection links together the Act of 1861 and the declaration of August, 1917. In the last analysis the latter is only the most recent and most memorable manifestation of a tendency that has been operative throughout British rule. But there are changes of degree so great as to be changes of kind, and this is one of them. For the first time the principle of autocracy, which had not been wholly discarded in all earlier reforms, was definitely abandoned; the conception of the British Government as a benevolent despotism was finally renounced; and in its place was substituted that of a guiding authority whose role it would be to assist the steps of India along the road that in the fulness of time would lead to complete self-government within the Empire. In the interval required for the accomplishment of this task, certain powers of supervision, and it need be of intervention, would be retained, and substantial steps towards redeeming the pledges of the Government were to be taken at the earliest moment possible."

The Duke of Connaught delivered a lengthy and deeply impressive address. He first read a message from the King Emperor. In this, His Majesty sent to the members of both the Indian Legislature and the Provincial Councils his congratulations and earnest good wishes. His Majesty said: "For years, it may be for generations, patriotic and loyal Indians have dreamed of Swaraj for their motherland. Today you have beginnings of Swaraj within my Empire, and widest scope and ample opportunity for progress to the liberty which my other Dominions enjoy" His Majesty emphasised the very special responsibilities vested upon the first representatives of the people in the new legislatures and declared that he would watch their work with untailing sympathy and resolute faith.

His Royal Highness said there was in history no parallel for the constitutional change which that day's function initiated. "Political freedom has often been won by revolution, by tumult, by civil war, at the price of peace and public safety. How rarely has it been the free gift of one people to another, in response to a growing wish for greater liberty and to growing evidence of fitness for its enjoyment; Such, however, is the position of India to day." His Royal Highness emphasised that as H. E. the Viceroy had observed, "the principle of autocracy has all been abandoned." He told the House that the Government would give the fullest possible effect consistent with their own responsibilities to Parliament to the principle of the new constitution that the policy and decisions of the Government of India should be influenced to an extent incomparably greater than hitherto by the views of Indian Legislature. His Royal Highness addressed a few words of personal sympathy to H. E. the Viceroy and formally declared duly open the Council of State and the Legislative Assembly. Finally he addressed to the Members of both Houses a few personal words. He noted the bitterness and estrangement that he saw around him and testified to His Majesty's deep concern at the terrible chapter of events in the Punjab. His Royal Highness made a personal appeal to all, "put in the simple words that come from my heart, not to be coldly and critically inter-

preted, to bury along with the dead past the mistakes and misunderstandings of the past, to forgive where you have to forgive and to join hands and to work together to realise the hopes that arise from to-day."

The Council of State again met on February 14. The first hour was given up to questions. Government then introduced the Code of Civil Procedure (Amendment) Bill and the Maintenance Orders Enforcement Bill. The Hon. Sir Maneckji Dadabhoy, by special permission, moved a recommendation to Government that the speeches delivered by H.R.H. the Duke of Connaught and H. E. the Viceroy at the inauguration ceremony be printed in all important vernaculars and freely distributed throughout the length and breadth of the country at the cost of Government. The Hon. Member and others who followed him referred to the epoch-making character of the two speeches and the resolution was carried unanimously.

The Hon. Mr. Srinivasa Sastri then moved for the appointment of a Committee to examine the Repressive Laws now on the Statute Book " and report whether all or any of them should be repealed, and, in cases where repeal is not necessary, whether the laws in question should be amended and, if so, how." Mr. Sastri specially referred to the Rowlatt Act, " the unblest mother, I must say, of a monstrous brood of evil," to the deportation Regulations from 1818 to 1827, to the Press Act, and to the Act authorising the Government of India to constitute special tribunals to try certain offences. He also mentioned the Seditious Meetings Act, the Newspapers Incitement to Offences Act and the Acts relating to conspiracies. He referred to H. R. H. the Duke of Connaught's references to the new era of political freedom in India and said it would be incongruous with the popular liberty now inaugurated if such laws continued on the Statute Book in their present form. Difficulties and misunderstandings, he said, there must be, in future, " but revolution and tumult and Civil War there need not be if history can teach and mankind can learn. That, sir, is non-violent co-operation, not non-co-operation, which may begin in non-violence and in professions of non-violence, but through the imperfections and weakness of the material on which it works, cannot but end in violence and bloodshed." The Hon. Mr. G S. Khaparde moved an amendment recommending the immediate repeal of five Repressive Laws. In a debate lasting some hours, numerous unofficial members supported the resolution and only one supported the amendment. The Hon. Sir William Vincent, Home Member of the Government of India, said he would not object to the resolution subject to certain minor Regulations. The amendment was negatived without the decision, three other amendments were withdrawn and the resolution was carried unanimously.

The Legislative Assembly, after the inauguration ceremony, held their first meeting on February 15. One hour having been devoted to questions, the President said that if as time went on the number of questions was as great as at present the House would have to find means for dealing with them. He reminded the Assembly of the special restrictions which the House of Commons had applied in a similar difficulty. The President then announced that he appointed Sir Deva Prasad Sarbhadhikari, Sir Jamsetji Jeejeebhoy, Sir Logie Pirie Watson and Chaudhuri Shahab-ud-Din as a panel of chairmen for the Assembly.

The Hon. Dr. T. B, Sapru, Law Member of Government, having introduced the Bill determining the salary of the Deputy President at Rs. 1,000 per annum, and the Hon. Sir Thomas Holland, Member of Commerce and Industry, having introduced the Indian Tea Cess (Amendment) Bill, Mr. Jamnadas Dwarkadas moved his resolution recommending Government to declare the connection of India with the British Empire to be based on the principle of equal partnership and perfect racial equality, to express regret that the Martial Law Administration in the Punjab in 1919 departed from these principles, to mete out deterrent punishments to officers who were found guilty and to relieve Indian Revenue of payments in pensions or otherwise to them and to assure adequate compensation to the families of those killed or injured.

The debate lasted for 5 hours, including an adjournment of 50 minutes for luncheon. Indian unofficial members in all parts of the House participated and the speakers on the Government Benches were H. E. the Commander-in-Chief, the Hon. Sir William Vincent, Sir Godfrey Fell and the Law Member, the Hon. Dr. Sapru. The unofficial speakers unanimously supported the resolution. The Commander-in-Chief as one who had only recently arrived in India and was therefore in no way connected with the disturbances in 1919 declared himself " fully alive to the mistakes and the errors that were committed." He impressed upon the House how the army " dread the day " when they are called upon to aid the Civil Power in the suppression of disturbances and repudiated " any idea that the repressive measures that may be necessary should be intended directly to influence any other situation at a distance from the immediate seat of the disturbance itself." The Hon. Sir William Vincent, after referring to the want on murders and crimes of violence by which the very structure of the administration had been threatened in the Punjab, admitted that " on the other hand we have overdrastic and severe punishment, the excessive use of force and acts which have been interpreted as calculated to humiliate the Indian people in a manner which cannot but be regarded as unpardonable—morally indefensible at any time but more so than ever at a time when this country is about to enter upon a system of responsible Government." The Government of India, he said, repudiated any idea that force was to be used on any occasion in excess of the absolute requirements of the case. Government by the issue of a special manual for the use of officers and by other measures had taken every possible step to prevent the recurrence of such acts as had caused a blot on the administration of Martial Law in the Punjab.

Government expressed their disapproval of the improper acts that were committed there and their deep regret to those who had suffered through them. But the punishment of the officers concerned

should not, he said, be vindictive and he showed the House how severely the action already taken by Government in this respect had been felt. Mr. Darcy Lindsay, speaking on behalf of the elected European Members of the Assembly, supported the views and sentiments expressed by the Hon. the Home Member. Finally, yielding to an appeal by Mr. Eardley Norton, Mr. Jamnadas Dwarkadas, with the consent of the House, withdrew clause 3 of his resolution, calling for deterrent punishments to guilty officers, and the resolution as amended was unanimously adopted.

The Council of State met on February 16 for unofficial resolutions. First of these was one by the Hon. Lala Sukhbir Sinha recommending Government to have an Ayurvedic and Tibbi Medical College in every province, and to take measures to develop Indian drugs and to appoint vaidyas and hakims in every dispensary. It was thrown out by 32 votes to 11, after occupying the House up to the luncheon adjournment. The Hon. Mr. Maricair next moved for the removal of restrictions on the export of rice from India, but Government having shown their anxiety lest there should prove still to be a shortage of food supplies in India owing to the failure of winter rains, after the early cessation of the 1920 monsoon, the resolution was after full discussion withdrawn.

The Legislative Assembly again met on February 17 and proceeded with unofficial resolutions. The House had evidently received as a warning the fact that the discussion of two resolutions for a whole day by the Council of State on February 16 had wasted the opportunities of other unofficial Hon. Members to move resolutions. Rai J. N. Mujamdar Bahadur at the outset said he had a resolution sixth on the list, but that the five Hon. Members who had precedence of him were willing to let him move his resolution first. The President pointed out that if the Hon. Members chose, after having gained their precedence, to dispense with it in favour of others, that was not the business of the Chair, but they could only do so by withdrawing their resolutions and thereby depriving themselves of the rights legitimately won in the ballot and incurring the danger of not getting their resolutions discussed at all. The Rai Bahadur thereupon withdrew his request.

Mr. N. M. Samarth moved a resolution "that the Local Governments be given collectively a voice in determining the Military expenditure" and attempted to justify his proposal on the ground of the financial contributions contributed by the Provinces to the Government of India Exchequer. The Finance Member pointed out the practical difficulties of the suggestion and showed that the provincial contributions were also used for the Railway, Geological, Archæological, Survey and other departments, so that one might ask why should not the Provinces have a voice in the expenditure of every department. The resolution was negatived without a division.

Mr. Wali Mahomed Hussanally moved for the increase in the number of I. C. S. posts open to members of the Provincial Civil Service. Mr. S. P. O'Donnell, Home Secretary, said Government's view of this matter had nothing to do with the question of the Indianisation of the I.C.S. but, they objected, as the Public Services Commission had done, to making promotion from the Provincial Civil Service one of the main avenues of entrance to the I.C.S., their reason being the practical one that the Provincial Service was recruited to fill the minor charges in the Civil Administration, that the work of its members was not on the same level as that required of the I.C.S. and that the officers selected for promotion could only be chosen at a relatively late stage of their careers. After a prolonged debate, the resolution was adopted by 68 to 34.

A resolution by Rao Bahadur T. Rangachariar in favour of the improvement of the conditions of travel of 3rd class passengers was carried and the House after a further hour's debate also accepted the following terms of a resolution moved by Mr. P. S. Sivaswamy Iyer:—"This Assembly recommends to the Governor General in Council that notwithstanding anything contained in Parts I and II of the Report of the Esher Committee, the Army in India should be entirely under the control, real as well as nominal, of the Government of India, and should be free from any domination or interference by the War Office on matters of military policy, organisation or administration and that such co-ordination as may be desirable between the military policies and organizations of different parts of the Empire, should be secured by discussion and agreement, at Conferences at which India is adequately represented."

The Assembly sat again on February 19 for official business. The Indian Tea Cess Amendment Bill was passed, the Indian Penal Code Amendment Bill, the Indigo Cess Amendment Bill and the Import and Export of Goods Amendment Bill were introduced. The last named measure was required to be extended for another year to give Government power to control the export of food stuffs, coal, etc.

The House next proceeded with a series o official resolutions recommending the ratification by Government of various conventions and recommendations adopted by the Labour Conference held from October 29, 1919, and January 27, 1920, at Washington under Article 23 of the Covenant of the League of Nations, embodied in the Peace Treaty of Versailles. The resolutions were similarly adopted by the Council of State at a meeting of their held on February 21. The discussion by the Council was interrupted by a motion for adjournment by the Hon. Mr. Bhurgri in order to call attention to the views of Indian Mahomedans on the question of relations with Turkey, the motion being withdrawn after discussion.

When the Assembly met again on February 22 it adopted without discussion the Bill determining the salary of its Deputy President. The Indian Limitation Amendment Bill was referred to Select Committee. The Indigo Cess Amendment Bill and the Import and Export of Goods Amendment Bills were passed. On the motion of the Finance Member the House ordered the elections of eight of their members to the

Committee on Public Accounts and of not more than ten of their members, to which one should be added by the Governor-General, to the Standing Finance Committee. A Government resolution for the appointment of a Committee of officials and non-officials to examine the Press and Registration of Books Act of 1867 and Indian Press Act of 1910 and to report what modifications, if any, were required was adopted, after a debate, in which the Home Secretary stated that Government had introduced the motion in response to unofficial opinion and in which unofficial members expressed their appreciation, desire and determination to respond in the true spirit of co-operation

The Council of State again sat for unofficial resolutions on February 23 and the first motion was one by the Hon. Sir Maneckji Dadabhoy for the appointment of a Committee of both Houses " to explore the possibilities of improvement in the position of the existing Government stocks and to advise Government on the question of future loans, both for State purposes and for Railway and Irrigation purposes." Sir Maneckji specially emphasized the political trouble that might be caused by the almost unmarketable prices of Government 3 and 3½ per cent. stock. Mr. E. M. Cook, Financial Secretary, replying on behalf of Government, shared the Hon. Member's concern at the very great depreciation of Government's securities, but showed that there lay ahead the necessity for large loans for railway, irrigation and other capital or quasi-capital, productive or unproductive expenditure, which could obviously only be raised by further raising the rate of interest and consequently further depressing the older securities. He moved an amendment eliminating the recommendation for the appointment of a committee and transforming the resolution into one demanding that financial policy should be directed so as to ensure the rehabilitation of Government securities with due regard to the necessity of funding the temporary debt and to the provision of capital expenditure for productive purposes. The Finance Member, in strongly supporting the amendment, laid stress upon the difficulty of discussing publicly and in formal committees matters which might affect the finances of institutions which the members represented and of coming to any recommendations without materially affecting the money market and he showed the House that if the amendment be adopted, Government would consult everybody whose opinion might be of value. He showed that the securities of the Government of India had not dropped nearly so seriously as those of other countries and pointed out to the fundamental soundness of the Indian financial position. The amendment was accepted.

The Hon. Mr. Bhurgri moved a recommendation for early steps " to place the Universities of India on a more democratic basis." After considerable ventilation of unofficial views the resolution was withdrawn on the ground, to which the Hon. Mr. Shafi, Member of Education, drew attention, that education was a provincial subject.

The Hon. Mr. Lalubhai Samaldas raised an extremely interesting debate by moving that Government should address the Secretary of State with a prayer that they be granted " full fiscal autonomy under the direction of Indian Legislature." The outstanding features of the debate were speeches by Dr. Sapru, Sir William Vincent and Mr. Sastri. Explaining the present position Dr. Sapru pointed out that the Secretary of State could not formally grant what the resolution demanded without overriding the clear decision of the statute and that the effect of doing so would be even to deprive the Crown of its power of veto, which according to strict constitutional law, applied to the self-governing Colonies just as to India, though by the repeated exercise of convention through a long series of years the practice had grown that in regard to matters of a fiscal character decided by the Colonial Legislature the Crown did not as a matter of fact exercise that veto. Mr. Sastri endorsed Dr. Sapru's explanation and said " that what fiscal autonomy we ought to enjoy, has been granted to us as part of a large proposition that has been enunciated." He claimed that the demand for fiscal independence for India which was put forward by the Moderate deputation that visited England during the Joint Committee deliberations of the Government of India Bill " has been fully granted to us under the arrangements embodied in the Government of India Act and in the Joint Select Committee's report." The motion was finally accepted without a division, but amended by the addition of the words " Subject to the provisions of the Government of India Act."

When the Assembly again met on February 24 there was an interesting discussion on a resolution by Sardar Gulab Singh recommending special measures for the development of Female Education. Government's attitude was expressed by Mr. H. Sharp, Education Secretary, who said the Education Department had not asked the Governo.-General to disallow the resolution although it was a Provincial subject, but he said the position was as follows :—" If this Assembly passes this resolution, it is a recommendation to the Governor-General in Council. The Governor-General in Council cannot take that merely as a recommendation and continue to do nothing. He would have to send down some sort of recommendation to the Local Governments and that in the present circumstances, would constitute an undue interference with the work of Ministers." The Finance Member emphasized the same difficulty and the resolution was thrown out without a division. There followed an interesting discussion between the lawyers of the House on a resolution by Munshi Iswar Saran recommending Legislation " with a view to create an Indian bar, so as to remove all distinctions enforced by statute or by practice between barristers and vakils." The debate led to an exposure of the professional jealousies which exist among various sections of the Indian bar as already existing, according to whether its members are English trained or Indian trained. The Law Member said that to give effect to what the mover of the resolution intended by the motion, it would be necessary to overhaul the entire legal machinery. A feature of the debate was the tribute generally paid to the great value to the Indian Bar of the Barristers, whether English or Indian, trained

in England. Eventually the House adopted a Government amendment that before undertaking Legislation on the subject Government should consult the Provincial authorities and law associations.

Mr. Kamat then moved a resolution recommending that no action should be taken on Reports of Commissions or Committees appointed by the Secretary of State or by Government of India until the Indian Legislature has had an opportunity of discussing them. It was pointed out on behalf of Government that practice would not admit of such a resolution being carried out and the motion was accepted subject to a provision making it operative "as far as practicable."

The Annual Budget was introduced in the Legislative Assembly on March 1. The Finance Member enlarged upon the prevalent trade depression and estimated a deficit at 18¾ crores in the ensuing year. His main proposal for meeting this was an increase in the general import tariff from 7½ per cent. to 11 per cent this measure to produce with additional revenue of Rs 384 lakhs. Further tariff changes were proposed as follow :—

A specific import duty of 12as. per gross box, instead of the present *ad valorem* of 7½ per cent. on matches — Estimated to yield additional revenue of Rs. 110 lakhs.

A new scale of duties of imported liquors,— Estimated to yield an additional Rs. 94 lakhs

Increase of the general *ad valorem* duty of 7½ per cent. to 20 per cent.on article of luxury— Estimated to yield an additional Rs. 114 lakhs.

Increase of the import duty on foreign sugar from 10 to 15 per cent.—Estimated to yield an additional Rs. 65 lakhs.

Increase of 50 per cent. in the duty on tobacco other than manufactured tobacco —Estimated to yield an additional Rs. 40 lakhs.

The Finance Member further proposed a substantial increase in the surcharge imposed on railway rates in 1916, estimating an additional revenue of Rs. 5¼ crores in this source He also proposed an increase of postal rates to yield an additional Rs. 2½ crores and increase in the upper grades of income-tax, so as to work up to a maximum of 16, instead of 12 pies, per rupee as at present. The additional revenue obtainable from this source he estimated Rs. 7½ crores.

The additional taxation thus provided for amounted to Rs. 19,17 lakhs, a deficit of 18¾ crores for 1921-22 being thus converted into a surplus of Rs. 84 lakhs. All the proposals were to come into force on April 1 except the tariff increases, which would operate from March 1, the immediate introduction of the tariff changes and their operation for one month in the old financial year being estimated to yield an additional revenue during that year Rs. 70 lakhs, which would to that extent reduce the estimated deficit of 11⅞ crores in that year.

Discussion of the Budget began on March 7, when there was general criticism of the failure of Government to meet the deficit, at least in part, by more drastic curtailment of expenditure, though the taxation proposals met with general approval, subject to disagreement with details and to a wide demand for an increase of the general import tariff from 7½ to 12½, rather than to 11 per cent, this amount of additional taxation being deducted chiefly from that to be raised by increases of postal rates and railway freight. The debate, that in the Council of State and the debate in the Assembly on amendments made by the Council, continued almost daily until March 24, when the final approval of the Legislature to the Finance Bill was registered. The Budget was passed intact in all essentials, alterations being made only by the cutting of comparatively sums from items of expenditure here and there and by slight adjustments of the incidence of the new import duties. Concessions regarding the method of presenting the Budget were made by the Finance Member and established valuable precedents in procedure Some members of the Assembly on various occasions endeavoured to secure the opinion of the House against the exercise by the Council of State of amending powers in regard to Money Bills, but the weight of legal opinion was against this and when at last the Bill went to the Upper House the Council reinstated the half-anna letter post which had been deleted by the carriage of an unofficial amendment in the Assembly and everybody was glad of the rescue.

An important question that arose out of the Budget was that of building a temporary Chamber for the Assembly at Simla and of the completion of the new Capital of Delhi There was some hostility to the latter on the ground of economy, but the weight of opinion was in favour of completion There was strong feeling against voting money for another Chamber in Simla, because this seemed contrary to the indignation brought by many members from their constituencies against the hill station habit." Eventually, the money for completing the already partly built Simla Chamber was voted, it being pointed out that the building when finished with for Assembly purposes could be sold at a profit, and a resolution was carried urging Government to complete the Delhi buildings as quickly as possible, so that the flit to Simla should the sooner become unnecessary

Much discontent was expressed, during Budget discussions, against the withholding of the non-votable portion of the public expenditure, including military expenditure, from the discretion of the House. Government responded by taking the Legislature into their confidence on many matters of military policy, and in particular referred to a Committee of the Assembly the report of the Esher Committee for their consideration and report. The Committee was presided over by Dr. Sapru, Law Member, but otherwise consisted of fourteen unofficial members. It presented a unanimous report on March 21st and its recommendations took the form of fifteen Resolutions. These insisted on the purpose of the Army in India being the defence of India and the maintenance of peace within her borders and on its training being conducted with that in view. They stipulated that the army should not ordinarily be utilised outside India except for the defence of India and recommended various provisions for preserving the control of the Government of India over the Army, especially as against in-

terference by the Chief of the Imperial General Staff through the Commander-in-Chief. They demanded certain steps, including the reduction of the British ratio in the Army in India, and the formation of a short service territorial army, for the sake of economy, and the increase of facilities for Indians to enter commissioned rank. They also recommended the appointment of a Committee "adequately representative of non-official Indian opinion" to report upon military problems, especially with regard to India's claim to full responsible government and equality of status with the Dominions. The report was considered on March 28 and subject to minor amendments carried.

Among other matters of great importance was a Resolution recommending Government to ask local Governments "to stop all repressive measures now being used all over India." The main feature of the debate upon it was a speech by Sir William Vincent showing the character of the agitation being conducted by the non-co-operators and warning the House against weakening the hands of Government and their officers in face of it. This was followed by several unofficial speeches against the Resolution, and finally an amended Resolution was agreed to, making no reference to local Governments or repressive measures, but asking Government to "as far as possible avoid recourse to any proceedings under exceptional legislation in dealing with the non-co-operation movement."

Among numerous unofficial Resolutions and Bills, Mr. Seshagiri Aiyar in the Assembly secured the passage of a Bill to declare the rights of Hindus to make transfers and bequests in favour of unborn children. There was an interesting discussion on the possibility of codifying Hindu Law, though the resolution in favour of it was withdrawn, and Dr. Gour secured the passage of a resolution for the collection of opinions on the desirability of establishing a supreme court of appeal for all India.

There was also a resolution by Mr. N. M. Joshi, representative of Labour, recommending Government to introduce Legislation "for the registration of trade unions and for the protection of trade unionists and trade union officials from civil and criminal liabilities for *bona fide* trade union activities." The general burden of Mr. Joshi's argument was that trade union officials were at the present time in India considerably hampered in their activities by the present state of the latter regarding conspiracy and that in the interest of labour it was highly desirable they should be given the same freedom as union leaders enjoy in England. Eventually, the House accepted an amended resolution recommending Government to introduce "As soon as practicable . . . . such legislation as may be necessary for the registration of trade unions."

The second session of the new Legislature was held at Simla in September, 1921. His Excellency the Viceroy addressed a joint sitting of the two Houses on September 3rd. Both bodies unanimously resolved to present an address of welcome to His Royal Highness the Prince of Wales on his forthcoming visit and extended their welcome to H. E. Lord Reading on his assumption of the Viceroyalty. While this motion of welcome to the Viceroy was under discussion in the Council of State, Mr. Khaparde took advantage of the opportunity to suggest that the legislature should adopt the constitutional practice followed at Westminister of voting an address after the Speech from the Throne. The President promised to put forward some suggestions after consulting the President of the Assembly.

The question of further constitutional progress was raised by Rai Jadunath Mazumdar Bahadur, who moved a resolution for the grant of autonomy to the provinces and of responsibility in the Central Government on the termination of the term of the existing legislatures and for the grant of full Dominion Status at the end of nine years. The speeches indicated a wide divergence of opinion in the House. Sir William Vincent objected that the resolution was not consistent with the pronouncement of August 1917, the Government of India Act or the Joint Committee's Report. He asked the House as a practical body to consider whether after nine months of the working of the new Act, the British Parliament would ever agree to any change. He inquired if the Assembly was aware that out of the 250 millions residing in British India only one million were voters, and that out of that one million only 182,000, had recorded their votes. Responsible Government as he understood it, Sir William said, meant the transference of the power to the electorate. Could it be said that the electorate was sufficiently educated to understand the value of the franchise? Was there any guarantee that at the next election the non-co-operators would not come into these Councils in a majority and with their avowed object of paralysing the Government would exercise the same sanity and render the same help to the Government as the present Assembly? He warned the House against going too fast because it would hinder rather than expedite the pace of political reform in India. A Government amendment was finally accepted. It ran "that this Assembly recommends to the Governor-General in Council that he should convey to the Secretary of State the view of this Assembly that the progress made by India on the path of responsible Government warrants re-examination and revision of the present constitution at an earlier date than 1929".

Any doubts as to the powers of the Council to discuss the Budget were sought to be set at rest by Mr. Kale, on whose proposition an amendment of the Standing Orders enabling the Council to discuss the general principles of the Budget was accepted.

Sir Sivaswamy Aiyar brought forward a motion recommending the transfer of the judicial administration of the North Western Frontier Province to the Punjab High Court and the appointment of a committee to report on the expediency of the re-amalgamation of that province with the Punjab. Sir Sivaswamy contended that both the political and the judicial machinery of the North-Western Frontier Province was unsuitable and unsatisfactory, especially in the method of its working, and he described the state of affairs there as a scandal. He received general support from the non-official benches. Dr. Sapru on behalf of Government, challenged the indictments against the administration of the N. W. F. P., but he offered that Government should undertake its own private inquiry as to the advisability of the transference of the judicial machinery to the Punjab High

Court, and said that perhaps Government would appoint an Indian Additional Judicial Commissioner, Sir Sivaswamy refused the offer unless it was for a public inquiry, and as this was refused the motion was carried.

The Hon. Mr. Sethna in the Council of State moved that the administration of Aden should not be transferred to the Colonial office. Several non-official members including the Hon. Sir Dinshaw Wacha supported him. The Hon. Mr. Froom opposed and speaking from the commercial point of view stated that in the interests of the traders the proposed transfer was necessary, as Aden would then grow in importance as Singapore had grown. Mr. Bray said the attitude of the Government was one of benevolent neutrality, and that the growing expenditure on Aden weighed with them. It was bound to increase by five lakhs next year. He repeated the assurance that should this transfer take place the interests and the status of the Indians would be safeguarded. The resolution was carried, Government members not voting.

A great deal of time was devoted to discussions relating to the removal of racial disabilities and to the improvement of the status of Indians abroad. Mr. Samarth in the Assembly moved a resolution for the removal of distinctions between the Indian and European members of the Indian Civil Service in regard to criminal jurisdiction over European British subjects and also between Indians and Europeans in regard to the mode of trial, the sentence to be passed and the right of appeal. After considerable debate Sir William Vincent moved an amendment asking for the appointment of a committee to consider what amendment may be made in those provisions of the Criminal Procedure Code which differentiate between Indians and Europeans in criminal trials and proceedings and to report on the best methods of giving effect to their proposals. Mr. Rangachariar proposed an amendment to this expressly stating that the committee was appointed in order to remove racial distinctions. Sir William said that while Government recognised the principle of equality as indisputable the difficulty lay in giving practical effect to it. After a prolonged discussion the House finally agreed to Sir William's amendment, as amended by Mr. Rangachariar.

The Hon. Mr. Lalubhai Samaldas moved a resolution in the Council of State, demanding equality of status for Indians in East Africa Colonies and Protectorates as laid down in the Government of India's Despatch of 21st October, 1921. The Hon. Mr. Sarma in accepting the resolution promised that the Government would abide by the Despatch. The principle of equal citizenship had been re-enunciated and accepted at the Imperial Conference, and there could not be and would not be any deviation from that principle.

The position of Indians in the Secretariat and in regard to the highest appointments in the country also engaged the attention of the Legislature, Mr. Raza Ali moved a resolution in the Council of State, asking the Government to initiate a policy of appointing Indians to the offices of Secretary, Joint Secretary and Deputy Secretary in the Army, Marine, Education, Foreign, Political and Public Works Departments of the Government of India. Mr. Craik repudiated the suggestion that the posts were given to Europeans first as strongly as he repudiated the suggestion that they should be given to Indians simply because they were Indians. Efficiency was the sole test. He moved an amendment to the effect that Indians should be given opportunities for becoming qualified for the posts referred to and this was carried.

The Assembly rejected by 41 votes to 35 Lala Girdhari Lal Agarwala's motion regarding the desirability of equalising the number of Indians and Europeans in the posts of Governors, Chief Justices and Judges of High Courts by appointing Indians to the posts in the future till the deficiency was made up.

Mr. Subramanyam in the Assembly successfully moved a protest against the decision of the Council of Medical Education and Registration of the United Kingdom to withhold recognition from the medical diplomas of the Indian Universities until the practical training in midwifery given to medical students in India was improved.

Colonel Gidney moved for a committee to report on the enhancement of pensions in cases of those drawing an annual pension between Rs. 5,000 and Rs. 540, but his motion was negatived.

Saiyid Raza Ali moved a resolution in the Council of State recommending the removal of the highly centralised system of administration obtaining in this country under which many classes of officials, especially District Magistrates or Collectors, have vast powers. The consensus of opinion was against the resolution, and it was rejected.

Mr. T. P. Mukerjee in the Assembly brought forward a resolution recommending the separation of judicial and executive functions and urging the appointment of a committee for preparing a scheme for the purpose. The Hon. Sir William Vincent objected to the resolution on the ground that the matter was a provincial one and that the Government of India could not interfere, but the resolution was passed by 46 to 35.

Sir Maneckjee Dadabhoy in the Council brought forward a resolution that the Council be authorised, if necessary by statute, to receive from the public petitions on all matters. Mr. Craik pointed out that the question bristled with difficulties and it was referred to a small expert committee.

Mr. Joshi moved for the repeal of the Workmen's Breach of Contract Act No. XIII of 1859 and Sections 490 and 492 of the Indian Penal Code, on the ground that the Act made a civil offence a criminal offence and constituted class legislation which enabled the employers to prevent labourers from changing their masters. The basic principle of indentured labour, *viz.*, the liability to criminal punishment for a civil offence, about which they were protesting in other countries, Mr. Joshi contended, was being allowed to remain in India, and he maintained that it was nothing short of slavery. Mr. Kamat vigorously opposed the resolution. Sir William Vincent strongly repudiated the idea that the Government were helping the employers against the employed and pointed to legislation like the Trade Union Bill and the Compensation for Workmen Bill which indicated

the Government's solicitude for the welfare of labour. Mr. Joshi eventually withdrew his resolution.

Mr. Innes moved in the Assembly six resolutions, all of which were agreed to, relating to the recommendations of the Geneva Labour Conference, asking the Assembly not to ratify five recommendations as not touching India and urging that two of them should be further examined

In the Assembly Sir Vithaldas Thackersey brought forward a motion instructing the High Commissioner for India ordinarily to buy stores for India in the cheapest markets consistently with the quality and delivery, every deviation from this rule being communicated to the Government of India with reasons for the information of the Assembly. Mr A. C. Chatterji on behalf of the Government accepted the motion, provided that the cheapest market meant transactions, economical in the long run subject to abnormal conditions, and it was thus adopted.

A resolution that at the time of placing orders for materials required in India by Government, the High Commissioner should put them in the cheapest market for materials of the same quality, was moved in the Council of State by Mr. Lalubhai Samaldas and was strongly supported and agreed to.

A number of miscellaneous subjects also came up for discussion.

Professor S C. Shahani moved for the raising without any further delay, of capital needed for the construction of the Sukkur Barrage which, he said, would benefit not only Sind but the whole of India. Mr. Hailey argued that the financial situation of the Central Government was not encouraging as they had (meet the outstandings of treasury bills and unbacked paper currency notes and to face liability for loans which would be maturing and liabilities of a capital nature on central expenditure as well as demands that would be made in the near future for railway communications and transport facilities. The Sukkur Barrage, he maintained, must be financed only by the Bombay Government, though the Government of India would help to the utmost towards an early construction of the project. The motion, nevertheless, was adopted.

The Assembly agreed to Mr. Innes' motion for a committee of the Members of the Indian Legislature to report on the two specific recommendations of the Railway Committee relating to the separation of railway from general finance and to the requirements of the railways in regard to capital expenditure during the next ten years. In moving his resolution Mr. Innes remarked on the drastic nature of the recommendations. Mr. Venkatapati Raju opposed the motion, saying that the House should deal with the report comprehensively and not tackle particular issues only, leaving aside the bigger questions of the nationalisation of railways and the abolition of the Railway Board. Mr. Hailey urged that the question of finance should immediately be discussed as a decision thereon was essential.

Advantage was taken by members of both Houses of the Indian Legislature of the power they now enjoy of calling the attention of the Government to questions of urgent public importance by moving the adjournment to consider the situation in the Moplah country. In the Council of State Sir Maneckjee Dadabhoy raised the question In the Legislative Assembly Rao Bahadur T. Rangachariar, while approving of the declaration of martial law in the disturbed area, expressed his disappointment at the unpreparedness of the authorities in Malabar for the trouble and asked Government to be on their guard against any repetition in the Moplah country of the Punjab errors. Sir William Vincent urged that the whole trouble was chiefly due to the preachings of the extremist Khilafat agitators. He regretted that the tone of some of the speakers had not been quite in consonance with a message of hope and sympathy which they should have sent to officers facing great difficulties As for non-co-operation, Sir William declared that the Government's attitude towards it could not be changed by an isolated outbreak, although it viewed with anxiety the attempts to tamper with the loyalty of the troops. He hoped Government would have the support of the Assembly if it found it necessary to take action in this regard and remarked that unless the Council and the Assembly were prepared to vote more money for internal defence it would be difficult to deal with such risings.

The Legislative activities of the Assembly included the introduction of the Emigration Act Amendment Bill and there were introduced and passed through the Council and the Assembly Bills to amend the Negotiable Instruments Act, 1881, Indian Post Office Act, 1898, Indian Marine Act, 1887, Indian Works of Defence Act, 1903, and a Bill to provide for the levy of customs duty on lac exported from British India. The Bill to constitute a War Relief Trust for India, amalgamating balances of the War Relief Fund and the Patriotic and Indian Heroes' Fund, failed, as the Assembly refused to give leave for its introduction.

To give effect to the recommendations of the Committee appointed in pursuance of a resolution passed during the preceding session, Sir William Vincent introduced a Bill to repeal the Press Act, 1910, and the Newspaper (Incitement to Offences) Act, 1908, to make certain provisions in regard to the liability of editors of newspapers and to facilitate the registration of printers and publishers and to provide for the seizure and disposal of certain seditious documents. The Bill was referred to Select Committee. Sir William also presented reports of the Select Committees appointed last session on the Maintenance Orders Bill and on the Indian Penal Code Amendment Bill, and as amended by them the two Bills were passed by the Assembly. The Council of State also passed both these Bills. The amendment of the Indian Penal Code does away with the confiscation of property on conviction for the offence of waging war against the King and substitutes for it liability to fine. The Bill to amend the Indian Limitation Act was recommitted to an enlarged Select Committee. This was necessitated by certain provisions in the Bill which had caused apprehension in certain quarters and required careful consideration. Mr. Hailey's Bill to consolidate the law relating to Income-tax and Super-tax and to provide a new procedure and basis for future assessment, was referred to a Joint Committee chosen from both Houses.

While preserving the interest of the State the Bill seeks to save the tax-payer every unnecessary inconvenience and to make him feel less uncertain as to what he is really liable to pay instead of leaving his liability to vary with the varying interpretations which may be put on the law by Income Tax officials. Moreover, unlike the existing Income-Tax Act, which includes both matters of procedure and of administration and actually imposes the rate of tax, the new Bill deals with definition and procedure. It relates solely to matters of administration and method and does not seek to impose any particular rate of tax, which will be left as in England to the annual Finance Bill and will thus come up every year before the Legislature. Bills to amend the Code of Criminal Procedure and the Court Fees Act were committed to a Joint Committee and Bills to amend the Cattle Trespass Act and the Land Acquisition Act were passed, the latter with Sir Sivaswamy's amendment allowing appeals under the Act to the Privy Council, exactly in the same manner as is allowed under the Code of Civil Procedure. The Council of State passed both these bills in the form in which they had emerged from the Assembly.

The Criminal Procedure Code Amendment Bill, providing for the issue by Courts in British India of Commissions for the examination of witnesses in Courts in the Indian States, was passed by the Council of State, but in the Assembly it was postponed for further consideration, Dr Gour pointing out that the time was short and there was no provision for the punishment of witnesses who might commit perjury.

Mr. Seshagiri Iyer obtained leave to introduce a Bill to amend the Hindu law relating to the exclusion from inheritance of certain classes of heirs. On behalf of Government Dr Sapru said the official attitude would be one of neutrality towards the Bill till the opinions of the Local Governments and High Courts had been ascertained. Dr Gour introduced a Bill prescribing a registered instrument as necessary for a valid adoption, but after a long debate it was negatived by 57 votes to 50. Mr Rangachariar's motion to refer to Select Committee his Bill to amend the Transfer of Property Act was negatived as being retrograde. Mr. Seshagiri Iyer also introduced a Bill "to amend the Hindu law of inheritance in certain particulars and to remove certain doubts." Mr. Abdul Kassim introduced a Bill to provide for the registration of waqf estates and for the proper rendering of accounts by the mutwallis of such estates in British India. Mr. Latthe brought forward a Bill to amend the law relating to the emoluments claimable by Watandar Hindu priests so as to provide that no person shall be entitled to claim as a matter of right any ceremonial emoluments from any Hindu who does not call in the services of the priest claiming those emoluments. The Bill was, after some opposition, referred to Select Committee.

Supplementary estimates came up in the Assembly on the 22nd September. Mr. Hailey observed that although receipts under the Customs had fallen short the receipts under the other heads were quite up to expectations. Much, however, depended on the course of events during the next few months. The supplementary grants required amounted to Rs 3,43,32,000. Demands under most heads were carefully scrutinised and all were sanctioned except one. Objection was taken by Mr. Samarth to the demand for two lakhs rupees to meet the expenditure incidental to the proposed Indian tour of Lord Lytton's Indian Students' Committee. The opponents of this item contended that it was useless for a Committee mainly concerned with the removal of the grievances of Indian students in the United Kingdom to come out to India. Mr. Shafi pressed the necessity of the Committee's visit to India in order to enable it to grasp the real facts at both ends of the claim. He warned the House against the dangers of creating a precedent of refusing funds to an important committee which had deliberately come to the conclusion that an Indian tour was indispensable. The demand was rejected.

The Assembly agreed to a supplementary grant of a lakh of rupees towards the cost of the proposed Delegation of the Empire Parliamentary Association which was expected to visit India during the cold weather.

Mr Hailey having announced his desire to reduce the already sanctioned grant under Post and Telegraphs by two lakhs, the total demand as finally sanctioned stood at Rs. 3,39,32,000. This sum contained roughly only Rs. 1,19,00,000 as debitable to revenue, the remaining being debitable to capital on account of additional expenditure on railways, on the new Delhi, loans, etc. The total grant of Rs. 3,39,32,000, therefore, did not, in any way represent a total increased revenue expenditure such as would affect any expected surplus or deficit in the budget.

A noticeable feature of the discussion on the supplementary grants was the manner in which member after member of the Finance Committee supported the Government over the items, which had previously been passed by that body.

The deficit in Bengal having attracted the attention of the Central Government, Mr. Hailey moved that the contribution of 63 lakhs payable by the former to the Government of India be waived for three years. The Finance Member pointed out that at the lowest figure Bengal's deficit was between 120 to 130 lakhs and said the claims of Bengal could not be disregarded, especially in view of the political reaction that would result if the House refused the motion. He referred to the exceptional difficulties of Bengal and asked the Assembly to consider the question not in the interests of one province but of the whole of India. Mr. Venkatapatiraju moved to amend the resolution so as to provide for similar concessions to other provinces where financial difficulties existed. In the discussion which followed some members represented the difficulties of their own provinces, while others deprecated the spirit of Provincialism. Mr. Hailey in reply emphasised that it was within the competence of the House to show similar concessions to any other Province if necessity arose and it was therefore unnecessary to make the resolution vague by inserting in it Mr. Raju's amendment. The House rejected the amendment and adopted Mr. Hailey's motion.

Thus ended the second session of the new Legislature.

The Indian National Congress.

The following record of the early work of the Congress is written by the Hon. Sir Dinsha Wacha:—The Congress was practically founded in 1885 by the late Mr. Allan Octavian Hume, a retired member of the Indian Civil Service, and the son of the distinguished Joseph Hume, M.P., whose radicalism is so well known and who was one of the chief advocates of Retrenchment and Reform in the House of Commons in the forties or fifties. Mr. Hume had a distinguished career in the service. In his younger days when Collector and Magistrate at Etawah, he had rendered invaluable service in quelling the Mutiny in its incipient stage. For this service he was created a Civil Companion of the Bath, a rare honour in those days for a young Anglo-Indian Civil Servant. He retired from the service in 1883 after having honourably filled several high offices, the last of which was the Home Secretaryship of the Government of India. The policy of Lord Lytton's Government (1876-80) had aroused discontent in the country. The imposition of the Vernacular Press Act, commonly known as the Black Act, and the uncalled for hostilities with the Amir Shere Ali of Afghanistan which culminated in the Second Afghan War were the subject of much adverse criticism among the most moderate but enlightened Indians in all parts of the country. It was recognised in all quarters that the people should organise themselves by way of a conference to ventilate their grievances. Correspondence was passing among the Indian leaders of thought in the different provinces as to the formation of such a conference on a sound and permanent footing. The viceroyalty of Lord Ripon (1880-84) gave the necessary stimulus and encouragement. Thus by 1883, when Mr. Hume retired, the idea of the Conference had so far taken body and form that, with the sympathetic support of Mr. Hume, a Union was established after he had in 1883 the genuine support of many sterling friends of India in Parliament, especially John Bright and Mr. Stagg. Mr. Hume had been a silent but watchful observer of events and felt that he must give his active support to the movement, his heart being fully prepared to ameliorate the social, economical and political condition of the Indians. He was in close communication with the leaders in various provinces. Here it may also be worth while recording the fact that during the preliminary stage of the inception of the Congress, Mr. Hume, who had retired to Simla, had had the opportunity of consulting Lord Dufferin on the subject and it is a fact that His Lordship was at one with the object and greatly encouraged Mr. Hume in his mission. Subsequently after 1888 His Lordship, for reasons of his own, which have never been authoritatively declared, chose to assume a hostile attitude towards the organisation but it was effectually met by the speech which Mr. George Yule made in December 1888 at the Congress of Allahabad.

First Session.

