India in 1921.

The year 1921 will always be remembered as one of the most puzzling in the political history of India.

The great scheme of reforms embodied in the Government of India Act, 1919, came into operation. The first elections held under this measure were carried out towards the close of the previous year. The party led by Mr Ghandy having gone into political outlawry, they boycotted the elections. This did not prevent the full complement of members being elected to the Imperial and Provincial Councils, on the contrary it ensured that the men chosen accepted in full the principle of the reforms and were anxious to work them. The Council of State and the Imperial Legislative Assembly, with several of the provincial Councils, were formally opened by His Royal Highness the Duke of Connaught during a visit to India where he brought a special message of good will and encouragement from His Majesty the King-Emperor. These Councils at once settled down to business in a spirit of serious patriotism. Their task was not always an easy one, especially in the Imperial Legislative Assembly, where largely in consequence of the wanton declaration of war by Afghanistan in 1919 the finances were so seriously affected that large additional taxes had to be voted. But these and other problems were faced in a spirit of real responsibility, the Councils not only did the work they had to do well, but began the building of solid conventions which will assist all future progress.

But whilst the Councils were bending their energies to this constructive work, and Ministers were exploring the ground covered by their portfolios, the Non-co operation Party laboured unceasingly to make the established, or any form of Government impossible. The boycott movement, in all its constructive schemes, failed; few relinquished titles, after a period of fermentation students returned to their educational institutions, Government servants remained at their posts. On the constructive side of non-co-operation, the use of the hand-spinning wheel, or charka, which Mr Ghandy treated as the symbol of fitness of India for swaraj, or self-government, had a wide vogue, but the economic barrenness of hand-spinning, at which a skilled worker can earn only a few annas a day, inevitably provoked a reaction and towards the close of the year Mr. Ghandy had to bewail the falling off in the sales of khadi, or hand-woven cloth. And whilst Mr. Ghandy preached his doctrine of non-violence, some of his followers were bound by no such limitations. There was an ugly riot in Malegaon, a small town in the Bombay Deccan, directly attributable to the non-co-operation movement and disturbances at Dharwar, also in the Bombay Presidency.

The Indian Moslems were unceasingly lashed into opposition by the Khilafat workers, led by Mr. Mahomed Ali and Mr. Shaukat Ali, exploiting the external and internal troubles of Turkey. These culminated in a grave outbreak of the Moplahs of Malabar. Descendants from Arab settlers, always prone to fanatical violence, the Moplahs broke into open rebellion. They cut communications, they plundered right and left; they murdered a few Englishmen and many Hindus, other Hindus escaping with their lives by accepting forcible conversion to Mahomedanism. Living for the most part in country with few roads and large areas of almost trackless jungle, the Moplahs offered a considerable resistance to the forces despatched against them, and although the back of the rebellion was speedily broken, it was not entirely suppressed by the end of the year.

The Moplah rising, with its brutal crusade against the Hindus, opened the eyes of many to the certain sequelae of a lawless movement. After great patience, the Government instituted proceedings against Mr Mahomed Ali, Mr. Shaukat Ali and a few others for sedition, and the Alis were convicted and sentenced to two years imprisonment. But notwithstanding these experiences, the non-co-operation movement continued with great activity throughout the latter part of the year, being specially directed to the boycott of all foreign cloth, the spread of the spinning wheel, and the prevention of drinking by picketting the liquor shops, and was the direct cause of serious riots in Bombay City in November.

India is therefore confronted by two forces. The intelligentsia of the country, mobilised in the constitutional bodies, are working steadily, in full harmony with the executive, for the better government of India. Outside the constitutional bodies the Non-co-operation party is active in working for the overthrow of the established government, without the vaguest plan of what is to take its place. So far the utmost efforts of the disruptionists have failed to produce any effect on the Government and the administration. There are many signs that the intelligence of the country is revolting in an increasing degree from the political sterility of non-co-operation and the certainty of a devastating chaos if it attains any considerable measure of success. Yet at the same time disturbances in more than one centre show whither this campaign of lawlessness leads; the Moplah rising is a sinister warning of the inevitable result of even temporarily and in a limited area overthrowing authority in a country where racial differences and religious antagonisms are so acute.

Amidst these political distractions India has made substantial recovery from the economic malaise which followed the war. After two famines in three years—1918 and 1920—the rains of the year were abundant and the harvest good. Trade and industry revived, though the complete recovery of Indian trade is dependent on the re-establishment of the buying power of Europe and the collapse of the German mark caused anxiety.

The History of India in Outline.

No history of India can be proportionate, and the briefest summary must suffer from the same defect. Even a wholesale acceptance as history of mythology, tradition, and folklore will not make good, though it makes picturesque, the many gaps that exist in the early history of India: and, though the labours of modern geographers and archæologists have been amazingly fruitful, it cannot be expected that these gaps will ever be filled to any appreciable extent. Approximate accuracy in chronology and an outline of dynastic facts are all that the student can look for up to the time of Alexander, though the briefest excursion into the by-ways of history will reveal to him many alluring and mysterious fields for speculation. There are, for example, to this day castes that believe they sprang originally from the loins of a being who landed "from an impossible boat on the shores of a nighly improbable sea"; and the great epic poems contain plentiful statements equally difficult of reconciliation with modern notions of history as a science. But from the Jataka stories and the Puranas, much valuable information is to be obtained, and, for the benefit of those unable to go to these and other original sources, it has been distilled by a number of writers.

The orthodox Hindu begins the political history of India more than 3,000 years before Christ, with the war waged on the banks of the Jumna between the sons of Kuru and the sons of Pandu; but the modern critic prefers to omit several of those remote centuries and to take 600 B. C.; or thereabouts, as his starting point. At that time much of the country was covered with forest, but the Aryan races, who had entered India from the north, had established in parts a form of civilization far superior to that of the aboriginal savages, and to this day there survive cities, like Benares, founded by those invaders. In like manner the Dravidian invaders from an unknown land, who overran the Deccan and the Southern part of the Peninsula, crushed the aborigines, and at a much later period, were themselves subdued by the Aryans. Of these two civilizing forces, the Aryan is the better known, and of the Aryan kingdoms the first of which there is authentic record is that of Magadha, or Bihar, on the Ganges. It was in, or near, this powerful kingdom that Jainism and Buddhism had their origin, and the fifth King of Magadha, Bimbisara by name, was the friend and patron of Gautama Buddha. The King mentioned was a contemporary of Darius, autocrat of Persia (521 to 485 B. C.) who annexed the Indus valley and formed from his conquest an Indian satrapy which paid as tribute the equivalent of about one million sterling. Detailed history, however, does not become possible until the invasion of Alexander in 326 B.C.

Alexander the Great.

That great soldier had crossed the Hindu Kush in the previous year and had captured Aornos, on the Upper Indus. In the spring of 326 he crossed the river at Ohind, received the submission of the King of Taxila, and marched against Porus who ruled the fertile country between the rivers Hydaspes (Jhelum) and Akesines (Chenab). The Macedonian carried all before him, defeating Porus at the battle of the Hydaspes, and crossing the Chenab and Ravi. But at the River Hyphasis (Bias) his weary troops mutinied, and Alexander was forced to turn back and retire to the Jhelum where a fleet to sail down the rivers to the sea was nearly ready. The wonderful story of Alexander's march through Mekran and Persia to Babylon, and of the voyage of Nearchus up the Persian Gulf is the climax to the narrative of the invasion but is not part of the history of India. Alexander had stayed nineteen months in India and left behind him officers to carry on the Government of the kingdoms he had conquered: but his death at Babylon, in 323, destroyed the fruits of what has to be regarded as nothing but a brilliant raid, and within two years his successors were obliged to leave the Indian provinces, heavily scarred by war but not hellenized.

The leader of the revolt against Alexander's generals was a young Hindu, Chandragupta who was an illegitimate member of the Royal Family of Magadha. He dethroned the ruler of that kingdom, and became so powerful that he is said to have been able to place 600,000 troops in the field against Seleucus, to whom Babylon had passed on the death of Alexander. This was too formidable an opposition to be faced, and a treaty of peace was concluded between the Syrian and Indian monarchs which left the latter the first paramount Sovereign of India (321 B. C.) with his capital at Pataliputra, the modern Patna and Bankipore. Of Chandragupta's court and administration a very full account is preserved in the fragments that remain of the history compiled by Megasthenes, the ambassador sent to India by Seleucus. His memorable reign ended in 297 B. C. when he was succeeded by his son Bindusara, who in his turn was succeeded by Asoka (269—231 B. C.) who recorded the events of his reign in numerous inscriptions. This king, in an unusually bloody war, added to his dominions the kingdom of Kalinga (the Northern Circars) and then becoming a convert to Buddhism, resolved for the future to abstain from conquest by force of arms. The consequences of the conversion of Asoka were amazing. He was not intolerant of other religions, and did not endeavour to force his creed on his "children". But he initiated measures for the propagation of his doctrine with the result that "Buddhism, which had hitherto been a merely local sect in the valley of the Ganges, was transformed into one of the greatest religions of the world—the greatest, probably, if measured by the number of adherents. This is Asoka's claim to be remembered; this it is which makes his reign an epoch, not only in the history of India, but in that of the world." The wording of his edicts reveal him as a great king as well as a great missionary, and it is to be hoped that the excavations now being carried on in the ruins of his palace may throw yet more light on his character and times. On his death the Maurya kingdom fell to pieces. Even during his reign there had been signs of new forces at work on the borderland of India, where the inde-

pendent kingdoms of Bactria and Parthia had been formed, and subsequent to it there were frequent Greek raids into India. The Greeks in Bactria, however, could not withstand the overwhelming force of the westward migration of the Yuch-chi horde, which, in the first century A. D., also ousted the Indo-Parthian kings from Afghanistan and North-Western India.

The first of these Yuch-chi kings to annex a part of India was Kadphises II (A. D. 85—125), who had been defeated in a war with China, but crossed the Indus and consolidated his power eastward as far as Benares. His son Kanishka (whose date is much disputed) left a name which to Buddhists stands second only to that of Asoka. He greatly extended the boundaries of his empire in the North, and made Peshawar his capital. Under him the power of the Kushan clan of the Yuch-chi reached its zenith and did not begin to decay until the end of the second century, concurrently with the rise in middle India of the Andhra dynasty which constructed the Amaravati stupa, "one of the most elaborate and precious monuments of piety ever raised by man."

The Gupta Dynasty.

Early in the fourth century there arose, at Pataliputra, the Gupta dynasty which proved of great importance. Its founder was a local chief, his son Samudragupta, who ruled for some fifty years from A.D. 326, was a king of the greatest distinction. His aim of subduing all India was not indeed fulfilled but he was able to exact tribute from the kingdoms of the South and even from Ceylon, and, in addition to being a warrior, he was a patron of the arts and of Sanskrit literature. The rule of his son, Chandragupta, was equally distinguished and is commemorated in an inscription on the famous iron pillar near Delhi, as well as in the writings of the Chinese pilgrim Fa-hien who pays a great tribute to the equitable administration of the country. It was not until the middle of the fifth century that the fortunes of the Gupta dynasty began to wane—in face of the onset of the White Huns from Central Asia—and by 480 the dynasty had disappeared. The following century all over India was one of great confusion, apparently marked only by the rise and fall of petty kingdoms, until a monarch arose, in A.D. 606, capable of consolidating an Empire. This was the Emperor Harsha who, from Thanasar near Ambala, conquered Northern India and extended his territory South to the Nerbudda. Imitating Asoka in many ways, this Emperor yet "felt no embarrassment in paying adoration in turn to Siva, the Sun, and Buddha at a great public ceremonial." Of his times a graphic picture has been handed down in the work of a Chinese "Master of the Law," Hiuen Tsiang by name. Harsha was the last native paramount sovereign of Northern India; on his death in 648 his throne was usurped by a Minister, whose treacherous conduct towards an embassy from China was quickly avenged, and the kingdom so laboriously established lapsed into a state of internecine strife which lasted for a century and a half.

The Andhras and Rajputs.

In the meantime in Southern India the Andhras had attained to great prosperity and carried on a considerable trade with Greece, Egypt and Rome, as well as with the East Their domination ended in the fifth century A.D. and a number of new dynasties, of which the Pallavas were the most important, began to appear. The Pallavas made way in turn for the Chalukyas, who for two centuries remained the most important Deccan dynasty, one branch uniting with the Cholas. But the fortunes of the Southern dynasties are so involved, and in many cases so little known; that to recount them briefly is impossible. Few names of note stand out from the record except those of Vikramaditya (11th century) and a few of the later Hindu rulers who made a stand against the growing power of Islam, of the rise of which an account is given below. In fact the history of mediæval India is singularly devoid of unity. Northern India was in a state of chaos from about 650 to 950 A.D. not unlike that which prevailed in Europe of that time, and materials for the history of these centuries are very scanty. In the absence of any powerful rulers the jungle began to gain back what had been wrested from it: ancient capitals fell into ruins from which in some cases they have not even yet been disturbed, and the aborigines and various foreign tribes began to assert themselves so successfully that the Aryan element was chiefly confined to the Doab and the Eastern Punjab. It is not therefore so much for the political as for the religious and social history of this anarchical period that one must look. And the greatest event—if a slow process may be called an event—of the middle ages was the transition from tribe to caste, the final disappearance of the old four-fold division of Brahmans; Kshattriyas, Vaisyas, and Sudras, and the formation of the new division of pure and impure largely resting upon a classification of occupations. But this social change was only a part of the development of the Hindu religion into a form which would include in its embrace the many barbarians and foreigners in the country who were outside it. The great political event of the period was the rise of the Rajputs as warriors in the place of the Kshattriyas. Their origin is obscure but they appeared in the 8th century and spread, from their two original homes in Rajputana and Oudh, into the Punjab, Kashmir, and the Central Himalayas, assimilating a number of fighting clans and binding them together with a common code. At this time Kashmir was a small kingdom which exercised an influence on India wholly disproportionate to its size. The only other kingdom of importance was that of Kanauj—in the Doab and Southern Oudh—which still retained some of the power to which it had reached in the days of Harsha, and of which the renown extended to China and Arabia.

With the end of the period of anarchy, the political history of India centres round the Rajputs. One clan founded the kingdom of Gujarat, another held Malwa, another (the Chauhans) founded a kingdom of which Ajmer was the capital, and so on. Kanauj fell into the hands of the Rathors (circ 1040 A.D.) and the dynasty then founded by that branch of the Gaharwars of Benares became one of the most famous in India. Later in the same century the Chauhans were united; and by

1163 one of them could boast that he had conquered all the country from the Vindhyas to the Himalayas, including Delhi already a fortress a hundred years old. The son of this conqueror was Prithwi Raj, the champion of the Hindus against the Mahomedans. With his death in battle (1192) ends the golden age of the new civilization that had been evolved out of chaos; and of the greatness of that age there is a splendid memorial in the temples and forts of the Rajput states and in the two great philosophical systems of Sankaracharya (ninth century) and Ramanuja (twelfth century). The triumph of Hinduism had been achieved, it must be added, at the expense of Buddhism, which survived only in Magadha at the time of the Mahomedan conquest and speedily disappeared there before the new faith.

Mahomedan India.

The wave of Mahomedan invaders that eventually swept over the country first touched India, in Sind, less than a hundred years after the death of the Prophet in 632. But the first real contact was in the tenth century when a Turkish slave of a Persian ruler founded a kingdom at Ghazni, between Kabul and Kandahar. A descendant of his, Mahmud (967-1030) made repeated raids into the heart of India, capturing places so far apart as Multan, Kanauj, Gwalior, and Somnath in Kathiawar, but permanently occupying only a part of the Punjab. Enduring Mahomedan rule was not established until the end of the twelfth century, by which time, from the little territory of Ghor, there had arisen one Mahomed Ghori capable of carving out a kingdom stretching from Peshawar to the Bay of Bengal. Prithwi Raj, the Chauhan ruler of Delhi and Ajmer, made a brave stand against, and once defeated, one of the armies of this ruler, but was himself defeated in the following year. Mahomed Ghori was murdered at Lahore (1206) and his vast kingdom, which had been governed by satraps, was split up into what were practically independent sovereignties. Of these satraps, Qutb-ud-din, the slave ruler of Delhi and Lahore, was the most famous, and is remembered by the great mosque he built near the modern Delhi. Between his rule and that of the Mughals, which began in 1526, only a few of the many Kings who governed and fought and built beautiful buildings, stand out with distinction. One of these was Ala-ud-din (1296-1316), whose many expeditions to the south much weakened the Hindu Kings, and who proved himself to be a capable administrator. Another was Firoz Shah, of the house of Tughlaq, whose administration was in many respects admirable, but which ended, on his abdication, in confusion. In the reign of his successor, Mahmud (1398-1413), the kingdom of Delhi went to pieces and India was for seven months at the mercy of the Turkish conqueror Taimur. It was the end of the fifteenth century before the kingdom, under Sikandar Lodi, began to recover. His son, Ibrahim, still further extended the kingdom that had been recreated, but was defeated by Babar, King of Kabul, at Panipat, near Delhi, in 1526, and there was then established in India the Mughal dynasty.

The Mahomedan dynasties that had ruled capital other than Delhi up to this date were of comparative unimportance, though some great men appeared among them. In Gujarat, for example, Ahmad Shah, the founder of Ahmedabad, showed himself a good ruler and builder as well as a good soldier, though his grandson, Mahmud Shah Begara, was a greater ruler—acquiring fame at sea as well as on land. In the South various kings of the Bahmani dynasty made names for themselves, especially in the long wars they waged on the new Hindu kingdom that had arisen which had its capital at Vijayanagar. Of importance also was Adil Khan, a Turk, who founded (1490) the Bijapur dynasty of Adil Shahis. It was one of his successors who crushed the Vijayanagar dynasty, and built the great mosque for which Bijapur is famous.

The Mughal Empire.

As one draws near to modern times it becomes impossible to present anything like a coherent and consecutive account of the growth of India as a whole. Detached threads in the story have to be picked up one by one and followed to their ending, and although the sixteenth century saw the first European settlements in India, it will be convenient here to continue the narrative of Mahomedan India almost to the end of the Mughal Empire. How Babar gained Delhi has already been told. His son, Humayun, greatly extended his kingdom, but was eventually defeated (1540) and driven into exile by Sher Khan, an Afghan of great capabilities, whose short reign ended in 1545. The Sur dynasty thus founded by Sher Khan lasted another ten years when Humayun having snatched Kabul from one of his brothers, was strong enough to win back part of his old kingdom. When Humayun died (1556) his eldest son, Akbar, was only 13 years old and was confronted by many rivals. Nor was Akbar well served, but his career of conquest was almost uninterrupted and by 1594 the whole of India North of the Nerbudda had bowed to his authority, and he subsequently entered the Deccan and captured Ahmednagar. This great ruler, who was as remarkable for his religious tolerance as for his military prowess, died in 1605, leaving behind him a record that has been surpassed by few. His son, Jehangir, who married the Persian lady Nur Jahan, ruled until 1627, bequeathing to an admiring posterity some notable buildings—the tomb of his father at Sikandra, part of the palace at Agra, and the palace and fortress of Lahore. His son, Shahjahan, was for many years occupied with wars in the Deccan, but found time to make his court of incredible magnificence and to build the most famous and beautiful of all tombs, the Taj Mahal, as well as the fort, palace and Juma Masjid at Delhi. The quarrels of his sons led to the deposition of Shahjahan by one of them, Aurangzeb, in 1658. This Emperor's rule was one of constant intrigue and fighting in every direction, the most important of his wars being a twenty-five years' struggle against the Marathas of the Deccan who, under the leadership of Sivaji, became a very powerful faction in Indian politics. His bigoted attitude towards Hinduism made Aurangzeb all the more anxious to establish his Empire on a firm basis in the south, but he was unable to hold his many conquests, and on his death (1707) the

Empire, for which his three sons were fighting, could not be held together. Internal disorder and Maratha encroachments continued during the reigns of his successors, and in 1739 a fresh danger appeared in the person of Nadir Shah, the Persian conqueror, who carried all before him. On his withdrawal, leaving Mahomed Shah on the throne, the old intrigues recommenced and the Marathas began to make the most of the opportunity offered to them by puppet rulers at Delhi and by almost universal discord throughout what had been the Mughal Empire. There is little to add to the history of Mahomedan India. Emperors continued to reign in name at Delhi up to the middle of the 19th century, but their territory and power had long since disappeared, being swallowed up either by the Marathas or by the British.

European Settlements.

The voyage of Vasco da Gama to India in 1498 was what turned the thoughts of the Portuguese to the formation of a great Empire in the East. That idea was soon realized, for, from 1500 onwards, constant expeditions were sent to India and the first two Viceroys in India—Almeida and Albuquerque—laid the foundations of a great Empire and of a great trade monopoly. Goa, taken in 1510, became the capital of Portuguese India and remains to this day in the hands of its captors, and the countless ruins of churches and forts on the shores of Western India, as also farther East at Malacca, testify to the zeal with which the Portuguese endeavoured to propagate their religion and to the care they took to defend their settlements. There were great soldiers and great missionaries among them—Albuquerque, da Cunha, da Castro in the former class, St. Francis Xavier in the latter. But the glory of Empire loses something of its lustre when it has to be paid for, and the constant drain of men and money from Portugal, necessitated by the attacks made on their possessions in India and Malaya, was found almost intolerable. The junction of Portugal with Spain, which lasted from 1580 to 1640, also tended to the downfall of the Eastern Empire and when Portugal became independent again, it was unequal to the task of competing in the East with the Dutch and English. The Dutch had little difficulty in wresting the greater part of their territory from the Portuguese, but the seventeenth century naval wars with England forced them to relax their hold upon the coast of India, and during the French wars between 1795 and 1811 England took all Holland's Eastern possessions, and the Dutch have left in India but few traces of their civilisation and of the once powerful East India Company of the Netherlands.

The first English attempts to reach India date from 1496 when Cabot tried to find the North-West passage, and these attempts were repeated all through the sixteenth century. The first Englishman to land in India is said to have been one Thomas Stephens (1579) who was followed by a number of merchant adventurers, but trade between the two countries really dates from 1600 when Elizabeth incorporated the East India Company which had been formed in London. Factories in India were founded only after Portuguese and Dutch opposition had been overcome, notably in the sea fight off Swally (Suvali) in 1612. The first factory, at Surat, was for many years the most important English foothold in the East. Its establishment was followed by others, including Fort St. George, Madras, (1640) and Hughli (1651). In the history of these early years of British enterprise in India the cession of Bombay (1661) as part of the dower of Catherine of Braganza stands out as a land-mark; it also illustrates the weakness of the Portuguese at that date, since in return the King of England undertook to protect the Portuguese in India against their foes—the Marathas and the Dutch. Cromwell, by his treaty of 1651, had already obtained from the Portuguese an acknowledgment of England's right to trade in the East; and that right was now threatened, not by the Portuguese, but by Sivaji and by the general disorder prevalent in India. Accordingly, in 1686, the Company turned its attention to acquiring territorial power, and announced its intention to establish such a policy of civil and military power, and create and secure such a large revenue.....as may be the foundation of a large, well-grounded, sure English dominion in India for all time to come. Not much came of this announcement for some time, and no stand could be made in Bengal against the depredations of Aurangzeb. The foundations of Calcutta (1690) could not be laid by Job Charnock until after a humiliating peace had been concluded with that Emperor, and, owing to the difficulties in which the Company found itself in England, there was little chance of any immediate change for the better. The union of the old East India Company with the new one which had been formed in rivalry to it took place in 1708, and for some years peaceful development followed; though Bombay was always exposed by sea to attacks from the pirates, who had many strongholds within easy reach of that port, and on land to attacks from the Marathas. The latter danger was felt also in Calcutta. Internal dangers were numerous and still more to be feared. More than one mutiny took place among the troops sent out from England, and rebellions like that led by Keigwin in Bombay threatened to stifle the infant settlements. The public health was bad and the rate of mortality was at times appalling. To cope with such conditions strong men were needed, and the Company was in this respect peculiarly fortunate; the long list of its servants, from Oxenden and Aungier to Hastings and Raffles, contains many names of men who proved themselves good rulers and far-sighted statesmen, the finest Empire-builders the world has known.

Attempts to compete with the English were made of course. But the schemes of the Emperor Charles VI to secure a share of the Indian trade were not much more successful than those made by Scotland, Denmark, Sweden, and Russia. By the French, who founded Pondicherry and Chandernagore towards the end of the 17th century, much more was achieved, as will be seen from the following outline of the development of British rule.

The French Wars.

When war broke out between England and France in 1744, the French had acquired a

strong position in Southern India, which had become independent of Delhi and was divided into three large States—Hyderabad, Tanjore, and Mysore—and a number of petty states under local chieftains. In the affairs of these States Dupleix, when Governor of Pondicherry, had intervened with success, and when Madras was captured by a French squadron, under La Bourdonnais (1746) Dupleix wished to hand it over to the Nawab of Arcot—a deputy of the Nizam's who ruled in the Carnatic. The French, however, kept Madras, repelling an attack by the disappointed Nawab as well as the British attempts to recapture it. The treaty of Aix-la-Chapelle restored Madras to the English. The fighting had shown the Indian powers the value of European troops, and this was again shown in the next French war (1750-54) when Clive achieved enduring fame by his capture and subsequent defence of Arcot. This war arose from Dupleix supporting candidates for the disputed successions at Arcot and Hyderabad while the English at Madras put forward their own nominees. One of Dupleix's officers, the Marquis de Bussy, persuaded the Nizam to take into his pay the army which had established his power, and in return the Northern Circars, between Orissa and Madras, was granted to the French. This territory, however, was captured by the English in the seven years' war (1756-63). Dupleix had by then been recalled to France. Lally, who had been sent to drive the English out of India, captured Fort St. David and invested Madras. But the victory which Colonel (Sir Eyre) Coote won at Wandiwash (1760) and the surrender of Pondicherry and Gingee put an end to the French ambitions of Empire in Southern India. Pondicherry passed more than once from the one nation to the other before settling down to its present existence as a French colony in miniature.

Battle of Plassey.

While the English were fighting the third French war in the South they became involved in grave difficulties in Bengal, where Siraj-ud-Daula had acceded to power. The headquarters of the English at Calcutta were threatened by that ruler who demanded they should surrender a refugee and should cease building fortifications. They refused and he marched against them with a large army. Some of the English took to their ships and made off down the river, the rest surrendered and were cast into the jail known as the "Black Hole." From this small and stifling room 23 persons, out of 146, came out alive the next day. Clive who was at Madras, immediately sailed for Calcutta with Admiral Watson's squadron, recaptured the town 1757), and, as war with the French had been proclaimed, proceeded to take Chandernagore. The Nawab Siraj-ud-Daula then took the side of the French, and Clive, putting forward Mir Jafar as candidate for the Nawab's throne, marched out with an army consisting of 900 Europeans, 2,000 sepoys and 8 pieces of artillery against the Nawab's host of over 50,000. The result was the historic battle of Plassey (June 23) in which Clive, after hesitating on the course to be pursued, routed the Nawab. Mir Jafar was put on the throne at Murshidabad, and the price of this honour was put at £2,340,000 in addition to the grant to the Company of the land round Calcutta now known as the District of the twenty-four Parganas. In the year after Plassey, Clive was appointed Governor of Bengal and in that capacity sent troops against the French in Madras and in person led a force against the Oudh army that was threatening Mir Jafar, in each case with success. From 1760 to 1765 Clive was in England. During his absence the Council at Calcutta deposed Mir Jafar and, for a price, put Mir Kasim in his place. This ruler moved his capital to Monghyr, organized an army, and began to intrigue with the Nawab Wazir of Oudh. He soon found, in a dispute over customs dues, an opportunity of quarrelling with the English and the first shots fired by his followers were the signal for a general rising in Bengal. About 200 Englishmen and a number of sepoys were massacred, but his trained regiments were defeated at Gheria and Oodeynullah, and Mir Kasim sought protection from the Nawab of Oudh. But in 1764, after quelling a sepoy mutiny in his own camp by blowing 24 ringleaders from the guns, Major (Sir Hector) Munro defeated the joint forces of Shah Alam, the Mughal Emperor, and the Nawab of Oudh in the battle of Buxar. In 1765 Clive (now Baron Clive of Plassey) returned as Governor. "Two landmarks stand out in his policy. First, he sought the substance, although not the name, of territorial power, under the fiction of a grant from the Mughal Emperor. Second, he desired to purify the Company's service, by prohibiting illicit gains, and by guaranteeing a reasonable pay from honest sources. In neither respect were his plans carried out by his immediate successors. But our efforts towards a sound administration date from this second Governorship of Clive, as our military supremacy dates from his victory at Plassey." Before Clive left India, in 1767, he had readjusted the divisions of Northern India and had set up a system of Government in Bengal by which the English received the revenues and maintained the army while the criminal jurisdiction was vested in the Nawab. The performance of his second task, the purification of the Company's service, was hotly opposed but carried out. He died in 1774 by his own hand, the House of Commons having in the previous year censured him, though admitting that he did render "great and meritorious services to his country."

Warren Hastings.

The dual system of government that Clive had set up proved a failure and Warren Hastings was appointed Governor, in 1772, to carry out the reforms settled by the Court of Directors which were to give them the entire care and administration of the revenues. Thus Hastings had to undertake the administrative organization of India, and, in spite of the factious attitude of Philip Francis, with whom he fought a duel and of other members of his Council, he reorganized the civil service, reformed the system of revenue collection, greatly improved the financial position of the Company, and created courts of justice and some semblance of a police force. From 1772 to 1774 he was Governor of Bengal, and from 1774 to 1775

he was the first Governor-General, nominated under an Act of Parliament passed in the previous year. His financial reforms, and the forced contributions he enacted from the rebellious Chet Singh and the Begam of Oudh, were interpreted in England as acts of oppression and formed, together with his action in the trial of Nuncomar for forgery, the basis of his seven years' trial before the House of Lords which ended in a verdict of not guilty on all the charges. But there is much more for which his administration is justly famous. The recovery of the Marathas from their defeat at Panipat was the cardinal factor that influenced his policy towards the native states. One frontier was closed against Maratha invasion by the loan of a British brigade to the Nawab Wazir of Oudh, for his war against the Rohillas, who were intriguing with the Marathas. In Western India he found himself committed to the two Maratha wars (1775-82) owing to the ambition of the Bombay Government to place its own nominee on the throne of the Peshwa at Poona, and the Bengal troops that he sent over made amends, by the conquest of Gujrat and the capture of Gwalior, for the disgrace of Wadgaon where the Marathas overpowered a Bombay army. In the South—where interference from Madras had already led (1769) to what is known as the first Mysore war, a disastrous campaign against Hyder Ali and the Nizam—he found the Madras Government again in conflict with those two potentates. The Nizam he won over by diplomacy, but against Hyder Ali he had to despatch a Bengal army under Sir Eyre Coote. Hyder Ali died in 1782 and two years later a treaty was made with his son Tipu. It was in these acts of intervention in distant provinces that Hastings showed to best advantage as a great and courageous man, cautious, but swift in action when required. He was succeeded, after an interregnum, by Lord Cornwallis (1786-93) who built on the foundations of civil administration laid by Hastings, by entrusting criminal jurisdiction to Europeans and establishing an Appellate Court of Criminal Judicature at Calcutta. In the Civil Service he separated the functions of the District Collector and Judge and organized the "writers" and "merchants" of the Company into an administrative Civil Service. This system was subsequently extended to Madras and Bombay. Lord Cornwallis is better known for his introduction, on orders from England, of the Permanent Settlement in Bengal. (See article on Land Revenue). A third Mysore war was waged during his tenure of office which ended in the submission of Tipu Sultan. Sir John Shore (Lord Teignmouth), an experienced Civil Servant, succeeded Lord Cornwallis, and, in 1798, was followed by Lord Wellesley, the friend of Pitt, whose projects were to change the map of India.

Lord Wellesley's Policy

The French in general, and "the Corsican" in particular, were the enemy most to be dreaded for a few years before Lord Wellesley took up his duties in India, and he formed the scheme of definitively ending French schemes in Asia by placing himself at the head of a great Indian confederacy. He started by obtaining from the Nawab of Oudh the cession of large tracts of territory in lieu of payments overdue as subsidies for British troops, he then won over the Nizam to the British side, and, after exposing the intrigues of Tipu Sultan with the French, embarked on the fourth Mysore war which ended (1799) in the fall of Seringapatam and the gallant death of Tipu. Part of Mysore, the Carnatic, and Tanjore roughly constituting the Madras Presidency of to-day then passed to British rule. The five Maratha powers—the Peshwa of Poona, the Gackwar of Baroda, Sindhia of Gwalior, Holkar of Indore and the Raja of Nagpur—had still to be brought into the British net. The Peshwa, after being defeated by Holkar, fled to British territory and signed the Treaty of Bassein which led to the third Maratha war (1802-04) as it was regarded by Sindhia and the Raja of Nagpur at a betrayal of Maratha independence. In this the most successful of British campaigns in India, Sir Arthur Wellesley (the Duke of Wellington) and General (Lord) Lake carries all before them, the one by his victories of Assaye and Argaum and the other at Aligad and Laswari. Later operations, such as Colonel Monson's retreat through Central India were less fortunate. The great acquisitions of territory made under Lord Wellesley proved so expensive that the Court of Directors, becoming impatient, sent out Lord Cornwallis a second time to make peace at any price. He, however, died soon after his arrival in India, and Sir George Barlow carried on the government (1805-7) until the arrival of a stronger ruler, Lord Minto. He managed to keep the peace in India for six years, and to add to British dominions by the conquest of Java and Mauritius. His foreign policy was marked by another new departure, inasmuch as he opened relations with the Punjab, Persia, and Afghanistan, and concluded a treaty with Ranjit Singh, at Lahore, which made that Sikh ruler the loyal ally of the British for life.

The successor of Lord Minto was Lord Moira, who found himself obliged almost at once to declare war on the Gurkhas of Nepal, who had been encroaching on British territory. After initial reverses, the English, under General Ochterlony, were successful and the Treaty of Sagauli (1816) was drawn up which defines British relations with Nepal to the present day. For this success Lord Moira was made Marquis of Hastings. In the same year he made preparations for the last Maratha war (1817-18) which was made necessary by the lawless conduct of the Pindaris, gangs of Pathan or Rohilla origin, whose chief patrons were the rulers of Native States. The large number of 120,000 that he collected for this purpose destroyed the Pindaris, annexed the dominions of the rebellious Peshwa of Poona, protected the Rajput States, made Sindhia enter upon a new treaty, and compelled Holkar to give up part of his territory. Thus Lord Hastings established the British power more firmly than ever, and when he resigned, in 1823, all the Native States outside the Punjab had become parts of the political system and British interests were permanently secured from the Persian Gulf to Singapore. Lord Amherst followed Lord Hastings, and his five years' rule (1823-28) are memorable for the first Burmese war and the capture of Bharatpur. The former opera-

tion was undertaken owing to the insolent demands and raids of the Burmese, and resulted in the Burmese ceding Assam, Aracan, and the coast of Martaban and their claims to the lower provinces. The capture of Bharatpur by Lord Combermere (1826) wiped out the repulse which General Lake had received there twenty years earlier. A disputed succession on this occasion led to the British intervention.

Social Reform.

A former Governor of Madras, Lord William Bentinck, was the next Governor-General. His epitaph by Macaulay, says: "He abolished cruel rites; he effaced humiliating distinctions; he gave liberty to the expression of public opinion; his constant study was to elevate the intellectual and moral character of the nations committed to his charge."

Some of his financial reforms, forced on him from England, and his widening of the gates by which educated Indians could enter the service of the Company, were most unpopular at the time, but were eclipsed by the acts he took for the abolition of *Sati*, or widow-burning, and the suppression—with the help of Captain Sleeman—of the professional hereditary assassins known as *Thags*. In 1832 he annexed Cachar, and, two years later, Coorg. The incompetence of the ruler of Mysore forced him to take that State also under British administration—where it remained until 1881. His rule was marked in other ways by the despatch of the first steamship that made the passage from Bombay to Suez, and by his settlement of the long educational controversy in favour of the advocates of instruction in English and the vernaculars. Lord William Bentinck left India (1835) with his programme of reforms unfinished. The new Charter Act of 1833 had brought to a close the commercial business of the Company and emphasized their position as rulers of an Indian Empire in trust for the Crown. By it the whole administration, as well as the legislation of the country, was placed in the hands of the Governor-General in Council, and authority was given to create a Presidency of Agra. Before his retirement Bentinck assumed the statutory title of Governor-General of India (1834), thus marking the progress of consolidation since Warren Hastings in 1774 became the first Governor-General of Fort William. Sir Charles Metcalfe, being senior member of Council, succeeded Lord William Bentinck, and during his short tenure of office carried into execution his predecessor's measures for giving entire liberty to the press.

Afghan Wars.

With the appointment of Lord Auckland as Governor-General (1836-42) there began a new era of war and conquest. Before leaving London he announced that he looked with exultation to the prospect of "promoting education and knowledge, and of extending the blessings of good Government and happiness to millions in India;" but his administration was almost exclusively comprised in a fatal expedition to Afghanistan, which dragged in its train the annexation of Sind, the Sikh wars, and the inclusion of Baluchistan in the protectorate of India. The first Afghan war was undertaken partly to counter the Russian advance in Central Asia and partly to place on the throne at Kabul the dethroned ruler Shah Shuja in place of Dost Mahomed. The latter object was easily attained (1839) and for two years Afghanistan remained in the military occupation of the British. In 1841 Sir Alexander Burnes was assassinated in Kabul and Sir William Macnaghten suffered the same fate in an interview with the son of Dost Mahomed. The British Commander in Kabul, Gen. Elphinstone, was old and feeble, and after two months' delay he led his army of 4,500 and 12,000 camp followers back towards India in the depth of winter. Between Kabul and Jallalabad the whole force perished, either at the hands of the Afghans or from cold, and Dr. Brydon was the only survivor who reached the latter city. Lord Ellenborough succeeded Lord Auckland and was persuaded to send an army of retribution to relieve Jallalabad. One force under Gen. Pollock relieved Jallalabad and marched on Kabul, while Gen. Nott, advancing from Kandahar, captured Ghazni and joined Pollock at Kabul (1842). The bazaar at Kabul was blown up, the prisoners rescued, and the army returned to India leaving Dost Mahomed to take undisputed possession of his throne. The drama ended with a bombastic proclamation from Lord Ellenborough and the parade through the Punjab of the (spurious) gates of Somnath taken from the tomb of Mahmud of Ghazni.

Sikh Wars.

Lord Ellenborough's other wars—the conquest of Sind by Sir Charles Napier and the suppression of an outbreak in Gwalior—were followed by his recall, and the appointment of Sir Henry (1st Lord) Hardinge to be Governor-General. A soldier Governor-General was not unacceptable, for it was felt that a trial of strength was imminent between the British and the remaining Hindu power in India, the Sikhs. Ranjit Singh, the founder of the Sikh Kingdom, had died in 1839, loyal to the end to the treaty he had made with Metcalfe thirty years earlier. He left no son capable of ruling, and the *khalsa*, or central council of the Sikh army, was burning to measure its strength with the British sepoys. The intrigues of two men, Lal Singh and Fej Singh, to obtain the supreme power led to their crossing the Sutlej and invading British territory. Sir Hugh Gough, the Commander-in-Chief, and the Governor-General hurried to the frontier, and within three weeks four pitched battles were fought—at Mudki, Ferozeshah, Aliwal and Sobraon. The Sikhs were driven across the Sutlej and Lahore surrendered to the British, but the province was not annexed. By the terms of peace the infant Dhuleep Singh was recognized as Rajah; Major Henry Lawrence was appointed Resident, to assist the Sikh Council of Regency, at Lahore; the Jullundur Doab was added to British territory; the Sikh army was limited; and a British force was sent to garrison the Punjab on behalf of the child Rajah. Lord Hardinge returned to England (1848) and was succeeded by Lord Dalhousie, the greatest of Indian proconsuls.

Dalhousie had only been in India a few months when the second Sikh war broke out. In the attack on the Sikh position at Chillianwala the British lost 2,400 officers and men

besides four guns and the colours of three regiments: but before reinforcements could arrive from England, bringing Sir Charles Napier as Commander-in-Chief, Lord Gough had restored his reputation by the victory of Gujrat which absolutely destroyed the Sikh army. As a consequence the Punjab was annexed and became a British province (1849), its pacification being so well carried out, under the two Lawrences that on the outbreak of the Mutiny eight years later it remained not only quiet but loyal. In 1852 Lord Dalhousie had again to embark on war, this time in Burma, owing to the ill-treatment of British merchants in Rangoon. The lower valley of the Irawaddy was occupied from Rangoon to Prome and annexed, under the name of Pegu, to those provinces that had been acquired in the first Burmese war. British territories were enlarged in many other directions during Lord Dalhousie's tenure of office. His "doctrine of lapse" by which British rule was substituted for Indian in States where continued misrule on the failure of a dynasty made this change possible, came into practice in the cases of Satara, Jhansi, and Nagpur (which last-named State became the Central Provinces) where the rulers died without leaving male heirs. Oudh was annexed on account of its misrule. Dalhousie left many other marks on India. He reformed the administration from top to bottom, founded the Public Works Department, initiated the railways, telegraphs and postal system, and completed the great Ganges canal. He also detached the Government of Bengal from the charge of the Governor-General, and summoned representatives of the local Governments to the deliberations of the Government of India. Finally, in education he laid down the lines of a department of public instruction and initiated more practical measures than those devised by his predecessors. It was his misfortune that the mutiny, which so swiftly followed his resignation, was by many critics in England attributed to his passion for change.

The Sepoy Mutiny.

Dalhousie was succeeded by Lord Canning in 1856, and in the following year the sepoys of the Bengal army mutinied and all the valley of the Ganges from Delhi to Patna rose in rebellion. The causes of this convulsion are difficult to estimate, but are probably to be found in the unrest which followed the progress of English civilisation; in the spreading of false rumours that the whole of India was to be subdued; in the confidence the sepoy troops had acquired in themselves under British leadership; and in the ambition of the educated classes to take a greater share in the government of the country. Added to this, there was in the deposed King of Delhi, Bahadur Shah, a centre of growing disaffection. Finally there was the story—not devoid of truth—that the cartridges for the new Enfield rifle were greased with fat that rendered them unclean for both Hindus and Mahomedans. And when the mutiny did break out it found the Army without many of its best officers who were employed in civil work, and the British troops reduced, in spite of Lord Dalhousie's warnings, below the number he considered essential for safety. On May 10 the sepoys at Meerut rose in mutiny, cut down a few Europeans, and, unchecked by the large European garrison, went off to Delhi where next morning the Mahomedans rose. From that centre the mutiny spread through the North-Western Provinces and Oudh into Lower Bengal. Risings in the Punjab were put down by Sir John Lawrence and his subordinates, who armed the Sikhs, and with their help reduced the sepoys, and Lawrence was subsequently able to send a strong body of Sikhs to aid in the siege of Delhi. The native armies of Madras and Bombay remained for the most part true to their colours. In Central India the contingents of some of the great chiefs joined the rebels, but Hyderabad was kept loyal by the influence of its minister, Sir Salar Jung.

The interest of the war centres round Delhi, Cawnpore and Lucknow, though in other places massacres and fighting occurred. The siege of Delhi began on June 8 when Sir Henry Barnard occupied the Ridge outside the town. Barnard died of cholera early in July, and Thomas Reed, who took his place, was obliged through illness to hand over the command to Archdale Wilson. In August Nicholson arrived with a reinforcement from the Punjab. In the meantime the rebel force in Delhi was constantly added to by the arrival of new bodies of mutineers; attacks were frequent and the losses heavy: cholera and sunstroke carried off many victims on the Ridge: and when the final assault was made in September the Delhi army could only parade 4,720 infantry, of whom 1,960 were Europeans. The arrival of siege guns made it possible to advance the batteries on September 8, and by the 13th a breach was made. On the following day three columns were led to the assault, a fourth being held in reserve. Over the ruins of the Kashmir Gate, blown in by Home and Salkeld, Col Campbell led his men and Nicholson formed up his troops within the walls. By nightfall the British, with a loss of nearly 1,206 killed and wounded, had only secured a toothold in the city. Six days' street fighting followed and Delhi was won; but the gallant Nicholson was killed at the head of a storming party. Bahadur Shah was taken prisoner, and his two sons were shot by Captain Hudson.

Massacre at Cawnpore.

At Cawnpore the sepoys mutinied on June 27 and found in Nana Sahib, the heir of the last Peshwa, a willing leader in spite of his former professions of loyalty. There a European force of 240 with six guns had to protect 870 non-combatants, and held out for 22 days, surrendering only on the guarantee of the Nana that they should have a safe conduct as far as Allahabad. They were embarking on the boats on the Ganges when fire was opened on them, the men being shot or hacked to pieces before the eyes of their wives and children and the women being mutilated and murdered in Cawnpore to which place they were taken back. Their bodies were thrown down a well just before Havelock, having defeated the Nana's forces, arrived to the relief. In Lucknow a small garrison held out in the Residency from July 2 to September 25 against tremendous odds and enduring the most fearful hardships. The relieving force, under Havelock and Outram, was itself invested, and the garrison was

not finally delivered until Sir Colin Campbell arrived in November. Fighting continued for 18 months in Oudh, which Sir Colin Campbell finally reduced, and in Central India, where Sir Hugh Rose waged a brilliant campaign against the disinherited Rani of Jhansi—who died at the head of her troops—and Tantia Topi.

Transfer to the Crown.

With the end of the mutiny there began a new era in India, strikingly marked at the outset by the Act for the Better Government of India (1858) which transferred the entire administration from the Company to the Crown. By that Act India was to be governed by, and in the name of, the Sovereign through a Secretary of State, assisted by a Council of fifteen members. At the same time the Governor-General received the title of Viceroy. The European troops of the Company, numbering about 24,000 officers and men were—greatly resenting the transfer—amalgamated with the Royal service, and the Indian Navy was abolished. On November 1, 1858, the Viceroy announced in Durbar at Allahabad that Queen Victoria had assumed the Government of India, and proclaimed a policy of justice and religious toleration. A principle already enunciated in the Charter Act of 1833 was reinforced, and all, of every race or creed, were to be admitted as far as possible to those offices in the Queen's service for which they might be qualified. The aim of the Government was to be the benefit of all her subjects in India—"In their prosperity will be our strength, in their contentment our security, and in their gratitude our best reward." Peace was proclaimed in July 1859, and in the cold weather Lord Canning went on tour in the northern provinces, to receive the homage of loyal chiefs and to assure them that the "policy of lapse" was at an end. A number of other important reforms marked the closing years of Canning's Viceroyalty. The India Councils Act (1861) augmented the Governor-General's Council, and the Councils of Madras and Bombay by adding non-official members, European and Indian, for legislative purposes only. By another Act of the same year High Courts of Judicature were constituted. To deal with the increased debt of India, Mr. James Wilson was sent from England to be Financial Member of Council, and to him are due the customs system, income tax, license duty, and State paper currency. The cares of office had broken down the Viceroy's health. Lady Canning died in 1862 and this hastened his departure for England where he died in June of that year. His successor, Lord Elgin, lived only a few months after his arrival in India, and was succeeded by Sir John (afterwards Lord) Lawrence, the "saviour of the Punjab."

Sir John Lawrence.

The chief task that fell to Sir John Lawrence was that of reorganising the Indian military system, and of reconstructing the Indian army. The latter task was carried out on the principle that in the Bengal army the proportion of Europeans to Indians in the infantry and cavalry should be one to two, and in the Madras and Bombay armies one to three: the artillery was to be almost wholly European. The re-organisation was carried out in spite of financial difficulties and the saddling of Indian revenues with the cost of a war in Abyssinia with which India had no direct concern; but operations in Bhutan were all the drain made on the army in India while the re-organising process was being carried on. Two severe famines—in Orissa (1866) and Bundelkhand and Upper Hindustan (1868-9)—occurred, while Sir John Lawrence was Viceroy, and he laid down the principle for the first time in Indian history, that the officers of the Government would be held personally responsible for taking every possible means to avert death by starvation. He also created the Irrigation Department under Col. (Sir Richard) Strachey. Two commercial crises of the time have to be noted. One seriously threatened the tea industry in Bengal. The other was the consequence of the wild gambling in shares of every description that took place in Bombay during the years of prosperity for the Indian cotton industry caused by the American Civil War. The "Share Mania," however, did no permanent harm to the trade of Bombay, but was, on the other hand, largely responsible for the series of splendid buildings begun in that city during the Governorship of Sir Bartle Frere. Sir John Lawrence retired in 1869, having passed through every grade of the service, from an Assistant Magistracy to the Viceroyalty. Lord Mayo, who succeeded him, created an Agricultural Department and introduced the system of Provincial Finance, thus fostering the impulse to local self-government. He also laid the foundation for the reform of the salt duties, thereby enabling his successors to abolish the inter-provincial customs lines. Unhappily his vast schemes for the development of the country by extending communications of every kind were not carried out to the full by him, for he was murdered in the convict settlement of the Andaman Islands, in 1872. Lord Northbrook (Viceroy 1872-6) had to exercise his abilities chiefly in the province of finance. A severe famine which threatened Lower Bengal in 1874 was successfully warded off by the organization of State relief and the importation of rice from Burma. The following year was notable for the deposition of the Gaikwar of Baroda for misgovernment, and for the tour through India of the Prince of Wales (the late King Edward VII). The visit of the Duke of Edinburgh to India when Lord Mayo was Viceroy had given great pleasure to those with whom he had come in touch, and had established a kind of personal link between India and the Crown. The Prince of Wales' tour aroused unprecedented enthusiasm for and loyalty to the British Raj, and further encouragement was given to the growth of this spirit when, in a durbar of great magnificence held on January 1st, 1877, on the famous Ridge at Delhi, Queen Victoria was proclaimed Empress of India. The Viceroy of that time, Lord Lytton, had, however, to deal with a situation of unusual difficulty. Two successive years of drought produced, in 1877-78, the worst famine India had known. The most strenuous exertions were made to mitigate its effects, and eight crores of rupees were spent in importing grain; but the loss of life was estimated at 5½ millions. At this time also Afghan affairs once more became prominent.

Second Afghan War.