Progress was so far made as to formulate the programme of a first meeting in Poona which at the time was the seat of great political activity. The Christmas week of 1885 was resolved upon for the inauguration of the Conference. Unfortunately, when the preparations were being made cholera broke out in the City of Poona and it was deemed unsafe to invite delegates there. Accordingly the seat of the first assembly was hurriedly transferred to Bombay under the auspices of the Bombay Presidency Association, with its then active honorary secretaries, Messrs. Pherozeshah M. Mehta, Kashinath Trimbuk Telang and Dinsha Edulji Wacha. It was at the same time resolved to christen it "The Indian National Congress," having regard to the fact that its principal aim was faithfully to echo the public opinion of all India. So many misleading statements were made during the earliest years of the Congress as to its aims and objects that it may be useful to relate what they are as laid down by Mr. Hume himself in a speech he made at Allahabad in 1888, on the eve of the session of the Fourth Congress at that centre. Firstly, he prefaced his enumeration of the objects by stating that "no movement in modern historical times has ever acquired, in so short a period, such an appreciable hold on the minds of India, none has ever promised such wide reaching and beneficent results." Further on, it was observed that "the Congress movement is only one outcome, though at the moment the most pronunent and tangible, of the labours of a body of cultured men, mostly born natives of India, who some years ago banded themselves together to labour silently for the good of India." As to the fundamental principles of the Congress they are:—

Firstly, the fusion into one national whole of all the different and discordant elements that constitute the population of India;

Secondly, the gradual regeneration along all lines, mental, moral, social and political of the nation thus evolved; and,

Thirdly, the consolidation of union between England and India by securing the modification of such of the conditions as may be unjust or injurious to the latter country.

The Split.

It was on the fundamental principles above stated that the Congress carried out its appointed work amidst much misrepresentation, obloquy and even abuse, till 1907 when an extreme faction of delegates deliberately chose to raise a split in the united camp. At the Congress held in Surat in that year the session had to be abandoned owing to the violent outbreak of the factional spirit of those who since have been known as "Extremists," in contrast with the overwhelming majority of those entertaining sober views who are called "Moderates;" but if the proceedings were for the time abandoned, it was not without the leading men immediately organising themselves on the spot to take ways and means for the holding of future congresses and for the purpose of framing a written constitution of which the most important part was the creed of the Congress. In other words, the unwritten aims and objects of the Congress were reduced to writing in a crystallised form. As such it may be repeated here, as it should dispel all doubts, misgivings or misunderstandings of the true aims and objects of the Congress.

"The objects of the Indian National Congress are the attainment by the people of India of a system of Government similar to that enjoyed by the self-governing members of the British Empire, and a participation by them in the rights and responsibilities of the Empire on equal terms with those members. These objects are to be achieved by constitutional means by bringing about a steady reform of the existing system of administration and by promoting national unity, fostering public spirit and developing and organising the intellectual, moral, economic and industrial resources of the country."

For some years following 1907 efforts were made to heal the split and these were without avail until 1916 when a re-united Congress met at Lucknow under the presidency of Babu Ambica Charan Muzumdar of Faridpur in Bengal. But the union then effected was purely superficial; the difference between the Moderates and the Extremists was fundamental; the Extremists captured the machinery of the Congress and from the period of the special session held at Calcutta in September 1920 the Congress passed entirely under the domination of Mr. Gandhi.

THE CONGRESS AND THE REFORMS.

The attitude of the Indian National Congress towards the Montagu-Chelmsford Scheme was fully summarised in the section Constitutional Reform in India in the Indian Year Book 1920. What is commonly known as the joint scheme of the Indian National Congress and the Moslem League which is discussed in the Montagu-Chelmsford Report will be found set out in the Indian Year Book for 1918, pp. 659, 660, 661, 662, 663, 664 and 665. As is shown in the section on Constitutional Reform the effect of this scheme was to sever the nominal unanimity between the Moderate and the Extreme Wings. The Congress went over entirely to the Extreme Wing and the Moderate Party set up its own organisation.

At the 1919-20 Session of the Congress, held at Amritsar, a qualified approval was given to the Scheme. This was expressed in the following resolutions:—

XIV.—(*a*) This Congress reiterates its declaration of last year that India is fit for full responsible government and repudiates all assumptions and assertions to the contrary wherever made.

(*b*) That this Congress adheres to the resolutions passed at the Delhi Congress regarding Constitutional Reforms and is of opinion that the Reforms Act is inadequate, unsatisfactory and disappointing.

(*c*) That this Congress further urges that Parliament should take early steps to establish full responsible government in India in accordance with the principle of Self-determination.

(*d*) Pending such introduction this Congress trusts that so far as may be possible they will so work the Reforms as to secure early establishment of full responsible government and this Congress offers its thanks to the Rt. Honourable E. S. Montagu for his labours in connection with the Reforms.

In the hot weather following the Amritsar Session of the Congress the report of the Hunter Committee on the disturbances in the Punjab was published. This aroused very bitter hostility in India. In order to deal with these and other political questions which had developed, a special session of the Indian National Congress was held at Calcutta in September under the presidency of Lala Lajpat Rai. This Congress was dominated by the influence of Mr. G. K. Gandhi who launched his non-co-operation programme and received the assent of a majority of the delegates. The cardinal features of the programme are set out in the following resolutions:—

"In view of the fact that on the Khilafat question both the Indian and Imperial Governments have signally failed in their duty towards the Musalmans of India and the Prime Minister has deliberately broken his pledged word given to them; and that it is the duty of every non-Moslem Indian in every legitimate manner to assist his Musalman brother in his attempt to remove the religious calamity that has overtaken him; and in view of the fact that in the matter of the events of April, 1919, both the said Governments have grossly neglected or failed to protect the innocent people of the Punjab and punish the officers guilty of unsoldierly and barbarous behaviour towards them and have exonerated Sir Michael O'Dwyer, who proved himself directly, or indirectly, responsible for most of the official crimes and callous to the sufferings of the people placed under his administration; and that the debate in the House of Commons and especially in the House of Lords betrayed a woeful lack of sympathy with the people of India and showed virtual support of the systematic terrorism and frightfulness adopted in the Punjab, and that the latest Viceregal pronouncement is proof of entire absence of repentance in the matters of the Khilafat and the Punjab:—

This Congress is of opinion that there can be no contentment in India without redress of the two aforementioned wrongs and that the only effectual means to vindicate national honour and to prevent a repetition of similar wrongs in future is the establishment of a Swarajya.

This Congress is further of opinion that there is no course left open for the people of India but to approve of and adopt the policy of progressive non-violent non-co-operation until the said wrongs are righted and Swarajaya is established.

And inasmuch as a beginning should be made by the classes who have hitherto moulded and represented public opinion and inasmuch as Government consolidates its power through titles and honours bestowed on the people, through schools controlled by it, through its law courts and its Legislative Councils, and inasmuch as it is desirable in the prosecution of the movement to take the minimum risk and to call for the least sacrifice compatible with the attainment of the desired object, this Congress earnestly advises:—

(*a*) Surrender of titles and honorary offices and resignation of nominated posts in local bodies;

(*b*) Refusal to attend Government levees, durbars and other official and semi-official functions held by Government officials or in their honour;

(*c*) Gradual withdrawal of children from schools and colleges owned, aided or controlled by Government and in place of such schools and colleges the establishment of national schools and colleges in the various provinces.

(*d*) The gradual boycott of the British Courts by lawyers and litigants and the establishment of private arbitration courts by them for the settlement of private disputes.

(*e*) Refusal on the part of the military, clerical and labouring classes to offer themselves as recruits for service in Mesopotamia.

(*f*) Withdrawal by the candidates of their candidature for election to the reformed Councils and refusal on the part of the voters to vote for any candidate who may, despite the Congress advice, offer himself for election.

(*g*) The boycott of foreign goods.

And, inasmuch as the non-co-operation movement has been conceived as a measure of discipline and self-sacrifice without which no nation can make real progress and, inasmuch as an opportunity should be given in the very first stage of non-co-operation to every man, woman and child for such discipline and self-sacrifice, this Congress advises the adoption of Swadeshi in piecegoods on a vast scale and, inasmuch as the existing mills of India with indigenous capital and control do not manufacture sufficient yarn and sufficient cloth for the requirements of the nation and are not likely to do so for a long time to come, this Congress advises the immediate stimulation of further manufacture on a large scale by means of reviving hand-spinning in every home and hand-weaving on the part of the millions of the weavers who have abandoned their ancient and honourable calling for want of encouragement."

These decisions were confirmed at the ordinary session of the Congress which was held at Nagpur commencing in Christmas week. The discussion ranged round two important points. The first of these was the change in the creed of the Congress and article (1) of the **Congress constitution** was altered into the following words: "The object of the Indian National Congress is the attainment of Swarajya by the people of India by all legitimate and peaceful means," the omission of the qualification within the British Empire being deliberate. The Non-Co-operation resolution was reaffirmed in the following terms:—

Whereas in the opinion of the Congress the existing Government of India has forfeited the confidence of the country; and

Whereas the people of India are now determined to establish Swaraj; and

Whereas all methods adopted by the people of India prior to the last Special Session of the Indian National Congress have failed to secure due recognition of their rights and liberties and the redress of their many and grievous wrongs, more specially in reference to the Khilafat and the Punjab.

Now this Congress while reaffirming the resolution on Non-violent Non-co-operation passed at the Special Session of the Congress at Calcutta declares that the entire or any part or parts of the scheme of Non-violent Non-co-operation, with the renunciation of voluntary association with the present Government at one end and the refusal to pay taxes at the other, should be put in force at a time to be determined by either the Indian National Congress or the All-India Congress Committee and that in the meanwhile, to prepare the country for it, effective steps should continue to be taken in that behalf:—

(*a*) by calling upon the parents and guardians of school children (and not the children themselves) under the age of 16 years to make greater efforts for the purpose of withdrawing them from such schools as are owned, aided or in any way controlled by Government and concurrently to provide for their training in national schools or by such other means as may be within their power in the absence of such schools;

(*b*) by calling upon students of the age of 16 and over to withdraw without delay, irrespective of consequences, from institutions owned, aided or in any way controlled by Government if they feel that it is against the conscience to continue in institutions which are dominated by a system of government which the nation has solemnly resolved to bring to an end, and advising such students either to devote themselves to some special service in connection with the non-co-operation movement or to continue their education in national institutions;

(*c*) by calling upon trustees, managers and teachers of Government, affiliated or aided schools and Municipalities and Local Boards to help to nationalise them;

(*d*) by calling upon lawyers to make greater efforts to suspend their practice and to devote their attention to national service including boycott of law courts by litigants and fellow lawyers and the settlement of disputes by private arbitration;

(*e*) in order to make India economically independent and self-contained by calling upon merchants and traders to carry out a gradual boycott of foreign trade relations, to encourage hand-spinning and hand-weaving and in that behalf by having a scheme of economic boycott planned and formulated by a committee of experts to be nominated by the All-India Congress Committee;

(*f*) and generally, inasmuch as self-sacrifice is essential to the success of non-co-operation by calling upon every section and every man and woman in the country to make the utmost possible contribution of self-sacrifice to the national movement;

(*g*) by organising Committees in each village or group of villages with a provincial central organisation in the principal cities of each Province for the purpose of accelerating the progress of non-co-operation;

(*h*) by organising a band of national workers for a service to be called the Indian National Service; and

(i) by taking effective steps to raise a national fund to be called the **All-India Tilak Memorial Swarajya Fund** for the purpose of financing the foregoing National Service and the non-co-operation movement in general.

This Congress congratulates the nation upon the progress made so far in working the programme of non-co-operation, specially with regard to the boycott of Councils by the voters and claims, in the circumstances in which they have been brought into existence, that the new Councils do not represent the country and trusts that those, who have allowed themselves to be elected in spite of the deliberate abstention from the polls of an overwhelming majority of their constituents, will see their way to resign their seats in the Councils, and that if they retain their seats in spite of the declared wish of their respective constituencies in direct negation of the principle of democracy, the electors will studiously refrain from asking for any political service from such Councillors.

This Congress recognises the growing friendliness between the Police and the Soldiery and the people, and hopes that the former will refuse to subordinate their creed and country to the fulfilment of orders of their officers, and, by courteous and considerate behaviour towards the people, will remove the reproach hitherto levelled against them that they are devoid of any regard for the feelings and sentiments of their own people.

And this Congress appeals to all people in Government employment, pending the call of the nation for resignation of their service, to help the national cause by imparting greater kindness and stricter honesty in their dealings with their people and fearlessly and openly to attend all popular gatherings whilst refraining from taking any active part therein and, more specially, by openly rendering financial assistance to the national movement.

This Congress desires to lay special emphasis on **non-violence** *being the integral part* of the non-co-operation resolution and invites the attention of the people to the fact that **non-violence** in word and deed is as essential between people themselves, as in respect of the Government, and this Congress is of opinion that the spirit of violence is not only contrary to the growth of a true spirit of democracy but actually retards the enforcement (if necessary) of the other stages of non-co-operation.

Finally, in order that the Khilafat and the Punjab wrongs may be redressed and *Swarajya established within one year*, this Congress urges upon all public bodies, whether affiliated to the Congress or otherwise, to devote their exclusive attention to the promotion of non-violence and non-co-operation with the Government and, inasmuch as the movement of non-co-operation can only succeed by complete co-operation amongst the people themselves, this Congress calls upon public associations to advance Hindu-Muslim unity and the Hindu delegates of this Congress call upon the leading Hindus to settle all disputes between Brahmins and non-Brahmins, wherever they may be existing, and to make a special effort to rid Hindusm of the reproach of untouchability, and respectfully urges the religious heads to help the growing desire to reform Hinduism in the matter of its treatment of the suppressed classes.

The most notable difference between the Special Congress at Calcutta and the ordinary course at Nagpur was that at Nagpur Mr. Gandhi's influence was supreme and anyone who ventured to express a difference of opinion received no hearing.

THE NON-CO-OPERATION MOVEMENT.

The launching of the non-co-operation movement is described above. Shortly before the meeting of the Congress in Christmas week in Ahmedabad the secretaries of the Congress issued a report in which they summarised the work of the year. The main lines of this report are reproduced below. It must be understood that the Editor of The Year Book takes no responsibility whatsoever for the accuracy or otherwise of the statements made in the report; they are given as published with this caveat. Some who have visited the "national educational institutions" have described the curriculum as a poor imitation of that in the Government and aided institutions; the students as marked by indiscipline and inattention. Whilst there may have been promises of a crore of rupees to the Swaraj fund, it is understood that the actual collections do not exceed thirty-five lakhs of rupees.

Congress Committee's Report:—The Nagpur Congress divided the country into 21 different provinces on a linguistic basis Congress workers were therefore engaged in organising the new Congress Committees with their subordinate bodies, viz., the District Congress Committees, the Tehsil Congress Committees and the Village Congress Committees in descending order. This work was consummated by the middle of February in almost all the provinces.

The activities of the non-co-operators were directed for the first three months of the year mainly on the boycott of law courts and Government controlled schools. The appendix at the end gives the number of students that non-co-operated in the various provinces. The total number reported comes to about 90,000. The national educational institutions number more than 800 with about 70,000 students studying in them.

The following extract from the statement of the Vice-Chancellor of the Calcutta University before the Senate on the 15th September 1921 speaks for itself :—

SCHOOLS.—The statement shows that whereas in July 1921, the recognised schools had 210,986 pupils, they had in July 1921 only 163,787 students, in other words 47,179 students have disappeared from our recognised schools, that is, nearly 23 per cent. of the students have left off their studies.

COLLEGES.—" . . . the number of students which stood at 10,492 on the 15th September

1920 and was brought down to 6,121 on the 1st March rose to 7,585 on the 10th August 1921. To put the matter briefly 12 per cent. of the students have disappeared in March 1921; nearly 14 per cent. returned to the colleges by the 10th August 1921, so that out of 10,192 the net loss was 2,907, that is more than 27 per cent."

The number of lawyers that have suspended practice in answer to the call of non-co-operation is more than 900 and that of arbitration courts started is about 2,600.

In the beginning of April the All-India Congress Committee met at Bezwada to consider the political situation of the country. It passed a resolution placing the following programme before the country commonly known as the Bezwada Programme :—

1. To collect one crore of rupees.
2. To enlist one crore of members.
3. To introduce 20 lakhs of charkhas in good working order, all before the end of June.

All the Congress workers concentrated their attention upon this programme and by the end of June, the programme was fulfilled so far as the money and the number of charkhas were concerned. Punjab alone claims to have nearly 40 lakhs of wheels spinning. The appendix gives the figures of these three per provinces.

The campaign was spontaneously started in the month of April almost all over the country with a view to purging the society of its impurities and cutting down the excise revenues of the Government. The campaign was wonderfully successful in a very short time. The excise revenues of the Government considerably decreased.

Swadeshi.

After the completion of the Bezwada programme the next item in the non-co-operation movement was naturally the Swadeshi, *i.e.*, hand-spinning and hand-weaving. In fact Swadeshi was an evident corollary of the Bezwada programme. The country had by the end of June more than 20 lakhs of charkhas in good working order and collected more than a crore of rupees towards the Tilak Swaraj Fund. The necessary complement of Swadeshi was the boycott of foreign cloth. The boycott was started by burning the foreign cloth and making bonfires.

On the 5th of October the Working Committee met at Bombay and passed a resolution asking the country to redouble its efforts and to bring about a complete boycott before the end of October. The All-India Committee at Delhi passed a similar resolution on the 4th November.

As the year was coming to a close, most of the provinces were anxious to launch upon civil disobedience including non-payment of taxes. A similar though less intense desire was expressed by some members at Bezwada in April and at Bombay in July, but the country was not prepared. The public had not sufficiently understood the secret of non-violence, and the Committee did not sanction the starting of civil disobedience. Different was the case at Delhi. The country had made vast progress in the direction of non-violence even under provocation, and the Committee at Delhi passed its resolution on Civil Disobedience allowing the Provincial Congress Committee to start individual or mass civil disobedience if they were satisfied that the conditions laid down were fulfilled.

The Provincial Congress Committee of Gujrat took the lead and allowed the Bardoli and Anand Taluqs to start mass civil disobedience or aggressive civil disobedience as it is now rightly called. Bardoli was going to begin on the 23rd November under the leadership of Mahatma Gandhi. But the Bombay disturbances on the 17th November and the following days proved that the country was not yet prepared for mass or aggressive civil disobedience. The Working Committee met in Bombay on the 22nd and 23rd, and warned the Provincial Congress Committee against embarking upon mass civil disobedience without first making certain of a peaceful atmosphere being retained throughout the province concerned.

But the phenomenal success of the hartals all over the country on the 17th November, the day of the landing of H. R. H. the Prince of Wales in Bombay, turned the heads of the Government. The Bengal Government started by declaring all the Congress and Khilafat volunteers as unlawful assemblies by a notification under the Criminal Law Amendment Act.

The Congress of 1921:—It was in the circumstances narrated in the last paragraph of this report that the Congress was held at Ahmedabad in Christmas week, 1921. The Governments of Bengal, the United Provinces, the Punjab and Madras had taken active steps to deal with the intimidation and lawlessness which had grown up round the non-co-operation campaign. This led to many arrests, including Mr. C. R. Das, the President-elect of the Congress, Lala Lajpatrai and Pandit Motilal Nehru. In place of Mr. Das Hakim Ajman Khan was elected President of the Congress. But it was throughout a one man show, and that man Mr. Ghandi. He insisted that the Congress should be run on swadeshi principles. The delegates were clothed in handspun cloth, or khaddar, they sat on the ground, there were few set speeches. The real points of difference, as usual, were settled in the Subjects Committee, not in the open Congress, which simply met to register approval of the decisions of the Subjects Committee. The work of the Congress resolved itself into one resolution appointing Mr. Ghandi dictator, with power to appoint a successor. The resolution ran as follows :—

Whereas, since the holding of the last National Congress the people of India have found from actual experience that by reason of the adoption of non-violent non-co-operation the country has made a great advance in fearlessness, self-sacrifice and self-respect, and whereas the movement has greatly damaged the prestige of the Government, and whereas on the whole the country is rapidly progressing towards Swaraj, this Congress confirms the resolution adopted at the special session of the Congress at Calcutta and reaffirmed at Nagpur and places on record the fixed determination of the Congress to continue the programme of non-violent non-

co-operation with greater vigour than hitherto, in such a manner as each province may determine, till the Punjab and the Khilafat wrongs are redressed and Swaraj is established, and the control of the Government of India passes into the hands of the people from that of an irresponsible corporation.

Whereas, by reason of the threat uttered by His Excellency the Viceroy in his recent speeches and the consequent repression started by the Government of India in the various provinces by way of disbandment of the volunteer corps and forcible prohibition of public and even committee meetings in an illegal and high-handed manner and by the arrest of many Congress workers in several provinces, and whereas this repression is manifestly intended to stifle all the Congress and Khilafat activities and deprive the public of their assistance, this Congress resolves that all activities of the Congress be suspended, as far as necessary, and appeals to all quietly and without any demonstration to offer themselves for arrest by belonging to the volunteer organisations, to be formed throughout the country in terms of the resolution of the Working Committee arrived at in Bombay on the 23rd day of November last, provided that no one shall be accepted as a volunteer, who does not sign the following pledge:

"With God as witness, I solemnly declare that (1) I wish to be a member of the National Volunteer Corps. (2) So long as I remain a member of the corps, I shall remain non-violent in word and deed, and shall earnestly endeavour to be non-violent in intent, since, I believe, that as India is circumstanced non-violence alone can help the Khilafat and the Punjab and result in the attainment of Swaraj and the consolidation of unity among all the races and communities of India, whether Hindu, Mussalman, Sikh, Parsi, Christian or Jew. (3) I believe in and shall endeavour always to promote such unity. (4) I believe in Swadeshi as essential for India's economic, political and moral salvation and shall use handspun and handwoven khadder to the exclusion of every other cloth. (5) As a Hindu, I believe the justice and necessity of removing the veil of untouchability and shall on all possible occasions seek personal contact with and endeavour to render service to the submerged classes. (6) I shall carry out the instructions of my superior officers and all the regulations, not inconsistent with the spirit of this pledge, prescribed by the volunteer boards or the working committee of any other agency established by the Congress. (7) I am prepared to suffer imprisonment, assault or even death, for the sake of my religion and my country without resentment. (8) In the event of my imprisonment, I shall not claim from the Congress any support for my family or dependents."

This Congress trusts that every person of the age of 18 and over will immediately join the volunteer organisations, notwithstanding the proclamation prohibiting public meetings, and inasmuch as even committee meetings have been attempted to be construed as public meetings, this Congress advises the holding of committee meetings and of public meetings, the latter in closed places and by tickets and by previous announcements, at which, as far as possible, only a speaker previously announced shall deliver written speeches, care being taken in every case to avoid the risk of provocation and possible violence by the public in consequence.

This Congress is further of opinion that civil disobedience is the only civilised and effective substitute for an armed rebellion, whenever every other remedy for preventing arbitrary, tyrannical and emasculating use of authority by individuals or corporations has been tried, and, therefore, advises all Congress workers and others who believe in peaceful methods and are convinced that there is no remedy, save some kind of sacrifice to dislodge the existing Government from its position of perfect irresponsibility to the people of India, to organise individual civil disobedience and massed, when the mass of the people have been sufficiently trained in the methods of non-violence, and otherwise, in terms of the resolution therein of the last meeting of the All-India Congress Committee, held at Delhi.

This Congress is of opinion that in order to concentrate attention upon civil disobedience, whether mass or individual, (whether of an offensive or defensive character) under proper safeguards and under instructions to be issued from time to time by the Working Committee or the Provincial Congress Committee concerned, all other Congress activities should be suspended, whenever and wherever and to the extent to which it may be found necessary.

This Congress calls upon all students of the age of 18 and over, particularly those studying in the national institutions and the staff thereof immediately to sign the foregoing pledge and become members of the National Volunteer Corps.

In view of the impending arrest of a large number of Congress workers, this Congress, whilst requiring the ordinary machinery to remain intact and to be utilised in the ordinary manner, whenever feasible, hereby appoints, until further instructions, Mahatma Gandhi as the sole executive authority of the Congress and invests him with the full powers of the All-India Congress Committee, including the power to convene a special session of the Congress, or of the All-India Congress Committee or the Working Committee, and also with the power to appoint a successor in an emergency.

This Congress hereby confers upon the said successor and all subsequent successors appointed in turn by their predecessors all his aforesaid powers, provided that nothing in this resolution shall be deemed to authorise Mahatma Gandhi or any of the aforesaid successors to conclude any terms of peace with the Government of India or the British Government without the previous sanction of the All-India Congress Committee to be finally ratified by the Congress, specially conveyed for the purpose, and provided also that the present creed of the Congress shall in no case be altered by Mahatma Gandhi or his successors, except with the leave of the Congress first obtained.

This Congress congratulates all those patriots who are now undergoing imprisonment for the sake of their conscience or country and realises that their sacrifice has considerably hastened the advent of Swaraj.

It has been stated that civil disobedience will start on January 31st,

The Moslem League.

The Indian Moslem League was established in 1906. Prior to that time the Indian Moslems had stood aloof from politics. Acting under the guidance of the greatest man they have produced, **Sir Syed Ahmad**, they devoted their attention to education, founding the Aligarh College with the special purpose of making up the leeway of Mahomedans in education, and left politics to the other Indian peoples. A few Mahomedans joined the National Congress and took part in its annual sessions; but the community as a whole stood aside from political movements.

In 1906 however changes occurred which impelled Indian Moslems to action. Under the Act of 1892, constituting the Indian Legislative Councils, there was no specific Moslem representation and in the elections which had taken place under that Act the Moslems had for all practical purposes failed to find selection. Therefore, when the amendment of the Act and the extension of the representative principle were under discussion, they were stirred to action. They feared lest, under an academic system, adapted only to a homogeneous people, their distinct communal interests would either secure no representation at all, or only inadequate representation. They therefore took counsel together and approached the Viceroy in deputation, headed by His Highness the Aga Khan, and presented their views in an important State paper.

First Constitution.

It was felt that in view of the changed conditions the Moslems should organise their own political society for the expression of their communal policy. This was the origin of the Moslem League. The rules and regulations of the League provided for a constitution, with provincial branches, and defined the objects of the League in the following language:—

The **objects of the League** shall be:—

(*a*) to promote among Indian Mussalmans feelings of loyalty towards the British Government, and to remove any misconception that may arise as to the intentions of Government with regard to any of its measures:

(*b*) to protect the political and other rights and interests of Indian Mussalmans and to place their needs and aspirations before the Government in temperate language:

(*c*) without prejudice to the objects mentioned under (*a*) and (*b*) of this section, to promote so far as possible concord and harmony between the Mussalmans and other communities of India.

Revised Constitution.

In 1912 and 1913 Moslem opinion as expressed by the League underwent a certain change. First at a meeting of the Council, afterwards at the annual session which was held at Lucknow, the constitution was amended so as to include in the objects of the League the attainment of a system of **self-government** in India under the Crown. The objects of the League, as defined, are thus set forth:—

The objects of the League shall be:—

(*a*) to maintain and promote among the people of this country feelings of loyalty towards the British Crown:

(*b*) to protect and advance the political and other rights and interests of the Indian Mussalmans:

(*c*) to promote friendship and union between the Mussalmans and other communities of India.

(*d*) without detriment to the foregoing objects, attainment, under the ægis of the British Crown, of a system of self-government suitable to India, through constitutional means, by bringing about, amongst others, a steady reform of the existing system of administration, by promoting national unity, by fostering public spirit among the people of India and by co-operating with other communities for the said purposes.

This change in the constitution of the League produced much discussion and was opposed by many of the older men who had led the community.

Merged in the Congress.—From the time of the Amritsar Congress the Moslem League lost its effective separate existence. It followed the Congress step by step in the change of its constitution and in the adoption of non-co-operation; its annual session is only a pale reflection of the Congress, whose resolution it accepts, with special emphasis on the Khilafat issue. Few of the leading Moslems of India take any part in its discussions, and those Moslems who are active in public life prefer to make their appearance at the Congress rather than at the nominal session of the League.

The headquarters of the League are at Lucknow.

THE LIBERAL FEDERATION.

In the Indian Year Book, 1919, the course of events which led to a definite rupture between the Extremist and Moderate sections of the Indian National Congress is set out. For some years there was growing up a strong line of cleavage between these two elements in Indian public life. It came to a head at the Surat Session of 1907 which broke up in disorder because the Extremists could not get their own way. In 1916 a nominal union between the two wings was established when a reunited Congress met at Lucknow. The unity then

established was however more artificial than real and the essential differences between the two wings were accentuated when the Montagu-Chelmsford Report on Indian constitutional reforms was published in 1918. A grave question then arose as to what should be the Indian attitude towards the scheme of reforms then outlined. The Extremists at first tried to stampede the country into a rejection of the proposed reforms *in toto*. The Moderates, whilst refusing to accept every line of the Report as sacrosanct were determined to regard it as a marked development in the constitutional progress of India, and whilst pressing for an extension of the measures there proposed decided to accept them as a great step forward in the political evolution and as substantially satisfactory. The strong attitude taken by them and the growing appreciation in the country of the real liberality of the Reform Scheme prevented the irreconcilables from stampeding political opinions as they had hoped. Nevertheless there was no prospect of agreement between the two wings, mainly because the Extremists insisted on characterising the reforms as disappointing and unsatisfactory, whilst the Moderates regarded them as liberal and progressive although falling short in some respects of their ideal.

Consequently the Moderates declined to join in a special session of the Indian National Congress which was held in August 1918 to consider the Reform Scheme; it held a special conference of its own where its own ideas were put forward in a series of resolutions. The bulk of the Moderates also abstained from the ordinary Christmas Session of the Congress in Delhi in 1918; they have continued to remain aloof from the older organisation and have set up their own. The essential differences between the two wings are clearly revealed by a study of the resolutions carried at the different sessions. A brief summary of the proceedings at the Indian National Congress has been given in the preceding pages. The Moderates held their own session in Calcutta when the Chairman of the Reception Committee, Sir Binode Mitter, very clearly indicated their attitude towards the scheme. Sir Binode Mitter emphatically declared that the Act brought new opportunities of service. Hitherto Indians had had no share in the actual government of the country; they were in the position of mere critics. They must now forget merely to criticise as they would have henceforth to solve real difficulties. The Chairman of the Conference, Sir P.S. Sivaswamy Iyer, emphasised these essential points. He said that the Act constituted a decided advance upon existing conditions and it gave them great opportunities of acquiring a practical knowledge of the art of responsible government.

The essential creed of the Moderates is indicated in the principal resolutions adopted at their session which are set out below:

Important Resolutions.—(*a*) This Conference desires to convey to the Right Honourable Mr. Montagu its heartfelt appreciation of the statesmanship, courage and single minded devotion displayed by him in initiating and carrying the reform proposals and setting India firmly on the road to responsible government.

(*b*) This Conference desires to record its proud appreciation of the Right Honourable Lord Sinha's services to the country in his capacity as a member of the War Cabinet, as a representative of India at the Peace Conference and in his conduct of the Reform Bill in the House of Lords.

(*c*) This Conference desires to thank the Joint Committee for removing several defects in the original Reform Bill and improving it.

While regretting the omission to introduce some measure of responsibility in the central government, this Conference welcomes the Government of India Act of 1919 as a definite and substantial step towards the progressive realisation of responsible government. This Conference appeals to all sections of the community, European and Indian, officials and non-officials, whole-heartedly to co-operate for the successful working of the Act.

The Moderate Conference of 1920-1921 was held at Madras at the close of the year under the presidency of Mr C. Y. Chintamani, one of the new Ministers in the United Provinces. The Moderates are now known as the National Liberal Federation and are best designated by the term of Indian Liberals although the term Moderates still persists.

The resolutions of this Conference on the subject of Non-co-operation was as follows:

"The Federation expresses its emphatic disapproval of the policy of non-co-operation as calculated to destroy individual liberty of speech and action and incite social discord and retard the progress of the country towards responsible government. But the Federation feels the best way of successfully combating the non-co-operation movement is for the Government to redress the wrongs that have led to its adoption."

Special prominence was given to the question of military expenditure, the President sounding the dominant note in the statement that the reduction of the military charges was the test of the sincerity of Government.

The Federation and Lawlessness:—The Federation met in session at Allahabad in December 1921, in circumstances of some excitement. The measures adopted by some of the Provincial Governments to deal with the intimidation and lawlessness practiced by non-co-operators had produced a mild stampede amongst a section of the Liberals, who joined in the general denunciation of Repression. It was in these circumstances that the Federation passed a resolution urging full provincial autonomy at the end of the first term of the Legislatures, and subject to safeguards, popular control over all subjects in the central Government except defence, foreign affairs, relations with the Indian States and ecclesiastical affairs. Later, when the Federation re-assembled after the Subjects Committee meeting, the President stated that a large majority of the members accepted the following resolution:—"This Federation fully realises the difficulties of Government in dealing with the present critical situation and the inevitable dangers to the country of a campaign of civil disobedience and the necessity for the protection of law-abiding

and peaceful citizens against any interference with their liberties, and it recognises the duty of all patriotic citizens to support Government in all the measures necessary for the maintenance of peace and order. But it views with great concern the inauguration of a policy of indiscriminate arrests and extensive application of the Criminal Law Amendment Act and is strongly of opinion that such a policy defeats its own object by alienating popular sympathy and aggravating the general unrest. It also draws pointed attention to the fact that some local Governments and local authorities have acted with an excess of zeal and want of discretion in the matter of the arrests and with harshness and severity in regard to the sentences of which the Federation strongly disapproved. It therefore urges on Government the immediate reconsideration of its policy in order to ease the present situation."

The Federation passed a number of resolutions including one regarding the state management of railways and another supporting the present measures against the Moplahs also expressing horror at the Podanur Prison van tragedy and the hope that those responsible would be brought to book. The President, in closing the Session, warned all against the dangers of civil disobedience and fervently appealed to the country to take to constitutional agitation to attain Swaraj.

Posts and Telegraphs.

POST OFFICE.

The control of the Posts and Telegraphs of India is vested in an officer designated Director-General of Posts and Telegraphs who works in subordination to the Government of India in the Public Works Department. The superior staff of the Direction, in addition to the Director-General himself, consists on the postal side of two Deputy Directors-General (who are officers of the rank of Postmaster-General), and six Assistant Directors-General (whose status is similar to that of Deputy Postmasters-General).

For postal purposes, the Indian Empire is divided into eight circles as shown below, each in charge of a Postmaster-General :—Bengal and Assam, Bihar and Orissa, Bombay, Burma, Central, Madras, Punjab and North-West Frontier, and United Provinces. The Central Circle comprises roughly the Central Provinces and the Central India and Rajputana Agencies.

The Postmasters-General are responsible to the Director-General for the whole of the postal arrangements in their respective circles, with the exception of those connected with the conveyance of mails by railways and inland steamers which are entrusted to three officers bearing the designation of Deputy Postmaster-General, Railway Mail Service. All the Postmasters-General are provided with Personal Assistants, while those in charge of the largest circles are also assisted by Deputy Postmasters-General. The eight Postal Circles and the jurisdictions of the three Deputy Postmasters-General, Railway Mail Service, are divided into Divisions, each in charge of a Superintendent of Post Offices or Railway Mail Service as the case may be and each Superintendent is assisted by a certain number of officials styled Inspectors.

Generally there is a head post office at the head-quarters of each revenue district and other post offices in the same district are usually subordinate to the head office for purposes of accounts. The Postmasters of the Calcutta, Bombay, and Madras General Post Offices and of the larger of the other head post offices are directly under the Postmaster-General and most of them exercises the same powers as a Superintendent of Post Offices in respect of inspections, appointments, leave and punishments. The Presidency Postmasters, indeed, have one or more Superintendents subordinate to them. When the duties of the Postmaster of a head office become so onerous that he is unable to perform them fully himself, a Deputy Postmaster is appointed to relieve him of some of them, and if still further relief is required, one or more Assistant Postmasters are employed. The more important of the offices subordinate to the head office are designated sub-offices and are usually established only in towns of some importance. Sub-offices transact all classes of postal business with the public, submit accounts to the head offices to which they are subordinate, incorporating therein the accounts of their branch offices, and frequently have direct dealings with Government local sub-treasuries. The officer in charge of such an office works it either single-handed or with the assistance of one or more clerks according to the amount of business.

Branch offices are small offices with limited functions ordinarily intended for villages, and are placed in charge either of departmental officers on small pay or of extraneous agents, such as school-masters, shopkeepers, landholders or cultivators who perform their postal duties in return for a small remuneration.

The audit work of the Post Office is entrusted to the Accountant-General, Posts and Telegraphs, who is an officer of the Finance Department of the Government of India and is not subordinate to the Director-General. The Accountant-General is assisted by Deputy Accountants-General, all of whom, with the necessary staff of clerks, perform at separate headquarters the actual audit work of a certain number of postal circles.

In accordance with an arrangement which has been in force since 1883, a large number of sub-post offices and a few head offices perform telegraph work in addition to their postal work and are known by the name of combined offices. The policy is to increase telegraph facilities everywhere and especially in towns by opening a number of cheap telegraph offices working under the control of the Post Office.

The **Inland Tariff** (which is applicable to Ceylon and Portuguese India except as indicated below) is as follows *subject to alterations made by the Budget of* 1922 :—

	When the postage is prepaid.	When the postage is wholly unpaid.	When the postage is insufficiently prepaid.
Letters.	Anna.		
Not exceeding half a tola	½		
Exceeding half a tola but not exceeding one tola	1		
Exceeding 1 tola but not exceeding two and a half tolas	1	Double the prepaid rate (chargeable on delivery).	Double the deficiency (chargeable on delivery).
Every additional two and a half tolas or part of that weight	1		
Book and pattern packets.			
Every 5 tolas or part of that weight ..	½		

Postcards.

Single	½ anna.
Reply	½ „

(The postage on cards of private manufacture must be prepaid in full.)

Parcels (prepayment compulsory).

(*a*) Parcels not exceeding 440 tolas in weight:—

	Rs. a.
Not exceeding 20 tolas	0 2
Exceeding 20 tolas but not exceeding 40 tolas	0 3
For every additional 40 tolas or part of that weight	3 annas.

(*b*) Parcels exceeding 440 tolas in weight:—

4 annas for every 40 tolas or fraction thereof up to 800 tolas.

Registration is compulsory in the case of parcels weighing over 440 tolas.

These rates are not applicable to parcels for Portuguese India.

In the case of parcels for Ceylon a registration fee of 2 annas is chargeable on each parcel in addition to the rates shown above.

Registration fee.

	Rs. a.
For each letter, postcard, book or pattern packet, or parcel to be registered	0 2

Ordinary Money Order fees.

On any sum not exceeding Rs. 10 ..	0 2
On any sum exceeding Rs. 10 but not exceeding Rs. 25	0 4
On any sum exceeding Rs. 25 up to Rs. 600	0 4

for each complete sum of Rs. 25, and 4 annas for the remainder; provided that, if the remainder does not exceed Rs. 10, the charge for it shall be only 2 annas.

Telegraphic money order fees.—The same as the fees for ordinary money orders *plus* a telegraph charge calculated at the rates for inland telegrams for the actual number of words used in the telegram advising the remittance, according as the telegram is to be sent as an "Express" or as an "Ordinary" message.

In the case of Ceylon the telegraph charge is calculated at the rates shown below:—

Express—Rs. 2 for the first 12 words and 3 annas for each additional word.

Ordinary.—Re. 1 for the first 12 words and 2 annas for each additional word. Telegraphic money orders cannot be sent to Portuguese India.

Value-payable fees.—These are calculated on the amount specified for remittance to the sender and are the same as the fees for ordinary money orders.

Insurance fees.—For every Rs. 50 of insured value 1 anna.

As regards Ceylon and Portuguese India see Foreign Tariff.

Acknowledgment fee.—For each registered article 1 anna.

The Foreign Tariff (which is not applicable to Ceylon except in respect of insurance fees or to Portuguese India except in respect of insurance fees and parcel postage) is as follows:—

Letters.

To the United Kingdom, other British Possessions and Egypt, including the Soudan.	2 annas for the first ounce and 1½ anna for each additional ounce or part of that weight.
To other countries, colonies or places.	3 annas for the first ounce and 1½ annas for every additional ounce or part of that weight.

Postcards Single	1½ anna.
„ Reply	3 annas.

Printed Papers.—½ anna for every 2 ounces or part of that weight.

Business Papers.—½ anna for every 2 ounces or part of that weight, subject to a minimum charge of 3 annas for each packet.

Samples.—½ anna for every 2 ounces or part of that weight, subject to a minimum charge of 1 anna for each packet.

(The rates shown above are those chargeable when the postage is prepaid.)

Parcels.—(Prepayment compulsory.) The rates vary with the countries to which they are addressed. The rates to the United Kingdom are—

	Via Gibraltar. Rs. a. p.
Not over 3 lbs. ..	1 8 0
„ „ 7 „	2 12 0
„ „ 11 „	3 15 0

Registration fee.—3 annas for each letter, postcard, or packet, except to Ceylon or Portuguese India for which the fee is 2 annas.

Money Orders.—To countries on which money orders have to be drawn in rupee currency, the rates of commission are the same as in the case of inland money orders.

To countries on which money orders have to be drawn in sterling, the rates are as fixed temporarily from time to time in accordance with variations in the market rate of exchange.

Insurance fees—

To countries other than those named below ..3 annas for every £5 or fraction thereof.

To Ceylon and Portuguese India .. ..2 annas for every Rs 100 or fraction thereof.

To Mauritius, the Seychelles, Zanzibar, and the British East Africa, Uganda, and Somaliland Protectorates ..4 annas for every Rs. 100 or fraction thereof.

Acknowledgment fee.—3 annas for each registered article.

Growth of the Post Office.—At the end of 1897-98 the total number of post offices was 11,742 and the total length of mail lines 126,351 miles. For the 31st March 1921 the corresponding figures were 19,416 and 1,57,301. During the year 1897-98, the total number of letters, postcards, newspapers and packets given out for delivery was 460,899,344, while for the year 1920-21 the total number of unregistered articles of the same classes given out for delivery *plus* the number of registered letters and packets posted amounted to 1,375,266,446. The number of parcel mail articles given out for delivery in the former year was 4,119,781 as compared with 14,111,036 such articles posted during the latter year. The total number and value of money orders issued increased from 11,795,041 and Rs. 24,79,45,455 in 1897-98 to 38,504,814 and Rs. 98,36,48,317, respectively, in 1920-21. During the former year the total number of articles insured for transmission by post was 326,645 with an aggregate declared value of Rs. 10,00,62,590 and the corresponding figures for 1910-11 were 1,169,428 and Rs. 26,88,78,255. As the result, however, mainly of the introduction in 1911-12 of the rule under which inland articles containing currency notes or portions thereof must be insured, the figures for 1920-21 stand at 4,510,471 and Rs. 1,37,66,71,002. The number of accounts open on the books of the Post Office Savings Bank grew from 730,387 on the 31st March 1898 to 1,877,957 at the end of 1920-21, with an increase from Rs. 9,28,72,978 to Rs. 22,86,21,716 in the total amount standing at the credit of depositors. The total staff on the 21st March 1921 numbered 102,885. The net financial result of the working of the Post Office for the year 1920-21 was a deficit of Rs. 45,99,372.

This account of the activities of the Post Office would not be complete if it were not mentioned that on the 31st March 1921 there were 33,258 active Postal Life Insurance policies with an aggregate assurance of Rs. 4,88,87,682 and that during 1920-21 it disbursed a sum of Rs. 75,46,103 to Indian Military pensioners; sold over 51¾ lakhs of cash certificates to the public; collected at its own expense a sum of Rs. 50¼ lakhs on account of customs duty on parcels and letters from abroad; and sold 15,484 lbs. of quinine to the public.

TELEGRAPH DEPARTMENT.

Telegraphs.—Up to 1912 the telegraph system in India was administered as a separate department by an officer designated Director-General of Telegraphs who worked in subordination to the Government of India in the Department of Commerce and Industry. In that year it was decided to vest the control of Posts and Telegraphs in a single officer as an experimental measure with a view to the eventual amalgamation of the two Departments.

In pursuance of this policy an experimental amalgamation of the two services was introduced in the Bombay and Central Circles from the 1st July 1912. The fundamental principles of this scheme which followed closely the system in force in the United Kingdom and several other European countries were that the traffic and engineering work of the Telegraph Department should be separated, the former branch of work in each Circle being transferred to the Postmaster-General assisted by a Deputy Postmaster-General and a suitable number of attached officers and the engineering branch being controlled by a Director of Telegraphs in charge of the two Circles. Subordinate to this officer there were several Divisional Superintendents who were assisted by a number of attached officers.

In 1914 the complete amalgamation of the two Departments was sanctioned by the Secretary of State and introduced from 1st April. The superior staff of the Direction, in addition to the Director-General himself, consists on the engineering side of a Chief Engineer, Telegraphs, with two Dy. Chief Engineers and a Personal Assistant to the Director-General. For traffic work there is a Deputy Director-General, with an Assistant and two Assistant Directors-General. On the 27th March 1920 a Controller of Telegraph Traffic was appointed to assist the Deputy Director General in the inspection of offices and in controlling telegraph traffic. In the Circles the scheme which has been introduced follows closely on the lines of the experimental one referred to above. For telegraph engineering purposes India is divided up into five Circles, each in charge of a Director. For Burma special arrangements were considered necessary and the engineering work is in charge of the Post Master-General who is a Telegraph officer specially selected for the purpose. These six Circles are divided into twenty-one Divisions each of which is in charge of a Divisional Engineer.

The telegraph traffic work is under the control of the Postmasters-General, each of whom is assisted by a Deputy Postmaster-General and a suitable staff of attached officers.

The audit work of the Telegraph Department is, like that of the Post Office, entrusted to the Accountant-General, Posts and Telegraphs, assisted by a staff of Deputy and Assistant Accountants-General.

Inland Telegrams and Tariff.—Telegrams sent to or received from places in India or Ceylon are classed as Inland telegrams. The tariff for inland telegrams is as follows:—

	For delivery in India. *Private and State.*		For delivery in Ceylon. *Private and State.*	
	Express.	Ordinary.	Express.	Ordinary.
	Rs. a.	Rs. a.	Rs. a.	Rs. a.
Minimum charge,	1 8	0 12	2 0	1 0
Each additional word over 12	0 2	0 1	0 3	0 2

The address is charged for.

Additional charges.

Minimum for reply-paid telegram .. .. Acknowledgment of receipt	Minimum charge for an ordinary telegram.
Multiple telegrams, each 100 words or less	4 annas
Collation	One quarter of charge for telegram.
For acceptance of an Express telegram during the hours when an office is closed.	Rs. If both the offices of origin and destination are closed .. 2 If only one of the offices is closed. 1 If the telegram has to pass through any closed intermediate office an additional fee in respect of each such office 1
Signalling by flag or semaphore to or from ships—per telegram	The usual inland charge plus a fixed fee of 8 ans.
Boat hire	Amount actually necessary.
Copies of telegrams, each 100 words or less	4 annas.

	For delivery in India. *Press.*		For delivery in Ceylon. *Press.*
	Express.	Ordinary.	Express.
	Rs. a.	Rs. a.	Rs. a.
Minimum charge ..	1 0	0 8	1 0
Each additional 6 words over 48 in respect of India, each additional four words over 32 in respect of Ceylon ..	0 2	0 1	0 2

The address is free.

Foreign Tariff.—The charges for foreign telegrams vary with the countries to which they are addressed. The rates per word for private and state telegrams to all countries in Europe are as follows:—

	Urgent	Ordinary.	Deferred.	State.
	Rs. a.	Rs. a.	Rs. a.	Rs. a.
All countries in Europe (except Germany) *via* Eastern	3 12	1 4	0 10	0 10
Germany *via* Eastern-London ..	4 8	1 8	0 12	0 14

Growth of Telegraphs.—At the end of 1897-98 there were 50,305 miles of line and 155,088 miles of wire and cable, as compared with 387,169 wire including: cable and 89,610 line including cable miles, respectively, on the 31st March 1921. The numbers of departmental telegraph offices were 257 and 184, respectively, while the number of telegraph offices worked by the Post Office rose from 1,634 to 3,400. The increase in the number of paid telegrams dealt with is shown by the following figures:—

		1897-98.	1920-21.
Inland ..	Private ..	4,107,270	14,607,259
	State ..	860,382	1,428,987
	Press ..	35,910	262,271
Foreign ..	Private ..	735,679	2,656,654
	State ..	9,896	173,796
	Press ..	5,278	25,814
		5,754,415	19,054,781

The outturn of the workshops during 1920-21 represented a total value of Rs. 31,19,200. At the end of the year the total staff numbered 13,443. The total capital expenditure up to the close of 1920-21 amounted to Rs. 16,06,50,031. The net revenue for the year was Rs. 81,78,879.

Wireless.—The total number of wireless telegraph stations open at the end of 1920-21 was twenty, *viz.*, Port Blair, Rangoon, Diamond Island, Table Island, Victoria Point, Madras, Bombay, Sandheads, Calcutta, Karachi, Delhi, Jutogh, Allahabad, Lahore, Nagpur, Peshawar, Quetta, Secunderabad, Maymyo and Mhow, but of these, only Port Blair, Diamond Island, Table Island, Victoria Point and Sandheads book telegrams direct from the public.

Telephones.—On the 31st March 1921 the number of telephone exchanges established by the Department was 255 with 10,703 connections. Of these exchanges, 109 were worked departmentally. The number of telephone exchanges established by Telephone Companies was 11 with 20,335 connections.

The Botanical Survey is under the direction of the Superintendent of the Royal Botanic Garden, Calcutta, with whom are associated the Economic Botanists belonging to the Agricultural Department. In 1912 the post of Reporter on Economic Products was abolished and replaced by that of Economic Botanist to the Botanical Survey. Much of the systematic botanical work of India is done for the department by forest officers and others. Over 2,000 specimens were obtained in 1911-12 by the officer deputed to accompany the Abor Expedition as botanist, and a material addition was made to the information available as to the vegetation of the little-known frontier region traversed.

Geological Survey.—The first object of the Department is the preparation of a general geological map of India. Various economic investigations, which form an increasingly important part of the Department's work, are also conducted. These include investigation of marble and sandstone quarries for the purpose of building Imperial Delhi, the examination of the Korea coal-field in the Central Provinces, of petroliferous localities in the Punjab and North-West Frontier Province, of pitchblende areas in the Gaya District, &c.

Zoological Survey.—A scheme for the formation of a Zoological Survey on the basis of the Zoological and Anthropological Section of the Indian Museum, Calcutta, came into force in July, 1916. The proposals as sanctioned by the Secretary of State mainly are as follows:—The headquarters of the Survey will be the Indian Museum. The scheme regarding the Zoological Survey entails the breaking up of the organisation now known as the Zoological and Anthropological Section of the Indian Museum into two parts, one of which will become a Government department under the title of the Zoological Survey of India, and will be primarily concerned with zoological investigation and exercise such advisory functions as may be assigned to it by Government, while the other part will remain as the office of the Trustees of the Indian Museum and will be organised for the present on the lines laid down in the existing by-laws of the Museum. It will be the duty of the Zoological Survey to act as guardians of the standard zoological collection of the Indian Empire, and as such to give every assistance in their power both to officials and to others, in the identification of zoological specimens submitted to them, arranging, if requested to do so, to send collections to specialists abroad for identification in cases in which no specialist is available in India. The Director of the Survey is Dr. Anandale.

Mammal Survey.—The Survey was instituted in the year 1912 with the object of making as complete a study as possible of the occurrence and distribution of Mammals in India, Burma and Ceylon, and with the further object of supplementing the collection of Indian Mammals at the Bombay Natural History Society's Museum and at the British Museum as well as at the Natural History Museums in India, the primary object of the Survey being the furtherance of our knowledge of Indian Mammalian Fauna. Up to 1891 Naturalists in India had to rely for information on Dr. Jerdon's "Mammals of India" published in 1874. In 1884 R. A. Sterndale published his Natural History of Indian Mammals a purely popular work which did not add much to Jerdon's book. In 1881 a memorial prepared by Dr. Sclater, Hon. Secretary to the Zoological Society and signed by Darwin, Hooker, Huxley, and other well known scientists, was presented to the Secretary of State for India. The memorial recommended that a series of Volumes dealing with the Fauna of India should be prepared and Dr. Blanford should be appointed its Editor. The memorial resulted in the publication in 1888-1890 of the Volume on Mammals in the "Fauna of British India" Series and since 1891 this volume has been the standard work on *Indian Mammals*. Blanford's book was however based on the information then available and the shortcomings of the book have been revealed in the light of more recent research. Further knowledge in regard to distribution and classification and the discoveries of new species have rendered Blanford practically obsolete.

To remedy this defect, at the instigation of the authorities of the British Museum, the Bombay Natural History Society decided to institute what is now known as the Mammal Survey. Mr. W. S. Millard, then Hon. Secretary of that Society, issued in an appeal to its members to enable the Society to engage the services of trained European collectors so as to make a systematic collection of the mammals of India, Burma and Ceylon. The response to the appeal resulted in over a lakh of rupees being raised between 1911 and 1920, partly by subscriptions from the Society's members, contributions from Indian Princes, and grants from the Indian Government, the Government of Burma, Ceylon, Malay States, and the Provincial Governments. Subscriptions were also received from a few Learned Societies and Institutions in England and America. By the outbreak of the war the Survey had been carried on over large areas of the country, the districts covered being—In Western India a portion of Sind, the whole of Gujarat, Kutch and Kathiawar; the Southern Maharatta country and Kanara in Southern India; in Coorg and Mysore; in the centre large tracts of the Central Provinces and some districts of Bengal and Behar; in Northern India the Society's collectors had worked over Kumaun, Darjeeling and Sikkim and the Bhutan Duars. In Burma, collections were made along the Chindwin river, in Central Burma and in the Shan States, Pegu and a portion of Tenasserim. The whole of Ceylon was also systematically surveyed.

The material, which up to the outbreak of War comprised some 17,000 specimens, was forwarded to the British Museum where the collections were scientifically worked out by the late Mr. R. C. Wroughton, formerly Inspector General of Forests, Mr. Oldfield Thomas, F.R.S., Curator of Mammals at the British Museum, Mr. Martin C. Hinton and others. The results of their researches were published in a series of scientific papers in the Journal of the Bombay Natural History Society. The enormous mass of material then collected resulted in the discovery of large numbers of new forms and species and by increasing our knowledge of the distribution of Indian Mammalia has enabled the revision of Blanford's Mammalia to be undertaken and early in 1921 the Secretary of

State for India commissioned Mr R. C Wroughton, since deceased, and Mr. M. C. Hinton to undertake the work.

At the beginning of the War certain important areas however remained to be worked, principally S. India, the Eastern Ghats, the Central Indian states and certain portions of Burma and the Mergui Archipelago. So when demobilisation rendered it possible the work of the Survey which had been in abeyance during the War was resumed and a collector was first sent to Assam which has now been thoroughly worked. The Bombay Natural History Society's collectors are now in the Eastern Ghats and in Mergui, and it is hoped, if sufficient funds are forthcoming, to complete the work as originally conceived.

The Board of Scientific Advice.—This Board includes the heads of the Meteorological, Geological, Botanical, Forest, and Survey Departments, representatives of the Agricultural and Civil Veterinary Departments and other scientific authorities whose special attainments may be useful. It was established in 1902 to co-ordinate official scientific inquiry to ensure that research work is distributed to the best advantage, and to advise the Government of India in prosecuting practical research into those questions of economic or applied science on the solution of which the agricultural and industrial development of the country so largely depends. The programmes of investigation of the various departments are annually submitted to the Board for discussion and arrangement, and an annual report is published on the work done.

The Secretary to the Government of India (Department of Revenue and Agriculture) is *ex-officio* President of the Board which includes the Director-General of Observatories, the Director of the Zoological Survey the Surveyor-General of India, the Principal Punjab Veterinary College, the Director of the Indian Institute of Science, the Inspector General of Forests, the Agricultural Adviser to the Government of India, the Director of the Geological Survey, the Director-General, Indian Medical Service, the Secretary to the Government of India, Public Works Department, and the Director of the Botanical Survey of India, who is Secretary to the Board of Scientific Advice.

The Programme of the scientific departments for 1919-20 includes the following. The Meteorological department will organise upper air observatories in various places in connexion with the proposed air services. The Kodaikanal Observatory will investigate the displacement of solar lines, the spectrum of Venus, and solar rotation. The Survey of India expects to commence meteorological work and will continue its magnetic work. The Geological Survey of Bihar, Orissa, the Central Provinces and Burma will be continued and enquiries into Wolfram and tin in Tenasserim, Sulphur and Chromite in Baluchistan and Seistan and Mica in Bihar and Orissa will be taken up, and research made into Gondwana fossil plants and fossils from Sind, Baluchistan, the North-West Himalayas and Burma. From shortage of staff the work of the Botanical and Zoological Surveys will be much curtailed but it is hoped that Cinchona work will be extended and that the survey of the fresh water molluscs of India and the investigation of the Chilka Lake fishes and Indian Diptera will be continued. Under Forestry the technical and physical properties and the actual and potential uses of Indian timber for numerous purposes, the antiseptic treatment of timber, material for paper pulp, fibres, gums, oleo-resins, the fungal diseases and insect pests of forest trees, the culture of various species of trees of economic importance, and the chemistry of various forest products will form subjects for investigation. Under Agriculture, the chemical investigation of drainage water from fallow and cropped soils, of alkali soils, of green manures, of "windrowing" on sugarcane; the botanical study of wheat, tobacco, fibre plants, cotton, indigo, fodder crops and fruit; the fungal diseases of jute, sugarcane, rice, rubber, etc.; the insect pests of sugar, rice, cotton, fruit trees, and stored gram, insect control and the bionomics of blood sucking insects, the bacteriology of Indian soils, the bacteriology and chemistry of Indigo, experimental work in practical agriculture and the diseases of farm stock, will be the chief subjects of investigation.

The Indian Research Fund.—Scientific research work is rapidly developing in India. In 1911 the sum of 5 lakhs (£33,000) out of the surplus opium revenue was set aside as an endowment for research into epidemic diseases in connection with the Central Research Institute, at Kasauli. It was hoped that this sum might be largely augmented by private subscriptions. An Indian Research Fund Association was constituted, and a good deal of work has already been undertaken. Its objects are defined as "the prosecution and assistance of research, the propagation of knowledge and experimental measures generally in connection with the causation, mode of spread and prevention of communicable diseases." Fresh investigations into kala azar and cholera have been inaugurated, and an officer was deputed, at the expense of the Fund, to study yellow fever in the regions where it is endemic, with a view to taking steps to prevent its introduction into India. A further grant of 6 lakhs (£40,000) was made to the Central Research Fund from the opium surplus of 1911-12. It has been decided to devote to research and anti-malarial projects 5 lakhs (£33,000) a year from Imperial revenue commencing in 1913-14. A new periodical "The Indian Journal of Medical Research," was instituted in 1913 and is published four times annually, as the official organ of the Research Fund. The journal deals with every branch of research directly or indirectly connected with medical and sanitary science, and forms a record of what is being done in India for the advance of this work. For the year 1917-18 the Board recommended the continuance on the existing lines of the following inquiries:—Beri Beri by Lieutenant-Colonel McCarrison; Leprosy by Dr. Sudhamoy Ghosh; Hook-worm by Dr. K. S. Mhaskar; Plague Prevention by Dr. G. D. Chitre; Entomological by Mr. Awati and Mr. Mitter. A grant has been made to Lieut.-Col. Glen Liston for experiments with hydro-cyanic acid gas as a disinfectant.

Survey of India.—The work of the Survey of India Department falls under various heads, namely, the trigonometrical survey, topographical and forest surveys, special surveys and explorations, and map production. Cadastral

surveys are now carried out by the Provincial Land Records and Settlement Departments.

In 1904 attention was drawn to the defective state of the **topographical survey maps,** and a Committee was appointed to report on the subject. To overtake the arrears of revisional survey and to secure that the maps of India should be brought up to date and revised at proper intervals, they recommended a considerable increase of establishment and an increased expenditure of £210,000 a year for the next 25 years. They also made recommendations for altering the size and improving the quality of the maps. After further inquiry the Government of India decided that a scale of 1 inch to the mile would ordinarily be sufficient for reserved forests and special areas being surveyed on the scale of 2 inches to the mile, and the ½-inch scale employed for waste and barren tracts.

Indian Science Congress.

The Indian Science Congress was founded largely owing to the efforts of Dr. J. L. Simonsen and Mr. P. S. Macmahon, the present Honorary General Secretaries of the Congress. The Asiatic Society of Bengal undertakes the management of the Congress finances and publishes annually the Proceedings of the Congress. The objects are (1) to encourage research and to make the results generally known among science workers in India, (2) to give opportunities for personal intercourse and scientific companionship and thus to overcome to some extent one of the chief drawbacks in the life of workers in science in India, (3) to promote public interest in science; for this end the Congress is held at different centres annually, and evening lectures open to the public form an important part of the proceedings of each Congress.

The Congress meets in January each year, the proceedings last for six days. The Head of the Local Government is Patron of the Congress: the Congress session is opened by a Presidential Address delivered for the President for the year. The President is chosen annually, the different sections being represented in turn. The sections are (1) Agriculture, (2) Physics and Mathematics, (3) Chemistry, and Applied Botany (4) Zoology and Ethnography, (5) Botany, (6) Geology, (7) Medical Research. When the sections meet separately each section is presided over by its own President also chosen annually. The mornings are devoted to the reading and discussion of the papers, the afternoons to social functions and visits to places of interests; in the evenings public lectures are delivered.

Government officers whose services can be spared will be granted special leave to attend the Congress and can recover, through the usual channels, the actual train fare paid by them to and from the Congress—(*See* Circular Letter from the Government of India, Department of Revenue and Agriculture (General) No. 10171, dated 17th August 1916, embodied in Bombay Government, Education Department, Order No. 2324, dated 14th September 1916).

THE IMPERIAL INSTITUTE.

The Imperial Institute, South Kensington, has been placed by the Imperial Institute (Management) Act of 1916 under the control of the Secretary of State for the Colonies as representing the central authority for the Dominions, Colonies, and Protectorates of the Empire. The actual management of the Institute will be with an executive council of twenty-five members, which, subject to the general control of the Secretary of State for the Colonies, will possess considerable autonomy and will be the governing body of the Institute. India is to be represented on this council by four members, one nominated by the Government of India, two by the Secretary of State for India, and one by the Secretary of State for the Colonies. In addition, it is understood that there will be a special Indian Committee of the Council with co-opted members—an arrangement which will greatly increase the connection of the Institute with Indian interests, and, it is hoped, will promote the development of those activities of the Institute for India which are most needed in England.

An account of the work done by the Institute for India, by Dr. W. R. Dunstan, Director of the Imperial Institute, has lately been published in the *Bulletin* of the Institute.

The **Indian Collections** of the Imperial Institute, which have been completely reorganised in recent years, constitute the Indian Section of the Public Exhibition Galleries. They include a representation of the important raw materials of India, illustrations of its chief industries and their results, tabular information and diagrams respecting Indian trade and commerce, maps, pictures, and photographs of its cities and industries.

Technical Information Bureau.—Ever since the Scientific and Technical Research Department was started, a most important part of its work has been, in addition to conducting researches, to collect and critically collate all published information respecting the production and industrial uses of raw materials, and it has gradually come to be recognized as a central clearing-house for information of this character. Merchants and manufacturers in England, as well as producers in India and the Colonies, have applied in increasing numbers for information on these subjects. In order to be in a position to deal more effectively with such enquiries, a special branch of the department was formed in 1914, whose business it is, in collaboration with the staff of the Scientific and Technical Research Department, to collect and distribute technical information. Since the war this branch, known as the Technical Information Bureau, has been very full of work, and has not only dealt with a large number of inquiries as to Indian materials and their possibilities, but has taken the initiative with British manufacturers and merchants in bringing to their notice important Indian materials which await a new market.

The Institute has a library and map rooms which are important auxiliaries to this work and publishes quarterly the *Bulletin* which has played a conspicuous part in making known throughout the Empire the results of researches conducted at the Institute, and the records of progress in the various aspects of the production and utilisation of commercial and economic materials.

The Public Trustee.

The **Public Trustee of England** is a Government Official created by Statute (Public Trustee Act, 1906), whereby the State acts as an executor or as a trustee under Wills, and as a trustee under Settlements, whether these instruments are new or old, and in other offices of an analogous character.

The office has been a great success; in the seven years that it has been open the value of the trusts in course of administration have amounted, in round figures, to £50,000,000, while the estimated value of Wills lodged in the Department which have yet to mature is put at some £59,000,000, showing a total value of business of all kinds negotiated at £110,000,000.

Fees chargeable.—The office is now entirely self-supporting and is no charge upon the tax-payer. A provision of the Statute declares that the Office is to make no profit but to charge only such fees as may provide the working expenses and constitute a reserve fund against the liabilities assumed by the State for breach of trust. In accordance with this mutual principle the fees have already been reduced from their original scale, and the cash surplus of fees over expenses, regarded as the nucleus of a reserve fund for all contingencies, is now £14,585.

The main fees are of two kinds—a fee on capital and a fee on income. The fees on capital are taken in two instalments—an instalment of half taken at the beginning, and another instalment of half taken at the end of a trust—each instalment being calculated at the following rates:—

On the first £1,000, fifteen shillings per cent.

On the excess of £1,000 to £20,000, five shillings per cent.

On the excess of £20,000 to £50,000, two shillings and six pence per cent.

On the excess of £50,000, one shilling and three pences per cent. The **Fee on income** is one per cent. if, as is usual, the income be paid direct from its source to the person entitled, on any income in excess of £2,000 a year the fee is only ½ per cent. Where the income is paid through the Department then the fee is two per cent. up to £500 a year, and one per cent. on any excess of £500 a year, and ½ per cent. on income in excess of £2,000 a year. The fee on investment is ¼ per cent.; the Public Trustee, out of this fee paying the brokerage. There is power to vary these fees to meet the peculiar circumstances of special cases; but owing to the low range of the fees, and their mutual character the power of reduction is but seldom exercised, except perhaps in the case of large trusts.

The Department has been organised upon lines followed by commercial organisations. Forms are avoided wherever possible, the methods of the Office prescribing prompt attention to all matters within the day.

The particulars of any trust in which it is desired that the Public Trustee should act may be brought to his notice by letter or by personal interview, and upon his assent being obtained, his appointment should be effected in the ordinary way as in the case of private trustees. In the case of a Will about to be made, his appointment can be secured by the simple provision "I appoint the Public Trustee of England as the executor and trustee of this my Will."

One of the forms of trusteeship which would appeal to English people residing in India is a scheme known as a "**Declaration of Trust.**" An official pamphlet explains that the Public Trustee's services have been requested by people who, either because of professional or business pre-occupation, or from want of experience in dealing with money matters, or from the disadvantages which might attach to Governmental, professional or business disabilities abroad, are not well placed to select and supervise their investments. It would appear that the services of the Department in this matter were first requisitioned by officers taking up appointments in India; and, following out their request for individual assistance, this scheme of trust came to be devised, and has been found to commend itself to the circumstances of a very large circle of persons similarly disadvantaged. A Declaration of Trust is an **inexpensive form of trusteeship** by virtue of which the owner practically retains full control over his capital. The property is made over to the Public Trustee either in the form of money to be invested or specific securities transferred into his name; and thereupon the Public Trustee executes a short "declaration" setting out that he holds the money invested or the securities in trust for the transferor. The result of this is that income, as it accrues, is paid to the owner or to any beneficiary as he may direct. A wide field of investment is permissible, as the trust provides that the funds may be invested as the owner may from time to time direct. As the pamphlet sets out interest at the rate of at least 4 per cent. is to be looked for under the scheme from investments of a non-speculative character. It should be understood that this form of trusteeship is not analogous to a bank deposit, where the return of the capital at par, given the solvency of the bank, is expected. Investments are selected with the greatest care in consultation with the owner, but it must be understood that the Public Trustee does not accept responsibility for any fluctuation of any of the investments chosen. The fees payable for this scheme of trusteeship, so far as the capital fees are concerned, are half those payable in the case of an ordinary settlement. The other fees are the same as the ordinary fees.

The appointment of the Public Trustee secures certain definite advantages inasmuch as he is by Act of Parliament a Corporation Sole: and thus it is said the Public Trustee never dies, so that the expense of appointment of other Trustees is permanently avoided. His

integrity is guaranteed by the State, while the measure of his success would indicate that he is necessarily experienced and skilled in his duties.

Close personal attention is given by the Public Trustee and his senior officers to the details of every trust; and as regards the work of investment, a large organisation has been set up to give the best consideration not only to the selection of investments but to the duty of keeping them under frequent observation.

An Advisory Committee of men of recognised authority has, in the past year, been appointed by the Lord Chancellor to assist the Public Trustee by a quarterly review of the investments made. In the last Annual Report the Public Trustee speaks of having secured a return of £3-19-4 per cent. upon his trustee investments and a return of £4-10-1 per cent. upon his non-trustee investments.

The success of the Department would seem to show that there is a widespread public need in England for such an Office, and the energy and efficiency with which the Department has been constituted and conducted has been a great factor in commending it to the public. The State Guarantee is also doubtless a factor of great importance. A statutory rule provides that strict secrecy shall be observed in respect of all trusts administered in the Department.

The administration is subject to an **audit** by the Controller and Auditor-General (the Government Auditor), while the internal organisation has been built up upon the principle of a check and counter-check upon the administration.

An important section of the Statute gives the Public Trustee power to direct an audit and investigation of the condition and accounts of any trust.

Officials in India will doubtless tend to make an increasing use of the Department. As a Government Office, its stability will commend itself to them as a medium to safeguard their interests under Wills or Settlements which can be entirely relied upon, and free from the risks and expense attendant upon any other forms of trusteeship.

Further information upon details and copies of the official pamphlet, reports and rules, etc., can be obtained of the official agents to the Department, *viz* :—Messrs. King, Hamilton & Co., Calcutta and in Bombay, Messrs. King, King & Co., whose head office is Messrs. Henry S. King & Co., 65, Cornhill, London, E. C.

THE ADMINISTRATOR-GENERAL.

In India the functions of a Public Trustee are divided in each Province between two officials, the Administrator-General and the Official Trustee.

The office of **Administrator-General** was first constituted by Indian Act VII of 1849. There were several later enactments on the subject, all of which have ceased to be in force. The present law is to be found in Indian Act III of 1913, which contains the following provisions :—There are three Administrators-General in each of the Presidencies of Bengal, Madras, and Bombay. Their combined jurisdiction covers the whole of British India. The Administrator-General is entitled to letters of administration, when granted by a High Court, unless they are granted to the next of kin. In the other Courts he is entitled to letters in preference to a creditor, a legatee other than a universal legatee, or a friend of the deceased.

If any person who is not an Indian Christian, a Hindu, Mohammedan, Persian, Buddhist dies leaving w thin any Presidency assets exceeding the value of Rs. 1,000 and if no person to whom any Court would have jurisdiction to commit administration of such assets has, within one month from his death, applied in such Presidency for probate or letters of administration, the Administrator-General is required to apply for letters of administration. In case of apprehended danger of misappropriation, deterioration, or waste of assets left by the deceased in the towns of Calcutta, Madras, and Bombay, the High Courts may direct the Administrator-General to apply for letters of administration. He can also be required to collect and hold assets until a right of succession or administration is determined. Probate and letters of administration granted to an Administrator-General have effect throughout the Presidency, but the High Court can direct that they have effect throughout one or more of the other Presidencies. A private executor or administrator may with the assent of the Administrator-General transfer the assets of the estate to the Administrator-General. There are provisions in the Act with regard to the revocation of grants and the distribution of assets When the assets do not exceed Rs. 1,000 in value, the Administrator-General may, when no probate or letters of administration have been granted, give a certificate to a person, claiming otherwise than as a creditor to be interested in such assets, entitling him to receive the assets. There is also power in certain events to give such certificate to a creditor. There is a further power to send the residue of the assets to the country of domicile of the deceased. The Government of India is required by the Act to make good all sums for which the Administrator-General would be personally liable if he had been a private administrator, except where the Administrator-General and his officers have in no way contributed to the liability.

Fees both on capital and on income are payable out of the estates taken charge of by the Administrator-General. The fees on capital vary from 3 per cent. on the gross value in the case of small estates to 2 per cent. in the case of large estates. The fees on income vary in the case of moveable property from 2 per cent. to 3 per cent., and in the case of immovable property from 3 per cent. to 5 per cent. When the Court has directed the Administrator-General to collect and hold the assets a fee of 1 per cent. on the value of the assets taken possession of, collected, realised, or sold is payable. A small fee is also payable in cases where the

Administrator-General grants a certificate the Administrator has power to reduce the fees to one-half.

Official Trustee.—The office of Official Trustee dates from the year 1843. By Indian Act XVII of that year the Supreme Court had power to appoint the Registrar or other officer of the Court to be a trustee, where there was no trustee willing to act. Act XVII of 1843 was repealed by Act XVII of 1864, which was in its turn repealed by Act II of 1913, which contains the present law on the subject. There are three Official Trustees. The Official Trustee of Bengal has powers in the greater part of India. The powers of the Official Trustee of Bombay extend to the Bombay Presidency and the Province of British Baluchistan; those of the Official Trustee of Madras extend to the Madras Presidency and the Province of Coorg. The Government can appoint Deputy Official Trustees.

An Official Trustee can (*a*) act as an ordinary trustee, (*b*) be appointed trustee by a Court of competent jurisdiction. He has, except as otherwise provided, the same powers, duties, and liabilities as ordinary trustees. He may decline any trust. He may not accept any trust under any composition or scheme of arrangement for the benefit of creditors, nor of any estate known or believed by him to be insolvent. He cannot accept a trust for a religious purpose, or for the management or carrying on of any business. He cannot administer the estate of a deceased person unless he be sole executor and sole trustee under the will. He cannot be appointed trustee along with any other person. With his consent he may be appointed trustee in the instrument making the trust, and he may accept a trust contained in a will. When property is subject to a trust, and there is no trustee within the jurisdiction willing or capable to act, the High Court may appoint the Official Trustee as trustee. He may also be appointed a trustee by the surviving or continuing trustees of a trust, and all persons beneficially interested therein.

As in the case of an Administrator-General, the Government of India is responsible for the acts or defaults of an Official Trustee. Fees are payable at rates fixed by the Government.

PROVING OF WILLS.

In British India if a person has been appointed executor of the will of a deceased person, it is always advisable to prove the will as early as possible. If the will is in a vernacular it has to be officially translated into English. A petition is then prepared praying for the grant of probate of the will. All the property left by the deceased has to be disclosed in a schedule to be annexed to the petition. The values of immoveable properties are usually assessed at 16⅔ years purchase on the nett Municipal assessment. For estate under Rs. 10,000 the probate duty payable is 2%; between Rs. 10,000 and Rs. 50,000 the duty payable is 2½%. Over 50,000 rupees the duty payable is 3%. In determining the amount of the value of the estate for the purposes of probate duty the following items are allowed to be deducted:—

1. Debts left by the deceased including mortgage encumbrances.
2. The amount of funeral expenses.
3. Property held by the deceased in trust and not beneficially or with general power to confer a beneficial interest.

The particulars of all these items have to be stated in a separate schedule. It is the practice of the High Court to send a copy of these schedules to the Revenue authorities and if the properties particularly immoveable properties have not been properly valued, the Revenue department require the petition to be amended accordingly. In certain cases the Court then requires citations to be published and served on such persons as the Court thinks are interested in the question of the grant of probate. If no objection is lodged by any person so interested within 14 days after the publication or service of citation and if the will is shown to have been properly executed and the petitioner entitled to probate, probate is ordered to be granted.

Labour.

Labour in India was not organised until recently and the movement may be said to date from 1920 the year too of the first meeting of the All-India Trade Union Congress in Bombay.

Industrial Disputes.—There was an exceptionally long period of strikes throughout the country in 1921. The detailed statistics for the whole period are not yet available, but those for the Bombay Presidency from 1st April 1921 may be summarised as follows:—

Month.	No. of strikes and lockouts	Aggregate duration in working days.	Proportion settled.			
			In favour of employers (Per cent).	In favour of employees (Per cent).	Compromised (Per cent.)	In progress (Per cent).
1921.						
April	6	181,450	33	17	17	33
May	11	227,115	27	9	18	46
June	10	79,801	70	10	..	20
July	10	12,268	60	10	10	20
August	14	192,001	36	36	7	21
September	21	256,498	80	10	..	10
October	15	231,896	27	13	27	33
November	31	62,009	29	42	19	10
December	9	26,321	78	11	11	..

Trade Unions.—In regard to Trade Unions, the Government of India have addressed Local Governments with a view to legislation on the Registration and Protection of Trade Unions throughout India. This Act will, it is hoped, be passed in the autumn session of the Central Legislature this year, or in the coming cold whether session. The All India Trade Union Congress held its second session at Jharia on the 30th November and continued its sittings on the 1st and 2nd of December, at which representatives from almost all the provinces were present. Mr. Joseph Baptista of Bombay who was elected President delivered an address in the course of which he suggested that Government should establish a Ministry of Labour. He outlined the constitution of the congress and hopes that it would develop into a national organ of labour, in which the Co-operative, Trade Union, and Socialistic movements would be represented.

Industrial Peace.—During the year as is to be expected with the existence of strikes, serious attempts were made by Government and employers and also by members of the general public to arrive at some solution for the prevention and early settlement of industrial disputes. A committee sat in Calcutta and presented a report. This has resulted in the formation of Conciliation Boards but no legislation has been passed with regard to this. At the present moment a strong non-official committee under the presidentship of Sir Stanley Reed is sitting in Bombay to arrive at a solution for the prevention and early settlement of industrial disputes in this presidency.

The Committee is exploring all the possible ways and means suitable to the peculiar conditions of India, at any rate of this Presidency, by which strikes would be prevented or settled with the least possible delay. The Committee was appointed on the acceptance by the Government of a Resolution moved in the Legislative Council in October 1921 by Mr. Kanji Dwarkadas, M.L.C.

Workmen's Compensation.—The question of Workmen's Compensation Act on the lines of the English Legislation is at present under consideration and the Workmen's Compensation Act, will, it is understood, be on the Statute Book in the near future. The Local Governments have been consulted on the following points:—

(1) Is it desirable to affirm in general terms the principle of employers' liability?

(2) If so, should the necessary legislation follow the English Employers Liability Act of 1880 and the Workmen's Compensation Act of 1906?

(3) Should there be provision for compensatory benefits and should this be limited to industrial workers ?

(4) What provisions should regulate the inclusion of workers in.—

(*a*) Factories,

(*b*) Mines,

(*c*) Railways,

(*d*) Ships,

(*e*) Docks ?

(5) Is the principle of limitation to manual workers as a general rule approved ?

(6) Should the compensatory provisions cover.—

(*a*) Building trades,

(*b*) Telegraph, and telephone services ?

(7) What further classes should be included ; are there any dangerous or unhealthy trades for which provision should be specially made ?

(8) What should be the necessary circumstances antecedent to the injury to bring it within the scope of the Act ?

(9) What exceptions should be made in this connection ?

(10) For what injuries should compensation be provided ?

(11) How should the cost of compensation be met ?

(12) What type of scales should be adopted for compensation ?

(13) Should the award of lump sums be avoided ?

(14) Are the scales suggested suitable ?

(15) Is the principle of special scales for minors approved ?

(16) Should refusal to receive medical attention debar an employee from claiming compensation ?

(17) How should the Act be administered ?

(18) Should special penalties be provided for deliberate evasion of the Act ?

General.—The question of forming Employment Agencies is also under consideration. During the year Labour Offices were in existence in Bombay and in Madras. It is under stood that the Government of Bengal are shortly to appoint a Labour Officer in the Secretariat.

THE LABOUR OFFICE.

"More than 30 years ago," His Excellency the Governor of Bombay said in a foreword to the first (September) issue of the *Labour Gazette*, "it was decided in the House of Commons that immediate steps should be taken to ensure the collection in England of full and accurate statistics in regard to Labour matters. In India on the other hand the importance of such statistics to industry and labour has been realised less rapidly and the compilation of labour statistics as such was until recently still in its infancy. . . To prevent these misunderstandings between employer and employed and between both of these and the general public, as well as to provide Government with reliable data my Government decided that a Labour Office must be instituted and this decision was carried into effect in April last (1921)". His Excellency pointed out that the Labour Office is intended to furnish up-to-date and accurate information regarding the realities of the labour world. This was the primary function of the Labour Office as of Labour Departments the world over.

In a resolution of Government in the Home Department dated 29th April 1921, the functions of the Labour Office were set out as follows :—

(*i*) LABOUR STATISTICS AND INTELLIGENCE. —These relate to the conditions under which labour works and include information relating to the cost of living, wages, hours of labour, family budgets, strikes and lock-outs, and similar matters ;

(*ii*) INDUSTRIAL DISPUTES.—As experience and knowledge are gained and the activities of the Labour Office develop, it will promote the settlement of industrial disputes when these arise ; and

(*iii*) LEGISLATION AND OTHER MATTERS RELATING TO LABOUR.—The Labour Office will advise Government from time to time as regards necessary new legislation or the amendment of existing laws. Legislation, it may be noted, in regard to (1) the registration and protection of trade unions ; (2) Workmen's Compensation ; (3) Unemployment agencies ; and (4) a new Factory Act is under consideration.

PERSONNEL.

DIRECTOR —Mr. G. Findlay Shirras, M.A., F.S.S., (Hony) I.E.S., M.L.C.

INVESTIGATORS —Mr. W. J. Herridge, Rao Sahib M.M Gandhi, B.Sc. ; Miss G. Pimpalkhare.

JUNIOR AND PART TIME INVESTIGATORS.— Miss S. Dabholkar, Miss B. Desai, Mr. S. A. Jakhi, Dr. (Mrs.) F. D. Barnes, M.D., Women's Medical Service (lent for one year by the Dufferin Fund for invetigations regarding maternity benefits and child welfare in connexion with organised industries of the Presidency.)

(*iv*) LABOUR Gazette.— A *Labour Gazette* is published monthly. It is a journal for the use of all interested in obtaining prompt and accurate information on matters specially affecting labour. It is intended to stand to labour questions here in the same relation as the "Labour Gazettes" and "Labour Reviews" of Departments of Labour in other countries, Statistical and other information on the cost of living, wholesale and retail price levels, wages and the hours of labour, industrial disputes trade unions, etc., is regularly published.

Enquiries, &c.—These should be addressed to the Director, Labour Office, Secretariat, Bombay. The Telegraphic address is :— "BOMLABOUR".

CENTRAL LABOUR BOARD.

Secretary—S. H. Jhabwala,
123, Esplanade Road, Fort,
Bombay.

Bombay Development Scheme.

The Bombay Development Scheme in its widest sense represents concerted attempts by the three local bodies, the Municipality, the City Improvement Trust and the Port Trust, each working in its own sphere, and by the Government, to secure the rapid and adequate development of the city.

The Municipality is developing various areas in the city which will result in providing increased residential and business accommodation. The Mahim scheme will provide two main avenues running north to south, in addition to the 60 feet road from Worli to Mahim Bazar, now practically completed, and a large number of cross roads. It aims at the development of an area in which it may be possible to house, approximately, a population of 2,50,000. Provision has been made for a central park with a frontage on the bay and for a smaller park near the southern end of the area. The main contribution of the Municipality, however, towards the general development scheme lies in the great water and drainage projects which it is undertaking and which are essential for the health and well-being of the city.

Improvement Trust.—The Improvement Trust are developing the north of the Island on a large scale and at a rapid pace, completing their old schemes, Dadar-Matunga and Sion-Matunga, and pressing on with the new schemes, adopted in 1919, the total area of which amounts to about one-ninth of the area of the whole Island. Of the latter, the Worli scheme will provide for three classes of people; the richer class on the sea face, the middle class on the main road, and very large areas for the working classes on the land which is now being reclaimed in the neighbourhood of the mills. At Dharavi the land now occupied by the tanneries and the swamps to the south will be converted into a salubrious garden suburb, including a large amount of accommodation for the working classes. The Sewri-Wadalla scheme is intended almost entirely for the working and lower middle classes, and the area included in it will, when the contemplated railway connections are made, be within easy access by rail from Victoria Terminus.

Port Trust.—The Port Trust is completing the preparation of a scheme for a great expansion of he docks, the new docks to be located on the outh-west corner of Trombay. The construction of the new cotton depot on the Mazgaon Sewri reclamation is being pushed on as rapidly as possible, which will release for other purposes the ground now occupied by the Cotton Green.

Programme.—The works which Government propose to carry out themselves are as follows:—

(*a*) The provision of at least 50,000 one room tenements for the working classes, to meet an actual existing shortage of accommodation as reported by the Municipal Commissioner in 1919.

(*b*) The Back Bay and East Colaba Reclamation, to reduce congestion in the business area and provide residential accommodation and open spaces in the south of the City.

(*c*) The development of South Salsette, including Trombay, partly for residential and partly for industrial purposes.

(*d*) The provision of other industrial areas at greater distances.

(*e*) The improvement of communications to the suburban areas

(*f*) The improvement of the supply and transport of building materials.

The question of special measures for the development of Bombay has been under the consideration of Government for many years. The results of the last general survey of the subject are contained in the report of the Bombay Development Committee submitted in May 1914. The war made it impossible then to carry out any large schemes as to formulate a definite policy. And when the war had come to an end, it was found that owing to the large increase in the City's population during the war, and the high prices of materials, conditions were much worse than before, and that more rapid and more drastic action was necessary.

Scope of Work.—In a speech to the Legislative Council in August 1920, His Excellency the Governor explained that the industrial housing scheme, which Government considered essential, would be carried out by them direct, instead of being entrusted to the Municipality or the Improvement Trust, because of the very heavy liabilities which already rested on those bodies He introduced a Bill for the levy of a cess of one rupee per bale on cotton imported into Bombay, the proceeds of which would be used partly to provide additional revenue for the Municipality in view of its large programme of expenditure, partly to meet the loss anticipated on the housing scheme, and partly to assist development schemes in Salsette.

He announced Government's decision to establish a new Development Department, and Directorate, which would be at once a department of Government, detached as far as possible from the ordinary Secretariat, and an executive organisation, and defined its duties as under:—

(*a*) To carry out the Back Bay Reclamation Scheme and any other reclamation schemes which may be found necessary in or near Bombay City.

(*b*) To undertake the industrial housing scheme of 50,000 one-roomed tenements for the working classes in Bombay.

(*c*) To organise systematically the supply of building materials for its own work and for the works with which it is connected.

(*d*) To take over all questions relating to the acquisition of land in Bombay City and all questions regarding the utilisation of Government land.

(*e*) To carry out large schemes for the systematic development of Salsette.—

(*i*) by town planning schemes to be carried out by local authorities, and

(*ii*) by the purchase of areas outright with a view to resale after development.

(*f*) To secure an adequate water supply for the whole of Salsette when it is developed as an urban area.

(*g*) To deal with the supply and distribution of electrical energy, both for domestic and industrial purposes in the area outside Bombay.

(*h*) To take up the question of the Improvement of communications to link up Bombay City with the areas to be developed in Salsette and Trombay.

He stated also that, in view of the magnitude of the schemes to be undertaken simultaneously by Government and the local bodies, Government had decided that the finance of the whole scheme should be pooled, that they should lend their credit to the local bodies, and appeal to the public for the money required by them as well as by Government themselves. The result of this decision was the Bombay Development Loan of 1920, the subscriptions to which amounted to Rs. 939 lakhs in round figures. Of this amount, Rs. 419½ lakhs were forthwith transferred to the local bodies, further advances being made subsequently.

Personnel.—The whole Development Department, including the Directorate, is in charge of the Hon'ble Sir Chimanlal Setalvad, as General Member of Council. The Director of Development is in charge of the executive organisation and staff, subject to the orders of Government. The Deputy Director, in addition to assisting the Director in executive matters, is Secretary to Government in the Development Department, and also Commissioner for the Bombay Suburban Division, which includes the areas in Salsette and the Ambarnath taluka, in which development schemes are being carried out.