The Amir, Sher Ali, was found to be intriguing with Russia and that fact, coupled with his repulse of a British mission led to the second Afghan War. The British forces advanced by three routes—the Khyber, the Kurram, and the Bolan—and gained all the important vantage points of Eastern Afghanistan. Sher Ali fled and a treaty was made with his son Yakub Khan, which was promptly broken by the murder of Sir Louis Cavagnari, who had been sent as English envoy to Kabul. Further operations were thus necessary, and Sir F. (now Lord) Roberts advanced on the capital and defeated the Afghans at Charasia. A rising of the tribes followed, in spite of Sir D. Stewart's victory at Ahmed Kheyl and his advance from Kabul to Kandahar. A pretender, Sirdar Ayub Khan, from Herat prevented the establishment of peace, defeated Gen. Burrows' brigade at Maiwand, and invested Kandahar. He was routed in turn by Sir F. Roberts who made a brilliant march from Kabul to Kandahar. After the British withdrawal fighting continued between Ayub Khan and Abdur Rahman, but the latter was left undisputed Amir of Afghanistan until his death in 1901

In the meantime Lord Lytton had resigned (1880) and Lord Ripon was appointed Viceroy by the new Liberal Government. Lord Ripon's administration is memorable for the freedom given to the Press by the repeal of the Vernacular Press Act, for his scheme of local self-government which developed municipal institutions, and for the attempt to extend the jurisdiction of the criminal courts in the Districts over European British subjects, independently of the race or nationality of the presiding judge. This attempt, which created a feeling among Europeans in India of great hostility to the Viceroy, ended in a compromise in 1884. Other reforms were the re-establishment of the Department of Revenue and Agriculture, the appointment of an Education Commission with a view to the spread of popular instruction on a broader basis, and the abolition by the Finance Minister (Sir Evelyn Baring, now Lord Cromer) of a number of customs duties. Lord Dufferin, who succeeded Lord Ripon in 1884, had to give his attention more to external than internal affairs: one of his first acts was to hold a durbar at Rawalpindi for the reception of the Amir of Afghanistan which resulted in the strengthening of British relations with that ruler. In 1885 a third Burmese war became necessary owing to the truculent attitude of King Thibaw and his intrigues with foreign Powers. The expedition, under General Prendergast, occupied Mandalay without difficulty and King Thibaw was exiled to Ratnagiri, where he died on 16th December 1916. His dominions of Upper Burma were annexed to British India on the 1st of January, 1886.

The Russian Menace.

Of greater importance at the time were the measures taken to meet a possible, and as it then appeared a probable, attack on India by Russia. These preparations, which cost over two million sterling, were hurried on because of a collision which occurred between Russian and Afghan troops at Penjdeh, during the delimitation of the Afghan frontier towards Central Asia, and which seemed likely to lead to a declaration of war by Great Britain. War was averted, but the Penjdeh incident had called attention to a menace that was to be felt for nearly a generation more; it had also served to elicit from the Princes of India an unanimous offer of troops and money in case of need. That offer bore fruit under the next Viceroy, Lord Lansdowne, when the present system of Imperial Service Troops was organised. Under Lord Lansdowne's rule also the defences of the North-Western Frontier were strengthened, on the advice of Sir Frederick (now Earl) Roberts, who was then Commander-in-Chief in India. Another form of precautionary measure against the continued aggression of Russia was taken by raising the annual subsidy paid by the Indian Government to the Amir from eight to twelve lakhs.

On the North-Eastern Frontier there occurred (1891) in the small State of Manipur a revolution against the Raja that necessitated an inquiry on the spot by Mr. Quinton, the Chief Commissioner of Assam. Mr. Quinton, the commander of his escort, and others, were treacherously murdered in a conference and the escort ignominiously retreated. This disgrace to British arms led to several attacks on frontier outposts which were brilliantly defeated. Manipur was occupied by British troops and the government of the State was reorganised under a Political Agent. Lord Lansdowne's term of office was distinguished by several other events, such as the passing of the Parliamentary Act (Lord Cross's Act, 1892), which increased the size of the Legislative Councils as well as the number of non-officials in them: legislation aimed at social and domestic reform among the Hindus: and the closing of the Indian Mints to the free coinage of silver (1893). In Burma great progress was made, under Sir Alexander Mackenzie, as Chief Commissioner: comparative order was established, and large schemes for the construction of railways, roads, and irrigation works were put in hand. (The Province was made a Lieutenant-Governorship in 1897).

Frontier Campaigns.

Lord Elgin, who succeeded Lord Lansdowne in 1894, was confronted at the outset with a deficit of Rs. 2¼ crores, due to the fall in exchange. (In 1895 the rupee fell as low as 1s. 1d.) To meet this the old five per cent. import duties were reimposed on a number of commodities, but not on cotton goods: and within the year the duty was extended to piece-goods, but not to yarn. The reorganisation of the Army, which involved the abolition of the old system of Presidency Armies, had hardly been carried out when a number of risings occurred along the North-West Frontier. In 1895 the British Agent in Chitral—which had come under British influence two years previously when Sir H. M. Durand had demarcated the southern and eastern boundaries of Afghanistan—was besieged and had to be rescued by an expeditionary force. Two years later the Wazirs, Swatis, and Mohmands attacked the British positions in Malakand, and the Afridis closed the Khyber Pass. Peace was only established after a prolonged campaign (the Tirah campaign) in which 40,000 troops were employed, and over 1,000 officers

and men had been lost. This was in itself a heavy burden on the finances of India, which was increased by the serious and widespread famine of 1896-97 and by the appearance in India of bubonic plague. The methods taken to prevent the spread of that disease led, in Bombay, to rioting, and elsewhere to the appearance in the vernacular press of seditious articles which made it necessary to make more stringent the law dealing with such writings.

Lord Curzon's Viceroyalty.

With famine and plague Lord Curzon also, who succeeded Lord Elgin in 1899, had to deal. In 1901 the cycle of bad harvests came to an end; but plague increased, and in 1904 deaths from it were returned at over one million. Of the many problems to which Lord Curzon directed his attention, only a few can be mentioned here: some indeed claim that his greatest work in India was not to be found in any one department but was in fact the general gearing up of the administration which he achieved by his unceasing energy and personal example of strenuous work. He had at once to turn his attention to the North-West Frontier. The British garrisons beyond our boundary were gradually withdrawn and replaced by tribal levies, and British forces were concentrated in British territory behind them as a support. An attempt was made to check the arms traffic and work on strategic railways was pushed forward. The fact that in seven years he only spent a quarter of a million upon repressive measures and only found it necessary to institute one blockade (against the Mahsud Waziris) is the justification of this policy of compromise between the Lawrence and Forward schools of thought. In 1901 the trans-Indus districts of the Punjab were separated from that Province, and together with the political charges of the Malakand, the Khyber, Kurram, Tochi, and Wana were formed into the new North-West Frontier Province, under a Chief Commissioner directly responsible to the Government of India. That year also witnessed the death of Abdur Rahman, the Amir of Afghanistan, and the establishment of an understanding with his successor Habibullah. In 1904 the attitude of the Dalai Lama of Tibet being pro-Russian and anti-British, it became necessary to send an expedition to Lhasa under Colonel (Sir Francis) Younghusband. The Dalai Lama abdicated and a treaty was concluded with his successor.

In his first year of office Lord Curzon passed the Act which, in accordance with the recommendations of the Fowler Commission, practically fixed the value of the rupee at 1*s.* 4*d.*, and in 1900 a Gold Reserve fund was created. The educational reforms that marked this Viceroyalty are dealt with elsewhere: chief among them was the Act of 1904 reorganising the governing bodies of Indian Universities. Under the head of agrarian reform must be mentioned the Punjab Land Alienation Act, designed to free the cultivators of the soil from the clutches of money-lenders, and the institution of Agricultural banks. The efficiency of the Army was increased (Lord Kitchener was Commander-in-Chief) by the re-armament of the Indian Army, the strengthening of the artillery, and the reorganisation of the transport service. In his relations with the Feudatory Chiefs, Lord Curzon emphasized their position as partners in administration, and he founded the Imperial Cadet Corps to give a military education to the sons of ruling and aristocratic families. In 1902 the British Government obtained from the Nizam a perpetual lease of the Assigned Districts of Berar in return for an annual payment of 25 lakhs The accession of King Edward VII was proclaimed in a splendid Durbar on January 1, 1903. In 1904 Lord Curzon returned to England for a few months but was re-appointed to a second term of office, Lord Ampthill, Governor of Madras, having acted as Viceroy during his absence. The chief act of this second term was the partition of Bengal and the creation of a new Province of Eastern Bengal and Assam—a reform, designed to remove the systematic neglect of the trans-Gangetic areas of Bengal, which evoked bitter and prolonged criticism. In 1905 Lord Curzon resigned, being unable to accept the proposals of Lord Kitchener for the re-adjustment of relations between the Army headquarters and the Military Department of the Government, and being unable to obtain the support of the Home Government. Lord Curzon was succeeded by **Lord Minto**, the grandson of a former Governor-General. It was a stormy heritage to which Lord Minto succeeded, for the unrest which had long been noticed developed in one direction into open sedition. The occasion of the outburst in Bengal was the partition of that province. The causes of the flood of seditious writings and speeches, of the many attempts at assassination, and of the boycott of British goods are less easily definable. The mainspring of the unrest was "a deep-rooted antagonism to all the principles upon which Western society, especially in a democratic country like England, has been built up."

Outside Bengal attempts to quell the disaffection by the ordinary law were fairly successful. But scarcely any province was free from disorder of some kind and, though recourse was had to the deportation of persons without reason assigned under an Act of 1818, special Acts had to be passed to meet the situation, *viz*:— an Explosives Act, a Prevention of Seditious Meetings Act, and a Criminal Law Amendment Act which provides for a magisterial inquiry in private and a trial before three judges of the High Court without a jury. Concurrently with these legislative measures steps were taken to extend representative institutions. In 1907 a Hindu and a Mahomedan were appointed to the Secretary of State's Council, and in 1909 a Hindu was appointed for the first time to the Viceroy's Council. The Indian Councils Act of 1909 carried this policy farther by reconstituting the legislative councils and conferring upon them wider powers of discussion. The executive councils of Madras and Bombay were enlarged by the addition of an Indian member.

As regards foreign policy, Lord Minto's Viceroyalty was distinguished by the conclusion (1907) between Great Britain and Russia of an agreement on questions likely to disturb the friendly relations of the two countries in Asia generally, and in Persia, Afghanistan and Tibet in particular. Two expeditions had to be undertaken on the North-West frontier, against the Zakka Khels and the Mohmands;

and ships of the East Indies Squadron were frequently engaged off Maskat and in the Persian Gulf in operations designed to check the traffic in arms through Persia and Mekran to the frontier of India.

Visit of the King and Queen.

Sir Charles (Lord) Hardinge was appointed to succeed Lord Minto in 1910. His first year in India was marked by the visit to India of the King Emperor and the Queen, who arrived at Bombay on December 2, 1911. From there they proceeded to Delhi where, in the most magnificent durbar ever held in India, the coronation was proclaimed and various boons, including an annual grant of 50 lakhs for popular education, were announced. At the same ceremony His Majesty announced the transfer of the capital of India from Calcutta to Delhi; the reunion of the two Bengals under a Governor-in-Council; the formation of a new Lieutenant Governorship for Behar, Chota Nagpur and Orissa and the restoration of Assam to the charge of a Chief Commissioner.

In August, 1913, the demolition of a lavatory attached to a mosque in Cawnpore was made the occasion of an agitation among Indian Mahomedans and a riot in Cawnpore led to heavy loss of life. Of those present at the riot, 106 were put on trial but subsequently released by the Viceroy before the case reached the Sessions, and His Excellency was able to settle the mosque difficulty by a compromise that was acceptable to the local and other Mahomedans

Still more serious trouble occurred in September, 1914, when a riot at Budge-Budge among a number of Sikh emigrants returned from Canada gave a foretaste of the revolutionary plans entertained by those men. The sequel, revealed in two conspiracy trials at Lahore, showed that the "Ghadr" conspiracy was widespread and had been consistently encouraged by Germany. That plot, however, had little influence on the general attitude of India to the war with Germany, and it was not the least of Lord Hardinge's services that he encouraged India to play a magnificent part in the war. To anticipate events in some degree, it may here be stated that India was at no time included in the theatre of war except when the Emden bombarded Madras, though shipping off Bombay was seriously affected by mines laid by the enemy.

Lord Chelmsford as Viceroy.

Lord Hardinge, whose great services had been rewarded with the Knighthood of the Garter, left India in 1916 and was succeeded by Lord Chelmsford, whose tenure of office was destined to be one of the most eventful in the modern history of India. The part played by India in the war was developed in every possible way. Not only was the Indian Army increased but the resources of the country were developed with the help of the Munitions Board and India assumed responsibility for 100 millions of the war debt. The share of India in the Imperial burden of the war was emphasised in another and very significant way by her representation in the Imperial War Cabinet in London by His Highness the Maharaja of Bikaner and Sir S. P. (Lord) Sinha. On the Frontier, where there had been numerous though comparatively slight disturbances in 1914-15, a punitive expedition had to be undertaken against the Mahsuds.

In 1917 **Mr. Montagu,** who had succeeded Mr. Chamberlain as Secretary of State, carried out the latter's intention of visiting India. The visit took place at a time when the movement in favour of Home Rule for India had attained to the highest pitch yet witnessed and at a time when, as was shown by the increase of Indian representation on the Council of India and by the grant of commissions in the Army to Indians, the Government was anxious to meet the wishes of the people so far as it could without departing from its policy of avoiding controversial political issues during the war. The result of the visit was shown in the following year when a report was issued containing what is known as the joint scheme of reform evolved by the Secretary of State and the Viceroy. This scheme (of which details are given elsewhere in this volume) aimed at carrying into effect the announcement made in Parliament on August 20, 1917, that "the policy of His Majesty's Government, with which the Government of India are in complete accord, is that of the increasing association of Indians in every branch of the administration and the gradual development of self-governing institutions with a view to the progressive realisation of responsible government in India as an integral part of the British Empire." Shortly after this report there was issued a report by the Special Committee of Inquiry, over which Mr. Justice Rowlatt presided, into seditious crime in India. That report and the legislation which followed in consequence of it, together with the announcement of the proposed reform scheme, led to a renewal of political discussion and agitation which had to a great extent been in abeyance during the early years of the war.

Early in 1919 prolonged strikes in Bombay and elsewhere showed that India, though comparatively little affected by the economic results of the war, was confronted by industrial and economic problems which were none the less grave The gravity of those problems was increased by the ravages of influenza which is supposed to have caused 6,000,000 deaths during the winter months of 1917-18. Disturbances broke out in April as a sequel to the passive resistance movement against the Rowlatt Act (the Satyagraha Movement) which produced a situation to which there has been no parallel since the Mutiny. It is sufficient here to state that in Ahmedabad, Viramgam, Delhi, Lahore, Amritsar, Gujranwalla and other places the crowd, by attacking life and property and by train wrecking and tearing up railway lines and telegraph wires, provoked a situation which could only be met by the proclamation of martial law and the enforcement of military measures for the protection of law abiding subjects and for the suppression of disorder.

Exaggerated reports of those riots and of the effect of the Rowlatt Act may be presumed to have had some influence on the Amir of Afghanistan when he declared war and invaded British territory. Amir Habibullah Khan, who had been loyal to his treaty obligations throughout the war, was murdered in February and, after a brief occupation of the throne by his brother Nasrulla Khan, his son Amanulla had

been declared Amir. A sequel to this war was the renewal of trouble along a great part of the North Western frontier where the tribesmen, who had at first appeared to be impressed by the British successes, took the offensive against our advance posts especially in southern Waziristan. The operations which necessarily followed and the severity of the fighting were on a scale never previously reached in frontier war, and made the campaign of unusual length.

During the year political feeling ran high and opportunity was taken to foster a bond of union between Hindus and Mahomedans in connection with an agitation by the latter in favour of safeguarding the Khilafat and maintaining the temporal power of Turkey in its integrity. The publication of numerous despatches dealing with the Reform Scheme and the hearing of evidence by a Parliamentary Committee dealing with the subject helped to concentrate attention on the progress of the Scheme. India was represented at the Peace Conference by the Maharaja of Bikaner and by Lord Sinha, the first Indian peer and the first Indian Under Secretary.

The King's Proclamation.

The Government of India Bill was passed in December and on the 24th of that month there was issued a proclamation by His Majesty the King-Emperor (of which the full text is given elsewhere in this book) in which he invited his subjects in India to consider the past and join him in his hopes for the future. In the course of the proclamation His Majesty said :—"I rely on the leaders of the people, the Ministers of the future, to face responsibility and endure misrepresentation, to sacrifice much for the common interest of the State, remembering that true patriotism transcends party and communal boundaries ; and, while retaining the confidence of the Legislatures, to co-operate with My Officers for the common good in sinking unessential differences and in maintaining the essential standards of a just and generous Government. Equally do I rely upon My Officers to respect their new colleagues and to work with them in harmony and kindliness ; to assist the people and their representatives in an orderly advance towards free institutions ; and to find in these new tasks a fresh opportunity to fulfil as in the past their highest purpose of faithful service to My people."

Events in 1920 and 1921.

The year 1920, more than any which preceded it, was distinguished by political agitation. The cause of this was in part the indignation created by the facts disclosed in the report of the Hunter Commission on the outbreaks of 1919 in the Punjab and elsewhere, and the stimulus given to the Khilafat agitation by the terms of the Peace treaty with Turkey. In spite of the vigour with which the doctrine of non-co-operation was preached the first elections for the new Councils were held without any serious disturbance at the end of the year High prices continued, and in some cases advanced, and the world-wide labour unrest was reflected in India by many strikes.

The fruits of agitation were reaped in plenty in 1921. Murderous outbreaks at Malegaon, Dharwar and elsewhere were followed by a rebellion of the Moplahs in Malabar which assumed the most serious proportions and necessitated prolonged military operations before even a small part of the country affected could be brought back to anything like normal condition. That rebellion was due in part to economic causes but still more to the teachings of the Khilafat party which in other parts of the country also were of a character which made it necessary for Government to take action against some of the more prominent leaders of the Party. The policy of the Government, under Lord Reading who had succeeded Lord Chelmsford as Viceroy, was one of marked tolerance and patience, trusting that the non-co-operation movement would die of its own inanity In November, after Mr. Gandhi had several times promised to obtain swaraj for India by a certain date and had as often explained away his unfulfilled promise, the National Congress Committee, meeting in defiance of its President, determined that a policy of civil resistance should be adopted. In these circumstances but little attention was paid by the more extreme section of Indian politicians to the important fact that India was represented at the meeting of the Imperial Cabinet in London and at the Washington Conference on disarmament and the problems of the Pacific ; but the emphasis thus given to India's international status constitutes an important milestone in the history of India.

It had been arranged that H. R. H. the Prince of Wales should visit India at the end of 1920 and should open the new Councils in 1921, but, for reasons of health, that visit had to be postponed ; and H. R. H. the Duke of Connaught came to India early in 1921 in order to open the new Councils.

The Prince's visit actually took place later in the year. He landed at Bombay on November 17th and from there started on a prolonged tour through India. His visit was essentially non-political. He brought with him a message from the King in which His Majesty said :—"My son has followed from afar your fortunes. It is now his ambition by his coming among you, to ripen goodwill into a yet fuller understanding. I trust and believe when he leaves your shores, your hearts will follow him and his will stay with you and that one link the more will be added to the golden chains of sympathy which for these years has held my Throne to India. And it is my warmest prayer that wisdom and contentment growing in hand-in-hand will lead India into increasing national greatness within a free Empire, the Empire for which I labour and for which, if it be Divine Will, my son shall labour after me."

The enthusiasm with which the Prince was greeted at the outset of his tour was very marked. But simultaneously with the loyal display riots broke out in Bombay which speedily developed into faction fights between various communities in which the casualties were heavy, many lives being lost. Order in some parts of the city was only restored after three or four days of lawlessness.

The Government of India.

The impulse which drove the British to India was not conquest but trade. The Government of India represents the slow evolution from conditions established to meet trading requirements. On September 24, 1599, a few years before the deaths of Queen Elizabeth and Akbar, the merchants of London formed an association for the purpose of establishing direct trade with the East and were granted a charter of incorporation. The Government of this Company in England was vested in a Governor with a General Court of Proprietors and a Court of Directors. The factories and affairs of the Company on the East and West Coast of India, and in Bengal, were administered at each of the principal settlements of Madras (Fort St. George), Bombay and Calcutta (Fort William), by a President or Governor and a Council consisting of the senior servants of the Company. The three "Presidencies" were independent of each other and subordinate only to the Directors in England.

Territorial Responsibility Assumed.

The collapse of government in India consequent on the decay of Moghul power and the intrigues of the French on the East Coast forced the officers of the Company to assume territorial responsibility in spite of their own desires and the insistent orders of the Directors. Step by step the Company became first the dominant, then the paramount power in India. In these changed circumstances the system of government by mutually independent and unwieldly councils of the merchants at the Presidency towns gave rise to grave abuses. Parliament intervened, and under the Regulating Act of 1773, a Governor-General and four councillors were appointed to administer the Presidency of Fort William (Bengal), and the supremacy of that Presidency over Madras and Bombay was for the first time established. The subordinate Presidencies were forbidden to wage war or make treaties without the previous consent of the Governor-General of Bengal in Council, except in cases of imminent necessity. Pitt's Act of 1784, which established the Board of Control in England, vested the administration of each of the three Presidencies in a Governor and three councillors, including the Commander-in-Chief of the Presidency Army. The control of the Governor-General-in-Council was somewhat extended, as it was again by the Charter Act of 1793. Under the Charter Act of 1833 the Company was compelled to close its commercial business, and it became a political and administrative body holding its territories in trust for the Crown. The same Act vested the direction of the entire civil and military administration and sole power of legislation in the Governor-General-in-Council, and defined more clearly the nature and extent of the control to be extended over the subordinate governments. After the Mutiny, there was passed, in 1858, an Act transferring the Government of India from the Company to the Crown. This Act made no important change in the administration in India, but the Governor-General, as representing the Crown, became known as the Viceroy. The Governor-General is the sole representative of the Crown in India; he is assisted by a Council, composed of high officials; each of whom is responsible for a special department of the administration.

Functions of Government.

The functions of the Government in India are perhaps the most extensive of any great administration in the world. It claims a share in the produce of the land and in the Punjab and Bombay it has restricted the alienation of land from agriculturists to non-agriculturists. It undertakes the management of landed estates where the proprietor is disqualified. In times of famine it undertakes relief work and other remedial measures on a great scale. It manages a vast forest property and is the principal manufacturer of salt and opium. It owns the bulk of the railways of the country, and directly manages a considerable portion of them; it has constructed and maintains most of the important irrigation works; it owns and manages the post and telegraph systems; it has the monopoly of the Note issue, and it alone can set the mints in motion. It lends money to municipalities, rural boards, and agriculturists and occasionally to owners of historic estates. It controls the sale of liquor and intoxicating drugs and has direct responsibilities in respect to police, education; medical and sanitary operations and ordinary public works of the most intimate character. The Government has also close relations with the Native States which collectively cover more than one-third of the whole area of India and comprise more than one-fifth of its population. The distribution of these great functions between the Government of India and the provincial administrations has fluctuated and was definitely regulated by the Reform Act of 1919.

THE REFORMS OF 1919.

Great changes were made in the system of government in British India by the Government of India Act, 1919, which, together with the rules framed under it—almost as important in their provisions as the Act itself—came into general operation in January 1921. The Act was the outcome of an inquiry conducted in India in the winter of 1917-18 by the Secretary of State (Mr. Montagu) and the Viceroy (Lord Chelmsford), the results of which were embodied in their Report on Indian Constitutional Reform issued in the spring of 1918. The recommendations in this report were supplemented by those of two Committees which toured India in the winter of 1918-19, and which issued their Reports in the spring of 1919. A third Committee was appointed during the latter year to make recommendations for the modification of the system of administration of Indian affairs in the United Kingdom, and issued their Report while the Government of India Bill was under examination by a Joint Select Committee of both Houses of Parliament. The Joint Select Committee in their turn issued an exhaustive Report on the Bill, which was passed in a form practically identi-

cal with that recommended by the Joint Committee, and received the Royal Assent on the 23rd December 1919.

The Divisions.—British India for administrative purposes is divided into 15 provinces, each with its separate Local Government or administration. In eight of the provinces—the three Presidencies of Madras, Bombay and Bengal, the United Provinces of Agra and Oudh, the Punjab, Bihar and Orissa, the Central Provinces, and Assam—the Local Government consists of a Governor, an executive Council of not more than four members, and two or more Ministers. In one province—Burma—the Local Government consists, pending further legislation, of a single individual—the Lieutenant-Governor, assisted by a secretariat and headquarter staff, but Burma is to be brought into line with the other Provinces. The remaining six provinces are directly administered by Chief Commissioners, who are technically mere agents of the Central Government of India. No change has been made by the Act of 1919 in the system of administration in these six minor provinces, and although Burma has been given separate provincial revenues along with the eight major provinces, and representation on the newly constituted Indian Legislature, the Act of 1919 did not profess to make any change in the internal constitution of this province.

Dyarchy.—In these eight provinces the executive Government is a dual organism which owes its unity to the Governor. One half of the organism consists of the Governor and his executive Council, all of whom are appointed by the King. This body is responsible for the administration of those subjects which are "reserved." The other half of the executive organism is the Governor acting with the advice of Ministers who are appointed by him, hold office during his pleasure, and must be elected members of the Provincial Legislative Council. To the Governor acting with Ministers is entrusted the administration of "transferred" subjects.

The Object.—The framers of the Act of 1919 had a twofold object in view. Their primary object was to devise a plan which would render possible the introduction by successive stages of a system of responsible government in British India in modification of the previous system under which the Governments in India, both central and provincial, received their mandates from the British Parliament acting through the Secretary of State for India, the Cabinet Minister responsible to Parliament for the administration of Indian affairs. Earlier statutes thus enshrined a purely official hierarchy, consisting of the Secretary of State in Council at the apex, the Governor-General in Council (commonly known as "the Government of India") in supreme control in India, and the various Local Governments in their own provincial areas. The law enjoined upon the Local Governments implicit obedience to any instructions they might receive from the Government of India, vested in the Secretary of State in Council unlimited power to "superintend, direct and control all acts, operations and concerns which relate to the government and revenues of India," and similarly vested superintendence, direction and control over all government affairs civil and military, in India in the Government of India, subject to any instructions or directions it might receive from the Secretary of State in Council. The whole fabric was thus inextricably interwoven. The various Local Governments were primarily responsible for the preservation of law and order, and for the administration of domestic affairs in their own areas, and the Government of India was primarily responsible for the administration of those matters which affected the whole of India, and for the maintenance of good relations between province and province, though it was also responsible for the general oversight and direction of administration throughout British India. Tradition and practice, based chiefly on convenience, had therefore, to a considerable extent operated to demarcate "spheres of influence" for the Local Governments and for the Government of India respectively. But the demarcation was not clear cut, and was in no sense legally recognised. Constitutional theory, as founded upon the law in force up to the Act of 1919, made the Secretary of State responsible to Parliament for every phase of governmental activity in India and for the raising and expenditure of every rupee of Indian revenues; and, although the extent to which the exercise of this responsibility in the detailed superintendence of the formulation of policy and of the day-to-day administration in the provinces and at the centre varied from time to time with the varying personality of individual Secretaries of State and the varying interest displayed by Members of Parliament in Indian affairs, the fact that responsibility did lie to Parliament for every detail of Indian administration rendered inevitable a close and detailed supervision from Whitehall. This in its turn necessitated a similar relationship between the Government of India and the provinces. With the increasing complexity of Government activities, it was inevitable that the Local Governments, at all events of the major provinces, should gradually acquire considerable freedom in the management of their domestic affairs; but the Government of India, in virtue of its statutory right of control and intervention and its concurrent powers of legislation for the provinces, was always able, and frequently bound, to exercise powers, both executive and legislative, which at times tended to excessive centralisation and to the subordination of the best interests of one part of British India to what was conceived to be the uniform advantage of the provinces as a whole.

The Provinces.—Starting from the premise that it was in the provinces that the first substantial steps must be taken towards the development of a system of responsible government, the framers of the Act of 1919 provided for a statutory demarcation of the functions to be exercised by the Government of India and the Provincial Governments respectively, in their administrative capacity. No attempt was made in this connection to limit the field open to the Indian Legislature, which still retains a concurrent (though not an overriding) power of legislation for the affairs of the

provinces in general of individual provinces; but the rules under the Act provide specifically for the exercise of this right in certain specified provincial matters, and the theory upon which the Act proceeds assumes that a convention will be established and rigorously observed which will confine intervention by the Indian Legislature in provincial affairs to matters so specified.

Finance.—The "revenues of India"—or, rather, their sources—are definitely divided between the Central and Provincial Governments; the Provincial Governments have now almost complete control over the administration of their "allocated" revenues, they have power to supplement them by raising loans on the security of these revenues, and their right, subject in certain cases to the Governor-General's sanction, to initiate new taxation measures is formally recognised.

It was found impossible to devise any scheme of allocation of revenues between the Central and Provincial Governments which did not leave the former with a deficit. This deficit is to be met in part by an annual contribution from seven of the eight Governors' provinces, the province of Bihar and Orissa, owing to the comparative exiguousness and inelasticity of its own revenues, having been exempted from this contribution. The aggregate sum thus due from the provinces to the Government of India at the outset is Rs. 983 lakhs, of which Madras contributes Rs. 348 lakhs, the United Provinces Rs. 240 lakhs, the Punjab Rs. 175 lakhs, and the other four provinces sums ranging from Rs. 15 lakhs to Rs. 64 lakhs. The annual contribution is in no case to be subject to increase in the future, and if reduction of the aggregate is found possible by the Government of India, reductions are to be made in fixed proportions from the quota of the several provinces.

Responsibility.—The first steps towards responsibility were to transform the Provincial Legislative Council into a body of sufficient size and with a sufficiently large elected majority (which the Act fixes at 70 per cent. as a minimum) to represent adequately public opinion in the province, and to create an electorate. The first franchise rules have given the vote to about 5,000,000 of the adult male population, and have enabled the Legislative Council of any "Governor's province" to extend the franchise to women. The following table shows the strength and composition of each of the Provincial Councils:—

Province.	Elected.	Nominated and *ex-officio*.		Total.
		Officials.	Non-officials.	
Madras	98	23	6	127
Bombay	86	20	5	111
Bengal	113	20	6	139
United Provinces	100	18	5	123
Punjab	71	16	6	93
Bihar and Orissa	76	18	9	103
Central Provinces	53	10	5	68
Assam	39	9	5	53

The figures for officials in this table are maxima in every case, and where less than the maximum number of officials is nominated to any Council, the number of nominated non-officials must be increased in proportion; *e.g.*, if there are only 16 officials (nominated and *ex-officio*) on the United Provinces Council, there must be seven nominated non-officials. The official members who have seats *ex-officio* are the members of the Executive Council, who are at present four in number (the statutory maximum) in Madras, Bombay, and Bengal, three in Bihar and Orissa, and two in each of the remaining provinces. These Executive Councils contain an equal number of Indian and British members except in Bihar and Orissa (which has an Indian Governor), where two of the three members are British officials.

Electorates.—The electorates in each province are arranged for the most part on a basis which is designed to give separate representation to the various races, communities, and

special interests into which the diverse elements of the Indian population naturally range themselves. Although there are minor variations from province to province, a table showing their character in one province (Bengal) will give a sufficiently clear idea of the general position.

Class of Electorate.	No. of Electorates of this Class.	No. of Members returnable by Electorates of this Class.
Non-Muhammadan	42	46
Muhammadan	34	39
European	3	5
Anglo-Indian (in the technical sense of persons of mixed European and Asiatic descent).	1	2
Landholders	5	5
University	1	1
Commerce and Industry	8	15
Total	94	113

Of the 94 constituencies in Bengal, all but nine (those representing the University and Commerce and Industry) are arranged on a territorial basis, *i e*, each constituency consists of a group of electors, having the prescribed qualifications which entitle them to a vote in a constituency of that class, who inhabit a particular area. The normal area for a "Muhammadan" or "non-Muhammadan" constituency is a district (or where districts are large and populous, half a district) in the case of rural consituencies, and, in the case of urban constituencies, a group of adjacent municipal towns Some large towns form urban constituencies by themselves, and the City of Calcutta provides eight sparate constituencies, six "non-Muhamadan" and two "Muhammadan" the latter, of course, being coterminous with the former.

Throughout the electoral rules there runs a general classification of the various kinds of constituencies into two broad categories, those which are designed to represent special interests, such as Landholders, Universities, Planters or Commerce being described as "special" constituencies, and those which are based on a racial distinction—Muhammadan, European, Sikh, etc.—being known as "general" constituencies.

Voters' Qualifications.—The qualifications for electors (and consequently for candidates) vary in detail from province to province, chiefly on account of variations in the laws and regulations which form the basis of assessment of income or property values. Generally speaking, both in rural and urban areas the franchise is based on a property qualification as measured by the payment of a prescribed minimum of land revenue or of its equivalent, or of income tax, or of municipal taxes, but in all provinces retired, pensioned or discharged officers and men of the regular army are entitled to the vote, irrespective of the amount of their income or property. The actual number of voters registered in each province on the first rolls prepared under the new Act are shown in the following table, but owing to the short time available for the preparation of these rolls it is not unlikely that the revision due before the next elections will result in a general increase :—

TABLE SHOWING TOTAL NUMBER OF VOTERS REGISTERED IN EACH PROVINCE ON THE ROLLS PREPARED FOR THE ELECTIONS OF 1920

Madras ..	1,258,156	Punjab ..	505,361
Bombay ..	548,419	Bihar and Orisas ..	327,564
Bengal ..	1,021,418	Central Provinces.	144,737
United Provinces	1,347,278	Asam ..	203,191
Total ..		5,356,124.	

POWERS OF PROVINCIAL LEGISLATIVE COUNCILS.

In origin the legislative authority in British India was a meeting of the Governor-General (or, in the case of the Presidencies of Madras and Bombay, of the Governor) with his Executive Council, "for the purpose of legislation." When met for this purpose there were added to the Executive Council certain "additional members," at first very few in number, and those few all nominated by the Governor-General or the Governor, as the case might be. A Council so constituted had originally no powers or duties beyond those immediately arising out of the discussion of the particular legislative measure which at the time was engaging its attention, and its functions were confined strictly to the discussion and enactment of legislative measures. In course of time the number of "additional" members, and the proportion of these who were non-official Indians, were steadily increased, the principle of election was gradually substituted for nomination as the means of selecting non-official members, and the functions of the Councils were extended so as to include the right of interpellation, of the discussion of matters of general public interest, and of criticising and discussing the budget proposals of the Executive Government. This extension of the powers of the Councils was in the main the result of the "Morley-Minto Act" of 1909. The Indian Councils

Act of 1892 had given power to discuss the budget but not to divide the Council upon it Lord Morley's Act went further and provided that, notwithstanding the terms of the Indian Councils Act of 1861 which had restricted the powers of all Councils to the discussion of legislative measures, the Local Government might make rules authorising the discussion of the annual financial statement, of any matter of general public interest, and the asking of questions under such conditions and restrictions as might be imposed by the rules, and these rules recognised the right of the Councils to vote on motions thus submitted for their discussion The other results of the Act of 1909 were definitely to recognise the principle of election as the means of selecting non-official members of all Councils (although the method adopted was mainly that of indirect election), a considerable increase in the number of both non-official and official members, and the setting up in every province of a non-official (though not, save in one province, an elected) majority. A further important, though indirect, result of the Morley-Minto Act was the appointment of an Indian member to the Executive Council of the Governor-General, and to such Provincial Executive Councils as were then in existence and subsequently created.

Old System.—But although the Legislative Councils (which, originally created in two provinces only in addition to the Governor-General's Legislative Council, existed in 1919 in nine provinces) had steadily acquired a more and more representative character and a large share of the normal functions of a legislative assembly as generally understood, they still remained in theory up to the passing of the Act of 1919 mere accretions to the Executive Government of the provinces for the purpose of advising on, and enacting, legislation. It is true that the non-official element in the Provincial Council's as constituted by Lord Morley's Act of 1909 had acquired a considerable measure of control over legislation, in view of the fact that in most provinces that Act and the rules framed under it placed the non-official members in a slight majority over their official colleagues; but for various reasons this control, even in the sphere of legislation, can hardly be described as definite popular control, and over matters outside the legislative sphere the Councils had no controlling voice at all.

The Changes.—The most important changes made by the Act of 1919 in the powers of the Provincial Councils were—

(*i*) the power to vote (and consequently to withhold) supplies;

(*ii*) a greatly enhanced freedom of initiation in the matter of legislation; and

(*iii*) power to frame their own rules of procedure in matters of detail, subject to the Governor's concurrence.

A further right which the Councils will acquire after four years from the time of their commencement is the right to elect their own President. At the outset the President is nominated by the Governor, but from the start every Council has an elected Deputy President. The Governor (who formerly was *ex-officio* President of his Legislative Council) no longer has any direct connection with its proceedings. The first-named of these newly acquired powers is of sufficient importance to require a detailed explanation of its scope, which can best be given in the terms of the Act itself (section 72D).

72D.—(1) The provisions contained in this section shall have effect with respect to business and procedure in governors' legislative councils.

(2) The estimated annual expenditure and revenue of the province shall be laid in the form of a statement before the council in each year, and the proposals of the local government for the appropriation of provincial revenues and other moneys in any year shall be submitted to the vote of the council in the form of demands for grants. The council may assent, or refuse its assent, to a demand, or may reduce the amount therein referred to either by a reduction of the whole grant or by the omission or reduction of any of the items of expenditure of which the grant is composed:—

Provided that—

(*a*) the local government shall have power, in relation to any such demand, to act as if it had been assented to, notwithstanding the withholding of such assent or the reduction of the amount therein referred to, if the demand relates to a reserved subject, and the governor certifies that the expenditure provided for by the demand is essential to the discharge of his responsibility for the subject; and

(*b*) the governor shall have power in cases of emergency to authorise such expenditure as may be in his opinion necessary for the safety or tranquility of the province, or for the carrying on of any department; and

(*c*) no proposal for the appropriation of any such revenues or other moneys for any purpose shall be made except on the recommendation of the governor, communicated to the council.

(3) Nothing in the foregoing sub-section shall require proposals to be submitted to the council relating to the following heads of expenditure:—

(*i*) Contributions payable by the local government to the Governor-General in Council; and

(*ii*) Interest and sinking fund charges on loans; and

(*iii*) Expenditure of which the amount is prescribed by or under any law; and

(*iv*) Salaries and pensions of persons appointed by or with the approval of His Majesty or by the Secretary of State in Council; and

(*v*) Salaries of judges of the high court of the province and of the advocate-general.

If any question arises whether any proposed appropriation of moneys does or does not relate to the above heads of expenditure, the decision of the governor shall be final.

Executive and Legislature:—In the light of these facts it is now possible to explain more exactly the relationship between the provincial executive and the provincial legislature. The dual character of the former has already been mentioned, and the corresponding bifurcation of provincial subjects into "reserved" and "transferred" categories. The rules under the act prescribe a list of 20 subjects which are trans-

ferred to the administration of the Governor acting with Ministers, the more important of which are Local Self-Government, Medical Administration, Public Health, Education (with certain reservations), Public Works, Agriculture, Excise, and Development of Industries The "reserved" subjects comprise all those in the list of "provincial" (as distinct from "central") subjects which are not transferred.

Machinery:—No change has been made by the Act of 1919 in the machinery and methods of administration by the Governor in Council; decisions are taken at the Council Board, as before, by a majority vote, and the Governor is entitled, as before, to overrule such a vote in certain specified circumstances if he disagrees with it. For such decisions the Governor in Council remains, as before, responsible to the Secretary of State and Parliament, and on questions of legislation and supply he has the power of enforcing them despite opposition by a majority of the Legislative Council. But, the whole spirit of the Act and the existence of a large non-official elected majority in every Provincial Legislative Council is an important factor in determining the policy to be pursued by the official half of the Government in its administration of reserved subjects. A further and not less important factor is the existence in the Government, side by side with the Executive Council, of two or more Ministers appointed from the elected members of the legislature, who, though they are not charged by law with, and in fact are legally absolved from, any responsibility for decisions on matters outside the transferred sphere, will necessarily be able, and in fact are expected, to make their opinions felt by their colleagues in the Executive Council. But these factors, while they will doubtless lead to constant endeavour on the part of the official half of the Government to accommodate its policy to the wishes of its ministerial colleagues and of the majority of the legislature, and to avoid situations which involve resort to the enforcement of its decisions in the face of popular opposition, are not intended to obscure the responsibility to Parliament in the last resort of the Governor in Council for the administration of reserved subjects and the right of His Majesty's Government, and of the Secretary of State as a member thereof, to lay down and require the observance of any principles which they regard as having the support of Parliament, and, in the last resort, of the British electorate.

Transfer of Control.—With regard to transferred subjects the position is very different. Here there has been an actual transfer of control from the British elector and the British Parliament to the elector and the Legislative Council in the Indian province. The provincial subjects of administration are grouped into portfolios, and just as each member of the Executive Council has charge of a portfolio consisting of a specified list of "reserved" subjects or "departments," so each Minister is directly responsible for the administration of those particular transferred "departments" which are included in his portfolio. But his responsibility lies, not, as in the case of a member of the Executive Council, to the Government of India, the Secretary of State and Parliament, but to the Provincial Legislative Council of which he is an elected member and from which he is selected by the Governor as commanding or likely to command the support of the majority of that body. He holds office during the Governor's pleasure, but his retention of office is contingent on his ability to retain the confidence not only of the Governor, but also of the Legislative Council, upon whose vote he is directly dependent for his salary. Further, the control of the Legislative Council over transferred subjects, both as regards supplies and legislation, is almost entirely free from the restrictions just noticed which necessarily qualify its control over the "reserved" subjects. It is thus within the power of the Provincial Council to insist on the pursuit of a policy of its own choice in the administration of transferred subjects by withdrawing its confidence from a Minister who departs from that policy and bestowing it only on a successor who will follow its mandate; and this power is dependent on the provincial elector in virtue of his freedom to control the composition of the Legislative Council by the use which he makes of his vote No doubt this statement requires some qualification before it can be accepted as literally accurate, for, technically, the authority charged with the administration of transferred subjects is "*the Governor acting with Ministers* appointed under this Act," not the Ministers acting on their own initiative, and, further, the Governor, who is not, of course, subject to removal from office by the Legislative Council, is charged personally with responsibility for the peace and tranquillity of his province, and would be entitled, and indeed bound, to recommend the removal of a department from the transferred list if he found the legislature bent on pursuing a policy in its administration which, in his judgment, was incompatible with the maintenance of peace and tranquillity; yet the powers of control vested in the Legislative Council over the transferred sphere are undoubtedly great, and it was the opinion at all events of the Joint Select Committee that legislature and Ministers should be allowed to exercise them with the greatest possible freedom. "If after hearing all the arguments," observed the Committee, "Ministers should "decide not to adopt his advice, then in the "opinion of the Committee the Governor should "ordinarily allow Ministers to have their way, "fixing the responsibility upon them, even if "it may subsequently be necessary for him to "veto any particular piece of legislation. It "is not possible but that in India, as in all other "countries, mistakes will be made by Ministers "acting with the approval of a majority of the "Legislative Council, but there is no way of "learning except through experience and "the realisation of responsibility."

Provision of Funds.—The terms of the Act leave the apportionment of the provincial revenues between the two halves of the executive for the financing of reserved and transferred subjects respectively to be settled by rules, merely providing that rules may be made "for "the allocation of revenues or moneys for the purpose of such "administration" *i.e.*, "the "administration of transferred subjects by the "Governor acting with Ministers." Probably the best description available of the method adopted by the rules for the settlement of this matter is the recommendation of the Joint

Select Committee whose proposals have been followed with one modification only to enable the Governor to revoke at any time, at the desire of his Council and Ministers an "order of allocation" or to modify it in accordance with the'r joint wishes. The passage is as follows :—

"The Committee have given much attention to the difficult question of the principle on which the provincial revenues and balances should be distributed between the two sides of the provincial governments They are confident that the problem can readily be solved by the simple process of common sense and reasonable give-and-take, but they are aware that this question might, in certain circumstances, become the cause of much friction in the provincial government, and they are of opinion that the rules governing the allocation of these revenues and balances should be framed so as to make the existence of such friction impossible They advise that, if the Governor, in the course of preparing either his first or any subsequent budget, finds that there is likely to be a serious or protracted difference of opinion between the Executive Council and his Ministers on this subject he should be empowered at once to make an allocation of revenue and balances between the reserved and transferred subjects which should continue for at least the whole life of the existing Legislative Council The Committee do not endorse the suggestion that certain sources of revenue should be allocated to reserved and certain sources to transferred subjects, but they recommend that the Governor should allocate a definite proportion of the revenue, say, by way of illustration, two-thirds to reserved and one-third to transferred subjects, and similarly a proportion, though not necessarily the same fraction of the balances It the Governor desires assistance in making the allocation, he should be allowed at his discretion to refer the question to be decided to such authority as the Governor-General shall appoint. Further, the Committee are of opinion that it should be laid down from the first that, until an agreement which both sides of the Government will equally support has been reached, or until an allocation has been made by the Governor, the total provisions of the different expenditure heads in the budget of the province for the preceding financial year shall hold good.

The Committee desire that the relation of the two sides of the Government in this matter as in all others, should be of such mutual sympathy that each will be able to assist and influence for the common good the work of the other, but not to exercise control over it. The budget should not be capable of being used as a means for enabling Ministers or a majority of the Legislative Council to direct the policy of reserved subjects; but on the other hand the Executive Council should be helpful to Ministers in their desire to develop the departments entrusted to their care. On the Governor personally will devolve the task of holding the balance between the legitimate needs of both sets of his advisers."

THE CENTRAL GOVERNMENT

The structural changes made by the Act of 1919 in the system of government outside the eight "Governors' provinces" are of comparatively minor scope, though the spirit of the Act requires, as has already been shown, considerable modification of the relationship hitherto subsisting between the Provincial Governments on the one hand and the Government of India and the Secretary of State in Council on the other. The only concrete changes made in the constitution of the Central Government are the removal of the statutory bar to the appointment of more than six members of the Governor-General's Executive Council (which, however, has had the far-reaching consequence that three of the eight members of the Council are now Indians), and the reconstitution in a much more enlarged, representative and independent form of the central legislature It has already been observed that this body was, in origin, like all other legislative bodies in India, the Governor-General's Executive Council with the addition of certain "additional members" appointed to assist the Executive Council in the formulation of legislation. Despite its steady growth in size and influence, and despite the introduction of the elective system, the existence of "additional members," who of course under Lord Morley's Act greatly preponderated in numbers over the members proper, *i.e.*, the Executive Councilors, still persisted up to the passing of the Act of 1919. That Act, however, has entirely remodelled the "Indian Legislature," as it is now called, which has become, like the Legislative Council in a Governor's province a legislature with all the inherent powers ordinarily attributed to such a body save such as are specifically withheld by the terms of the Act It consists of two Chambers The Upper Chamber, or "Council of State," contains 60 members, of whom 34 are elected (including one member to represent Berar, who, though technically nominated, is nominated as the result of elections held in Berar), and 26 nominated, of whom not more than 20 may be officials The Lower Chamber, or "Legislative Assembly," consists of 144 members, of whom 104 are elected (including as in the case of the Council of State, one Berar member, who, though actually elected, is technically a nominee). Of the 40 nominated members, 26 are required to be officials. The members of the Governor-General's Executive Council are not *ex-officio* members of either Chamber, but each of them has to be appointed a member of one or other Chamber, and can vote only in the Chamber of which he is a member. Any member of the Executive Council, may, however, speak in either Chamber. The President of the Upper Chamber is a nominee of the Governor-General, as also, for the first four years after the constitution of the Chamber, is the President of the Legislative Assembly. But after that period the Lower Chamber is to elect its own President, and it elects its own Deputy-President from the outset. The normal lifetime of each Council of State is five years, and of each Legislative Assembly three years; but either Chamber, or both simul-

taneously, may be dissolved at any time by the Governor-General.

Election.—The method of election for both Chambers is direct, and although the number of electors is considerably smaller than for the Provincial Councils, it is a great advance on the very restricted and for the most part indirect franchise established under the Act of 1909 for the unicameral central legislature which no longer exists. Generally speaking, the electoral scheme for the Lower Chamber is on the same model as that for the Provincial Councils already described, except that, *firstly*, the property qualification for voters (and consequently for candidates) is higher in order to obtain manageable constituencies, and past service with the colours is not *per se* a qualification for the franchise, and *secondly*, that the constituencies necessarily cover a considerably larger area than constituencies for the Provincial Council. The distribution of seats in both Chambers, and the arrangement of constituencies, are on a provincial basis; that is a fixed number of the elective seats in each Chamber is assigned to representatives of each province, and these representatives are elected by constituencies covering an assigned area of the province.

The following table shows the allotment of the elective seats:—

	Legislative Assembly	Council of State.
Madras ..	16	5
Bombay ..	16	6
Bengal	17	6
United Provinces ..	16	5
Punjab ..	12	4
Bihar and Orissa ..	12	3
Central Provinces ..	6	2
Assam	4	1
Burma ..	4	2
Delhi	1	..
	104	34

Since the area which returns perhaps 80 members to a Provincial Council is the same as the area which returns perhaps 12 members to the Legislative Assembly—namely, the entire province in each case—it follows that on the direct election system this area must be split into constituencies which are much larger than the constituencies for the local Councils, and just as it is generally correct to say that the normal area unit for those rural constituencies for the latter which are arranged on a territorial basis is the district, it may be said that the normal area unit in the case of the Legislative Assembly is the Division (the technical term for the administrative group of districts controlled by a Divisional Commissioner).

The Franchise:—The general result of the first franchise arrangements under the Act is thus that there is in each province a body of electors qualified to vote for, and stand for election to, the Provincial Council, and that a selected number of these voters are qualified to vote for and stand for election to those seats in the Legislative Assembly which are assigned to the province. The qualifications for candidature for the Legislative Assembly are the same in each province, *mutatis mutandis*, as for candidature for the Provincial Council, except that in all provinces, so long as the candidate can show that he resides somewhere within the province, no closer connection with his particular constituency is insisted upon.