The Back Bay Reclamation works and the East Colaba Reclamation Project are in charge of a Chief Engineer (under the Director), assisted by 3 Deputy Chief Engineers, one at the Quarry near Kandivlee Station from which materials for the wall are being obtained, one at Marine Lines and one at Colaba, at either end of the seawall. This branch is detached from the remainder of the engineering staff.

For development works other than the reclamation, the Director is Chief Engineer, and is assisted by 4 Superintending Engineers. One is in charge of industrial housing, one of development works in Salsette, one of the Salsette Trombay Railway Scheme, and the industrial area beyond Kalyan, and one of questions relating to the supply and transport of materials.

The appointment of Salsette Development Officer, created many years ago, has been absorbed in the Directorate, and the holder of it is also Collector of the Suburban District, and in charge of the staff employed on the acquisition of land in the suburban area. There is a Land Manager, who is employed on valuations, the preparation of details of schemes, negotiations with land owners, etc. As the existing land revenue survey is not nearly accurate enough for land to be developed as an urban area, a Superintendent of Suburban survey has been appointed to make a survey on the general lines of the Bombay City survey.

The Government of India have appointed a special Audit Officer for the Bombay Development Scheme, and have authorised his appointment as Deputy Financial Adviser, and the appointment of the Deputy Controller of Currency as Financial Adviser to the Development Department.

Housing— In Bombay City, apart from certain petty schemes affecting Government properties, the work of the Directorate consists at present of industrial housing and the Back Bay Reclamation. Detailed estimates for the East Colaba Reclamation are being prepared, with a view to work being started next cold weather. Three housing schemes are in progress, at Naigaum, DeLisle Road and Worli. Work on the latter two sites has begun only recently, but some of the chawls at Naigaum will be ready shortly On the plot already taken over from the Improvement Trust at Naigaum, 9 chawls are being constructed departmentally and a contract for 10 was let. Another 23 chawls are to be constructed on a second site to be handed over shortly by the Trust. At DeLisle Road 33 chawls are to be constructed At Worli about 68 acres of the land recently reclaimed in the Trust's Worli scheme are being taken over and about 150 chawls in all are to be constructed. All the chawls are to contain 80 tenements.

As regards *Back Bay*, the equipment and preparation of the quarry have been practically completed, there is through railway communication to the Marine Lines Section, the rolling stock has arrived, and the transport of materials will commence shortly. At Marine Lines the railway siding and yard are practically complete, and the construction of the gantry is in progress. Work on the wall has been commenced at Colaba.

Salsette.—In Salsette a large part of the Bandra-Ghodbunder road up to Andheri has been widened, quarrying and reclamation are in progress at Gilbert Hill, Andheri, the roads in Santa Cruz Town Planning Scheme No. I. have been completed, and those in Santa Cruz Scheme No. II, including the road to Juhu island, are in progress. The development scheme at Khar between the proposed Khar station and the sea, and a small scheme at Chapel Road, Bandra, have been worked out in detail. The seprovide for 863 and 166 building plots respectively. Negotiatons are being carried on for settlements with some of the previous owners and with co-operative building societies having special claims, and the balance of the plots will shortly be placed on the market. Only preliminary work has been done on the large scheme, Shahar, for the area lying between the G.I.P. and B. B. & C.I. Railways. Progress here depends on the construction of the Salsette Trombay Railway referred to later.

In Trombay there are 3 large schemes, Trombay North-East is intended to provide for (*a*) a new municipal slaughter house, tanneries, dyeworks and other noxious trades which ought

to be removed from the City; (*b*) a separate area for milch cattle stables; (c) residential areas for the people employed in the tanneries, etc. Trombay North-West is intended to provide a residential area for the lower middle class on good land surrounding on 3 sides the existing Chembur village and extending to the south and east. The development of Trombay West will depend on the detailed proposals of the Port Trust as regards the new docks.

In Trombay North-West, which is intended to be a residential area, the development of a gross area of 570 acres, to provide over 3,100 building plots, has been worked out in detail and is under Government's consideration. Meanwhile arrangements are being made to start work on the new roads in order to open out the area. This new estate will have railway access to Bombay from a new station to be opened temporarily on the Municipal line from Kurla Station. A detailed survey for the conversion of the first part of this line into a regular railway and its extension to Trombay has been carried out by the G.I.P. Railway. Preparations for starting work on the tannery area in Trombay North-West are almost complete.

A survey of the proposed Salsette Trombay Railway to run from Pir Pau to Kurla and then through the Shahar scheme lying between the G.I.P. and B.B. & C.I. Railways to Andheri has been completed. This line is to be used in the first instance as a construction line to enable development to proceed rapidly in central Salsette and Trombay. The earthwork has been commenced at the Andheri end, and a contract has been let for the earthwork from Kurla to Wadavli village in Trombay, south of Chembur.

Industrial Town.—The Ambernath Scheme aims at the provision of a new industrial township with a water supply independent of the Bombay system. About 18 lakhs of square yards of land adjoining the South East line of the G.I.P. Railway near Ambernath station will be available for actual factory sites, and ample land is reserved for housing all persons employed in the factories. The water is to be drawn from the Uhlas river, into which the tail-water of the Andhra Valley Hydro Electric Scheme will presently discharge. A barrage, designed to impound 42 million gallons of water, is being constructed. It has been designed so as, with the river widening works, also in progress, to avoid restricting the river during floods. Filtration works, to filter in the first instance 3 million gallons a day, are in hand. Pumps and a pumping main have been ordered, and the earthwork for the pumping main and work on the reservoirs is about to be started. Two factories are almost completely constructed and a third is well in hand. Electric supply is expected to commence in March or April. Roads connecting the present factories with the existing main road and the railway are practically complete. Surveys are being made for widening and improving the main road to Kalyan and for new approach roads to the area. Sites for housing, for a bazar, for Government buildings have been decided on, the storm water drainage of the area has been designed and details of the sewage system are under consideration. The G.I.P. Railway at the commencement of the scheme provided temporary sidings and a temporary loading siding, and details of the permanent arrangements required are being discussed with the railway authorities.

Supplies.—As regards materials, arrangements are being made wth a group of Indian Companies for the supply of all the cement likely to be required by the Development Directorate for 10 years, the local bodies in Bombay having an option of participating, if they wish to do so. No single source of supply of sand and shingle, in adequate quantities and of suitable qualities, has been found. Additional sidings have been arranged for and are being constructed at Mumbra, the principal place of supply at present Surveys have been made of other sources, and estimates for construction of sidings at the most promising of these are being prepared. An experimental brick-field has been opened at Wasind, mainly as a means of ascertaining what improvements in the manufacture of ordinary bricks are possible and desirable. Railway sidings from Mahaluxmi to the Worli Housing site and from Lower Parel to the De Lisle Road site, for the transport of materials, are being arranged for. A depot has been established and sidings are almost completed at Matunga. These sidings will be used for materials required on development schemes in Bombay not accessible by rail, and facilities will be given to the public engaged in building in the north of the island. A small fleet of steam wagons and trailers has been provided for the transport of materials, and in connection with the proposed development of Salsette and Trombay, small workshops capable of expansion as required are being erected near Kolekalyan and Wadavli near Chembur.

Military Lands—Arrangements have been made with the Government of India involving the relinquishment by the military authorities of practically all the land they hold in the Fort area. The services displaced are to be reinstated partly at Deolali and partly at Colaba, where the military area is to be increased by about 265 acres at the southern end of the Back Bay Reclamation. The Government of India have to pay the Government of Bombay for this land, and this payment and the cost of new buildings, etc., due to the removal of the military from the Fort are to be covered by the sale of the land to be vacated. One small site has been sold and several plots on the Palton Road Estate (formerly the Old Palton Road lines) will be put up for sale at the end of January. Works are in progress at Carnegy Lines and Colaba and tenders have been received for the first of the new works at Deolali. The Bombay Military Lands Scheme is in charge of a Board of Control, consisting of the Director of Development and the General Officer Commanding, Bombay District. The Audit Officer, Bombay Development Scheme, is also Financial Adviser and Audit Officer for the Military Scheme. The staff employed on this scheme do not form part of the Development Directorate, but work in the same building, and in conjunction with the Directorate. As military land becomes ready for disposal, it is handed over by the military authorities to the Bombay Government, and action in regard to its disposal is taken by the Development Directorate under the orders of Government.

Freemasonry in India.

In 1728 a dispensation was granted by the Grand Lodge of England to Geo. Pomfrett, Esq., authorising him to "open a new Lodge in Bengal." Of this personage nothing further is known but under Capt. Farwinter, who in the following year succeeded him as Provincial Grand Master of India, Lodge was established in 1730, which in the Engraved Lists is distinguished by the arms of the East India Company, and is described as "No. 72 at Bengal in the East Indies." The next Provincial Grand Masters were James Dawson and Zech. Gee, who held office in 1740; after whom came the Hon. Roger Drake, appointed 10th April 1755. The last named was Governor of Calcutta at the time of the attack made on the settlement by Surajah Dowlah in 1756. Drake missed the horrors of the Black Hole by escaping and was accused of deserting his post, but, though present at the retaking of Calcutta by Admiral Watson and Clive, it is improbable that he resumed the duties of his masonic office after the calamity that befell the settlement.

The minutes of the Grand Lodge inform us that William Mackett, Provincial Grand Master of Calcutta, was present at the meeting of that body November 17th, 1760, and we learn on the same authority that at the request of the "Lodges in the East Indies" Mr. Cullin Smith was appointed P. G. M. in 1762. At this period it was the custom in Bengal "to elect the Provincial Grand Master annually by the majority of the votes of the members present, from amongst those who passed through the different offices of the (Prov.) Grand Lodge and who had served as Dep. Prov. Grand Master." This annual election as soon as notified to the Grand Lodge of England was confirmed by the Grand Master without its being thought an infringement of his prerogative. In accordance with this practice, Samuel Middleton was elected (P. G. M. circa) in 1767; but in passing it may be briefly observed that a few years previously a kind of roving commission was granted by Earl Ferrars in 1762-64 to John Bluvitt, Commander of the "Admiral Watson," Indiaman "for East India where no other Provincial Lodge is to be found." Middleton's election was confirmed October 31st, 1768, and, as the dispensation forwarded by the Grand Secretary was looked upon as abrogating the practice of annual elections, he accordingly held the office of D. G. M. Unfortunately the records of the P. G. L. date back only to 1774, and thus much valuable information is lost to us. This Grand Lodge continued working until 1792 when it ceased to meet. It seems that the officers were selected from only two Lodges much to the dissatisfaction of the other Lodges, and resulted in most of the dissatisfied bodies seceding and attaching themselves to the Athol of Ancient Grand Lodge. In 1813 at the Union both the Ancients and Moderns in Calcutta combined and gave their allegiance to the **United Grand Lodge of England** and have since been working peaceably under the Provincial Grand Lodge of Bengal which was revived in that year and in 1840 created a District Grand Lodge.

Madras.—The earliest Lodge in Southern India (No. 222) was established in Madras in 1752. Three others were also established about 1766. In the same year Capt. Edmund Pascal was appointed P. G. M. for Madras and its Dependencies and in the following year another Lodge was established at Fort St. George. In 1768 the Athol (or Ancients) invaded this District and in 1782 established a Provincial Grand Lodge and both these Provincial Grand Bodies continued working peaceably side by side until the union. Indeed, though not generally known, these two Grand Bodies made an attempt at coalition long before any such movement was made by their parent bodies, the Grand Lodge of England, and the Ancient Grand Lodge, and Malden in his History of Freemasonry in Madras states that in a great measure they succeeded. At the Union in 1813 all the bodies in Madras gave their allegiance to the United Grand Lodge. One event worthy of note was the initiation in 1776 at Trichinopoly of the eldest son of the Nawab of Arcot, Undat-ul-Amari, who in his reply to the congratulations of the Grand Lodge of England stated "he considered the title of English Mason as one of the most honourable that he possessed." This document is now stored in the archives of the United Grand Lodge.

Bombay.—Two Lodges were established in this Presidency during the 17th century, Nos. 234 at Bombay in 1758 and 569 in Surat in 1798, both of which were carried on the lists until the union when they disappeared. A Provincial Grand Master, James Todd, was appointed but there is no record that he exercised his functions and his name drops out of the Freemasons' Calendar in 1799. In 1801 an Athol Warrant was granted (No 322) to the 78th foot which was engaged in the Maratha War under Sir Arthur Wellesley. In 1818 Lord Moria was asked to constitute a Lodge to be known by the name of St. Andrew by eight Masons residing there and also to grant a dispensation for holding a Provincial Grand Lodge for the purpose of making the Hon. Mountstuart a Mason, he having expressed a wish to that effect. The Petitioners further requested "that his name might be inserted in the body of the warrant, authorising them to instal him after being duly passed and raised a Deputy Grand Master of the Deccan. Of the reply to this application no copy has been preserved. Lodge Benevolence was established in Bombay in 1822.

In 1823 a Military Lodge "Orion-in-the-West" was formed in the Bombay Artillery and installed at Poona as No. 15 of the Coast of Coromandel. It seems from Lane's records that in 1830 it was discovered that this Lodge was not on the records of the United Grand Lodge of England. A Warrant was subsequently issued bearing date 19th July 1833. According to the early proceedings of this Lodge, members were examined in the Third Degree and passed to the chair in the Fourth Degree for which a fee of three gold mohurs was charged. In the following year a second Lodge was established at Poona by the Provincial Grand Lodge of Bengal which however left no trace of its existence. In 1825 the civilian element of "Orion" seceded and formed the "Lodge of Hope" also at Poona No. 802.

Here "Orion" unrecognized at home, aided in the secession of some of its members, who

obtained a warrant, on the recommendation of the parent Lodge, from the Grand Lodge of England. Two years later it was discovered that no notification of the existence of "Orion-in-the-West" had reached England, nor had any fees been received, although these including quarterages had been paid into the Provincial Grand Lodge, Coast of Coromandel. It was further ascertained that in granting a warrant for a Bombay Lodge the Provincial Grand Master of Coromandel had exceeded his powers. Ultimately a new warrant No. 598 was granted as already stated in 1833. Lodge "Perseverance" was started in Bombay No. 818 in 1828. Up to this time the jurisdiction of the Grand Lodge of England in India had not been invaded; but in 1836 Dr. James Burnes was appointed by the Grand Lodge of Scotland, P. G. M. of Western India and its Dependencies. No Provincial Grand Lodge however was formed until 1st January 1838. A second Scottish Province of Eastern India was started which on the retirement of the Marquis of Tweedale was absorbed within the jurisdiction of Dr. Burnes, who in 1846 became Provincial Grand Master for all India (including Aden) but with the proviso, that this appointment was not to act in restraint of any future sub-division of the Presidencies. Burnes may be best described as being in 1836, in ecclesiastical phrase as a Provincial Grand Master "in partibus infidelium" for whatever Lodges then existed throughout the length and breadth of India were strangers to Scottish Masonry. But the times were propitious. There was no English Provincial Grand Lodge in Bombay and the Chevalier Burnes, whom nature had endowed with all the qualities requisite for Masonic Administration, soon got to work and presented such attractions to **Scottish Freemasonry** that the strange sight was witnessed of English Masons deserting their mother Lodges, to such an extent that these fell into abeyance, in order to give support to Lodges newly constituted under the Grand Lodge of Scotland. In one case indeed, a Lodge "Perseverance" under England went over bodily to Scotland, with its name, jewels, furniture, and belongings, and the charge was accepted by Scotland. This Lodge still exists in Bombay and now bears No. 338 on the Register of Scotland. From this period, therefore, Scottish Masonry flourished, and English Masonry declined until the year 1848 when a Lodge St. George No. 807 on the Rolls of the Grand Lodge of England was again formed at Bombay, and for some years was the solitary representative of English Masonry in the Province. In 1844 Burns established a Lodge "Rising Star" at Bombay for the **admission of Indian gentlemen** the result of which is seen at the present day. Thus the seed planted at Trichinopoly in 1776 by the initiation of Andat-ul-Amari has borne fruit, resulting in the initiation of thousands of Indian gentlemen of all castes and creeds, and which has gone far to establishing that mutual trust between West and East, a distinguishing characteristic of Speculative Freemasonry. A Provincial Grand Lodge was re-established in Bombay in 1860, and converted into a District Grand Lodge in 1871.

The Grand Lodge of England.—All three Constitutions of the United Kingdom, the United Grand Lodge of England, the Grand Lodge of Ireland and the Grand Lodge of Scotland hold jurisdiction in India. By far the largest is the first; the next largest is the third and the number of Lodges under Ireland is as yet small. The Grand Lodge of England divides its rule under Five District Grand Masters independent of each other and directly subordinate to the Grand Master of England by whom they are appointed.

Bengal.

80 Lodges. Rt. W. Bro. The Earl of Ronaldshay, G.C.I.E., District Grand Master.

Madras.

31 Lodges. Rt. W. Bro. Hon. L. E. Buckley C.S.I., District Grand Master.

Bombay.

48 Lodges. Rt. W. Bro. W. A. Haig-Brown, J.P., Hon. Mag., District Grand Master.

Punjab.

31 Lodges. Rt. W. Bro. Maj.-Genl. Sir George Fletcher McMunn, K.C.B., K.C.S.I., D.S.O., District Grand Master.

Burma.

14 Lodges. Rt. W. Bro. James McKenna, C.I.E. District Grand Master.

204

The Grand Lodge of Scotland exercises its rule through a Grand Master of all Scottish Freemasonry in India, who is elected by the Brethren subject to confirmation by the Grand Master Mason of Scotland. Maj. Gen. W. E. Jennings, C.I.E., the present incumbent of the office, controls 65 Lodges.

The **Grand Lodge of Ireland** granted a warrant to establish a Lodge at Kurnal in 1837, but it was short lived. An attempt was made in 1869 to establish a Lodge in Bombay, but on the representation of the Grand Secretary of England, to the Deputy Grand Secretary of Ireland that it would be objectionable to create a third masonic jurisdiction in the Province, there being two already, *viz.*, English and Scottish, the Grand Lodge of Ireland declined to grant the warrant. In 1911, however, a warrant was sanctioned for the establishment of Lodge "St. Patrick" and since that year two other Lodges have sprung into being.

The Grand Lodge of Ireland has no District Grand Master in India at present, the Lodges corresponding direct with the Grand Lodge in Dublin. There are ten Lodges, 4 in Calcutta, 3 in Ceylon and 3 in Bombay.

Royal Arch Masonry—.Under England, the District Grand Master in any District is nearly always created also Grand Superintendent, his Deputy as Second and another Companion as Third Principal.

Under Ireland there is no local jurisdiction and under Scotland the office is elective subject to confirmation.

The five English Districts are constituted as under:—

Bengal.

27 Chapters. The Earl of Ronaldshay, G.C.I.E., Grand Superintendent.

Madras.

15 Chapters. The Hon. Mr. L. E. Buckley, C.S.I., Grand Superintendent.

Bombay.

21 Chapters. W. A. Haig-Brown, J.P., Hon. Mag., Grand Superintendent.

Punjab.

18 Chapters. Maj-Genl. Sir George Fletcher McMunn, K.C.B., K.C.S.I., D.S.O. P.A.G. Soj. (Eng.), Grand Superintendent.

Burma.

6 Chapters. James McKenna, C.I.E., Grand Superintendent.

87

The present Grand Superintendent of R. A Masonry under Scotland is the Hon Maj.-Gen. W. E. Jennings, C.I.E., and there are 29 Chapters.

There is one Irish Chapter in Calcutta.

Mark Masonry—Under England, Mark Masonry is worked under the Grand Mark Lodge of England and Wales, and divided into separate Districts, but in most cases the District Grand Master is also District Grand Mark Master.

Bengal.

26 Lodges Rt. W. Bro Th Earl of Ronaldshay G.C.I.E., D. Grand Master.

Bombay.

14 Lodges. Rt. W. Bro. W. A. Haig Brown, J. P., Hon. Mag., D. Grand Master.

Madras.

13 Lodges. Rt. W. Bro. Hon. L E. Buckley, C.S.I, D. Grand Master.

Punjab.

14 Lodges. Rt. W. Bro. Maj.-Genl Sir George Fletcher MacMunn, K.C.B., K.C.S.I., D.S O, D. Grand Master.

Burma.

6 Lodges Rt. W. Bro James McKenna, C I.E., District Grand Master.

The Mark degree is incorporated with the Royal arch degree in Irish Chapters. Mark degree is worked in some S. C. Lodges, but mostly in R. A. Chapters, in which the Excellent R A.M. and other degrees can be obtained. S. C. Chapters insist upon candidates being Mark Master Masons before exaltation. Mark degree in Craft Lodges is conferred by the Rt. Wor. Master in S. C. Craft does not recognise the ceremony of Rt. W. Mark Master. This is confined strictly to Chapters. Such Chapter has a Lodge of M. M. M. working under its charter. Separate charters for Mark Lodges are only issued by the G. Chapter of Scotland.

Other Degrees.—There are many side degrees worked in India, of the Ancient and Accepted Rite, no degree higher than the 18° is worked in India under England, but under Scotland the 30° is worked. The Knight Templar Degree is also worked in several places under both English and Scottish jurisdiction. There are fourteen 18th Degree Chapters working in India.

Roman Eagle Conclave No. 43, Bombay.

St. Mary's Commandery No. 43, Bombay.

R. A. Mariner, 72, 514 and 662, Bombay.

R. A. Mariner, 61, 81, 82, and 106, Madras.

Secret Monitor, 14, 21, 36, 37, 40 and 42 Madras.

Benevolent Associations.—Each District works its own benevolent arrangements which include the Relief of Distressed Masons, educational provision for the children of Masons and maintenance provision for widows in poor circumstances.

All information will be given to persons entitled by the District Grand Secretary in each District. The names and addresses of **District Grand Secretaries** are given below:—

D. G. S., Bengal.

J. A. Dolton, P. A. G. D. C. (Eng.), 19, Park Street, Calcutta.

D. G. S, Bombay.

J. F. Pennock, V.D., P.A.G.D.C. (Eng.), Kings Buildings, Fort, Bombay.

D. G S, Burma.

W. Kendall, 4, Hume Road, Rangoon.

D. G. S., Madras.

C. M. Maduranavakam Pillai, Freemasons' Hall, Egmore, Madras.

D. G. S., Punjab.

David E. Johnston, P.G. St. B. (Eng.), Freemasons' Hall, Lahore.

Visit of the Most Worshipful Grand Master.—H R. H. The Duke of Connaught and Strathearn was the outstanding event of the year. Loyal addresses were presented by the District Grand Lodges of Bengal, Madras and Bombay and the Masonic Brotherhood in all these centres gave the Most Worshipful Grand Master a cordial welcome.

Scottish Constitution.—For information regarding the Benevolent Funds application should be made to Arthur W. S. Wise, J.P., 17, Murzban Road, Bombay

Indian Architecture.

I. ANCIENT.

The architecture of India has proceeded on lines of its own, and its monuments are unique among those of the nations of the world. An ancient civilization, a natural bent on the part of the people towards religious fervour of the contemplative rather than of the fanatical sort, combined with the richness of the country in the sterner building materials—these are a few of the factors that contributed to making it what it was, while a stirring history gave it both variety and glamour. Indian architecture is a subject which at the best has been studied only imperfectly, and a really comprehensive treatise on it has yet to be written. The subject is a vast and varied one, and it may be such a treatise never will be written in the form of one work at any rate. The spirit of Indian art is so foreign to the European of art culture that it is only one European in a hundred who can entirely understand it, while art criticism and analysis is a branch of study that the modern Indian has not as yet ventured upon to any appreciable extent. Hitherto the one, and with a few exceptions the only recognized authority on the subject has been Fergusson, whose compendious work is that which will find most ready acceptance by the general reader. But Fergusson attempted the nearly impossible task of covering the ground in one volume of moderate dimensions, and it is sometimes held that he was a man of too purely European a culture, albeit wide and eclectic, to admit of sufficient depth of insight in this particular direction. Fergusson's classification by races and religions is, however, the one that has been generally accepted hitherto. He asserts that there is no stone architecture in India of an earlier date than two and a half centuries before the Christian era, and that "India owes the introduction of the use of stone for architectural purposes, as she does that of Buddhism as a state religion, to the great Asoka, who reigned B.C. 272 to 236."

Buddhist Work.

Fergusson's first architectural period is then the Buddhist, of which the great tope at Sanchi with its famous Northern gateway is perhaps the most noted example. Then we have the Gandharan topes and monasteries. Perhaps the examples of Buddhist architecture of greatest interest and most ready access to the general student are to be found in the Chaitya halls or rock-cut caves of Karli, Ajunta, Nasik, Ellora and Kanheri. A point with relation to the Gandhara work may be alluded to in passing. This is the strong European tendency, variously recognized as Roman, Byzantine but most frequently as Greek, to be observed in the details. The foliage seen in the capitals of columns bears strong resemblance to the Greek acanthus, while the sculptures have a distinct trace of Greek influence, particularly in the treatment of drapery, but also of hair and facial expression. From this it has been a fairly common assumption amongst some authorities that Indian art owed much of its best to European influence, an assumption that is strenuously combated by others as will be pointed out later.

The architecture of the Jains comes next in order. Of this rich and beautiful style the most noted examples are perhaps the Dilwara temples near Mount Abu, and the unique "Tower of Victory" at Chittore.

Other Hindu Styles.

The Dravidian style is the generic title usually applied to the characteristic work of the Madras Presidency and the South of India. It is seen in many rock-cut temples as at Ellora, where the remarkable "Kylas" is an instance of a temple cut out of the solid rock, complete, not only with respect to its interior (as in the case of mere caves) but also as to its exterior. It is, as it were, a life-size model of a complete building or group of buildings, several hundred feet in length, not built, but sculptured in solid stone, an undertaking of vast and, to our modern ideas, unprofitable industry. The Pagoda of Tanjore, the temples at Srirangam, Chidambaram, Vellore, Vijayanagar, &c., and the palaces at Madura and Tanjore are among the best known examples of the style.

The writer finds some difficulty in following Fergusson's two next divisions of classification, the "Chalukyan" of South-central India, and the "Northern or Indo-Aryan style." The differences and the similarities are apparently so intermixed and confusing that he is fain to fall back on the broad generic title of "Hindu"—however unscientific he may thereby stand confessed. Amongst a vast number of Hindu temples the following may be mentioned as particularly worthy of study:—Those at Mukteswara and Bhuvaneswar in Orissa, at Khajuraho, Bindrabun, Udaipur, Benares, Gwalior, &c. The palace of the Hindu Raja Man Singh at Gwalior is one of the most beautiful architectural examples in India. So also are the palaces of Amber, Datiya, Urcha, Dig and Udaipur.

Indo-Saracenic.

Among all the periods and styles in India the characteristics of none are more easily recognizable than those of what is generally called the "Indo-Saracenic" which developed after the Mahomedan conquest. Under the new influences now brought to bear on it the architecture of India took on a fresh lease of activity and underwent remarkable modifications. The dome, not entirely an unknown feature hitherto, became a special object of development, while the arch, at no time a favourite constructional form of the Hindu builders, was now forced on their attention by the predilections of the ruling class. The minaret also became a distinctive feature. The requirements of the new religion,—the mosque with its wide spaces to meet the needs of organized congregational acts of worship—gave opportunities for broad and spacious treatments that had hitherto been to some extent denied. The Moslem hatred of idolatry set a tabu on the use of sculptured representations of animate objects in the adornment of the buildings, and led to the development

of other decorative forms. Great ingenuity came to be displayed in the use of pattern and of geometrical and foliated ornament. This Moslem trait further turned the attention of the builders to a greater extent than before to proportion, scale and mass as means of giving beauty, mere richness of sculptured surface and the aesthetic and symbolic interest of detail being no longer to be depended on to the same degree.

The art was thus the gainer by the new conditions. It gained in power and variety much as "Classic" architecture gained under the Romans. But it equally lost something too. The Indo-Saracenic is apt to appear cold and hard. The writer was impressed by this on his first view of the Gwalior palace already mentioned. Though a Hindu building that palace has yet much of what might be called the more sophisticated quality of the Indo-Saracenic work as well as some similarity of detail. It has, being Hindu, a certain amount of sculptured ornament of animated forms, and the general effect of roundness, richness and interest thereby imparted seemed eloquent in suggestion as to what is lacking in so many of the Mahometan buildings.

Foreign Influence.

There would appear to be a conflict between archæologists as to the extent of the effect on Indian art produced by foreign influence under the Mahometans. The extreme view on the one hand is to regard all the best of the art as having been due to foreign importation. The Gandharan sculptures with their Greek tendency, the development of new forms and modes of treatment to which allusion has been made, the similarities to be found between the Mahometan buildings of India and those of North Africa and Europe, the introduction of the minaret and, above all, the historical evidences that exist of the presence in India of Europeans during Mogul times, are cited in support of the theory. On the other hand those of the opposite school hold the foregoing view to be due to the prevailing European preconception that all light and leading must come by way of Europe, and the best things in art by way of Greece. To them the Gandharan sculpture, instead of being the best, is the worst in India even because of its Greek tincture. They find in the truly indigenous work beauties and significances not to be seen in the Graeco-Bactrian sculptures, and point to those of Borobudei in Java, the work of Buddhist colonists from India, wonderfully preserved by reason of an immunity from destructive influences given by the insular position, as showing the best examples of the art extant. It is probable that a just estimate of the merits of the controversy, with respect to sculpture at any rate, cannot be formed till time has obliterated some of the differences of taste that exist between East and West.

To the adherents of the newer school the undisputed similarities between Indo-Mahometan and Hindu buildings outweigh those between Indian and Western Mahometan work, especially in the light of the dis-similarities between the latter. They admit the changes produced by the advent of Islam, but contend that the art; though modified, yet remained in its essence what it had always been, indigenous Indian. The minaret, the dome, the arch, they contended, though developed under the Moslem influence, were yet, so far as their detailed treatment and craftsmanship are concerned, rendered in a manner distinctively Indian. Fergusson is usually regarded as the leader of the former school, while the latter and comparatively recent school has at present found an eager champion in Mr. E. B. Havell, whose works, on the subject are recommended for study side by side with those of the former writer. Mr. Havell practically discards Fergusson's racial method of classification into styles in favour of a chronological review of what he regards to a greater extent than did his famous precursor as being one continuous homogeneous Indian mode of architectural expression, though subject to variations from the influences brought to bear upon it and from the varied purposes to which it was applied.

Agra and Delhi.

Agra and Delhi may be regarded as the principal centres of the Indo-Saracenic style—the former for the renowned Taj Mahal, for Akbar's deserted capital of Fatehpur Sikri, his tomb at Secundra, the Moti Musjid and palace buildings at the Agra fort. At Delhi we have the great Jumma Musjid, the Fort, the tombs of Humayon, Sufdar Jung, &c., and the unique Qutb Minar. Two other great centres may be mentioned, because in each there appeared certain strongly marked individualities that differentiated the varieties of the style there found from the variety seen at Delhi and Agra, as well as that of one from that of the other. These are Ahmedabad in Gujarat and Bijapur on the Dekhan, both in the Bombay Presidency.

Ahmedabad.

At Ahmedabad with its neighbours Sirkhej and Champanir there seems to be less of a departure from the older Hindu forms, a tendency to adhere to the lintel and bracket rather than to have recourse to the arch, while the dome though constantly employed, was there never developed to its full extent as elsewhere, or carried to its logical structural conclusion. The Ahmedabad work is probably most famous for the extraordinary beauty of its stone "jali"—or pierced lattice-work, as in the palm tree windows of the Sidi Sayyid Musjid.

Bijapur.

The characteristics of the Bijapur variety of the style are equally striking. They are perhaps more distinctively Mahomedan than those of the Ahmedabad buildings in that here the dome is developed to a remarkable degree, indeed the tomb of Mahmud—the well-known "Gol Gumbaz"—is cited as shewing the greatest space of floor in any building in the world roofed by a single dome, not even excepting the Pantheon. The lintel also was here practically discarded in favour of the arch. The Bijapur style shews a bold masculine quality and a largeness of structural conception that is unequalled elsewhere in India, though in richness and delicacy it does not attempt to rival the work of the further North. In this we recognize among other influences

that of the prevailing material, the hard uncompromising Dekhan basalt. In a similar manner the characteristics of the Ahmedabad work with its greater richness of ornamentation are bound up with the nature of the Gujarat freestone, while at Delhi and Agra the freer choice of materials available—the local red and white sandstones, combined with access to marble and other more costly materials—was no doubt largely responsible for the many easily recognizable characteristics of the architecture of these centres.

II. MODERN.

The modern architectural work of India divides itself sharply into two classes. There is first that of the indigenous Indian "Master-builder" to be found chiefly in the Native States, particularly those in Rajputana. Second there is that of British India, or of all those parts of the peninsula wherever Western ideas and methods have most strongly spread their influence, chiefly, in the case of architecture, through the medium of the Department of Public Works. The work of that department has been much animadverted upon as being all that building should not be, but, considering it has been produced by men of whom it was admittedly not the *metier*, and who were necessarily contending with lack of expert training on the one hand and with departmental methods on the other, it must be conceded that it can shew many notable buildings. Of recent years there has been a tendency on the part of professional architects to turn their attention to India, and a number of these has even been drafted into the service of Government as the result of a policy initiated in Lord Curzon's Viceroyalty. In time, therefore, and with the growth of the influence of these men, such of the reproach against the building of the British in India as was just and was not merely thoughtlessly maintained as a corollary to the popular jape against everything official, may gradually be removed. If this is so as to Government work progress should be even more assured in the freer atmosphere outside of official life. Already in certain of the greater cities, where the trained modern architect has established himself, in private practice, there are signs that his influence is beginning to be felt. He still complains, however, that the general public of India needs much educating up to a recognition of his value; both in a pecuniary sense and otherwise. It is also to be observed that the survival of a relic of the popular idea of the time before his advent, to the effect that though an architect might occasionally "design" a building it was always an engineer who built it, is still indicated by the architect in some cases deeming it advisable to style himself "architect and engineer."

To the work of the indigenous "master-builder" public attention has of recent years been drawn with some insistence, and the suggestion has been pressed that efforts should be directed towards devising means for the preservation of what is pointed out—and now universally acknowledged— to be a remarkable survival—almost the only one left in the world—of "living art," but which is threatened with gradual extinction by reason of the spread of Western ideals and fashions. The matter assumed some years ago the form of a mild controversy centring round the question of the then much discussed project of the Government of India's new capital at Delhi. It was urged that this project should be utilised to give the required impetus to Indian art rather than that it should be made a means of fostering European art which needed no such encouragement at India's expense. The advocates of this view appear for the most part to have been adherents of the "indigenous Indian" school of archæologists already mentioned, and to have based their ideas on their own reading of the past. They still muster a considerable following not only amongst the artistic public of England and India, but even within the Government services. Their opponents, holding what appears to be the more official view both as to archæology and art, have pointed to the "death" of all the arts of the past in other countries as an indication of a natural law, and deprecate as waste of energy all efforts to resist this law, or to institute what they have termed "another futile revival." The British in India they contend, should do as did the ancient Romans in every country on which they planted their conquering foot. As those were wont to replace indigenous art with that of Rome, so should we set our seal of conquest permanently on India by the erection of examples of the best of British art. This is the view which, as we have indicated, appears to have obtained for the moment the more influential hearing, and the task of designing and directing the construction of the principal buildings in the new Capital has accordingly been entrusted jointly to a London and to a South African architect, neither of whom can be unduly influenced by either past or recent architectural practice so far as India is concerned.

The results cannot but be awaited with the keenest interest, and meanwhile the controversy, with suspended judgment, naturally falls into abeyance. It is, moreover, however vital to the interests of the country's architecture, too purely technical and academic for its merits to be estimated by the general reader or discussed here. Its chief claim on our attention has in the fact that it affords an added interest to the tourist, who may see the fruits of both schools of thought in the various modern buildings of British India as well as examples of the "master builders" work in nearly every native town and bazaar. The town of Lashkar in Gwalior State may be cited as peculiarly rich in instances of picturesque modern Indian street architecture, while at Jaipur, Udaipur, Benares, etc., this class of work may be studied in many different forms both civil and religious. The extent to which the "unbroken tradition from the past" exists may there be gauged by the traveller who is architect enough for the purpose.

Archæology.

The archæological treasures of India are as varied as they are numerous. Those of the pre-Muhammadan period may roughly be divided into (1) architectural and sculptural monuments and (2) inscriptions. No building or sculpture in India with any pretensions to be considered an example of architecture or art can be ascribed to a time earlier than that of Asoka (circa 250 B.C.). In the pre-Asoka architecture of India, as in that of Burma or China at the present day, wood was solely or almost solely employed. Even at the close of the 4th century, B.C., Megasthenes, the Greek Ambassador at the court of Chandragupta, grandfather of Asoka, describes Pataliputra, the capital of the Indian monarch, as "surrounded by a wooden wall pierced with loop-holes for the discharge of arrows." If the capital itself was thus defended, we can easily infer that the architecture of the period was wooden. And long long after stone was introduced the lithic styles continued to be influenced by, or copied from, the wooden.

Monumental Pillars.—The first class of works that we have to notice are the monumental pillars, known as *lats*. The oldest are the monolithic columns of Asoka, nearly thirty in number, of which ten bear his inscriptions. Of these the Lauriya-Nandangarh column in the Champaran District, Tirhut, is practically uninjured. The capital of each column, like the shaft, was monolithic, and comprised three members, *viz.*, a Persepolitan bell, abacus, and crowning sculpture in the round. By far the best capital of Asoka's time was that exhumed at Sarnath near Benares. The four lions standing back to back on the abacus are carved with extraordinary precision and accuracy. Of the post-Asokan period one pillar (B.C. 150) stands to the north-east of Besnagar in the Gwalior State, another in front of the cave of Karli (A.D. 70), and a third at Eran in Central Provinces belonging to the 5th Century, A. D. All these are of stone; but there is one of iron also. It is near the Qutb Minar at Delhi, and an inscription on it speaks of its having been erected by a king called Chandra, identified with Chandragupta II. (A.D. 375-413) of the Gupta dynasty. It is wonderful "to find the Hindus at that age forging a bar of iron larger than any that have been forged even in Europe to a very late date, and not frequently even now." Pillars of later style are found all over the country, especially in the Madras Presidency. No less than twenty exist in the South Kanara District. A particularly elegant example faces a Jaina temple at Mudabidri, not far from Mangaloro.

Topes.—*Stupas*, known as *dagabas* in Ceylon and commonly called Topes in North India, were constructed either for the safe custody of relics hidden in a chamber often near the base or to mark the scene of notable events in Buddhist or Jaina legends. Though we know that the ancient Jainas built *stupas*, no specimen of Jaina *stupas* is now extant. Of those belonging to the Buddhists, the great Tope of Sanchi in Bhopal, is the most intact and entire of its class. It consists of a low circular drum supporting a hemispherical dome of less diameter. Round the drum is an open passage for circumambulation, and the whole is enclosed by a massive stone railing with lofty gates facing the cardinal points. The gates are essentially wooden in character, and are carved, inside and out, with elaborate sculptures. The *stupa* itself probably belonged to the time of Asoka, but as Sir John Marshall's recent explorations have conclusively shown, the railing and the gateways were at least 150 and 200 years later, respectively. Other famous Buddhist *stupas* that have been found are those of Bharhut between Allahabad and Jubbulpore, Amravati in the Madras Presidency, and Piprahwa on the Nepalese frontier. The tope proper at Bharhut has entirely disappeared, having been utilised for building villages, and what remained of the rail has been removed to the Calcutta Museum. The bas-reliefs on this rail which contain short inscriptions and thus enable one to identify the scenes sculptured with the *Jatakas* or Birth Stories of Buddha give it a unique value. The *stupa* at Amravati also no longer exists, and portions of its rail, which is unsurpassed in point of elaboration and artistic merit, are now in the British and Madras Museums. The *stupa* at Piprahwa was opened by Mr. W. C. Peppe in 1898, and a steatite or soap-stone reliquary with an inscription on it was unearthed. The inscription, according to many scholars, speaks of the relics being of Buddha and enshrined by his kinsmen, the Sakyas. And we have thus here one of the *stupas* that were erected over the ashes of Buddha immediately after his demise.

Caves.—Of the rock excavations which are one of the wonders of India, nine-tenths belong to Western India. The most important groups of caves are situated in Bhaja Bedsa, Karli, Kanheri, Junnar, and Nasik in the Bombay Presidency, Ellora and Ajanta in Nizam's Dominions, Barabar 16 miles north of Gaya, and Udayagiri and Khandagiri 20 miles from Cuttack in Orissa. The caves belong to the three principal sects into which ancient India was divided, *viz.*, the Buddhists, Hindus and Jainas. The earliest caves so far discovered are those of Barabar which were excavated by Asoka and his grandson Dasaratha, and dedicated to Ajivikas, a naked sect founded by Makkhali Gosala. This refutes the theory that cave architecture was of Buddhist origin. The next earliest caves are those of Bhaja, Pitalkhora and cave No. 9 at Ajanta and No. 19 at Nasik. They have been assigned to 200 B.C. by Fergusson and Dr. Burgess. But there is good reason to suppose from Sir John Marshall's recent researches and from epigraphic considerations that they are considerably more modern. The Buddhist caves are of two types—the *chaityas* or chapel caves and *viharas* or monasteries for the residence of monks. The first are with vaulted roofs and horse-shoe shaped windows over the entrance and have interiors consisting of a nave and side aisles with a small *stupa* at the inner circular end. They are thus remarkably similar to Christian basilicas. The second class consist of a hall surrounded by a number of cells. In the later *viharas* there was a sanctum in the centre of the back wall containing a large image of Buddha. Hardly a *chaitya* is found without one or more *viharas* adjoining it. Of the Hindu cave tem-

ples that at Elephanta near Bombay is perhaps the most frequented. It is dedicated to Siva and is not earlier than the 7th century A.D. But by far the most renowned cave-temple of the Hindus is that known as Kailasa at Ellora. It is on the model of a complete structural temple but carved out of solid rock. It also is dedicated to Siva and was excavated by the Rashtrakuta king, Krishna I, (A. D. 768), who may still be seen in the paintings in the ceilings of the upper porch of the main shrine. Of the Jaina caves the earliest are at Khandgiri and Udayagiri; those of the mediæval type, in Indra Sabha at Ellora; and those of the latest period, at Ankai in Nasik. The ceilings of many of these caves were once adorned with fresco paintings. Perhaps, the best preserved among these are those at Ajanta, which were executed at various periods between 350-650 A.D. and have elicited high praise as works of art. Copies were first made by Major Gill, but most of them perished by fire at the Crystal Palace in 1866. The lost ones were again copied by John Griffiths of the Arts School, Bombay, half of whose work was similarly destroyed by a fire at South Kensington. They were last copied by Lady Herringham during 1909-11. Her pictures, which are in full scale, are at present exhibited at the Indian Section of the Victoria and Albert Museum, South Kensington, and have been reproduced in a volume brought out by the India Society.

Gandhara Monuments.—On the north-west frontier of India, anciently known as Gandhara, are found a class of remains, ruined monasteries and buried *stupas*, among which we notice for the first time representations of Buddha and the Buddhist pantheon. The free use of Corinthian capitals, friezes of nude Erotes bearing a long garland, winged Atlantes without number, and a host of individual motifs clearly establish the influence of Hellenistic art. The mound at Peshawar, locally known as Shah-ji-ke-Dheri, which was explored in 1909, brought to light several interesting sculptures of this school together with a reliquary casket, the most remarkable bronze object of the Gandhara period. The inscription on the casket left no doubt as to the mound being the *stupa* raised over the bones of Buddha by the Indo-Scythian king Kanishka. They were presented by Lord Minto's Government to the Buddhists of Burma and are now enshrined at Mandalay. To about the same age belong the *stupas* at Manikyala in the Punjab opened by Ranjit Singh's French Generals, Ventura and Court, in 1830. Some of them contained coins of Kanishka.