The franchise for the Council of State differs in character from that for the Provincial Council and the Legislative Assembly. The concern of the framers of the Act and rules was to secure for the membership of this body a character as closely as possible approximating to a "Senate of Elder Statesmen" and thus to constitute a body capable of performing the function of a "true revising Chamber." With this object, in addition and as an alternative to a high property qualification—adopted as a rough and ready method of enfranchising only persons with a stake in the country—the rules admit as qualifications certain personal attributes which are likely to connote the possession of some past administrative experience or a high standard of intellectual attainment. Examples of these qualifications are past membership of either Chamber of the Legislature as now constituted, or of its predecessor, or of the Provincial Council the holding of high office in local bodies (district boards, municipalities and corporations), membership of the governing bodies of Universities, and the holding of titles conferred in recognition of Indian classical learning and literature.

Powers:—The powers and duties of the Indian legislature differ but little in character within the "central" sphere from those of the provincial Councils within their provincial sphere, and it has acquired the same right of voting supplies for the Central Government. But as no direct attempt has yet been made to introduce responsible government at the centre the step in that direction having been avowedly confined to the provinces, and as consequently the Executive Government of India remains legally responsible as a whole for the proper fulfilment of its charge to the Secretary of State and Parliament, it follows that the powers conferred on provincial Governors to disregard an adverse vote of the Legislative Council on legislation or supplies are, as conferred on the Governor-General in his relationship with the Indian Legislature, less restricted in their operation than in the provinces; that is to say, they cover the whole field and are not confined in their application to categories of subjects.

THE INDIA OFFICE.

The Act makes no structural changes in the part played by the India Office in the administration of Indian affairs. Slight alterations have been effected in the number and tenure of office of the members of the Secretary of State's Council, and some relaxations have been made in the statutory rigidity which formerly bound their procedure and that of the Office in general. But provisions now exist which will undoubtedly as time

goes on have a material effect on the activities of the Office as it is now constituted. A High Commissioner for India has been appointed for the purpose of taking over, as the direct agent of the Government of India, that portion of India Office functions which is of the nature of agency, as distinct from administrative supervision and control. The process of separation of staff and functions for the purpose of this transfer will necessarily be somewhat slow, but a substantial beginning has been made by handing over to the direct control of the High Commissioner the large departments which are concerned with the ordering and supply of stores and stationery in England for Government use in India, with the payment of pensions to retired members of Indian services resident in the United Kingdom, and with the assistance of Indian students in England. Concurrently with this change, it is now possible to defray from British revenues the salaries of the Secretary of State and of the Parliamentary Under Secretary, and that portion of the cost of salaries of India Office staff and general maintenance which is attributable to the exercise of its administrative as distinct from purely agency functions.

In due course the apportionment to British estimates will be the cost of the India Office as it exists after the transfer of functions to the High Commissioner has been completely effected; then the salaries of the High Commissioner and his staff will be the only expenses in the United Kingdom chargeable to Indian revenues. Until that time arrives, however, an estimate was the only basis for settlement, and for five years from 1920-21. the cost ofthe India Office payable from British revenues has been fixed at 136,500*l*., which includes the salaries of the Secretary of State and of the Parliamentary Under Secretary, and a contribution of 40,000*l*., which has for some years been made by the Treasury towards Indian expenditure, as the result of the recommendations of the Welby Commission.

THE FUTURE.

The Act of 1919 and its provisions are essentially transitional. It is intended, not to set up a new and permanent constitution, but to make such changes in the law as will enable "the progressive realisation of responsible Government in British India as an integral part of the Empire." This feature of the Act was clearly expressed in its Preamble, but although the Preamble finds no place in the law as amended by the Act of 1919, that law now contains provision for the appointment, after a period of 10 years' trial of the law in its amended form, of a Parliamentary Commission "for the purpose of inquiring into the working of the system of government, the growth of education, and the development of representative institutions in British India, and matters connected therewith," and such a Commission, when appointed, is directed to "report as to whether it is desirable to establish the principle of responsible government, or to extend, modify, or restrict the degree of responsible government then existing" in British India. Had it been possible to legislate more exactly for a process of evolution, the Act would doubtless have provided for a series of such Commissions, as the means of affording to Parliament criteria for determining "the time and manner of each advance" in "progress by successive stages" towards attainment of the "declared policy," of which the Preamble speaks. But it will be the task of a future Parliament to decide what changes, by further legislat on or by amendment of the existing statutory rules, it is expedient to adopt in the light of the first Statutory Commission's enquiry: and in taking its decisions that Parliament will, in the main, be "guided" (as its predecessor of 1919 forecasted) "by the cooperation received from those on whom new opportunities for service" have been "conferred, and by the extent to which it is found that confidence can be reposed in their sense of responsibility."

PERSONNEL AND PROCEDURE.

The Governor-General and the "Executive" members of his Council are appointed by the Crown. No limit of time is specified for their tenure of office, but custom has fixed it at five years. There are seven Executive Members of Council. These Members hold respectively the portfolios of Land Revenue and Agriculture, the Home, the Finance and the Education Departments. The Law Member has charge of the Legislative Department, and a member with English official experience has charge of the Commerce and Industry Department. The Viceroy acts as his own member in charge of Foreign affairs. Railways are administered by a Board of three members, whose chairman has the status of a Secretary, and are under the general control of the Commerce and Industry Department. The Commander-in-Chief may also be and in practice always is, an "extraordinary" member of the Council. He holds charge of the Army Department. The Governors of Madras, Bombay and Bengal become "extraordinary" members if the Council meets within their Presidencies. The Council may assemble at any place in India which the Governor-General appoints; in practice it meets only in Delhi and Simla.

In regard to his own Department each Member of Council is largely in the position of a Minister of State, and has the final voice in ordinary departmental matters But any question of special importance, and any matter in which it is proposed to over-rule the views of a Local Government, must ordinarily be referred to the Viceroy Any matter originating in one department which also affects another must be referred to the latter, and in the event of the Departments not being able to agree, the case is referred to the Viceroy. The Members of Council meet periodically as a Cabinet—ordinarily once a week—to discuss questions which the Viceroy desires to put before them, or which a member who has been over-ruled by the

Viceroy has asked to be referred to Council. If there is a difference of opinion in the Council the decision of the majority ordinarily prevails, but the Viceroy can over-rule a majority if he considers that the matter is of such grave importance as to justify such a step. Each department office is in the subordinate charge of a Secretary, whose position corresponds very much to that of a permanent Under-Secretary of State in the United Kingdom, but with these differences—that the Secretary is present at Council meetings; that he attends on the Viceroy, usually once a week, and discusses with him all matters of importance arising in his Department; that he has the right of bringing to the Viceroy's special notice any case in which he considers that the Viceroy's concurrence should be obtained to action proposed by the Departmental Member of Council; and that his tenure of office is usually limited to three years. The Secretaries have under them Deputy, Under and Assistant Secretaries, together with the ordinary clerical establishments. The Secretaries and Under-Secretaries are usually members of the Indian Civil Service. The Government of India has no Civil Service of its own as distinct from that of the Provincial Governments, and officers serving under the Government of India are borrowed from the Provinces.

THE DIVISION OF FUNCTIONS.

The keynote of the scheme is effective provincial autonomy and the establishment of an immediate measure of responsibility in the Provinces all of which are raised to the status of Governors in Council. This demanded a sharp division between Imperial and Provincial functions. The following subjects are reserved to the Government of India, with the corollary that all others vest in the Provincial Governments:—

1. (*a*) Defence of India, and all matters connected with His Majesty's Naval, Military, and Air Forces in India, or with His Majesty's Indian Marine Service or with any other force raised in India, other than military and armed police wholly maintained by local Governments.

(*b*) Naval and military works cantonments.

2. External relations, including naturalisation and aliens, and pilgrimages beyond India.

3. Relations with States in India.

4. Political charges.

5. Communications to the extent described under the following heads namely:—

(*a*) railway and extra-municipal tramways, in so far as they are not classified as provincial, subjects under entry 6 (*d*) of Part II of this Schedule;

(*b*) aircraft and all matters connected therewith; and

(*c*) inland waterways, to an extent to be declared by rule made by the Governor General in Council or by or under legislation by the Indian legislature.

6. Shipping and navigation, including shipping and navigation on inland waterways in so far as declared to be a central subject in accordance with entry 5 (*c*).

7. Light-houses (including their approaches) beacons, lightships, and buoys.

8. Port quarantine and marine hospitals.

9. Ports declared to be major ports by rule made by the Governor General in Council or by or under legislation by the Indian legislature.

10. Posts, telegraph and telephones, including wireless installations.

11. Customs, cotton excise duties, income-tax, salt, and other sources of all-India revenues.

12. Currency and coinage.

13. Public debt of India.

14. Savings Banks.

15. The Indian Audit Department and excluded Audit Departments, as defined in rules framed under section 96-D (1) of the Act.

16. Civil law, including laws regarding status, property, civil rights and liabilities, and civil procedure.

17. Commerce, including banking and insurance.

18. Trading companies and other associations.

19. Control of production supply and distribution of any articles in respect of which control by a central authority is declared by rule made by the Governor General in Council or by or under legislation by the Indian legislature to be essential in the public interest.

20. Development of industries, in cases where such development by a central authority is declared by order of the Governor General in Council, made after consultation with the local Government or local Governments concerned expedient in the public interest.

21. Control of cultivation and manufacture of opium, and sale of opium for export.

22. Stores and stationery, both imported and indigenous, required for Imperial Departments.

23. Control of petroleum and explosives.

24. Geological survey.

25 Control of mineral development, in so far as such control is reserved to the Governor General in Council under rules made or sanctioned by the Secretary of State, and regulation of mines.

26. Botanical Survey.

27. Inventions and designs.

28. Copyright

29. Emigration from, and immigration into, British India, and inter-provincal migration.

30 Criminal law, including criminal procedure.

31. Central police organisation.

32. Control of arms and ammunition.

33. Central agencies and institutions for research (including observatories), and for professional or technical training or promotion of special studies.

34. Ecclesiastical administration, including European cemeteries.

35. Survey of India.

36. Archæology.

37. Zoological Survey.

38. Meteorology.

39. Census and statistics.

40. All-India services.

41. Legislation in regard to any provincial subject in so far as such subject is in Part

II of this Schedule stated to be subject to legislation by the Indian legislature, and any powers relating to such subject reserved by legislation to the Governor General in Council.

42. Territorial changes, other than inter-provincial, and declaration of law in connection therewith.

43. Regulation of ceremonial, titles, orders, precedence, and civil uniform.

44. Immovable property acquired by, and maintained at the cost, of the Governor General in Council.

45. The Public Service Commission.

Government of India.

VICEROY AND GOVERNOR-GENERAL OF INDIA

His Excellency the Right Hon. RUFUS DANIEL ISAACS, Earl of Reading, P.C., G.C.B., G.M.S.I., G.M.I.E., K.C.V.O., *assumed charge of office, 3rd April*, 1921.

PERSONAL STAFF OF THE GOVERNOR-GENERAL.

Private Secretary, S. R. Hignell, C.I.E., I.C.S.
Comptroller of the Household, Major W. W. Muir, O.B.E.
Military Secretary, Lieut.-Col. C. Kennedy Craufurd Stuart, O.B.E.
Asst. Private Secretary, C. L. Corfield, I.C.S.
Aides-de-Camp.—Capt. A. E. C. Harris, M.C., 7th Lrs.; Capt. R. T. Lawrence, M.C., 10th Lrs., Capt. C. M. W. Noel-Hill, Rifle Bde.; Capt. R. Burton, Gren. G'ds. (Res. of Offs.); Subadar-Major Dalpat Singh, Bahadur, I.O.M., 6th Royal Jat Lt. Infy., Subadar-Major Gulab Shah, (Hony. Lt.) Bahadur, 1-127th Bal. L. I.
Extra Aide-de-Camp.—Lt. G. G. Meares, M.C., R.A.
Honorary Aides-de-Camp—Lt.-Col. (Hony Col., late Ind. Volrs.) H. H. G. Mitchell, O.B.E., late 2nd Madras Gp. Garr. Arty., Lt.-Col. G. E. Llewhellin, V.D., Bihar L. H.; Lt.-Col. (Hony. Col, late Ind Volrs.) W. T. Wright, V.D., Punj. Rif.; Lt.-Col. T. F. Gavin-Jones, late 7th U. P. Horse, Lt.-Col. P. R. Cadell, C.S.I., C.I.E., V.D., late 15th Bo. Bn.; Lt.-Col R. St. J. Hickman, V.D., Surma V. L. H.; Lt.-Col J. Donald, C.I.E., I.C.S., Cal. Bn., Capt. E. J. Headlam, C.M.G., D.S.O., R.I.M.; Lt.-Col. (Hony. Col., late Volrs.) A. J. Pugh, O.B.E., V.D., Calcutta L. Horse; Lt.-Col. S. S. G. Tulloch, V.D., B. N. Ry. R.; Lt.-Col. W. M. Egerton, I.e.C., D.S.O., Rang'n Bn.; Raja Sir Hari Singh, K.C.I.E., Hony. Capt. General in, and Commander-in-Chief of, the Jammu and Kashmir State Forces; Ganpat Rao Raghunath Rajwade, C.B.E., Colonel in Gwalior State Army; Jafar Husain, Risaldar-Major, H. E. the Govr. Genl.'s Body Guard; Nawab O man Yar-ud-Dowla, Bahadur, Major and Commander of H. E. H. the Nizam's Regular Forces; B. Chamraj Urs, Sardar Bahadur, Lt.-Col. and Chief Commandant, Mysore State Forces; Risaldar-Maj. (Hony. Capt.) Abdul Aziz, Sardar Bahadur, late 5th Cav.; Madho Singh Rana, Subadar-Major (Hony. Capt.), Sardar Bahadur late 4th G.R.; Risaldar-Major (Hony. Capt.) Abdul Karim Khan, Sardar Bahadur, late Gover.-Genl.'s Body Guard Subdr.-Maj. (Hony. Capt.) Mit Singh, I.O.M., Sardar Bahadur, late 53rd Sikhs; Risaldar-Maj. Karm Singh, Bahadur, late 13th Lrs; Risaldar-Maj. (Hony. Capt.) Muhi-ud-din Khan, C.I.E., I.D.S.M., Sardar Bahadur, late 31st Lrs.

Surgeon, Major T. J. C. Evans, M.C., F.R.C.S., I.M.S.

Commandant of Body Guard, Major A. Brooke, 18th Lrs.

Ordinary Members—

COUNCIL.

Sir William Henry Hoare Vincent, K.C.S.I.
W. M. Hailey, C.S.I., C.I.E. (*Finance*).
Khan Bahadur Mian Muhammad Shafi, C.I.E.
Rao Bahadur B. N. Sarma.
Dr. Tej Bahadur Sapru.
C. A. Innes, C.I.E., I.C.S., Acting.

Extraordinary Member—
H. E. Lord Rawlinson, G.C.B., G.C.V.O., K.C.M.G., Commander-in-Chief in India.

SECRETARIAT.

REVENUE AND AGRICULTURE DEPARTMENT.
Secretary, J. Hullah, I.C.S.
Under-Secretary, J. W. Hearn, I.C.S.
Registrar, C. H. Martin.
Superintendents, A. B. E. Thomson, J. H. Green, H. H. Lincoln and T. McDonnell.

FINANCE DEPARTMENT.

Ordinary Branch.

Secretary, E. M. Cook, C.I.E., I.C.S.
Joint Secretaries, J. E. C. Jukes, C.I.E., I.C.S., and G. G. Sim, C.I.E., I.C.S.
Deputy Secretary, A. F. L. Brayne, I.C.S.
Assistant Secretary, A. V. V. Aiyar, B.A.
Registrar, E. W. Baker, I.S.O.
Superintendents, G. J. Piper, C. N. Charabarty, V. K. Menon, W. M. Mather, Ram Nath, P. C. Chetty, Shah Muhammad and Sital Singh.
Comptroller and Auditor-General, M. F. Gauntlett, C.B.E., C.I.E., I.C.S.
Controller of Currency, A. C. McWatters, C.I.E., I.C.S.

Military Finance Branch.

Financial Adviser, E. Burdon, I.C.S.
Additional Financial Advisers, B. N. Mitra, C.I.E., C.B.E., M.A., and A. A. L. Parsons, I.C.S.

Military Accountant General (*offg.*), Col. R. E. Carr-Hall, C.I.E., I.A.

Deputy Financial Advisers, Lt.-Col. G. W. Ross, D.S.O., I.A., Lt.-Col. S. G. V. Ellis, D.S.O., I.A., M. R. Coburn, O.B.E., and Commander A. W. Wood, R.N.

Assistant Financial Advisers, H. S. Cumber, G. E. Hodges, M.B.E. (*on leave*), G. M. Turner, F. J. Woolmer, H. I. Macdonald, H. F. Brisley (*Provisional*), R. T. Waugh (*offg.*) and H. D. Banerjee (*offg.*)

Superintendents, Major and Commissary T. A. Duffy (*on field service*), Rai Sahib Lala Hari Shanker Kaisth, A. K. Ghosh, Gauri Shankar, B.A., (*Provisional*), A. J. Mendes (*offg.*), and Rai Sahib K. C. Maulik, B.A.

FOREIGN DEPARTMENT

Political Secretary, Sir J. B. Wood, K.C.I.E.

Foreign Secretary, Sir H. R. C. Dobbs, C.S.I., C.I.E., (*on deputation*), Denys Bray, C.I.E., C.B.E. (*offg.*)

Deputy Secretary (*Foreign*), Major F. H. Humphrys, C.I.E.

Deputy Secretary (*General*), Major C. H. Gabriel

Under Secretary, K. S. Fitze.

Assistant Secretary, Major P. G. Loch.

Attache Khan Bahadur Nur-ul-Islam.

Registrar, T. G. B. Waugh.

Inspector-General, Imperial Service Troops, Major-General Sir H. D. E. Watson, K.B.E., C.B., C.M.G., C.I.E., M.V.O.

Superintendents, D. A. Clarke, E. Betram Higgs, F. P. Buckner, J. W. S. Inglis, R. C. Albert, F. S. Hosley, K. D. Fink, M. C. H. Hacourt, G. M. Coates, M. Smith, R. S. Budd, C. W. Kirkpatrick and Inam-ul-Hak.

HOME DEPARTMENT.

Secretary, The Hon. Mr. S. P. O. Donnel (*on leave*); H. D. Craik (*offg.*)

Deputy Secretary, C. W. Goynne.

Under Secretary, A. Macleod, I.C.S.

Registrar (*officiating*), A. Lawrence.

Superintendents, Rai Prasanna Kumar Basu Bahadur, Ramani Mohan Ganguli, U. C. Stuart, K. P. Anantan, W. D. Almedia, J. C. McDermott, T. P. Roy, Rai Bijay Krishna Banerji Bahadur and N. Banerji.

Officers on Special Duty Dr. L. F. Rushbrook Williams, O.B.E., and R. S. Bajpai, BAR-AT-LAW.

Inspector, Office Procedure.—R. J. Watson.

EDUCATION DEPARTMENT.

Secretary, H. Sharp, C.S.I., C.I.E.

Educational Commissioner with the Government of India, J. A. Richey, C.I.E.

Deputy Secretary, Maharaj Singh, C.I.E

Assistant Secretary, Dr. Wali Muhammad.

Superintendents, G. E. Jackson, A. H. Bartlett, P. N. Sen, and L. M. Roy.

Registrar, Rai Bahadur M. N. Chakrabarti.

Curator, Bureau of Education, G. R. Kaye, F.R.A.S.

LEGISLATIVE DEPARTMENT.

Secretary, H. Moncrieff Smith, C.I.E., I.C.S.

Deputy Secretary, S. C. Gupta.

Registrar, C. H. F. Pereira.

Superintendents, A. L. Banerji, E. H. Brandon, D. D. Baird, D. P. Dutt and F. A. Thorpe.

ARMY DEPARTMENT.

Secretary, Major-General Sir A. H. Bingley (*on leave*) Col. A. Shairp, C.M.G., *officiating*.

Deputy Secretary (*officiating*), A. A. Whelan.

Assist. Secretaries, Lt.-Col. F. G. Moore, Lt.-Col. G. W. Marshall, I.S.O., V.D., Capt. R. Tharle-Hughes, M.B.E., and Capt. H.W. Markwrick.

Registrar, A. B. Kurning.

Superintendents, J. E. G. Kirk, P. Hypher, J. C. R. Leslie, A. P. Bates, Rai Saheb J. C. Das Gupta and W. G. Macleod.

PUBLIC WORKS DEPARTMENT.

Secretary, Col. Sir S. D'A. Crookshank, K.C.M.G., C.B., C.I.E., D.S.O., M.V.O.

Deputy Secretary, R. P. Hadow.

Under Secretary, A. Brebner, C.I.E. (*on privilege leave*); *offg.* E. P. Burke.

Assistant Secretary, W. G. Dollman.

Superintendents, W. I. Tilden, Atanu Mohan Banerji Nihal Chand, L. Bloemink, W. R. Chambers and A. M. Price.

Inspr.-Genl. of Irrign (*offg.*), F. St. J. Gebbie, C.I.F., M.V.O.

Elecl. Adviser, J. W. Meares, F.R.A.S., M.I.C.E., M.I.E.E.

COMMERCE AND INDUSTRY DEPARTMENT.

Secretary, C. A. Innes, C.I.E., I.C.S.

Deputy Secretary, R. B. Ewbank, I.C.S.

Under Secretary, J. B. Taylor, I.C.S.

Registrar, E. P. Jones.

Superintendents, B. B. Banarji, Capt. C. H. Baldrey, Khan Saheb Chaudhri Fateh Din, K. D. Banerji, J. F. Reed and T. D. Ahmed.

RAILWAY BOARD.

President, The Hon. Col. W. D. Waghorn, C.B., C.M.G., R.E., *Members*, E. A. S. Bell, C.I.E., and A. M. Clark.

Secretary, H. L. Cole.

Chief Engineer, G. Richards.

POST OFFICE & TELEGRAPH DEPT.

Director-General of Posts & Telegraphs, Hon. Mr. G. R. Clarke, O.B.E.

NORTHERN INDIA SALT REVENUE.

Commissioner, J. C. Ferguson, Actg.

INDO-EUROPEAN TELEGRAPH DEPARTMENT.

Persian Gulf and Persian Sections.

Directors, E. E. Gunter, H. W. Smith, C.I.E., W. King-Wood, C.I.E. (*offg.*), Commander of Cable Steamer "Patrick Stewart," F. W. Townsend.

SURVEY DEPARTMENT.

Surveyor-General of India, Col. C. H. D. Ryder, C.I.E., D.S.O.

GEOLOGICAL SURVEY.

Director, E. H. Pascoe, M.A., F.G.S.

Superintendents, E. Vredenburg, B.Sc., F.G.S.; L. L. Fermor, D.Sc., F.G.S. and G. E. Pilgrim, D.Sc.

Chemist, W. A. K. Christie, B.Sc., Ph.D.

BOTANICAL SURVEY.

Director, Lt.-Col. A. T. Gage, M.B., I.M.S.; *Economic Botanist, (offg.)* P. M. Deb Barman; *Economic Botanist, Madras*, F. R. Parnell, *Economic Botanist, Bombay*, W. Burns, B.Sc.; *Economic Botanist, United Provinces*, H. M. Leake, M.A., F.L.S.

ARCHÆOLOGICAL SURVEY.

Director-General of Archæology, Sir J. H. Marshall; M.A., C.I.E.; D. B. Spooner, *Deputy Director-General*; *Superintendent, Western Circle*, Rakhal Das Banerjee, M.A.; *Superintendent, Southern Circle*, A. H. Longhurst; *Superintendent, Northern Circle*, Daya Ram Sahni; *Assistant Superintendent*, J. A. Page; *Superintendent, Burma*, C. Duroiselle, I.S.O; *Superintendent*, Frontier Circle, H. Hargreaves.

MISCELLANEOUS APPOINTMENTS.

Director-General, Indian Medical Service, Major-General Sir W. R. Edwards, C.B., C.M.G., M.D., I.M.S. (on leave). Major, General W. H. B. Robinson, C.B., K.H.S., I.M.S. (offg.).

Sanitary Commissioner with the Government of India, Lieut.-Col. F. H. G. Hutchinson, L. M. & S.

Deputy Director-General, Indian Medical Service, Lt.-Col. R. A. Needham, C.I.E., I.M.S.

Asstt. Director-General, Indian Medical Service (Sany.), Lt.-Col. W. D. H. Stevenson, C.I.E., I.M.S.

(*i*) Created an Earl .. .. June 1911

(*j*) During tenure of office, the Viceroy is Grand Master and First and Principal Knight of the two Indian Orders (G.M.S.I., and G.M.I.E.). On quitting office, he becomes G.C.S.I. and G.C.I.E., with the date of his assumption of the Viceroyalty.

*

The gradual evolution of the Indian constitution is fully traced in the article on 'The Government of India," which precedes this; so also are the great changes made by the Reform Act of 1919. For the purposes of easy reference the powers of the Legislatures, as well as the special powers reserved to the Governor-General for the discharge of his responsibilities, which are fully set out in the Act, are reproduced below:—

21. (1) Every Council of States shall continue for five years, and every Legislative Assembly for three years, from its first meeting:

Provided that—

(*a*) either chamber of the legislature may be sooner dissolved by the Governor-General and

(*b*) any such period may be extended by the Governor-General if in special circumstances, he so thinks fit; and

(*c*) after the dissolution of either chamber the Governor-General shall appoint a date not more than six months, or with the sanction of the Secretary of State, not more than nine months after the date of dissolution for the next session of that chamber.

22. (1) An official shall not be qualified for election as a member of either chamber of the Indian legislature, and, if any non-official member of either chamber accepts office in the service of the Crown in India his seat in that chamber shall become vacant.

(4) Every member of the Governor-General's Executive Council shall be nominated as a member of one chamber of the Indian legislature, and shall have the right of attending in and addressing the other chamber, but shall not be a member of both chambers.

24. (3) If any Bill which has been passed by one chamber is not, within six months after the passage of the Bill by that chamber, passed by the other chamber either without amendments or with such amendments as may be agreed to by the two chambers, the Governor-General may in his discretion refer the matter for decision to a joint sitting of both chambers, Provided that standing orders made under this section may provide for meetings of members of both chambers appointed for the purpose, in order to discuss any difference of opinion which has arisen between the two chambers.

(4) Without prejudice to the powers of the Governor-General under section sixty-eight of the principal Act, the Governor-General may where a Bill has been passed by both chambers of the Indian legislature, return the Bill for reconsideration by either chamber.

(7) Subject to the rules and standing orders affecting the chamber, there shall be freedom of speech in both chambers of the Indian legislature. No person shall be liable to any proceeding in any court by reason of his speech or vote in either chamber, or by reason of any thing contained in any official report of the proceedings of either chamber.

25. INDIAN BUDGET:—(1) The estimated annual expenditure and revenue of the Governor-General in Council shall be laid in the form of a statement before both chambers of the Indian legislature in each year.

(2) No proposal for the appropriation of any revenue or moneys for any purpose shall be made except on the recommendation of the Governor-General

(3) The proposals of the Governor-General in Council for the appropriation of revenue or moneys relating to the following heads of expenditure shall not be submitted to the vote of the legislative assembly, nor shall they be open to discussion by either chamber at the time when the annual statement is under consideration, unless the Governor-General otherwise directs—

(*i*) interest and sinking fund charges on loans; and

(*ii*) expenditure of which the amount is prescribed by or under any law; and

(*iii*) salaries and pensions of persons appointed by or with the approval of His Majesty or by the Secretary of State in Council; and

(*iv*) salaries of chief commissioners and judicial commissioners; and

(*v*) expenditure classified by the order of the Governor-General in Council as—

(*a*) ecclesiastical;

(*b*) political;

(*c*) defence.

(4) If any question arises whether any proposed appropriation of revenue of moneys, does or does not relate to the above heads the decision of the Governor-General on the question shall be final.

(5) The proposals of the Governor-General in Council for the appropriation of revenue or moneys relating to heads or expenditure not specified in the above heads shall be submitted to the vote of the legislative assembly in the form of demands for grants.

(6) The legislative assembly may assent or refuse its assent to any demand or may reduce the amount referred to in any demand by a reduction of the whole grant.

(7) The demands as voted by the legislative assembly shall be submitted to the Governor-General in Council, who shall, if he declares that he is satisfied that any demand which has been refused by the legislative assembly is essential to the discharge of his responsibilities, act as if it had been assented to, notwithstanding the withholding of such assent or the reduction of the amount therein referred to, by the legislative assembly.

(8) Notwithstanding anything in this section the Governor-General shall have power, in cases of emergency, to authorise such expenditure as may, in his opinion, be necessary for the safety or tranquillity of British India or any part thereof

26. EMERGENCY POWERS:—(1) Where either chamber of the Indian legislature refuses leave to introduce or fails to pass in a form recommended by the Governor-General, any Bill, the Governor-General may certify that the passage of the Bill is essential for the safety, tranquillity or interests of British India or any part thereof, and thereupon—

(*a*) if the Bill has already been passed by the other chamber, the Bill shall, on signature by the Governor-General, notwithstanding that it has not been consented to by both chambers, forthwith become an Act of the Indian legislature in the form of the Bill as originally introduced or proposed to be introduced in the Indian legislature, or (as the case

may be) in the form recommended by the Governor-General; and

(*b*) if the Bill has not already been so passed, the Bill shall be laid before the other chamber, and, if consented to by that chamber in the form recommended by the Governor-General, shall become an Act as aforesaid on the signification of the Governor-General's assent, or, if not so consented to shall, on signature by the Governor-General, become an Act as aforesaid.

(2) Every such Act shall be expressed to be made by the Governor-General and shall, as soon as practicable after being made, be laid before both Houses of Parliament, and shall not have effect until it has received His Majesty's assent, and shall not be presented for His Majesty's assent until copies thereof have been laid before each House of Parliament for not less than eight days on which that House has sat; and upon the signification of such assent by His Majesty in Council and the notification thereof by the Governor-General, the Act shall have the same force and effect as an Act passed by the Indian legislature and duly assented to:

Provided that, where in the opinion of the Governor-General a state of emergency exists which justifies such action, the Governor General may direct that any such Act shall come into operation forthwith, and thereupon the Act shall have such force and effect as aforesaid, subject, however, to disallowance by His Majesty in Council.

27. SUPPLEMENTAL PROVISIONS:—(1) In addition to the measures referred to in sub-section (2) of section sixty-seven of the principal Act, as requiring the previous sanction of the Governor-General it shall not be lawful without such previous sanction to introduce at any meeting of either chamber of the Indian legislature any measure—

(*a*) regulating any provincial subject, or any part of a provincial subject, which has not been declared by rules under the principal Act to be subject to legislation by the Indian legislature;

(*b*) repealing or amending any Act of a local legislature;

(*c*) repealing or amending any Act or ordinance made by the Governor-General.

(2) Where in either chamber of the Indian legislature any Bill has been introduced or is proposed to be introduced, or any amendment to a Bill is moved, or proposed to be moved, the Governor-General may certify that the Bill or any clause of it, or the amendment affects the safety or tranquillity of British India, or any part thereof, and may direct that no proceedings, or that no further proceedings, shall be taken by the chamber in relation to the Bill, cause, or amendment, and effect shall be given to such direction.

THE LEGISLATIVE ASSEMBLY.

President:—The Hon'ble Mr. Alexander Frederick Whyte.

A—ELECTED MEMBERS (103).

Constituency.	Name.
Madras City (Non-Muhammadan Urban) ..	Rao Bahadur Tiruvenkata Rangachariar Avargal.

The Provincial Governments.

The object of the Reforms is the progressive realisation of responsible Government. Responsible government implies two conditions, first, that the members of the executive government should be responsible to their constituents, and secondly that these constituents should exercise their power through the agency of their representatives in the Assembly. These two conditions entail that there exist constituencies based on a franchise broad enough to represent the interests of the population generally, and capable of selecting representatives intelligently; secondly, that there is recognised and constitutional practice that the executive Government cannot retain office unless it commands the support of a majority in the Assembly. In India, these conditions are not realised. There must be a period of political education which can only be achieved through the gradually expanding exercise of responsibility. Practical considerations make the immediate handing over of complete responsibility impossible. Accordingly, the principle is adopted of transferring responsibility for certain functions of Government while reserving control over others, while at the same time establishing substantial provincial autonomy.

Provincial Autonomy:—Since substantial provincial autonomy is to be a reality, the provinces must not be dependent on the Indian Government for the means of provincial development. The general idea of the scheme on this matter is that an estimate should first be made of the scale of expenditure required for the upkeep and development of the services which clearly appertain to the Indian sphere; that resources with which to meet this expenditure should be secured to the Indian Government; and that all other revenues should then be handed over to the provincial Governments which will thenceforth be held wholly responsible for the development of all provincial services. The principal changes in detail is the abolition of divided heads of revenue. Indian and provincial heads of revenue are retained as at present; but to the former income-tax and general stamps are to be added and to the latter land revenue, irrigation, excise and judicial stamps. It follows that expenditure on famine relief and the protective irrigation works will fall upon the provinces, though in the matter of famine relief, the Indian Government could never wholly renounce responsibility in the case of any failure on the part of the provinces.

This arrangement leaves the Government of India with a large deficit. In order to supplement this, the contribution from each province to the Government of India is assessed and fixed on the following basis:—

In the financial year 1921-22 contributions shall be paid to the Governor General in Council by the local Governments mentioned below according to the following scale:—

Name of Province.	Contributions (In lakhs of rupees).
Madras	348
Bombay	58
Bengal	63
United Provinces	240
Punjab	175
Burma	64
Central Provinces and Berar ..	22
Assam	15

From the financial year 1922-23 onwards a total contribution of 983 lakhs, or such smaller sum as may be determined by the Governor General in Council, shall be paid to the Governor General in Council by the local Governments mentioned in the preceding rule. When for any year the Governor General in Council determines as the amount of the contribution a smaller sum than that payable for the preceding year, a reduction shall be made in the contribution of those local Governments only whose last previous annual contribution exceeds the proportion specified below of the smaller sum so determined as the total contribution, and any reduction so made shall be proportionate to such excess:—

Madras	..17—90ths.
Bombay	..13—90ths.
Bengal	..19—90ths.
United Provinces	..18—90ths.
Punjab	.. 9—90ths.
Burma	..6½—90ths.
Central Provinces and Berar	.. 5—90ths
Assam	..2½—90ths.

In cases of emergency the local Government of any province may be required by the Governor-General in Council, with the sanction of, and subject to the conditions approved by the Secretary of State, to pay to the Governor-General in Council a contribution for any financial year in excess of the amount required by the preceding rules in the case of that year.

The System of Government:—In all the provinces there is collective administration, the system of a Governor in Council. At the head of the Executive is the Governor, with an Executive Council nominated by the Governor. Associated with the Executive Council as part of the Government are one or more Ministers chosen by the Governor from among the elected members of the Legislative Council and holding office for the life of the Council.

The plan is adopted of making a division of the functions of the Provincial Government, between those which may be made over to popular control and those which for the present must remain in official hands. These functions are called "transferred" and "reserved" respectively. In the Provincial Executive the Governor in Council has charge of the reserved subjects. This is one part of the Executive. The other part of the Executive consists of the Governor and Minister or Ministers and deals with the "transferred" subjects. As a general rule the Executive deliberate as a whole although there may be occasions upon which the Governor prefers to discuss a particular question with that part of the Government directly responsible. The decision upon a transferred subject and on the supply for it in the provincial budget is taken after general discussion by the Governor and his Ministers; the decision on a reserved subject is taken after similar discussion by the Governor and the members of his Executive Council.

The Ministers hold office not at the will of the legislature but at the will of their constituents. Their salary while they are in office is secured to them and is not at the pleasure of the Legislative Council. They together with the Governor form the administration for the transferred subjects. It is not intended that the Governor should from the first be bound to accept the decision of his Ministers, because he will himself be generally responsible for the administration. But it is also not intended that he should be in a position to refuse assent at discretion to all his Ministers' proposals. The intention is rather that the Ministers should avail themselves of the Governor's trained advice upon administrative questions, while he on his part is willing to meet their wishes to the furthest possible extent, in cases where he realises they have the support of popular opinion.

The keynote of the scheme, it has been explained, is the establishment of effective provincial autonomy and the introduction of responsible government in the Provinces. This connotes a sharp division of authority between the Central Government and the Provinces and the division of the provincial administration into two parts, the Reserved Subjects, namely those reserved to the Governor and his Executive Council; and the Transferred Subjects, or the subjects transferred under certain conditions to Ministers chosen from the Legislative Council. In the section dealing with the Government of India (q.v.) a list is given of the subjects reserved to the Central Government; all other subjects are delegated to the Provinces. The division of the provincial administration between Reserved and Transferred subjects is given in the following statement:—

List of Provincial Subjects Transferred.

Column I.	Column II.
1. Local self-government—that is to say, matters relating to the constitution and powers of municipal corporations, improvement trusts, district boards, mining boards of health, and other authorities established in the provinces for purposes of local self-governments, exclusive of matters arising under the Cantonments Act, 1910; subject to legislation by the Indian legislature as regards (*a*) the powers of such authorities to borrow otherwise than from a provincial Government, and (*b*) the levying by such authorities of taxation not included in Schedule II to the Schedule Taxes Rules.	All Governors' provinces.
2. Medical administration, including hospitals, dispensaries and asylums, and for medical education.	Ditto.
3. Public health and sanitation and statistics; subject to legislation by the Indian legislature in respect to infection and contagious diseases to such extent as may be declared by any Act of the Indian legislature.	Ditto
4. Pilgrimages within British India	Ditto.

List of Provincial Subjects for Transfer—contd.

Column I.	Column II.
5. Education, other than European and Anglo-Indian education, provided that— (*a*) the following subjects shall be excluded, namely :— (*i*) the Benares Hindu University and such other Universities constituted after the commencement of these rules as may be declared by the Governor General in Council to be central subjects, and (*ii*) Chiefs' Colleges and any institution maintained by the Governor General in Council for the benefit of members of His Majesty's Forces or of other public servants or of the children of such members or servants; and (*b*) the following subjects shall be subject to legislation by the Indian legislature, namely :— (*i*) the control of the establishment and the regulation of the constitutions and functions of University constituted after the commencement of these rules, and (*ii*) the definition of the jurisdiction of any University outside the province in which it is situated, and (*iii*) for a period of five years from the date of the commencement of these rules, the Calcutta University and the control and organisation of secondary education in the Presidency of Bengal.	All Governors' provinces.
6. Public Works included under the following heads, namely :— (*a*) construction and maintenance of provincial buildings, other than residences of Governors of provinces, used or intended for any purpose in connection with the administration of the province on behalf of the departments concerned, save in so far as the Governor may assign such work to the departments using or requiring such buildings; and care of historical monuments, with the exception of ancient monuments as defined in section 2 (1) of the Ancient Monuments Preservation Act, which are for the time being declared to be protected monuments under section 3 (1) of that Act: provided that the Governor General in Council may, by notification, in the *Gazette of India*, remove any such monument from the operation of this exception; (*b*) roads, bridges, ferries, tunnels, ropeways, and causeways, and other means of communication, subject to such conditions as regards control over construction and maintenance of means of communication declared by the Governor General in Council to be of military importance, and as regards incidence of special expenditure connected therewith, as the Governor General in Council may prescribe; (*c*) tramways within municipal areas; and (*d*) light and feeder railway and extra-municipal tramways, in so far as provision for their construction and management is made by provincial legislation; subject to legislation by the Indian legislature in the case of any such railway or tramway which is in physical connection with a main line or is built on the same gauge as an adjacent main line.	All Governors' provinces, except Assam.

List of Provincial Subjects for Transfer—concld.

Column I.	Column II.
7. Agriculture, including research institutes, experimental and demonstration farms, introduction of improved methods, provision for agricultural education, protection against destructive insects and pests and prevention of plant diseases; subject to legislation by the Indian legislature in respect to destructive insects and pests and plant diseases to such extent as may be declared by any Act of the Indian legislature.	All Governors' provinces.
8. Civil Veterinary Department, including provision for veterinary training, improvement of stock, and prevention of animal diseases; subject to legislation by the Indian legislature in respect to animal diseases to such extent as may be declared by any Act of the Indian legislature.	Ditto.
9. Fisheries	All Governors provinces, except Assam.
10. Co-operative Societies	All Governors' provinces.
11. Forests, including preservation of game therein; subject to legislation by the Indian legislature as regards disforestation of reserved forests.	Bombay.
12. Excise, that is to say, the control of production, manufacture, possession, transport, purchase, and sale of alcoholic liquor and intoxicating drugs and the levying of excise duties and license fees on or in relation to such articles, but excluding, in the case of opium, control of cultivation, manufacture, and sale for export.	All Governors' provinces, except Assam.
13. Registration of deeds and documents; subject to legislation by the Indian legislature.	All Governors' provinces
14. Registration of births, deaths, and marriages; subject to legislation by the Indian legislature for such classes as the Indian legislature may determine.	Ditto.
15. Religious and charitable endowments	Ditto.
16. Development of industries, including industrial research and technical education.	Ditto.
17. Stores and stationery required for transferred departments; subject in the case of imported stores and stationery, to such rules as may be prescribed by the Secretary of State in Council.	Ditto.
18. Adulteration of food-stuffs and other articles; subject to legislation by the Indian legislature as regards import and export trade.	Ditto.
19. Weight and measures; subject to legislation by the Indian legislature as regards standards.	Ditto.
20. Libraries (other than the Imperial Library), Museums (except the Indian Museum, the Imperial War Museum, and the Victoria Memorial, Calcutta) and Zoological Gardens.	Ditto.

POWERS OF THE LEGISLATURES.

Under the Reform Act there has been set up a Legislative Council in each Governor's Province, which consists of the members of the Executive Council and of nominated and elected members. The Governor is not a member of the Legislative Council, but he has the right of addressing the Council and may for that purpose require the attendance of the members. The number of members of the Legislative Council varies from Province to Province, but the Act provides that not more than twenty per cent. shall be official members and at least seventy per cent. shall be elected members. The powers of the Legislative Council and the special powers of Governors are clearly set out in the Act and the essential clauses are reproduced here:—

8. (1) Every Governor's legislative council shall continue for three years from its first meeting:

Provided that—

(*a*) the council may be sooner dissolved by the Governor; and

(*b*) the said period may be extended by the Governor for a period not exceeding one year, by notification in the official gazette of the province, if in special circumstances (to be specified in the notification) he so thinks fit; and

(*c*) after dissolution of the council the Governor shall appoint a date not more than six months or, with the sanction of the Secretary of State, not more than nine months from the date of dissolution for the next session of the council.

10. (1) The local legislature of any province has power, subject to the provisions of this Act, to make laws for the peace and good government of the territories for the time being constituting that province.

(2) The local legislature of any province may, subject to the provisions of the sub-section next following, repeal or alter as to that province any law made either before or after the commencement of this Act by any authority in British India other than that local legislature.

(3) The local legislature of any province may not, without the previous sanction of the Governor-General, make or take into consideration any law—

(*a*) imposing or authorising the imposition of any new tax unless the tax is a tax scheduled as exempted from this provision by rules made under the principal Act; or

(*b*) affecting the public debt of India, or the customs duties or any other tax or duty for the time being in force and imposed by the authority of the Governor General in Council for the general purposes of the Government of India, provided that the imposition or alteration of a tax scheduled as aforesaid shall not be deemed to affect any such tax or duty; or

(*c*) affecting the discipline or maintenance of any part of His Majesty's naval, military, or air forces; or

(*d*) affecting the relations of the government with foreign princes or states; or

(*e*) regulating any central subject; or

(*f*) regulating any provincial subject which has been declared by rules under the principal Act, to be, either in whole or in part, subject to legislation by the Indian legislature, in respect of any matter to which such declaration applies; or

(*g*) affecting any power expressly reserved to the Governor-General in Council by any law for the time being in force; or

(*h*) altering or repealing the provisions of any law which, having been made before the commencement of this Act by any authority in British India other than that local legislative is declared by rules under the principal Act to be a law which cannot be repealed or altered by the local legislature without previous sanction; or

(*i*) altering or repealing any provision of an Act of the Indian legislature made after the commencement of this Act, which by the provisions of that Act may not be repealed or altered by the local legislature without previous sanction:

Provided that an Act or a provision of an Act made by a local legislature, and subsequently assented to by the Governor-General in pursuance of this Act, shall not be deemed invalid by reason only of its requiring the previous sanction of the Governor-General under this Act.

(4) The local legislature of any province has not power to make any law affecting any Act of Parliament.

11. (2) The estimated annual expenditure and revenue of the province shall be laid in the form of a statement before the council in each year, and the proposals of the local government for the appropriation of provincial revenue and other moneys in any year shall be submitted to the vote of the council in the form of demands for grants. The council may assent, or refuse its assent, to a demand, or may reduce the amount therein referred to either by a reduction of the whole grant or by the omission or reduction of any of the items of expenditure of which the grant is composed:

Provided that—

(*a*) the local government shall have power in relation to any such demand, to act as if it had been assented to, notwithstanding the withholding of such assent or the reduction of the amount therein referred to, if the demand relates to a reserved subject, and the Governor certifies that the expenditure provided for by the demand is essential to the discharge of his responsibility for the subject; and

(*b*) the Governor shall have power in cases of emergency to authorise such expenditure as may be in his opinion necessary for the safety or tranquillity of the province, or for the carrying on of any department; and

(*c*) no proposal for the appropriation of any such revenues or other moneys for any purpose shall be made except on the recommendation of the Governor, communicated to the council.

(3) Nothing in the foregoing sub-section shall require proposals to be submitted to the Council relating to the following heads of expenditure:—

(*i*) contribution payable by the government to the Governor-General in Council; and

(*ii*) interest and sinking fund charges on loans; and

(*iii*) expenditure of which the amount is prescribed by or under any law; and

(*iv*) salaries and pensions of persons appointed by or with the approval of His Majesty or by the Secretary of State in Council; and

(*v*) salaries of judges of the High Court of the province and of the Advocate-General.

If any question arises whether any proposed appropriation of moneys does or does not relate to the above heads of expenditure, the decision of the Governor shall be final.

(4) Where any Bill has been introduced or is proposed to be introduced, or any amendment to a Bill is moved or proposed to be moved, the Governor may certify that the Bill or any clause of it or the amendment affects the safety or tranquillity of his province or any part of it or of another province, and may direct that no proceedings or no further proceedings shall be taken by the council in relation to the Bill, clause or amendment, and effect shall be given to any such direction.

(7) Subject to the rules and standing orders affecting the council, there shall be freedom of speech in the Governors' legislative councils. No person shall be liable to any proceedings in any Court by reason of his speech or vote in any such council or by reason of anything contained in any official report of the proceedings of any such council.

12. **Return and Reservation**:—(1) Where a Bill has been passed by a local legislative council the Governor, Lieutenant-Governor or Chief Commissioner may, instead of declaring that he assents to or withholds his assent from the Bill, return the Bill to the council for reconsideration, either in whole or in part, together with any amendments which he may recommend, or, in cases prescribed by rules under the principal Act may, and if the rules so require shall, reserve the Bill for the consideration of the Governor-General.

(2) Where a Bill is reseved for the consideration of the Governor-General, the following provisions shall apply:—

(*a*) The Governor, Lieutenant-Governor or Chief Commissioner may, at any time within six months from the date of the reservation of the Bill with the consent of the Governor-General, return the Bill for further consideration by the council with a recommendation that the council shall consider amendments thereto:

(*b*) After any Bill so returned has been further considered by the council, together with any recommendation made by the Governor, Lieutenant-Governor or Chief Commissioner relating thereto, the Bill, if re-affirmed with or without amendment, may be again presented to the Governor, Lieutenant-Governor, or Chief Commissioner.

(*c*) Any Bill reserved for the consideration of the Governor-General shall, if assented to by the Governor-General within a period of six months from the date of such reservation, become law on due publication of such assent, in the same way as a Bill assented to by the Governor, Lieutenant-Governor or Chief Commissioner but, if not assented to by the Governor-General within such period of six months, shall lapse and be of no effect unless before the expiration of that period either—

(*i*) the Bill has been returned by the Governor, Lieutenant-Governor or Chief Commissioner, for further consideration by the council; or

(*ii*) in the case of the council not being in session, a notification has been published of an intention so to return the Bill at the commencement of the next session.

(3) The Governor-General may (except where the Bill has been reserved for his consideration), instead of assenting to or withholding his assent from any Act passed by a local legislature, declare, that he reserves the Act for the signification of His Majesty's pleasure thereon, and in such case the Act shall not have validity until His Majesty in Council has signified his assent and his assent has been notified by the Governor-General.

13. **Emergency Powers**:—(1) Where a governor's legislative council has refused leave to introduce, or has failed to pass in a form recommended by the Governor, any Bill relating to a reserved subject the governor may certify that the passage of the Bill is essential for the discharge of his responsibility for the subject, and thereupon the Bill shall, notwithstanding that the council have not consented thereto, be deemed to have passed, and shall, on signature by the governor, become an Act of the local legislature in the form of the Bill as originally introduced or proposed to be introduced in the council or (as the case may be) in the form recommended to the council by the governor.

(2) Every such Act shall be expressed to be made by the governor, and the governor shall forthwith send an authentic copy thereof to the Governor-General, who shall reserve the Act for the signification of His Majesty's pleasure, and upon the signification of such assent by His Majesty in Council, and the notification thereof by the Governor-General, the Act have the same force and effect as an Act passed by the local legislature and duly assented to:

Provided that where, in the opinion of the Governor-General a state of emergency exists which justifies such action, he may, instead of reserving such Act, signify assent thereto, and thereupon the Act shall have such force and effect as aforesaid, subject however to disallowance by His Majesty in Council.

(3) An Act made under this section shall as soon as practicable after being made, be laid before each House of Parliament, and an Act which is required to be presented for His Majesty's assent shall not be so presented until copies thereof have been laid before each House of Parliament for not less than eight days on which that House has sat.

The Administration:—Each Local Government works through a Secretariat, which is divided into various departments, each under a Secretary. In addition to the Secretaries, there are special departmental heads such as the Inspectors General of Police, Jails, and Registration; the Director of Public Instruction, the Inspector-General of Civil Hospitals or Surgeon-General, the Sanitary Commissioner and the Superintendent of the Civil Veterinary Department. There are also Chief Engineers for Public Works and Irrigation, who are likewise Secretaries to Government. In nearly all the Provinces except Bombay, the revenue departments are administered, under Government, by a Board of Revenue.

The administrative system is based on the repeated sub-division of territory, each administrative area being in the responsible charge of an officer who is subordinate to the officer next in rank above him. The most important of these units is the District, and India embraces more than 250 Districts, with an average area of 4,430 square miles and an average population of 931,000. In Madras there is no local officer above the head of the District; elsewhere a Commissioner has the supervision of a Division comprising from four to six Districts. The head of a District is styled either the Collector and District Magistrate or the Deputy Commissioner. He is the representative of the Government and embodies the power of the State. He is concerned in the first place with the land and the land revenue. He has also charge of the local administration of the excise, income tax, stamp duty and other sources of revenue. As a Magistrate of the first class, he can imprison for two years and fine up to a thousand rupees. In practice he does not try many criminal cases, although he supervises the work of the other Magistrates in the District.

In addition to these two main departments the Collector is interested in all matters pertaining to the welfare of the people. In some branches of the administration his functions are, in consequence of the formation of special departments, such as those of Public Works, Forests, Jails, Sanitation, and Education less direct than was formerly the case. But even in matters dealt with by separate departments, his active co-operation and direction in counsel are needed. The Municipal Government of all considerable towns is vested in Municipalities but it is the duty of the Collector to guide and control their working. He is usually the Chairman of the District Board which, with the aid of subsidiary boards, maintains roads, schools and dispensaries, and carries out sanitary improvements in rural areas.

Other important district officers are the Superintendent of Police, who is responsible for the discipline and working of the police force, and the Civil Surgeon, who (except in Bombay) is the head of the medical and sanitary administration. The local organisation of Government Public Works, Forests, Education and other special departments varies in different parts of the country. Each District has its own law officer, styled the Government Pleader.

The Districts are split up into sub-divisions, under Junior Officers of the Indian Civil Service or members of the Provincial Service called Deputy Collectors. In Madras, Bombay and the United Provinces there are smaller sub-district units called taluks or tahsils, administered by tahsildars (Bombay Mamlatdars), with naib tahsildars or mahalkarris. The tahsildar is assisted by subordinate officers, styled revenue inspectors or kanungos and the village officers. The most important of the latter are the headman who collects the revenue, the karnam, karkun or patwari who keeps the village accounts, and the chaukidar or village watchman.

INSTRUCTIONS TO GOVERNORS

Prior to the inauguration of the Reforms the following Instructions were issued to Governors under the Royal Sign Manual:—

Instructions to the Governor or acting Governor for the time being of the Presidency or Province of——:—Whereas by the Government of India Act provision has been made for the gradual development of self-governing institutions in British India with a view to the progressive realisation of Responsible Government in that country as an integral part of our Empire, and whereas it is our will and pleasure that in the execution of the office of the Governor in and over the Presidency or the Province of ———you shall further the purposes of the said Act to the end that the institutions and methods of Government therein provided shall be laid upon the best and surest foundations, that the people of the said Presidency or Province shall acquire such habits of political action and respect such conventions as will best and soonest fit them for self-government, and that our authority and the authority of the Governor-General in Council shall be duly maintained. Now, therefore, we do hereby direct and enjoin you and declare our will and pleasure to be as follows —

1. You shall do all that lies in your power to maintain those standards of good administration, to encourage religious toleration, co-operation and good will among all classes and creeds, to ensure the probity of public finance and the solvency of the Presidency or Province, and to promote all measures making for the moral, social and industrial welfare of the people and tending to fit all classes of the population without distinction to take their due share in the public life and government of the country.

2. You shall bear in mind that it is necessary and expedient that those now and hereafter to be enfranchised shall appreciate the duties, responsibilities and advantages which spring from the privilege of enfranchisement, that is to say, that those who exercise the power, henceforward entrusted to them, of returning representatives to the Legislative Council being enabled to perceive the effects of their choice of a representative, and that those who are returned to the Council, being enabled to perceive the effects of their votes given therein, shall come to look for the redress of their grievances and the improvement of their condition to the working of representative institutions.

3. DUTY OF THE MINISTERS:—Inasmuch as certain matters have been reserved for the administration according to law of the Governor in Council, in respect of which the authority of our Governor-General in Council shall remain unimpaired, while certain other matters have been transferred to the administration of the Governor acting with a Minister. it will be for you so to regulate the business of the government of the Presidency or Province that so far as may be possible the responsibility for each of these respective classes of matters may be kept clear and distinct.

4. Nevertheless, you shall encourage the habit of joint deliberation between yourself, your councillors and your ministers in order that the experience of your official advisers may be at the disposal of your ministers, and that the knowledge of your ministers as to the wishes of people may be at the disposal of your councillors.

5. You should assist ministers by all the means in your power in the administration of the transferred subjects and advise them in regard to their relations with the Legislative Council.

6. In considering a minister's advice and deciding whether or not there is sufficient cause in any case to dissent from his opinion, you shall have due regard to his relations with the Legislative Council and to the wishes of the people of the Presidency or Province, as expressed by their representatives therein.

SPECIAL CHANGES:—But in addition to the general responsibilities with which you are, whether by statute or under this instrument, charged we do further hereby specially require and charge you:—

(1) To see that whatsoever measures in your opinion necessary for maintaining safety and tranquillity in all parts of your Presidency or Province and for preventing occasions of religious or racial conflict are duly taken and that all orders issued by our Secretary of State or by our Governor-General in Council on our behalf, to whatever matters relating, are duly complied with.

(2) To take care that due provision shall be made for the advancement and social welfare of those classes amongst the people committed to your charge, who whether on account of the smallness of their number or their lack of educational or material advantages or from any other cause, specially rely upon our protection and cannot as yet fully rely for their welfare upon joint political action, and that such classes shall not suffer or have cause to fear neglect or oppression.

(3) To see that no order of your Government and no act of your Legislative Council shall be so framed that any one of the diverse interests of, or arising from, race, religion, education, social condition, wealth or any other circumstance may receive unfair advantage or may unfairly be deprived of privileges or advantages which they have heretofore enjoyed, or be excluded from the enjoyment of benefits which may hereafter be conferred on the people at large.

(4) To safeguard all members of our services employed in the said Presidency or Province in the legitimate exercise of their functions and in the enjoyment of all recognised rights and privileges, and to see that your Government order all things justly and reasonably in their regard and that due obedience is paid to all just and reasonable orders and diligence shown in their execution.

(5) To take care that while the people inhabiting the said Presidency or Province shall enjoy all facilities for the development of commercial and industrial undertakings, no monopoly or special privilege which is against the common interests shall be established; and no unfair discrimination shall be made in matters affecting commercial or industrial interests.

Instruction to the Governor-General.

The instructions to the Governor-General were not made public while Lord Chelmsford held office, but after Lord Reading had succeeded him the following revised Instrument of Instructions was published in June 1921:—

Instructions to Our Governor-General of India given at Our Court at Buckingham Palace this 15th day of March 1921.

Whereas by the Government of India Act it is enacted that the Governor-General of India is appointed by Warrant under Our Royal Sign Manual, and We have by Warrant constituted and appointed a Governor-General to exercise the said office subject to such instructions and directions as he, or Our Governor-General for the time being, shall from time to time receive or have received under Our Royal Sign Manual or under the hand of one of Our Principal Secretaries of State;

And whereas certain instructions were issued under Our Royal Sign Manual to Our said Governor-General bearing date the nineteenth day of November 1918:

And whereas by the coming into operation of the Government of India Act, 1919, it has become necessary to revoke the said Instructions and to make further and other provisions in their stead;

Now, therefore, We do by these Our instructions under Our Royal Sign Manual hereby revoke the aforesaid instructions and declare Our pleasure to be as follows:—

I. Our Governor-General for the time being (thereinafter called Our said Governor-General) shall with all due solemnity cause our Warrant under Our Royal Sign Manual appointing him to be read and published in the presence of the Chief Justice for the time being or, in his absence, of the Senior Judge of one of the High Courts established in British India, and of so many of the Members of the Executive Council of Our said Governor-General as may conveniently be assembled.

Our said Governor-General shall take the Oath of Allegiance and the Oath for the due execution of the Office of Our Governor-General of India, and for the due and impartial administration of Justice in the forms hereto appended; which Oaths the said Chief Justice for the time being or, in his absence, the Senior Judge of one of Our said High Courts shall, and he is hereby required to, tender and administer unto him.

II. And We do authorise and require Our said Governor-General from time to time by himself or by any other person to be authorised by him in that behalf, to administer to every person who shall be appointed by Us by Warrant

under Our Royal Sign Manual to be a Governor of one of Our presidencies or provinces in India, and to every person who shall be appointed to be a Lieutenant-Governor or a Chief Commissioner, the Oaths of Allegiance and of Office in the said forms.

III. And We do authorise and require Our said Governor-General from time to time, by himself or by any other person to be authorised by him in that behalf, to administer to every person who shall be appointed by Us by Warrant under Our Royal Sign Manual or by the Secretary of State in Council of India to be a Member of the Governor-General's Executive Council or a Member of a Governor's Executive Council, and to every person who shall be appointed to be a Member of a Lieutenant-Governor's Executive Council, and to every person whom any of Our said Governors shall appoint to be a Minister, the Oaths of Allegiance and of Office in the said forms together with the Oath of Secrecy hereto appended.

IV. And We do further direct that every person who under these instructions shall be required to take an Oath, may make an affirmation in place of an Oath if he has any objection to making an Oath.

V. And We do hereby authorise and empower Our said Governor-General in Our name and on Our behalf to grant to any offender convicted in the exercise of its criminal jurisdiction by any Court of Justice within Our said Territories a pardon either free or subject to such lawful conditions as to him may seem fit.

VI. And inasmuch as the policy of Our Parliament is set forth in the Preamble to the said Government of India Act, 1919, We do hereby require Our said Governor-General to be vigilant that this policy is constantly furthered alike by his Government and by the local Governments of all Our presidencies and provinces.

VII. In particular it is Our will and pleasure that the powers of superintendence, direction and control over the said local Governments vested in Our said Governor-General and in Our Governor-General in Council shall, unless grave reason to the contrary appears, be exercised with a view to furthering the policy of the local Governments of all Our Governors' provinces, when such policy finds favour with a majority of the Members of the Legislative Council of the province.

VIII. Similarly, it is Our will and pleasure that Our said Governor-General shall use all endeavour consistent with the fulfilment of his responsibilities to Us and to Our Parliament for the welfare of Our Indian subjects, that the administration of the matters committed to the direct charge of Our Governor-General in Council may be conducted in harmony with the wishes of Our said subjects as expressed by their representatives in the Indian Legislature, so far as the same shall appear to him to be just and reasonable.

IX. For above all things it is Our will and pleasure that the plans laid by Our Parliament for the progressive realisation of responsible government in British India as an integral part of Our Empire may come to fruition, to the end that British India may attain its due place among Our Dominions. Therefore We do charge Our said Governor-General by the means aforesaid and by all other means which may to him seem fit to guide the course of Our subjects in India whose governance We have committed to his charge so that, subject on the one hand always to the determination of Our Parliament, and, on the other hand, to the co-operation of those on whom new opportunities of service have been conferred, progress toward, such realisation may ever advance to the benefit of all Our subjects in India.

X. And We do hereby charge Our said Governor-General to communicate these Our Instructions to the Members of his Executive Council, and to publish the same in such manner as he may think fit.

Administrative Divisions.

The Bombay Presidency.

The Bombay Presidency stretches along the west coast of India, from Sind in the North to Kanara in the South. It embraces, with its feudatories and Aden, an area of 186,923 square miles and a population of 27,084,317. Of this total 62,988 square miles are in Native States, with a population of 7,444,549. Geographically included in the Presidency but under the Government of India is the first class Native State of Baroda, with an area of 8,182 square miles and a population of 2,032,798.

The Presidency embraces a wide diversity of soil, climate and people. In the Presidency Proper are the rich plains of Gujarat, watered by the Nerbudda and the Tapti, whose fertility is so marked that it has long been known as the Garden of India. South of Bombay City the province is divided into two sections by the Western Ghats, a range of hills running parallel to the coast. Above Ghats are the Deccan Districts, with a poor soil and an arid climate, south of these come the Karnatic districts. On the sea side of the Ghats is the Konkan, a rice-growing tract, intercepted by creeks which make communication difficult. Then in the far north is Sind, totally different from the Presidency Proper, a land of wide and monotonous desert except where irrigation from the Indus has brought abounding fertility.

The People.

The population varies as markedly as soil and climate. In Sind Mahomedans predominate. Gujarat has remained true to Hinduism although long under the dominion of powerful Mahomedan kings. Here there is an amplitude of caste divisions, and a people, who although softened by prosperity, are amongst the keenest trading races in the world. The Deccan peasant has been seasoned by adversity; the saying goes that the Deccan expects a famine one year in every three, and gets it; the population is much more homogeneous than in Gujarat, and thirty per cent. are Mahrattas. The Karnatic is the land of the Lingayets, a Hindu reforming sect of the twelfth century, and in the Konkan there is a large proportion of Christians. Four main languages are spoken, Sindi, Gujarati, Marathi and Kanarese, with Urdu a rough *lingua franca* where English has not penetrated. The main castes and tribes number five hundred.

Industries.

The principal industry is agriculture, which supports sixty-four per cent. of the population. In Sind the soils are wholly alluvial, and under the influence of irrigation produce yearly increasing crops of wheat and cotton. In Gujarat they are of two classes, the black cotton soil, which yields the famous Broach cottons, the finest in India, and alluvial, which under careful cultivation in Ahmedabad and Kaira makes splendid garden land. The dominant soil characteristic of the Deccan is black soil, which produces cotton, wheat, gram and millet, and in certain tracts rich crops of sugarcane. The Konkan is a rice land, grown under the abundant rains of the submontane regions, and in the south the Dharwar cotton vies with Broach as the best in India. There are no great perennial rivers suitable for irrigation, and the harvest is largely dependent upon the seasonal rainfall, supplemented by well irrigation. A chain of irrigation works, consisting of canals fed from great reservoirs in the region of unfailing rainfall in the Ghats, is gradually being completed, and this will ultimately make the Deccan immune to serious drought. More than any other part of India the Presidency has been scourged by famine and plague during the past twenty years. The evils have not been unmixed, for tribulation has made the people more self-reliant, and the rise in the values of all produce, synchronising with a certain development of industry, has induced a considerable rise in the standard of living. The land is held on what is known as the ryotwari tenure, that is to say, each cultivator holds his land direct from Government under a moderate assessment, and as long as he pays this assessment he cannot be dispossessed.

Manufactures.

Whilst agriculture is the principal industry, others have no inconsiderable place. The mineral wealth of the Presidency is small and is confined to building stone, salt extracted from the sea, and a little manganese. But the handicrafts are widely distributed. The handloom weavers produce bright-coloured saris, and to a diminishing extent the exquisite kincobs of Ahmedabad and Surat. Bombay silver ware has a place of its own, as well as the brass work of Poona and Nasik. But the tendency is to submerge the indigenous handicrafts beneath industry organised on modern lines. Bombay is the great centre in India of the textile trade. This is chiefly found in the headquarter city, Bombay.

Number of Looms in Bombay Island.	60,634
Number of Spindles in Bombay Island.	2,964,526
Number of hands employed in the Textile Industry in Bombay Island.	140,208
Consumption of Cotton by the Mills in Bombay Island .. .. Cwts.	3,350,025
Number of Spindles in Ahmedabad.	1,039,996
Number of Looms in Ahmedabad ..	22,718
Number of Spindles in Sholapore ..	2 44,240
Number of Looms in Sholapore ..	4,339
Number of Spindles in the Bombay Presidency (excluding Bombay Island)	1,809,713
Number of Looms in the Bombay Presidency (excluding Bombay Island)..	34,982

Great impetus has been given to Bombay industries by the provision of electric power generated fifty miles away on the Ghats, and the year 1919 witnessed a phenomenal flotation of new industrial companies of almost every description.

The situation of Bombay on the western sea-board in touch at once with the principal markets of India and the markets of the west has given Bombay an immense sea-borne trade. The older ports, Surat, Broach, Cambay and Mandvie, were famous in the ancient days, and their bold and hardy mariners carried Indian commerce to the Persian Gulf and the coasts of Africa. But the opening of the Suez Canal and the increasing size of ocean steamers have tended to concen

trate it in modern ports with deep water anchorages, and the sea-borne trade of the Presidency is now concentrated at Bombay and Karachi, although attempts are being made to develop Mormugao, in Portuguese territory, into an outlet for the trade of the Southern Mahratta Country.

Administration.

The Presidency is administered by a Governor and an Executive Council of four members, with the assistance of three Ministers. The exact change made in the functions of the Provincial Governments is indicated in the section on the Provincial Governments (*q. v.*) where a description is given of the division of the administration into two branches, the Reserved Subjects, administered by the Governor and his Council and the Transferred Subjects, administered by the Governor and his Ministers, the whole Government commonly meeting and acting as one. In another part of that section the division between Reserved and Transferred subjects is shown. This new form of administration under the Reform Act of 1919 came into operation in January 1921. All papers relating to public service business reach Government through the Secretariat, divided into six main departments each under a Secretary (*a*) Revenue and Financial: (*b*) Political, Judicial and Special: (*c*) General, Educational, Marine and Ecclesiastical: (*d*) Ordinary Public Works: (*e*) Irrigation: (*f*) Home. The senior of the Civilian Secretaries is entitled the Chief Secretary. The Government frequently moves. It is in Bombay from November to the end of March; at Mahableshwar from April to June; in Poona from June to September; and at Mahableshwar from October to November; but the Secretariat is always in Bombay. Under the Governor-in-Council the Presidency is administered by four Commissioners. The Commissioner in Sind has considerable independent powers. In the Presidency Proper there are Commissioners for the Northern Division, with headquarters at Ahmedabad; the Central Division at Poona; and the Southern Division at Belgaum. Each district is under a Collector, usually a Covenanted Civilian, who has under him one or more Civilians as Assistant Collectors, and one or more Deputy Collectors. A collectorate contains on an average from eight to ten talukas, each consisting of from one to two hundred villages whose whole revenues belong to the State. The village officers are the patel, who is the head of the village both for revenue and police purpose; the talati or kulkarni, clerk and accountant; the messenger and the watchman. Over each Taluka or group of village is the mamlatdar, who is also a subordinate magistrate. The charge of the Assistant Deputy Collector contains three or four talukas. The Collector and Magistrate is over the whole District. The Commissioners exercise general control over the Districts in their Divisions. The control of the Government over the Native States of the Presidency is exercised through Political Agents.

Justice.

The administration of justice is entrusted to the High Court sitting in Bombay, and comprising a Chief Justice, who is a barrister, and six puisne judges, either Civilians, Barristers, or Indian lawyers. In Sind the Court of the Judicial Commissioner (three judges, one of whom must be a barrister) is the highest court of civil and criminal appeal. Of the lower civil courts the court of the first instance is that of the Subordinate Judge recruited from the ranks of the local lawyers. The Court of first appeal is that of the District or Assistant Judge, or of a first class subordinate judge with special powers. District and Assistant Judges are Indian Civilians, or members of the Provincial Service. In cases exceeding Rs. 5,000 in value an appeal from the decision of the Subordinate or Assistant Judge and from the decision of the District Judge in all original suits lies to the High Court. District and Assistant Judges exercise criminal jurisdiction throughout the Presidency, but original criminal work is chiefly disposed of by the Executive District Officers. Capital sentences are subject to confirmation by the High Court. In some of the principal cities Special Magistrates exercise summary jurisdiction (Bombay has four Presidency Magistrates, as well as Honorary Magistrates exercising the functions of English Justices of the Peace) and a Court of Small Causes, corresponding to the English Country Courts.

Local Government.

Local control over certain branches of the administration is secured by the constitution of local boards and municipalities, the former exercising authority over a District or a Taluka, and the latter over a city or town. These bodies are composed of members either nominated by Government or elected by the people, who are empowered to expend the funds at their disposal on education, sanitation, the construction of roads and tanks, and general improvements. Their funds are derived from cesses on the land revenue, the toll and ferry funds. The tendency of recent years has been to increase the elective and reduce the nominated element, to allow these bodies to elect their own chairmen, whilst large grants have been made from the general revenues for water supply and drainage.

Finance.

The finance of the provincial governments is marked by definite steps toward provincial financial autonomy. Up to 1870 there was one common purse for all India. Since then progressive steps have been taken to increase the independence of local Governments. Broadly, certain heads of revenue are divided with the Imperial Government, whilst certain growing heads of revenue, varying in each province, are allotted to the local Government. Thus in Bombay the land revenue, stamp revenue and revenue from assessed taxes are divided with the Government of India. All other local sources of revenue go intact to the local Government. The provincial Budget for 1921-22 shows an opening balance of Rs. 2,78 lakhs, revenue Rs. 15,40 lakhs, expenditure Rs. 16,42 lakhs.

Public Works.

The Public Works Department is under the control of two Chief Engineers who act as Secretaries to the Government; one for General Works and the other for Irrigation.

Under them are Superintending Engineers in charge of divisions and Executive Engineers in charge of districts, with the Consulting Architect. The chief irrigation works are in Sind and consist of a chain of canals fed by the annual inundations from the Indus and one perennial canal the Jamrao. In the Presidency proper the principal protective works are the Nera Canal, Gokak Canal, Mutha Canal and the Godavari Canal Scheme. In addition there is under construction a chain of protective irrigation works, originating in reservoirs in the Ghat regions. The Godavari canals were completed during the year 1917-18, the Pravara canals are approaching completion and the works in connection with the Nira Right Bank canal are making good progress.

Police.

The Police Force is divided into three categories: District Police, Railway Police and the Bombay City Police. The District Police are under the Inspector-General who is either a member of the Gazetted Force or a Covenanted Civilian. Under him are the Deputy Inspector-Generals for Sind and the Northern and Southern Ranges of the Presidency proper, for Railways and for Criminal Investigation. District Superintendents of Police have charge of each District with a regular cadre comprising Assistant Superintendents, Sub-Inspectors, Chief Constables and Constables. The Bombay City Police is a separate force maintained by Government under a Commissioner who is responsible direct to Government. The Training School at Nasik prepares young gazetted officers and the rank and file for their duties. The cost of the Police is 165 lakhs.

Education.

Education is imparted partly through direct Government agency, partly through the medium of grants-in-aid. Government maintain Arts Colleges at Bombay, Poona and Gujarat; the Grant Medical College, the Poona College of Science, the Agricultural College, Veterinary College, School of Art, Law School and a College of Commerce. A Science College in Bombay is now in course of construction. Also in Bombay City, and the headquarters of each district, a model secondary school. The other secondary schools are in private hands; the majority of the primary schools are maintained by District and Local Boards with a grant-in-aid. The Bombay Municipality is responsible for primary education in Bombay City. There are now in the Presidency 10 Arts Colleges, 5,197 Scholars; 140 boys' High Schools; 44 girls' High Schools; 315 boys' middle schools; 41 girls' middle schools. The total number of pupils attending Secondary Schools is 82,373, of whom 10,117 are girls; 12,714 primary schools attended by 602,157 boys and 157,965 girls. Total expenditure on education is 235 lakhs.

The Educational Department is administered by a Director, with an Inspector in each Division and a Deputy Inspector with Assistants in each district. Higher education is controlled by the Bombay University (established in 1857) consisting of the Chancellor (the Governor of the Presidency), the Vice-Chancellor (appointed by Government for two years), and 110 Fellows of whom 10 are *ex-officio*; 10 elected by the Graduates, 10 by the Faculties; and 80 are nominated by the Chancellor.

The principal educational institutions are:—

Government Arts Colleges—

Elphinstone College, Bombay, Principal, Mr. Covernton.

Deccan College, Poona, Principal, Mr. H. G. D. Turnbull.

Gujarat College, Ahmedabad, Principal, the Rev. W. G. Robertson.

Dharwar College, Principal, Mr. H. G. Rawlinson.

Private Arts Colleges—

St. Xaviers, Bombay (Society of Jesus), Principal, Rev. Father Blatter.

Wilson College, Bombay (Scottish Mission), Principal, Rev. J. Mackenzie.

Ferguson College, Poona (Deccan Educational Society), Principal, Mr. Kanitkar.

Baroda College, Baroda (Baroda State), Principal, Mr. Masani.

Samaldas College, Bhavnagar (Bhavnagar State), Principal, Mr. Unwalla.

Bahauddinbhai College, Junagadh State, Principal, Mr. Scott.

Special Colleges—

Grant Medical College, Bombay (Government), Principal, Lt.-Col. Carter.

College of Science, Poona (Government) Principal, Dr. Allen.

Agricultural College, Poona (Government), Principal, Dr. Harold Mann.

Chiefs' College, Rajkot, Principal, Mr. C. Mayne.

College of Science, Ahmedabad.

Law School, Bombay, Principal, Mirza Ali Akbar Khan.

College of Commerce, Bombay, Principal, Mr. M. J. Antia.

Veterinary College, Bombay, Mr. K. Hewlett.

Bombay Bacteriological Laboratory, Director Lt.-Col. Glen Liston, C.I.E., I.M.S.

Sir J. J. School of Art, Bombay (Government), Principal, Mr. W. E. G. Solomon.

Victoria Technical Institute, Bombay.

Medical.

The Medical Department is in charge of the Surgeon-General and Sanitation of the Sanitary Commissioner, both members of the Indian Medical Service. Civil Surgeons stationed at each district headquarters are responsible for the medical work of the district, whilst sanitation is entrusted to one of the Deputy Sanitary Commissioners. Three large hospitals are maintained by the Government in Bombay, and well-equipped hospitals exist in all important up-country stations. Over four million persons including 67,000 in-patients are treated annually. The Presidency contains 7 Lunatic Asylums and 16 institutions for the treatment of Lepers. Vaccination is

carried out by a staff under the direction of the Sanitary Commissioner. Sanitary work has received an immense stimulus from the large grants made by the Government of India out of the opium surpluses. The expenditure on medical relief is 35 lakhs and on sanitation 2 lakhs.

Governor and President in Council.

His Excellency The Right Hon'ble Sir George Ambrose Lloyd, G.C.I.E., D.S.O. Took his seat 17th December 1918.

Personal Staff.

Private Secy.—C. G. Adam, I.C.S.

Mily. Secretary—Major R. L. Benson, D. S. O., M. C.

Surgeon.—Lt.-Col. G. J. Grafton-Young, I.M.S.

Aides-de-Camp.—Captain C. Brooke-Short, Capt. G. S. Rawstorne, 2nd Bn., Seaforth Highlanders, Lt. The Hon. J. H. P. Verney, M. C., Capt. C. J. Brigg, 8th Cavalry (on leave), Lt. J. H. Carmichael, 1st Bn., Argyle and Sutherland Highlanders.

Honorary Aides-de-Camp.—Captain A. K. MacEwan, O. B. E.; Mr. C. N. Moberley, C.I.E., Stephen Calvocoressi; Meherban Sir Parashramrav Ramchandrarav Alis Bhausaheb Patwardhan, K.C.I.E., Chief of Jamkhandi; Meherban Abdul Majid Khan Diller Jang Bahadur, Nawab of Savanur; Thakor Saheb Bahadursinhji Mansinhji of Palitana; Kumar Shri Shivaisinhji of Jamnagar; Shaikh Abdul Khaliq of Mangrol.

Commandant H. E. the Governor's Bodyguard.—Capt. J. Nethersole, M.C., 25th Cavalry.

Indian Aide-de-Camp—Subadar Major Balkrishna Rao Sardar Bahadur, 110th Mahrattas.

Members of Council and Ministers.

Finance Member.—The Hon. Mr. G. S. Lawrence, C.S.I.

Revenue Member.—The Hon. Sir Ibrahim Rahimtulla.

Home Member.—The Hon. Mr. M. H. W. Hayward.

General Member.—The Hon. Sir Chimanlal Setalvad.

Minister of Education.—The Hon. Mr. R. P. Paranjpye.

Minister of Local Self-Government.—The Hon. Shaik Ghulam Husain Hidayatallah.

Minister of Forests and Excise.—The Hon. Mr. C. V. Mehta.

The Educational portfolio includes, among other subjects, Medical Administration, Public Health, Sanitation and Industrial Development. The Minister of Local, Self-Government also deals with Public Works (roads and buildings) and the Civil Veterinary Department; while Agriculture, Co-operative Societies, Registration and some other matters are in charge of the Minister of Forests and Excise.

SECRETARIES TO GOVERNMENT.

Chief Secretary, Financial Department.—P. J. Mead, C.S.I., C.I.E.

Home Department.—James Crerar, C.I.E., I.C.S

Secretary, Judicial and Political Departments—A. Montgomerie, I.C.S.

Revenue—C. M. Baker, B.A., C.I.E.

General, Educational, Marine and Ecclesiastical—J. C. Ker, M.A., I.C.S.

Legal Department and Remembrancer of Legal Affairs.—A. C. Wild, B.A., I.C.S.

Public Works Department.—Lt.-Colonel E. M. Procs, *Chief Engineer and Secretary.*

MISCELLANEOUS APPOINTMENTS.

Advocate-General, The Hon. Sir. T.J. Strangman.

Inspector-General of Police, F. C. Griffith, O.B.E.

Director of Public Instruction, The Hon. Mr. J. G. Covernton, C.I.E.

Surgeon-General, The Hon. Major-General W. E. Jennings, M.D., I.M.S.

Oriental Translator, Shaikh Yakub Vazir Muhammad, M.B E.

Chief Conservator of Forests, W. E. Copleston.

Talukadari Settlement Officer, G. E. Chatfield, C.I.E., I.C.S.

Settlement Commissioner and Director of Land Records, F. G. H. Anderson.

Director of Agriculture and Co-operative Societies, G. F. Keatinge, C.I.E.

Registrar of Co-operative Societies, Otto Rothfeld.

Municipal Commissioner, Bombay, H. B. Clayton, I.C.S.

Sheriff, Mr. Mahomedbhai Currimbhoy.

Vice-Chancellor, Bombay University, Sir Chimanlal H. Setalvad.

Registrar, Bombay University, Fardunji Dastur.

Commissioner of Police, Bombay, W. C. Holman.

Sanitary Commissioner, Lieut.-Col. William O'Sullivan Murphy, M.P., I.M.S.

Accountant-General (Acting), J. S. Milne.

Inspector-General of Prisons, Lt.-Col. F. O. N. Mell, C.I.E., I.M.S.

Postmaster-General, H. A. Sams, C.I.E , I.C.S.

Commissioner of Customs, Salt, Opium and Excise, W. C. Shepherd, B.A , I.C S.

Collector of Customs, Bombay, G. S. Hardy, I.C.S.

Consulting Architect to Government, Samuel Woods Hill, A R.L., B.A.

Consulting Surveyor to Government, Arthur Edward Mirams, F.S.I., F.S.A., F.R.S.I.

Registrar of Companies, Capt. H. C. B. Mitchell.

Director of Development, Sir Lawless Hepper, KT., R.E.

Director, Labour Office, G. Findlay Shirras, M.A.

Director, Bureau of Information, G. F. Gennings.

GOVERNORS OF BOMBAY.

Sir Abraham Shipman	1662
Died on the island of Anjediva in Oct.	1664
Humfrey Cooke	1665
Sir Gervase Lucas	1666
Died, 21st May, 1667.	
Captain Henry Garey (*Officiating*) ..	1667
Sir George Oxenden	1668
Died in Surat, 14th July, 1669.	

Gerald Aungier	1669
Died in Surat, 30th June, 1677.	
Thomas Rolt	1677
Sir John Child, Bart.	1681
Bartholomew Harris	1690
Died in Surat, 10th May, 1694.	
Daniel Annesley (*Officiating*)	1694
Sir John Gayer	1694
Sir Nicholas Waite	1704
William Aislabie	1708
Stephen Strutt (*Officiating*)	1715
Charles Boone	1715
William Phipps	1722
Robert Cowan	1729
Dismissed.	
John Horne	1734
Stephen Law	1739
John Geekie (*Officiating*)	1742
William Wake	1742
Richard Bourchier	1750
Charles Crommelin	1760
Thomas Hodges	1767
Died, 23rd February, 1771.	
William Hornby	1771
Rawson Hart Boddam	1784
Rawson Hart Boddam	1785
Andrew Ramsay (*Officiating*)	1788
Major-General William Medows	1788
Major-General Sir Robert Abercromby, K.C.B. (*a*).	1790
George Dick (*Officiating*)	1792
John Griffith (*Officiating*)	1795
Jonathan Duncan	1795
Died, 11th August, 1811.	
George Brown (*Officiating*)	1811
Sir Evan Nepean, Bart.	1812
The Hon. Mountstuart Elphinstone	1819
Major-General Sir John Malcolm, G.C.B.	1827
Lieut.-General Sir Thomas Sidney Beckwith, K.C.B.	1830
Died, 15th January, 1831.	
John Romer (*Officiating*)	1831
The Earl of Clare	1831
Sir Robert Grant, G.C.H.	1835
Died, 9th July, 1838.	
James Farish (*Officiating*)	1838
Sir J. Rivett-Carnac, Bart.	1839
Sir William Hay Macnaghten, Bart. (*b*)	
George William Anderson (*Officiating*)	1841
Sir George Arthur, Bart., K.C.H.	1842
Lestock Robert Reid (*Officiating*)	1846
George Russell Clerk	1847
Viscount Falkland	1848
Lord Elphinstone, G.C.H., P.C.	1853
Sir George Russell Clerk, K.C.B. (2nd time)	1860
Sir Henry Bartle Edward Frere, K.C.B.	1862
The Right Hon. William Robert Seymour Vesey FitzGerald.	1867
Sir Philip Edmond Wodehouse, K.C.B.	1872
Sir Richard Temple, Bart., K.C.S.I.	1877
Lionel Robert Ashburner, C.S.I. (*Acting*)	1880
The Right Hon. Sir James Fergusson, Bart., K.C.M.G.	1880
James Braithwaite Peile, C.S.I. (*Acting*)	1885
Baron Reay	1885
Baron Harris	1890
Herbert Mills Birdwood, C.S.I. (*Acting*)	1890
Baron Sandhurst	1890
Baron Northcote, C.B.	1900
Sir James Monteath, K.C.S.I. (*Acting*)	1903
Baron Lamington, G.C.M.G., G.C.I.E.	1903
J. W. P. Muir-Mackenzie, C.S.I. (*Acting*)	1907
Sir George Sydenham Clarke, G.C.M.G., G.C.J.E. (*c*).	1907
Baron Willingdon, G.C.I.E.	1913
Sir George Ambrose Lloyd, G.C.I.E., D.S.O.	1918

(*a*) Proceeded to Madras on duty in Aug., 1793, and then joined the Council of the Governor-General as Commander-in-Chief in India on the 28th Oct., 1793.

(*b*) Was appointed Governor of Bombay by the Honourable the Court of Directors on the 4th Aug., 1841, but, before he could take charge of his appointment, he was assassinated in Cabul on the 23rd Dec., 1841.

(*c*) Afterwards (by creation) Baron Sydenham

BOMBAY LEGISLATIVE COUNCIL.

The Madras Presidency.

The Madras Presidency, officially the Presidency of Fort St. George, together with the Native States, occupies the whole southern portion of the peninsula, and, excluding the Native States, has an area of 141,075 square miles. It has on the east, on the Bay of Bengal, a coast-line of about 1,200 miles; on the west, on the Indian Ocean, a coast-line of about 450 miles. In all this extent of coast, however, there is not a single natural harbour of any importance; the ports, with the exception of Madras, which has an artificial harbour, are merely open roadsteads. A plateau, varying in height above sea-level from about 1,000 to about 3,000 ft., and stretching northwards from the Nilgiri Hills, occupies the central area of the Presidency; on either side are the Eastern and the Western Ghats, which meet in the Nilgiris. The height of the western mountain-chain has an important effect on the rainfall. Where the chain is high, the intercepted rain-clouds give a heavy fall, which may amount to 150 inches, on the seaward side, but comparatively little rain falls on the landward side of the range. Where the chain is low, rain-clouds are not checked in their westward course. In the central tableland and on the east coast the rainfall is small and the heat in summer excessive. The rivers, which flow from west to east, in their earlier course drain rather than irrigate the country; but the deltas of the Godaveri, Kistna and Cauvery are productive of fair crops even in time of drought and are the only portions of the east coast where agriculture is not dependent on a rainfall rarely exceeding 40 inches and apt to be untimely.

Population.

The population of the Presidency in 1911 was 41,402,000 and that of the Native States was 4,813,000. Hindus account for 89 per cent., Mahomedans for 6, Christians for 3, and Animists for 2. The vast majority of the population is of Dravidian race, and the principal Dravidian languages, Tamil and Telugu, are spoken by 15 and 14 million persons, respectively. Of every 1,000 people, 407 speak Tamil, 377 speak Telugu, 74 Malayalam, 37 Canarese and 23 Hindustani. It is remarkable that of the 41 millions of population all but quarter of a million belong to it by birth.

Agriculture.

About 68 per cent. of the population is occupied in agriculture, nearly 49 per cent. having a direct interest as landowners and tenants. The total cropped area of 1919-20 was 38.2 million acres as against a normal of 39 million acres. Though the area cultivated is a bit below normal, it is much greater than that of last year when the total area cropped was only 36 million acres The increase in the area cultivated is due to the season which was on the whole favourable from an agricultural point of view. As such, the yield of the chief food crops and industrial crops was greater than that of last year. But the area under cotton cultivation has appreciably decreased from 3·1 million acres of last year to 2·34 million acres, this being due to the fall in prices and the preference given to the cultivation of food crops and especially to want of sufficient rains in the early part of the year in Guntur and Nellore. The considerable decrease in the area of sugar cultivation is due to a similar reason. Of the principal food grains, rice was cultivated on 11·7 million acres as against 11·4 in a normal year; cholum or great millet is 5·5 million acres as against 5·2; kambu or spiked millet in 3 3 million acres as against 3·5 million acres; ragi or millet in about 2·5 million acres though it was less than that of a normal year by 9,700 acres. Of the industrial crops groundnut was cultivated in 1·1 million acres as against 1·5 in a normal year, and cotton in 2·3 million acres though it was about 67,386 acres more than in a normal year. The acreage under tea and coffee was above normal, being 45,000 in the case of the former and 54,000 in that of the latter, and there is also a tendency for increased output. Nearly one-third of the cultivated area on the east coast has ordinarily to be irrigated, whereas on the West Coast no irrigation is necessary. The irrigation works on the East include about 28,000 tanks, 6,200 river channels, 6,100 spring channels, 1,400 anicuts, nearly 400,000 ayacut wells and 225,000 supplemental wells of all sorts. The utilisation of machinery for purposes of agriculture is steadily increasing, there being about 600 pumping installations all over the Presidency though a very small number of these plants, namely 144, is under the supervision of the Government Industrial Department, and the rest private. The harvest prices of the principal food grains were higher than that of last year, and during the year under review the supply of locally grown grain was generally low and the shortage of rice especially made good by imports from Burma and Bengal. Of the two most important exports of Madras, namely, cotton and groundnut, cotton export has increased slightly in spite of the fall in prices owing to large quantities in stock at the hands of the ryots; and groundnut export has also been resumed due to the removal of trade restrictions. The major part of the export to the extent of 67 per cent. was to France. There is great scarcity of labour and wages of labour increase rapidly.

A special feature of the agricultural activities of the Presidency is a large industry which the planting community have built up contributing substantially to the great economic development of the country during the past half a century. They have organised themselves as a registered body under the style and title of "The United Planters' Association of Southern India" on which are represented the coffee, tea and rubber and a few other minor planting produce; while safeguarding their own industry they have been able to do a great deal in adding to the wealth and resources of the country generally. So important a place do they occupy in the body-politic, that the Government have given them special representation on the Madras Legislative Council, besides passing special legislation for the control of their labour. The Government have also appointed a Deputy Director of Agriculture for the planting districts, besides one or two expert officers working in their area. Two new agricultural stations were established during the year at Coonoor on the Nilgiris for fruit culture and for rearing silk worms. The three experimental stations established in the previous year at Siddapur (Coorg), Peermede (Travancore)

and Mooply (Cochin) for coffee, tea and rubber, respectively, were brought into working order as well as a fourth station for the study of rubber at Tenmalai (S. Travancore). By far the most notable event of the year in regard to agricultural education was the introduction of a new scheme for the complete separation from the beginning of the certificate and diploma courses with different qualifications for admission to each. An application was made during the year to the University for the treatment of agriculture as a new department of science in the existing Faculty of Arts and Sciences and for the institution of a new degree to be known as B. Sc. Ag. Agricultural and Scientific Research and Experiments were carried on satisfactorily. The Botanical Herbarium at the Agricultural College, Coimbatore, now contains more than 16,000 sheets of identified specimens. The receipts and expenditure were roughly Rs. 4 and Rs. 13 lakhs, respectively, in 1920-21. The Agricultural and Industrial Departments are under the Reformed Act transferred subjects and the Minister in charge of the departments has already on hand, schemes for the scientific development of these two departments including forest industries on a commercial scale.

Forests.

At the close of 1920-21 there were 19,325 square miles of forests in the presidency. The difficulties of forest conservancy were accentuated during the year by the general unrest and by the preaching of non-co-operation. The output of timber during the period was 98,450 tons. A somewhat interesting development was the supply of ebony logs for fittings in some of the new buildings under construction at Delhi. Another innovation was the supply of logs to the agents for timber to the Government of India in London. The timber of *Terminalia tomentosa* has commanded a sale in London for cabinet work at very high prices and the department is attempting to develop the market. A keen demand was noticed in the year for nux-vomica consequent on the growing employment of strychnine in the preparation of insecticides for use in agriculture. A specially interesting feature of the year was the visit paid to the Presidency by Mr. C. S Martin, Consulting Forest Engineer to the Government of India, whose reports on the evergreen forests of Malabar and Tinnevelly were under the consideration of the Government. Mr. Martin's expert knowledge and long practical experience of the modern lumbering methods followed in America give special weight to his opinions and his advice is likely to prove of the greatest value in the systematic exploitation of the more valuable but hitherto undeveloped forests in the Madras Presidency.

Industries.

The Department of Industries is in charge of a Director who has five Assistants with headquarters at Bezwada, Bellary, Coimbatore, Madura and Madras. The department participated in three exhibitions held during the year 1920 and the exhibits aroused a great deal of interest. The Textile branch of the Department and the Kerala Soap Institute, Calicut, were awarded gold medals. The Bureau of Industrial and Commercial Information continued useful as also the Pumping and Boring Department. In the latter general information and advice on engineering questions was given free of charge, but a fee of Rs. 10 was demanded in cases where local inspection was necessary. The greater part of the work done in the tannery during the year was in connection with chrome tannages. As a result of continued experiments the department was able to produce chamois leather of very good quality. Seven peripatetic weaving parties went about the presidency demonstrating to weavers the advantages of improved methods and appliances. The Industrial Chemist was carrying out inquiries in connection with the production of power alcohol. The construction of an Industrial Institute at Coonoor was sanctioned with a view to organise the fruit preserving industry on the Nilgiris and at the same time to encourage an extension of existing fruit culture. At the Industrial Laboratory, Coonoor, the investigation of high-grade inks was proceeded with. The Government Trades School, Madras, developed satisfactorily. The number of industrial schools assisted by Government during the year was 37. The total expenditure of the department in 1920-21 rose from Rs 6·30 lakhs to Rs. 8·69 lakhs while the total receipts fell from Rs. 3·31 lakhs to Rs. 2·58 lakhs.

Trade.

The total value of the sea-borne trade of the Presidency during 1920-21 was Rs. 73·28 crores showing an increase of Rs. 1·12 crores or 1·5 per cent. as compared with that of the preceding year and of Rs. 15·12 crores or 26 per cent. as compared with 1913-14. The year was more strikingly abnormal than any of the war years. There was an adverse balance of trade. Foreign trade including Government transactions declined by Rs. 2·03 crores or 4 per cent. Under foreign trade imports expanded by Rs. 11·45 crores or 82 per cent. while exports declined by Rs. 13·48 crores or 37 per cent. There was an increase of Rs. 11·59 crores or 87 per cent. in the imports of private merchandise. Imports of motor-vehicles and hardware went up by 216 and 126 per cent owing to restricted supply in previous years. There was heavy speculative buying of paper, the imports of which rose by 340 per cent. Exports of private merchandise declined by Rs. 13·16 crores or 37 per cent. Exports of leather declined by 72 per cent. and those of raw skins by 75 per cent. due to the large accumulation of stocks in the consuming countries and general trade depression. The total value of Government stores imported and exported amounted to Rs. 30·11 lakhs and Rs. 0·68 lakhs respectively. There was an increase of 14 per cent. in the total amount of tonnage (2·46 million tons) available during the year for the carriage of ordinary merchandise, but the total number of vessels entered and cleared declined from 2,588 to 2,476. The average tonnage per vessel was 994 tons. The trade with the United Kingdom represented 52 per cent. of the total trade, compared with 48 per cent. in 1919-20 and expanded by Rs. 95·48 lakhs or 4 per cent. The trade with the British Empire representing 71 per cent of the aggregate trade of the Presidency increased by Rs. 43·32

lakhs or 1 per cent. The trade with the continent of Europe showed an increase by Rs. 213·79 lakhs or 45 per cent. and the increase occurred mainly in the trade with Belgium Germany, Holland and Norway. The trade with France showed a decrease. Decreased transactions with Japan and China resulted in a reduction of Rs. 237·97 lakhs in the trade with Asiatic ports. Interchanges with America which were practically confined to the United States declined by Rs. 187·63 lakhs or 35 per cent. Madras, the chief port, registered a total trade of Rs. 38·26 crores, representing 52 per cent. of the aggregate trade of the Presidency. Tuticorin for the first time lost its place in favour of Cochin as the first of the outports, but it still retained its pre-eminence in the foreign trade. The trade of Cochin Calicut, Negapatam and Cocanada improved in 1920-21 while that of Tuticorin, Mangalore, Dhanushkoti and Cuddalore declined. During the year Kasaragod in the South Kanara district was thrown open to foreign trade.

Salt.

The introduction of the Reforms scheme under the Government of India Act of 1919 led to the transfer of 'Excise' to the administration of the ministry. The rules of inspection were revised in 1920-21 with a view to the higher officers being able to devote special attention to circles and ranges where administration is weak and to make surprise visits as much as possible. The Madras Salt Act of 1889 was so amended as to provide for the recovery of the arrears of cess from the licensees summarily. Revised arrangements were sanctioned for the supply of Madras Salt to Travancore and Cochin Durbars. According to the new orders the duty on wastages in transit hitherto credited to the British Government will in future be credited to the Durbars concerned. This arrangement follows the existing practice in regard to salt obtained by the Durbars from Bombay. Of the total quantity of 11,357,196 maunds issued from salt factories during the year, 37,090 maunds were issued for export by sea to Calcutta, 60,536 maunds to the French Government, 481,986 maunds to the Travancore Durbar and 296,158 maunds to fish-curing yards, leaving 1,408,426 maunds which were distributed by rail or road for ordinary consumption in the areas usually supplied. No salt was taken to Cochin during the year 1920-21. In addition to the quantity of locally produced salt issued for ordinary consumption 1,520,629 maunds were imported by sea principally from Bombay into the West Coast districts and 250,714 maunds were imported from Bombay and Goa by rail. The imports from these areas into Mysore by rail were 630,191 maunds. Thus the total quantity of salt issued for the use of the Madras Presidency amounted to 12,882,960 maunds. The total salt revenue in 1920-21 was Rs. 146·12 lakhs as against Rs. 151·54 lakhs in 1919 while the total charges amounted to Rs. 46·80 lakhs.

Excise.

During the last quarter of 1920-21 a wave of temperance enthusiasm spread over certain parts of the Presidency and non-co-operators and temperance workers managed to interfere seriously with the business of the liquor sellers. As a result there was a substantial fall in the rentals obtained in the Ceded districts for the arrack shops sold in February and March 1921. The number of shops dealing in country spirits was 6,008 and the consumption 1,723,868 proof gallons. The total revenue from country spirits was Rs. 233·9 lakhs. The total revenue from toddy was Rs. 256 lakhs. The duty on imported and locally-made foreign liquor was raised from Rs. 11-4 to Rs. 18-12 per proof gallon with effect from 1st March. The total abkari revenue was Rs. 258·57 lakhs. The policy of Government has always been to minimise temptation to those who do not drink and to discourage excess among those who do and to the furtherance of this policy all considerations of revenue have been absolutely subordinate. In South India the sources of illicit supply are abundant and easily accessible. If the shops are closed liquor can be had from almost any palm. Every man can have his beer tap in his own back garden. It is hoped that those who desire to combat the evils of drunkenness by wholesale closure of shops will realize the shortsightedness of the policy they are following.

Education.

During the year 1920-21, the total number of public institutions rose from 34,288 to 35,895 and their strength 16,92,280 to 16,26,000. The percentage of male scholars to male population was 6·9 and the corresponding percentage for female scholars was 1·8. The percentage of the number of scholars, male and female to the total population was 4·4. The total expenditure for the year rose from Rs. 267 lakhs to Rs. 319 lakhs. The proportions which the public and private funds bear to the total expenditure are 56 and 44 per cent. respectively. Elementary and secondary education had the largest share in contributing to the increase in expenditure. On the 31st March 1921 there were first grade colleges for men 14, second grade for men 11, first grade for women 2, second grade for women 1, Oriental Colleges 13, Law College 1, Engineering College 1, Training Colleges 3, Veterinary College 1, Forest College 1, Agricultural College 1, Secondary schools 585, Elementary schools 34,906, special schools 345 with pupils in all 16,92,280. There were also 3,836 private institutions imparting instruction to 1,07,570 pupils. The number of secondary schools exclusively for Indian girls rose from 44 to 51 and the total number of institutions for females was 2,645 and their strength was 3,75,761. During the year the Madras Elementary Education Act was passed. The appointment of the Deputy Directress of Public Instruction was made permanent. A Woman's Branch of the Indian Educational Service was created. The Women's Secondary Grade Final Examination open to all women without any restriction as regards age and attendance at a recognised secondary school was instituted. A committee of five persons was appointed to advise Government on the selection of candidates for direct recruitment to the higher branches of the Educational service. Training classes were newly attached to several schools. The department is under a Director of Public Instruction who is subordinate

to the Secretary to Government in the Law (Education) Department of the Government of Madras, Ministry of Education.