Structural Temples.—Of this class we have one of the earliest examples at Sanchi, and another at Tigowa in the Central Provinces. In South India we have two more examples, *viz.*, Lad Khan and Durga temples at Aihole in Bijapur. All these belong to the early Gupta period and cannot be later than 500 A.D. The only common characteristic is flat roofs without spires of any kind. In other respects they are entirely different and already here we mark the beginning of the two styles, Indo-Aryan and Dravidian, whose differences become more and more pronounced from the 7th century onwards. In the Indo-Aryan style, the most prominent lines tend to the perpendicular, and in the Dravidian to the horizontal. The salient feature of the former again is the curvilinear steeple, and of the latter, the pyramidal tower. The most notable examples of the first kind are to be found among the temples of Bhubaneswar in Orissa, Khajarah in Bundelkhand, Osia in Jodhpur, and Dilwara on Mount Abu. One of the best known groups in the Dravidian style is that of the Mamallapuram Raths, of 'Seven Pagodas', on the seashore to the south of Madras. They are each hewn out of a block of granite, and are rather models of temples than *raths*. They are the earliest examples of typical Dravidian architecture, and belong to the 7th century. To the same age has to be assigned the temple of Kailasanath at Conjeeveram, and to the following century some of the temples at Aihole and Pattadkal of the Bijapur District, Bombay Presidency, and the monolithic temple of Kailasa at Ellora, referred to above. Of the later Dravidian style the great temple at Tanjore and the Srirangam temple of Trichinopoly are the best examples.

Intermediate between these two main styles comes the architecture of the Deccan, called Chalukyan by Fergusson. In this style the plan becomes polygonal and star-shaped instead of quadrangular; and the high-storeyed spire is converted into a low pyramid in which the horizontal treatment of the Dravidian is combined with the perpendicular of the Indo-Aryan. Some fine examples of this type exist, at Dambal, Rattihali, Tilliwalli and Hangal in Dharwar, Bombay Presidency, and at Ittagi and Warangal in Nizam's Dominions. But it is in Mysore among the temples at Hallebid, Belur, and Somnathpur that the style is found in its full perfection.

Inscriptions.—We now come to inscriptions, of which numbers have been brought to light in India. They have been engraved on varieties of materials, but principally on stone and copper. The earliest of these are found incised in two distinct kinds of alphabet, known as Brahmi and Kharoshthi. The Brahmi was read from left to right, and from it have been evolved all the modern vernacular scripts of India. The Kharoshthi was written from right to left, and was a modified form of an ancient Aramaic alphabet introduced into the Punjab during the period of the Persian domination in the 5th century B.C. It was prevalent up to the 4th century A.D., and was supplanted by the Brahmi. The earliest dateable inscriptions are the celebrated edicts of Asoka. One group of these has been engraved on rocks, and another on pillars. They have been found from Shahbazgarhi 40 miles north-east of Peshawar to Nigliva in the Nepal Tarai, from Girnar in Kathiawar to Dhauli in Orissa, from Kalsi in the Lower Himalayas to Siddapur in Mysore, showing by the way the vast extent of territory held by him. The reference in his Rock Edicts to the five contemporary Greek Princes, Antiochus II. of Syria, Ptolemy Philadelphus, and so forth is exceedingly interesting, and fixes B.C. 269 as the date of his coronation. His Rummindei pillar inscription, again, discovered in Nepal Tarai, now settles, beyond all doubt, the birth-place of Buddha which was for long disputed. Another noteworthy record is the inscription of the Besnagar pillar. The pillar had been known for a long time, but Sir John

Marshall was the first to notice the inscription on it. It records the erection of this column, which was a Garuda pillar, in honour of the god Vasudeva by one Heliodoros, son of Dion, who is described as an envoy of King Antialkidas of Taxila. Heliodorous is herein called a *Bhagavata*, which shows that though a Greek he had become a Hindu and presumably a Vaishnava. Another inscription worth noticing and especially in this connection is that of Cave No. 10 at Nasik. The donor of this cave, Ushavadata, who calls himself a Saka and was thus an Indo-Scythian, is therein spoken of as having granted three hundred thousand kine and sixteen villages to gods and Brahmans and as having annually fed one hundred thousand Brahmans. Here is another instance of a foreigner having embraced Hinduism. Thus for the political, social, economical and religious history of India at the different periods the inscriptions are invaluable records, and are the only light but for which we are 'forlorn and blind.'

Saracenic Architecture.—This begins in India with the 13th century after the permanent occupation of the Muhammadans. Their first mosques were constructed of the materials of Hindu and Jaina temples, and sometimes with comparatively slight alterations. The mosque called *Adhai-din-ka-jhompra* at Ajmer and that near the Qutb Minar are instances of this kind. The Muhammadan architecture of India varied at different periods and under the various dynasties, imperial and local. The early Pathan architecture of Delhi was massive and at the same time was characterised by elaborate richness of ornamentation. The Qutb Minar and tombs of Altamsh and Ala-ud-din Khilji are typical examples. Of the Sharqi style we have three mosques in Jaunpur with several tombs. At Mandu in the Dhar State, a third form of Saracenic architecture sprung up, and we have here the Jami Masjid, Hoshang's tomb, Jahaz Mahall and Hindola Mahall as the most notable instances of the secular and ecclesiastical styles of the Malwa Pathans. The Muhammadans of Bengal again developed their own style, and Pandua, Malda, and Gaur teem with the ruins of the buildings of this type, the important of which are the Adina Masjid of Sikandar Shah, the Elakhi mosque, Kadam Rasul Masjid, and so forth. The Bahmani dynasty of Gulbarga and Bidar were also great builders, and adorned their capitals with important buildings. The most striking of these is the great mosque of Gulbarga, which differs from all mosques in India in having the whole central area covered over so that what in others would be an open court is here roofed by sixty-three small domes. "Of the various forms which the Saracenic architecture assumed," says Fergusson, "that of Ahmedabad may probably be considered to be the most elegant." It is notable for its carved stone work; and the work of the perforated stone windows in Sidi Sayyid's mosque, the carved niches of the minars of many other mosques, the sculptured *Mihrabs* and domed and panelled roofs is so exquisite that it will rival anything of the sort executed elsewhere at any period. No other style is so essentially Hindu. In complete contrast with this was the form of architecture employed by the Adil Shahi dynasty of Bijapur. There is here relatively little trace of Hindu forms or details. The principal buildings now left at Bijapur are the Jami Masjid, Gagan Mahall, Mihtar Mahall, Ibrahim Rauza and mosque and the Gol Gumbaz. Like their predecessors, the Pathans of Delhi, the Moghuls were a great building race. Their style first began to evolve itself during the reign of Akbar in a combination of Hindu and Muhammadan features. Noteworthy among the emperor's buildings are the tomb of Humayun, and the palaces at Fatehpur, Sikri and Agra. Of Jehangir's time his mosque at Lahore and the tomb of Itimad-ud-daula are the most typical structures. "The force and originality of the style gave way under Shah Jahan to a delicate elegance and refinement of detail." And it was during his reign that the most splendid of the Moghul tombs, the Taj Mahal at Agra, the tomb of his wife Mumtaz Mahall, was constructed. The Moti Masjid in Agra Fort is another surpassingly pure and elegant monument of his time.

Archæological Department.—As the archæological monuments of India must attract the attention of all intelligent visitors, they would naturally feel desirous to know something of the Archæological Department. The work of this Department is primarily two-fold, conservation, and research and exploration. None but spasmodic efforts appear to have been made by Government in these directions till 1870 when they established the Archæological Survey of India and entrusted it to General (afterwards Sir) Alexander Cunningham, who was also the first Director-General of Archæology. The next advance was the initiation of the local Surveys in Bombay and Madras three years after. The work of these Surveys, however, was restricted to antiquarian research and description of monuments, and the task of conserving old buildings was left to the fitful efforts of the local Governments, often without expert guidance or control. It was only in 1878 that the Government of India under Lord Lytton awoke to this deplorable condition, and sanctioned a sum of 3½ lakhs to the repair of monuments in United Provinces, and soon after appointed a conservator, Major Cole, who did useful work for three years. Then a reaction set in, and his post and that of the Director-General were abolished. The first systematic step towards recognising official responsibility in conservation matters was taken by Lord Curzon's Government, who established the seven Archæological Circles that now obtain, placed them on a permanent footing, and united them together under the control of a Director-General, provision being also made for subsidising local Governments out of imperial funds, when necessary. The Ancient Monuments Preservation Act was passed for the protection of historic monuments and relics especially in private possession and also for State control over the excavation of ancient sites and traffic in antiquities. Under the direction of Sir John Marshall, Kt., C.I.E., Director-General of Archæology, a comprehensive and systematic campaign of repair has been prosecuted, and the result of it is manifest in the present altered conditions of old buildings. One has only to see for example the Moghul buildings at Agra, Delhi, Lahore and Ajmer, in order to be convinced how the work of careful reconstruc-

tion and repair has converted these decayed and desecrated monuments with their modern excrescences into edifices of unrivalled loveliness. Another noteworthy feature of this work has been the rescue of many of these buildings from profane and sacrilegious uses. It is well-known that the superb Pearl Mosque of Jahangir in the Lahore Fort contained a Government treasury, and the Sleeping Hall of Shah Jahan served as a Church for the British troops. At Bijapur two mosques have been recovered, one of which was used as Dak Bungalow and the other as Post Office. The local Kutcherry has now been expelled from the lovely musjid of Sidi Sayyid at Ahmedabad. The Cave temples at Trichinopoly are no longer godowns. Nor has research work been in any way neglected under the new order of things. A unique feature of it for the first time introduced under the guidance and advice of Sir John Marshall has been the scientific excavation of buried sites, such as Sarnath where Buddha preached his first sermon, Kasia or Kusinara where he died, Saheth-Maheth the ancient Srasvasti, Taxila or Takshasila, the seat of the ancient Hindu University, Patna or Pataliputra, the Mauryan capital, Besnagar or the ancient Vidisa, and so forth. The results achieved, especially at the last three places, are of a sensational character. At Taxila Sir John has brought to light the remains of a palace of the Assyrian style and a massive and imposing temple dedicated to Zoroastrian worship and resembling a Greek peripteral temple with the addition of a solid tower of the Likkurat type rising behind the shrine. At Patna Dr. D. B. Spooner has found traces of a Mauryan palace which is an actual replica of the Achæmenian palace at Persepolis. At Besnagar Mr. D. R. Bhandarkar has excavated a temple of Vasudeva of the third century B.C., which proves to be the oldest of all Hindu shrines in India. Among other results of this excavation is the noteworthy discovery that the art of forging steel was practised in India more than two thousand years ago and that mortar was used in the construction of brick masonry at least as early as the third century B.C.

TIDAL CONSTANTS.

The approximate standard time of High Water may be found by adding to, or subtracting from, the time of High Water at London Bridge, given in the calendar, the correction given as below :—

Manners and Customs.

Next to the complexion of the people, which varies from fair to black, the tourist's attention in India is drawn by their dress and personal decoration. In its simplest form a Hindu's dress consists of a piece of cloth round the loins. Many an ascetic, who regards dress as a luxury, wears nothing more, and he would dispense with even so much if the police allowed him to. The Mahomedan always covers his legs, generally with trousers, sometimes with a piece of cloth tied round the waist and reaching to the ankles. Hill men and women, who at one time wore a few leaves before and behind and were totally innocent of clothing, do not appear to-day within the precincts of civilisation and will not meet the tourist's eye. Children, either absolutely nude or with a piece of metal hanging from the waist in front, may be seen in the streets in the most advanced cities, and in the homes of the rich. The child Krishna, with all the jewels on his person, is nude in his pictures and images.

Dress.—The next stage in the evolution of the Hindu dress brings the loincloth nearly down to the feet. On the Malabar coast, as in Burma, the ends are left loose in front. In the greater part of India, they are tucked up behind—a fashion which is supposed to befit the warrior, or one end is gathered up in folds before and the other tucked up behind. The simplest dress for the trunk is a scarf thrown over the left shoulder, or round both the shoulders like a Roman toga. Under this garment is often worn a coat or a shirt. When an Indian appears in his full indigenous dress, he wears a long robe, reaching at least down to the calves: the sleeves may be wide, or long and sometimes puckered from the wrist to the elbow. Before Europeans introduced buttons, a coat was fastened by ribbons, and the fashion is not obsolete. The Mahomedan prefers to button his coat to the left, the Hindu to the right. A shawl is tied round the waist over the long coat, and serves as a belt, in which one may carry money or a weapon, if allowed. The greatest variety is shown in the head-dress. More than seventy shapes of caps, hats, and turbans, may be seen in the city of Bombay. In the Punjab and the United Provinces, in Bengal, in Burma and in Madras other varieties prevail. Cones and cylinders, domes and truncated pyramids, high and low, with sides at different angles: folded brims, projecting brims: long strips of cloth wound round the head or the cap in all possible ways, ingenuity culminating perhaps in the "parrot's beak" of the Maratha turban—all these fashions have been evolved by different communities and in different places, so that a trained eye can tell from the head-covering whether the wearer is a Hindu, Mahomedan or Parsi, and whether he hails from Poona or Dharwar, Ahmedabad or Bhavnagar.

Fashion Variations.—Fashions often vary with climate and occupation. The Bombay fisherman may wear a short coat and a cap, and may carry a watch in his pocket; yet, as he must work for long hours in water; he would not cover his legs, but suspend only a coloured kerchief from his waist in front. The Pathan of the cold north-west affects loose baggy trousers, a tall head-dress befitting his stature and covers his ears with its folds as if to keep off cold. The poorer people in Bengal and Madras do not cover their heads, except when they work in the sun or must appear respectable. Many well-to-do Indians wear European dress at the present day, or a compromise between the Indian and European costumes, notably the Indian Christians and Parsis. Most Parsis however have retained their own head-dress, and many have not borrowed the European collar and cuffs. The majority of the people do not use shoes: those who can afford them wear sandals, slippers and shoes, and a few cover their feet with stockings and boots after the European fashion in public.

Women's Costumes.—The usual dress of a woman consists of a long piece of cloth tied round the waist, with folds in front, and one end brought over the shoulder or the head. The folds are sometimes drawn in and tucked up behind. In the greater part of India women wear a bodice: on the Malabar coast many do not, but merely throw a piece of cloth over the breast. In some communities petticoats, or drawers, or both are worn. Many Mussalman ladies wear gowns and scarfs over them. The vast majority of Mahomedan women are *gosha*, and their dress and persons are hidden by a veil when they appear in public: a few converts from Hinduism have not borrowed the custom. In Northern India Hindu women have generally adopted the Mussalman practice of seclusion. In the Dekhan and in Southern India they have not.

As a rule the hair is daily oiled, combed, parted in the middle of the head, plaited and rolled into a chignon, by most women. Among high caste Hindu widows sometimes shave their heads in imitation of certain ascetics, or monks and nuns. Hindu men do not, as a rule, completely shave their heads, Mahomedans in most cases do. The former generally remove the hair from a part of the head in front, over the temples, and near the neck, and grow it in the centre, the quantity grown depending upon the fancy of the individual. Nowadays many keep the hair cropped in the European fashion, which is also followed by Parsis and Indian Christians. Most Mussalmans grow beards, most Hindus do not, except in Bengal and elsewhere, where the Mahomedan influence was paramount in the past. Parsis and Christians follow their individual inclinations. Hindu ascetics, known as Sadhus or Bairagis as distinguished from Sanyasis, do not clip their hair, and generally coil the uncombed hair of the head into a crest, in imitation of the god Shiva.

Hindu women wear more ornaments than others of the corresponding grade in society. Ornaments bedeck the head, the ears, the nose, the neck, the arms, wrists, fingers, the waist—until motherhood is attained, and by some even later—and the toes. Children wear anklets. Each community affects its peculiar ornaments, though imitation is not uncommon. Serpents with several heads, and flowers, like the lotus, the rose, and the champaka, are among the most popular object of representation in gold or silver.

Caste Marks.—Caste marks constitute a mode of personal decoration peculiar to Hindus, especially of the higher castes. The simplest mark is a round spot on the forehead. It represents prosperity or joy, and is omitted in mourning and on fast-days. It may be red, or yellowish as when it is made with ground sandalwood paste. The worshippers of Vishnu draw a vertical line across the spot, and as Lakshmi is the goddess of prosperity, it is said to represent her. A more elaborate mark on the forehead has the shape of U or V, generally with the central line, sometimes without it, and represents Vishnu's foot. The worshippers of Shiva adopt horizontal lines, made with sandalwood paste or ashes. Some Vaishnavas stamp their temples, near the corners of the eyes, with figures of Vishnu's conch and disc. Other parts of the body are also similarly marked. The material used is a kind of yellowish clay. To smear the arms and the chest with sandalwood paste is a favourite kind of toilet, especially in the hot season. Beads of Tulsi or sacred Basil, and berries of Rudraksha *elæocarpus ganitrus*, strung together are worn round their necks by Vaishnavas and Shaivas, respectively. The Lingayats, a Shaiva sect, suspend from their necks a metallic casket containing the Linga or phallus of their god. Bairagis, ascetics, besides wearing Rudraksha rosaries round their necks and matted hair, smear their bodies with ashes. Religious mendicants suspend from their necks figures of the gods in whose name they beg. Strings of cowries may also be seen round their necks. Muslim dervishes sometimes carry peacock's feathers.

Hindu women mark their foreheads with a red spot or horizontal line. High caste widows are forbidden to exhibit this sign of happiness, as also to deck themselves with flowers or ornaments. Flowers are worn in the chignon. Hindu women smear their faces, arms, and feet sometimes with a paste of turmeric, so that they may shine like gold. The choice of the same colour for different purposes cannot always be explained in the same way. The red liquid with which the evil eye is averted may be a substitute for the blood of the animal slaughtered for the purpose in former times. In many other cases this colour has no such associations. The Muslim dervish affects green, the Sikh Akali is fond of blue, the Sanyasi adopts orange for his robe, and no reason can be assigned with any degree of certainty.

Shiva.—India is a land of temples, mosques and shrines, and the Hindu finds at every turn some supernatural power to be appeased. Shiva has the largest number of worshippers. He has three eyes, one in his forehead, a moon's crescent in his matted hair, and at the top of the coil a woman's face representing the river Ganges. His abode is the Mount Kailas in the Himalayas, from which the river takes its source. Round his neck and about his ears and limbs are serpents, and he also wears a necklace of skulls. In his hands are several weapons, especially a trident, a bow, and a thunderbolt, and also a drum which he sounds while dancing for he is very fond of this exercise. He sits on a tiger's skin, and his vehicle is a white bull. His wife Parvati and his son Ganesha sit on his thighs. An esoteric meaning is attached to every part of his physical personality. The three eyes denote an insight into the past, present and future: the moon, the serpents, and the skulls denote months, years and cycles, for Shiva is a personification of time, the great destroyer. He is also worshipped as a Linga or phallus which represents creative energy.

Ganpati.—Ganesh or Ganpati, the controller of all powers of evil subject to Shiva, is worshipped by all sects throughout India. Every undertaking is begun with a prayer to him. He has the head of an elephant, a large abdomen, serpents about his waist and wrists, several weapons in his hands, and a piece of his tusk in one hand. He is said to have broken it off when he wanted to attack the moon for ridiculing him. The different parts of his body are also esoterically explained. His vehicle is a rat.

Parvati.—Parvati, the female energy of Shiva, is worshipped under various names and forms. She is at the head of all female supernatural powers, many of whom are her own manifestations. Some are benign and beautiful, others terrible and ugly. Kali, the tutelary deity of Kalighat or Calcutta, is one of her fierce manifestations. In this form she is black: a tongue smeared with blood projects from her gaping mouth: besides her weapons, she carries corpses in her hands, and round her neck are skulls. Bombay also takes its name from a goddess, Mumbadevi. Gouri, to whom offerings are made in Indian homes at an annual festival, is benign. On the other hand the epidemic diseases like the plague and smallpox are caused by certain goddesses or "mothers."

Vishnu, the second member of the Hindu trinity, is the most popular deity next to Shiva. He is worshipped through his several incarnations as well as his original personality. His home is the ocean of milk, where he reclines on the coils of a huge, many-headed serpent. At his feet sits Lakshmi, shampooing his legs. From his navel issues a lotus, on which is seated Brahma, the third member of the trinity. In his hands are the conch, which he blows on the battlefield, and the disc, with which the heads of his enemies are severed. Round his neck are garlands of leaves and flowers, and on his breast are shining jewels. As Shiva represents destruction, Vishnu represents protection, and his son is the god of love. To carry on the work of protection, he incarnates himself from time to time, and more temples are dedicated nowadays to his most popular incarnations; Rama and Krishna, than to his original personality. Rama is a human figure, with a bow in one of his hands. He is always accompanied by his wife Sita, often by his brother Lakshmana, and at his feet, or standing before him with joined hands, is Hanuman, the monkey chieftain, who assisted him in his expedition against Ravana, the abductor of his wife. Krishna is also a human figure, generally represented as playing on a flute, with which he charmed the damsels of his city, esoterically explained to mean his devotees.

Brahma is seldom worshipped: only a couple of temples dedicated to him have yet been discovered in all India.

Minor Deities.—The minor gods and goddesses and the deified heroes and heroines who fill the Hindu pantheon, and to whom shrines are erected and worship is offered, constitute a legion. Many of them enjoy a local reputation, are unknown to sacred literature, and are worshipped chiefly by the lower classes. Some of them, though not mentioned in ancient literature, are celebrated in the works of modern saints.

The **Jains** in their temples, adore the sacred personages who founded and developed their sect, and venerate some of the deities common to Hinduism. But their view of Divinity is different from the Hindu conception, and in the opinion of Hindu theologians they are atheists. So also the **Buddhists** of Burma pay almost the same veneration to Prince Siddhartha as if he was a god, and indeed elevate him above the Hindu gods, but from the Hindu standpoint they are also atheists.

Images.—Besides invisible powers and deified persons, the Hindus venerate certain animals, trees and inanimate objects. This veneration must have originated in gratitude, fear, wonder, and belief in spirits as the cause of all good or harm. Some of the animals are vehicles of certain gods and goddesses—the eagle of Vishnu: the swan of Brahma: the peacock of Saraswati: Hanuman, the monkey of Rama: one serpent upholds the earth, another makes Vishnu's bed: elephants support the ends of the universe, besides one such animal being Indra's vehicle: the goddess Durga or Kali rides on a tiger: one of Vishnu's incarnations was partly man and partly lion. The cow is a useful animal: to the Brahman vegetarian her milk is indispensable, and he treats her as his mother. So did the Rishi of old, who often subsisted on milk and fruits and roots. To the agriculturist cattle are indispensable. The snake excites fear. Stones, on which the image of a serpent is carved, may be seen under many trees by the roadside. The principal trees and plants worshipped are the Sacred Fig or Pipal, the Banyan, the Sacred Basil, the Bilva or Wood Apple, the Asoka, and the Acacia. They are in one way or another associated with some deity. The sun, the moon, and certain planets are among the heavenly bodies venerated. The ocean and certain great rivers are held sacred. Certain mountains, perhaps because they are the abodes of gods and Rishis, are holy. Pebbles from the Gandaki and the Narmada, which have curious lines upon them, are worshipped in many households and temples.

Worship.—Without going into a temple, one can get a fair idea of image worship by seeing how a serpent-stone is treated under a tree. It is washed, smeared with sandal, decorated with flowers: food in a vessel is placed before it, lamps are waved, and the worshipper goes round it, and bows down his head, or prostrates himself before the image. In a temple larger bells are used than the small ones that are brought to such a place: jewels are placed on the idol: and the offerings are on a larger scale. Idols are carried in public procession in palanquins or cars. The lower classes sacrifice animals before their gods and goddesses.

Domestic Life.—Of the daily domestic life of the people a tourist cannot see much. He may see a marriage or funeral procession. In the former he may notice how a bridegroom or bride is decorated: the latter may shock him, for a Hindu dead body is generally carried on a few pieces of bamboo lashed together: a thin cloth is thrown over it and the body is tied to the frame. The Mahomedan bier is more decent, and resembles the Christian coffin. Some Hindus, however, carry the dead to the burial ground in a palanquin with great pomp. The higher castes cremate the dead: others bury them. Burial is also the custom of the Muslims, and the Parsis expose the dead in Towers of Silence.

Indian Names.

The personal name of most Hindus denotes a material-object, colour, or quality, an animal, a relationship, or a deity. The uneducated man, who cannot correctly pronounce long Sanskrit words, is content to call his child, father, brother, uncle, or mother, or sister, as the case may be. This practice survives among the higher classes as well. Appa Saheb, Anna Rao, Babaji, Bapu Lal, Bhai Shankar, Tatacharya, Jijibhai, are names of this description, with honorific titles added. It is possible that in early society the belief in the re-birth of departed kinsmen lent popularity to this practice. Nothing could be more natural than to call a man white, black, or red: gold or silver: gem, diamond, ruby, pearl, or merely a stone: small or tall, weak or strong: a lion, a snake, a parrot, or a dog: and to name a woman after a flower or a creeper. Thus, to take a few names from the epics, Pandu means white, and so does Arjuna: Krishna black: Bhima terrible: Nakula a mongoose: Shunaka a dog: Shuka a parrot: Shringa a horn. Among the names prevalent at the present day Hira is a diamond: Ratna or Ratan a jewel: Sonu or Chinna gold: Velli or Belli, in the Dravidian languages, means white metal or silver. Men are often called after the days of the week on which they were born, and hence they bear the names of the seven heavenly bodies concerned. When they begin to assume the names of the Hindu deities, they practically enter upon a new stage of civilisation. It is doubtful whether the Animists ever venture to assume the names of the dreaded spirits worshipped by them. To pronounce the name of a devil is to invite him to do harm. If the spirits sometimes bear the names of human beings, the reason seems to be that they were originally human.

High-caste practices.—The high caste Hindu, on the other hand, believes that the more often the name of a deity is on his lips, the more merit he earns. Therefore he deliberately names his children after his gods and goddesses, so that he may have the opportunity of pronouncing the holy names as frequently as possible. These are also sonorous and picturesque. Shiva is happy: Vishnu is a pervader: Govinda is the cowherd Krishna: Keshava has fine hair: Rama is a delighter: Lakshmana is lucky: Narayana produced the first living being on the primeval waters: Ganesha is the Lord of Shiva's hosts: Dinakara is the luminary that makes the day: Subrahmanya is a brother of Ganesha. Sita is a furrow: Saitri a ray of light: Tara a star: Radha prosperity: Rukmini is she of golden ornaments: Bhama of the glowing heart. Shiva and Vishnu has each got at least a thousand names, and they may be freely drawn upon and paraphrased in naming one's children; and the whole Hindu pantheon is as crowded as it is large. When a mother loses several children, she begins to suspect that some evil spirit has conspired against her and in order to make her off-spring unattractive to the powers of darkness, she gives them ugly names, such as Keru, rubbish, or Ukirda, dunghill, or Martoba, the mortal. Women are named after rivers, as Sarasvati, Ganga, Bhagirathi, Godavari, or Kaveri, just as men are sometimes called after mountains. Manu counsels young men not to choose a wife with such a name, perhaps because a river is an emblem of deviousness and inconstancy, as a hill is an emblem of stability. But the names of rivers have not been discarded. The Burmans have a curious custom: if a child is born on a Monday, his name must begin with a guttural, on Tuesday with a palatal, on Thursday with a labial, on Saturday with a dental.

Family names.—When a person rises in importance, he adds to his personal name a family or caste name. It was once the rule that the title Sharma might be added to a Brahman's name, Varma to a Kshatriya's, Gupta to a Vaishyas, and Dasa to a Shudra's. This rule is fairly well observed in the case of the first two titles, but the meaning of the other two has changed. Dasa means a slave or servant, and the proudest Brahman cannot disdain to call himself the servant of some god. Thus, although Kalidas, the famous poet, was a Shudra, Ramadas, the famous guru of Shivaji, was a Brahmin. The Vaishnavas have made this fashion of calling oneself a servant of some god exceedingly popular, and in Western India high caste Hindus of this sect very commonly add Das to their names. The Brahmans of Southern India add Aiyer or Aiyangar to their names. Shastri, Acharya, Bhat, Bhattacharya, Upadhyaya, Mukhopadhyaya, changed in Bengal into Mukerji, are among the titles indicative of the Brahmanical profession of studying and teaching the sacred books. Among warlike classes, like the Rajputs and Sikhs, the title Singh (lion) has become more popular than the ancient Varma. The Sindhi Mal, as in Gidumal, means brave and has the same force. Raja changed into Raya, Rao and Rai was a political title, and is not confined to any caste. The Bengali family names, like Bose and Ghose, Dutt and Mitra, Sen and Guha, enable one to identify the caste of their bearers, because the caste of a family or clan cannot be changed. Shet, chief of a guild or a town, becomes Chetty, a Vaishya title, in Southern India. Mudaliyar and Nayudu, meaning leaders, are titles which were assumed by castes of political importance under native rulers. Nayar and Menon are the titles of important castes in Malabar. Ram, Lal, Nand, Chand, are among the additions made to personal names in Northern India. Suffixes like Ji, as in Ramji or Jamshedji, the Kanarese Appa, the Telugu Garu, the feminine Bai or Devi, are honorific. Prefixes like Babu, Baba, Lala, Sodhi, Pandit, Raja, and the Burmese Maung are also honorific.

Professional names.—Family names sometimes denote a profession: in some cases they might have been conferred by the old rulers. Mehta, Kulkarni, Deshpande, Chitnavis, Mahalnavis are the names of offices held in former times. One family name may mean a flour seller, another a cane-seller, and a third a liquor-seller. To insert the father's name between one's personal and the family name is a common practice in Western India. It is rare elsewhere. When a family comes from a certain place, the suffix 'kar' or 'wallah' is added to the name of the place and it makes a family surname in Western India. Thus we may have Chiplunkars and Suratwallahs, or without these affixes we may have Bhavnagris. Malabaris and Bilimorias, as among Parsis. Thus Vasudev Pandurang Chiplunkar would be a Hindu, whose personal name is Vasudev's father's name Pandurang, and family name derived from the village of Chiplun, is Chiplunkar. In Southern India the village name precedes the personal name. The evolution of Musalman names follows the same lines as Hindu names. But Muslims have no god or goddesses, and their names are derived from their religious and secular history. These names and titles are often as long and picturesque as Hindu appellations. The agnomens Baksh, Din, Ghulam, Khwaje, Fakir, Kazi, Munshi, Sheikh, Syed, Begum, Bibi and others, as well as honorific additions like Khan, have meanings which throw light of Muslim customs and institutions. The Parsis also have no gods and goddesses, and their personal names are generally borrowed from their sacred and secular history. Their surnames frequently indicate a profession or a place, as in the case of Hindus in Western India. Batliwallah, Readymoney, Contractor, Saklatwallah, Adenwallah and others like them are tell-tale names.

Conversions.—As a rule, a child is named soon after it is born, and in the case of males the appellation is not changed. The higher Hindu castes have a separate ceremony called the name-giving ceremony performed on the twelfth day after birth. When a girl is married in these castes, the husband's family give her a new personal name. When a boy is invested with the sacred thread and is made a twice-born, his name is not changed, but when a man joins an order of ascetics, his lay name is dropped, and he assumes a new name. So also when a Burman joins an order of monks or nuns, the lay name is superseded by a Pali name. Christian converts change their original name when they are baptised.

Indian Art.

In India there has never been so marked a separation between what are now known as the Fine Arts, and those applied to industry as was the case in Europe during the nineteenth century. As, however, Industrial art forms the subject of a special article in this book, the term Indian Art will here be confined to Architecture, Sculpture and Painting.

Historical.—The degree of proficiency attained in art by Indians prior to B. C. 250, can only be conjectured by their advancement in literature; and by the indirect evidences of indebtedness shown by the works of the historic period, to those which preceded them; or direct records of artistic work of an earlier date than B. C. 250 do not exist. The chief historic schools of architecture are as follows

Name.	Dates.	Locality of the best Examples.
Buddhist	B.C.250—A.D 750.	Ellora, Ajanta, Kali, Sanchi.
Jaina	A.D.1000—1300.	Ellora, Mount Abu, Pahtana.
Brahminica	A D. 500 to the present day.	Ellora, Elephanta, Orissa, Bhuvaneswar, Dharwar
Chalukyan	A D 1000—1200.	Umber, Somnathpur Ballur.
Dravidian	A.D.1350—1750.	Ellora, Tanjore, Madura, Tinnevelly.
Pathan	A.D 1200—1550.	Delhi, Mandu, Jaunpore.
Indo-Saracenic	A.D.1520 – 1760.	Lahore, Delhi, Agra, Amber, Bijapur.

Buddhist Architecture is mainly exemplified by the rock-cut temples and monasteries found in Western India and in the *Topes* or sacred mounds. The interior decorations, and external facades of the former, and the rails and gates surrounding the latter point unmistakably to their being derived from wooden structures of an earlier period. The characteristic features of these temples are horse-shoe openings in the facades to admit light, and colonnades of pillars with richly ornamented caps in the interior halls. Jaina Architecture is found in its most highly developed form in the Dilwara temples at Mount Abu. The ground plan consists of a shrine for the god or saint; a porch, and an arcaded courtyard with niches for images. The characteristic of the style is grace and lightness, with decorative carving covering the whole interior, executed with great elaboration and detail. Constructional methods suggest that original types in wood have been copied in marble.

Brahminical, Chalukyan and Dravidian styles differ little in essential plan, all having a shrine for the god, preceded by pillared porches. The outer forms vary. The northern Brahminical temples have a curved pyramidal roof to the shrines, which in the southern or Dravidian style are crowned by a horizontal system of storied towers, and each story, decreasing in size, is ornamental with a central cell and figures in high relief. The Chalukyan style is affected by its northern and southern neighbours, taking features from each without losing its own special characteristics of which the star-shaped plan of the shrine, with the five-fold bands of external ornament, is the principal features. Pathan Architecture was introduced into India by the Mahomedan invasion of the thirteenth century. At old Delhi are fine examples in the Kutub Mosque and Minar. The characteristics of the style are severity of outline, which is sometimes combined with elaborate decoration due, it is stated, to the employment of Hindu craftsmen. The mosques and tombs at Ahmedabad already show Hindu influence; but purer examples are to be found at Jaunpore and Mandu. Indo-Saracenic Architecture reached the climax of its development during the reigns of the Moghul Emperors, Akbar, Jehangir and Shah Jahan. It eclipsed in richness of material and refinement of taste the building efforts of previous periods, its crowning example being the Taj Mahal at Agra. The buildings erected during the Adil Shahi dynasty at Bijapur at a slightly later date, exhibit a certain Turkish influence, especially in the great tomb of Mahmoud. Though less refined and lacking the attraction of precious materials in their decoration, these splendid edifices are held in higher esteem by some critics than those of the Moghals, on account of their simplicity, grandeur and fine proportions. The era of great civil architecture in India was revived by the Mahomedan powers. Splendid palaces and fortresses were built at Madras, Delhi, Agra, Fattehpore-Sikri and Bijapur, and the example thus set was copied by the Hindu princes at Jaipur, Udaipur and elsewhere in India. The application of great architectural treatment, unequalled in extent elsewhere, is to be seen in the Ghauts or steps enclosing lakes and on the banks of rivers. The most notable constructional contribution of the Mahomedans to Indian architecture was the introduction of the true arch and dome.

Sculpture.—The use of sculpture and painting in isolated works of art was practically non-existent in India until modern times. One or two reliefs and certain gigantic figures may be quoted as exceptions, but taken generally it may be stated that these arts were employed as the decorative adjuncts of architecture. No civil statuary, such as is now understood by the term, was executed; for no contemporary portrait figures, or busts in marble, or bronze, have come down to us from the ruins of ancient India, as they have from those of Egypt, Greece and Rome. Sculpture has been used exclusively as the handmaid of religion and to this fact may be attributed the stereotyped forms to which it became bound. The lavish use of sculpture on Indian temples often exceeds good taste, and mars the symmetry and dignity of their mass and outline; but for exuberance of imagination, industrious elaboration and vivid expression of movement, Indian sculpture is perhaps without its equal elsewhere in the world. The most impressive specimens are the earliest, found in the Buddhist and Brahminical cave temples of Ellora, Ajanta and Elephanta. The great Trimurthi in the last named of these temples ranks for mystery

and expressive grandeur with the greatest masterpieces of Egyptian art. The outstanding characteristics of Hindu sculpture are the power displayed in suggesting movement; the fine sense of decorative arrangements of line and mass; and an overpowering ingenuity in intricate design. Mahomedan sculpture in India, though not exclusively confined to geometric forms as is that of the more severe Arabian school, is very restrained as compared with that of the Hindus. Floral motifs are often used in the ornaments to tombs and palaces, but rarely in those of mosques. Their geometric ornament shows great ingenuity and invention; and wonderful decorative use is made of Persian, Arabic and Urdu lettering in panels, and their borders. The representation of human or animal figures is rarely to be met with. Sculptured and modelled relief is, as a rule, kept very low; and is mainly confined to the decoration of mouldings, architraves, lintels, or the bands of ornament which relieve large exterior wall spaces. Buildings of purely Mahomedan design and workmanship show greater restraint than those upon which Hindu workmen have been employed and are more satisfactory; but at Ahmedabad the two celebrated windows are striking examples of a happy combination of the two styles.

Painting.—Much of the carved stonework upon ancient Indian buildings was first plastered and then decorated with colour, but the only paintings, in the modern acceptation of the term, now existing, which were executed prior to the Moghul period, are those upon the walls of the cave temples at Ajanta. These remarkable works were produced at intervals during the first 600 years of the Christian era. They exhibit all the finer characteristics of the best Indian sculpture, but with an added freedom of expression due to the more tractable vehicle employed. They remained hidden in the Deccan jungles for nearly twelve hundred years, until accidentally discovered in 1816. They are painted in a species of fresco; and when first brought to light were well preserved, but they have greatly deteriorated owing to the well meant, but misguided action of copyists, and the neglect of the authorities. Their origin is as wrapt in mystery as is that of the artists who painted them; for no other paintings of similar power and character are known to exist; and the artists, so far as is known, left no successors. Nine hundred years elapsed between the completion of the Ajanta paintings and the commencement of the second period of Indian painting. This owned its origin to the introduction of Persian artists by the Moghul Emperor Akbar; and the establishment of the indigenous Moghul school was due to the encouragement and fostering care of his successors, Jehangir and Shah Jahan. Unlike the works of the Ajanta painters, which were designed upon a large scale, the pictures of the Moghul school were miniatures. They were executed in a species of opaque water-colour upon paper or vellum, resembling in technique the illuminated missals produced by the monks in Europe during the middle ages. Some of the finest of the earlier specimens in India are of a religious character; this phase of development being closely allied to the art the caligraphist. As its range extended, a remarkable school of portrait painters arose; notable for restrained but extremely accurate drawing, keen insight into character, harmonious colour, fine decorative feeling, and extraordinary delicacy and finish in the painting of detail. The artists of a Hindu off-shoot of this movement, known as the Rajput school, were less fully endowed with the technical and purely aesthetic qualities than were the Moghul painters; but they brought to their work poetry and sentiment which are not to be found in that of the Mahomedans. The pictures of both branches of the Moghul school, although highly decorative in character, were not intended for exhibition upon the walls of rooms, according to Western practice, and, when not used as illustrations or decorations to manuscript books, were preserved in portfolios. As this school of painting was the last expression of traditional art in India, in the restricted sense here applied to the term, and, as the question has a distinct bearing upon the modern development of painting, a few words may be added regarding the difference between the conventions followed by Eastern and Western painters. Until the middle of the fourteenth century the conventions of both East and West were practically the same, though the use of them differed according to environment and national temperament. These conventions the artists of the East have retained; and development has been upon the line of decorative fitness, harmony of colour, and expressive action. Their art has throughout been decorative, and when natural objects have been depicted, their treatment has been that of a flat pattern. The European painters, after the period above mentioned on the contrary, sought to attain the appearance of actuality in the objects depicted by the study of the science of light and shade, and perspective; and in achieving this end, and developing it into the realisation of atmosphere and light, they sacrificed a large measure of the decorative quality which characterised the work of the earlier school. Eastern artists have ignored or been blind to light and shade; and in works entirely free from European influence one will look in vain for any suggestion of it in their figures or for shadows of objects cast upon the ground. During the last fifty years there has been a strong movement toward a return to decorative conventions, on the part of European artists who have assimilated much that the East has to teach them, without thereby affecting the distinctively Western character of their work. Indian and Japanese artists have been less successful when attempting the reverse of this practice, and appear to lose whatever is best in their traditional practice without acquiring the finer qualities of that of the West.

Modern Painting.—As the reign of Shah Jahan exhibits the high tide of artistic development in India, so the reign of his successor Aurangzeb marks the period of its rapid decline. The causes of this are attributable to the absence of encouragement by this Emperor; to his long periods of absence from the court at Delhi or Agra, entailed by the continuous wars he waged in his efforts to bring the whole of the Peninsula under his rule; and partly to the tendency strongly inherent in the Indian artist

to become stereotyped in his practice. All foreign designers, painters and craftsmen who had been attracted to India by the great works carried out by Akbar, Jehangir and Shah Jahan left the country, and their places were taken by no successors. The indigenous artists left to themselves in the isolated courts of small Indian princes, or collected in schools in remote districts, employed themselves mainly upon repeating the works of a previous age, instead of seeking new motifs for artistic treatment. So purely mechanical did the work become that in some of the schools or guilds of painters, the execution of a single picture was subdivided; one craftsman painting the face, a second the drapery, and a third the background. Such methods could only lead to deterioration and decay. At the time when the British East India Company ceased to be only a guild of merchants and became a great administrative power in 1757, very little vitality survived in the ancient art of the country. During the century of its administrative history between the battle of Plassey and the Indian Mutiny, the "Company" was too fully occupied in fighting for its existence, extending its borders and settling the internal economy of its ever increasing territories, to be able to give much attention to conserving any remnant of artistic practice which had survived. Without any deliberate intention of introducing western art into the country, Greek and its derivative styles of architecture were adopted for public and private buildings in Calcutta, Bombay and Madras because these were found to be more suitable for their purpose than buildings of indigenous pattern. The practical result was the same; for the Indian craftsmen employed upon their erection were confronted with styles affording no scope for the application of their traditional ornament and concerning which they had no knowledge or sympathy. As there were no sculptors in India capable of modelling or carving civil sculpture, the monuments to distinguish public servants were all imported from England; and the portraits, or other paintings which decorated the interior walls of the buildings, were furnished by European painters who visited India or by artists in England. Although a considerable amount of research work of a voluntary nature was done by Archæologists, no official interest was taken in artistic education until the Government of India was transferred to the British Crown in 1859. In England itself, the first fifty years of the nineteenth century was a period of gross commercialism and artistic degradation; but with the advent of the International Exhibition of 1851 the eyes of the nation were opened to the value of art as applied to industry.