The Director is also the Commissioner of Government Examinations.

Government.

The Madras Presidency is governed on a system generally similar to that obtaining in Bombay and Bengal. At the head is the Governor usually selected from the ranks of British public men or of ex-Governors of Colonies. Under the Reform Scheme there are associated with the Governor four Members of the Executive Council in charge of the Reserved Subjects and three Ministers in charge of the Transferred Subjects. Madras administration differs, however, in some important respects from that of other major Provinces. There is no intermediate local authority between the Collector of the District and the authorities at headquarters, the Commissioner being unknown in Madras. Part of the power which would be reserved elsewhere for the Commissioner is given to the Collector, whose status is rather higher in Madras than elsewhere, and part is exercised by the Board of Revenue. Each member of the Board of Revenue is in fact a Commissioner for specific subjects throughout the Presidency. This conduces to administration by specialists and to the maintenance of equal progress in specific matters in every part of the Presidency, but it leaves the Government without an official who can judge of the general administration of large parts of the coruntry. For these and other reasons the Decentralisation Commission recommended that a system of Commissionerships be introduced in Madras.

Revenue and Finance.

Including the receipts and charges of the Civil and Public Works Departments but excluding the figures relating to Army, Posts and Telegraphs and Home Accounts as well as those relating to capital outlay and debt and remittance transactions the gross revenue amounted to Rs. 24,96,22,151 in 1920-21 while the gross expenditure was 12,76,57,179. The surplus amounted to Rs. 12,19,64,972. The year opened with a cash balance of Rs. 395 lakhs in the reserve treasury. The collections from supertax were Rs. 18,22,520 and the excess profits duty amounted to Rs. 38,32,284. The provincial accounts opened with a balance of Rs. 2,05,92,771 and closed with a balance of Rs. 57,92,114. The transactions of the year resulted in a deficit of Rs. 1,48,00,657 which was the net result of an aggregate revenue of Rs. 9,82,63,227 and an expenditure of Rs. 11,30,63,884.

Governor.

His Excellency Baron Willingdon of Ratton, G.C.S.I., G.C.I.E., G.B.E. Took his seat, 10th April 1919.

Personal Staff.

Private Secy., Mr. A. C. Duff, I.C.S.
Military Secy., Major K. O. Goldie, O.B.E.
Surgeon, Major D. P. Johnstone, R.A.M.C.
Aide-de-Camp, Major J. Mackenzie.
Aide-de-Camp, Captain N. C. deBrath.
Extra Aide-de-Camp, Capt. Donald Powell.
Extra Aide-de-Camp, Captain E. M. Allfrey, M.C.,
Commandant, H. E. the Governor's Body Guard, Major J. F. W. Ogilvie, M.C.Q.V.O.
Indian Aide-de-Camp, Risaldar Yakub Khan.

Members of Council.

Sir Lionel Davidson (Home).

C. G. Todhunter (Finance).

Khan Bahadur Muhamad Habibulla Sahib (Revenue).

Srinivasa Iyengar (Law).

Ministers.

A. Subbrayah Reddiar (Education).

Ramarayaningar (Local Self-Government).

K. Venkata Reddi (Development).

SECRETARIES TO GOVERNMENT.

Chief Secretary, A. R. Knapp, I.C.S.

Revenue Secretary, N. E. Marjoribanks, C.I.E., I.C.S.

Local and Municipal Secretary, F. J. Richards.

Public Works Secretary, W. Hutton.

MISCELLANEOUS APPOINTMENTS.

Commissioner of Revenue Settlement, etc., L. E. Buckley, I.C.S.

Director of Public Instruction, Richard Littlehailes, M.A.

Vice-Chancellor of Madras University, The Hon. Sir John Wallis.

Registrar of Madras University, F. Dewsbury.

Inspector-General of Police, Percy Beart Thomas.

Surgeon-General, Major-General Gerard Godfrey Giffard, C.S.I.

Sanitary Commissioner, Lt.-Col. E. L. Perry, D.S.O., I.M.S.

Accountant-General, A. Newmarch.

Inspector-General of Prisons, Major John Phillip Cameron, I.M.S.

Postmaster-General, A. W. L. Ryan.

Collector of Customs, A. M. Green.

Commissioner of Salt, Abkari, etc., Mr. N. E. Marjoribanks, C.I.E., I.C.S.

Inspector-General of Registration, C. R. M. Schmidt.

Director of the Kodaikanal and Madras Observatories, J. Evershed.

Supdt., Govt. Central Museum, and Principal Librarian, Connemara Public Library, F. H. Gravely.

Piscicultural Expert, H. C. Wilson.
Director of Agriculture, G. A. D. Stuart.
Consulting Architect, W. H. Nicholls.
Sheriff, C. T. Muthiah Chetty.
Chief Conservator of Forests, S. Cox, C.I.E.

Owing to the revised M. S. S. having been received after the formes were imposed, the list of Presidents and Governors has been tranferred to page 261.

The Bengal Presidency.

The Presidency of Bengal, as constituted on the 1st April 1912, comprises the Burdwan and Presidency divisions and the district of Darjeeling, which were formerly administered by the Lieutenant-Governor of Bengal; and the Rajshahi, Dacca and Chittagong divisions which by the partition of the old Province had been placed under the administration of the Lieutenant-Governor of Eastern Bengal and Assam. The area of the Presidency is 84,093 square miles, and it possesses a population of 46,305,170 persons; included within this area are the two Native States of Cooch Behar and Hill Tippera, which are under the general supervision of the Government of Bengal. The area of the British territory is 78,700 square miles. Bengal comprises the lower valleys and deltas of the Ganges and Brahmaputra, and in the main consists of a great alluvial plain intersected in its southern portion by innumerable waterways. In the north are the Himalayan mountain and submontane tracts of Darjeeling and Jalpaiguri, and on the south-east the hills in Hill Tippera and Chittagong, while on the west the Chota Nagpur plateau is continued by an undulating tract running through the western portions of Midnapur, Bankura, Burdwan and Birbhum. The general range of the country however is very low, and a great fertile plain extends southward from Jalpaiguri to the forests and swamps known as the Sunderbans, which lie between the area of cultivation and the Bay of Bengal.

The People.

Of the inhabitants of the Presidency 24,237,052 or 52·4 per cent. are Mahomedans and 20,948,061 Hindus. These two major religions embrace all, but 2·4 per cent. of the population. Christians, Buddhists and Animists combined number a little over 1,120,000.

Bengali is spoken by ninety-two per cent. of the population of the Presidency and Hindi and Urdu by four per cent. The Oriya-speaking people number 293,168 and Naipali is the tongue of 89,000 persons principally residents in the Darjeeling and Jalpaiguri districts. The great majority of the speakers of the Munda languages are Santals in West and North Bengal.

Industries.

According to the returns of the Census of 1911 nearly 35¼ million or three-fourths of the population derive their support from pasture and agriculture, and of these nearly 30 millions are cultivators, and nearly 3¾ millions farm servants and field labourers. The area under jute in 1920 is estimated at 2,205,323 acres against 2,458,955 in 1919. Bengal is the most important rice-producing area in Northern India, and it is computed that about 85 per cent. of the cultivated area of the Presidency is devoted to its production. Other crops include barley, wheat, pulses and oil-seeds, the area devoted to the last named being 1,475,700 acres. Sugar is produced both from the sugar-cane and from the date-palm, and tobacco is grown for local consumption in nearly every district of Bengal. The area under tea in 1919-20 was 178,200 acres. There were 317 plantations employing a daily average of 155,131 permanent and 6,251 temporary hands.

Manufacture and Trade.

The main industries in this part of India in addition to the agricultural industry are the jute mill industry, the tea industry (largely an Assam industry) and coal mining. The jute mills in and around Calcutta constitute the principal manufacturing industry of the Presidency. The jute mills in Bengal worked 5 days a week from January 20th to March 28th, 1919, and for 4 days weekly for the rest of the year. From 1st January to 31st March 1920, the jute mills worked five days a week and from 1st April to 31st December 1920 six days a week. There were 72 mills belonging to 48 companies (including three private concerns) at work during the year 1919-20 with 40,676 looms and 847,487 spindles. The average number of persons employed daily was 277,393. There were no difficulties as regards the supply of labour. The value of the exports of Raw Jute by sea from Calcutta during 1919-20 increased by 1,084 lakhs to Rs. 2,269 lakhs. The quantity exported also was more than in the preceding year by 172,196 tons. The Jute cess benefited the Calcutta Improvement Trust to the extent of Rs. 8·56 lakhs, while Rs. 8·08 lakhs were collected in the preceding year. The exports of raw and manufactured jute represented 55 per cent. of Calcutta's exports during 1919-20 and these were with the exception of raw and manufactured cotton, India's premier export in that year. Other principal industries were cotton twist and yarn, silk yarn and cloth, hand-made cloth, sugar, molasses and paper. Twelve cotton mills were at work during 1919-20 employing daily on an average 12,294 persons. The silk weaving industry continues to decline. There was only one silk mill working during 1919-20 which employed 130 hands. The manufacture of tea is carried on an extensive scale in Darjeeling and Jalpaiguri. The capital employed by joint stock companies in the industry in India amounted to over Rs. 34 crores and the daily average labour force to 973,000 during 1919. In 1919 the number of coal mines under the scope of the Indian Mines Act worked in Bengal was 216. The total output for Bengal was 5,777,602 tons against 5,302,295 tons raised in 1918, while the output of all the mines in Bengal, Bihar and Orissa, and Assam amounted to 21,186,669 tons. The capital of joint stock, coal companies only in the industry employed in these provinces is approximately Rs. 731 lakhs. The daily average of persons employed in the coal mines in Bengal was 48,642 and in Bengal, Bihar and Orissa, and Assam 181,648. Three paper mills produced 25,070 tons of paper valued at Rs. 1,83,96,071 in 1919-20.

In 1919-20 the foreign sea-borne trade of Bengal (excluding treasure but including Government stores) amounted to Rs. 231 crores of which 90 crores represented imports and Rs. 141 crores exports. Of the total foreign and coasting trade of Bengal, 95 per cent. was the share of Calcutta. The six chief exports from Bengal are in order of importance; jute (raw and manufactures), tea, hides and skins (raw), grain, pulse and flour, seeds and

opium and the six leading imports are cotton goods, metals, sugar, machinery and mill-work, salt, and oils.

Administration.

The present form of administration in Bengal dates from December 1920. In 1912 the Government of the Province underwent an important change, when in accordance with the Proclamation of His Majesty the King-Emperor at Delhi the Province was raised from the status of a Lieutenant-Governor to that of a Governor-in-Council, thus bringing it into line with the Presidencies of Madras and Bombay. In 1920 under the Reform Scheme, which is fully described in the sections The Government of India and the Provincial Governments (*q. v.*) the system of Governor-in-Council was further expanded into a Governor-in-Council and Ministers. There are four members of the Executive Council, who are in charge of the "reserved subjects," and three Ministers, who are in charge of the "transferred subjects." The working of this system and the division of the administration into these two classes of subjects is fully described in the sections to which reference is made.

Bengal is administered by five Commissioners under the Governor in Council, the divisions being those of the Presidency, Burdwan, Rajshahi, Dacca and Chittagong. The unit of administration is the District Magistrate and Collector. As Collector he supervises the ingathering of the revenue and is the head of all the Departments connected with it, while as District Magistrate he is responsible for the administration of criminal justice in the district. The immediate superior of the District Magistrate is the Divisional Commissioner. Commissioners are the channels of communication between the local officers and the Government. In certain revenue matters they are, in their turn, subject to the Board of Revenue in Calcutta; in other matters they are under the direct control of Government.

Justice.

The administration of Justice is entrusted to the High Court of Calcutta which consists of the Chief Justice who is a Barrister and 14 Puisne judges including one additional judge who are Barristers, Civilians or Vakils. Below the High Court are the District and Additional Judges, the Small Cause Court and Subordinate Judges and the Munsifs. Of these officers the District and Additional Judges and a certain number of subordinate Judges are also endowed with the power of a Criminal Court while the remainder have jurisdiction in Civil matters only. Criminal Justice is administered by the High Court, the Courts of Session and the Courts of the various classes of Magistrates On its appellate side the High Court disposes of appeals from the order of a Court of Session, and it also confirms, modifies or annuls sentences of death passed by Sessions Courts. Calcutta has four Presidency Magistrates, two Municipal Magistrates and also a number of Honorary Magistrates and it possesses a Court of Small Causes with Judges including one Additional Judge who dispose of cases of the class that are usually heard in County Courts in England.

Local Self-Government.

By Bengal Act III of 1884 which regulates municipal bodies in the interior and its subsequent amendments the powers of Commissioners of municipalities have been increased and the elective franchise has been extended. Municipal expenditure now comprises a large number of objects, including veterinary institutions and the training and employment of Health Officers and Sanitary Inspectors and female medical practitioners. The Commissioners also have large powers in regard to the water-supply and the regulation of buildings. In Calcutta Act (III) of 1899 created three co-ordinate municipal authorities, the Corporation, the General Committee, and the Chairman. The total number of Commissioners is fifty, of whom 25 are elected, and the remainder appointed by Government and by commercial bodies. In order to improve the insanitary and congested areas of the city, the Calcutta Improvement Trust has been created with extensive powers. In the mofussil, District and Local Boards exercise considerable powers, with regard to Public Works, Education and Medical relief and Union Committees have been formed which deal for the most part with the control of village roads, sanitation and water-supply.

Bengal Act V of 1911 introduced a new system of self-government by the creation of village authorities vested with the power and duties necessary for the management of communal village affairs and entrusted with powers of self-taxation. The new village authority, to be called the Union Board, will replace the existing Chaukidari *panchayats* and the Union Committee and will deal with the village police, village roads, water supply, sanitation, primary school and dispensaries. The Act also empowers Government to create out of the members of the Union Board Village Benches and Courts for the trial of petty criminal and civil cases arising within the union. The Act has been extended to all Districts in the Presidency except Darjeeling, Chittagong, Melda and Pabna and about 1,500 Union Boards have been established.

Public Works.

The Public Works Department is under the charge of a Chief Engineer who is also the Secretary to Government in the P. W. and Railway Departments and the Irrigation Department is under the charge of second Chief Engineer who is as well the Secretary to Government in the Irrigation and Marine Departments.

The P. W. D. deals with questions regarding the construction of public buildings and roads and the carrying out of miscellaneous public improvements.

The Railway Department deals with questions regarding acquisition of lands required by the several Railways and alignment of main lines of Railways and Tramway projects.

The Irrigation Department deals with matters connected with the numerous embankments and drainage works as well as the waterways that intersect the Presidency.

The Marine Department deals with all questions connected with the Bengal Pilot Service, merchant shipping, boiler commission, smoke nuisance and the importation, possession, &c., of petroleum and the importation of explosives.

Police.

The Bengal Police force comprises the Military Police, the District Police, the Railway Police, and the River Police. The Bengal Police are under the control of the Inspector-General of Police, the present Inspector-General being a member of the Imperial Police Service. Under him are Deputy Inspectors-General, for the Dacca Range, the Rajshahi range, the Presidency range, the Burdwan range and the Bakarganj range and also two Deputy Inspectors-General, one in charge of the C. I. D. and the other in charge of the Intelligence Branch of the C. I. D. Each district is in charge of a Superintendent, and some of the more important districts have an Additional Superintendent. The Railway Police is divided into three distinct charges each under a Superintendent. The River Police is also under a Superintendent. The cadre comprises Assistant Superintendents, Deputy Superintendents, Inspectors, Sub-Inspectors, Sergeants, head constables and constables. There is also a Village Police, composed of daffadars and chowkidars, who receive a monthly salary which is collected from the villages or unions by the Panchayat or Union board. In the Madaripur Sub-Division however the daffadars who are whole-time servants are paid partly by Government and partly by the Panchayat. The Calcutta City police is a separate force maintained by Government under a Commissioner who is responsible direct to Government. The Commissioner has under him Deputy Commissioners, Assistant Commissioners, Inspectors, Sub-Inspectors, European Sergeants, head constables and constables. A school for the training of recruits for the Calcutta Police force has been established at Calcutta. There is a training college and school at Sardah, in the district of Rajshahi where newly appointed gazetted officers, Sub-Inspectors and constables of the Bengal police learn their duties. There are two other schools at Dacca and Berhampore for the training of constables. The annual cost of the Police is over 63 lakhs.

Medical.

The head of the Medical Department is the Surgeon General with the Government of Bengal, and Sanitation is in charge of the Sanitary Commissioner, the former appointment is always held by a member of the Indian Medical Service, while the latter post is also ordinarily held by a member of that service. There is also a Sanitary Engineer for the Presidency. In the districts the Civil Surgeons are responsible for medical work. There are 22 hospitals in Calcutta, 10 of which are supported by the Government and 439,806 persons were treated at these institutions of whom 34,703 were in-patients. In the mofussil districts there are 738 hospitals and dispensaries; the number of patients treated in them was 6,368,171 including 72,028 inpatients.

Education.

In the Presidency of Bengal education is imparted partly through Government agency and partly through private bodies, assisted to some extent by Government grants-in-aid. Government maintains three Arts Colleges in Calcutta (of which one is a college for women and one the Sanskrit College), one at Hughli, one at Krishnagar, one at Dacca, one at Rajshahi and one at Chittagong. It also maintains two training colleges, one at Calcutta and one at Dacca, for teachers who teach in secondary schools through the medium of English and 5 normal schools, one in each division, for the training of teachers in secondary schools through the medium of the vernacular; also an engineering college at Sibpur and an engineering school at Dacca, a medical college, a veterinary college, a school of art and a commercial school in Calcutta and a weaving school at Serampore. It also provides at the headquarters of all districts, except Burdwan and Midnapore, and also at certain other mofussil centres, High English schools for the education of boys, while to some Government Arts Colleges high schools are attached. In Calcutta there are four Government high schools for boys, two of which are attached to Presidency College and one to the Sanskrit College. Government high schools for girls exist only in the headquarters stations of Calcutta, Dacca, Mymensingh and Chittagong. The other secondary schools, with the exception of a few middle schools managed either by Government or by municipal and district boards, are under private control. The administration of primary education in all areas, which are not under municipalities, rests with the district boards, grants being given from provincial revenues to the boards, which contribute only slightly from their own funds. Only in backward localities are such schools either entirely managed, or directly aided, by Government. Apart from the institutions referred to above, 107 institutions called Guru Training Schools are maintained by the Departments for the training of vernacular teachers. For the education of Mohomedans, there are senior madrasas at Calcutta, Dacca, Chittagong and Hughli, and one junior madrasa at Rajshahi which are managed by Government. There are also certain Government institutions for technical and industrial education. A large proportion of educational work of every grade is under the control of various missionary bodies, which are assisted by Government grants-in-aid.

The municipalities are required to expend a certain proportion of their ordinary income on education. They are mainly responsible for primary education within their jurisdiction, but schools in these areas are eligible also for grants from Government. These bodies maintain a second grade Arts College and a high school at Midnapore, a high school at Burdwan, a high school at Santipur and a high school at Chittagong.

There are in the Presidency :—

Arts Colleges	36	Secondary Schools	2,800
Law "	9	Primary Schools	46,240
Medical Colleges	2	Special "	1,527
Engrg. College	1	Private Institutions	2,259
Training Colleges	4		
Veterinary College	1		

with 19,53,909 pupils in all.

The Department is administered by a Director of Public Instruction, assisted by an Assistant Director and an Assistant Director for Muhammadan Education. Each division is in charge of a Divisional Inspector assisted by a certain number of Additional and Assistant Inspectors according to the requirements of the several divisions. Similarly the administrative charge of the primary education of each district is in the hands of a Deputy Inspector assisted by

Additional Deputy and Sub-Inspectors of Schools, the latter class officers being in some instances helped by officers of humbler status called Assistant Sub-Inspectors and Inspecting Pandits and Maulvis. Higher education is controlled by the University (Calcutta) established in 1857, administered by the Chancellor (the Governor-General and Viceroy of India), the Rector (the Governor of Bengal), the Vice-Chancellor (appointed by the Government of India, usually for two years at a time), and 110 Fellows, of whom 10 are ex-officio, 10 are elected by registered Graduates, 10 by the Faculties and the remainder 80 are nominated by the Chancellor. The University maintains a Law College, called the University Law College, Calcutta. The University is mainly an examining body, but it has now made itself responsible for the actual teaching of students, for which purpose it employs an agency which is quite distinct from the staffs of the affiliated colleges.

The following University Professorships have been founded:—(1) Prasanna Kumar Tagore Law Professorship, (2) Minto Professorship of Economics, (3) George V. Professorship of Mental and Moral Science, (4) Hardinge Professorship of Higher Mathematics, (5) Carmichael Professorship of Ancient Indian History and Culture, (6) Palit Professorships of Chemistry and Physics, (7) Sir Rash Behary Ghose Professorship of Applied Mathematics, Physics, Chemistry and Botany, (8) Two Professorships of English and (9) University Professorship of Comparative Philology. The new University of Dacca is expected to start work in July 1921.

The principal educational institutions are:—

GOVERNMENT ARTS COLLEGES.

Presidency College, Calcutta.

Sheriff, Rai Bahadur Dr. C. Bose.

Superintendent, Royal Botanic Gardens, Lieut-Colonel A. T. Gage.

Registrar of Co operative Credit Societies, J. M. Mitra.

LIEUTENANT-GOVERNORS OF BENGAL.

Frederick J. Halliday	1854
John P. Grant	1859
Cecil Beadon	1862
William Grey	1867
George Campbell	1871
Sir Richard Temple, Bart., K.C.S.I. ..	1874
The Hon. Ashley Eden, C.S.I.	1877
Sir Steuart C. Bayley, K.C.S.I. (*Offg.*) ..	1879
A. Rivers Thompson, C.S.I., C.I.E. ..	1882
H. A. Cockerell, C.S.I. (*Officiating*) ..	1885
Sir Steuart C. Bayley, K.C.S.I., C.I.E. ..	1887
Sir Charles Alfred Elliott, K.C.S.I. ..	1890
Sir A. P. MacDonnell, K.C.S.I. (*Offg.*) ..	1893
Sir Alexander Mackenzie, K.C.S.I. Retired 6th April 1898. ..	1895
Charles Cecil Stevens, C.S.I. (*Officiating*) .	1897
Sir John Woodburn, K.C.S.I. .. .. Died, 21st Nov. 1902.	1898
J. A. Bourdillon, C.S.I. (*Officiating*) ..	1902
Sir A. H. Leith Fraser, K.C.S.I.	1903
Lancelot Hare, C.S.I., C.I.E. (*Offg.*) ..	1906
F. A. Slacke (*Officiating*)	1906
Sir E. N. Baker, K.C.S.I. .. .. .. Retired 21st Sept. 1911.	1908
F. W. Duke, C.S.I. (*Officiating*)	1911

The office of Lieutenant-Governor of Bengal was abolished on April 1st, 1912, when Bengal was raised to a Governorship.

GOVERNORS OF THE PRESIDENCY OF FORT WILLIAM IN BENGAL.

The Rt. Hon. Baron Carmichael of Skirling, G.C.I.E., K.C.M.G.	1912
The Rt. Hon. Earl of Ronaldshay, G.C.I.E.	1917

BENGAL LEGISLATIVE COUNCIL.

(1) **Ex-officio—**

The Hon'ble Sir Henry Wheeler, K.C.I.E., C.S.I.
The Hon'ble Sir Bijay Chand Mehtab, K.C.S.I., K.C.I.E., I.O.M., Maharajadhiraja Bahadur of Burdwan.

The Hon'ble Mr. John Henry Kerr, C.S.I., C.I.E.

The Hon'ble Sir Abdur-rahim, Kt.

(2) **Official Nominated Members—**

Mr. W. C. Wordsworth.
,, Donald Hector Lees, I.C.S.

Lt.-Col. Frederick O'Kenealy, C.I.E., I.M.S.
Mr. John Lang, I.C.S.

,, Lewis Sydney Steward O'Malley, C.I.E., I.C.S.
,, Alexander Marr, I.C.S.

,, William Stenning Hopkyns, O.B.E., I.C.S.
Rai Amar Nath Das Bahadur.
Mr. John Arthur Laing Swan, I.C.S.
,, William Woodward Hornell, C.I.E.
,, Nalini Bhushan Gupta, C.I.E.
,, James Donald, C.I.E., I.C.S.
,, Cecil Henry Bompas, C.S.I., I.C.S.
,, Leonard Birley, C.I.E., I.C.S.
,, George G. Dey.
,, Charles F. Payne.

(3) **Nominated Non-Officials—**
Mr. Satish Chanddra Mukharji.
Babu Bhishmadeb Das.

Mr. Krishna Chandra Ray Chaudhuri.
Babu Hemchandra Bhattacharji.

Babu Ghaneshyamdas Birla.
Maulvi Abdur Rahim.

(4) **Elected Members.**

	Babu Amulyadhan Addy.
Bengal Marwari Association	Babu Kesharam Poddar.
Bengal Mahajan Sabha	Mr. Tarit Bhushan Roy.

The United Provinces.

The United Provinces of Agra and Oudh lie in practically the centre of Upper India. They are bounded on the north by Tibet, on the north-east by Nepal, on the south and south-east by Bengal, on the south by two of the Chota Nagpur States of the Central India Agency and the Saugor District of the Central Provinces, and on the west by the States of Gwalior, Dholpur, Bharatpur, Sirmor, and Jubbal, and by the Punjab. Their total area amounts to 107,267 square miles, to which may be added the area of the two Native States of Tehri and Rampur, both of which lie within the United Provinces, 5,079 square miles and the newly-created independent State of Benares with an area of 865 miles, giving a total of 112,346 square miles. The total population is 45,590,946.

The Provinces, originally termed the North-Western Provinces and so amalgamated in 1877, receiving their present designation in 1902, include four distinct tracts of country: portions of the Himalayas, the sub-Himalayan tracts (the Kumaon), the great Gangetic plain and portions of the hill systems of Central India (Bundelkhand). The first two of these tracts are infertile and support a very sparse population and the Central Indian plateau is almost equally infertile, though better populated. The soil of the Gangetic plain, however, possesses an extreme fertility and here the density of population rises from 512 persons per square mile in the west, to 549 in the centre and 718 in the east, which gives the Provinces as a whole a greater population pressure on the soil than any other Provinces in India. In the south there are low rocky hills, broken spurs of the Vindhyan mountains, covered with stunted trees and jungle, and in the North the lower slopes of the Himalayas, clothed with dense forest, affording excellent big and small game shooting, and rising beyond in a tangled mass of ridges, ever higher and higher, until is reached the line of the eternal snows, but the greater part of the provinces consists of level plain, teeming with highly-cultivated fields and watered by four rivers—the Ganges, Jumna, Gogra and the Gumti.

The People.

The population is mainly Hindu, 85 per cent. ranking as such whilst Mahomedans number 14 per cent., the total of all other religions being less than 0·6 per cent. composed of Christians (Europeans and Indians), Jains, Aryas and Sikhs; the Aryas are the followers of the Arya Samaj sect, which obtains widely in the Punjab and has extended its influence to the United Provinces. The three main physical types are Dravidian, Aryan and Mongoloid, the latter being confined to the Himalayan and sub-Himalayan districts and the former to South Mirzapur and Bundelkhand, whilst the high-caste Aryans frequent the western Districts of the Province. Most of the people, however, show a mixed Arya-Dravidian origin. Three languages are spoken by the great majority of the people in the plains—Western Hindi, Eastern Hindi and Behari; Urdu, or Hindustani is a dialect of Western Hindi, though it contains a large admixture of Persian and Arabic words, which makes it a *lingua franca*.

Industries.

The principal industry is agriculture, which supports no less than 71·7 of the population. The soils of the Provinces fall into three groups; the valley soils of the Himalayas, the main alluvium and the Central Indian alluvium; the chief characteristic soil of the Central Indian alluvium is the black soil, with a lighter variant, though here also there are light loams and gravel. The Himalayan soils are of local origin and vary with the nature of the rock from which they have been formed, whilst the main alluvium soils are sand, clay and loam, the loam being, naturally, the most productive. The soil generally yields excellent crops of rice, millet, maize, linseed, cotton, wheat, sugarcane, pulses, barley and poppy, rice being grown mostly in low-lying, heavy clays. The greater part of the Provinces is highly cultivated, the rainfall varies from 50 to 60 inches in the Hills, to 40 inches in the Benares and Gorakhpur Divisions, whilst the Agra Division receives about 25 to 30 inches annually only. Drought seriously affected Bundelkhand and the Agra Division, in the past, but improved drainage, and irrigation (a protective system of irrigation works exists and is being extended) have enabled a complete recovery to be made and the agricultural prosperity of the Provinces is now high, though it varies with the rainfall. The great scourge has been, and is, that of plague, which hampers the agriculturist severely, and in the Terai, malaria still exacts a large toll. Land is held mostly on the ryotwari tenure in Bundelkhand and Kumaon, on zemindari tenure in Agra and taluqdari tenure in Oudh. The principal land owners in Oudh are the Taluqdars, some of whom own very large estates. The area held in taluqdari tenure amounts to 51 per cent. of the total area in Oudh.

Manufactures.

The Provinces are not rich in minerals, Coal exists in Southern Mirzapur, iron and copper are found in the Himalayan Districts, and there were mines of importance there formerly, but increased difficulty of working them as veins became exhausted resulted in the closure of most of them. Gold is found in minute quantities by washing in some of the rivers in the Hills. Limestone is found in the Himalayas and stone is largely quarried in the Mirzapur District. Cotton is ginned and spun throughout the provinces, as a home industry, and weaving, by means of hand-looms, is carried on in most districts. In 1901 nearly a million persons were dependent on weaving, 140,000 on spinning and 136,000 on cleaning, pressing, and ginning, but during the last decade these industries have been on the decrease. The largest industry is in Azamgarh district, where there are 130,000 looms. Silk spinning is confined almost entirely to the district of Benares, where the amous *Kinkob* brocade is made. Em-

broidery is manufactured in Lucknow, where the noted *chikan* work of silk on cotton or muslin is produced, and in Benares, where gold and silver work on velvet silk, crepe and sarsenet obtains. The glass industry is important in some districts, Benares and Moradabad are noted for their lacquered brass work, porcelain is manufactured at Ghazipur, and other industries are those of paper-making (Lucknow) dyeing, leather-work and fireworks. The chief centre of European and Indian industry is Cawnpore, which, situated in most advantageous position on the Ganges, possesses tanneries, cotton, woollen, jute and other mills, which have a large and ever increasing output (the woollen mill is the largest in India). There are cotton factories at Aligarh (famous for its locks), Meerut and Bareilly; Mirzapur (which produces also excellent carpets), Hardoi and Hathras have cotton mills. Excellent furniture is made at Bareilly, at Allahabad there are stone works, at Rosa there is a very large English distillery, with patent still, and the provinces can claim six breweries, with an out-turn of over a million gallons.

The largest trade centres are Cawnpore, Allahabad, Mirzapur, Benares, Lucknow, Meerut, Aligarh, Hathras, Muttra, Agra, Farukhabad, Moradabad, Chandausi, Bareilly, Saharanpur, Muzufarnagar, Ghaziabad, Khurja, Gorakhpur, Ghazipur, Pilibhit and Shahjahanpur.

Administration.

The Province was until the close of 1920 administered by a Lieutenant-Governor, chosen from the ranks of the Indian Civil Service. Under the Reform Scheme the Province was raised to the status of a Governor-in-Council, the Governor being assisted by two members of the Executive Council in charge of the Reserved Subjects and two Ministers in charge of the Transferred Subjects. The medium for the transaction of public business is the Secretariat, the Staff of which consists of five Secretaries and five Under-Secretaries. The Chief Secretary is in charge of the Revenue, Appointment, General Administration, Political and Forest Departments; another Secretary attends to the Medical, Judicial, Police, Educational and Sanitation Departments; whilst a third looks to the local Self-Government, Financial, Municipal, Miscellaneous and Separate Revenue Departments. The other two Secretaries belong to the Public Works Department, and are also Chief Engineers, one of whom deals with Irrigation, and the other with Roads and Buildings. Government spends the cold weather, October to April, in Lucknow and Allahabad, mostly in Lucknow, the Secretariat moves between these two places. The Governor and the Secretariat spend the hot weather in Naini Tal, but during the monsoon the Governor tours the plains, as he does also in the cold weather. The Board of Revenue is the highest court of appeal in revenue and rent cases, and it has important executive duties, being the chief revenue authority in the Provinces. There are forty-eight British districts, thirty-six in Agra and twelve in Oudh, average area 2,000 square miles and average population a million. Each District is in charge of a District Officer, termed a Collector and Magistrate in Agra and a Deputy Commissioner and Magistrate in Oudh and Kumaon, who is an Indian Civilian. The Districts are grouped together in Divisions under a Commissioner. There are nine Divisions, having an average area of nearly 12,000 square miles and a population of from 5 to 6 millions. The Districts are sub-divided into *tahsils*, of which there are 217, with an average area of 500 square miles and a population of 220,000. Each *Tahsil* is in charge of a *Tahsildar*, who is responsible for the collection of revenue, and also exercises judicial powers. *Tahsils* are divided into *parganas* which are units of importance in the settlement of land revenue. Subordinate to the *Tahsildars* are *kanungos*, of whom there are, on an average, three to a *tahsil*. These officials supervise the work of the *patwaris*, or village accountants, check their papers and form a link direct between the villagers and Government. For judicial purposes (revenue and criminal), the District Officer assigns a subdivision, consisting of one or more *tahsils*, as the case may be to each of his subordinates, who may be covenanted civilians, (Joint and Assistant Magistrates and Collectors) or members of the Provincial Service (Deputy Collectors and Magistrates). The Commissioner of the Bareilly and Kumaon Divisions are Political Agents for the Native States of Rampur and Tehri respectively and the Commissioner of Benares is the Political Agent for Benares State.

Justice.

Justice is administered by the High Court in the Province of Agra, and the Court of the Judicial Commissioner, in Oudh, which are the final appellate authorities in both criminal and civil cases. The former, which consists of a Chief Justice and five puisne Judges, two of whom are Indians, sits at Allahabad, and the latter, represented by a Judicial Commissioner and two Additional Commissioners, one of whom is an Indian, sits always in Lucknow. There are twenty-seven District and Additional District Judges, (Indian Civilians) twenty-one in Agra and six in Oudh, who have both original and appellate jurisdiction in civil and criminal cases, and occasional appellate jurisdiction in rent cases, but District Officers and their assistants, including *Tahsildars*, preside in both criminal and rent and revenue courts, and dispose of a good deal of the work. In Kumaon, the Commissioner is a High Court Judge in Civil cases, and a District Judge in Criminal cases. In the larger Cantonments, the Cantonment Magistrates have limited powers as Judges of a Small Cause Court. There are also Subordinate Judges, Judges of Small Cause Courts and Munsifs, who dispose of a large number of small civil suits, being specially empowered, in some cases, to decide suits up to Rs. 2,000, but generally they take cases up to Rs. 1,000, whilst Subordinate Judges hear cases up to Rs. 5,000. Appeals from Munsifs and Subordinate Judges go to the District Judges. Small Cause Court Judges try suits to the value of Rs. 500. There are also Honorary Munsifs, limited to Rs. 200 suits, and village Munsifs, whose jurisdiction is fixed at Rs. 20.

Local Government.

Local Government is exercised by means of District and Municipal Boards, the former levying local rates on land-owners; the latter deriving its revenue from octroi

and other forms of taxation. The aim is to abolish octroi, because it interferes with through trade. Eighty-five Municipalities possess the privilege of electing their own members and all the principal Boards now have non-official Chairman, with an Executive Officer who is directly responsible to the Board in all matters. Local self-government has been given a wider extension by the Municipalities Act, passed in 1916 under which the responsibilities of the boards and their chairmen have been largely increased. They deal with questions of sanitation, communication, lighting, town improvement, roads, water supply, drainage and education. Grants are made to Boards by Governments in some cases for special purposes from general revenues. Small towns, termed Act XX towns, also enjoy some measure of local self-government and it is under consideration to extend the principle here too.

Finance.

The Financial history of the Province has not been a happy one, inadequate settlements, *i.e.*, contracts between the Government of India and the local Government, and the severe famine in 1896 having caused Provincial bankruptcy, which for a long time necessitated rigid economy in order to accumulate reserves which could be spent on productive works. Recently liberal Imperial assignments have been made by the Government of India and the financial prospects are accordingly much brighter, though the war naturally hampered progress. The new system of Provincial Finance and the liabilities of the Province thereunder are fully described in the section "The Provincial Governments" (*q. v.*).

Public Works.

The Public Works Department is divided into the Roads and Buildings branch and the Irrigation branch, each of which is administered by a Chief Engineer, who is also a Secretary to Government. The Provinces are divided into three circles and ten divisions for the administration of roads and buildings, and into four circles and twenty divisions for irrigation purposes. Each circle is in charge of a Superintending Engineer, and each division is in charge of an Executive Engineer. The whole of the irrigation works constructed or maintained by Government are in charge of the Department, nearly all metalled roads, and also bridges on second-class roads, and generally, all works costing more than Rs. 1,000, except in Municipalities. The most important irrigation works within the last twenty years have been the construction of the Betwa Canal, the Fatehpur branch of the Lower Ganges Canal, the Mat branch of the main Ganges Canal, improvements in the Rohilkhand and Terai Canals and extensive drainage operations in the Doab districts of the Meerut and Agra division. Important irrigation extension works are now being considered.

Police.

The Police Force is divided into District and Railway Police and is administered by an Inspector-General, with five Deputies, one of whom is in charge of Railways, and two Assistants, forty-nine District Superintendents, two Railway Superintendents, and thirty Assistant Superintendents. There is a Police Training School at Moradabad. There is a local C. I. D. forming a separate detective department, under a Deputy Inspector-General, with an assistant. There is an armed police, specially recruited, and armed with the Martini Rifle. The present cost of the force is 133 lakhs. The administration of the Jail department is in charge of an Inspector-General of Prisons, who is a member of the Indian Medical Service.

Education.

Education is in part wholly State-maintained; and partly by means of grants-in-aid There is a State University at Allahabad, a Government Sanskrit College at Benares, whilst Arabic and Persian are taught in special classes at the Muir College, Allahabad, which also has a special science side, which of late has been greatly extended, and there is a Government Engineering College at Roorkee (Thomason College). There are aided Colleges in Lucknow (Canning College), (Reid Christian College), and (Isabella Thoburn College), Agra (St. John's), Aligarh (the Mahomedan Oriental College), Gorakpur, Cawnpore and Meerut, and an unaided College at Benares, the Central Hindu College. In Lucknow there is the Martiniere school, an entirely independent institution, for European and Anglo-Indian children, and there is a Girls' Martiniere connected with it, whilst in the Hill-Stations, Naini-Tal and Mussoorie, there are many excellent private scholastic institutions for European boys and girls, which are attended by students from all over India. Government maintain Training Colleges, for teachers in Lucknow and Allahabad, an Art Crafts and an Industrial School in Lucknow, and an Agricultural College at Cawnpore. Public Schools are almost entirely maintained by the District and Municipal Boards and primary education is almost entirely in their hands. Primary and female education are in a very backward condition, though there was in 1915-16 an increase in pupils The position of the Province in regard to Education is fully described under the head Education and in the tables attached thereto (*q. v.*)

Higher education is controlled by the Allahabad University (constd. in 1887) which consists of a Chancellor, Vice-Chancellor and seventy-five ordinary and four *ex-officio* Fellows, of whom some are elected by the Senate or by registered graduates and the Faculties, and the remainder nominated by the Lieutenant-Governor, in his capacity of Chancellor. The Faculties are those of Art, Science, Law and Medicine, and the University possesses an important Law School. A Mahomedan University was established at Aligarh in 1920 and a Hindu University has been inaugurated at Benares.

The principal educational institutions are:—

The Mahomedan University, Aligarh.

The Hindu (Benares) University, Benares.
St. John's College, Agra.
Muir College, Allahabad.
Queen's College, Benares.
Canning College, Lucknow.
Agra College.
Reid Christian College, Lucknow.

Meerut College.
Woodstock College, Mussoorie.
Bareilly College.
Christian College, Allahabad.
Christ Church College, Cawnpore.
Isabella Thoburn College, Lucknow.
Thomason College, Roorkee.
King George's Medical College, Lucknow.

Medical.

The Medical Department is in charge of an Inspector-General of Civil Hospitals. A Civil Surgeon is in charge and is responsible for the medical work of each district, and in a few of the larger stations he has an assistant. In two stations (Ranikhet and Almora) Medical Officers in military employ hold collateral civil charge. There are eighty-three Assistant Surgeons in charge of important dispensaries and a large number of Indian hospital assistants. Lady doctors and female hospital assistants visit *purda nashin* women in their own homes and much good work is done in this manner.

The best equipped hospitals, for Indian patients are the Thomason Hospital at Agra, King George's Hospital and the Balrampur Hospital at Lucknow. The Ramsay Hospital for Europeans at Naini Tal is a first class institution and there are also the Lady Dufferin Hospitals. King George's Medical College is one of the best equipped in the country, with a staff of highly efficient professors, and the hospital is the first in the Provinces. There is an X-Ray Institute at Dehra Dun, where valuable research work has been carried out and the Pasteur Institute at Kasauli take cases from all parts of India, and there are sanatoria for British soldiers in the Hills.

Administration.

Governor.—His Excellency Sir Harcourt Butler, K.C.S.I., C.I.E. Appointed December 1920.

Private Secretary—Captain Victor F. Gamble.

Aide-de-Camp.—Captain A. D. G. S. Batty.

Members of Council and Ministers.—The Hon. Mr. L. C. Porter, (Finance).

The Hon. the Raja of Mahmudabad (Home Member).

The Hon. Pandit Jagat Narain (Local Self-Government and Public Health.)

The Hon. Mr. C. Y. Chintamani (Education and Industries).

SECRETARIAT.

Chief Secretary to Government, G. B. Lambert, I.C.S.

Financial Secretary to Government, E. A. H. Blunt, O.B.E., I.C.S.

Judicial Secretary to Government, C. H. B. Kendall, I.C.S.

Secretary to Government, Public Works Dept. (Buildings & Roads, & Railways), H. M. Willmot.

MISCELLANEOUS APPOINTMENTS.

Opium Agent, Ghazipur, C. E. Wild.
Chief Conservator of Forests, P. H. Clutterbuck.
Director of Public Instruction, C. F. de la Fose.
Inspector-General of Police. L. M. Kaye.

Inspector-General of Civil Hospitals, Col J. K. Close, M.D., I.M.S.
Sanitary Commissioner, Major Cuthbert Lindsay Dunn.
Inspector-General of Registration, T. A. H. Way, I.C.S.
Commissioner of Excise, T. A. H. Way.
Accountant-General, Richard Waterfield.
Inspector-General of Prisons, Lt.-Col. J. M. Woolley.
Postmaster-General, H. S. H. Pilkington, C.I.E., M.V.O.
Chemical Analyser, Dr. E. H. Hankin.
Director of Agriculture, H. M. Leake, M.A.

LIEUTENANT-GOVERNORS OF THE NORTH-WESTERN PROVINCES.

Sir C. T. Metcalfe, Bart., G.C.B.	1836
The Right Hon. the Governor-General in the North-Western Provinces (Lord Auckland).	1838
T. C. Robertson	1840
The Right Hon. the Governor-General in the North-Western Provinces (Lord Ellenborough).	1842
Sir G. R. Clerk, K.C.B.	1843
James Thomson. Died at Bareilly. ..	1843
A. W. Begbie, *In charge*	1853
J. R. Colvin. Died at Agra	1853
E. A. Reade, *In charge*	1857
Colonel H. Fraser, C.B., Chief Commissioner, N.-W. Provinces.	1857
The Right Hon. the Governor General administering the N.-W. Provinces (Viscount Canning).	1858
Sir G. F. Edmonstone	1859
R. Money, *In charge*	1863
The Hon. Edmund Drummond	1863
Sir William Muir, K.C.S.I.	1868
Sir John Strachey, K.C.S.I.	1874
Sir George Couper, Bart., C.B.	1876

LIEUTENANT-GOVERNORS OF THE NORTH WESTERN PROVINCES AND CHIEF COMMISSIONERS OF OUDH.

Sir George Couper, Bart, C.B., K.C.S.I.	1877
Sir Alfred Comyns Lyall, K.C.B.	1882
Sir Auckland Colvin, K.C.M.G., C.I.E. ..	1887
Sir Chas. H. T. Crosthwaite, K.C.S.I. ..	1892
Alan Cadell (*Officiating*)	1895
Sir Antony P. MacDonnell, K.C.S.I. (*a*) ..	1895
Sir J. J. D. La-Touche, K.C.S.I.	1901

(*a*) Afterwards (by creation) Baron MacDonnell.

LIEUTENANT-GOVERNORS OF THE UNITED PROVINCES OF AGRA AND OUDH.

Sir J. J. D. La Touche, K.C.S.I.	1902
Sir J. P. Hewett, K.C.S.I., C.I.E.	1907
L. A. S. Porter, C.S.I. (*Officiating*).. ..	1912
Sir J. S. Meston. K.C.S.I.	1912
Sir Harcourt Butler, K.C.S.I., C.I.E. ..	1918

GOVERNOR OF THE UNITED PROVINCES.

Sir Harcourt Butler, K.C.S.I., C.I.E. ..	1920

UNITED PROVINCES LEGISLATIVE COUNCIL.

Name and nature of constituency.	Name or names of member or members returned by election.
Agra City, non-Muhammadan, Urban	Pandit Govind Sahai Sharma.
Cawnpore City do.	Rai Anand Sarup Bahadur.
Allahabad City do.	Lala Sheo Charan Lal.
Lucknow City do. .. .	The Hon'ble Pandit Jagat Narayan.
Benares City do.	Rai Ravinandan Prasad Bahadur.
Bareilly City do.	Lala Chhail Bihari Lal.
Meerut *cum* Aligarh do.	Lala Kishori Lal.
Moradabad *cum* Shahjahanpur, non-Muhammadan, Urban.	Babu Brijnandan Prasad.
Dehra Dun district, non-Muhammadan, Rural ..	Mr. Ugar Sen.
Saharanpur district do. ..	Lala Shadi Ram.
Muzafarnagar district do. ..	Pandit Hirde Nath Kunzru.
Meerut district (North) do. ..	Chaudhri Mukhtyar Singh.
Meerut district (South) do ..	Rai Sita Ram Sahib.
Bulandshahr district (East) do. ..	Pandit Nanak Chand.
Bulandshahr district (West) do ..	Thakur Manik Singh.
Aligarh district (East) do. ..	Dr. Manohar Lal.
Aligarh district (West) do. ..	Rao Sahib Sheo Dhyan Singh.
Muttra district do ..	Babu Narayan Dass.
Agra district do. ..	Munshi Narayan Prasad Ashthana.
Mainpuri district do. ..	Chaudhri Maharaj Singh.
Etah district do. ..	Rai Indra Narayan.
Bareilly district do. ..	Raja Kali Charan Misra.
Bijnor district do. ..	Chaudhri Sher Singh.
Budaun district do. ..	Rai Daya Shankar Sahib.
Moradabad district do. ..	Chaudhri Sardar Singh.
Shahjahanpur district do. ..	Babu Gur Sahai.
Pilibhit district do. ..	Pandit Brijnandan Prasad.
Jhansi district do. ..	The Hon'ble Mr. C. Y. Chintamani.
Jalaun district do. ..	Rai Gopaldas Sharma Sahib.
Hamirpur district do. ..	Babu Parmeshar Dayal Amist.
Banda district do. ..	Pandit Bhagwat Prasad Dube.
Farrukhabad district do. ..	Babu Gaindan Lal.

Name and nature of constituency.	Name or names of member or members returned by election.
Etawah district non-Muhammadan, Rural ..	Raja Hukm Tej Pratab Singh.
Cawnpore district do. ..	Pandit Balbhaddra Prasad Tiwari.
Fatehpur district do. ..	Major Des Raj Ranjit Singh.
Allahabad district do ..	Pandit Radha Kant Malaviya.
Benares district do. ..	Kunwar Nand Lal.
Mirzapur district do. ..	Mahant Parmanand Gir.
Jaunpur district do ..	Pandit Krishna Kant Malaviya.
Ghazipur district do ..	Babu Parsidh Narayan
Ballia district do ..	Thakur Hanuman Singh
Gorakhpur district (West) do. ..	Mr. Ajudhia Das.
Gorakhpur district (East) do. ..	Raja Indrajit Pratap Bahadur Sahi.
Basti district do. ..	Bhaya Hanumat Prasad Singh.
Azamgarh district do. .	Babu Ganga Prasad Rai.
Naini Tal district do. .	Rai Narayan Dat Chhimwal Sahib.
Almora district do. ..	Kunwar Anand Singh
Garhwal district do. ..	Thakur Jodh Singh B. Negi.
Lucknow district do. ..	Pandit Gokaran Nath Misra.
Unao district do. ..	Rai Ganesh Prasad Bahadur.
Rai Bareli district do. ..	Sardar Birpal Singh.
Sitapur district do. .	Thakur Rajendra Singh.
Hardoi district do. .	Thakur Mashal Singh.
Kheri district do. .	Babu Sita Ram
Fyzabad district do. .	Thakur Kesharya Prasad Singh.
Gonda district do. ..	Maharaja Sir Bhagwati Prasad Singh Bahadur, K.C.I.E., K.B.E.
Bahraich district do. ..	Pandit Ramsewak Pande.
Sultanpur district do. .	Raja Pratab Singh Bahadur.
Partabgarh district do. ..	Babu Shankar Dayal.
Bara Banki district do. ..	Rai Rajeshwar Bali.
Allahabad cum-Benares, Muhammadan, Urban ..	Saiyid Raza Ali.
Lucknow cum-Cawnpore do. ..	Mirza Muhammad Sajjad Ali Khan.
Agra and Meerut *cum* Aligarh do ..	Saiyid Al-i-Nabi.
Bareilly and Shahjahanpur cum-Moradabad do. ..	Saiyid Janab Ahmad.
Dehra Dun district do. ..	Maulvi Shahab-ud-din.

Names and nature of constituency.	Name or names of member or members returned by election.
Saharanpur district Muhammadan, Rural ..	Maulvi Shahab-ud-din.
Meerut district do.	Kunwar Jamshed Ali Khan.

The Punjab.

The Punjab, or land of the five rivers, is so called from the five rivers by which it is enclosed, namely, the Jhelum, Chenab, Ravi, Beas and Sutlej. Together with the North-West Frontier Province and the Native State of Jammu and Kashmir which lie to the north, the Punjab occupies the extreme north-western corner of the Indian Empire, and with the exception of the above-mentioned province comprises all of British India north of Sind and Rajputana and west of the river Jumna. Previous to October 1912, the Punjab with its feudatories embraced an area of 136,330 square miles and a population at the Census of 1911 of 24,187,750 (inclusive of 28,587 transfrontier Baluchis) that is to say, about one-thirteenth of the area and population of the Indian Empire. But the formation of a separate province of Delhi reduced the area and population of the Punjab by about 450 square miles and 380,000 souls respectively. Of the total area of the Punjab, 36,551 square miles are in Native States (34 in number) with a population of 4,212,794, and 2,566 square miles are tribal territory on the western border of Dera Ghazi Khan district with a population of 28,587.

Physical Features.

The greater part of the Punjab consists of one vast alluvial plain, stretching from the Jumna in the east to the Suleman Range in the west. The north-east is occupied by a section of the Himalayas and the Salt Range forms its north-western angle. A few small spurs of the Aravalli mountain system traverse the extreme south-east and terminate in the Ridge at Delhi. The Punjab may be divided into five natural divisions. The Himalayan tract includes an area of 22,000 square miles, with a scanty population living scattered in tiny mountain hamlets. The Salt Range tract includes the districts of Attock, Rawalpindi and Jhelum and part of Shahpur district. Its physical configuration is broken and confused and the mountainous tracts of Murree and Kahuta approximate closely in characteristics to the Himalayan tract. Except in the hills, the rainfall leaves little margin for protection against distress in unfavourable seasons and irrigation is almost unknown. Skirting the base of the hills and including the low range of the Siwaliks, runs the narrow sub-montane tract. This tract, secure in an ample rainfall, and traversed by streams from the hills, comprises some of the most fertile and thickly populated portions of the province. Its population of over four millions is almost wholly agricultural and pastoral but it includes one large town in Sialkot. Of the plains of the Punjab, the eastern portion covers an area of some 36,000 square miles with a population of 10½ millions. East of Lahore, the rainfall is everywhere so far sufficient that cultivation is possible without irrigation in fairly favourable seasons, but over the greater part of the area the margin is so slight that, except where irrigation is employed, any material reduction in the rainfall involves distress, if not actual famine. Within the eastern plains lie the large cities of Lahore and Amritsar, and the population in comparison with the western Punjab is largely urban. The western plains cover an area of 59,000 square miles, with a population of a little over six millions. The rainfall in this area, heaviest in the north and east and decreasing towards the west and south, is everywhere so scanty that cultivation is only possible with the aid of artificial irrigation or upon the low-lying river-banks left moist by the retreating floods. In this very circumstance, these tracts find their scarcity against famine, for there cultivation is almost independent of rain, a failure of which means nothing worse than a scarcity of grass. So little rain is sufficient, and absolute drought occurs so seldom that the crops may be said never to fail from this cause. The western plains embrace the great colony areas on the Lower Chenab and Lower Jhelum Canals which now challenge the title of the eastern plains as the most fertile, wealthy and populous portions of the province. Multan and Lyallpur are the largest towns in the western area. Owing to its geographical position, its scanty rainfall and cloudless skies, and perhaps to its wide expanse of untilled plains, the climate of the Punjab presents greater extremes of both heat and cold than any other portion of India. The summer, from April to September, is scorchingly hot, and in the winter, sharp frosts are common. But the bright sun and invigorating air make the climate of the Punjab in the cold weather almost ideal.

The People.

Of the population roughly one half is Mahomedan, three-eighths Hindu and one-eighth Sikh. Socially the landed classes stand high and of these the Jats, numbering nearly five millions, are the most important. Roughly speaking, one half the Jats are Mahomedan, one-third Sikh and one-sixth Hindu. In distribution they are ubiquitous and are equally divided over the five divisions of the province. Next in importance come the Rajputs, who number over a million and a half. The majority of them are Mahomedans by religion, about a fourth are Hindus and a very few Sikhs. They are widely distributed over the province. Both Jats and Rajputs of the Punjab provide many of the best recruits for the Indian Army. In fact all the agricultural classes of the Punjab, except in the south-western districts, made a magnificent response to the appeal for recruits in the great war and the province's contribution of upwards of 400,000 men to the main power of the Empire speaks for itself. The Gujars are an important agricultural and pastoral tribe, chiefly found in the eastern half of the province and in the extreme north-west. In organisation they closely resemble the Jats and are often absorbed into that tribe. There are many minor agricultural tribes, priestly and religious castes (Brahmans, Sayads and Kureshis), most of whom are landholders, the trading castes of the Hindus (Khatris, Aroras and Banias) and trading castes of the Mahomedans (Khojas, Parachas and Khakhas), and the numerous artisan and menial castes. There are also vagrant and criminal tribes, and foreign elements in the population are represented by the Baluchis of Dera Ghazi Khan and neighbouring

districts in the west, who number about half a million and maintain their tribal system, and the Pathans of the Attock and Mianwali districts. Pathans are also found scattered all over the province engaged in horse-dealing, labour and trade. A small Tibetan element is found in the Himalayan districts.

Languages.

The main language of the province is Punjabi, which is spoken by more than half the population. Western Punjabi may be classed as a separate language, sometimes called Lahndi, and is spoken in the north and west. The next most important languages are Western Hindi, which includes Hindustani, Urdu (the polished language of the towns) and other Hindi; Western Pahari, which is spoken in the hill tracts; and Rajasthani, the language of Rajputana. Baluchi, Pushto, Sindhi and Tibeto-Burman languages are used by small proportions of the population.

Agriculture.

Agriculture is the staple industry of the province, affording the main means of subsistence to 56 per cent. of the population. It is essentially a country of peasant proprietors. About one-sixth of the total area in British districts is Government property, the remaining five-sixths belonging to private owners. But a large part of the Government land is so situated that it cannot be brought under cultivation without extensive irrigation. Thus the Lower Chenab Canal irrigates nearly 1,900,000 acres of what was formerly waste land and the Lower Jhelum Canal, 390,000 acres, and the Lower Bari Doab Canal, when the colonisation scheme is completed, will add 1,200,000 acres to this total. Large areas in the hills and elsewhere which are unsuited to cultivation are preserved as forest lands, the total extent of which is about 8,700 square miles. Of the crops grown, wheat is the most important and the development of irrigation has led to a great expansion of the wheat area, which now occupies in an average year over 8½ millions of acres. The average annual outturn of wheat is 3,000,000 tons, valued at present prices at approximately £20,000,000. Next in importance to wheat is gram, the average annual produce of which is a million tons valued at £5,000,000. Other important staples are barley, rice, millets, maize, oilseeds (rape, toria and sesamum), cotton and sugarcane. Cotton is grown generally throughout the province but the ravages of boll-worm have affected the popularity of the crop. The cotton grown is of the short stapled variety, known as 'Bengals'. The country being preponderantly agricultural, a considerable proportion of the wealth of the people lies in its live-stock. The latest cattle census gives the following figures:—cattle, nearly 8,000,000 head: buffaloes, about 850,000; bovine young stock, 3,800 000; sheep, 4,500,000, goats, 4,250,000. Large profits are derived from the cattle and dairy trades and wool is a staple product in the south-west in Kulu and Kangra and throughout the plains generally. The production of hides and skins is also an important industry.

Industries.

The mineral wealth of the Punjab is small, rock salt, saltpetre, and limestone for road-building being the most important products. There are some small coal mines in the Jhelum district, with an output of about 50,000 tons a year, and gold-washing is carried on in most of the rivers, not without remunerative results. Iron and copper ores are plentiful but difficulties of carriage and the absence of fuel have hitherto prevented smelting on a large scale. The Punjab is not a large manufacturing country, the total number of factories being only 184, the majority of which are devoted to cotton ginning, cleaning and pressing. Cotton weaving as a domestic industry is carried on by means of hand looms in nearly every village. The Salvation Army has shown considerable enterprise in improving the hand-weaving industry. Blankets and woollen rugs are also produced in considerable quantities and the carpets of Amritsar are famous. Silk-weaving is also carried on and the workers in gold, silver, brass, copper and earthenware are fairly numerous and ivory carving is carried on at Amritsar and Patiala.

Administration.

Prior to the passing of the Indian Reform Act of 1919 the system of administration was that of a Lieutenant-Governor, drawn from the ranks of the Indian Civil Service. Under that Act the Province was raised to the status of a Governorship, with an Executive Council and Ministers, the Governor in Council being in charge of the Reserved Subjects and the Governor with his Ministers of the Transferred Subjects. The general system of provincial administration under this scheme is sketched in the section Provincial Governments (*q. v.*) where is also given a list of the Reserved and Transferred Subjects. Associated with the Governor and the Council and Ministers is an enlarged Legislative Council, with wide powers, whose scope and authority are given under the Legislative Councils (*q. v.*), the system being common to all the major Provinces. The Punjab Commission, the body which is responsible for the Civil administration of the province, is recruited from the Indian Civil Service and the Provincial Civil Service. Up to the date of the separation of the North-West Frontier Province from the Punjab, one-fourth of the cadre was drawn from the Indian Army. The business of Government is carried on through the usual Secretariat which consists of three Secretaries, designated (1) Chief, (2) Revenue and (3) Financial Secretaries, and three Under-Secretaries. There is also at present an Additional Secretary. In the Public Works Department, there are also three Secretaries (Chief Engineers), one in the Buildings and Roads Branch and two in the Irrigation Branch. The heads of the Police and Educational Departments are also Under-Secretaries to Government. The Government spends the winter in Lahore and the summer (from the middle of May to the middle of October) in Simla. Under the Governor, the province is administered by five Commissioners (for Ambala, Jullunder, Lahore, Rawalpindi and Multan) who exercise general control over the

Deputy Commissioners—29 in number—each of whom is in charge of a district. A district on an average contains four tahsils, each consisting of about 300 villages. The Deputy Commissioner is usually a Covenanted Civilian or military member of the Punjab Commission, although five Deputy Commissionerships are "listed" for Provincial Civil Servants. The Deputy Commissioner has under him one or more Assistant Commissioners (Covenanted Civilians) and one or more Extra Assistant Commissioners (Provincial Civilians). In some cases, one or more tahsils form a subdivision under the charge of a sub-divisional officer who has wide powers. The tahsil is in charge of a Tahsildar, in some cases assisted by one or more Naib Tahsildars. The village is under a Lambardar or headman and in most districts the villages are grouped into zails, each under a zaildar. The lambardars and zaildars are "village officers" and not Government-servants. The district Land Records and Excise staff, though organised for special departmental purposes, is available for general administrative work. The Native States of the province are arranged for the purposes of supervision into five groups, each under the charge of a Political Agent. Except in the case of the Sikh Phulkian States (Patiala, Jhind and Nabha) and the Bahawalpur Agency, the Political Agent is either the neighbouring Commissioner or Deputy Commissioner. The principal heads of Department in the province are the two Financial Commissioners (who are the highest Court of Revenue jurisdiction, and heads of the departments of Land and Separate Revenue and of Agriculture and the Court of Wards), the three Chief Engineers, the Inspector-General of Police, the Director of Public Instruction, the Inspector-General of Prisons, the Inspector-General of Civil Hospitals, the Sanitary Commissioner, the Conservator of Forests, the Director of Agriculture and Industries, the Inspector-General of Registration, the Registrar of Co-operative Credit Societies and Joint Stock Companies and the Legal Remembrancer. The Accountant-General, the Postmaster-General, the Director of Telegraph Engineering, and the Agent, North-Western Railway, represent Imperial Departments under the Government of India.

Justice.

The administration of justice is entrusted to a High Court, which is the final appellate authority in civil and criminal cases, and has powers of original criminal jurisdiction in cases where European British subjects are charged with serious offences and original civil jurisdiction in special cases. The Court sits at Lahore and is composed of a Chief Justice and six puisne judges (either Civilians or barristers), and an eighth additional judge. The conversion of the old Chief Court into a High Court which had first been mooted as long ago as 1886 and was sanctioned by the Secretary of State in 1916, could not take effect until the war was over and was finally brought into force on April 1, 1919. Subordinate to the High Court are the District and Sessions Judge (22 in number) each of whom exercises civil and criminal jurisdiction in a civil and sessions division comprising one or more districts. They hear most of the first appeals in Civil suits and try sessions cases and hear criminal appeals from the district and first class magistrates. One or two divisions have an additional judge and in many districts a Subordinate Judge exercising unlimited civil jurisdiction, is appointed to assist the District Judge but the majority of civil suits are tried in the first instance by Munsifs whose jurisdiction is limited to suits not exceeding Rs. 1,000 in value. The assistants to Deputy Commissioners are always invested with the powers of a Munsif, but the former practice of investing Tahsildars with Munsif's powers is being gradually discontinued. At Lahore, Amritsar and Simla there are Courts of Small Causes. The Deputy Commissioner is the District Magistrate and controls the subordinate Criminal Courts of the District. All the assistants of the Deputy Commissioner as well as the District and Subordinate Judges, but not the Munsifs, are invested with magisterial powers. Tahsildars usually exercise the powers of a second class magistrate and Naib Tahsildars those of the third class, and considerable assistance is obtained from Honorary Magistrates who sit either singly or as a bench. In districts in which the Frontier Crimes Regulation is in force the Deputy Commissioner on the finding of a Council of Elder (Jirga) may pass sentence up to four years' imprisonment. In all cases capital sentences require the confirmation of the Chief Court. Special Revenue Courts to decide all suits regarding tenant right, rents and cognate matters in which civil courts have no jurisdiction have been established under the Punjab Tenancy Act. The Financial Commissioners are the final court of appeal in revenue cases.

Local Government.

Local control over certain branches of the administration is secured by the constitution of district boards exercising authority over a district and of municipalities exercising authority over a city or town. A few districts have local boards which exercise authority over a tahsil. These bodies are composed of members either nominated by Government or elected by the people and they are empowered to spend the funds at their disposal on schools and dispensaries, vaccination, sanitation, roads and rest houses and general improvements. The funds of district boards are derived mainly from a cess on the land revenue of the district supplemented by grants from Provincial Funds, and those of municipalities from octroi, local taxation and Government grants. In the smaller towns which are known as "notified areas", a simpler form of government than the municipal system is in force. Where the elective principle is in force as regards both district boards and municipalities, the public shows very little interest in the elections, except in a few cases where sectarian feeling runs high.

Finance.

The system of provincial finance also underwent a radical change under the Reform Act. Prior to the passing of that measure certain heads of revenue were reserved to the Government of India, others were made over entirely to the Provinces, others were "divided" between the Government of India and the

Provinces, the provinces in this way contributing to the cost of the central government. The Reform Act swept this system away. Certain heads of revenue were reserved to the Government of India; the rest were made over entirely to the Provinces, subject to a contribution fixed in each case to the expenses of the central government. These financial provisions, with the Punjab contribution, are described in detail in the section The Provincial Governments (*q. v.*)

Public Works.

As was stated in the section on "Administration" the Public Works Department is divided into two branches, one for Buildings and Roads and the other for Irrigation. In the former branch, under the Chief Engineer, the province is divided into three circles under Superintending Engineers and 11 divisions under Executive Engineers. The primary object of this branch is the construction and maintenance of Imperial and Provincial works, but it also assists municipalities and district boards. The Irrigation branch is under two Chief Engineers, one of whom is also Chief Engineer of Irrigation Works in the North-West Frontier Province. Under them are nine Superintending Engineers in charge of circles and 39 Executive Engineers in charge of divisions. In addition to the work of construction and maintenance Irrigation Officers are responsible for the assessment of water rates leviable on irrigated areas and in several districts where the land revenue demand is assessed on the fluctuating principle, for the formulation of this demand on irrigated crops as well.

Irrigation.

The canal system of the Punjab is admittedly one of the greatest achievements of British rule in India. Not including the enormous Triple Canal project recently completed, the total irrigated area in British districts and Native States amounts to 8,269,233 acres. The Beas is the only one of the great rivers of the province from which no canal takes off. The Indus provides supplies for two large series of inundation canals, one on either bank. Taking off from the Jhelum is the Lower Jhelum perennial canal, with 150 miles of main channel and 1,000 miles of distributaries and lower down the river is a large series of inundation canals. The Lower Chenab perennial canal takes off from the Chenab and comprises 427 miles of main channel and 2,278 miles of branches, while below the junction of the Chenab and Ravi rivers is a series of inundation canals on both banks. The Ravi provides supplies for the Upper Bari Doab Canal, which has 370 miles of main line and branches and 1,571 miles of distributaries. Some small inundation canals and the Sidhani system with a length of 200 miles also take off from the Ravi. The Sirhind Canal, which has a main line and branches of 538 miles and distributaries amounting to 3,703 miles, takes off from the Sutlej, and there are two systems of inundation canals deriving their supplies from the Upper and Lower Sutlej respectively in addition to the Grey Canals maintained on the co-operative system in the Ferozepore district and a vast series of inundation canals in Bahawalpur State. The Western Jumna Canal, which takes off from the right bank of the Jumna, has a main line and branches of 377 miles and distributaries of 1,764 miles. The Triple Canal project is intended to carry surplus water from the Jhelum and the Chenab to supplement the scanty supplies in the lower reaches of the Ravi and incidentally to afford irrigation to the tracts through which the supply channels pass. The three canals included in the scheme are known as the Upper Jhelum, Upper Chenab and Lower Bari Doab Canals. Of these the Upper Chenab was opened in April 1912 and the Lower Bari Doab in April 1913 and the Upper Jhelum in December 1915. The most interesting feature of this great work is the level crossing at Balloki, 40 miles from Lahore, where the Upper Chenab canal supply is passed across the Ravi into the Lower Bari Doab Canal.

Police.

The Police force is divided into District and Railway Police. The combined force is under the control of the Inspector-General, who is a member of the gazetted force and has under him three Deputy Inspectors-General, and a fourth Deputy Inspector-General in charge of Criminal Investigation, the Police Training School and Finger Print Bureau at Phillaur. The Railway Police are divided into two districts, Northern and Southern, under an Assistant Inspector-General. The District Police are controlled by Superintendents, each of whom is in charge of a district, and has under him one or more Assistant Superintendents. The district is divided into circles under charge of Inspectors, and again into thanas in charge of a Sub-Inspector. The staff of a thana consists on an average of one Sub-Inspector, two head constables and 10 constables. A service of Provincial Police officers has also been established consisting of 18 Deputy Superintendents, who are employed as assistants to the Superintendents. The total police force of the province exclusive of gazetted officers, consists of 980 officers and about 20,000 men, practically half of whom are armed with revolvers and bored out rifles. The village police or chaukidars are under the control of the Deputy Commissioner of each district not of the Police Superintendent.

Education.

Although the Punjab is usually considered rather a backward province, education has made great strides especially in the last ten years. Government maintain the Government College at Lahore, the Central Training College at Lahore, a Training Class for European teachers at Sanawar (Simla Hills), normal schools at the headquarters of each division, and High Schools at the headquarters of each district, and the Lawrence Military Asylum at Sanawar for European children. Two more Government Colleges, at Ambala and Multan, are in contemplation. There are in the province nine arts colleges (one of them Oriental), 6 professional colleges

for males and 1 for females; 130 High Schools for boys and 18 for girls; 241 middle schools for boys and 43 for girls; 6,492 Primary Schools for boys and 855 for girls; 54 schools for special instruction for boys and 12 for girls. The number of pupils attending schools of all classes, both male and female, is 563,154. The nine arts colleges are:—The Government, Oriental, Forman Christian, Dayanand, Islamia and Dayal Singh Colleges at Lahore; Khalsa, Amritsar; Murray, Sialkote; Gordon, Rawalpindi. Professional education is represented by the Law, Medical and Veterinary Colleges at Lahore, the Agricultural College at Lyallpur, the Clerical and Commercial School at Amritsar, the Engineering School at Rasul, the Mayo School of Art and the Railway Technical School, both at Lahore. There are eight Industrial Schools in the Province maintained by Municipalities or District Boards and others maintained by Missionary bodies, the Arya Samaj, etc., which receive grants-in-aid. The education of the domiciled community is provided for by a number of secondary boarding schools in hill stations and of primary schools in the plains. The aristocracy of the province is provided for by the Aitchison Chiefs' College for boys and the Queen Mary's College for girls, both at Lahore.

The Education Department is administered by the Director of Public Instruction, who has under him an Inspector of Schools in each civil division an Assistant Director, with two or more assistants, a District Inspector, with assistants, in each district, two Inspectresses of girls' schools and an Inspector of European schools. Higher education is controlled by the Punjab University (incorporated in 1882) which has the Lieuteuant-Governor as *ex-officio* Chancellor, a Vice-Chancellor appointed by Government and a Senate. In addition to the nine arts colleges already mentioned and the Law and Medical Colleges at Lahore, St. Stephen's College, Delhi, and the Hindu College, Delhi, and six other colleges in Kashmir, Patiala, Bahawalpur, Kapurthala and the North-West Frontier Province are affiliated to the Punjab University.

Medical.

The Medical Department is controlled by the Inspector-General of Civil Hospitals (a member of the Indian Medical Service) who also supervises the departments of the Chief Plague Medical Officer and the Chief Malaria Medical Officer. Sanitation is controlled by the Sanitary Commissioner (also a member of the Indian Medical Service) who has under him two Deputy Sanitary Commissioners and is advised by the Sanitary Board, with the Sanitary Engineer as Technical Adviser. Medical work in the districts is in charge of the Civil Surgeons, of whom fourteen before the War were members of the Indian Medical Service and others Military Assistant Surgeons and uncovenanted Medical Officers, chiefly Civil Assistant Surgeons. The Mayo Hospital at Lahore and special railway, canal and police hospitals are maintained by Government, but the ordinary hospitals and dispensaries in the districts are maintained by municipal or district funds. Certain private institutions such as the Walker Hospital at Sialra and many mission dispensaries receive grants-in-aid. The Mayo Hospital at Lahore has been greatly extended and improved as a memorial to King Edward VII, and was formally opened by Lord Hardinge in December 1915. The total number of patients treated at all hospitals and dispensaries in the year is over four and a half millions, including nearly 75,000 in-patients. A temporary department to combat plague has been organised under the Chief Medical Plague Officer. In the districts the Civil Surgeons are generally in charge of the operations against plague, but additional officers are employed from time to time. There is only one lunatic asylum in the Province at Lahore, but there are ten leper asylums. The Pasteur Institute at Kasauli performs the functions of a provincial laboratory for the Punjab. Vaccination is supervised by the Sanitary Commissioner, but is more particularly the concern of the Deputy Sanitary Commissioner, who has under him a special staff. Civil Surgeons also have a local staff of vaccinators under them.

Administration.

Governor, Sir Edward Maclagan, K.C.I.E., C.S.I. I.C.S.

PERSONAL STAFF.

Private Secretary, Major G. C. S. Black, O.B.E.

Aide-de-Camp, Capt. K. O'Brien Harding, O.B.E.

Honorary Aides-de-Camp, Hon. Lieut. Risaldar Major Amar Singh Bahadur, Subedar-Major Feroz Khan Bahadur and Subedar Sainbir Gurung, Bahadur, I.O.M.

MEMBERS OF COUNCIL.

The Hon. Sir John Maynard.

The Hon. Sardar Bahadur Sardar Sunder Singh Majithia.

MINISTERS.

Khan Bahadur Mian Fazal Hussain

Lala Harkisan Lal.

SECRETARIAT.

Chief Secretary, J. P. Thompson, I.C.S.

Revenue Secretary J. D. Boyd, I.C.S.

Financial Secretary, B. T. Gibson, I.C.S.

PUBLIC WORKS DEPARTMENT

Irrigation Branch

Secretaries, F. W. Woods; H. W. M. Ives, A.M.I.C.E.

Buildings and Roads Branch.

Secretary, A. S. Montgomery.

REVENUE DEPARTMENT.

Financial Commissioner, P. J. Fagan, I.C.S.

Director of Industries, E. A. Scott, O.B.E.

Director of Agriculture, C. A. H. Townsend

Director of Land Records, Inspector-Genl. of Registration, and Registrar-General, D. J. Boyd

MISCELLANEOUS APPOINTMENTS.

Director of Public Instruction, G. Anderson.

Inspector-General of Police, A. C. Stewart.

Inspector-General of Registration, Shaikh Rahim Bakhsh.

Conservator of Forests, J. W. A. Grieve.

Inspector-General of Civil Hospitals, Colonel Robert Charles Macwatt, C.I.E., I.M.S.

Sanitary Commissioner, Lt.-Col. S. B. Smith, C.M.G., I.M.S.

Inspector-General of Prisons, Lt.-Col. E. L. Ward.

Accountant-General, F. D. Gordon, M.A.

Postmaster-General, H. N. Hutchinson, O.B.E., I.C.S.

LIEUTENANT GOVERNORS OF THE PUNJAB.

Sir John Lawrence, Bart., G.C.B.	1859
Sir Robert Montgomery, K.C.B.	1859
Donald Friell McLeod, C.B.	1865
Major-General Sir Henry Durand, K.C.S.I., C.B., died at Tonk, January 1871.	1870

Lala Uttam Chand, Anarkali, Lahore	Lahore City (Non-Muhammadan).

Burma.

The Province of Burma lies between Assam on the North-West and China on the North-East, and between the Bay of Bengal on the West and South-West and Siam on the South-East. Its area, including the district of Putao constituted in February 1914, is approximately 270,000 square miles, of which 172,000 are under direct British Administration, 31,000 belong to independent and 67,000 to semi-independent Native States. The main geographical feature of the country is the series of rivers and hills running fan-like from North to South with fertile valleys in between, widening and flattening out as they approach the Delta. Differences of elevation and rainfall produce great variations in climate. The coastal tracts of Arakan and Tenasserim have a rainfall of about 200 inches, the Delta less than half that amount. The hot season is short and the monsoon breaks early. The maximum shade temperature is about 96°, the minimum about 60°. North of the Delta the rainfall decreases rapidly to 30 inches in the central dry zone which lies in a "rain shadow" and has a climate resembling that of Bihar. The maximum temperature is twenty degrees higher than in the wet zone, but this is compensated by a bracing cold season. To the north and east of the dry zone lie the Kachin hills and the Shan plateau. The average elevation of this tableland is 3,000 feet with peaks rising to 9,000. Consequently it enjoys a temperate climate with a rainfall of about 70 inches on the average. Its area is over 50,000 square miles. There is no other region of similar area in the Indian Empire so well adapted for European colonization. The magnificent rivers, the number of hilly ranges (Yomas) and the abundance of forests, all combine to make the scenery of Burma exceedingly varied and picturesque.

The People.

The total population of Burma at the census of 1921 was 13,205,564. In 1911 there were 7,642,201 Burmans, 996,420 Shans, 919,641 Karens, 239,953 Kachins, 306,486 Chins, 344,123 Arakanese and 320,629 Talaings. There is also a large alien population of 108,877 Chinese and about 600,000 Indians, while the European population was 24,355.

The Burmans, who form the bulk of the population, belong to the Tibetan group and their language to the Tibeto-Chinese family. They are essentially an agricultural people, 80 per cent. of the agriculture of the country being in their hands. The Burmese, and most of the hill tribes also, profess Buddhism, but Animism, or the worship of nature spirits, is almost universal. The interest taken by the Burmese in the course of the war, their response to the call for recruits and their generous contributions to war loans and charitable funds seem to show that their apathy towards the government of the country is giving way to an intelligent loyalty to British rule. But attempts are being made by the Indian Reform party to exploit this newly awakened interest in politics. In appearance the Burman is usually somewhat short and thick set with Mongolian features. His dress is most distinctive and exceedingly comfortable. It consists of a silk handkerchief bound round his forehead, a loose jacket on his body and a long skirt or loongi tied round his waist, reaching to his ankles. The Burman women, perhaps the most pleasing type of womanhood in the East, lead a free and open life, playing a large part in the household economy and in petty trading. Their dress is somewhat similar to the man's minus the silk kerchief on the head, and the loongyi is tucked in at the side instead of being tied in front. A well dressed and well groomed Burmese lady would, for grace and neatness, challenge comparison with any woman in the world.

Communications.

The Irrawaddy, and to a less extent the Chindwin, afford great natural thoroughfares to the country. At all seasons of the year these rivers, especially the Irrawaddy, are full of sailing and steam craft. In the Delta the net-work of waterways is indeed practically the only means of communication. The Irrawaddy Flotilla Company, with a fine fleet of mail, cargo and ferry boats, gives the Irrawaddy and the Delta rivers and creeks a splendid river service.

The Burma Railways Company has a length of 1,600 miles open line. The principal lines are from Rangoon to Mandalay; from Sagaing to Myitkyina, the most northern point in the system; the Rangoon-Prome line; and the Pegu-Martaban line, which serves Moulmein on the further bank of the Salween River. An important branch line runs from Thazi on the main line across the Meiktila and Myingyan Districts to Myingyan Town on the Irrawaddy. Another branch goes from Sagaing on the Irrawaddy to Alon on the Chindwin. A small branch on the Sagaing-Myitkyina line runs from Naba to Katha on the Irrawaddy. A branch on the right bank of the Irrawaddy runs from Bassein to Kyangin. A ferry at Henzada connects this branch with another branch running from Letpadan on the Prome line to the left bank of the Irrawaddy at Tharawaw. An important line, the Southern Shan States Railway, is open as far as Aungban, 7 miles beyond Kalaw, the future hill-station of the province, and 70 miles from Thazi, the junction with the Rangoon-Mandalay main line. The new line will end thirty miles further east at Yawnghwe, the principal town in the rich valley of the Nam Pilu. The Northern Shan States railway runs from Myohaung Junction, 3 miles south of Mandalay, to Lashio.

The length of metalled roads is nearly 2,000 miles and of unmetalled roads nearly 11,000. The number of roads is for a rich province like Burma quite inadequate. One of the most urgent needs of the Province is a very generous extension of roads both metalled and unmetalled. The newly-constituted Committee on Roads and Communications will no doubt effect rapid improvement when funds become available. The imperial grant of 50 lakhs spread over four or five years went a very little way towards making good deficiencies, and the proposal to provide funds by means of a tax on rice exports was not approved.

A revision of the Provincial settlement is urgently required. No arrangement can be satisfactory which does not recognize the claim of Burma, as a new and undeveloped country, to separate treatment. She is taxed far more highly than any other province and her surplus should be used to a far greater extent than hitherto for capital expenditure on development, and not swept into the Imperial coffers.

Industry.

Agriculture is the chief industry of the province and supports nearly three-fourths of the population. The nett total cropped area is 14½ million acres of which more than half a million acres are cropped twice. Irrigation works supply water to 1¾ million acres. The main supply water to 1¾ million acres. The Burma coastwise trade balance is invariably favourable, the exports exceeding the imports. Rangoon imported in 1920-21 cotton twist and yarn to the value of Rs. 2,81 lakhs and cotton piecegoods to the value of Rs 2,32 lakhs chiefly from Bombay and Calcutta; jute goods to the value of Rs. 1,92 lakhs and coal worth Rs 1,06 lakhs, almost entirely from Calcutta; grain and pulse worth Rs. 1,17 lakhs. In return Burma supplied India with 970,000 tons of rice to the value of nearly Rs 15¾ crores, as compared with 1,750,000 tons valued at Rs. 22¼ crores in 1919-20. India's purchases had been surprisingly low during the opening months of the year but when control of the inter-provincial rice trade was released in January 1921, the trade revived and by the end of the year Bombay (as usual the principal purchaser) had taken 512,000 tons, Bengal 254,000, and Madras 181,500. India is very largely dependent on Burma for her supplies of Kerosene, benzine and petrol which rank second to rice in order of importance India's purchases totalled 100 million gallons in 1920-21, as compared with 105 in 1919-20 and 117 in 1918-19. Teak wood was exported in large quantities from Burma to India where stocks were low early in the year. Bombay took 53,600 cubic tons in 1920-21 as compared with 24,500 in 1919-20, Bengal 47,600 as compared with 43,000 cubic tons in the previous year; and Madras 36,700 as compared with 32,000. The total value of the trade increased from Rs. 1,78 lakhs in 1919-20 to Rs. 2,76 lakhs in 1920-21.

Forests play an important part in the industrial life of the Province. The forest reserves cover nearly 30,000 square miles, while unclassed forests are estimated at about 110,000 square miles. Government extracts some 90,000 tons of teak annually, private firms, of whom the Bombay Burma Trading Corporation and Steel Brothers are the chief, extract over 276,000 tons. Other timber extracted by licensees amounts to nearly 400,000 tons and firewood 700,000 tons.

The war has given a great impetus to the exploitation of the mineral resources of the country and there has been a rapid increase in the number of mines. Wolfram and tin mines in Tenasserim have especially developed. Government has aided their development by the appointment of special officers, the importation of labour and the construction of roads. In 1918 wolfram was extracted to the amount of 4,442 tons valued at over a crore of rupees. Burma is the chief source of the world's supply of this important mineral. In the same year 100 tons of block tin and 732 tons of tin ore were produced. The value was nearly eighteen lakhs. Silver, lead and zinc are extracted by the Burma Mines Company at Badwin in the Northern Shan States, Copper in small quantities is also found there. No zinc has been won since 1916. There are small deposits of Molybdenite in Tavoy and Mergui and of platinum in Mytkyina. Antimony is found in large quantities in Amherst district in an area at present too difficult of access for profitable working. The output of precious stones from the ruby mines had declined since the war began. Gold dredging in the Myitkyina District has proved unprofitable and the company has been wound up. From the mines in the Hukong valley jade and amber worth nearly four lakhs were won. Next in importance for war purposes to wolfram and far exceeding it in commercial value is petroleum. The oldest and largest oil field in the province is at Yenangyaung in Magwe district where the Burma Oil Company has its chief wells. But borings in other districts have shown that the oil-bearing strata extend over the whole of the dry zone, and the output from the smaller fields in Myingyan, Pakokku and Minbu districts is now considerable, while the wells sunk in Thayetmyo and Prome districts are also showing satisfactory returns. Two-thirds of the total production comes from the Yenangyaung field, whence it is carried 300 miles in pipes to the oil refineries at Syriam on the Rangoon river. The revenue from minerals for the year was Rs. 419 lakhs.

The area under rubber is 60,000 acres. The plantations are young and as the trees come into bearing production increases rapidly. But the planting of new ground is not on a scale to meet the demands for rubber, and Government has endeavoured by free grants of suitable land to stimulate planting. On this as on other industries of Burma the mischievous activities of the company promoter during the great 'boom" cast a blight from which it is only just recovering. The bulk of the rubber is grown in Tenasserim division, but there are large plantations near Rangoon and in the wet zone of Upper Burma near Myitkyina.

Manufactures.

There are 536 factories, over three-fifths of which are engaged in milling rice and over one-fifth are sawmills. The remainder are chiefly cotton ginning mills, oil mills for the extraction of oil from groundnuts, and oil refineries connected with the petroleum industry. The average daily number of operatives is under 70,000 At the Census of 1911, 469,743 or only 6·6 of the total population were engaged outside agriculture and production.

As is the case in other parts of the Indian Empire, the imported and factory-made article is rapidly ousting the home-made and indigenous. But at Amarapura in the Mandalay District a revival has taken place of hand silk-weaving. Burmese wood-carving is still famous and many artists in silver still remain, the finish of whose

work is sometimes very fine. Bassein and Mandalay parasols are well known and much admired in Burma. But perhaps the most famous of all hand-made and indigenous industries is the lacquer work of Pagan with its delicate patterns in black, green and yellow traced on a ground-work of red lacquer over bamboo. A new art is the making of bronze figures. The artists have gone back to nature for their models, breaking away from the conventionalized forms into which their silver work had crystallized, and the new figures display a vigour and life that make them by far the finest examples of art the province can produce.

Trade.

The total value of the foreign trade in 1918-19 was 3,565 lakhs, an increase of 15 per cent. compared with the previous year but 424 lakhs below the returns for the best year before the war. Imports amounted to 1,059 lakhs or 7 per cent. more than in the previous year. Rangoon, the only port with facilities for distribution, took 85·74 per cent. of the foreign trade and 93·43 of the Indian trade. Indian trade rose from 2,340 lakhs in 1917-18 to 3,354 lakhs in 1918-19. The net customs duty was 191¼ lakhs or 15½ lakhs more than in 1917-18. The shortage of shipping and the enormous cost of freight continued to hamper trade. Articles of export required for war purposes, such as wolfram, rubber and cotton, with hides, timber, tobacco and oil, shew the chief increases. The exports of rice and paddy to foreign countries totalled 1,642,067 tons, or 8 per cent. more than in 1917-18, but still 14 per cent. below the returns for the best year before the war. Increase of prices accounts for a considerable part of the increase of total trade, but after allowances have been made for the inflation of prices it is clear that there was a great recovery during the year.

The most important item of merchandise imported into Rangoon is manufactured cotton, which accounts for 27 per cent. of the total import trade. These imports are valued at Rs. 236 lakhs. In 1918-19 the United Kingdom took 36.8 per cent. and the rest of the British Empire 26.7 per cent. of the total foreign trade of the province. Japan stands next with 17 per cent., nearly four times as much as her nearest competitor, the United States. Of the import trade alone Japan takes 23 per cent., United Kingdom 48.8 per cent., British Dominions 16 per cent., the whole of Europe 2 per cent. Japan has nearly doubled her total trade in the twelve months and imports alone from Japan are two and a quarter times as much as the average of the three years ending March 1917.

Administration.

Burma has not yet been brought within the provisions of the Government of India Act, 1919, but in December 1920 Mr. Montagu stated in the House of Commons that he hoped next session to introduce a Bill with the object of bringing Burma into the scheme of constitutional reform. He hoped that Parliament, at the beginning of next session, would agree to the appointment of a Joint Standing Committee on Indian Affairs, consisting of nine members of each House. He would not propose any member of the Government to serve on the Committee, while if the Bill passed the second reading he proposed to refer it to a committee. Consequently, it would be Parliament that would decide. The scheme of the Government of India and the Government of Burma would be referred to the Standing Committee along with the Bill if it passed the second reading. He hoped to be able to convince the Committee that the principles of the scheme, which had been applied not because they liked it, but because they thought it would be the best as a transitional measure for the other provinces of India, would be the best for Burma.

In 1897 the Province, which had formerly been administered by a Chief Commissioner, was raised to a Lieutenant-Governorship. The head of the Province is therefore now the Lieutenant-Governor. He has a Council of seventeen members, one of whom is elected by the Burma Chamber of Commerce, one by the Rangoon Trades Association and the remaining fifteen are nominated by the Lieutenant-Governor. Not more than seven members may be official; the rest must be non-officials, and at least four must be selected from the Burmese population, one from the Indian and one from the Chinese community.

Burma is divided administratively into Upper Burma (including the Shan States and Chin Hills) and Lower Burma. The Shan States are administered by the Chiefs of the States, subject to the supervision of the Superintendents in the case of the Northern and Southern Shan States, and to the supervision of the Commissioners of the adjoining Divisions in the case of the other States. The Civil, Criminal and Revenue administration is vested in the Chief of the State, subject to the restrictions contained in the sanad. The law administered is the customary law of the State.

The Chin Hills are administered by a Superintendent.

Under the Lieutenant-Governor are eight Commissioners of divisions, four in Upper and four in Lower Burma. Commissioners in Upper Burma and the Commissioner of the Arakan Division are ex-officio Sessions Judges, but the other three Commissioners have been relieved of all judicial work.

Under the Commissioners are 40 Deputy Commissioners in charge of districts including the Police officers in charge of the Hill Districts of Arakan and the Salween District, who exercise the powers of a Deputy Commissioner. Deputy Commissioners are also District Magistrates, Collectors, and Registrars, except in Rangoon, where there is both a District Magistrate and a Collector. Subordinate to the Deputy Commissioner are Assistant Commissioners, Extra Assistant Commissioners and township officers, called Myooks. In the villages are the village headmen, Thugyis, assisted in Lower Burma by the Seeingaungs (rural policemen in charge of ten houses). The revenue administration is controlled by a Financial Commissioner assisted by two Secretaries. Subordinate Departments are in charge of a Commissioner of

Settlements and Land Records, a Director of Agriculture, a Superintendent of the Civil Veterinary Department and a Registrar of Co-operative Credit Societies.

Justice.

The administration of Civil and Criminal Justice is under the control of the Chief Court of Lower Burma with five judges, and of the Judicial Commissioner, Upper Burma, with an Assistant Judicial Commissioner. There are seven Divisional and eight District Judges. There are also separate Provincial and Subordinate Judicial Services. Divisional Judges are also Sessions Judges. The Chief Court at Rangoon is the highest Civil Court of appeal and the highest court of Criminal appeal and revision in Lower Burma. It is also the High Court for the whole of Burma (including the Shan States) where European British subjects are concerned. It is the principal Civil and Criminal Court of original jurisdiction for Rangoon Town and hears appeals from all sentences of Courts and magistrates exercising jurisdiction in Rangoon Town.

In Criminal and Civil matters the Judicial Commissioner of Upper Burma exercises the power of a High Court for appeal, reference and revision, except in respect of criminal cases in which European British subjects are concerned.

All village headmen have limited magisterial powers and a considerable number are also invested with civil jurisdiction to a limited extent.

In pursuance of the policy of decentralization steps were taken in 1917 to restore to the village headmen the power and influence which they possessed in Burmese times before the centralizing tendencies of British rule made them practically subordinate officers of the administration.

Municipalities.

The Rangoon Municipality is the most important, with an income of Rs. 46·31 lakhs and an expenditure of Rs. 36·81 lakhs. The Chairman is a member of the Indian Civil Service of Deputy Commissioner's rank. The members of the Committee are elected by wards.

There are 44 minor Municipalities, of which the most important are those at Mandalay and Moulmein. The average incidence of Municipal taxation is Rs. 2-3-5 per head, but in Rangoon it reaches Rs. 12.

Local Funds.

No Local Boards or District Boards exist in Burma. But in Lower Burma there are District Cess Funds, derived mostly from a 10 per cent. cess on collections of ordinary local revenue and from collections from markets, ferries, slaughter houses, etc. The total receipts exceed Rs. 38 lakhs.

In Upper Burma there are District Funds. They are derived from market, ferry and license fees and occasional grants from Provincial revenues. The total revenue exceeds Rs. 12 lakhs.

There are 7 Cantonment Funds, 22 Town Funds and, excluding the Rangoon Port Trust, 6 Port Funds.

Finance.

In Burma, as in other Provinces, the finances are based on a "Provincial Settlement," which came into force on the 1st April 1907. The Government of India retains in the first place the entire profits of the commercial departments, such as Posts and Telegraphs, and in the second place, all the revenue where the 'locale' is no guide to its true incidence, such as the net receipts from Customs, Salt and Opium. But as the income from these sources is inadequate for the purpose of meeting the cost of the Imperial Services, special arrangements are made as with other Provinces for the division of the remaining sources of revenue between Imperial and Provincial Funds.

In 1910-1911, as a result of the Report of the Decentralisation Committee, modifications were introduced into the Settlement. Briefly, the Local Government retains 5-8ths of the net Land Revenue instead of a half, and the whole of the net forest revenue. Stamps, Excise and Income tax receipts are divided equally between Imperial and Provincial revenues. The unfairness of the Provincial settlement is disguised by the inclusion, under the head of Land revenue, of capitation taxes amounting to nearly a crore of rupees. This is a tax peculiar to Burma and should be entirely provincial. The injustice of the existing arrangement is redressed by contributions from Imperial revenues, which enable the Local Government to remain solvent (see below). But it is a very unsatisfactory form of finance that robs a province of what are rightly its own revenues and remedies the injustice by means of doles.

The Imperial Government makes a fixed annual assignment to the Burma Government. Under the settlement of 1911 this assignment was fixed at Rs. 12·90 lakhs. The total contributions from Imperial Funds during the year 1917-18 amounted to Rs. 46·93 lakhs. From April 1st, 1915, onwards the Government of India has allotted an additional recurring grant of Rs. 15·11 lakhs to the province, and has further guaranteed to the province a minimum aggregate of revenue advancing by Rs. 8 lakhs annually until 1923-24. No payments under this guarantee are to be made till after the war but it will have retrospective effect from the year 1911-12.

A fresh financial arrangement will be made when the Reform Scheme is introduced.

Public Works.

This Department is administered by two Chief Engineers who are also Secretaries to Government in the Public Works Department. There are eight Superintending Engineers (including one for Irrigation and a Sanitary Engineer), 83 Executive Engineers and Assistant Engineers. A Consulting Architect is attached to Head Quarters.

There are four Major Irrigation Works—Mandalay, Shwebo and Mon Canals and the Ye-U canal in the Shwebo District. These irrigate nearly 400,000 acres. Minor irrigation works maintained by the department supply water to another 400,000 acres, and a large area is supplied with water from minor works maintained by the villagers themselves. The area in

lower Burma protected from floods and thrown open to cultivation by means of embankments is nearly 800,000 acres.

Police.

The Police Force is divided into Civil, Military and Rangoon Town Police. The first two are under the control of the Inspector-General of Police, the latter is under the orders of the Commissioner of Police, Rangoon, an officer of the rank of Deputy Inspector-General.

There are four other Deputy Inspectors-General, one each for the Eastern and Western Range, one for the Railway and Criminal Investigation Department and one for the Military Police.

The sanctioned strength of the Civil Police Force at the end of 1917 was 1,369 officers, and 14,425 men, but the numbers were 74 officers and 864 men short of the sanctioned strength. The strength of the Military Police on the 1st January 1918 was 16,409 officers and men. The Rangoon Town Police stand at 106 officers and 1,246 men but at the end of 1917 the force was 3 officers and 105 men short.

A special feature of Burma is the Military Police. Its officers are deputed from the Indian Army. The rank and file are recruited from natives of India with a few Kachins, Karens and Shans. The experiment of recruiting Burmese on a small scale has been successful. The organisation is military, the force being divided into battalions. The object of the force is to supplement the regular troops in Burma Their duties, apart from their military work is to provide escorts for specie, prisoners, etc., and guards for Treasuries, Jails and Courts. During the year 1917 the Military Police furnished 4,644 volunteers who were drafted into Indian regiments on active service, making 9,858 since war began.

Education.

At the head is the Director of Public Instruction with a Deputy Director. There are 6 Inspectors of Schools belonging to the Imperial and 3 belonging to the Provincial Service, and 7 Assistant Inspectors and one Assistant Inspectress belonging to the Provincial Service. The Rangoon College is staffed by a Principal and ten Professors drawn from the Imperial Service with three from the Provincial Service. Outside the Education Department is the Educational Syndicate, which holds certain examinations and serves as an advisory body on educational questions referred to it by Government. Vernacular education is controlled by Divisional Boards assisted by District Advisory Committees. A scheme of the constitution of District Boards is nearing completion.

The Burma University has now been established but its constitution evoked strong local protest. Under Government there are—

An Arts College, Law School, Reformatory School, School of Engineering, Medical School, Veterinary Training School, Apprentice School, High School for Europeans, High School at Taunggyi for the sons of Shan Chiefs, 5 Normal Schools, 21 Anglo-Vernacular High Schools, and 16 Anglo-Vernacular Middle Schools.

Aided Schools, managed chiefly by Christian Missions, include 31 European Schools, 7 Normal Schools and 142 Anglo-Vernacular Schools. The number of schools managed by Buddhist Societies is steadily increasing.

A remarkable feature of education in Burma is the system of elementary education evolved, generations ago, by the genius of the people. Nearly every village has a monastery (hpoongyi-kyaung); every monastery is a village school and every Burman boy must, in accordance with his religion, attend that school, shaving his head and for the time wearing the yellow robe. At the hpoongyi-kyaungs the boys are taught reading and writing and an elementary native system of arithmetic. The result is that there are very few boys in Burma who are not able to read and write and the literacy of Burman men is 412 per mille

Of 8,447 Vernacular Schools registered under the grant in aid rules and subject to regular inspection about one-third are Monastic Schools.

Another feature of education in Burma is the excellent work of the American Baptist Mission, which has established schools in most of the important towns in Burma, as well as a College in Rangoon.

Medical.

The control of the Medical Department is vested in an Inspector-General of Civil Hospitals. Under him are 41 Civil Surgeons. There is also a Sanitary Commissioner, two Deputy Sanitary Commissioners, an Inspector-General of Prisons, three whole time Superintendents of Prisons, a Chemical Examiner and Bacteriologist and a Superintendent of the Lunatic Asylum.

A Civil Surgeon is in charge of each District, while at the summer Head Quarters of Maymyo there is a special Civil Surgeon.

The total number of Hospitals and Dispensaries was 274 at the end of March 1917. The Rangoon General Hospital is perhaps the finest in the East.

The Pasteur Institute was opened in Rangoon in July 1915. The Director is a senior member of the Indian Medical Service.

The total number of patients treated in 1916 was nearly 2 millions.

The expenditure on hospitals and dispensaries in 1917 was 20·09 lakhs.

Administration.

Lieutenant-Governor, Sir Reginald Craddock, K.C.S.I.

Private Secretary, Capt. P. W. Heanly.

Aide-de-Camp, Captain F. T. Drake-Brockman.

Honorary Aides-de-Camp, Lt.-Col. A W. H. Lee and Capt. Anthony Hamilton.

Indian Aides-de-Camp, Hony. Capt. Muzaffar Khan, Sardar Bahadur; Subadar Sao Tang; Naib Commandant Sarran Singh, Sardar Bahadur.

LEGISLATIVE COUNCIL OF THE LIEUTENANT-GOVERNOR.

Officials.

Frederick Lewisohn, M.A., I.C.S.
John Mark Somers Hunter.