The **Schools of Art** then instituted throughout England were imitated in a timid and tentative manner in India; and were attached to the educational system, which had been previously modelled upon a definitely European basis. These schools of art, it should be remembered, were specially established to assist the artistic industries of the country, and not to provide instruction in architecture, sculpture and painting. In fact at a subsequent period they narrowly escaped extinction by the Secretary of State, upon the ground that they had become schools of painting and had thus been diverted from performing the original function for which they were established. The work of the Schools of Art in regard to industrial art is referred to elsewhere; and as two of them, that at Madras and that at Lahore, have confined their activities almost exclusively to this branch of the subject it is necessary to mention only the work of the Schools at Calcutta and Bombay in the present article. The Calcutta school, except for occasional experiments in the application of the graphic arts to lithography, engraving and stained glass, has become a school of painting and drawing. That at Bombay covers a wider field; for in addition to classes for modelling, painting and design it possesses a special school of architecture; a range of technical workshops, in which instruction is given in the applied arts; and research laboratories and studios devoted solely to the improvement of the Pottery industry. It is in the principles underlying the instruction in painting that the schools at Calcutta and Bombay have taken almost diametrically opposite roads to reach the end they both have in view, namely, the revival of the art of painting in India by means of an indigenous school of Indian painters. Mr. Havell, who until a few years back was the Principal of the Calcutta School, banished from within its walls every vestige of European art; and claimed that the traditional art of India, in its old forms, is not dead, but merely sleeping or smothered by the blanket of European culture laid upon it for the last 150 years, and needed but to be released from this incubus to regain its pristine vigour. Well equipped with literary ability; backed by intense enthusiasm for the views he held, which he advocated with admirable persistence; he imposed upon his students an exclusive and severe study of the Moghul and Rajput schools of painting. He was fortunate in finding a willing and equally enthusiastic disciple in Mr. Abinandranath Tagore, an artist of fine imagination and fancy, endowed with technical ability of a high order, combined with a serious devotion to his art. He with other Bengal painters, inspired by Mr. Havell's precepts, founded, about fifteen years ago, what has since become known as the Calcutta School of painting. In their early work the painters of this school closely adhered to the conventions of Moghul and Rajput artists, whom they took as their models; and these early examples made a great impression upon all European critics who saw them. They were welcomed as the first sign of a genuine revival of Indian painting, based upon traditional lines, and it was confidently hoped that the movement would meet with the support it merited from Indians of all classes. Interesting as many individual works of the school undoubtedly are the anticipations which greeted its inception have scarcely been fulfilled by the Calcutta school. The painters themselves have never reached the high technical standard of the artists who produced the best works of the Moghul or Rajput school: and, as time has passed, their outlook appears to have shifted, and, while stemming the flood of western influence, they appear to have drifted into a backwater of Japanese conventions. The Indian public has failed to give the school the support it was hoped they would afford, and the movement has had to depend for encourage-

ment mainly upon Europeans in England and India.

Bombay School of Art.—The attitude towards the development of art in modern India taken by Mr. Cecil Burns, who long guided the policy of the Bombay school, was diametrically opposite to that favoured by Mr. Havell. While yielding to no one in his admiration for the ancient art of India, and giving every encouragement to his students to study its masterpieces, the view he takes is that with European literature dominating the system under which the educated classes in India are trained; with European ideas, and science permeating the professional, commercial, industrial, and political life of the country, it is not possible for modern Indians now to recapture the spirit which alone gave vitality to the great works of the past ; that without this spirit, the conventions the ancient artists adopted are mere dead husks; and that to copy these would be as unprofitable as it would be for the artists of Europe to harness themselves to the conventions of the Greek and Roman sculptors or to those of the mediæval painters; that with European pictures,often of inferior quality illustrating every educational text book, and sold in the shops of every large city, it is essential for the proper education of art students that they should have before them the masterpieces of European art ; and that, with the wide adoption of European styles of architecture in India, it is necessary for a school of art to possess the best examples of ornament applicable to the great historic styles, for the purpose of study and reference. There are certain basic principles common to the technique of all great art, such as fine and accurate drawing in its widest sense, composition and design, and the science of colour harmony. By means of these an artist can express his individuality and emotions, and Mr. Burns held that the main function of a School of Art is to equip its students with the power of expression, untrammelled by any set conventions, so that when they leave the school, they do so with the capacity to employ their faculties in any direction their sympathies and tastes may impel them to take. Which of these two very divergent theories will produce the result both these gentlemen unite in wishing to see brought to pass, time alone will show. Certain it is that the driving fore of any artistic impulse must come from within the nation, and that India, like every other country, in its art, as in other matters, must work out its own salvation.

One striking success of hopeful augury has been achieved by the Bombay School in recent years This is the establishment of a flourishing school of architecture in which the study of Indian architecture takes an important place. Connected with this school is a students' architectural association designed to keep past students in touch with the school and with one another. As architecture embraces and influences every branch of decorative and industrial art, it is to be hoped that this school may be the means whereby the ancient glories of Indian architecture will be some day revived in new forms, bringing in its train a vitalising influence upon every other form of artistic activity.

Mural Painting.—Mr. W. E. Gladstone Solomon, the present Principal, has during the last two years studiously avoided any dogmatic theories as to the ultimate and which Indian art is destined to attain, though he has consistently pointed out the Indian's pre-eminence in the decoration of wall spaces. The guiding principle with Mr. Solomon has been to teach the students to draw and to paint what they see ; and further to encourage by all possible means their natural progress in the direction towards which their inherent instinct most obviously urges them. The application of this close training in the study of form and colour from the life to a decorative purpose, which accords both with ancient traditions and modern manifestations of the Indian artistic genius, has recently taken a definite line in the production of the mural paintings executed by the students at Government House and elsewhere in Bombay. These paintings are admitted by all critics to be of most hopeful augury for the future of Indian art clearly demonstrating as they do the capacity of our young Indian artists to grapple with the exacting problems of figure composition and to carry them out on a comprehensive scale.

Travel in India.

Thirty years ago, a tour in India was possible only to the wealthy, the leisured and those who had friends in the country. The cost of the journey was very high, the methods of transportation were very slow; and the facilities for travel were so indifferent that he was a bold man who consigned himself to the mercies of the country without a sheaf of letters of introduction. Now the mail which in peace time is posted in London on Friday night, reaches Bombay in thirteen and a half days, and the passenger can travel by the same route and with the same speed as the mail. A dozen lines have covered the sea route between Europe and India and Ceylon with a plexus of regular services. The Indian Railways provide facilities on the trunk lines unsurpassed by the *trains-de-luxe* of Europe, and the Indian hotel has grown into a really comfortable caravanserai.

In the touring season, which extends from November to March, there is the attraction of a perfect climate. It is never very hot; in the North indeed it is really cool, it is always fine and fresh and bracing. If there is one country in the world to which that elusive term applies, here we have at the season when the tourist arrives the real "Indian summer." Then there is its infinite variety. India is in no sense a nation and never will be. Its peoples are wide as the Poles asunder, each has its own art, its own architecture, its own customs and its own civilisation. A certain superficial resemblance runs through each; beneath lies a never-ending variety which age cannot wither nor custom stale.

The Grand Tour.—People coming to India for the first time so often ask:—"Where shall I go?" Well, wherever else the tourist may go, whatever else he should leave out, he should omit nothing on the Grand Tour. It is the foolish custom nowadays to sneer at those who follow the beaten tracks, but the visitor who shuns any part of the orthodox journey across India misses what nothing else can repay. **Bombay** is by far the most convenient point of departure, for here "the world end steamers wait," here is one of the finest cities in the British Empire, and here the traveller can best complete his outfit and arrangements. From Bombay stretch northwards the two great trunk lines of India. One, the **Bombay Baroda & Central India Railway**, leads through the pleasant garden of Gujarat to Ahmedabad, the ancient Moslem capital of the Province containing fine examples of Mahomedans and Jain architecture; thence to Abu for the famous Jain temples of Dilwara, and on to Ajmere, Jaipur and Agra. The other by the **Great Indian Peninsula Railway** carries the tourist over the Western Ghats by a superb mountain railway to Gwalior, whose rock fortress rises like a giant battleship from the plain, and so on to Agra. Of the glories of the Taj Mahal, Agra Fort, and the deserted city of Fatehpur Sikri it were supererogatory to speak. Another easy stage leads to **Delhi** that amazing collection of cities, dominated by the little Ridge where British valour kept the mutinous hordes at bay, and finally drove them from the city by a feat of arms unsurpassed in history. Then from Delhi the East Indian line leads comfortably to Benares, Lucknow and Calcutta, with the opportunity of an excursion to Cawnpore, if the spirit moves. The great charm of the Grand Tour is that it reveals the best that India can show. This route has the additional advantage that it fits in with any digressions which the time and purse of the traveller may permit. No one who can spare the time should fail to push northwards from Delhi to Peshawar, where the flower of the army keeps watch and ward over the Khyber, and up the dread Pass to the eyrie where the fort of Ali Masjid bars the way to all invaders. **Calcutta** is the best starting point for Darjeeling, though unfortunately the magnificent mountain panorama visible from there is often obscured at this season by mists. Then from Calcutta two alternatives open. A fine service of mail steamers leads to **Burma**, and one of the unforgettable memories of the East is a voyage down the Irrawaddy from Bhamo or Mandalay to Prome. Again, either direct from Calcutta, or *via* Burma, is an easy route to **Madras** and by way of Madura and Trichinopoly, with their peerless Hindu temples, back to Bombay, or on through Tuticorin to **Colombo.** But indeed the possibilities of expanding this tour are endless. Bombay is the best centre for the rock temples of Elephanta, Kenheri, Karli, Ellora and Ajanta. Calcutta is only a short distance from Puri the one Indian temple where there is no caste, and perhaps the most remarkable Hindu temple in the country. From Calcutta also start the river steamers which thread the steamy plains of Bengal and run to the tea gardens of Assam.

SPECIMEN TOURS.

A number of specimen tours in India are given below. They are taken from one of Messrs. Thos. Cook & Son's publications, from which firm further information may be obtained. The

traveller will also find he can obtain assistance from the principal Shipping Agents and Railway Companies, or from Messrs. Cox & Co., Messrs. Grindlay & Co., and Messrs King, King & Co.

	1st Class.	2nd Class Rail, 1st Class Steamer.

MATH.—A Hindu conventual establishment.

MAULVI.—A person learned in Muhammadan law.

MAUND, ver. Man.—A weight varying in different localities. The Ry. maund is 80 lbs.

MAYA.—Sanskrit term for delusion.

MEHEL or MAHAL.—A palace.

MELA.—A religious festival or fair.

MIHRAB.—The niche in the centre of the western wall of a mosque.

MIMBAR.—Steps in a mosque, used as a pulpit.

MINAR.—A pillar or tower.

MINOR WORKS.—Irrigation works for which regular accounts are not kept, except, in some cases, of capital.

MISTRI.—(1) a foreman, (2) a cook.

MONSOON.—Lit. 'season,' and specifically (1) The S. W. Monsoon, which is a Northward extension of the S. E. trades, which in the Northern Summer cross the equator and circulate into and around the low pressure area over North India, caused by the excessive heating of the land area, and (2) The N. E. monsoon, which is the current of cold winds blowing down during the Northern winter from the cold land areas of Central Asia, giving rain in India only in S. E. Madras and Ceylon through moisture acquired in crossing the Bay of Bengal, and passing across the equator into the low pressure areas of the Australasian Southern summit.

MUFASSAL, mofussil.—The outlying parts of a District, Province or Presidency, as distinguished from the head-quarters (Sadr).

MUKADDAM, muccadum.—A representative or headman.

MUKHTAR (corruptly mukhtiar).—(1) A legal practitioner who has not got a sanad, and therefore cannot appear in court as of right; (2) any person holding a power of attorney on behalf of another person.

MUKHTIARKAR.—The officer in charge of a taluka, Sind, whose duties are both executive and magisterial; syn. tahasildar.

MUKTI, 'release.'—The perfect rest attained by the last death and the final reabsorption of the individual soul into the world—soul, syn. NIRVANA, MOKSHA.

MUNG, mug.—A pulse, PHASEOLUS RADIATUS: syn. mag, Gujarat.

MUNJ.—(1) A tall grass (SACCHARUM MUNJA) in North India, from which mats are woven, and the Brahman sacred thread worn; (2) the said thread.

MUNSHI.—A teacher of Hindustani or any Perso-Arabian language.

MUNSIF.—Judge of the lowest Court with civil jurisdiction.

MURUM, moorum.—Gravel, used for metalling roads.

NACHANI-NAGLI.—See RAGI.

NAGARKHANA, Nakkarkhana.—A place where drums are beaten.

NAGARSHETH.—The head of the trading guild of Hindu and Jain Merchants in a city.

NAIB.—Assistant or Deputy.

NAIK.—A leader, hence (1) a local chieftain, in Southern India; (2) a native officer of the lowest rank (corporal) in the Indian army.

NAT.—A demon or spirit, Burma.

NAWAB.—A title borne by Musalmans, corresponding roughly to that of Raja among Hindus.

NAZAR, nazarana.—A due paid on succession or on certain ceremonial occasions.

NET ASSETS.—(1) In Northern India, the rent or share of the gross produce of land taken by the landlord; (2) in Madras and Lower Burma, the difference between the assumed value of the crop and the estimate of its cost of production.

NEWAR.—Broad cockney woven across bedsteads instead of iron slats.

NGAPI.—Pressed fish or salted fish paste, largely made and consumed in Burma.

NILGAI.—An antelope, BOSELAPHUS TRAGOCAMELUS.

NIM, neem.—A tree, MELIA AZADIRACHTA, the berries of which are used in dyeing.

NIRVANA.—See MUKTI.

NIZAM.—A title borne by the ruler of Hyderabad State.

NIZAMAT.—A sub-division of a Native State, corresponding to a British District, chiefly in the Punjab and Bhopal.

NON-AGRICULTURAL ASSESSMENT.—Enhanced assessment imposed when land already assessed as agricultural is diverted to use as a building site or for industrial concerns.

NON-COGNISABLE.—An offence for which the culprit cannot be arrested by the police without a warrant.

NON-OCCUPANCY TENANTS.—A class of tenants with few statutory rights, except in Oudh, beyond the terms in their leases or agreements.

NON-REGULATION.—A term formerly applied to certain Provinces to show that the regulations of full code of legislation was not in force in them.

NULLAH, NALA.—A ravine, watercourse, or drain.

OCCUPANCY TENANTS.—A class of tenants with special rights in Central Provinces, in United Provinces.

PADAUK.—A well known Burmese tree (PTEROCARPUS sp.) from the behaviour of which the arrival of the monsoon is prognosticated.

PADDY.—Unhusked rice.

PAGA.—A troop of horses among the Marathas.

PAGI.—A tracker thieves of strayed or stolen animals.

PAIGAH.—A tenure in Hyderabad State.

PAIK.—(1) A foot soldier; (2) in Assam formerly applied to every free male above sixteen years.

PAIREE.—The name of the second best variety of Bombay mango, distinguishable from the APHUS (*q. v.*) by its pointed tip, and by the colour being less yellow and more green and red.

PALAS.—See DHAK.

PALKI.—A palanquin or litter.

PAN.—The betel vine, PIPE BETLE.

PARAB.—A public place for the distribution of water, maintained by charity.

PARABADI.—A platform with a smaller platform like a dovecot on a centre pole or pillar built and endowed or maintained by charity, where grain is put every day for animals and birds.

PANCHAMA.—Low caste, Southern India.

PANCHAYAT.—(1) A committee for management of the affairs of a caste, village, or town; (2) arbitrators. Theoretically the panchayat has five (panch) members.

PANDIT.—A Hindu title, strictly speaking applied to a person versed in the Hindu scriptures, but commonly used by Brahmans. In Assam applied to a grade of Inspectors of primary schools.

PANSUPARI.—Distribution of PAN and SUPARI (*q. v.*) as a form of ceremonial hospitality.

PARDA, purdah.—(1) A veil or curtain; (2) the practice of keeping women secluded; syn. gosha.

PARDESI.—Foreign. Used in Bombay especially of Hindu servants, syces, &c., from North India.

PARGANA.—Fiscal area or petty sub-division of a tahsil, Northern India.

PASHM.—The fine wool of the Tibetan goat.

PASO.—A waistcloth.

PAT, put.—A stretch of firm, hard clay.

PATEL.—A village headman, Central and Western India; syn. reddi, Southern India, gaonbura, Assam; padhan, Northern and Eastern India: Mukhi, Guzarat.

PATIDAR.—A co-sharer in a village, Gujarat

PATTAWALLA.—See CHAPRASI.

PATWARI.—A village accountant; syn. karnam, Madras; kulkarni, Bombay Deccan; talati, Gujarat; shanbhog, Mysore, Kanara and Coorg; Mandal, Assam; Tapedar, Sind.

PEON.—See CHAPRASI.

PESHKASH.—A tribute or offering to a superior.

PHULAV, (Pilow).—A dish of rice and other ingredients, and by Anglo-Indians specifically used of chicken with rice and spices.

PHULKARI.—An embroidered sheet; lit flower-work.

PICE, paisa.—A copper or bronze coin worth one farthing; also used as a generic term for money.

PICOTTAH.—A lever for raising water in a bucket for irrigation, Southern India; syn. dhenkul or dhenkuli, or dhikli, Northern India.

PIPAL.—A sacred tree, FICUS RELIGIOSA.

PIR.—A Mahomedan religious teacher or salut.

PLEADER.—A class of legal practitioner.

PONGYI.—A Buddhist monk or priest, Burma.

POSTIN, poshteen.—A coat or rug of sheepskin tanned with the wool on, Afghanistan.

PRANT.—An administrative sub-division in Maratha States, corresponding to a British District (Baroda) or Division (Gwalior); also in Kathlawar.

PRESIDENCY.—A former Division of British India.

PROTECTED.—Forests over which a considerable degree of supervision is exercised, but less than in the case of 'reserved' forests.

PROVINCE.—One of the large Divisions of British India.

PUJA.—Worship, Hindu.

PUJARI.—The priest attached to a temple.

PUNDIT.—See Pandit.

PURANA.—Lit. 'old' Sanskrit (1) applied to certain Hindu religious books, (2) to a geological 'group'; (3) also to 'punch-marked' coins.

PUROHIT—A domestic chaplain or spiritual guide, Hindu.

PWE.—An entertainment, Burma.

RABI.—Any crop sown after the main South-West monsoon.

RAGI (ELEUSINE COROCANA).—A small millet used as a food-grain in Western and Southern India; syn. marua, Nagli Nachni.

RAJA.—A title borne by Hindus and occasionally by Musalmans, corresponding roughly to that of Nawab which is peculiar to Musalmans.

RAMOSHI.—A caste whose work is watch and ward in the village lands and hence used of any chaukidar (*q. v.*).

RANA.—A title borne by some Rajput chiefs equivalent to that of Raja.

RANI.—The wife or widow of a Raja.

RAO.—A title borne by Hindus, either equivalent to, or ranking below, that of Raja.

REGAR.—Name for a black soil in Central and Southern India, which is very retentive of moisture, and suitable for growing cotton.

REGULATION.—A term formerly applied to certain provinces to show that the Regulations or full code of legislation applied to them.

REH.—Saline or alkaline efflorescences on the surface of the soil, Northern India.

RESERVED.—Forests intended to be maintained permanently.

RICKSHAW.—A one or two seat vehicle on two wheels drawn by coolies, used in the hills.

ROHU.—A kind of fish, LABEO ROHITA.

RYOTWARI.—The system of tenure in which land revenue is imposed on the actual occupants of holdings.

SADR, sudder.—Chief (adjective). Hence the headquarters of a District; formerly applied to the Appellate Courts.

SAFFLOWER.—A thistle which yields a yellow dye from its petals and oil from its seeds (CARTHAMUS TINCTORIUS), ver. Kardai, Kushanti.

SAL.—A useful timber tree in Northern India, SHOREA ROBUSTA.

SAMBAR.—A deer, CERVUS UNICOLOR; syn. jarau.

SAN.—Bombay hemp, CROTALARIA JUNCEA.

SANAD.—(1), A charter or grant, giving its name to a class of States in Central India held under a sanad, (2) any kind of deed of grants.

SANNYASI.—A Hindu mendicant.

SARI.—A long piece of cloth worn by women as a shawl.

SARANJAM.—Land held revenue free or on a reduced quit-rent in consideration of political services rendered by the holder's ancestors.

SARKAR.—(1) The Government; (2) a tract of territory under Muhammadan rule, corresponding roughly to a Division under British administration.

SARSUBAH.—An officer in charge of a Division in the Baroda State corresponding to Commissioner of British territories.

SATI.—Suicide by a widow, especially on the funeral pyre of her husband.

SATYAGRAHA.—(lit.) One possessed by the truth; one who follows the truth wherever it may lead. (Commonly used to denote the passive resistance movement.)

SAWBWA.—A title borne by chiefs in the Shan States, Burma.

SEMAL or cotton tree.—A large forest tree with crimson flowers and pods containing a quantity of floss, BOMBAY MALABARICUM.

SEROW, sarau.—A goat antelope, NEMORHAEDUS BUBALINUS.

SETTLEMENT.—(1) The preparation of a cadastral record, and the fixing of the Government revenue from land; (2) the local inquiry made before Forest Reserves are created; (3) the financial arrangement between the Government of India and Local Governments.

SHANBHOG.—See PATWARI.

SHASTRAS.—The religious law-books of the Hindus.

SHEGADI, seggaree.—A pan on 3 feet with live charcoal in it.

SHER, ser, seer—A weight, or measure varying much in size in different parts of the country. The Railway ser is about 2 lbs.

SHETH, shethia.—A Hindu or Jain merchant.

SHIGURAM.—See TONGA.

SHISHAM or sissu.—A valuable timber tree, DALBERGIA SISSOO.

SILLADAR.—A native trooper who furnishes his own horse and equipment.

SOLA.—A water-plant with a valuable pith, AESCHYNOMENE ASPERA.

SOWAR.—A mounted soldier or constable.

STUPA or tope.—A Buddhist tumulus, usually of brick or stone, and more or less hemispherical, containing relics.

SUBAH.—(1) A province under Mahomedan rule; (2) the officer in charge of a large tract in Baroda, corresponding to the Collector of a British District; (3) a group of Districts or Division, Hyderabad.

SUBAHDAR.—(1) The governor of a province under Mahomedan rule; (2) a native infantry officer in the Indian Army; (3) an official in Hyderabad corresponding to the Commissioner in British territory.

SUB-DIVISION.—A portion of a District in charge of a junior officer of the Indian Civil Service or a Deputy Collector.

SUPARI.—The fruit of the betel palm, ARECA CATECHU.

SUPERINTENDENT.—(1) The chief police officer in a District; (2) the official in charge of a hill station; (3) the official, usually of the Indian Medical Service, in charge of a Central Jail.

SURTI.—Native of Surat, specially used of persons of the Dhed or Mahar caste who work as house servants of Europeans, and whose house speech is Gujarati.

SYCE, sais.—A groom.

TABUT.—See TAZIAH.

TAHSIL.—A revenue sub-division of a District; syn. taluka, Bombay; taluka, Madras and Mysore; township, Burma.

TAHSILDAR.—The officer in charge of a tahsil; syn. Mamlatdar, Bombay; township officer or myo-ok, Burma; Mukhtiarkar, Sind; Vahivatdar, Baroda. His duties are both executive and magisterial.

TAKAVI.—Loans made to agriculturists for seed, bullocks, or agricultural improvements; syn. tagai, Bombay.

TALATI.—See PATWARI.

TALAV, or talao.—A lake or tank.

TALUK, taluka.—The estate of a talukdar in Oudh. A revenue sub-division of a District, in Bombay, Madras and Mysore; syn. tahsil.

TALUKDAR.—A landholder with peculiar tenures in different parts of India. (1) An official in the Hyderabad State, corresponding to the Magistrate and Collector (First Talukdar) or Deputy Magistrates and Collectors (Second and Third Talukdars); (2) a landholder with a peculiar form of tenure in Gujarat.

TAMTAM, tumtum.—A North Indian name for a light trap or cart.

TANK.—In Southern, Western, and Central India, a lake formed by damming up a valley; in Northern India, an excavation holding water.

TAPEDAR.—See PATWARI.

TARAI.—A moist swampy tract; the term especially applied to the tract along the foot of the Himalayas.

TARI, toddy—The sap of the date, palmyra, or cocoanut palm, used as a drink, either fresh or after fermentation. In Northern India the juice of the date is called Sendhi.

TASAR, tussore.—Wild silkworms, ANTHERAEA PAPHIA; also applied to the cloth made from their silk.

TAZIA.—Lath and paper models of the tombs of Hasan and Husain, carried in procession at the Muharram festival; syn. tabut.

TEAK.—A valuable timber tree in Southern and Western India and Burma, TECTONA GRANDIS.

TELEGRAPHIC TRANSFERS.—See Council bills.

THAGI, thuggee.—Robbery after strangulation of the victim.

THAKUR.—(1) The modern equivalent of the caste name Kshattriya in some parts of Northern India; (2) a title of respect applied to Brahmans; (3) a petty chief; (4) a hill tribe in the Western Ghats.

THAMIN.—The brow-antlered deer Burma, CERVUS ELDI.

THANA.—A police station, and hence the circle attached to it.

TIKA.—(1) Ceremonial anointing on the forehead; (2) vaccination.

TIKAM.—The English pickaxe (of which the word is a corruption).

TIL.—An oilseed, SESAMUM INDICUM; also known as gingelly in Madras.

TINDAL, tandel.—A foreman, subordinate officer of a ship.

TIPAI, Teapoy.—A table with 3 legs, and hence used of any small European style table.

TOLA.—A weight equivalent to 180 grains (troy).

TONGA.—A one or two horsed vehicle with a covered top. syn. SHIGHRAM.

TSINE.—Wild cattle found in Burma and to the southward, BOS SONDAICUS; syn. hsaing and banteng.

UNIT.—A term in famine administration denoting one person relieved for one day.

URIAL.—A wild sheep in North-Western India, OVIS VIGNEI.

URID, UDID.—A pulse, 'black grain,' (PHASEOLUS MUNGO).

UMBAR.—A wild pig—(FICUS GLOMERATA).

USAR.—Soil made barren by saline efflorescence, Northern India.

VAHIVATDAR.—Officer in charge of a revenue sub-division, with both executive and magisterial functions, Baroda; syn. tahsildar.

VAID or baidya, Bengal.—A native doctor practising the Hindu system of medicine.

VAKIL.—(1) A class of legal practitioner; (2) an agent generally.

VIHARA.—A Buddhist monastery.

VILLAGE.—Usually applied to a certain area demarcated by survey, corresponding roughly to the English parish.

VILLAGE UNION.—An area in which local affairs are administered by a small committee.

WADA or WADI.—(1) an enclosure with houses built round facing a centre yard; (2) private enclosed land near a village.

WAKF.—A Muhammadan religious or charitable endowment.

WAO.—A step well.

WATAN.—A word of many senses. In Bombay Presidency used mostly of the land or cash allowance enjoyed by the person who performs some service useful for Govt. or to the village community.

WAZIR.—The chief minister at a Mahomedan court.

WET RATE.—The rate of revenue for land assured of irrigation.

YOGI.—A Hindu ascetic who follows the yoga system, a cardinal part of which is that it confers complete control over the bodily functions enabling the practiser, for instance to breathe in through one nostril and out at the other.

YUNANI.—Lit. Greek; the system of medicine practised by Mahomedans.

ZAMINDAR.—A landholder.

ZAMINDARI.—(1) An estate; (2) the rights of a landholder, zamindar; (3) the system of tenure in which land revenue is imposed on an individual or community occupying the position of a landlord.

ZANANA.—The women's quarters in a house, hence private education of women.

ZIARAT.—A Mahomedan shrine, North-Western Frontier.

ZILA.—A District.

The New Capital.

The transfer of the capital of India from Calcutta to **Delhi** was announced at the Delhi Durbar on December 12, 1911. The reasons for it were stated in despatches between the Government of India and the Secretary of State published at the time. It had long been recognised as necessary, in the interests of the whole of India, to de-provincialise the Government of India, but this ideal was unattainable as long as the Government of India was located in one Province, and in the capital of that Province—the seat of the Bengal Government—for several months in every year. It was also desirable to free the Bengal Government from the close proximity of the Government of India which had been to the constant disadvantage of that Province. To achieve these two objects the removal of the capital from Calcutta was essential: its disadvantages had been recognised as long ago as 1868, when Sir Henry Maine advocated the change. Various places had been discussed as possible capitals, but Delhi was by common consent the best of them all. Its central position and situation as a railway junction, added to its historical associations, told in its favour; and, as Lord Crewe said in his despatch on the subject, "to the races of India, for whom the legends and records of the past are charged with so intense a meaning, this resumption by the Paramount Power of the seat of venerable Empire should at once enforce the continuity and promise the permanency of British sovereign rule over the length and breadth of the country."

The foundation stones of the new capital were laid by the King Emperor on December 15, 1911, when His Majesty said:—"It is my desire that the planning and designing of the public buildings to be erected will be considered with the greatest deliberation and care so that the new creation may be in every way worthy of this ancient and beautiful city." Subsequently a **town-planning committee** was appointed—consisting of Captain G. S. C. Swinton, Chairman, and Mr. J. A. Brodie and Sir Edwin Lutyens, members—to advise on the choice of a site for, and the lay-out of, the capital. Mr. V. Lanchester was subsequently consulted by Government on some aspects of the question. The terms of their original engagement (subsequently renewed) were stated by the Under Secretary of State to be:—"The members of the committee will receive their travelling and living expenses, and the following fees for a five months' engagement:—Captain Swinton, 500 guineas; Mr. Brodie, 1,750 guineas; Sir Edwin Lutyens, 1,500 guineas. The Secretary of State has also undertaken to refund to the Corporation of Liverpool the amount of Mr. Brodie's salary for the period of the absence."

Delhi and its environs.—In their first report, dated from Simla, 13th June 1912, the Committee explain that, in dealing with the choice of a site, they felt that the following considerations were paramount and must receive the closest and most continual attention:—(*a*) Health and sanitation, (*b*) water-supply and irrigation supply, (*c*) the provision of ample room for expansion, (*d*) an extent of land suitable for the location of buildings of various characters and sizes and for the provision of spacious parks and recreation grounds—to be assumed at 10 square miles for the New City and 15 square miles for the Cantonment—(*e*) Cost of land and the cost of executing necessary works on different sites, (*f*) facility for external and internal communication, (*g*) Civil and Military requirements.

On the east of the Jumna they found no suitable site. To the north of Delhi, on the west of the Jumna, where the Durbar camps were pitched they found some general advantages. The area is, for example, upwind and upstream from the present city of Delhi. The ruins and remains of the Delhis of the past do not cumber the ground; While the external communications might need improvement, the tract is fairly well served by existing railways. Roads and canals and the internal communication could be made convenient without excessive expenditure, and a good deal of money has already been spent on the area. But its disadvantages were found to be overwhelming. The site is too small and much of the land is liable to flooding. Similarly, the western slope of the hills to the south of Delhi, the Naraina plain, was found unsuitable, mainly because it cannot be considered to be Delhi, is destitute of historical associations, and is shut out from all view of Delhi.

Southern site chosen.—The Committee finally selected a site on the eastern slopes of the hills to the south of Delhi, on the fringe of the tract occupied by the Delhis of the past. They describe it as follows:—"Standing a little to the Delhi side of the village of Malcha, just below the hills almost in the centre of the site, and looking towards the Jumna, Shahjahan's Delhi on the left fills the space between the ridge and the river. Following down from the present city on the foreshore of the riverain, Firoz Shah's Delhi, the site of Indra Prastha, Humayun's fort, Humayun's tomb and Nizamuddin's tomb take the eye in a continuous progress to the rocky eminence on which Ghiyasuddin Tughlak erected his fortress city. On the right the Lal Kot, the Kutb, the Kila Rai Pithora, Siri and Jahanpanah complete the circle of the monuments of ancient Delhis. The mid space in the fore ground is filled by Safdar Jang's Mausoleum and the tombs of the Lodi dynasty, while to the left, towards Delhi, Jey Singh's gnomons and equatorial dials raise their fantastic shapes." The land chosen is free from liability to flood, has a natural drainage, and is not manworn. It is not cumbered with monuments and tombs needing reverent treatment, and the site is near the present centre of the town of Delhi.

Healthiness of Site.—In February, 1913, a Committee consisting of Surgn. General Sir C. P. Lukis, Mr. H. T. Keeling, C.S.I., A.M I.C.E., and Major J. C. Robertson, I.M.S., was appointed to consider the comparative healthiness of the northern and southern sites. Their report, dated 4th March, 1913, states that "the Committee, after giving full consideration to the various points discussed in the above note, is bound to advise the Government of India that no doubt can exist as to the superior

healthiness of the southern site, the medical and sanitary advantages of which are overwhelming when compared with those of the northern site."

Report on Northern Site.—In the same month the Town-Planning Committee presented their second report, which dealt with the northern site. This had been elicited by the fact that in December, 1912, Sir Bradford Leslie, an engineer with a distinguished Indian career, had read a paper before the Indian section of the Royal Society of Arts in London, in which he set forth plans for building the new capital on the northern site and producing a fine water effect by a treatment of the river Jumna. This paper aroused considerable attention in England, and its publication synchronised with some letters and articles in the press in India expressing a preference for the northern site. The latter voiced a natural attraction to the north site which the Committee themselves experienced on their first visit to Delhi, and enunciated some predelictions which the Committee had at one time felt and later abandoned. The Town Planning Committee, therefore, undertook to review once more, and in greater detail, the arguments for and against the northern site. They came to the conclusion that:—"The soil is poor on the northern site as compared with the southern. The southern site is already healthy and has healthy surroundings. The northern site even after expenditure on sanitary requirements will never be satisfactory. If the northern site is to be made healthy, this involves going outside the site itself and making the neighbourhood healthy also. The building land to the south is generally good. On the north to be used at all it has in places to be raised at considerable cost. There is no really suitable healthy site for a cantonment in proximity to a city on the northern site. The exigencies of fitting in the requirements to the limited area of the northern site endanger the success of a lay-out as a whole and tend to make for cramping and bad arrangement. The result of placing a city on the northern site appears to the Committee to be the creation of a bad example in place of a good one."

Final Town-Planning Report.—The final report of the Town-Planning Committee, with a plan of the lay-out, was dated 20th March, 1913. The central point of interest in the lay-out, which gives the motif of the whole, is Government House, and the large blocks of Secretariats. This Government centre has been given a position at Raisina hill near the centre of the new city. Advantage is taken of the height of this hill and it is linked with the high ground behind so as to appear a spur of the ridge itself. Behind the hill a raised platform or forum will be built. This will be flanked by the large blocks of Secretariat buildings and terminated at its western end by the mass of Government House with its wide flight of steps, portico and dome. The forum will be approached by inclined ways with easy gradients on both its north and south sides. The axis of the main avenue centres on the north-west gate of Indrapat nearly due east of Government House.

Looking from the eastern end of the forum where the broad avenue enters the Governmental centre and where the great stairways are set, the view is towards the east. "Right and left the roadways go and weld into one the empire of to-day with the empires of the past and unite Government with the business and lives of its people."

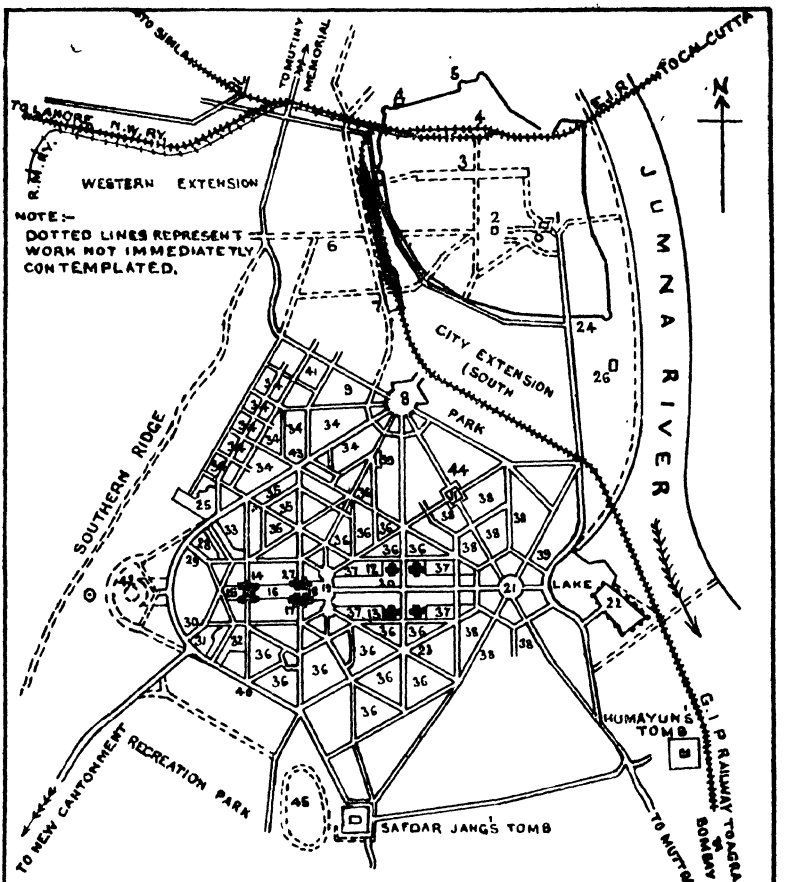
Behind Government House to the west will be its gardens and parks flanked by the general buildings belonging to the Viceregal estate. Beyond these again, on the ridge itself, will be a spacious amphitheatre to be made out of the quarry from which much of the stone for roads and buildings may be cut. Above this and behind it will lie the reservoir and its tower which will be treated so as to break the sky line of the ridge. To the east of the forum, and below it, will be a spacious forecourt defined by trees and linked on to the great main avenue or parkway which leads to Indrapat. Across this main axis, and at right angles to it, will run the avenue to the railway station. This will terminate in the railway station, the post office and business quarters at its northern end, and in the Cathedral at its southern extremity.

To the south-east will lie the park area in which stand the ancient monuments of Safdar Jang's Makhbara and the Lodi tombs. This area can be developed gradually as the city expands and has need of public institutions of various kinds. The axis running north-east from the Secretariat buildings to the railway station and towards the Jama Masjid will form the principal business approach to the present city. At the railway station a *place* will be laid out around which will be grouped the administrative and municipal offices, the banks, the shops and the hotels. On this *place* the post office is placed in symmetrical relation to the railway station.

The processional route will lead down from the railway station, due south to the point where it is intersected by the main east to west axis. Here round a *place* will be gathered the buildings of the Ethnological Museum, the Library and the Imperial Record Office. To the south-west of the railway station will lie the houses of the local administration and the residences of the European clerks.

Due south of the forum the residence of the Commander-in-Chief will be placed. Round about the Viceregal estate and the forum lies the ground destined for the residences of the Secretaries and other officials of the Government of India. To the south-east of Government House lies the club. To the south of the club a low ridge divides the tract into two portions. That to the west is well adapted for a golf-course, while the eastern side is designed for a race-course, the ridge itself offering unusual facilities for locating stands and seeing the races.

Communications.—The avenues range from 76 feet to 150 feet in width with the exception of the main avenue east of the Secretariat buildings where a parkway width of 1,175 feet has been allowed. The principal avenues in addition to the main avenues are those running at right angles to the main east to west axis.



1. KING EDWARD VII MEMORIAL
2. JAMA MASJID
3. CHANDNI CHOWK
4. EXISTING DELHI MAIN STATION
5. KASHMIR GATE
6. INTERMEDIATE CITY EXTENSION
7. PROPOSED NEW JOINT RAILWAY STATION.
8. STATE ENTRANCE TO RY: STATION
9. LADY HARDINGE'S COLLEGE & HOSPITAL FOR WOMEN.
10. JANTAR MANTAR
11. UNIVERSITY
12. RECORD OFFICE
13. ETHNOLOGICAL MUSEUM
14. GOVERNMENT HOUSE
15. MOGHAL GARDEN
16. VICEROY'S COURT
17. SECRETARIAT SOUTH BLOCK
18. GOVERNMENT COURT
19. GREAT PLACE
20. CENTRAL VISTA
21. PROPOSED WAR MONUMENTS.
22. PURANA KILA (INDRPAT)
23. CATHEDRAL SITE (ANGLICAN)
24. DELHI GATE
25. TALKATORA PARK
26. FEROZ SHAH KOTLA
27. SECRETARIAT NORTH BLOCK.
28. PRIVATE SECRETARY TO VICEROY.
29. MILITARY SECRETARY TO VICEROY.
30. SURGEON TO VICEROY
31. COMPTROLLER TO VICEROY
32. BODY GUARD & TROOPS
33. VICEREGAL STAFF QUARTERS
34. INDIAN CLERKS QUARTERS
35. EUROPEAN CLERKS QUARTERS
36. OFFICERS BUNGALOWS
37. HON. MEMBERS BUNGALOWS
38. RULING PRINCES & CHIEFS RESIDENCES.
39. BEGUM OF BHOPAL'S GIRLS' SCHOOL
40. COMMANDER-IN-CHIEF'S RESIDENCES.
41. PEONS' QUARTERS
42. PROPOSED AMPHITHEATRE
43. CATHEDRAL SITE (ROMAN CATH.)
44. ST. STEPHENS COLLEGE
45. PROPOSED RACE COURSE

Others form part of a system running from the amphitheatre to the railway station and Commander-in-Chief's residence, and from both the latter to the proposed War Memorial lying on the axis between Indrapat and Government House which is the focal point of the roads and avenues on the packway.

A lake which can be obtained by river treatment is shown on the plan. The lay-out has been made independent of the water effect, but the Committee think that its ultimate creation will enhance enormously the beauties and general amenities of the new capital: and it should and would become an integral portion of the design now submitted

The report contains lengthy recommendations concerning water-supply, drainage, sewage system, parks and communications. It is imperative, it says:—"that a complete scheme of railway arrangements designed to serve the whole of the capital, both old and new, should be an essential feature of the lay-out of the Imperial City, and this important matter should not be left to be settled when it is too late to deal with it." The main lines of the lay-out as projected by the Committee have been accepted by Government and a great deal of work has been on them. The expenses of the new central station and the difficulty experienced in meeting the various railway interests concerned will necessitate the postponement of this part of the scheme, and it has been decided that the needs of New Delhi will be met by a diversion of the existing Agra-Delhi Chord Railway to a line drawn eastward of Humayun's Tomb and Purana Killa and the construction of a new through station near the site of the proposed Central station. Another important modification consists in the reservation of the area lying south of the Delhi and Ajmere Gates of the city for the purpose of the extension of Old Delhi.

Nor is it now proposed to give effect to the extensive scheme of river training designed by the Town Planning Committee; and it is probable that little more will be done in this direction than to create a lake immediately at the end of the central vista and alongside the walls of Indrapat.

Temporary Capital.—For the use of the Government of India during the period of the building of the new capital—a period that will have to be extended owing to the conditions created by the war—an area has been selected along the Alipur Road, between the present civil station of Delhi and the Ridge. The early idea that many of the officials should live under canvas had to be given up, and there are now temporary offices and residences. The architecture and method of construction are similar to those adopted in the exhibition buildings at Allahabad in 1910; but the buildings will outlast the transitional period for which they are intended. They will subsequently be an asset of some value.

Chief Commissioner Appointed.—On October 1, 1912, by proclamation, there was constituted an administrative **enclave of Delhi** under a Chief Commissioner, Mr. W. M. Hailey, I.C.S. Mr. Hailey has since become Finance Member of H. E. the Viceroy's Executive Council and the Chief Commissioner is now Mr. C. A. Barrow, C.S.I., C.I.E., I.C.S. The Delhi district of the Punjab, from which this enclave was entirely taken, consisted of three tahsils or subdivisions and the enclave was formed by the central tahsil, that of Delhi, and by such part of the southern tahsil, Ballabgarh, as was comprised within the limits of the police post of Mahrauli. Delhi Province as thus defined had originally an area of 528 square miles to which was added later an area of 45 square miles to the east of the Jumna river and taken from the United Provinces to serve as a grazing ground for the cattle for the city. The total area is, therefore, 573 square miles. On the basis of the Census of 1911, the population of the area originally included in the Province is 3,98,269 and of the new area 14,552, or a total of 4,12,821. The population of the Municipal town of Delhi is 2,29,144.