C. O. Edge	Officiating Registrar, Revenue Secretary's Office.
W. Pilcher	Officiating Registrar, Secretary's Office.
W. J. Peters	Registarar, Public Works Department Secretariat.

Bihar and Orissa.

Bihar and Orissa lies between 19°-02′ and 27°-30′ N. latitude and between 82°-31′ and 88°-26′ E. longitude and includes the three provinces of Bihar, Orissa and Chota Nagpur, and is bounded on the north by Nepal and the Darjeeling district of Bengal; on the east by Bengal and the Bay of Bengal; on the south by the Bay of Bengal and Madras; and on the west by the United Provinces of Agra and Oudh and the Central Provinces.

The area of the British territories which constitute the Governorship of Bihar and Orissa is 83,181 square miles inclusive of the area of large rivers. In addition to the districts which are directly under British rule, there are two groups of petty States which lie to the south and south-west of the Province and which under the names of the Tributary and Feudatory States of Orissa and the Political States of Chota Nagpur are governed each by its own Chief under the superintendence and with the advice of the Commissioner of the nearest British Administrative division assisted, in the case of the Orissa States, by a Political Agent. The area of these territories is 28,648 square miles and as it is usual to include them when speaking of Bihar and Orissa the area of the whole Province may be stated at 111,829 square miles. Two of the provinces of the Governorship of Bihar and Orissa, *viz.*, Bihar and Orissa, consist of great river valleys, the third, Chota Nagpur, is a mountainous region which separates them from the Central Indian Plateau. Orissa embraces the rich deltas of the Mahanadi and the neighbouring rivers and is bounded by the Bay of Bengal on the south-east and walled in on the north-west by the hilly country of the Tributary States. Bihar lies on the north of the Province and comprises the valley of the Ganges from the spot where it issues from the territories of the Lieutenant-Governor of the United Provinces of Agra and Oudh till it enters Bengal near Rajmahal. Between Bihar and Orissa lies Chota Nagpur. Following the main geographical lines there are five Civil Divisions with head-quarters at Patna, Muzaffarpur (for Tirhut), Bhagalpur, Cuttack (for Orissa) and Ranchi (for Chota Nagpur).

The People.

The temporary head-quarters of Government are at Ranchi in Chota Nagpur, while the permanent Capital at Patna is nearing completion, the High Court, Government House and the Secretariat being already occupied. Various residences for the officials and quarters for the ministerial officers remain to be built. The new capital which lies between the Military Cantonment of Dinapore and the old civil station of Bankipore is known as "Patna", the old town being called "Patna City." The Province has at present no hill station. Enquiries are being made and records taken at Netarhat, an extensive plateau elevation 3,700 feet, 90 miles over west of Ranchi, where climatic conditions closely resemble Pachmarhi.

The Province has a population of 33,998,778 persons which is very little less than that of France and rather more than that of the Bombay Presidency. The province is almost entirely rural, no fewer than 966 per mille of the population living in villages. Even so with 344 persons per square mile, Bihar and Orissa is more thickly populated than Germany. There are only three towns which can be classed as cities, namely, Patna, Gaya and Bhagalpur. During the last thirty years the population of Patna, the capital designate, has been steadily diminishing. Hindus form an overwhelming majority of the population. Though the Muhammadans form less than one-tenth of the total population they constitute more than one-fifth of urban population of the province. Animists account for 7 per cent. These are inhabitants of the Chota Nagpur plateau and the Santal Parganas, the latter district being a continuation of the plateau in a north-easterly direction.

Industries.*

The principal industry is agriculture, Bihar, more especially North Bihar, being the "Garden of India." Rice is the staple crop but the spring crops, wheat, barley, and the like are of considerable importance. It is estimated that the normal area cultivated with rice is 15,615,100 acres or 48 per cent. of the cropped area of the Province. Wheat is grown on 1,121,800 million acres, barley on 1,411,800 acres, maize or Indian-corn on 1,634,600 acres, the latter being an autumn crop. Oil-seeds are an important crop, the cultivation having been stimulated by the demand for them in Europe. It is estimated that 1,932,300 acres of land are annually cropped with oil-seeds in the Province. There is irrigation in Shahabad, Gaya, Champaran and Muzaffarpur districts in Bihar and in Balasore and Cuttack in Orissa. The Indigo industry had before the war been steadily on the decline, the total area sown having decreased from 342,000 acres in 1896 to 109,600 acres in 1911. The principal cause of this was the discovery of the possibilities of manufacturing synthetic or chemically prepared indigo on a commercial scale, a process chiefly carried out in Germany. Owing, however, to the stoppage of supplies from Germany the value of natural indigo rose enormously and the area under cultivation temporarily increased. In the district of Purnea and in Orissa, and parts of the Tirhut Division jute is grown, but the acreage varies according to the price of jute. The last serious famine was in 1895-96. In any year in which monsoon currents from either the Bay of Bengal or the Arabian Sea are unduly late in their arrival or cease abruptly before the middle of September the agricultural situation is very grave. It may be said that for Bihar the most important rainfall is that known as the *hatia*, due towards the end of September or up to middle of October. Rain at this time not only

* The figures given in this paragraph relate to British territory only.

contributes materially to an increased outturn of the rice crop, but also provides the moisture necessary for starting the spring or *rabi* crops.

Manufactures.

Opium was formerly, with indigo, the chief manufactured product of Bihar, but in consequence of the agreement with the Chinese Government the Patna Factory has been closed. At Monghyr the Peninsular Tobacco Company have erected one of the largest cigarette factories in the world and as a result tobacco is being grown much more extensively. There are two important iron works in the Singhbhum District, Messrs. Tata & Co.'s Iron and Steel Works at Sakchi and the Bengal Iron and Steel Company at Dhulia. The Cape Copper Co are also opening up copper mines at the Rakha Hills in the same district. But by far the most important of the mineral industries in the province is that concerned in the raising of coal. The coalfields in the Manbhum District have undergone an extraordinary development in the past twenty years. The war has demonstrated the great value of the mica mines in Hazaribagh and Gaya which are now entirely controlled by Government and the output from which has considerably increased under the management of an officer deputed from the Geological Department.

Administration.

The Province on first constitution was administered by a Lieutenant-Governor-in-Council, thus being unique in India as the only Lieutenant Governorship with a Council. Under the Reform Act of 1919 it was raised to the status of a Governorship, with an Executive Council and Ministers. The principles of the provincial administration are fully explained in the section The Provincial Governorships, where the division of the administration into Reserved Subjects, in charge of the Governor and his Executive Council, and Transferred Subjects, in charge of the Governor and Ministers chosen from the Legislative Council, is set out in detail. In all these respects Bihar and Orissa is on the same plane as the other Provinces in India.

Finance.

The Province of Bihar and Orissa was formed with five divisions, detached from the old province of Bengal with effect from the 1st April 1912. The old arrangements made with the Government of Bengal regarding the financial administration of the Province therefore ceased to apply from that date. A fresh arrangement has, however, been made, with the approval of the Secretary of State. As the method adopted was in some measure tentative and provisional, a temporary settlement for a period of three years only has been effected. Owing to the war it has been found necessary to continue the provisional settlement for the present. Under the terms of this settlement the whole of the receipts under the heads of Interest, Forest, Registration, Courts of Law, Jails, Police, Ports and Pilotage, Education, Medical and superannuation receipts have been made over entirely to the local Government together with their corresponding charges. In addition to these, it receives three-fourths of the receipts from excise, the whole of the Land Revenue collected from Government Estates, one-half of the receipts under all other sub-heads excepting recoveries from zamindars and raiyats on account of survey and settlement in Bihar and other similar special surveys and the whole of the receipts under Scientific and other Minor Departments.

The financial relation of the Province with the Government of India and the contribution which the Province will receive from the funds of the Government of India are set out in the section. The Provincial Governments (*q. v.*) Bihar being a backward Province, with a small and slowly expanding revenue has received special treatment in this matter.

Public Works.

The Public Works Department in the Province of Bihar and Orissa consists of two branches, *viz.*:—(1) Roads and Buildings, and (2) Irrigation and Marine, which also deals with railways. Each branch has a Chief Engineer, who is also Secretary to the Local Government with an Engineer Officer as Under Secretary under him. There is also a non-professional Assistant Secretary, a Consulting Architect and a Sanitary Engineer, who works under a Sanitary Board. The electrical work of the Province is carried out by an Electrical Inspector and a staff of subordinates.

Justice.

The administration of justice is controlled by the High Court of Judicature recently established at Patna. In the administration of civil justice below the High Court are the District Judges as Courts of Appeal, the Subordinate Judges and the Munsiffs. The jurisdiction of a District Judge or Subordinate Judge extends to all original suits cognizable by the Civil Courts. It does not, however, include the powers of a Small Cause Court, unless these be specially conferred. The ordinary jurisdiction of a Munsif extends to all suits in which the amount or value of the subject matter in dispute does not exceed Rs. 1,000 though the limit may be extended to Rs. 2,000. On the criminal side the Sessions Judge hears appeals from Magistrates exercising first class powers while the District Magistrate is the appellate authority for Magistrates exercising second and third class powers. The District Magistrate can also be, though in point of fact he very rarely is, a court of first instance. It is usual in most districts for a Joint Magistrate or a Deputy Magistrate to receive complaints and police reports, cases of difficulty or importance being referred to the District Magistrate who is responsible for the peace of the district. In the non-regulation districts the Deputy Commissioner and his subordinates exercise civil powers and hear rent suits.

Local Self-Government.

Bengal Act III of 1884, which regulates the constitution, powers and proceedings of Municipal bodies in this Province has been amended by the Bengal Acts IV of 1894 and II of 1896. By these enactments the elective franchise has been further extended, and now provides for the establishment and maintenance of veterinary institutions and the training of the requi-

site staff, the improvement of breeds of cattle, the training and employment of female medical practitioners, the promotion of physical culture, and the establishment and maintenance of free libraries.

The total number of Municipalities at present in existence is 55. The ratepayers of 49 Municipalities have been granted the privilege of electing two-thirds of the number of Commissioners fixed in each case, whilst in 34 cases the Commissioners are authorised to elect their own Chairman. In the remaining towns Government has reserved to itself the power of appointing the Commissioners or Chairman, as the case may be, owing either to the backwardness of the place or to the necessity for holding the balance against contending interests or strong party feeling. It is only in 4 towns, however, that Government exercises complete control in the appointment of both Commissioners and Chairmen.

Apart from Municipalities, each district with the exception of the Santal Parganas, Angul and Singhbhum has a District Board constituted under Bengal Act III of 1885. Municipal areas are excluded in accordance with the provisions of section 1. Local Boards have been formed in all of these districts where there are sub-divisions, except Ranchi. There are at present 18 District Boards, 45 Local Boards, and 23 Union Committees in the Province.

In accordance with the provisions of section 7 of the Act, a District Board is to consist of not less than 9 members. Local Boards are entitled to elect such proportion (as a rule one-half) of the whole of the District Board as the Lieutenant-Governor may direct. In districts where there are no Local Boards, the whole of the members are appointed by Government. The Chairman of the District Board is appointed by Government, he is in practice always the Magistrate of the district.

Land Tenures.

Estates in the Province of Bihar and Orissa are of three kinds, namely, those permanently settled from 1793 which are to be found in the Patna, Tirhut and Bhagalpur divisions, those temporarily settled as in Chota Nagpur and parts of Orissa, and estates held direct by Government as proprietor or managed by the Court of Wards. The passing of the Bengal Tenancy Act (VIII of 1885) safeguarded the rights of the cultivators under the Permanent Settlement Act. Further, the Settlement Department under the supervision of the Director of Land Records makes periodical survey and settlement operations in the various districts, both permanently and temporarily settled. In the former, the rights of the undertenants are recorded and attested, while in the latter there is the re-settlement of rents. In the re-settlement proceedings, rents are fixed not only for the landlords but also for all the tenants. A settlement can be ordered by Government on application made by raiyats.

The tenures of Orissa are somewhat different. Under the zamindars, that is, the proprietors who took settlement from Government and pay revenue to Government direct, is a class of subordinate proprietors or proprietary tenure holders, who were originally village headmen dealing more or less direct with the revenue authorities. They have a variety of names, such as *mukadam, padhan, maurusi, sarbarakar, pursethi, khariddar* and *shikmi* zamindar. These sub-proprietors or proprietary tenure holders pay their revenue through the zamindars of the estates within which their lands lie. In Chota Nagpur, Orissa and the Santal Parganas, the rights of village headmen have been recognised. The headman collects the rents and is responsible for them minus a deduction as remuneration for his trouble.

Both Orissa and Chota Nagpur have their own Tenancy Acts.

Police.

The Departments of Police, Prisons and Registration are each under the general direction of Government, supervised and inspected by an Inspector-General with a staff of assistants. The Commissioner of Excise and Salt is also Inspector-General of Registration.

Under the Inspector-General of Police are three Deputy Inspectors-General and 27 Superintendents. There are also 27 Assistant Superintendents of Police and 15 Deputy Superintendents. The force is divided into the District Police, the Railway Police and the Military Police. A Criminal Investigation Department has also been formed for the collection and distribution of information relating to professional criminals and criminal tribes whose operations extend beyond a single district and to control, advise, and assist in investigations of crime of this class and other serious cases in which its assistance may be invoked. There are two companies of Military Police which are maintained as reserves to deal with serious and organised disturbances and perform no ordinary civil duties.

Education.

The position of education in the Province, with the numbers attending schools, is set out in the section Education and the tables attached thereto (*q. v.*) showing in great detail the educational status of the administration.

There is a University at Patna, whose functions are described under the Indian Universities. (*q. v.*)

There are 7 Arts Colleges with 2,811 students and one Training College for 32 students, which with the Patna College, the Ravenshaw College at Cuttack and the Greer Bhumihar Brahman College at Muzaffarpur is maintained by Government. The College at Bhagalpur, the Bihar National College at Bankipore and the Dublin University Mission College at Hazaribagh are aided by Government.

Medical.

The Medical Department is under the control of the Inspector-General of Civil Hospitals who is a Member of the Indian Medical Service. Under him there are 20 Civil Surgeons who are responsible for the medical work of the districts at the head-quarters of which they are stationed. 57 Dispensaries are maintained by Government in addition to 330 Dispensaries maintained by Local bodies, Railways, private persons, etc. 3,463,145 patients including 50,625 in-patients in public dispensaries were treated.

The total income of the medical institutions amounted to Rs. 16,69,916. A large asylum for Europeans has been opened at Ranchi which receives patients from Northern India. A similar institution is under construction for the Indians. At present these are treated at Patna.

Administration.

GOVERNOR.

His Excellency Lord Sinha of Raipur, K.C.I.E., Assumed office, December 1920. (Resigned December 1921.)

PERSONAL STAFF.

Private Secretary, William Ballie Brett, I.C.S.

Aide-de-Camp, Capt. E. A. Haskelt-Smith.

Honorary Aides-de-Camp, Hon. Capt. Sardar Bahadur Hira Singh, Subadar Major Sita Ram Singh, Major A. T. Peppe and Major J. A. M. Wilson.

EXECUTIVE COUNCIL.

Havilland Le Mesurier, C.S.I., C.I.E., I.C.S.
Sachchidanand Sinha.
Hugh McPherson, C.S.I., I.C.S.

MINISTERS.

Khan Bahadur Saiyed Muhammad Fakhruddin.
Madhusudan Das, C.I.E.

SECRETARIAT.

Chief Secretary to Government, Political, Appointment, and Educational Departments, G. Rainy, C.I.E.

Secretary to Government, Financial and Municipal Departments, J. D. Sifton.

Secretary to Government, Revenue Department, J. A. Hubback.

Secretary to Government (P. W. D.), Irrigation Branch, W. S. Bremner.

Buildings and Roads Branch, E. Blaber.

BOARD OF REVENUE.

Member, E. H. C. Walsh.

MISCELLANEOUS APPOINTMENTS.

Director of Public Instruction, G. E. Fawcus.

Inspector-General of Police, R. T. Dundas.

Conservator of Forests, E. R. Stevens.

Inspector-General of Civil Hospitals, Col. Herbert Austen Smith.

Sanitary Commissioner, Major William Charles Ross.

Inspector-General of Prisons, Major W. Gillit, C.I.E., I.M.S.

Accountant-General, D. R. Matheson.

Director of Agriculture, A. C. Dobbs.

BIHAR AND ORISSA LEGISLATIVE COUNCIL.

THE HON'BLE SIR WALTER MAUDE, K.C.I.E., C.S.I., I.C.S.—*President.*
MR. SANKARA BALAJI DHAVLE, I.C.S.—*Secretary.*

COUNCILLORS.

EX-OFFICIO.

THE HON'BLE SIR WALTER MAUDE, K.C.I.E., C.S.I., I.C.S.
THE HON'BLE MR. HAVILLAND LEMESURIER, C.S.I., C.I.E., I.C.S.
THE HON'BLE RAI BAHADUR KRISHNA SAHAY.

NOMINATED.

Officials.

Mr. Leonard Frederick Morshead, I.C.S.
Mr. Victor Herbert Jackson.
Mr. George Rainy, C.S.I., C.I.E., I.C.S.
Mr. James David Sifton, C.I.E., I.C.S.
Mr. John Austen Hubback, I.C.S.
Mr. Walter Sidney Bremner.
Mr. Edward Blaber.
Mr. Maurice Garnier Hallett, I.C.S.
Mr. Donald Weston, I.C.S.
Colonel Herbert Austen-Smith, C.I.E., I.M.S.
Mr. Walter Swain.
Mr. Bernard Abdy Collins, I.C.S.
Mr. Sankara Balaji Dhavle, I.C.S.

Non-officials.

Maharaja Bahadur Sir Ravaneshvar Prasad Singh, K.C.I.E.
Mr. Saiyid Hasan Imam, Barrister-at-Law.

REPRESENTATIVES OF CLASSES AND COMMUNITIES.

Mr. Dhan Masih Panna	Aborigines.
Reverend Edward Hamilton Whitley	
Reverend Emanuel Sukh	Depressed Classes.
Reverend Percival Edwin Heberlet	
Mr. Dhanjishah Meherjibhai Madan	Industrial interests other than planting and mining.
Rai Bahadur Purnendu Narayan Sinha ..	The domiciled Bengali Community.
Mr. Francis Ernest Lopes Morrison	The Anglo-Indian Community.
Reverend Prittam Luther Singh	The Indian Christian Community.
Mr. Baij Nath	The labouring classes.

ELECTED.

Patna Division.

Mr. Muhammad Yunus	Patna Division Muhammadan Urban.
Maulavi Saiyid Muhammad Husain ..	East Patna Muhammadan Rural.
The Hon'ble Khan Bahadur Saiyid Muhammad Fakhr-ud-din.	West Patna do.

Babu Shyam Narayan Sinha Sharma ..	Patna Division Non-Muhammadan Urban.
Babu Ram Gopal Singh Chaudhuri ..	Patna Non-Muhammadan Urban.
Babu Ganesh Datta Singh	East Patna do.
Babu Mithila Sharan Sinha	West Patna do.
Raja Harihar Prasad Narayan Singh, O.B.E., of Amawan.	Landholders, Patna Division.
Maulvi Malik Mukhtar Ahmad	Gaya Muhammadan Rural.
Babu Chhote Narayan Singh	West Gaya Non-Muhammadan Rural.
Rai Bahadur Kashi Nath Singh	Central Gaya do.
Babu Rameshvar Prashad Singh ..	East Gaya do.
Maulvi Hafiz Nurul Haqq	Shahabad Muhammadan Rural.
Vacant.	Central Shahabad Non-Muhammadan Rural
Babu Rajivaranjan Prasad Sinha ..	South Shahabad do.
Babu Dvarika Prasad Singh	Arrah do.

Tirhut Division.

Khan Bahadur Saiyid Ahmed Husain ..	Tirhut Division Muhammadan Urban.
Maulvi Saiyid Mehdi Hasan	Muzaffarpur Muhammadan Rural.
Maulvi Letafat Husain Khan	Darbhanga do.
Maulvi Saiyid Mubarak Ali .. .	Saran Muhammadan Rural.
Maulvi Saiyid Abbas Ali	Champaran Muhammadan Rural.
Rai Bahadur Dvarika Nath .. .	Tirhut Division Non-Muhammadan Urban.
Babu Raghubans Thakur	North-West Darbhanga Non-Muhammadan Rural.
Babu Shiva Shankar Jha	North-East Darbhanga Non-Muhammadan Rural.
Babu Ram Nihora Singh	South-East Darbhanga Non-Muhammadan Rural.
Babu Kameshvar Narayan Sinha ..	Samastipur Non-Muhammadan Rural.
Babu Maheshvar Prasad Narayan Singh	North Muzaffarpur do.
Babu Raghunandan Prasad Sinha ..	East Muzaffarpur do.
Babu Krishna Prasad Narayan Singh ..	West Muzaffarpur do.
Babu Radha Krishna	Hajipur Non-Muhammadan Rural
Babu Madhaveshvarendra Sahi	North Saran Non-Muhammadan Rural
Babu Nirsu Narayan Sinha	South Saran do.
Babu Lakshmi Mohan Misra	North Champaran do.
Babu Ambika Prasad Upadhyaya ..	South Champaran do.
Babu Krishnadev Narayan Maitha ..	Landholders, Tirhut Division.

Bhagalpur Division.

Khan Bahadur Saiyid Muhammad Tahir..	Bhagalpur Division Muhammadan Urban.
Khan Bahadur Saiyid Muhammad Naim .	Bhagalpur Muhammadan Rural.
Mr. Shah Muhammad Yahya	Monghyr do.
Maulavi Mir Faiyaz Ali	Purnea do.
Maulavi Saiyid Mohin-ud-din Mirza ..	Kishanganj do.
Maulavi Muhammad Umid Ali	Santal Parganas do
Babu Jyotish Chandra Bhattacharjya ..	Bhagalpur Division Non-Muhammadan Urban.
Swami Vidyanand alias Bishva Bharan Prasad.	North Bhagalpur Non-Muhammadan Rural.
Babu Bhuvaneshvari Prasad Mandal ..	Central Bhagalpur Non-Muhammadan Rural.
Babu Sukh Raj Ray	South Bhagalpur do.
Maharaj Kumar Chandra Maulcshvar Prashad Singh.	South-West Monghyr do.
Rai Sahib Kharag Narayan	North-West Monghyr do.
Vacant	East Monghyr Non-Muhammadan Rural.
Do.	Purnea Non-Muhammadan Rural.
Babu Jogendra Narayan Singh	Santal Parganas North Non-Muhammadan Rural.
Babu Satya Narayan Sinha	Santal Parganas South Non-Muhammadan Rural.
Raja Bahadur Kirtyanand Singh of Banaili.	Landholders' Bhagalpur Division.

Orissa Division.

Maulavi Shaikh Abdul Majid	Orissa Division Muhammadan Rural.
The Hon'ble Mr. Madhusudan Das, C.I.E...	Orissa Division Non-Muhammadan Urban.
Babu Birabar Narayan Chandra Dhir Narendra.	North Cuttack do.
Babu Rebati Kanta Ghosh	South Cuttack do.
Rai Bahadur Harendra Narayan Ray Mahashay.	North Balasore do.
Chaudhuri Bhagbat Prasad Samantarai Mahapatra.	South Balasore do.

Babu Pitabas Patnaik	North Puri Non-Muhammadan Rural.
Mahanth Gadadhar Ramanuj Das ..	South Puri do.
Babu Shankar Prasad Misra	Sambalpur do.
Raja Rajendra Narayan Bhanja Deo, O.B.E., of Kanika.	Landholder's, Orissa Division.

Chota Nagpur Division.

Khan Bahadur Khwaja Muhammad Nur..	Chota Nagpur Division Muhammadan Rural.
Rai Bahadur Radha Gobind Chaudhuri..	Chota Nagpur Division Non-Muhammadan Urban.
Rai Bahadur Sharat Chandra Ray ..	Ranchi Non-Muhammadan Rural.
Rai Bahadur Gopi Krishna	Hazaribagh Non-Muhammadan Rural.
Babu Devaki Prasad Sinha	Palamau Non-Muhammadan Rural.
Babu Jyotirmay Chattarji	South Manbhum Non-Muhammadan Rural.
Dulu Manki	Singhbhum Non-Muhammadan Rural.
Babu Shivadas Banarji	North Manbhum Non-Muhammadan Rural.
Kumar Thakurai Girivar Prashad Singh..	Landholders' Chota Nagpur Division.

Others.

Mr. Prasanta Kumar Sen	Patna University.
Mr. Cyril Gregory Atkins	European Constituency.
Mr. Julian Veitch Jameson	Planting Constitutency.
Mr. John Herbert Pattinson	Indian Mining Association.
Babu Umesh Chandra Banarji	Indian Mining Federation.

The Central Provinces and Berar.

The Central Provinces and Berar compose a great triangle of country midway between Bombay and Bengal. Their area is 130,991 miles, of which 82,000 are British territory proper, 18,000 (*viz.* Berar) held on perpetual lease from the Nizam and the remainder held by Feudatory Chiefs. The population (1921) is 13,908,514 under British administration, including 3,081,212 in Berar. Various parts of the Central Provinces passed under British control at different times in the wars and tumult in the first half of the 19th century and the several parts were amalgamated after the Mutiny, in 1861, into the Chief Commissionership of the Central Provinces. Berar was, in 1853, assigned to the East India Company as part of a financial arrangement with the Nizam for the maintenance of the Hyderabad contingent, and was leased in perpetuity to the Central Provinces in 1903, as the result of a fresh agreement with the Nizam.

The Country.

The Central Provinces may roughly be divided into three tracts of upland, with two intervening ones of plain country. In the northwest, the Vindhyan plateau is broken country, covered with poor and stunted forest. Below its precipitous southern slopes stretches the rich wheat growing country of the Nerbudda valley. Then comes the high Satpura plateau, characterised by forest-covered hills and deep water-cut ravines. Its hills decline into the Nagpur plain, whose broad stretches of shallow black cotton soil make it one of the more important cotton tracts of India and the wealthiest part of the C. P. proper. The Eastern half of the plain lies in the valley of the Wainganga and is mainly a rice growing country. Its numerous irrigation tanks have given it the name of the "lake country" of Nagpur. Further east is the far-reaching rice country of Chattisgarh, in the Mahanadi basin. The south-east of the C. P. is again mountainous, containing 24,000 square miles of forest and precipitous ravines, and mostly inhabited by jungle tribes. The Feudatory States of Bastar and Kanker lie in this region. Berar lies to the south-west of the C. P. and its chief characteristic is its rich black cotton-soil plains.

The People.

The population of the province is a comparatively new community. Before the advent of the Aryans, the whole of it was peopled by the Gonds and these aboriginal inhabitants fared better from the Aryans than their like in most parts of India because of the rugged nature of their home. But successive waves of immigration flowed into the province from all sides. The early inhabitants were driven into the inaccessible forests and hills, where they now outnumber all the other hill and forest tribes and form nearly a quarter of the whole population of the C. P., being found in large numbers in all parts of the province, particularly in the south-east. The main divisions of the new comers are indicated by the language divisions of the province. Hindi, brought in by the Hindustani-speaking peoples of the North, prevails in the North and East. Marathi in Berar and the west and centre of the C. P. Hindi is spoken by 56 per cent. of the population and is the *lingua franca*. Marathi by 31 per cent. and in Berar and Gondi by 7 per cent. The effects of invasion are curiously illustrated in Berar, where numbers of Moslems have Hindu names, being descendants of former Hindu officials who on the Mahomedan invasion adopted Islam rather than lose their positions. The last census shows that a gradual Brahmanising of the aboriginal tribes is going on. The tribes are not regarded as impure by the Hindus and the process of absorption is more or less civilising.

Industries.

When Sir Richard Temple became first Chief Commissioner of the C. P. the province was land-locked. The only road was that leading in from Jubbulpore to Nagpur. The British administration has made roads in all directions, the two trunk railways between Bombay and Calcutta run across the province and in the last few years a great impetus has been given to the construction of subsidiary lines. These developments have caused a steady growth of trade and have aroused vigorous progress in every department of life. The prime industry is, of course, agriculture, which is assisted by one of the most admirable agricultural departments in India and is now receiving additional strength by a phenomenal growth of the co-operative credit movement. The land tenure is chiefly on the zemindari, or great landlord system, ranging, with numerous variations, from the great Feudatory chiefships, which are on this basis, to holdings of small dimensions. A system of land legislation has gradually been built up to protect the individual cultivator. Berar is settled on the Bombay ryotwari system. About 16,000 square miles of the C. P. is forest; in Berar the forest area is about 3,300 square miles, the total forest area being one-fifth of the whole Province. The rugged nature of the greater part of the country makes forest conservation difficult and costly. Excluding forest and waste 57 per cent. of the total land is occupied for cultivation; in the most advanced districts the proportion is 80 per cent; and in Berar the figure is also high. The cultivated area is extending continuously except for the temporary checks caused by bad seasons. Rice is the most important crop of the C. P., covering a quarter of the cropped area. Wheat comes next, with 15½ per cent., then pulses and cereals used for food and oil seeds, with 11 per cent. and cotton with 7 per cent. In Berar cotton occupies 40 per cent. of the cropped area, jowar covers nearly an equal extent, then wheat and oil seeds. In agriculture more than half the working population is female.

Commerce and Manufactures.

Industrial life is only in its earliest development except in one or two centres, where the introduction of modern enterprise along the railway routes has laid the foundations for great future developments of the natural wealth of the province. Nagpur is the chief centre of a busy cotton spinning industry. The Empress Mills, owned by Parsi manufacturers, were opened there in 1877 and the general prosperity of the cotton trade has led to the addition of many mills here and in other parts of the province. The total amount of spun yarn exported annually from the Province is about 200,000 maunds, valued at nearly 55 lakhs of rupees.

The largest numbers engaged in any of the modern industrial concerns are employed in manganese mining which in 1920 employed 11,368 persons and raised 541,892 tons. Then follow coal mining with an output of 490,979 tons and 10,204 persons employed, the Jubbulpore marble quarries and allied works, the limestone quarries and the mines for pottery clay, soapstone, &c.

The total number of factories of all kinds legally so described was 445 in 1920, the latest period for which returns are available and the number of people employed in them 51,840. The same economic influences which are operative in every progressive country during its transition stage are at work in the C. P. and Berar, gradually sapping the strength of the old village industries, as communications improve, and concentrating industries in the towns. While the village industries are fading away a large development of trade has taken place. The last pre-war reports showed an increase in volume by one-third in eight years.

Administration.

The administration of the Central Provinces and Berar is conducted by a Governor-in-Council, who is appointed by the Crown. He is assisted by three secretaries, two under secretaries, two assistant secretaries. Simultaneously with the jubilee of the foundation of the Province in 1913 a Legislative Council was constituted. It consisted of 24 members, excluding the Chief Commissioner, 7 being elected by Municipalities, District Council, and Landholders in the C. P. and 17 nominated by the Chief Commissioner, of whom not more than 10 might be officials and 3 were to be non-officials chosen respectively by the municipalities, District Boards and Landholders of Berar. The Chief Commissioner had power to nominate an additional member, official or non-official, who had special knowledge of a subject on which legislation was pending. Under the Reform Scheme the administration is conducted, in relation to reserved subjects, by a Governor with an Executive Council of 2 members, one of whom is a non-official, and in relation to transferred subjects by a Governor acting with two Indian ministers.

The local legislature consists of 70 members, at least 70 per cent. of whom are elected and not more than 20 per cent. are officials. The Governor (who is not a member of the Council) has the right of nominating two additional members with special knowledge on any subject regarding which legislation is before the Chamber. The C. P. are divided for administrative purposes into four divisions, and Berar constitutes another division. Each of these is controlled by a Commissioner. Berar is divided into four districts, three other divisions into five districts each and one into three, and these are controlled by Deputy Commissioners, immediately subordinate to the Commissioners. The principal heads of Provincial departments are the Commissioner of Settlements and Director of Land Records, the Chief Conservator of Forests, the Inspector-General of Civil Hospitals, the Sanitary Commissioner, the Inspector-General of Police, the Inspector-General of Prisons, the Director of Public Instruction, the Excise Commissioner, the Inspector-General of Registration, Income Tax Commissioner, the Director of Agriculture, the Registrar of Co-operative Societies, and the Director of Industries. The Deputy-Commissioners of districts are the chief revenue authorities and District Magistrates and they exercise the usual powers and functions of a district officer. The district forests are managed by a forest officer, usually a member of the Imperial Forest Service, over whom the Deputy-Commissioner has certain powers of supervision, particularly in matters affecting the welfare of the people. Each district has a Civil Surgeon, who is generally also Superintendent of the District Jail and whose work is also in various respects supervised by the Deputy Commissioner. The Deputy Commissioner is also marriage registrar and manages the estates of his district which are under the Court of Wards. In his revenue and criminal work the Deputy Commissioner is assisted by (a) one or more Assistant Commissioners, or members of the Indian Civil Service; (b) one or more Extra-Assistant Commissioners, or members of the Provincial Civil Service, usually natives of India, but including a few Europeans and Anglo-Indians and (c) by Tahsildars and naib Tahsildars., or members of the Subordinate service, who are nearly always natives of India. The district is divided for administrative purposes into tahsils, the average area of which is 1,500 square miles. In each village a lambardar, or representative of the proprietary body, is executive headman.

Justice.

The Court of the Judicial Commissioner is the highest court of appeal in Civil cases, and also the highest Court of criminal appeal and revision for the Central Provinces and Berar except in reference to proceedings against European British subjects and persons jointly charged with European British subjects: in such cases the High Court of the N. W. P. and the High Court of Bombay have jurisdiction over different parts of the Provinces.

The Court sits at Nagpur and consists of a Judicial Commissioner (who is appointed by the Governor-General-in-Council) and 3 permanent and 1 temporary Additional Judicial Commissioners of whom one at least must be an advocate of the Court or a Barrister or pleader of not less than 10 years' standing.

Subordinate to the Judicial Commissioner's Court are the District and Sessions Judges (11 in number) each of whom exercises civil and criminal jurisdiction in a Civil and Sessions district comprising one or more Revenue districts. The civil staff below the District and Sessions Judge consists of Sub-Judges and Munsiffs.

Local Government.

Municipal administration was first introduced under the Punjab Municipal Acts and the Municipality of Nagpur dates from 1864. Several revising Acts extend its scope. Viewed generally, municipal self-government is considered to have taken root successfully. The general basis of the scheme is the Local Board, for each tahsil and the District Council for each district. In Berar these bodies are called Local Boards and District Boards. The larger towns have municipalities, there being 60 such bodies in the Province.

A certain proportion of the Local Board members are village headmen, elected by their own class, others are elected representatives of the mercantile and trading classes and a third proportion, not exceeding ⅓ of the whole, are nominated by Government. The constitution of the District Councils is similar.

The District Councils in the C. P. have no power of taxation and Local Boards derive their funds in allotments from the District Councils. The District Boards in Berar have been lately invested with power to impose a special education cess.

The officers of the District Councils are frequently non-officials, but it is generally found convenient that the Tahsildar and Naib Tahsildar should be Chairman and Secretary of the Local Boards.

Rural education and sanitation are among the primary objects to which these bodies direct their attention and expenditure on famine relief is in the first instance a charge upon the District Council funds.

Finance.

The main source of Government income in the province has always been the land revenue, but under Mahratta rule many petty imposts were added in all branches of trade and industry and life in general. Thus there was a special tax on the marriage of Banias and a tax of a fourth of the proceeds of the sale of houses. The scheme of Provincial finance was introduced in 1871-72. Special settlements under this system have been necessitated in view of the special circumstances of the province and the recurrence of famine, which at the end of the 19th century caused a severe economic strain upon the province. The wave of prosperity which has spread over the country in the past 20 years has more than trebled the funds available for the administration, compared with what they were before the several years of scarcity, and the progress of the administration and of expenditure has increased correspondingly, without any increase of taxation under provincial heads.

Public Works.

The Public Works Department is controlled by two Chief Engineers, who are also Secretaries to the Government. There are three Superintending Engineers for roads and buildings and four for Irrigation. In 1892 a separate division of the Public Works Department was formed for the construction of roads and buildings in the Feudatory States but it has since been abolished. The expansion of the department and its work has been one of the most remarkable features of the administration in the past decade and a half, largely owing to the demands of a progressive age in regard to communications and new buildings. The Irrigation Branch of the P. W. D. represents a completely new departure. It was formerly the accepted view that the irregular surface of the country would make irrigation canals impossible and that the S. W. monsoon was so regular that it would pay better to relieve famine than to prevent it. Both conclusions have been reversed. Picked officers investigated projects for irrigation when the Irrigation Commission was appointed (1901) and canal and storage works have since been advanced with vigour. The Tandula, Wainganga, Mahanadi and Kharang canal projects are amongst the more important schemes, while an extensive network of minor protective works is being constructed throughout the Province.

Police.

The police force was constituted on its present basis on the formation of the Province, the whole of which, including the Cantonments and the Municipalities, is under one force. The strength is equal to one man per 10 square miles of area. The superior officers comprise an Inspector-General, whose jurisdiction extends over Berar, three Deputy Inspectors-General, for assistance in the administrative control and supervision of the Police force, including the Criminal Investigation Department, and the usual cadre of District Superintendents of Police, Assistant and Deputy Superintendents and subordinate officers. On railways special Railway Police are employed under the control of two Superintendents of Railway Police with headquarters at Raipur and Hoshangabad. A Special Armed Force of 600 men is distributed over the headquarters of seven districts, for use in dealing with armed disturbers of the peace in whatever quarter they may appear. There is a small force of Mounted Police. The Central Provinces has no rural police as the term is understood in other parts of India. The village watchman is the subordinate of the village headman and not a police official and it is considered very desirable to maintain his position in this respect.

Education.

The educational department was constituted in 1862 and the scheme then drawn up has remained the basis of the system of public education to the present day. The leading principles are that the department should content itself with the direct management of colleges and higher secondary schools, the training of teachers and inspection in work

in rural areas. The maintenance of rural schools should be left to the local authorities, every encouragement should be given to private philanthropy and no Government schools should be founded where there exist a sufficient number of institutions capable, with the assistance of the State, of supplying the local demand for instruction. At the head of the Department is the Director of Public Instruction, who has a staff of Deputy Director of Public Instruction, eight Inspectors and two Inspectresses for girls' schools. All these appointments are included in the Indian Educational Service. An Agency Inspector supervises the schools of the Feudatory States. The province has five colleges, the Robertson and Training Colleges at Jubbulpore, and the Morris and Hislop Colleges and the Victoria College of Science at Nagpur. Sanction has also been accorded to the establishment of a Government College at Amraoti, the buildings of which are under construction. The Agricultural Department maintains an Agricultural College at Nagpur. The Colleges are affiliated to Allahabad University but a demand has arisen for a local University.

After much preliminary discussion, a committee was appointed in July, 1914, to frame a scheme "which shall provide for a **University** of the teaching type at Nagpur, or in its immediate neighbourhood, and for the affiliation to this central institution of colleges situated in other places in the C. P. and Berar." The committee in their report, issued in 1915, proposed a University presenting some of the features of an affiliating University but possessed of functions and endowed with responsibilities which transcend the scope of those universities in India which conform to that type. "For (says the report) it will not only be an examining but a teaching university, and its teaching activities will not be limited to the provision of courses of instruction for postgraduate degrees, but will embrace several departments of study in the lower courses. The main difference, however, between the university which we propose and existing universities will lie in the closer relations of the former with its constituent colleges. According to our scheme, the University will exercise an effective control over the teaching and discipline of all the institutions which come within its jurisdiction. For it is only by exercising control over its component parts that the Universities can maintain a high standard of moral and intellectual endeavour, and create traditions which will make themselves felt in the development of the Provinces as a whole."

The committee said: "The University which we propose will possess powers which will entitle it to a high place in the administrative machinery of the Provinces. But administrative autonomy involves a certain measure of financial independence, and we have made proposals accordingly. It is true that the University will be mainly dependent on the Government for financial support. Apart from fees, the University at first at any rate will have no resources of its own. But we confess to a desire to see it vested with financial control over the grant which it receives from Government as well as over its other receipts. If we may be permitted to employ a simile, the Government should regard the University as a business concern, of which it is a shareholder with a seat on the Board of Directors rather than as a servant to whom it makes certain payments, the disposal of which must be checked frequently and in detail.

"We recommend that the administration of the University be vested in a Chancellor, Vice-Chancellor, Senate and Syndicate. The Chief Commissioner of the Province will be the Chancellor. The Vice-Chancellor will be an honorary officer nominated by the Chancellor. The Senate will be the supreme authority, subject to the general control of the Government. It will be a body of 75 members, consisting partly of representatives of Government and of the general public, partly of elected representatives of the graduates and partly of teachers of the University and the constituent colleges, the latter being nominated by the Chancellor. The Syndicate will be the executive of the University, and will consist of the Vice-Chancellor, the Director of Public Instruction, a member of the Senate nominated by the Chancellor, four Principals of colleges, the Deans of the Faculties, and three members elected by the Senate from among their own number, of whom not more than one shall be a member of the teaching staff. The Chancellor's nominee on the Syndicate should be a person possessed of general administrative experience. In both these bodies the members of the teaching staff will predominate.

"After careful consideration, we have arrived at the conclusion that a university possessing the wide administrative and educational powers which we propose must be governed by a body in which professional and expert opinion will predominate. This we think we have secured by giving the members of the teaching staff a predominant voice in the counsels of the University.

"We recommend that the University shall contain, at its inception, Faculties of Arts, Law and Science, and a department for the training of teachers subordinate to the Faculty of Arts. We have considered the question of establishing a Faculty of Agriculture. But in view of the necessity which the Government Department of Agriculture feels of pursuing a tentative policy for some years to come with regard to agricultural education, we feel that it would be inadvisable at the present juncture to suggest that the University should make provision for instruction in this branch knowledge. As to the Medical and Engineering Schools, they are designed to meet certain special needs, and do not aim at providing courses of a university standard. It will be many years before the demand for higher courses will justify the establishment of Faculties in Medicine and Engineering."

The entire scheme is at present undergoing revision by committees of educationists and non-officials in the light of the Calcutta University Commission's report.

Until recent years, the demand for education, primary or secondary, was satisfied by a few institutions in the larger towns, while in the whole of the rural districts primary education

had to be pressed on an apathetic and even obstructive agricultural population. The new spirit of progress in recent years has quickened the public pulse and the efforts of Government to effect improved facilities have responded accordingly. Special grants from the Government of India budget surpluses in recent years have largely been devoted to assisting the District Councils to overtake their arrears of primary school building and liberal recurring grants have been made to Local Boards for the improvement of the pay of vernacular school masters. A large extension of normal schools and increase in the output of trained teachers, the development of manual training and the adaptation of primary schools to rural needs typify the administration's policy of consolidating the ground already won before embarking on further schemes of extension.

The Primary Education Bill passed by the local Legislative Council in March 1920 marks an important stage by giving local bodies power to introduce compulsory education in the areas under their jurisdiction.

Medical.

The medical and sanitary services of the province are respectively controlled by an Inspector-General of Civil Hospitals and a Director of Public Health. The medical department has progressed along comparatively stereotyped lines. A striking advance has been made in recent years with urban sanitation. The principal medical institutions are the Mayo Memorial Hospital at Nagpur, opened in 1874, with accommodation for 119 in-patients; the Victoria Hospital at Jubbulpore, opened in 1886 and accommodating 121 in-patients; the Lady Dufferin Hospital at Nagpur and the Lady Elgin Hospital at Jubbulpore, these last two being for women and containing together accommodation for 72 in-patients. The province has one lunatic asylum at Nagpur. Vaccination is compulsory in some Municipal towns to which the Vaccination Act has been extended. The administration in 1913 sanctioned the opening of peripatetic dispensaries in unhealthy areas.

GOVERNOR.

The Hon. Sir Frank Sly, K.C.S I., I.C.S.

MEMBERS OF THE EXECUTIVE COUNCIL.

The Hon. Mr. B. P. Standen, C.S.I., C.I.E., I.C.S.

The Hon. Mr. Moropant V. Joshi.

MINISTERS.

The Hon. Mr. S. M. Chitnavis, I.S.O.

The Hon. Mr. N. K. Kelkar.

SECRETARIAT.

Chief Secretary, Mr. A. E. Nelson, O.B.E., I.C.S., J.P., M.L.C.

Financial Secretary, Mr. H. C. Gowan, I.C.S., M.L.C.

Revenue Secretary, Mr. E. Gordon, I.C.S., M.L.C.

Legal Secretary, D. G. Mitchell, I.C.S., M.L.C.

Under Secretaries, P. J. H. Stent, I.C.S., K. L. F. Armitage, I.C.S., and Hira Lal Varma.

Financial Asstt. Secretary. C. E. Higher (on leave); John Santos, B.A., Offg.

Secretary, Public Works Department (Irrigation Branch), Lieut.-Col. S. G. Rivett-Carnac, R.E., *(Roads and Buildings)*, Lt.-Col. H. de L. Pollard-Lowsley, C.M.G., C.I.E., D.S.O., R.E.

BERAR.

Commissioner, Mr. F. C. Turner, I.C.S., M.L.C.

MISCELLANEOUS APPOINTMENTS.

Director of Public Instruction, Mr. J. C. Evans.

Inspector-General of Police, K. W. Deighton.

Chief Conservator of Forests, Mr. B. B. Osmaston.

Inspector-General of Prisons, Lt.-Col. C. H. Bensley, I.M.S.

Inspector-General of Civil Hospitals, Col. W. Young, I.M.S., F.R.C.S.

Director, Public Health, Lt.-Col. T. G. N. Stokes, I.M.S.

Asstt. Director, Public Health, J. F. Lobo, D.P.H.

Commissioner of Excise, Mr. C. U. Wills, O.B.E., I.C.S., M.L.C.

Income Tax Commissioner, Mr. K. S. Jatar.

Accountant-General, Mr. J. Patch, O.B.E.

Postmaster-General, Mr. J. R. T. Booth, I.C.S.

Director of Agriculture, Mr. David Clouston, C.I.E.

Registrar of Co-operative Credit Societies, Mr. H. R. Crosthwaite, C.B.E., C.I.E.

CHIEF COMMISSIONERS.

North-West Frontier Province.

The North-West Frontier Province, as its name denotes, is situated on the north-west frontier of the Indian Empire. It is in form an irregular strip of country lying north by east and south by west and may generally be described as the tract of country, north of Baluchistan, lying between the Indus and the Durand boundary line with Afghanistan. To the north it extends to the mountains of the Hindu Kush. From this range a long broken line of mountains runs almost due south, dividing the province from Afghanistan, until the Sulaiman Range eventually closes the south of the Province from Baluchistan. The greatest length of the province is 408 miles, its greatest breadth 279 miles and its total area about 39,000 square miles. The territory falls into three main geographical divisions: the Cis-Indus district of Hazara; the narrow strip between the Indus and the Hills, containing the Districts of Peshawar, Kohat, Banu and Dera Ismail Khan, and the rugged mountainous regions on the north and west between those districts and the border line of Afghanistan. Hazara and the four districts in the second division contain 13,418 square miles. The mountain regions, north and west, are occupied by tribes subject only to the political control of the Chief Commissioner in his capacity as Agent to the Governor-General. The area of this tract is roughly 25,500 square miles and in it are situated, from north to south, the political agencies severally known as the Malakand, Khyber, Kurram, Tochi and Wana Agencies. Each of the Deputy Commissioners of the five administered districts is responsible for the management of political relations with certain tribes or sections of the tribes across the frontier. A few hundred miles of the trans-border Territory are internally administered by the Political Agents, but the bulk of the trans-border population is free from any internal interference, so long as offences are not committed and so long as the tribes observe the conditions on which allowances are paid to many of them.

The area of the Province is a little more than half that of Bombay (excluding Sind and Aden) and amounts to more than three-fifths of the size of England without Wales. The density of population throughout the Province equals 130 persons to a square mile, but in the more favoured portions the pressure of population is much greater. In the Hazara District there are 208 persons to a square mile and in the trans-Indus plains tract the number is 156. The key to the history of the people of the N.-W. F. P. lies in the recognition of the fact that the valley of Peshawar was always more closely connected politically with Eastern Iran than with India, though in pre-Mahomedan times its population was mainly Indian by race. Early history finds the Iranians dominating the whole Indus valley. Then came the Greek invasion under Alexander the Great, in B.C. 327, then the invasions of the Sakas, and of the White Huns, and later, the two great waves of Muhammadan invasion. Last came the Sikh invasion, beginning in 1818. The Frontier Territory was annexed by the British in 1849 and placed under the control of the Punjab Government. Frequent warfare occurred with the border tribes. The most serious phases of these disturbances were the war provoked by the aggression of Afghanistan in 1919 and the protracted punitive operations against the Waziris in 1919-1920.

The division of the Frontier Province from the Punjab was frequently discussed, with the double object of securing closer and more immediate control and supervision of the Frontier by the Supreme Government and of making such alterations in the personnel and duties of frontier officials as would tend to the establishment of improved relations between the local British representatives and the independent tribesmen. The province was eventually removed from the control of the Punjab administration in 1901. To it was added the political charge of Dir, Swat and Chitral, the Political Agent of which had never been subordinate to the Punjab. The new Province was constituted under a Chief Commissioner and Agent to the Governor-General, with headquarters at Peshawar, in direct communication with the Government of India in the Foreign Department. In political questions there is no intermediary between the Chief Commissioner and the local officer; an arrangement designed to secure both prompt disposal of references and the utilisation of the expert knowledge of frontier conditions for which the head of the administration is selected.

The People.

The total population of the N.W.F.P. (1921) is 5,076,476, made up as follows:—

Hazara	622,349
Trans-Indus Districts.. ..	1,628,991
Trans-Border Area	2,825,136

This last figure is estimated. There are only 561·3 females per 1,000 males in the towns, and 872·2 females per 1,000 males in rural areas.

This disproportion of the sexes cannot at present be explained in the N.-W.F.P. any more than in other parts of Northern India, where it also appears. The discrepancy is greater here than in any other Province of India. There is no ground for believing that the neglect of girls in infancy has any effect in causing the phenomenon. On the other hand, the female population has to face many trials which are unknown to men. The evils of unskilled midwifery and early marriage are among them. Both the birth and death-rates of the Province are abnormally low. The birth rate in the administered districts, according to the last available official reports, is 35·1 and the death-rate 33·3. There were 122·5 male births for every 100 females. It is recognised that in this matter, and in regard to population generally, the registration of females may be defective, inasmuch as the Pathan, for whatever reasons, regards the birth of a daughter as a misfortune, the less said about which the better. The population is naturally increasing, but emigration reduces the net result.