The Architects' Designs.—At the Royal Academy in 1914 there were exhibited drawings by Sir Edwin Lutyens and Mr. Baker, which though provisional and rather in the nature of what are called Warrant Designs, show how the architectural problems of the new capital are to be solved. Government House and the Secretariat have been planned by them as one block, as it were a Capital, facing towards Indrapat. The **Secretariat** is being built on the rock of Raisina hill, the top of which has been levelled for the purpose: behind the Secretariat is to be a raised causeway forming the approach to Government House: and Government House itself is being built on a high basement constructed on an outcrop of rock. The main processional route to Government House has been made along sloping way (at a gradient of one in 22½) which leads from a semi-circular piazza, the "Great Place" to the level of the Secretariat buildings.

At the summit of this sloping way is the "**Government Court**", a space of about 1,100 feet in length, and 400 feet in breadth flanked to the north and south by the two blocks of Secretariat buildings. These buildings have been designed by Mr. Baker and the aggregate cost will be some Rs. 1,24,00,000. According to the design the eastern end of each block is marked by deep loggias looking out over the Central Vista. In the centre of each block is a dome. In the case of the north block this marks an Entrance Hall: in the south block it surmounts a Conference Hall with a suite of cloak and reception rooms. Each block contains four floors: on the main ground floor are the general offices of the Departments; on the first floor are the offices of members of Council Secretaries, and other officers; whilst the remaining floors are occupied by clerk rooms and records. An essential feature of the design, and one which sets the character of the whole building, is the provision of loggias and recessed gate ways or exedrae giving views through to the fountain courts situate in the interior of the blocks, and these take the place of the continuous verandahs that are so familiar a feature in Indian buildings. The Architect relies for control of temperature on these loggias and recesses, on which external walls, together with the thick window shutters adopted so widely in Southern Europe, and the wide *chajjs* characteristics of Oriental buildings.

Between the north and south Secretariat blocks, is the way into the "**Viceroy's Court**" —the raised causeway already referred to— leading up to Government House. The Court is about 600 feet in breadth and 1,300 feet in length; it will be treated with grass and water ways and low trees: and should form a dignified approach to the final group of buildings. At a point midway in the causeway, at which will be erected a column presented by the Maharajah of Jaipur, roads lead off to the north and south, forming alternative lines of approach to Government House.

One thus reaches the portico of **Government House.** This portico raised some twenty feet above the level of the Viceroy's Court and thirty-five feet above the surrounding country. The house itself centres round the great Durbar Hall, a domed structure which dominates the scheme of the buildings surrounding it. Grouped round the Durbar Hall are the State Rooms and great stairways from the entrance Courts on the north and south sides. Projecting from this central block are four wings, that on the south-west containing the Viceroy s private apartments. In the south-west wing, accommodation is provided for the A.D.C.'s to the Viceroys Guests are accommodate l in the north-west wing, whilst the north-east wing contains the officers of the Viceroy's Private and Military Secretaries and other members of his establishment. On the western side of the house will be a raised garden, walled and terraced after the manner of the Moghuls, and behind that again, on the level of the surrounding country, a park which will contain the staff houses and quarters. The park will extend to the rocky slopes of the Ridge which close in the vista on the west. The house will, with its attached quarters, garden and park, all of which have been designed by Sir Edwin Lutyens, cost approximately Rs. 95,00,000.

Style of Architecture.—There had been a prolonged "battle of the styles" over Delhi and if these designs gave satisfaction to neither of the extreme and opposed schools of thought, they clearly showed an endeavour to apply, with due regard for Indian sentiment, the spirit and essence of the great traditions of architecture to the solution of structural problems conditioned upon an Indian climate and Indian surroundings and requirements. To use the language of the architects themselves, it has been their aim "to express, within the limit of the medium and of the powers of its users, the ideal and the fact of British rule in India, of which the New Delhi must ever be the monument."

The inspiration of these designs is manifestly Western, as is that of British rule, but they combine with it distinctive Indian features without doing violence to the principles of structural fitness and artistic unity. Much will depend upon the resourcefulness and ability of the Indian artificers themselves whom the Government of India proposes to bring together in Delhi to give expression, by their decorative work, to the best traditions of skilled Indian craftmanship.

Cost of the Scheme.—It was at first tentatively estimated that the cost of the new capital would be four million sterling and that sum was given in the original despatch of the Government of India on the subject. Various factors have since then increased the cost, the chief of these being the immense rise in prices since the war, and the Legislative Assembly were informed by Government on 23rd March, 1921, that the revised estimates now amounted to 13 crores of rupees. This amount includes allowances for building new Legislative Chambers and Hostels for Members of the Indian Legislature, which were not allowed for in the earlier estimates.

The Project Estimate contains certain items such as land, residences, water supply, electric light and power, and irrigation on which recoveries in the form of rate or taxes will, in addition to meeting current expenditure, partially at any rate cover the interest on the capital outlay whilst there are other items on which some return on account of the sale of leases, general taxes on and indirect receipts may be expected.

Progress of the work.—The construction of New Delhi has made satisfactory progress, having regard to the curtailment of the Budget allotment, in consequence of the war and the return of officers and other establishments to their civil work has made possible a considerable speeding up of constructional operations provided money can be provided to pay for them.

Meanwhile the central point of interest in the plan has been given careful detailed consideration by the Government and the architects. The basements of Government House and the large blocks of Secretariats by which it will be flanked, and a great deal of their superstructures, have been completed; substantial progress has been made with the Viceroy's Court, the Government Court between the two blocks of Secretariats, and the Great Place and with the tree planting and waterways of the Central Vista. An indication of the progress at the Governmental centre on Raisina Hill is the arrival there in 1920 of the statues of their Majesties in Coronation robes, which are to be placed in front of Government House. That of the King, by Mr. Mackenna, is the gift of the Maharaja Scindia of Gwalior, and of the Queen, by Sir George Frampton, is the gift of the Maharaja of Bikanir. The keen interest of the ruling princes in the transfer of the capital, which is very welcome to them, is further shown in the gift by the Maharaja of Jaipur of funds for a Column, designed by Sir Edwin Lutyens, which is to be located midway in the Viceroy's Court This Column is surmounted by the Star of India, and will be visible from many parts of the New City.

Col. Sir Sydney Crookshank, Secretary to the Government of India, P.W.D., informed the Legislative Assembly at Delhi on 16th March, 1921, that the "Government House work is nearly one-third finished, the Secretariat blocks somewhere about two-fifths and the Residential buildings about three-fifths finished. We have still some 52 Officers' bungalows, 73 European quarters, and 16 Orthodox quarters to construct before we shall have finished the present programme of construction of residential buildings, which in itself is only about four-fifths of the

tot l required . . . . We have constructed "practically all the main roads and now have to carry on the construction of service roads . . . Where we are behindhand is in engineering services, and that is where we ought to make a special effort to push on, in order that we shall have our electric-light and power, sewerage and drainage and water supplies on a thoroughly satisfactory basis."

Opinion of the Legislature.—Considerable discussion regarding the New Capital works took place in the Assembly. A certain number of members who wished the work to be stopped, either to save the outlay or in order that a new capital might be established in some other locality with a more equable climate throughout the year, received no countenance. Strong feeling against the annual temporary migration of the Government of India to Simla led to the passage of a Resolution urging the speediest possible completion of New Delhi so that it might accommodate Government throughout the year. It runs. "This Assembly recommends to the Governor-General in Council that in the interests of economy and of general convenience alike the execution of the programme of New Delhi works may be expedited and the necessary funds provided or raised so that the Secretariat and Legislative buildings and connected works including residences may be completed as early as practicable." Sir Sydney Crookshank informed the House that at the rate of expenditure of one crore per annum, which was approximately the present rate, eight years would be required to finish the work, whereas by spending two crores a year the work would be finished in four years, but that as they had already entered on this year they could not spend fully two crores within it, so that the four-year period really meant between 4 and 5 years. Non-official Members urged Government to devise means for annually providing more funds and the Finance Member undertook to consider whether and how he could do so.

A non-official Member in the Legislative Assembly on 28th September, 1921, at Simla, moved a recommendation to Government "to appoint a Committee to inquire into the possibility of establishing a permanent Capital of India in a place possessing salubrious and temporate climate throughout the year." This proposal was ridiculed by several of his non-official colleagues and was eventually rejected without a division.

The exact expenditure on the New Capital upto 31st March, 1922, will be approximately Rs. 6,20,00,000, or approximately half the estimated total.

Two Cathedral Schemes.—In October 1913 a letter was published in *The Times* from the Bishop of Calcutta on the provision of a Cathedral at Delhi. He appealed for £50,000 in addition to any grant given by the Government, and quoted in his letter the following statement of approval by the King-Emperor: "I heartily approve of the project to build a Cathedral in the new city of Delhi. I trust that the appeal for the necessary funds may meet with a generous response, so that in due time the capital of India may possess a Cathedral which in design and character will testify to the life and energy of the Anglican Church and be worthy of its architectural surroundings both of days gone by and of those to come." His Majesty subscribed £100 and the Queen £50 to the fund. The Indian Church Aid Association have received several contributions towards the building fund for the proposed Cathedral Church, in response to the appeal of the Bishop of Calcutta. Cheques may be sent to the Secretary, Indian Church Aid Association, Church House, Westminster, S. W. and crossed Lloyds Bank, St. James's Street, S. W.

A Roman Catholic Cathedral is also projected and Father Paul Hughes, O.M.C., has been touring India collecting money for the Cathedral Fund.

All-India War Memorial.—H. R. H. the Duke of Connaught on 10th February, 1921, laid the foundation-stone of an All-India War Memorial at the southern end of the Central Vista. The place chosen is a fine position in the centre of the circular Princes' Park around which the mansions of the Ruling Princess will be built and overlooking the lake on the opposite side of which lies Indrapat.

The Memorial will take the form of a triumphal arch spanning Kingsway, the avenue running down the centre of the Vista. It will generally be similar to the Arc de Triomphe in Paris, but will be simpler in a way which will probably increase its grandeur and dignity. The monument will reach a height of 160 feet and the inner height of the arch will be 87 feet 6 inches and its breadth 70 feet. Over the arch on both fronts will appear in capital letters the single word INDIA and this will be flanked on each side by the initials MCM (*i.e.*, 1900) whilst immediately below them on the left-hand will be the initials XIV (*i.e.*, 14) and on the opposite side the figures XIX (*i.e.*, 19). Lateral arches through the monument will be flanked by fountains.

The architectural features of the Memorial will contain nothing specially pertaining to any religious denomination nor any carving of figures or other ornaments that might offend any creed. The lower part will be constructed of red Bhartpur stone and the upper part of white Dholpur stone. The arch will be surmounted by a great cornice and above this will be an attic, or series of enormous steps, ascending centrally. Above these will be a circular stone bowl 11½ feet in diameter. This is intended to be filled with burning oil on great anniversaries and other occasions so that there will be a shining fire by night and a column of smoke by day.

The end of each pier of the arch resembles in appearance the Cenotaph erected in Whitehall, London, in memory of the British soldiers who fell in the Great War. The memorial is solely Indian in purpose and will bear the names of Indian regiments only.

Legislative Council Chamber.—H. R. H. the Duke of Connaught on 12th February, 1921, laid the foundation-stone of a large group of Parliament buildings in New Delhi on a convenient site shortly north-eastward of the Secretariats. The buildings will form an imposing structure circular in shape and centrally surmounted by a large dome.

The outer edge of the building will be formed of a verandah, having along its outer side a complete circle of round stone columns, while opening on to the verandah will be a circle of Secretariat Offices concerned with the Chambers to be housed within. This girdle of verandah and offices will surround a large circular site in which will be four distinct buildings linked with one another and with the offices. Three of them will be practically semi-circular in shape, having their bases upon the inner side of the girdle. They will externally be similar in size and design and will internally be arranged to accommodate respectively the Chamber of Princes, the Council of State, and the Legislative Assembly. The spaces between them will be occupied by gardens, each garden occupying the same amount of ground as one of the buildings.

In the centre of the circle will stand the largest of the inner buildings. It will be circular in shape and will be linked by a cloister with each of the other buildings. It will contain a domed circular central hall 90 feet in diameter. This will be used as a library for the members of the three Chambers and will be of a size and arrangement sufficient and suitable to accommodate a joint session of both Council of State and Legislative Assembly and probably also of the Chamber of Princes with them, if it should ever be desirable to have a joint session of all three.

Residencies for ruling Princes and Chiefs.—Sites have already been allotted on which thirty three of the Ruling Princes and Chiefs propose to erect residences for occupation when visiting the New Capital. The States which up to the present hour signified their desire to build are Hyderabad, Baroda, Mysore, Bhopal, Gwalior, Kashmir, Kalat, Travancore, Bahawalpur, Bharatpur, Bikaner, Bundi, Kotah, Cutch, Jodhpur, Patiala, Tonk, Alwar, Datia, Dhar, Dholpur, Jaisalmer, Kishangarh, Orchha, Partabgarh, Sirohi, Faridkhot, Jind, Kapurthala, Nabha, Sailana, Malerkolta and Loharu.

Enthological Meseum.—The first wing has been built of a museum in which Sir Aurel Stein will house some of his Central Asian Antiquities. Work on certain frescoes was started under Sir Aurel's direction in the 1920-21 coldweather and has made considerable progress.

The Agra-Delhi Railway Diversion.—As has been already stated, this railway which at present runs across the site of the new city is to be diverted to a new alignment running East of Humayun's Tomb and Indrapat. Amongst other matters which are now receiving attention are the designs for the residences of the Commander-in-Chief and the Hon'ble members, the afforestation of the Ridge to the west of the new city, the designs for the Imperial Record Office, and the naming of the roads.

Sanitary Improvements.—While the work on the new city has been going forward various improvements in the existing Delhi have been carried out and the sanitary conditions in particular have been much improved. The fly nuisance which was extremely bad in Delhi has been much reduced, and other schemes have been formulated as the result of a sanitary survey which embraced the whole of the city. The most tangible results of these efforts is seen in the consistent fall in the death-rate, and the acknowledged reduction in the amount of sickness in Delhi.

Higher College for Chiefs.—It was proposed during 1914 that a higher college for Chiefs should be established at Delhi and in this connexion a conference of Chiefs and Political Officers was held at Delhi, in March, at which the Viceroy presided. It was subsequently announced that subscriptions offered towards the college amounted to about ten and a half lakhs, various recurring sums were promised, and the Government of India also promised to recommend the Secretary of State, a grant of Rs. 50,000 a year. Thus the whole capital would come to 12½ lakhs. The proposal is still under consideration.

Red Cross Work.

The Joint War Committee of the Order of St. John of Jerusalem and the British Red Cross Society, India Branch, came into being on 2nd August 1916 and has been responsible for the provision of almost the whole of the supplies of comforts for the sick and wounded ever since. Up to the end of 1917 its own resources had to be supplemented by grants from the Home Committee, but the generous response to the "**Our Day**" appeal made by all classes in India secured its financial position and for the past year it has not only been self-supporting but can regard the future without anxiety.

Their Excellencies the Viceroy, Lady Chelmsford and the Commander-in-Chief are the President, Lady President and Vice-President respectively of the Committee, the affairs of which are managed by a **General Committee** composed as follows :—

The Hon'ble Mr. W. M. Hailey, C.S.I., C.I.E., I.C.S. (Chairman).
Colonel Sir Lawless Hepper, Kt., R.E. (Vice-Chairman, Bombay).
The Hon'ble Sir W. E. Crum, O.B.E. (Vice-Chairman, Calcutta).
Col. C. L. Magniac, C.M.G., C.B.E., R.E. (Vice-Chairman, Madras).
Lieut.-General Sir Charles Burtchell, K.C.B., C.M.G., K.H.S.
The Hon'ble Sir William Vincent, K.C.S.I.
The Hon'ble Sir John Wood, K.C.I.E., C.S.I.
The Hon'ble Mr. H. Sharp, C.S.I., C.I.E.
Lieut.-Colonel H. Auston Smith, C.I.E., I.M.S.
H. R. Phelps, Esq.
B. N. Mitra, Esq., C.I.E., C.B.E.
Miss H. Rait, R.R.C., C.B.E.
The Hon'ble Major-General W. R. Edwards, C.B., C.M.G., K.H.P.
The Rev. James Black, M.A., O.B.E.
Lt.-Col. H. Ross, O.B.E., I.M.S.
W. J. Litster, Esq., O.B.E.
Major A. L. Davis, C.B.E.
Miss Darbyshire, R.R.C.
Lady Bingley, O.B.E.
E. J. Buck, Esq., C.B.E.

The Hon'ble Mr. Purshotamdas Thakurdas, C.I.E., M.B.E.

The Hon'ble Rao Bahadur Chaudhri Lal Chand, O.B.E.

Lieut.-Col. H. Ross, O.B.E., I.M.S. (Hon. Secretary.)

In the beginning of 1918 a scheme of reorganization of Red Cross work throughout India and Burma was adopted as the result of which each Province became practically autonomous as regards its own Red Cross work. The wants of Military hospitals situated within the boundaries of a Province became its own special care and were met by a Provincial Committee which administered Provincial Funds and organized Work Parties and other supplies. Provinces also were most generous in sending supplies of clothing and other comforts to the Bombay Depot. The General Committee thus relieved of the supervision of local work was enabled to concentrate its energies on co-ordinating Red Cross work throughout India, to take the measures necessary to avoid over-lapping, to exercise general control over the operations of the Bombay Depot, and to arrange for supplies required by Commissions overseas. The result of the re-organization proved most satisfactory.

Finances.—The operations of the Joint War Committee were brought to a close in June, 1920. According to the final report, the total receipts of the committee amounted to Rs. 1,77,85,716. Of this Rs. 17,44,683 was received from the Home Committee; of the collections on "**Our Day**" 85¾ lakhs were credited to the Central Committee donations to the Committee, interest, Government grants for Red Cross Hospitals and stores, etc. Mesopotamian "**Our Day**" collections and sale proceeds of assets of Mesopotamian commission account for the remainder. The Committee under its career with a capital investment of the face value of Rs. 56,33,000 (present market value Rs. 48,72,545) and Rs. 8,01,500-8-6 in floating and fixed deposit accounts.

New Organisation.—In 1919 when the Joint War Committee received an invitation to join the International League of Red Cross Societies, it was not deterred by the fact that it could not, in fact, claim to be a regularly constituted Red Cross Society. But it began to take the necessary steps to regularise its position in this regard. It recognized, moreover, that it had been constituted as a committee for war purposes; but the great war was over, and it desired that, following the example of the Red Cross Society of England, it should secure formal authority to expend for civil purposes such portions of its capital funds as remained after meeting the primary purposes for which they were subscribed A Bill was introduced by Sir Claude Hill in the Imperial Legislative Council in March 1920, designed to give effect to these intentions, and duly passed into law as Act XV of 1920. The first members of the Indian Red Cross Society as constituted by that Act, were nominated on 7th June 1920, and the Managing Body duly elected; the resources and the obligations of the Joint War Committee passed on that date to the Indian Cross Society.

Indian Official Reports.

(MOSTLY ANNUAL.)

General.—

Statistical Abstract relating to British India (Parliamentary Paper).

Statistics of British India :—

Vol. I.—Commercial.
Vol. II.—Financial.
Vol. III.—Public Health.

Customs Tariff.

The customs revenue is mainly derived from the general import duty, certain special import duties such as those on arms, liquors, sugar, petroleum and tobacco, and an export duty on rice. General import duties, which were abolished in 1882, were reimposed in 1894, since which date the general rate of duty on commodities imported into British India by sea has been 5 per cent. *ad valorem*. Cotton was exempted in 1894 when the general duties were received; in December 1894 a 5 per cent. duty *ad valorem* was imposed on imported cotton goods and yarns, while an excise duty of 5 per cent. was imposed on all yarns of counts above 20 spun at power mills in British India; in February 1896 cotton yarns and threads imported or manufactured in India were freed from duty, while a uniform 3½ per cent. *ad valorem* duty was imposed on all woven cotton goods imported or manufactured in India at power mills. The products of hand looms are exempted. The gross revenue from imports, salt excluded, in 1915-16, was Rs. 7,35,31,000. The estimated gross revenue from this source for 1916-17 is Rs. 8,89,20,000.

The **Chief alterations in the tariff**, which came into force on March 1, 1916, are as follows:—

Goods which before have been dutiable at the rate of 5 per cent. now pay 7½ per cent. *ad valorem* Machinery, which (with the exception of cartridge-making machinery and machines worked by animal or manual labour) was formerly free, is subject to a duty of 2½ per cent. *ad valorem*, but machinery for cotton spinning and weaving mills remains duty free, as do cotton yarn and thread. Cotton manufactures remain dutiable as before at the rate of 7½ per cent. *ad valorem*. Railway material and ships are to pay 2½ per cent., and coal a specific duty of 8 annas per ton. Iron and steel in bars, plates, sheets, and other manufactured forms, formerly dutiable at 1 per cent. are now to pay 2½ per cent. The rates for silver and petroleum remain as before, but silver plate and silver thread are to pay 10 per cent. The sugar duty is raised from 5 to 10 per cent., and considerable increases have also been made in the rates leviable on alcoholic liquors and tobacco. In addition export duties have been placed on tea and jute.

Schedule II—(Import Tariff).

No.	Names of Articles.	Per	Tariff Valuation.	Duty.
	I.—Food, Drink and Tobacco.			
	FISH.		Rs. a.	
1	FISH, SALTED, wet or dry	Indian maund of 82⅔ lbs. avoirdupois weight.	....	Such rate or rates of duty not exceeding twelve annas as the Governor-General in Council may, by notification in the *Gazette of India*, from time to time prescribe.

N. B.—Provided that, subject to such conditions as the Governor-General in Council may by notification in the *Gazette of India* prescribe, a rebate shall be granted to the exporter of two-third of the duty levied on hides and skins exported to any part of His Majesty's Dominions or of the territories of any Indian Prince or Chief under the suzerainty of His Majesty or of any territories under the protection of His Majesty or in respect of which a mandate of the League of Nations is exercised by the Government of any part of His Majesty's Dominions.

THE VICTORIA CROSS.

The announcement, made at the Delhi Durbar in 1911, that in future Indians would be eligible for the Victoria Cross gave satisfaction which was increased during the War and afterwards by the award of that decoration to the following :—

Subadar (then Sepoy) Khudadad Khan, 129th Baluchis—On 31st October 1914, at Hollebeke, Belgium, the British Officer in charge of the detachment having been wounded, and the other gun put out of action by a shell, Sepoy Khudadad, though himself wounded remained working his gun until all the other five men of the gun detachment had been killed.

Naick Darwan Sing Negi, 1-39th Garhwal Rifles.—For great gallantry on the night of the 23rd-24th November 1914 near Festubert, France, when the Regiment was engaged in retaking and clearing the enemy out of our trenches, and, although wounded in two places in the head, and also in the arm, being one of the first to push round each successive traverse, in the face of severe fire from bombs and rifles at the closest range.

Subadar (then Jamadar) Mir Dast, 55th Coke's Rifles.—For most conspicuous bravery and great ability at Ypres on 26th April 1915, when he led his platoon with great gallantry during the attack, and afterwards collected various parties of the Regiment (when no British Officers were left) and kept them under his command until the retirement was ordered. Jamadar Mir Dast subsequently on this day displayed remarkable courage in helping to carry eight British and Indian Officers into safety, whilst exposed to very heavy fire.

Rifleman Kulbir Thapa, 2-3rd Gurkha Rifles.—For most conspicuous bravery during operations against the German trenches south of Mauquissart. When himself wounded, on the 25th September 1915, he found a badly wounded soldier of the 2nd Leicestershire Regiment behind the first line German trench, and though urged by the British soldier to save himself, he remained with him all day and night. In the early morning of the 26th September, in misty weather, he brought him out through the German wire, and, leaving him in a place of comparative safety returned and brought in two wounded Gurkhas one after the other. He then went back in broad daylight for the British soldier and brought him in also, carrying him most of the way and being at most points under the enemy's fire.

Havildar (then Lance-Naick) Lala, 41st Dogras.—Finding a British Officer of another regiment lying close to the enemy he dragged him into a temporary shelter which he himself had made, and in which he had already bandaged four wounded men. After bandaging his wounds he heard calls from the Adjutant of his own Regiment who was lying in the open severely wounded. The enemy were not more than one hundred yards distant, and it seemed certain death to go out in that direction, but Lance-Naik Lala insisted on going out to his Adjutant, and offered to crawl back with him on his back at once. When this was not permitted, he stripped off his own clothing to keep the wounded officer warmer and stayed with him till just before dark when he returned to the shelter. After dark he carried the first wounded officer back to the main trenches, and then, returning with a stretcher carried back his Adjutant. He set a magnificent example of courage and devotion to his officers.

Sepoy Chatta Singh, 9th Bhopal Infantry.—For most conspicuous bravery and devotion to duty in leaving cover to assist his Commanding Officer who was lying wounded and helpless in the open. Sepoy Chatta Singh bound up the officer's wound and then dug cover for him with his entrenching tool, being exposed all the time to very heavy rifle fire. For five hours until nightfall he remained beside the wounded officer shielding him with his own body on the exposed side. He then, under cover of darkness, went back for assistance, and brought the officer into safety.

Naick Shahamad Khan, 89th Punjabis—For most conspicuous bravery. He was in charge of a machine-gun section in an exposed position in front of and covering a gap in our new line within 150 yards of the enemy's entrenched position. He beat off three counter-attacks, and worked his gun single-handed after all his men, except two belt-fillers, had become casualties. For three hours he held the gap under very heavy fire while it was being made secure. When his gun was knocked out by hostile fire he and his two belt-fillers held their ground with rifles till ordered to withdraw. With three men sent to assist him he then brought back his gun, ammunition, and one severely wounded man unable to walk. Finally, he himself returned and removed all remaining arms and equipment except two shovels. But for his great gallantry and determination our line must have been penetrated by the enemy.

Lance-Dafedar Govind Singh, 28th Cavalry.—For most conspicuous bravery and devotion to duty in thrice volunteering to carry messages between the regiment and brigade headquarters a distance of 1½ miles over open ground which was under the observation and heavy fire of the enemy. He succeeded each time in delivering his message although on each occasion his horse was shot, and he was compelled to finish the journey on foot.

Rifleman Karan Bahadur Rana, 2-3rd Gurkha Rifles.—For conspicuous bravery and resource in action under adverse conditions, and utter contempt of danger during an attack. He with a few other men succeeded, under intense fire, in creeping forward with a Lewis gun in order to engage an enemy machine gun which had caused severe casualties to officers and other ranks who had attempted to put it out of action. No. 1 of the Lewis gun party opened fire and was shot immediately. Without a moment's hesitation Karan Bahadur pushed the dead man off the gun, and in spite of bombs thrown at him and heavy fire from both flanks, he opened fire and knocked out the enemy machine gun crew. Then switching his fire on the enemy bombers and riflemen in front of him, he silenced their fire. He kept his gun in action, and showed the greatest coolness in removing defects which had twice prevented the gun from firing. He did magnificent work during the remainder of the day, and when a withdrawal was ordered,

assisted with covering fire until the enemy was close to him. He displayed throughout a very high standard of valour and devotion to duty.

Ressaidar Badlu Singh, 14th Lancers, attached 29th Lancers.—For most conspicuous bravery and self-sacrifice on the morning of the 23rd September 1918, when his squadron charged a strong enemy position on the west bank of the River Jordan, between the river and Kh. es Samarivch Village. On nearing the position Ressaidar Badlu Singh realised that the squadron was suffering casualties from a small hill on the left front occupied by machine guns and 200 infantry. Without the slightest hesitation he collected six other ranks and with the greatest dash and an entire disregard of danger charged and captured the position, thereby saving very heavy casualties to the squadron. He was mortally wounded on the very top of the hill when capturing one of the machine guns single-handed, but all the machine guns and infantry had surrendered to him before he died. His valour and initiative were of the highest order.

Rifleman Gobar Sing Negi, 2nd Battalion, 39th Garhwal Rifles.—For most conspicuous bravery on 10th March 1915 at Neuve Chapelle. During an attack on the German position he was one of a bayonet party with bombs who entered their main trench, and was the first man to go round each traverse, driving back the enemy until they were eventually forced to surrender. He was killed during this engagement.

Sepoy Ishaw Singh 28th Punjabis.—For devotion and bravery "quite beyond all praise" in Waziristan on 10th April, 1921 He received a severe gunshot wound in the chest while serving a Lewis gun, and when all the havildars had been killed or disabled he struggled to his feet, called to his assistance two men, and charged and recovered the gun, restoring it to action. He refused medical attention, insisting first on pointing out where the other wounded were and on carrying water to them. While the medical man was attending to these wounded he shielded him with his body and he submitted to medical attention himself only after he was exhausted through three hours' continual effort and by loss of blood.

PASSPORT REGULATIONS.

The following are the chief regulations concerning passports: -

1. Applications for Indian Passports must be made in the prescribed form, and submitted either direct or through the local authority—(*a*) in the case of a resident in British India, to the Local Government or Local Administration concerned; (*b*) in the case of a resident in a Native State, to the Agent to the Governor-General or Political Resident concerned.

2. The charge for an Indian Passport is Re. 1.

3. Indian Passports are granted to—(*a*) Natural-born British subjects; (*b*) wives and widows of such persons; (*c*) Persons naturalized in the United Kingdom, in the British Colonies or in India; and (*d*) Subjects of Native States in India. A married woman is deemed to be a subject of the State of which her husband is for the time being a subject.

4. Passports are granted upon the production of a declaration by the applicant (in the case of child under 15 requiring a separate passport by the child's parent or guardian) in the prescribed form of application verified by a declaration made by a *Political Officer, Magistrate, Justice of the Peace, Police Officer not below the rank of Superintendent* or *Notary Public*, resident in India. If possible the declaration should be signed by an officer of the district in which the applicant is resident. Otherwise the issue of a Passport may be delayed while enquiries are being made from the local authorities.

5. If the applicant for a Passport be a Naturalized British subject, the certificate of naturalization must be forwarded with the form of application to the Officer empowered to grant the Passport. It will be returned with the Passport to the applicant through the person who may have verified the declaration. Naturalized British subjects will be described as such, in their Passports, which will be issued subject to the necessary qualifications.

6. Small duplicate unmounted photographs of the applicant (and wife, if to be included) must be forwarded with the application for a Passport, one of which must be certified on the back by the person verifying the declaration made in the application form.

7. Indian Passports are not available beyond two years from the date of issue. They may be renewed by any competent British Authority for four further periods of two years each after which fresh Passports must be obtained. The fee for each renewal is Re. 1.

8. Passports cannot be issued or renewed on behalf of persons already abroad: such persons should be told to apply for Passports to the London Foreign Office or nearest British Mission or Consulate. Passports must not be sent out of India by post.

9. In the case of an applicant for a Passport being unable to write English a transcription in English should be placed below the applicant's vernacular signature in the form of application. In the case of an illiterate person, a thumb impression should be substituted for a signature on the form of application, which should be certified by the person verifying the declaration.

Parda nashin or gosha women desirous of travelling from India to Malaya, the Straits Settlements, the East Africa Protectorate, Uganda, Zanzibar, Mauritius, the Nyassaland Protectorate and the Union of South Africa are exempted from the necessity of attaching their photographs to their applications for passports or of appearing in person before the passport issuing authorities.

Racing.

Calcutta.

[*Season* 1920-21].

Governor's Cup. Distance 1¼ miles.—

Messrs. Douetil and Page's Cally (7st 8llbs.), Stokes 1
Mr. Thaddeus' Unitoi (8st. 8lbs), J. G. Meekings 2
Mr. Thaddeus' Misri Lal (7st. 8lbs.), Walker 3
Mr. De Souza's Mordennis (8st. 13lbs.), Wood 4

Won by three-quarters of a length; one length. Time—3 mins.

Metropolitan Plate. Distance 6 furlongs.—

Mr. Douetil's Pompano (7st. 10lbs., dec. 1lb.), Bond 1
Mr. Swan's Goldgainer (8st. 13lbs.), Northmore 2
H. H. the Maharani of Cooch Behar's Noutbutweel (8st. 12lbs.), Harrison 3
Mr. Avasia's Eudoxus (7st. 10lbs), Dobie 4

Won by one length, a short head and one length. Time—1min. 13 3-5 secs.

Prince of Wales' Plate. Distance 1 mile.—

Mr. Galstaun's Simon's Choice (8st. 4lbs.), Shatwell 1
Mr. Lander's Allan Brig (7st. 6lbs.), Stokes 2
Mr. De Souza's Violinist (7st., dec 2lbs.), Meekings 3
Mr. De Souza's Mordennis (8st 13lbs.), Wood 4

Won by half a length and one and a quarter lengths. Time—1 min. 40 secs.

Carmichael Cup. Distance 1¼ miles.—

General Raja Sir Hari Singh's GoodHealth (7st. 7lbs., cd. 7st. 11lbs.), Beasley .. } 1
Mr. Thaddeus' Unitoi (7st. 7lbs.), J. G. Meekings .. .. }
Mr. Low's St. Nathey (7st. 7lbs., cd. 7st. 8lbs.), Young 3
Mr. Galstaun's St. Quin (9st.), Shatwell 4

Won by dead heaters by half a length. Time—2 mins. 6 secs.

Macpherson Cup. Distance 1 mile 3 furlongs.—

Mr. Thaddeus' Unitoi (8st. 13lbs.), Ruiz 1
Mr. De Souza's Mordennis (8st. 12lbs.), Wood 2
Mr. Galstaun's Crenides (8st. 5lbs.), Shatwell 3
Messrs. Douetil and Page's Cally (8st. 3lbs.), Harrison 4

Won by a short head, half a length and one and a half lengths. Time—2 mins. 29 secs.

King-Emperor's Cup. Distance 1 mile.—

Mr. Sangidas Jesiram's Not Much (9st. 3lbs.), Riley.. 1
Mr. Goculdass' Roubaix (9st. 3lbs.), W. Huxley 2
Mr. R. R. S.'s Quarryman (9st. 3lbs.), Barden 3
H. H. the Maharajah of Rajpipla's Charlie's Smile (9st. 3lbs.), Ruiz 4

Won by one length, one and a half lengths and a short head. Time—1min. 38 4-5 secs.

Grand Military Chase. Distance 2½ miles.—

Major McCudden's Truncheon (11st. 10lbs), Owner 1
Colonel Commandant Pooler's Traveller (11st. 10lbs.), Captain Barker 2
Lt.-Colonel Gill and Capt. Rayneau's Centre (11st. 10lbs.), Captain Coles 3

Won by six lengths and distance. Time—5mins. 17 4-5 secs.

Burdwan Cup. Distance 1¼ miles.—

Mr. Goculdass' Silver Saint (11st. 3lbs.), Lyons 1
Genl. Raja Sir Hari Singh's Sunstroke (9st. 11lbs.), Mr. Frewell 2
Mr. Douetil's Ugly Gosling (11st. 3lbs.), Murrell 3
Mr. Harrison's Gavrelle (10st. 3lbs.), Thompson 4

Won by three lengths, two lengths and six lengths. Time—3 mins. 15 2-5 secs.

Prince of Wales' Cup. Distance 6 furlongs.—

Mr. Galstaun's Galway Gate (9st. 3lbs.), Bellhouse 1
Mr. Goculdass' Bell Metal (7st. 12lbs), Walker 2
Mr. Jesiram's Quarryman (9st. 3lbs.), Riley.. 3
Mr. Goculdas' Plymouth Rock (8st. 7lbs.), Huxley 4

Won by two lengths, one and a quarter lengths and one and a half lengths. Time—1 min. 13 secs.

Bengal Cup. Distance 1½ miles.—

Mr. Vernon's Sugar Cane (10st. 1lb.), A. C. Walker 1
Mr. Bashir Ali's Black Friar (7st. 2lbs.), Ritchie 2
Mr. Essajee's Steel Blue (11st. 12lbs.), Huxley 3
H. H. the Maharajah of Rajpipla's Tipster (8st.), Morris 4

Won by three-quarters of a length, a short head and two and a half lengths. Time—2 mins. 12 1-5 secs.

Viceroy's Cup. Distance 1¾ miles.—

Mr. Goculdass' Roubaix (9st. 3lbs.), Huxley 1
Mr. Sangidas Jesiram's Not Much (9st. 3lbs.), Riley 2
H. H. the Maharajah of Rajpipla's Charlie's Smile (9st.), Ritchie 3
Mr. Thaddeus' Unitoi (9st. 3lbs.), Ruiz.. 4

Won by a short head, one and three-quarter lengths and one and a quarter lengths. Time—2 mins 59 4-5 secs.

Cooch Behar Cup. Distance 1 mile 3 furlongs—

Mr. Low's St Nathey (7st. 8lbs.), Smith.. 1
Messrs. Evers and Eddi's Limton (7st 2lbs.), Dobie 2
H H the Maharani of Cooch Behar's Princess Ila (7st. 3lbs.), Ritchie.. .. 3
H. H the Maharajah of Rajpipla's Charlie's Smile (9st. 7lbs.), Rosey.. .. 4

Won by three lengths, one and three-quarter lengths and one and a quarter lengths. Time—2 mins 20 1-5 secs.

Bombay.

Byculla Club Cup Distance 1½ miles.—

Mr Galstaun's St. Quin (8st. 6lbs.), Barden 1
Mr. Galstaun's Simon's Choice (8st 3lbs.), Orrell .. .. } 2
Messrs. Skelton and Peachey's Aleli (8st 5lbs), Harrison .. .. .. }
Mr. Goculdass' Roubaix (9st. 9lbs.), Huxley 4

Won by one length, dead heat, and two lengths. Time—2 mins. 51 2-5 secs.

Grand Western Handicap. Distance 1 mile—

Mr Frank's Brendan (7st. 12lbs.), Morris 1
Mr. Galstaun's Starshot (8st 10lbs.), Orrell 2
Mr. G. E. D. Langley's Poignant (9st. 4lbs.), Barnett 3
Mr. Sangidas Jesiram's Not Much (9st 7lbs.), Stokes 4

Won by half a length, one length and three quarters of a length. Time—1 min 39 1-5 secs.

Mansfield Plate. Distance 6 furlongs.—

Mr Nadir F. Garda's Dorania (7st. 2lbs.), Townsend 1
Mr. Galstaun's Galway Gate (9st 6lbs.), Orrell 2
Mr. Langley's Poignant (9st. 4lbs.), Barnet 3
Mr R. R. S's Quarryman (9st 2lbs.), Lambert 4

Won by one and a quarter lengths, three-quarters of a length, and half a length. Time—1 min. 14 2-5 secs

Flying Plate. Distance 5 furlongs—

Mr. R. R. S.'s Quarryman (9st.), Brown.. 1
Mr. Galstaun's Galway Gate (9st. 4lbs.), Orrell 2
H. H. the Maharajah of Nawanagar's Western Wave (9st. 2lbs.), Ruiz 3
Messrs. A. S. Mooloobhoy and Pine's Cresset (8st. 11lb.), Harrison 4

Won by a head, one length and the same. Time—1min 2-5 secs.

Willingdon Plate. Distance 1¼ miles.—

Messrs. Skelton and Peachey's Aleli (8st. 8lbs.), Harrison 1
Mr. Galstaun's Simon's Choice (8st. 6lbs.), Orrell 2
Mr. Galstaun's St. Quin (8st. 11lbs.), Barden 3
Mr Frank's Brendan (8st. 11lb.), Morris.. 4

Won by half a length, the same and three lengths. Time—2 mins. 6 3-5 secs.

Colaba Cup Distance 1 mile.—

Mr A. J. De Souza's Violinist (8st. 12lbs.), Higgins 1
Mr. N Begmahomed's Pourboire (7st. 10lbs.), Morris 2
Mr. Goculdass' Tagamour (7st. 9lbs.), Harrison 3
Mr. Hillman's Quite Dark (8st.), Flynn .. 4

Won by three-quarters of a length, a short neck and half a length. Time—1 min 39 3-5 secs.

Bombay City Plate. Distance 1¼ miles.—

Mr. Galstaun's Starshot (7st. 9lbs.), Orrell 1
Mr. M. Goculdass' Roubaix (9st. 7lbs.), Huxley 2
Mr. Galstaun's Crenides (8st.), Rose.. .. 3
Mr Kelso's Plaxtol (7st. 7lbs.), Lambert.. 4

Won by one length, one and a half lengths and two lengths. Time—2 mins. 5 secs.

Melbourne Plate. Distance 7 furlongs and 65 yards—

Mr Sangidas Jesiram's Not Much (8st. 9lbs.), Stokes 1
Mr. Goculdass' Verge (9st.), Huxley .. 2
Mr. R. R. S.'s Quarryman (9st. 4lbs.), Brown 3
Messrs. Skelton and Peachey's Aleli (8st. 10lbs.), Harrison 4

Won by two lengths, a neck and the same. Time—1 min. 29 1-5 secs.

Innovation Plate. Distance 6 furlongs.—

Mr. R. R. S.'s Waynflete (7st. 4lbs.), Townsend 1
Mr. R R. S.'s Quarryman (9st. 3lbs.), Brown 2
Mr. Goculdass' Verge (9st. 11b.), Huxley. 3
Mr. Thaddeus' Goldgainer (8st. 9lbs.), Ruiz. 4

Won by a short neck, one and a half lengths and half a length. Time—1 min. 15 2-5 secs.

Turf Club Cup. Distance 1¼ miles—

Mr. Goculdass' Rose Hill (7st. 10lbs.), Herbert 1
H. H. the Maharajah of Rajpipla's Tipperary (8st 11b.), Morris 2
Mr. Heath's Dilawar (7st. 13lbs.), Donnelly 3
Mr. A. E. Stephen's Huntsman (7st. 3lbs.), Meekings 4

Won by a quarter of a length, a short head and half a length Time—2 mins. 51 2-5 secs.

Bombay Derby. Distance 1½ miles.—

Mr. Heath's Dilawar (7st. 8lbs.), Donnelly. 1
Mr. Goculdass' Trade Mark (7st. 4lbs), Meekings 2
Mr. Felice's Kitchener (7st. 8lbs.), Lambert. 3
Mr Goculdass' Waabil (6st 11lbs), Bona.. 4

Won by three-quarters of a length, one length and a short head. Time 2 mins. 53 3-5 secs.

Malabar Hill Plate. Distance 6 furlongs 41 yards—

Mr. Galstaun's Galway Gate (7st 2lbs), Rose 1
Mr. Goculdass' Roubaix (9st), Huxley .. 2
H.H. the Maharajah of Nawanagar's Western Wave (8st. 8lbs), Townsend 3

Won by six lengths and ten lengths Time—1 min. 13 1-5 secs.

Rajpipla Gold Cup. Distance 1 mile.—

Mr. Goculdass' Roubaix (9st.12lbs), Huxley) Mr. Langley's Poignant (9st 4lbs.), Barnett) 1

31st.—Lord Lytton is appointed Governor of Bengal in succession to Lord Ronaldshay.

Bibliography of India.

The general work of reference in one compact volume about India is still the late Sir William W. Hunter's *The Indian Empire: Its Peoples, History and Products* (Smith Elder, 1893, 28/-) which contains within its 800 pp. all the information, excellently arranged and indexed, that the general reader requires about this country. Its historical sections are particularly good giving a rapid and comprehensive bird's-eye-view of the course of Indian history from the advent of the Mahomedans in the eighth century down to nearly the close of the nineteenth century. Its statistics are based on the Census of 1891 and are therefore somewhat out of date. But, with this slight drawback which can be remedied by consulting the latest annual "Statistical Abstract" (see below), it gives in the compass of one volume a comprehensive view, neither too blurred nor too diffuse, of the Indian Empire and its past and present state. A more detailed account of India is to be found in the first four volumes of *The Imperial Gazetteer of India* (Clarendon Press, 1907) Vols. I-IV, 6/-each). These volumes, which are introductory to the alphabetical Gazetteer (Vols. V-XXIV), are an expansion of Hunter's one volume work mentioned above; but all the chapters, with the exception of those on the history of British Rule, have been rewritten by expert writers who have been in most cases Indian administrators also. The statistics in these volumes are based on the Census of 1901. The second volume of the *Oxford Survey of the British Empire* (Clarendon Press, 1914. 15/-) is mostly devoted to India and contains an excellent concise account by various well known writers of the Indian Empire as it is to-day. The statistics of this volume are based on the latest Census of 1911. Sir Thomas Holdich's volume on *India* in the "Regions of the World" Series (Clarendon Press, 1904, 10/6) is a compact geographical account by an authoritative writer. The same author's *Gates of India* (Macmillan, 12 s. 6d.) is a useful historical and geographical work on the North-West Frontier of India. Dr. George Smith's *Student's Manual of the Geography of British India* (Murray, 1882, 7/6) may still be used with profit, though parts of it are obsolete. Sir Thomas Holderness (fourth) edition, 1911, of Sir John Strachey's *India*, originally published in 1888, contains the best, succint account of Indian administration and progress (Macmillan, 1911, 10/-). The same editor's little book in the Home University Library, *Peoples and Problems of India* (Williams and Norgate, 1912, 1/-) is a useful introduction to the study of present day India. A very good *Atlas of India* is published as Vol. XXVI of the *Imperial Gazetteer* (separately, 17/6 Clarendon Press, 1909). It contains 28 general and 18 provincial maps besides 16 plans of Cities, including 3 of Bombay, 2 of Calcutta and 1 of Madras, Delhi, Simla, etc., each. A somewhat older though still excellent atlas is *Constable's Hand Atlas of India* (Constable, 1893, 14/-). It has 60 maps and plans and is accompanied by an index of 86 pp. The companion volume *Hand Gazetteer of India* by Jas. Bartholomew (Constable, 1894, 12/-) is a very concise gazetteer based on the second edition of 1886 of Hunter's *Imperial Gazetteer*. An older and fuller gazetteer, though still having the advantage of being in one compact volume, is Lethbridge and Wollaston's revised abridgment of *Thornton's Gazetteer of India* (W. H. Allen, 1888, 21/-).

Official Publications.—The principal official publications of general interest and utility are the Annual Reviews (*India in* 1920 is the latest) by Mr. L. F. Rushbrook Williams, published by the Government of India and their accompaniment. *The Statistical Abstract for British India* (issued towards the close of the year, about 1/6); the report on the Census of 1911 (Vol. I, Calcutta, Rs. 5, Text, Vol. II, Appendix giving tables, etc.); *Statistics of British India* (4 Vol., Calcutta) Administrative, Judicial, &c., annual *Statement of the Trade of British India* with Foreign Countries (Calcutta) and the annual *Review of Trade* (Eyre and Spottiswoode, 2/-); *Financial Statement of the Government of India* (Eyre and Spottiswoode). Every ten years is issued an elaborate review of the period as a Decennial number of the Moral and Material blue-book (now discontinued) and those by J. S Cotton (pub. 1885) and by Sir Athelstane Baines (pub. 1894) are specially valuable. A "Memorandum on some of the Results of Indian Administration during the past Fifty Years of British Rule in India" issued in 1909 by the India Office (reprinted at Government Press, Calcutta, 1911, six annas, in a handy octavo) is a valuable summary of the improvements since 1858.

History.—It is still the fashion to call James Mill's *History of British India* (Vols. I-VI up to 1805; continuation by H. H. Wilson, Vols. VII-IX, index Vol. X., last ed. 1858, W. H. Allen) the standard work on the subject, but it is out of date and in parts wrong-headed. No other author of equal ability and repute has treated the subject on a large scale with the exception of Mr. Vincent Smith whose *Oxford History of India* has become the standard work. It is a handy volume copiously illustrated, (Clarendon Press, 1920, 12-6). Sir W. W. Hunter made the attempt but lived only to write two volumes dealing with the first century of the English in India up to 1700. (History of British India, Vols. I-II, 1899-1900, Longmans, 30/-). A masterly historical sketch of the whole period is to be found in Sir Alfred Lyall's *British Dominion in India*, (Murray, 1894, latest ed. 1907, 5/-) which is specially remarkable for the writer's theory that the British dominion in India grew and expanded on a regular plan foreseen by its founders and was not as is generally supposed the result of a happy chance. Another excellent and interesting sketch is contained in the *Historical Geography of India* by P. E. Roberts, who had assisted Hunter in the above mentioned work (Clarendon Press, 1920, 8/6). Miss Gabrielle Festing's two works, *When Kings Rode to Delhi* (Blackwood, 1912, 7/6) and *Strangers Within the Gates* (Blackwood, 1914, 7/6) give a popular

but accurate presentment of the Mughal and British periods. Marshman's *History of India* (3 Vols., Longmans, 1871, 22-6) gives an excellent account, neither too detailed nor too concise, of the whole history and may be recommended as the most readable history of India till the Mutiny. There is an abridgment of Marshman in one volume (Blackwood, 6--). Trotter's *History of India*, recently revised and brought up to date by W. H. Hutton (S. P. C. K., 1917, 10/-) is a good and accurate compendium, as also is Meadows Taylor's *Students' Manual of Indian History* (Longmans, 7/6) which has long been well known for presenting a vast amount of facts in a small compass and in an agreeable style. For the Mahomedan period the standard work is Elphinstone's *History of India* (Murray, 16/-). A much more elaborate work for the same period is Sir Henry Elliot and Jas Dowson's *History of India as told by its own Historians* (8 Vols., 1867-1877, £ 8-8-0) giving translations of the chief Mahomedan historians. For the pre-Mahomedan period Vincent Smith's *Early History of India* (Clarendon Press, 3rd ed., 1914, 16/-) is the latest and best work. Mr. Vincent Smith is also the author of *The Oxford History of India*, from the earliest times to the end of 1911 (Clarendon Press, 12/6). Romesh Dutt's *History of Ancient Civilisation in India* (2 Volumes, Trubner's Oriental Series, 21/-, 1893) and Mrs. Manning's earlier work *Ancient and Mediæval India* (2 Vols., 1869, 30/-, W. H. Allen) deal mainly with literature rather than history proper though they give a more or less vivid picture of those early times. The following books, which are published by the Clarendon Press, are of particular interest. *Hindu Manners, Customs and Ceremonies* by J. A. Dubois: The Abbe Dubois lived for many years amongst the people of S India and gained an extraordinary insight of their customs and habits (6*s*.), *Travels in the Mogul Empire*, 1636-68 by Francis Bernier (7*s*. 6*d*.), *Observations of the Mussulmans of India* made during twelve years' residence in their immediate society by Mrs. Meer Hassan Ali, an Englishwoman who married an Indian Mahomedan(7*s*. 6*d*.), *Rambles and Recollections of an Indian Official* by Major-General Sleeman (6*s*.), *Annals and Antiquites of Rajasthan* in 3 volumes (52*s*. 6*d*.), *The Story of My Life* by Col. Meadows Taylor, (16*s*.), *Early Travels in India*, 1583-1619, by William Foster, C.I.E., (10*s*. 6*d*.), *The Rights of the Twice Born* by Mrs. Sinclair Stevenson, *The latest and best books on the Brahman Caste* (21*s*.), *A History of the Maratha People*, by C. A. Kincaid and R. Parasnis (16*s*.)

Historical Biography.—The principal characters of Indian history, Hindu 'Mahomedan and British such as Asoka, Babar, Akbar, Clive, Warren Hastings, Dalhousie, etc., are individually treated in the well known *Rulers of India* series of historical and biographical monographs (28 Vols., Clarendon Press, 1890-1902, 2/6 each). In the English *Men of Action* series (Macmillan, 2/6 each) there are also volumes on famous Anglo-Indian statesmen, such as Sir Alfred Lyall's *Warren Hastings*, Archibald Forbes' *Havelock*, Sir Richard Temples *Lord Lawrence*, Sir W. Butler's *Charles Napier*. Among biographies of Anglo-Indian worthies may be mentioned as specially interesting and valuable Sir George Forrest's *Life of Lord Clive* (Cassell, two vols., 1919), Col. Malleson's *Warren Hastings* (Chapman and Hall, 1894, 16/-), Bosworth Smith's *Lord Lawrence* (2 Vols., Smith Elder, 1883, new ed., Nelson's series, 1/-) Herbert Edwardes and Merivale's *Sir H. Lawrence* (2 Vols., Smith Elder 1872), Sir W. Hunter's *Lord Mayo* (2 Vols., Smith Elder, 1875, 24/-), Sir W. Lee Warner's *Lord Dalhousie* (2 Vols., Macmillan, 1904, 25/-), Sir Alfred Lyall's *Lord Dufferin* (2 Vols., Murray, 1905, new ed, Nelson's series 1/-), Marshman's *Sir H. Havelock* (Longmans, 3/6), Martineau's *Sir Bartle Frere* (2 Vols., Murray, 1895, 32/-), Mallet's *Earl of Northbrook* (Longmans, 1910, 16/-), Lord Roberts' *Forty-one Years in India* (Macmillan, 1897, new ed. 6/-), Colebrooke's *Mountstuart Elphinstone* (2 Vols., Murray, 1884, 25/-), Trotter's *John Nicholson* (1897, Murray, 2/6) and *Bayard of India* (Outram) (Blackwood 5/-). Among noteworthy works treating of recent history since 1858 are Lovat Fraser's *India under Lord Curzon and After* (Heinemann, 1911, 16/-), Ladv Betty Balfour's *Lord Lytton's Indian Administration* (Longmans, 1899, 18/-), Sir W. Hunter's *Bombay*, 1885–1900, a Study of Indian Administration (Clarendon Press, 1892, 16/-), Col. Hanna's *Second Afghan War* (3 Vols, Constable, 1899–1907, 36/-), *Official History of the Second Afghan War* (Murray, 1905, 21/-). Sir John Adye *Indian Frontier Policy*, a historical sketch (Macmillan 1897, 6/-), Trotter's *India under Victoria* (2 Vols., W. H. Allen, 1886, 30/-).

For the Indian Mutiny the standard history is Kaye and Malleson's *History of the Indian Mutiny* (new ed. 6 vols. Longmans, 21/-). Sir George Forrest's *History of the Mutiny* (4 vols., 1904–1914, Blackwood, 64/-) gives the chief records in the Indian archives. The best one-volume narratives are Malleson's shorter work. *Indian Mutiny* (in Messrs. Seeley's "Events of Our Own Times" series 5/-) and T. Rice Holmes' History of *The Indian Mutiny* (1883, W. H. Allen, new ed. Macmillan, 15/-8).

Constitution and Administration.—The changes lately effected in the constitution of the Indian Government have been embodied in the Report on Indian Constitutional Reforms, drawn up by the Secretary of State and the Viceroy (the Montagu-Chelmsford Scheme) and published in a handy octavo (Government Press, Calcutta, July 1918, one rupee.) The most comprehensive book on the new constitution is *Dyarchy* by Lionel Curtis (Clarendon Press, 1921 : 31-6) which contain all the documents, etc., relating to the reform scheme. At the head of earlier books on the Indian Constitution, but now necessarily out of date, stands Sir Courtenay Ilbert's "*The Government of India* being a Digest of the Statute Law relating thereto with historical introduction and explanatory matter" (Clarendon Press, 1st ed., 1898; 2nd ed., 1907, 3rd ed., 1915, 14/-; the first edition contains important constitutional documents such as minutes, despatches, charters, etc., covering 130 pp. which have been omitted in the subsequent issues.) The Digest drawn up by Sir C. Ilbert many years ago has been now embodied in the main in the "Government of India Act of 1915", which contains the entire body of law relating to the Government of India and which has been officially issued in octavo form (price 7*d*. Eyre and Spottiswoode). A supple-

ment to Ilbert's third edition gives a comparison between the Digest given in the book and this Act (1916, 1/-) The constitutional documents from the Regulating Act of 1773 down to the Consolidating Act of 1915 have been printed in handy form in P. Mukerji's *Indian Constitutional Documents* (1915, Calcutta, Thacker, Spink, Rs. 6); of the second ed. Vol. II, Rs. 3 has been issued in 1918 containing an historical introduction divided into two parts dealing with English political institutions and the present working constitution of India. The important constitutional documents have been also included in A. R. Iyengar's *Indian Constitution* (1909, 2nd enlarged ed. 1913, Loganatham, Madras, Rs. 3) which contains an historical view of the various administrative institutions. The documentary matter extends to nearly 250 pp. Chesney's *Indian Polity* (3rd ed. 1894, Longmans) gives an excellent historical view of the system of administration as it grew up from the early days of the English in India down to the end of the nineteenth century. Sir William Lee Warner's *The Citizen of India* (1897, Macmillan 2/6) gives in brief outline a very good sketch of Indian administration. A more up-to-date work is C. Anderson's *British Administration in India* (Macmillan). H. A. D. Phillips' *Our Administration of India* (1888, W. Thacker, London, 6/-) gives an account of the Revenue and Collectorate Administration in all departments, and though this is done with special reference to Bengal, it is more widely useful. A. Mackenzie's *How India is Governed* (1882, Kegan Paul, 2) is a very brief sketch of the Indian constitution and administration and of England's work in India. For the system of judicial administration Herbert Cowell's *History and Constitution of the Courts and Legislative Authorities in India* (1872, 2nd ed., 1884, Thacker Spink, Calcutta, Rs. 6/ is still useful, for the historical part.

Economics, Famines, etc.—Baden Powell's Land Revenue and Tenure in British India (2nd ed., 1907, revised by Sir T. Holderness, with an appendix added in 1912, 5/-, Clarendon Press) gives an account of land revenue system in India. Sir W. Hunter's *Annals of Rural Bengal* (1868, new ed., 1897, Smith Elder, 16/-) and his *Orissa* (2 vols., 1872, Smith Elder, 32/-) give a good idea of the economic condition of eastern India when it passed under British Rule. J. C. Jack's *The Economic Life of a Bengal District* (1916, Clarendon Press, 7/6) is an economic study of the people's life based on the minute data collected from innumerable families for the record of rights of Bengal and is of great value in estimating the resources of the people and the economic results of British rule. Dr. H. Mann's *Land and Labour in a Deccan village* (Oxford University Press; 2 vols., Rs. 6) and Dr. Slater's *Some South Indian villages* (Oxford University Press, Rs. 5) deal with agricultural economics. Sir Theodore Morison's *Industrial Organisation of an Indian Province* (1906, Murray. 10/6) reviews the principal economic facts and shows their relation to the abstract science of economics. The author treats specially of the United Provinces to which his personal observation was mainly confined. Morison's *Economic Transition in India* (1911, Murray) deals with the development of industrial and economic resources of the country. Romesh Dutt's *Economic History of India under Early British Rule* (1902, Kegan Paul, 16) and the same in the *Victorian Age* (1904, Kegan Paul, 1904) are a powerful though one-sided indictment of British economic and land revenue policy. A valuable book on the co-operative system is R. B. Ewbank's *Indian Co-operative Studies* (Oxford University Press.). Dutt, who is a staunch champion of the Permanent System of land tenure in vogue in Bengal and of its introduction into other parts of India, in his *Famines and Land Assessments in India* (1899, Kegan Paul, 7/6) on the same lines asserts that famines are due to the land policy of the Government. On Famines the best books are the Reports of the Famine Commissions pub. 1885, 1887, 1898 (Eyre and Spottiwoode). A good narrative of the last great famine of 1899–1900 is to be found in Vaughan Nash's *The Great Famine its causes* (1900, Longmans, 6/-). On the earlier great Bengal Famine, Sir Bartle Frere's *The Impending Bengal Famine*, and how to prevent future famines in India, (1874, Murray, 5/-) is useful and suggestive. Charles Blair's *Indian Famines* in their historical and financial aspects (1874, Blackwood 5/-) contains good remarks on preventive and mitigating measures. Loveday's *History and Economics of Indian Famines* (2s. 6d.) is a later book of the same kind. For public works, Railways, etc., Thornton's *Indian Public Works* (1875, Kegan Paul, 5/-) MacGeorge's *Ways and Works in India* (1893, Constable, 14/-), Horace Bell's *Railway Policy in India* (1894, 12/-), Deakin's *Irrigated India* (1893, Spon, 8/6), Buckley's *Irrigation Works of India* (1905 Spon, 42/-) Valentine Ball's *Coal Fields of India* (new edition, 1914, Calcutta), Report of the *Irrigation Commission* (1905, Eyre and Spottiwoode).

On **Finance** the work of the Strachey Brothers, Sir John and Sir Richard, *Finances and Public Works of India* (1882, Kegan Paul, 10/6) is valuable as describing the system of Indian Finance by persons who had intimate knowledge and personal experience. Reports of the Indian Currency Committee, 1893 and 1899, and of the Royal Commission on the administration of the expenditure of India, 1900, contain a vast mass of useful material. *Indian Currency* (1878, Longmans 2/-), by Dunning Macleod, treats of the means of introducing a Gold Currency in India, and of extending Banking and Paper Currency. H. J. Tozer's *British India and its Trade* (1902) gives a good view of the trade and surveys its growth during the latter half of the nineteenth century. Prof. Lees Smith's *Studies in Indian Economics* (1909, Constable, 3/6) and Jadunath Sarkar's *Economics of British India* (4th ed., 1917, Sarkar and Sons, Calcutta) are good introductions to the subject. The former is a series of lectures delivered by the author for the Bombay Government. The Exchange question is briefly explained in F. V. Rushforth's *The Indian Exchange Problem* (Oxford University Press: 1921. Re. 1-6).

The Protected States.—Malleson's *Native States of India* (1875, W. H. Allen, 18/-), gives an historical sketch of the various states. The author was then connected with the state of Mysore as the guardian of its young ruler. The work of another official who was connected

with Mysore as its Resident at the end of his Indian career, Sir W. Lee-Warner, *The Native States of India* (2nd ed., 1910, Macmillan, 12s. 6d. 1st ed., 1894, under title "Protected Princes of India") whilst giving what he calls an "Account of India under Home Rule", chiefly discusses the question of the position of these states in relation to the British Government. A Punjab official, Sir Charles Tupper, in his *Our Indian Protectorate* (1893, Longmans, 16/-) similarly treats of the relations between the British Government and its Feudatories, but goes more into the past and has instructive chapters on indigenous home rule under the Mahrattas, the Sikhs, the Mahomedans, etc. This valuable work is now thoroughly out of print, but a good vernacular translation in Gujarati by A. N Buch (1900 Rajkot) is available. Sir Lepel Griffin's *Punjab Chiefs* (1865 Trubner) and *Baias of the Punjab* (1870, 2nd ed. 1873, Trubner, 20/-) give in considerable detail the history of the principal Punjab states like Patiala, Kapurthala, Nabha, etc. Massy prepared a new edition of the former book (1889, Allahabad, Pioneer Press) and completed it by another *Chiefs and Families of Note in the Punjab* (1890, Allahabad, Pioneer Press) and they give short notices of all the ruling chiefs of the Punjab. Aberigh Mackay who was tutor to the Raja of Ratlam in Central India and Principal of Rajkumar College at Indore, wrote on the *Chiefs of Central India* (1879) and on the *Native Chiefs and their States in 1877* (1878). Both books are noteworthy. Aitchison's *Treaties, Engagements and Sanads* relating to India and the neighbouring countries (3rd ed., 1893, 11 volumes, Calcutta, Government Press, Rs. 34) is the standard collection of all the treaties with the Native Feudatory States. The relations with the Nizam are investigated in H. G. Brigg's *The Nizam* (2 vols., 1861, Quaritch, 28/-) and Hastings Fraser's *Our Faithful Ally, the Nizam* (1865, Smith Elder 18/-). The relations with the Gaekwar of Baroda are exhaustively treated in *The Guicowar and his Relations with the British Government* (1863, Education Press, Bombay) by Col. R. Wallace who was Resident at Baroda.

INTEREST TABLE.

From 5 to 12 per cent. on Rupees 100.

Calculated for 1 *Year*, 1 *Month* (*Calendar*), 1 *Week, and* 1 *Day* (365 *Days to Year*), *the Decimal Fraction of a Pie for the Day being shown for the Day.*

Note or Memo, intimating the purchase or sale—		
(*a*) Of any Goods exceeding in value Rs. 20	0	2
(*b*) Of any Stock or marketable Security exceeding in value Rs. 20—Subject to a maximum of Rs. 10, a. 1 for every Rs. 10,000, or part.		
Note of Protest by a Ship's Master ..	0	8
Partnership—Where the capital does not exceed Rs. 500	2	8
In any other case	10	0
Dissolution of	5	0
Policy of Insurance—		
(1) *Sea*—Where premium does not exceed rate of 2a., or ½ per cent. of amount insured	0	1
In any other case for Rs. 1,500 or part thereof	0	1
(2) *For time*—For every Rs. 1,000 or part insured, not exc. 6 months ..	0	2
Exceeding 6 and not exceeding 12 months	0	4
If drawn in duplicate, for each part:—Half the above rates, for Sea and Time.		
(3) *Fire*—When the sum insured does not exceed Rs. 5,000..	0	8
In any other case	1	0
In respect of each receipt for any payment of a premium on any renewal of an original policy—One half of the duty payable in respect of the original policy in addition to the amount, if any, chargeable under Art. 53 (*Receipt*).		
(4) *Accident and Sickness*—Against Railway accident, valid for a single journey only	0	1
In any other case—for the maximum amount which may become payable in the case of any single accident or sickness where such amount does not exceed Rs. 1,000, and also where amount exc. Rs. 1,000, for every Rs. 1,000 or part	0	2
(5) *Life, or other Insurance, not specifically provided for*—		
For every sum insured not exceeding Rs. 250	0	2
For every sum insured exceeding Rs. 250 but not exceeding Rs. 500	0	4
For every sum of Rs. 1,000 in excess of Rs. 500	0	6
If drawn in duplicate, for each part—		
Half the above rates.		
In case of a re-insurance by one Company with another—¼ of duty payable in respect of the original insurance, but not less than 1 anna, or more than 1 R.		
Power of Attorney—		
For the sole purpose of procuring the registration of one or more documents in relation to a single transaction or for admitting execution of one or more such documents	0	8
When required in suits or proceedings under the Presidency Small Causes Courts Act, 1882	0	8
Authorising 1 person or more to act in a single transaction other than that mentioned above	1	0
Authorising not more than 5 persons to act jointly and severally in more than 1 transaction, or generally ..	5	0
Authorising more than 5 but not more than 10 persons to act	10	0
When given for consideration and authorising the Attorney to sell any immovable property—The same duty as a *Conveyance* for the amount of the consideration.		
In any other case, for each person authorised	1	0
Protest of Bill or Note	1	0
Proxy	0	1
Receipt for value exc. Rs. 20	0	1
Reconveyance of mortgaged property—		
(*a*) If the consideration for which the property was mortgaged does not exceed Rs. 1,000—the same duty as a conveyance for the amount of such consideration as set forth in the Reconveyance.		
(*b*) In any other case	10	0
Release—that is to say, any instrument whereby a person renounces a claim upon another person or against any specified property—		
(*a*) If the amount or value of the claim does not exceed Rs. 1,000—the same duty as a Bond for such amount or value as set forth in the Release.		
(*b*) In any other case	5	0
Respondentia Bond—The same duty as a Bond for the amount of the loan secured.		
Security Bond—(*a*) when the amount secured does not exceed Rs. 1,000—the same duty as a Bond for the amount secured.		

	Rs.	a.
(*b*) In any other case	5	0
Settlement—The same duty as a Bond for the sum equal to the amount or value of the property—settled as set forth in such settlement.		
Revocation of Settlement.—The same duty as a Bond for a sum equal to the amount or value of the property concerned as set forth in the instrument of revocation but not exceeding ten rupees.		
Share-warrant to bearer issued under the Indian Companies Act.—One and a half times the duty payable on a conveyance for a consideration equal to the nominal amount of the shares specified in the warrant.		
Shipping Order	0	1
Surrender of Lease—When duty with which lease is chargeable does not exceed Rs. 5 :—The duty with which such Lease is chargeable. In any other case	5	0
Transfer of Shares—One-half of the duty payable on a Conveyance for a consideration equal to the value of the share.		
Transfer of any Interest secured by a Bond, Mortgage-deed, or Policy of Insurance—If duty on such does not exceed Rs. 5—The duty with which such Bond, &c., is chargeable. In any other case	5	0
—Of any property under the Administrator General's Act 1874, Section 31..	10	0
—of any trust property without consideration from one trustee to another trustee or from a trustee to a beneficiary—five rupees or such smaller amount as may be chargeable for transfer of shares.		
Transfer of Lease by way of assignment and not by way of under-lease—The same duty as a conveyance for a consideration equal to the amount of the consideration for the transfer.		
Trust, Declaration of—Same duty as a Bond for a sum equal to the amount or value of the property concerned, but not exceeding	15	0
Revocation of—Ditto, but not exceeding	10	0
Warrant for Goods..	0	4

WIRELESS TELEGRAPHY.

It was decided during the year 1919-20 to form a separate Wireless branch of the Telegraph Department to deal with all matters connected with civil wireless telegraphy in India and in pursuance of this decision five officers were brought out from England to inaugurate the branch.

All wireless stations worked satisfactorily throughout the year, except at times of abnormally heavy atmospheric disturbances, and gave valuable assistance on occasions when communication by the land lines was interrupted. Wireless communication was carried on between Bombay and Aden, Bombay and Ceylon, the Bay stations and Penang, and Karachi and the Persian Gulf. Experiments were also commenced with a view to establishing a wireless service between Burma and the Malay Peninsula but these had unavoidably to be postponed.

New apparatus was imported which considerably improved the efficiency of the several stations equipped with it, particularly as regards receptivity during unfavourable conditions, and certain modern transitting apparatus employing thermionic valves was also obtained and tested for use in India.

It was found necessary to form a combined civil and military school at Karachi as a temporary measure to meet a serious shortage of operations for civil and military requirements.

Licences to Officers.—The Government of India have decided that the granting of licences to military officers in respect of wireless telegraph apparatus used for experimental purposes shall be regulated by the following general principles: (1) When an officer conducts experiments in wireless telegraphy in his official capacity at the expense of Government no licence is required, but only executive permission, which may be given so far as the Telegraph Department is concerned by the Director-General, Posts and Telegraphs.

(2) When an officer carries on experiments as a private individual at his own expense, he must obtain a licence. If the approval of the military authorities is required to what he proposes to do, he should obtain such approval before the Director-General, Posts and Telegraphs, is approached. The licence will then be submitted by the Director-General, Posts and Telegraphs, for the sanction of the Government of India.

(3) With reference to the above, attention is drawn to the necessity for applying for licences to own and use wireless telegraphy apparatus or installations, experimental or otherwise. Applications for such licences will be submitted through the Chief of the General Staff and will contain particulars regarding the apparatus showing (*a*) system it is proposed to employ, (*b*) maximum range of signalling with applicant's own receiving apparatus, (*c*) power (current and voltage), (*d*) source of power.

Imperial Wireless Chain :—There was much discussion during the year over the establishment of an Imperial Wireless Chain, which was pressed on the Home Authorities by the Empire Press Union amongst other bodies. But no real progress has been made, through the obstruction of the British Post Office. The position is briefly as follows. The Indian Government is perfectly willing to take its place in the wireless chain. But it has not the capital funds for the erection of the necessary high-power station, nor has it the technical staff to operate it. Therefore it is dependent on outside assistance. The only British Company with experience of erecting and operating high-power stations is the Marconi Company. The Government of India therefore concluded the basis of a contract with the Marconi Company for the erection and working of a high-power station in India. But the Government of India insist on direct communication with the United Kingdom. They maintain that this is practicable. As a matter of fact India is already in daily wireless communication with the Marconi Station at Carnarvon, although that station was constructed for the Atlantic and not for the eastern traffic. They maintain that it is desirable, for with traffic from various quarters concentrating at Cairo there is bound to be congestion. Further, the interposition of an intermediary station at Cairo will make the system unprofitable. To this the British Post Office returns a stubborn non-possumus. It is experimenting with a system of its own called the Poulsen arc, which has admitted defects. It has erected a high-power station at Leafield, which is working badly; it is erecting another high-power station at Cairo. But this is a system with which neither India nor Australia will cooperate; there will be no Imperial wireless chain until the obstructive obstinacy of the British Post Office is overcome.

Who's Who in India.

ABBOTT, EVELYN ROBINS, C.I.E.(1921), I.C.S. Punjab Commn. *b.* 9 May 1873. *Educ.*: Bath Coll. and Balliol Coll. *m.* Lillian, *d.* of Sir W. O. Clark, Kt. (I.C.S. retd.) *Address*: Commissioner's House, Multan.

ACHARIYAR, P., SIR RAJAGOPALA, K.C.S.I. (1920), C.I.E., Member of Madras Executive Council. *Educ.*: Madras University. Entered I.C.S., 1888. Diwan of Cochin, 1896-1902; Diwan of Travancore, 1907-14; Secretary to Government of Madras, 1914. *Address*: Madras.

ADVANI, MOTIRAM SHOWKIRAM, Kaiser-i-Hind Gold Medal (1919); District Judge, Broach, since 1917. *b.* 12 October 1868. *m.* Margaret Annesley, daughter of the late Rev. Charles Voysey. *Educ.*: The Albert School and Presidency College, Calcutta. Barrister (Inner Temple), 1892; Practised in Karachi, 1892-1904; Assistant Judge, Hyderabad, 1904; Acted as District Judge, Hyderabad, 1905; Permanent District Judge, 1911. Served in Thana and Surat. *Address*: Broach.

The Moplah Rebellion.

The Moplah insurrection on the west coast of Madras aroused public attention to a degree unknown in the past. The outrages recorded have not however been wholly unparalleled in the history of the Malabar district. From 1796 to 1809, just after the occupation of the West Coast by the East India Company's troops, guerilla warfare was carried on by the Hindu peasantry with whom were associated the Moplahs. Sir Arthur Wellesley (the Duke of Wellington) took part in the suppression of the rebellion. From 1836 onwards to the present day local unrest among the Moplahs has been a chronic feature of Malabar history. During the intervening years between 1809 and 1836 the powerful castes of Hindu landlords had settled down, with their rights in the land completely acknowledged, to the detriment, it is feared, of the prosperity of their tenants, who included a very substantial number of Moplahs.

The Moplahs:—The Moplahs are Moslems of a fanatical type, as different in their own way from the ordinary Indian Mahommedan as the tribes of the North-West. They claim to be descendants of Arab ancestors. It is probable that they are the descendents of converts made by Arab merchant sailors and military adventures; some at least of them have a strain of Arab blood. Malabar, and, indeed, the South-West Coast, was for centuries the gateway for foreign trade—even, it is believed, from the time of King Solomon. Coins of the Roman Emperors have been found in the region, and the Jews have an ancient synagogue preserved to this day in Cochin. Arab, Portuguese, Dutch, French, and Danish settlements in turn were established, and in some cases exist still as vestiges of the maritime power of those nations.

The Country:—The Moplahs mainly inhabit the civil districts of Malabar and South Canara; they overflow into the mountain district of the Nilgiris and the native states of Cochin, but they are concentrated in the two Taluks of Ernad and Walavanad in the Malabar district, where out of a population of 3,000,000 they number 1,000,000. They are tenant farmers, sailors and ferrymen on the backwaters and rivers which traverse the district. Large numbers of Moplahs migrate as labourers to rubber and other plantations; they are generally appreciated as very good workers, and command substantial wages for their services. Vigorous in action, possessing great physical courage, reckless when under the excitement of passion they retain to this day the characteristics of their seafaring piratical ancestors. Their fanaticism is only equalled by their ignorance; only one out of every ten males possesses even the rudiments of education—the census of 1911 records only 500 out of half a million who returned themselves as literate in English. The physical inaccessibility of Malabar has, indeed, kept all its communities out of the general stream of developing life in India, and it is only in recent years that the most literate Hindu classes have been affected by this new outer world. The Moplah, however, has an outer world, and that is the world of Islam. He is shut off from the rest of India by the great mountain range of the Nilgiris, which runs parallel to the sea coast at an average distance of some 50 miles, and his real world is the Indian Ocean and the Moslem countries whose shores it laps. His community for centuries has been a Mahomedan outpost of the Middle East, even as his neighbours, the Syrian Christians of Travancore have been an outpost of the Eastern Church. In 1857 the Indian Mutiny had its reflection in a wave of religious fanaticism which passed over this distant community, and again in 1885 the Mahdist movement in Egypt was one of the causes, if not an important cause, of the rebellion of that year.

In 1880 a British member of the Indian Civil Service was deputed to inquire into the chronic unrest of the Moplah community, and he reported that trouble was due to certain causes, among which were: (*a*) The existence of the precarious tenant right by which the Moplah held his lands, (*b*) the difficulty he experienced in acquiring sites for mosques and burial grounds. This chronic unrest flares into open rebellion when fed by religious propaganda.

The Outbreak—Early in 1921 the Khilafat movement workers, which included Hindu non-co-operators, visited Malabar and, in spite of local warnings, insisted on holding meetings, though some of them were prohibited by the authorities, and a prominent Mahomedan leader was arrested and imprisoned for infraction of police regulations. In June reports were received of voluntary local organisations which carried on their propaganda in secret. In this month the police arrested a Moplah who was charged with breaking into a landlord's house. The action of the police nearly led to a riot, which was, however, averted. On August 21 the police sought to arrest certain Moplah criminals at Tirurangadi, a Moplah religious stronghold. After effecting these arrests in the early forenoon the police forces were unsuccessfully attacked that afternoon by armed bands. Two police officers were killed. In the meantime armed mobs appeared on several of the neighbouring main roads, and forces were sent out to disperse them, the railway lines were cut in various places, and a station was completely wrecked. In fact, the three taluks of the district of Malabar were completely overpowered by Moplah rebels. Many Hindus, especially those of the land class, were murdered, and others of the lower castes have been forcibly converted to Islam; some Europeans, particularly police and military officers and planters, have been killed. Property was looted and, what is most serious in a country such as India which is entirely dependent on its crops, agricultural operations have been suspended owing to the lawless condition of the countryside, and the district is to-day faced with famine.

Suppression:—Martial law was immediately proclaimed in Malabar and on August 26 a fierce encounter took place at Podakuttur between a company of British soldiers and a Moplah mob who were armed with guns, swords, and war knives. The rebels were finally dis-

persed after a battle which lasted for five hours, having lost, it is reported, 400 men killed. By the middle of September the situation was well in hand, and by the end of the year only a few gangs were unbroken. The problem, however, with which the administration is faced is to restore the Hindu refugees to their homes, and to tide over the period of inevitable famine. The task is a very heavy one. The Malabar district consists of a narrow littoral intersected by numerous rivers which, by tide pressure, form backwaters; by spurs from the low foot hills, covered with impenetrable bush, which run almost to the sea, thus making communications even more difficult; of uplands with deep ravines, backed by the high range of mountains already referred to. The uncultivated lands are covered with almost impenetrable tropical forests, and it will need adequate forces; adequate to give protection to the peaceful Hindu cultivator against the depredation of roving bands, and also to reduce these bands to submission by blockade. Some of the leaders proclaimed their independence as local kings, levied blackmail on the Hindu population, and flaunted the ascriptions of royalty even to the establishment of law courts and the issue of currency notes.

The Casualties'—The Home Member informed the Legislative assembly in January 1922 that the number of forced conversions of Hindu, according to the Madras Government, ran into thousands. The military expenditure incurred by the Government was over 15 lakhs. The question of a grant or compensation to those who suffered at the hands of the rebels was now engaging the Madras Government's attention.

So far 2,250 Moplahs had been killed and 5,727 sentenced to various terms of imprisonment by the Summary Courts. The total figures of those sentenced by all kinds of Courts was not available.

The Train Tragedy'—The military operations, which were conducted with efficiency and care, were clouded by what is known as the Tiam Tragedy. The facts were let out in the following official communications on Nov. 21:—

"Government much regret to announce that they have received a report that of a party of 100 convicted prisoners who were entrained at Tirur, 56 were found dead of asphyxiation at Podanur. Others received adequate medical attention immediately on arrival at Podanur. Eight have since died and the remaining are reported to be likely to recover.

"Government have instructed Mr. A. R. Knapp, Special Commissioner for Malabar Affairs, to make immediately a full enquiry into this most deplorable occurrence and to spare no pains fully to elucidate the circumstances which resulted in this terrible loss of life and suffering."

The Committee has not yet reported (2—2—22.)

The Calendars.

A full Calendar will be found at the beginning of this book. Below are given details of the other Calendars in use in India.

The *Jewish* Calendar is in accordance with the system arranged A.D. 358. The Calendar dates from the Creation, which is fixed as 3,760 years and 3 months before the beginning of the Christian Era; the year is Luni-solar.

The *Mohammedan*, or era of the Hejira, dates from the day after Mahomet's flight from Mecca, which occurred on the night of July 15, 622 A.D. The months are Lunar.

The *Fasli* year was derived from a combination of the Hejira and Samvat years by the order of Akbar; it is Luni-solar. The *Bengali* year seems also to have been related at one time to the Hejira, but the fact of its being Solar made it lose 11 days each year.

The *Samvat* era dates from 57 B.C., and is Luni-solar. The months are divided into two fortnights—*sudi*, or bright, and *badi*, or dark. Each fortnight contains 15 tithis, which furnish the dates of the civil days given in our calendars.

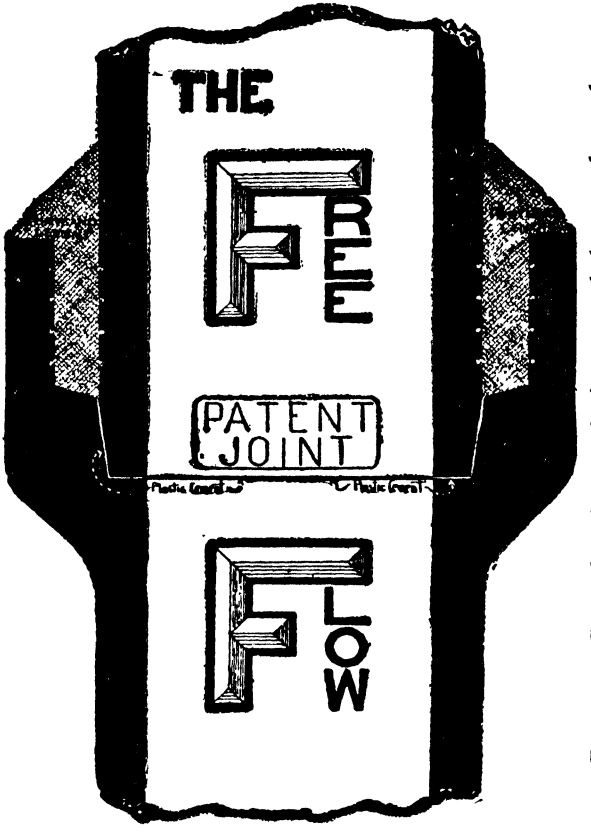
KNOWLES' for Pipes.

The last word in Stoneware Pipe Joints.

Cheaper than an ordinary Pipe—Why?



Because—Cost of laying drain is so much less, and can be easily and efficiently done by Native Labour in any part of the World.

AVOIDS LIPPING.

The

"MONOTYPE"

A Typefoundry as well as a Composing Machine.

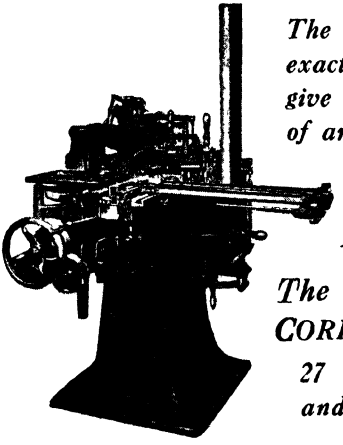
SETS and casts all classes of work from 5 point to 24 point, up to 60 ems pica measure.

Supplies new type and rules for every job, and an abundance of leads and spacing material.

Does away with distribution, picking and turning for sorts.

Reduces the cost of make-ready in the machine room.

The "Monotype" satisfies the most exacting demands, and does not give one advantage at the expense of another.



For full particulars, apply to

The LANSTON MONOTYPE CORPORATION, LIMITED,

27 Waterloo Street, Calcutta, and P. O. Box 305, Bombay.

Head Offices :

43 and 44, Fetter Lane, London, E.C. 4.

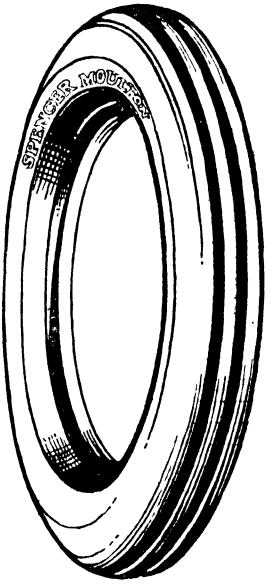
The Gold Standard



Pure rubber is the gold standard of tyre construction. That is a fundamental principle, and the one on which Spencer Moulton motor tyres are built up.

Nothing but pure rubber—procured direct from our own plantations—enters their make-up. In addition, only the finest fabric—woven in our own mills—is used. And on top of all is our experience in the handling of rubber, extending over 70 years.

Remember these facts when next ordering your tyres.

SPENCER MOULTON

THREE RIBBED TYRES

Present economic features worthy of every motorist's consideration.

Best by the Travel Test.

GEORGE SPENCER, MOULTON & Co., Ltd.

BENNETT, COLEMAN & CO.'S PUBLICATIONS.

"DRAINAGE PROBLEMS OF THE EAST."

(*Second Edition*)

BY

C. C. JAMES.

Price per set Rupees 25. Post and V.P.P. Rs. 1-4.

MEMBER of the Institute of Civil Engineers, Fellow of the Royal Meteorological Society, Fellow of the Royal Sanitary Institute, Member of the Incorporated Association of Municipal and County Engineers, Examiner in Sanitary Engineering to the University of Bombay, Author of "Oriental Drainage," "Notes on Sewage Disposal" and "Further Notes on Sewage Disposal." This work issued in two volumes has been thoroughly revised and brought up to date. Mr. Carkeek James had the unique opportunity of seeing practically all the large drainage schemes carried out in Bombay and consequently this new edition is almost certain to win the widespread approval of all engineers dealing with kindred problems anywhere East of Suez.

Views of Bombay Old and New.

Price Re. 1-8.

New Edition, Postage 3 annas.

The views show the city as it was sixty years ago and as it is to-day.

BENNETT, COLEMAN & CO.'S PUBLICATIONS.

The Hindu Gods

BY

C. A. KINCAID, C.V.O., I.C.S.

Price Re. 1-2.

V. P. P. Three Annas.

THE object of this little work is to supply a want which is widely felt among Englishmen and other foreigners resident in India, namely, a simple little guide book, which will help them to tell at a glance to what God a temple is dedicated or what the little brass images on their own and their neighbours' drawing room tables represent.

Price Re. 1-4. Postage 4 Annas.

THE RAINBOW,

A BOOK OF VERSE FOR CHILDREN

BY

E. LUCIA TURNBULL

ILLUSTRATED BY

J. L. HERBERT DOBSON.

This little book will appeal to all children as it talks about many common experiences of childhood.

BENNETT, COLEMAN & Co., Ld.,

100% Profit

"INDIA is one of the greatest commercial assets of the British Empire . . . . The surplus of India's immense resources in produce and raw material should find a ready demand within the Empire, while her population of 315 million souls forms a vast potential market for the British Manufacturer. A closer study of Indian conditions with a view of supplying India's exact requirements should repay the outlay a hundredfold."—

LORD HARDINGE OF PENSHURST
(Ex-Viceroy of India) in a Message to
"*The Times of India.*"

The Right Honourable JOSEPH AUSTIN CHAMBERLAIN when Secretary of State for India said:—"I heartily wish success to the effort which "*The Times of India*" is making to rouse all concerned to an appreciation of the great opportunity afforded to them."