The dominant language of the Province is Pashtu and the population contains several lingual strata. The most important sections of the population, both numerically and by social position, are the Pathans. They own

a very large proportion of the land in the administered districts and are the ruling race, of the tribal area to the west. There is a long list of Pathan, Baluch, Rajput and other tribal divisions. Gurkhas have recently settled in the Province. The Mahomedan tribes constitute almost the whole population, Hindus amounting to only 5 per cent. of the total and Sikhs to a few thousands. The occupational cleavage of the population confuses ethnical divisions.

Under the North-West Frontier Province Law and Justice Regulation of 1901, custom governs all questions regarding successions, betrothal, marriage, divorce, the separate property of women, dower, wills, gifts, partitions, family relations such as adoption and guardianship, and religious usages and institutions, provided that the custom be not contrary to justice, equity or good conscience. In these matters the Mahomedan or Hindu law is applied only in the absence of special custom.

Climate, Flora and Fauna.

The climatic conditions of the N.-W.F.P., which is mainly the mountainous region, but includes the Peshawar Valley and the riverame tracts of the Indus in Dera Ismail Khan District, are extremely diversified. The latter district is one of the hottest areas of the Indian continent, while on the mountain ranges the weather is temperate in summer and intensely cold in winter. The air is generally dry and hence the annual ranges of temperature are frequently very large. The Province has two wet seasons, one the S.-W. Monsoon season, when moisture is brought up from the Arabian Sea and the Bay of Bengal: the other in winter, when storms from Mesopotamia, Persia and the Caspian Districts bring widespread rain and snowfall. Both sources of supply are precarious and not infrequently either the winter or the summer rainfall fails almost entirely. The following description of the Daman, the high ground above the Indus, stretching across Dera Ismail Khan to the mountains on the west, occurs in an account written some years ago by Captain Crostwaite: "Men drink once a day and the cattle every second day. Washing is an impossible luxury. . . . It is possible in the hot weather to ride thirty miles and neither hear a dog bark nor see the smoke of a single fire." With the exception of the Kunhar River, in Hazara, which flows into the Jhelum, the whole territory drains into the Indus. The flora of the Province varies from the shrubby jungle of the south-eastern plains to barren hills, pine forests and fertile mountain valleys. Tigers used to abound in the forests but are now quite extinct; leopards, hyenas, wolves, jackals and foxes are the chief carnivora. Bear, deer and monkeys are found; a great variety of fish is caught in the Indus.

The mountain scenery is often magnificent. The frontier ranges contain many notable peaks of which the following are the principal:

Takht-i-Sulaiman, Sulaiman Range, in Dera Ismail Khan, 11,292 feet.

Pir Ghal, Sulaiman Range, in Mahsud Waziristan, 11,583 feet.

Sika Ram, in the Safed Koh, in the Kurram Agency, 15,621 feet.

Kagan Peaks of the Himalayas, in the Hazara District. 10,000 to 16,700 feet.

Istragh Peak (18,900 ft.), Kachin Peak (22,641 ft.), Tirich Mir (25,426 ft.), all in the Hindu Kush, on the northern border of Chitral Agency.

Trade and Occupations.

The population derives its subsistence almost wholly from agriculture. The Province is practically without manufactures. There is no considerable surplus of commercial products for export. Any commercial importance which the province possesses it owes to the fact that it lies across the great trade routes which connect the trans-border tribal territories and the marts of Afghanistan and Central Asia with India, but the influence of railways is diminishing the importance of these trading interests. The travelling traders (or Powindahs) from the trans-frontier area have always pursued their wanderings into India and now, instead of doing their trading in towns near the border, carry it by train to the large cities in India. Prices of agricultural produce have in recent years been high, but the agriculturists, owing to the poverty of the means of communication, have to some extent been deprived of access to Indian markets and have therefore been unable to profit by the rates prevailing. On the other hand, high prices are a hardship to the non-agricultural classes. The effects of recent extensions of irrigation have been important. Land tenures are generally the same in the British administered districts as in the Punjab. The cultivated area of the land amounts to 32 per cent. and uncultivated to 68 per cent.

The work of civilisation is now making steady progress. Relations with the tribes have improved, trade has advanced, free medical relief has been vastly extended, police administration has been reformed and the desire of people for education has been judiciously and sympathetically fostered. In the British administered districts 19 per cent. males and 7 per cent. females of the total population are returned as literates. The figures for males denote a very narrow diffusion of education even for India. Those for females are not notably low, but they are largely affected by the high literacy amongst Sikh women, of whom 13·3 per cent. are returned as literate. The inauguration of a system of light railways throughout the Province, apart from all considerations of strategy, must materially improve the condition of the people and also by that means strengthen the hold of the administration over them. The great engineering project of the Upper Swat River Canal, which was completed in 1914, and the lesser work of the Paharpur Canal, also completed a few years ago, will bring ease and prosperity to a number of peasant homes.

Administration.

The administration of the North-West Frontier Province is conducted by the Chief

Commissioner and Agent to the Governor-General in Council. His staff consists of—

(1) Officers of the Political Department of the Government of India.

(2) Members of the Provincial Civil Service.

(3) Members of the Subordinate Civil Service

(4) Superintendents and Assistant Superintendents of Police.

(5) Officers recruited for the service of departments requiring special knowledge—Militia, Engineering, Education, Medicine and Forestry.

The cadre posts reserved for officers coming under the first head above are :—

Administration.	Chief Commissioner & Agent to the Governor-General		
	Secretary		
	Under Secretary		5
	Personal Assistant		
	Revenue Commissioner and Revenue Secretary		
	Resident in Waziristan...		1
	Deputy Commissioners	.. 5	
	Political Agents	.. 5	12
	District Judges	.. 2	
	Assistant Commissioners and Assistant Political Agents		13
Judicial Commr.'s Court and Divisional Judges.	One Judicial Commissioner.		
	Two Divisional and Sessions Judges.		4
	One Additional ditto.		

The districts under the Deputy Commissioners are divided into from two to five subcollectorates, in charge of tahsildars, who are invested with criminal and civil and revenue powers, and are assisted by naib-tahsildars, who exercise only criminal and revenue powers. Some sub-divisions are in charge of Assistant or Extra Assistant Commissioners. The village community characteristic of some parts of India is not indigenous among the Pathans. Its place as a social unit is to some extent taken by the tribe, which is held together by the ties of kinship and ancient ancestry, real or imaginary. Modern municipal local government has been introduced in the towns. There are also district boards. The district is the unit for police, medical and educational administration and the ordinary staff includes a District Superintendent of Police, a Civil Surgeon, who is also the Superintendent of Jail and a District Inspector of Schools. The Province forms a single educational circle and only possesses one forest division, that of Hazara. There are four divisions of the Roads and Building Branch of the Public Works Department, each under an Executive Engineer. The Irrigation Department of the P. W. D. is in charge of a Chief Engineer, Irrigation, who is also *ex-officio* Secretary to the Chief Commissioner. The administration of the civil police force of the districts is vested in an Inspector-General. There is a special force of Frontier Constabulary. The revenue and expenditure of the Province are wholly Imperial. Of the Agencies only Kurram and Tochi Valley pay land revenue to the British Government. The revenue administration of all five administered districts is controlled by the Revenue Commissioner. For the administration of civil and criminal justice there are two Civil and Sessions divisions, each presided over by a Divisional and Sessions Judge. The Judicial Commissioner is the controlling authority in the Judicial branch of the administration, and his Court is the highest criminal and appellate tribunal in this Province. The principal officers in the present Administration are :—

Agent to the Governor General and Chief Commissioner, The Hon'ble Sir Alfred Hamilton-Grant, K.C.I.E., C.S.I., I.C.S., (Sir John L. Maffey, K.C.V.O., C.S.I. C.I.E., I.C.S., acting).

Resident Waziristan, J. A. C. Fitzpatrick, C.I.E., C.B.E., I.C.S.

Judicial Commissioner, F. P. Rennie, I.C.S.

Revenue Commissioner, H. N. Bolton, C.S.I., C.I.E., I.C.S.

Secretary to Chief Commissioner, H. A. F. Metcalfe, I.C.S.

Under Secretary to Chief Commissioner, Major R. J. Macnabb.

Assistant Financial Secretary to Chief Commissioner, Lala Chuni Lal.

Indian Personal Assistant to Chief Commissioner, Khan Bahadur Sadulla Khan.

Secretary, Public Works Department, Buildings and Roads Branch Col. H. A. D Fraser, R.E.

Secretary, Public Works Department, Irrigation Branch, N. White.

Deputy Conservator of Forests, R. Parnell.

Chief Medical Officer, Lieut.-Col. W. M. Anderson, C.I.E., I.M.S.

Inspector-General of Police, E. W. Tomkins, C.I.E., O.B.E.

Commandant, Frontier Constabulary, R. C. Boyle, C.I.E.

Director of Public Instruction, C. E. W. Jones, M.A., (J. R. Cornah, B.A., acting).

Superintendent, Archaeological Survey, H. Hargreaves.

Divisional and Sessions Judges, J. H. R. Fraser, I.C.S., (Peshawar), K. B. Muhd. Abdul Karim Khan, I.S.O., M.B.E.,(Derajat), T. B. Copeland, Additional Sessions Judge, (Peshawar).

Political Agents.

Major W. G. Neale, Dir, Swat and Chitral
Lt.-Col. W. J. Keen, C.I.E., C.B.E., Khyber.
Mr. F. V. Wylie, I.C.S., Tochi.
Lt.-Col. R. Garrett, Kurram.

Deputy Commissioners.

Lt. Col. E. H. S. James, C.I.E., Hazara.

Major C. P. Crosthwaite, O.B.E., Peshawar.

Major W. A. MacD. Garstin, Bannu.

Major M.E. Rae, T.A. (*offg.*) Dera Ismail Khan.

Major C. E. Bruce, C.I.E., O.B.E., Kohat.

Former Chief Commissioners.

Lieut.-Col Sir Harold Deane, K.C.S.I., Died 7th July 1908.

Lieut.-Col. Sir George Roos-Keppel, G.C.I.E., K.C.S.I., to 9th September 1919.

Assam.

The Province of Assam, 61,682 square miles in area, includes the Assam Valley Division, the Surma Valley and Hills Division and the State of Manipur. It owes its importance to its situation on the north-east frontier of India. It is surrounded by mountainous ranges on three sides while on the fourth (the west) lies the Province of Bengal on to the plains of which debouch the two valleys of the Brahmaputra and the Surma which form the plains of Assam. These two valleys are separated from each other by the Assam Range, which projects westward from the hills on the eastern border.

Population.

The total population of the province in 1911 was 7,598,861, of whom 1½ millions were Mahomedans, 3½ millions Hindus and 1¼ millions Animists. 46 per cent. of the population speak Bengali, 22 per cent. speak Assamese. other languages spoken in the province are Hindi, Uriya and a great variety of languages classified under the general heading of the Tibeto-Chinese languages. Owing to the great areas of waste and rivers the density of the province is only 115, which compared with that of most other parts of India, is low, but is more than double that of Burma.

Agricultural Products.

It has agricultural advantages for which it would be difficult to find a parallel in any part of India, climate, soil, rainfall and river systems all being alike favourable to cultivation. Rice is the staple food crop, nearly 5 million acres being devoted to this crop. In 1917-18 the outturn of rice was 1,584,924 tons. Except in the Himalayan Terai irrigation is unnecessary. Jute and tea are the most important crops grown for export; the area under jute in 1917-18 being 100,324 acres that under tea about 399,690 acres. The number of tea gardens is 796, the production being about 243 million lbs. Wheat and tobacco are also grown and about 30 square miles are devoted to sugarcane. The total area of 'reserved' forest is about 5,381 square miles and the unclassified state forests cover about 18,509 square miles.

Meteorological Conditions.

Rainfall is everywhere abundant, and ranges from 93 to 124 inches. The maximum is reached at Cherrapunji in the Khasi Hills, which is one of the wettest places in the world, having a rainfall of 458 inches. The temperature ranges fron 59° at Sibsagar in January to 84° in July. Earthquakes of considerable severity have taken place, by far the worst being that which occurred in 1897.

Land Tenures.

Most of the actual cultivators of the soil usually hold direct from the State, and the area of land on which rent is paid is inconsiderable. A large part of Goalpara and of the more densely populated portions of Sylhet was however included in the permanent settlement of Bengal; and the system of land tenure in Cachar, and the existence of large estates on privileged rates of revenue in Kamrup have tended to produce a tenant class which at the 1901 census amounted to more than one-third of the total number of persons supported by agriculture. In the 1911 census a very marked increase in tenancy throughout the Province is shown.

The Assam Labour and Emigration (Amendment) Bill was passed on the 24th March 1915. The Act carries with it the abolition of the recruiting contractor and the creation of Labour Bureau to supervise recruiting.

Mines and Minerals.

The only minerals in Assam worked on a commercial scale are coal, limestone and petroleum oil. The most extensive coal measures are in the Naga Hills district, where about 300,000 tons are raised annually and used mainly by the river steamers. Limestone is quarried in the Khasi and Jaintia Hills, in Sylhet, and in the Gare hills. Petroleum is worked only in Lakimpur.

An account of the petroleum occurrences in Assam was recently published in the memoirs of the Geological Survey of India. It states that the petroleum localities in this province are confined to a curved belt of country along the basins of the Brahmaputra and Surma. This belt is traceable over a distance of some 800 miles from N.E. Assam through Kachar and Chittagong to the Arakan coast, where it has a S.S.E. trend. It is roughly concentric with the trend of the Burmese oil belt, the distance between the two varying from 70 to 150 miles.

Manufactures and Trade.

Silk is manufactured in the Assam Valley, the weaving being done by the women. Cotton weaving is also largely practised by the women, and almost every house contains a loom; the cloth is being gradually displaced by imported goods of finer texture and colour. Boat building, brass and metal and earthenwares, tea manufacture and limestone burning are the other industries apart from agriculture, which itself employs about 84 per cent. of the population. Assam carries on a considerable **trade** with the adjoining foreign tribes and countries.

Communications.

The trade of Assam is chiefly carried by river, but increasing use is being made of the Assam Bengal Railway which runs from the port of Chittagong to Silchar at the eastern end of the Surma Valley. A branch of that line runs along the south of the Assam Valley from Gauhati to Tinsukia a station on the Dibru-Sadiya Railway, and is connected with the Surma Valley branch by a line that pierces the North Cachar Hills, the points of junction being Lumding in the northern and Badarpur in the southern valley. The Eastern Bengal State Railway connects Assam with the Bengal system *via* the valley of the Brahmaputra. The excellence of its water communication makes Assam less dependent upon roads than other parts of India; but in recent years the road system has been developed and there is a trunk road through the whole length of the Brahmaputra Valley and an excellent road from Gauhati to Shillong. A large fleet of

steamers maintained by the India General Steam Navigation Company and the Rivers Steam Navigation Company plies on the rivers of both valleys. A daily service of passenger boats runs from Goalundo to Dibrugarh.

Education.

There are in the Province at present 4,619 educational institutions including two Arts Colleges with 221,469 students. Of the total population 333,672 are returned as literate. The distribution of literacy naturally varies considerably throughout the Province. The large number of immigrant coolies and of aboriginal tribes tends to lower the proportion of literates in the Brahmaputra Valley, and a comparatively high standard of literacy in the Hills is due mainly to the progress of education amongst the Khasis of whom a large proportion have been converted to Christianity. Amongst the Animists in the Hills the Lushais seem to have an extraordinary keenness for learning, which is the more remarkable, because the administration of their district dates from quite recent times.

Administration.

The province of Assam was originally formed in 1874 in order to relieve the Lieutenant-Governor of Bengal of part of the administration of the huge territory then under him. In 1903, as the result of further deliberations, it was decided to add to the small Province of Assam the eastern portion of its unwieldy neighbour and to consolidate those territories under a Lieutenant-Governor. The Province of Eastern Bengal and Assam as then constituted was again broken up on the 1st of April, 1912: the Eastern Bengal Districts were united with the Bengal Commissionerships of Burdwan and the Presidency to form the Presidency of Bengal under a Governor-in-Council, Bihar, Chota Nagpur and Orissa were formed into a separate province, while the old Province of Assam was re-constituted under a Chief Commissioner.

Under the Indian Reforms Act of 1919 the Province was raised in status to that of administration by a Governor-in-Council and was thereby ranked, with certain minor provisions to suit its undeveloped character with the older major provinces of India. The exact nature of this change in its constitution, with the powers of the Governor, the Council, the Ministers and the Legislative Council is indicated in the general section The Provincial Governments (*q. v.*). There is also set out the financial arrangement between the Government and the Provinces. The new constitution came into force in December 1920.

The capital is Shillong, a town laid out with great taste and judgment among the pine woods on the slopes of the Shillong Range which rises to a height of 6,450 feet above the sea. It was destroyed in the earthquake of 1897 and has been rebuilt in a way more likely to withstand the shocks of earthquake.

GOVERNOR

Sir William Marris, K.C.S.I., K.C.I.E.

EXECUTIVE COUNCIL.

William James Reid, C.S.I.

Abdul Majid, C.I.E.

SECRETARIAT.

Private Secretary, Major R. C. B. Williams.

Chief Secretary, A. W. Botham.

Second Secretary, A. R. Edwards.

Baluchistan.

Baluchistan is an oblong stretch of country occupying the extreme western corner of the Indian Empire. It is divided into three main divisions: (1) British Baluchistan with an area of 9,476 square miles consisting of tracts assigned to the British Government by treaty in 1879; (2) Agency Territories with an area of 44,345 square miles composed of tracts which have, from time to time, been acquired by lease or otherwise brought under control and placed directly under British officers; and (3) the Native States of Kalat and Las Bela with an area of 78,434 square miles. The Province embraces an area of 134,638 square miles and according to the census of 1921 it contains 800,678 inhabitants, divided between the administered districts 421,679 and States 378,999.

The country, which is almost wholly mountainous, lies on a great belt of ranges connecting the Safed Koh with the hill system of Southern Persia. It thus forms a watershed the drainage of which enters the Indus on the east and the Arabian Sea on the south while on the north and west it makes its way to the inland lakes which form so large a feature of Central Asia. Rugged, barren, sun-burnt mountains, rent by high chasms and gorges, alternate with arid deserts and stony plains, the prevailing colour of which is a monotonous sight. But this is redeemed in places by level valleys of considerable size in which irrigation enables much cultivation to be carried on and rich crops of all kinds to be raised.

The political connection of the British Government with Baluchistan commenced from the outbreak of the First Afghan War in 1839; it was traversed by the Army of the Indus and was afterwards occupied until 1842 to protect the British lines of communication. The districts of Kachi, Quetta and Mastung were handed over to the Amir of Afghanistan and Political Officers were appointed to administer the country. At the close of the First Afghan War, the British withdrew and these districts were assigned to the Khan of Kalat. The founder of the Baluchistan Province as it now exists was Sir Robert Sandeman who broke down the close border system and welded the Baluch and Brahui Chiefs into a close confederacy. In the Afghan War of 1879 Pishin, Shorarud. Sibi, Zawara Valley and Thal-Chotiali were handed over by Yakub Khan to the British Government and retained at Sir Robert Sandeman's strenuous insistence.

Industries.

Baluchistan lies outside the monsoon area and its rainfall is exceedingly irregular and scanty. Shahrig which has the heaviest rainfall, records no more than 11¼ inches in a year. In the highlands few places receive more than 10 inches and in the plains the average rainfall is about 5 inches, decreasing in some cases to 3. The majority of the indigenous population are dependent for their livelihood on agriculture, provision and care of animals and transport. The Majority of Afghan and the Baluch, as a rule, cultivate their own lands. The Brahuis dislike agriculture and prefer a pastoral life. Previous to the advent of the British life and property were so insecure that the cultivator was fortunate if he reaped his harvest. The establishment of peace and security has been accompanied by a marked extension of agriculture which accounts for the increase in the numbers of the purely cultivating classes. The Mekran Coast is famous for the quantity and quality of its fish and the industry is constantly developing. Fruit is extensively grown in the highlands and the export is increasing.

Education is imparted in 329 schools with 7,102 scholars. There is a distinct desire for education amongst the more enlightened headmen round about Quetta-Pishin and other centres where the Local Government with its officers stays at certain seasons, such as Sibi and Ziarat; but on the whole education or the desire of it has made little or no advance in the outlying districts. The mineral wealth of the Province is believed to be considerable, but cannot be exploited until railways are developed. Coal is mined at Khost on the Sind-Pishin railway and in the Bolan Pass. Chromite is extracted in the Zhob District near Hindu-bagh. Lime-stone is quarried in small quantities.

Administration.

The head of the local administration is the officer styled Agent to the Governor-General and Chief Commissioner. Next in rank comes the Revenue Commissioner who advises the Agent to the Governor-General in financial matters and generally controls the revenue administration and exercises the functions of a High Court as Judicial Commissioner of the Province. The keynote of administration in Baluchistan is self-government by the tribesmen, as far as may be, by means of their Jirgas or Councils of Elders along the ancient customary lines of tribal law, the essence of which is the satisfaction of the aggrieved and the settlement of the feud, not retaliation on the aggressor or the vindictive punishment of a crime. The district levies which normally numbered 2,300 odd play an unobtrusive but invaluable part in the work of the Civil Administration not only in watch and ward and the investigation of crime, but also in the carrying of the mails, the serving of processes and other miscellaneous work. In addition to these district levies there are ordinarily two irregular Corps in the Province; the Zhob Levy Corps and the Makran Levy Corps. Their combined strength in the latest returns was 953 cavalry and 892 infantry. The Province does not pay for itself and. receives large subsidies from the Imperial Government. The receipts and expenditure roughly balance each other at 29 lakhs. The land revenue demanded is about Rs. 12 lakhs annually.

ADMINISTRATION.

Agent to the Governor-General and Chief Commissioner, The Hon'ble Lt.-Col. Sir Armine Dew, K.C.I.E., C.S.I.

Revenue and Judicial Commissioner, Lt.-Col. H. Stewart, C.I.E., I. A.

Secretary, Public Works Department, Col. L. H. Close, C.M.G.

Secretary to the Agent to the Governor-General and Chief Commissioner, Mr. H. D. G. Law, M.A., I.C.S.

Political Agent, Zhob, Major R. H. C. Trench.

Political Agent, Kalat and Bolan Pass, Major W. G. Hutchinson, O.B.E.

Assistant for Mekran to the Political Agent in Kalat and ex-officio Commandant, Mekran Levy Corps, Captain C. E. U. Bremner.

Political Agent and Deputy Commissioner, Quetta, Mr. C. P. Skrine, I.C.S.

Assistant Political Agent and Assistant Commissioner, Quetta, Capt. C. G. Snelling.

Political Agent, Chagai, Capt. H. W. C. Robson.

Political Agent and Deputy Commissioner, Sibi, Lt.-Col. T. H. Keyes, C.M.G., C.I.E.

Assistant Political Agent, Sibi, Captain W. F. Campbell, I.A.

Political Agent, Loralai, Major C. T. Daukes.

Residency Surgeon and Chief Medical Officer, Major H. H. Thorburn, I.M.S.

Civil Surgeon, Sibi, Captain J. N. Turner, I. S. M. D.

Assistant Political Agent, Zhob, Captain J. C. Johnson.

Assistant Political Agent, Kalat, R. B. Lala Lachhman Das.

Assistant Political Agent, Jhalawan and Las Bela, K. B. Seth Kaikobad.

Civil Surgeon, Quetta, Captain J. B. Hance, I.M.S.

ANDAMAN AND NICOBAR ISLANDS.

This is a group of islands in the Bay of Bengal of which the headquarters are at Port Blair, by sea 780 miles from Calcutta, 740 miles from Madras and 360 miles from Rangoon, with which ports there is regular communication.

The land area of the islands under the administration is 3,143 square miles, namely, 2,508 square miles in the Andamans and 635 square miles in the Nicobars. The total population of the islands was returned in the census of 1911 as 26,459. The Islands are administered by the Chief Commissioner of the Andaman and Nicobar Islands who is also the Superintendent of the Penal Settlement. The penal settlement, which was established in 1858, is the most important in India

Chief Commissioner of Port Blair, Lieut.-Col. H. C. Beadon, C.I.F.

Acting Commandant and District Superintendent of Police, Major F. C. Sanderson.

Medical Superintendent, Cellular and Female Jails, Major A. S Leslie, I.M.S

COORG.

Coorg is a small petty Province in Southern India west of the State of Mysore. Its area is 1,582 square miles and its population 174,976. Coorg came under the direct protection of the British Government during the war with Sultan Tipu of Seringapatam. In May 1834, owing to misgovernment, it was annexed. The Province is directly under the Government of India and administered by the Chief Commissioner of Coorg who is the Resident in Mysore with his headquarters at Bangalore. In him are combined all the functions of a local government and a High Court. The Secretariat is at Bangalore where the Assistant Resident is styled Secretary to the Chief Commissioner of Coorg. In Coorg his chief authority is the Commissioner whose headquarters are at Mercara and whose duties extend to every branch of the administration. The chief wealth of the country is agriculture and especially the growth of coffee. Although owing to over-production and insect pests coffee no longer commands the profits it once enjoyed, the Indian output still holds its own against the severe competition of Brazil. The bulk of the output is exported to France.

Resident and Chief Commissioner, Coorg, Lt.-Col. S. G. Knox, C.I.E., I.C.S.

AJMER-MERWARA.

Ajmer-Merwara is an isolated British Province in Rajputana. The Agent to the Governor-General in Rajputana administers it as Chief Commissioner. The Province consists of two small separate districts, Ajmer and Merwara, with a total area of 2,711 square miles and a population of 501,395. At the close of the Pindari war Daulat Rao Scindia, by a treaty dated June 25, 1818, ceded the district to the British. Fifty-five per cent. of the population are supported by agriculture, the industrial population being principally employed in the cotton and other industries. The principal crops are maize, millet, barley, cotton, oil-seeds and wheat.

Officiating Agent to the Governor-General in Rajputana and Chief Commissioner of Ajmer-Merwara, The Hon. Mr. R. E. Holland, C.I.E.

Aden.

Aden was the first new territory added to the Empire after the accession of Queen Victoria. Its acquisition in 1839 was the outcome of an outrage committed by the local Fadhli chief upon the passengers and crew of a British buggalow wrecked in the neighbourhood. Various acts of treachery supervened during the negotiations regarding the buggalow outrage and Aden was captured by a force sent by the Bombay Government under Major Baillie. The act has been described as one of those opportune political strokes which have given geographical continuity to British possessions scattered over the world.

Aden is an extinct volcano, five miles long and three broad, jutting out to sea much as Gibraltar does, having a circumference of about 15 miles and connected with the mainland by a narrow isthmus of flat ground This is nearly covered at one part at high spring tides, but the causeway and aqueduct are always above, though sometimes only just above, water. The highest peak on the wall of precipitous hills that surrounds the old crater which constitutes Aden is 1,775 feet above sea level. Rugged spurs, with valleys between, radiate from the centre to the circumference of the crater. A great gap has been rent by some volcanic disturbance on the sea surface of the circle of hills and this opens to the magnificent harbour. The peninsula of Little Aden, adjacent to Aden proper, was obtained by purchase in 1868 and the adjoining tract of Shaikh Othman, 39 square miles in extent, was subsequently purchased when, in 1882, it was found necessary to make provision for an over-flowing population.

Attached to the settlement of Aden are the islands of Perim, an island of 5 square miles extent in the Straits of Bab-el-Mandeb, in the entrance to the Arabian Sea ; Sokotra island, at the entrance to the Gulf of Aden, in the Arabian Sea, acquired by treaty in 1886 and 1,382 miles in extent ; and the five small Kuria Muria islands, ceded by the Imam of Maskat in 1854 for the purpose of landing the Red Sea cable, and otherwise valuable only for the guano deposits found upon them. They are off the Arabian coast about two-thirds of the way from Aden to Maskat. The whole extent of the Aden settlement, including Aden, Little Aden, Shaikh Othman and Perim, and subject to post-war adjustments, is approximately 80 miles. The 1911 census showed Aden, with Little Aden, Shaikh Othman, and Perim to have a population of 46,165. The population of Perim is a matter of a few hundreds, largely dependent on the Coal Depot maintained there by a commercial firm. That of Sokotra is 12,000, mostly pastoral and migratory inland, fishing on the coast.

Strategic Importance.

Aden's first importance is as a naval and military station of strategic importance. This aspect was ably discussed by Colonel A. M. Murray, in his "Imperial Outposts." He points out that Aden is not a naval base in the same sense that Gibraltar, Malta and Hong-Kong were made, but a *point d'appui*, a rendezvous and striking point for the fleet. It was seized in 1839 because of its usefulness as a harbour of refuge for British ships and from a strategist's point of view this is its primary purpose and the *raison d'etre* of its forts and garrison. Aden under British rule has retained its ancient prestige as a fortress of impregnable strength, invulnerable by sea and by land, dominating the entrance to the Red Sea, and valuable to its owners as a commercial emporium. A port of call and a cable centre. The harbour extends 8 miles from east to west and 4 from north to south and is divided into two bays by a spit of land. The depth of water in the western bay is from 3 to 4 fathoms, across the entrance 4½ to 5 fathoms, with 10 to 12 fathoms 2 miles outside. The bottom is sand and mud. There are several islands in the inner bay. Strategic control of the Red Sea was rendered complete by the annexation of Perim and Sokotra, which may both be regarded as outposts of Aden, and are under the political jurisdiction of the Resident.

The Arab chiefs of the hinterland of Arabia are nearly all stipendiaries of the British Government. Colonel Wahab and Mr. G. H. Fitzmaurice, of the Constantinople Embassy, were appointed in 1902 as Commissioners to delimitate the frontier between Turkish Arabia and the British protectorate around Aden. A convention was signed in 1905 settling details, the frontier line being drawn from Shaikh Murad, a point on the Red Sea coast opposite Perim, to the bank of the river Bana, the eastern limit of Turkish claims, at a point some 29 miles north-east of Dthala, and thence north-east to the great desert. The area left within the British Protectorate was about 9,000 square miles. The arrangement gave to Turkey Cape Bab-el Mandeb, which forms the Arabian bank of the eastern channel past Perim into the Red Sea. England took this gatepost of the Red Sea from the Turks in November 1914. A sanitorium and small British garrison used to be maintained at Dthala, which is 7,700 feet high, but the garrison was withdrawn in 1906, Lord Morley explaining this step as being in accordance with the policy stated in the House of Lords in 1903,—that His Majesty's Government had never desired to interfere with the internal and domestic affairs of the tribes on the British side of the boundary, but had throughout made it plain that they would not assent to the interference of any other Power with those affairs. Affairs in this respect have been disarranged considerably by the war.

British Policy.

There has been much criticism of a policy under which Aden has failed to advance with the same progressive strides which have marked the development of other British dependencies. It is said that the former Persian possessors of Aden built its wonderful water tanks, and the Arabs made an aqueduct 20 miles long, while the British have done nothing except mount guns to protect their coal yards. Trade, it is argued, flourishes because this is a natural emporium of commerce, but not because of the attention its needs get from Government. Lord Roberts, writing on this point a few years ago, said : "It is not creditable to British rule to

make use of a dependency like Aden for selfish purposes of political necessity without attempting to extend the benefits of civilised Government to the neighbouring native tribes, especially when those tribes are living under the aegis of the British Crown. The Persians, the Turks and even the Arabs did more for Aden in their time than we have done during our seventy years' occupation.....Aden has always suffered under the disadvantage of being an appanage of the Bombay Presidency, with which it has neither geographical, racial nor political affinity. Probably the best solution of the matter would be to hand over the place to the Colonial Office, relieving the Government of Bombay of a charge which is only looked upon as an incubus." Some important steps have been taken in the past few years to satisfy the commercial needs of the port.

Trade.

The trade of Aden has developed immensely since British acquisition in 1839, largely through the Government of India declaring it a free port in 1850, since when it has attracted much of the valuable trade between Arabia and Africa, formerly monopolised by the Red Sea ports of Hodeida and Mokha. The opening of the Suez Canal was also responsible for a large increase of trade through Aden into the interior.

The total imports by sea in the last pre-war year amounted to £3,756,964, exclusive of treasure, and exports to £3,267,283, imports overland were £270,213 and exports £140,159, exclusive of treasure. The war practically overturned the overseas trade and some time must elapse before it can return to normal conditions. There has been a great increase of trade since the signing of the Armistice, but prices have so greatly risen that comparisons are difficult. Foreign trade in the official year 1918-19 amounted to £6,888,484 and Indian trade to £3,034,642, these amounts representing increases of £1,652,435 and £575,700 respectively. Land trade amounted to £121,533, a decrease of £8,547. Since the cessation of the hostilities on the Shaikh Othman front, the inland trade has increased by one thousand camel loads monthly.

Language.

The language of the settlement is Arabic, but several other Asiatic tongues are spoken. The population is chiefly returned as Arabs and Shaikhs. The Somalis from the African coast and Arabs do the hard labour of the port. So far as the settlement is concerned there are no products whatever, with the important exception of salt. The crops of the tribal low country adjoining are jowar, sesamum, a little cotton, madder, a bastard saffron and a little indigo. In the hills, wheat, madder, fruit, coffee and a considerable quantity of wax and honey are obtained. The water supply forms the most important problem. Water is drawn from four sources—wells, aqueducts, tanks or reservoirs and condensers.

Administration.

The Aden settlement was until 1918 subject politically to the Government of Bombay, but it was then handed over to the Foreign Office. The question of its future control is still under discussion, the alternative proposals having to hand it over to the Colonial Office of the Imperial Government and to permit it to continue as in past years a portion of the Indian Empire. Indian opinion in India opposes the transfer, holding that under the Colonial Office the status of Indians in the place would suffer. The administration is conducted by a Resident, who is assisted by four Assistants. The Resident is also ordinarily military Commandant and has hitherto usually been an officer selected from the Indian army, as have his assistants. The Resident has jurisdiction as a Judge of the Vice-Admiralty Court in matters connected with slave trading, his court being called the Colonial Court of the Admiralty. The laws in force in the settlement are generally speaking those in force in the Bombay Presidency, supplemented on certain points by special regulations to suit local conditions. The management of the port is under the control of a Board of Trustees formed in 1888. The principal business of the Port Trust has been the deepening of the harbour, so as to allow vessels of all sizes to enter and leave at all states of the tide. The Aden police force numbers slightly over 200 men. There are hospitals and dispensaries in both Aden and Perim, in addition to the military institutions of this character. The garrison comprises a troop of engineers, three companies of garrison artillery, one battalion of British infantry, two companies of sappers and miners and one Indian regiment. Detachments from the last named are maintained at Perim and Shaikh Othman respectively.

The average temperature of the station is 87 degrees in the shade, the mean range being from 75 in January to 98 in June, with variations up to 102. The lulls between the monsoons, in May and September, are very oppressive. Consequently, long residence impairs the faculties and undermines the constitution of Europeans and even Indians suffer from the effects of too long an abode in the settlement, and troops are not posted in the station for long periods, being usually sent there one year and relieved the next. But Aden is exceptionally free from infectious diseases and epidemics, and the absence of vegetation, the dryness of the soil and the purity of the drinking water constitute efficient safeguards against many maladies common to tropical countries. The annual rainfall varies from ¼ inch to 8¼ inches, with an irregular average of 3 inches.

The following are the principal officers of the present administration :—

Political Resident, Major-General T. E. Scott, C.B., C.I.E., D.S.O.

Assistant Residents, Captain J. G. Worth (Perim) and Major B. R Reilly, O.B.E.

The area enclosed within the boundaries of India is 1,773,168 square miles, with a population of 315,132,537 of people—nearly one-fifth of the human race. But of this total a very large part is not under British Administration. The area covered in the Native States is 675,267 square miles with a population of seventy millions. The Native States embrace the widest variety of country and jurisdiction. They vary in size from petty states like Lawa, in Rajputana, with an area of 19 square miles, and the Simla Hill States, which are little more than small holdings, to States like Hyderabad, as large as Italy, with a population of thirteen millions. They include the inhospitable regions of Western Rajputana, Baroda, part of the Garden of India, Mysore, rich in agricultural wealth, and Kashmir, one of the most favoured spots on the face of the globe. In the case of 175 States control is exercised by the Government of India, and of about 500 by the Provincial Governments. The four principal states, Hyderabad, Mysore, Baroda and Kashmir, are in direct relation with the Government of India. The other States are grouped under the direction of an Agent to the Governor-General, as for Rajputana and Central India; in one case the Provincial Government has been compelled to group its States, those of Kathiawar, under an Agent to the Governor.

Relations with the Paramount Power.

So diverse are the conditions under which the Native States were established and came into political relation with the Government of India, that it is impossible even to summarise them. But broadly it may be said that as the British boundaries expanded, the states came under the influence of the Government and the rulers were confirmed in their possessions. To this general policy however there was, for a brief period, an important departure. During the regime of Lord Dalhousie the Government introduced what was called annexation through lapse. That is to say, when there was no direct heir, the Covernment considered whether public interests would be secured by granting the right of adoption. Through the application of this policy, the states of Satara and of Nagpur fell in to the East India Company, and the kingdom of Oudh was annexed because of the gross misgovernment of its rulers. Then came the Mutiny. It was followed by the transference of the dominions of the East India Company to the Crown, and an irrevocable declaration of policy toward the Native States. In the historic Proclamation of Queen Victoria it was set out that "We desire no extension of our present territorial possessions; and while we will permit no aggression on our dominions or our rights to be attempted with impunity, we shall allow no encroachments on those of others. We shall respect the rights, dignity and honour of the Native Princes as our own; and we desire that they, as well as our own subjects, should enjoy that prosperity and that social advancement which can only be secured by internal peace and good government." Since the issue of that proclamation there has been no encroachment on the area under Native rule by the Government of India. On the contrary, the movement has been in the opposite direction. In 1881 the State of Mysore, which had been so long under British administration that the traditions of Native rule were almost forgotten, was restored to the old Hindu ruling house. In 1911 the Maharajah of Benares, the great taluqdar of Oudh, was granted ruling powers over his extensive possessions. On many occasions the Government of India has had to intervene, to prevent gross misgovernment, or to carry on the administration during a long minority; but always with the undeviating intention of restoring the territories as soon as the necessity for intervention passed. Almost all states possess the right of adoption in default of heirs.

Rights of Native States.

The rights and obligations of the Native States are thus described by the Imperial Gazetteer. The Chiefs have, without exception, gained protection against dangers from without and a guarantee that the protector will respect their rights as rulers. The Paramount Power acts for them in relation to foreign Powers and other Native States. The inhabitants of the Native States are the subjects of their rulers, and except in case of personal jurisdiction over British subjects, these rulers and their subjects are free from the control of the laws of British India. Criminals escaping to a Native State must be handed over to it by its authorities; they cannot be arrested by the police of British India without the permission of the ruler of the State. The Native Princes have therefore a suzerain power which acts for them in all external affairs, and at the same time scrupulously respects their internal authority. The suzerain also intervenes when the internal peace of their territories is seriously threatened. Finally they participate in all the benefits which the protecting power obtains by its diplomatic action, or by its administration of its own dominions, and thus secure a share in the commerce, the railways, the ports, and the markets of British India. Except in rare cases, applied to maritime states, they have freedom of trade with British India although they levy their own customs, and their subjects are admitted to most of the public offices of the British Government.

Obligations of Native States.

On the other hand, the Native States are under an obligation not to enter into relations with foreign nations or other states; the authority of their rulers has no existence outside their territories. Their subjects outside their dominions become for all intents and purposes British subjects. Where foreign interests are concerned, the Paramount Power must act so that no just cause of offence is given by its subordinate allies. All Native States alike are under an obligation to refer to the British every question of dispute with other states. Inasmuch as the Native States have no use for a military establishment other than for police, or display, or for co-operation with the Imperial Government, their military forces, their equipment and armament are prescribed by the Paramount Power. Although old and unaltered treaties declare that the British Government will have no manner of concern with any of a Maharajah's dependents or servants, with respect to whom the Maharajah is absolute, logic and public opinion

have endorsed the principle which Lord Canning set forth in his minute of 1860, that the "Government of India is not precluded from stepping in to set right such serious abuses in a Native Government as may threaten any part of the country with anarchy or disturbance, nor from assuming temporary charge of a Native State when there shall be sufficient reason to do so." Of this necessity the Governor-General in Council is the sole judge, subject to the control of Parliament. Where the law of British India confers jurisdiction over British subjects or other specified persons in foreign territory, that power is exercised by the British courts which possess it. The subjects of European Powers and the United States are on the same footing. Where cantonments exist in Native territory, jurisdiction both over the cantonment and the civil station is exercised by the suzerain power.

Political Officers.

The powers of the British Government are exercised through Political Officers who, as a rule, reside in the states themselves. In the larger states the Government is represented by a Resident, in groups of states by an Agent to the Governor-General, assisted by local Residents or Political Agents. These officers form the sole channel of communication between the Native States and the Government of India and its Foreign Department, with the officials of British India and with other Native States. They are expected to advise and assist the Ruling Chiefs in any administrative or other matters on which they may be consulted. Political Agents are similarly employed in the larger States under the Provincial Governments, but in the petty states scattered over British India the duties of the Agent are usually entrusted to the Collector or Commissioner in whose district they lie. All questions relating to the Native States are under the special supervision of the Supreme Government, and in the personal charge of the Governor-General. A proposal has been made by the Government of India that, in view of the increasing importance of the Native States, an additional Secretary, styled the Political Secretary, shall be appointed, who shall be in special charge, under the Viceroy, of these questions.

Closer Partnership.

Events have tended gradually to draw the Paramount Power and the Native States into closer harmony. Special care has been devoted to the education of the sons of Ruling Chiefs, first by the employment of tutors, and afterwards by the establishment of special colleges for the purpose. These are now established at Ajmere, Rajkot, Indore and Lahore. The Imperial Cadet Corps, whose headquarters are at Dehra Dun, imparts military raining to the scions of the ruling chiefs and noble families. The spread of higher education has placed at the disposal of the Native States the products of the Universities. In these ways there has been a steady rise in the character of the administration of the Native States, approximating more closely to the British ideal. Most of the Native States have also come forward to bear their share in the burden of Imperial defence. Following on the spontaneous offer of military assistance when war with Russia appeared to be inevitable over the Penjdeh incident in 1885, the states have raised a portion of their forces up to the standard of the Native troops in the Indian Army. These are termed Imperial Service Troops; they belong to the states, they are officered by Indians; but they are inspected by a regular cadre of British officers under the general direction of the Inspecton General of Imperial Service Troops. Their numbers are approximately 22,000 men; their armament is the same as that of the Indian Army and they have done good service often under their own Chiefs, on the Frontier and in China and in Somaliland. Secure in the knowledge that the Paramount Power will respect their rights and privileges, the Ruling Chiefs have lost the suspicion which was common when their position was less assured, and the visits of the Prince of Wales in 1875, of the Prince and Princess of Wales in 1905-06, and of the King and Queen in 1911-12 have tended to seal the devotion of the great feudatories to the Crown. The improvement in the standard of native rule has also permitted the Government of India largely to reduce the degree of interference in the internal affairs of the Native States. The new policy was authoritatively laid down by Lord Minto, the then Viceroy, in a speech at Udaipur in 1909, when he said:—

"Our policy is with rare exceptions, one of non-interference in the internal affairs of the Native States. But in guaranteeing their internal independence and in undertaking their protection against external aggression it naturally follows that the Imperial Government has assumed a certain degree of responsibility for the general soundness of their administration and could not consent to incur the reproach of being an indirect instrument of misrule. There are also certain matters in which it is necessary for the Government of India to safeguard the interests of the community as a whole as well as those of the paramount power, such as railways, telegraphs and other services of an Imperial character. But the relationship of the Supreme Government to the State is one of suzerainty. The foundation-stone of the whole system is the recognition of identity of interests between the Imperial Government and Durbars and the minimum of interference with the latter in their own affairs."

HYDERABAD.

Hyderabad, the premier Native State in India, is in the Deccan. Its area is 82,698 square miles and population 13,374,676. The general physical characteristics of the State are an elevated plateau, divided geographically and ethnologically by the Manjra and Godaveri rivers. To the North-West is the Trappean region, peopled by Marathas, a country of black cotton soil producing wheat and cotton. To the South-East is the granatic region of the Telugus and producing rice.

HISTORY.—In pre-historic times Hyderabad came within the great Dravidian zone. The date of the Aryan conquest is obscure, but the

dominions of Asoka 272 to 231 B.C. embraced the northern and western portions of the State. Three great Hindu dynasties followed, those of the Pallavas, Chalukyas and Yadavas. In 1294 the irruption of the Mahomedans under Ala-ud-din Khilji, commenced, and thenceforward till the time of Aurungzebe the history of the State is a confused story of struggles against the surviving Hindu kingdom of the South, and after the fall of Vijayanagar, with each other. Aurungzebe stamped out the remains of Mahomedan independence of the South, and set up his General, Asaf Jah, of Turcoman descent, as Viceroy, or Subhadar of the Deccan in 1713. In the chaos which followed the death of Aurungzebe, Asaf Jah had no difficulty in establishing and maintaining his independence, and thus founded the present House. During the struggle between the British and the French for mastery in India, the Nizam finally threw in his lot with the British, and unshaken even by the excitement of the mutiny, has been so staunch to his engagements as to earn the title of "Our Faithful Ally." The present ruler is His Exalted Highness Sir Usman Ali Khan Bahadur Fatch Jung, G.C.S.I.

THE BERARS.—A most important event in the history of the State occurred in November 1902, when the Assigned Districts of Berar were leased in perpetuity to the British Government. These districts had been administered by the British Government on behalf of the Nizam since 1853; under the treaties of 1853 and 1860, they were "assigned" without limit of time to the British Government to provide for the maintenance of the Hyderabad contingent, a body of troops kept by the British Government for the Nizam's use, the surplus revenues, if any, being payable to the Nizam. In course of time it had become apparent that the maintenance of the Hyderabad contingent on its old footing as a separate force was inexpedient and unnecessary, and that similarly the administration of Berar as a separate unit was very costly, while from the point of view of the Nizam, the precarious and fluctuating nature of the surplus was financially inconvenient. The agreement of 1902 re-affirmed His Highness' sovereignty over Berar, which instead of being indefinitely "assigned" to the Government of India, was eased in perpetuity to an annual rental of 25 lakhs (nearly £167,000); the rental is for the present charged with an annual debit towards the repayment of loans made by the Government of India. The Government of India were at the same time authorised to administer Berar in such manner as they might think desirable, and to redistribute, reduce, re-organise and control the Hyderabad Contingent, due provision being made, as stipulated in the treaty of 1853, for the protection of His Highness' dominions. In accordance with this agreement the Contingent ceased in March 1903 to be a separate force and was re-organised and redistributed as an integral part of the Indian Army, and in October 1903 Berar was transferred to the administration of the Chief Commissioner of the Central Provinces.

ADMINISTRATION.—The Nizam is supreme in the State and exercises the power of life and death over his subjects. The form of government was changed in 1919, an Executive Council being established which consists of seven ordinary and one extraordinary members under a president Sir Syed Ali Imam, K.C.S.I. Below the Secretariat the State is divided into Subhas or Divisions, Districts and Talukas. Fifteen District, 88 Taluk and nine Divisional Boards are at work in the District. A Legislative Council, consisting of 23 members, of whom 12 are official and 11 non-official, is responsible for making laws. The State maintains its own currency, the Osmania Sicca rupee with a subordinate coinage. In 1904 an improved Mahbubia rupee was struck and this exchanges with the British rupee at the ratio of 115 or 116 to 100. It has its own postal system and stamps for internal purposes. It maintains its own Army, comprising 16,269 troops, of which 3,753 are classed as Regular and 11,242 as Irregular. There are in addition 1,274 Imperial Service Troops.

FINANCE.—After many vicissitudes, the financial position of the State is strong. For the year 1918-19 receipts amounted to Rs. 583 lakhs and expenditure to Rs. 601 lakhs.

PRODUCTION AND INDUSTRY.—The principal industry of the State is agriculture, which maintains 57·1 per cent. of the population. The common system of land tenure is ryotwari. As no reliable figures are available to show the gross produce it is impossible to say what proportion the land revenue bears to it, but it is collected without difficulty. The principal food crops are millet and rice; the staple money crops cotton, which is grown extensively on the black cotton soils, and oil-seeds. The State is rich in minerals. The great Warangal coal measures are worked at Singareni, but the efforts to revive the historic gold and diamond mines have met with very qualified success. The manufacturing industries are consequent on the growth of cotton, and comprise three spinning and weaving mills and ginning and pressing factories in the cotton tracts.

COMMUNICATIONS.—One hundred and thirty-seven miles of the broad gauge line from Bombay to Madras traverse the State. At Wadi, on this section, the broad gauge system of the Nizam's Guaranteed State Railway takes off, running East to Warangal and South-East toward Bezwada, a total length of 330 miles. From Hyderabad the metre gauge Godaveri Railway runs North-West to Manmad on the Great Indian Peninsula Company's system 391 miles. There are thus 471 miles of broad gauge and 391 of metre in the State. The Barsi Light Railway owns a short extension to Latur. The roads are generally inferior.

EDUCATION.—The State maintains two Colleges. The Nizam College at Hyderabad (first grade) is affiliated to the Madras University. The Oriental College at Hyderabad prepares students for the local Moulvi and Munshi examinations. In 1918-19 the total number of educational institutions rose from 3,224 to 3,556, the number of primary schools in particular having been largely increased.

British Resident—Mr. C. L. S. Russell, I.C.S.

MYSORE.

The State of Mysore is surrounded on all sides by the Madras Presidency except on the north and north-west where it is bounded by the districts of Dharwar and North Canara respectively and towards the south-west by Coorg. It is naturally divided into two regions of distinct character; the hill country (the Malnad) on the west and the wide-spreading valleys and plains (the Maidan) on the east. The State has an area of 29,461 square miles excluding that of the Civil and Military Station of Bangalore and a population of 5,705,359, of whom over 92 per cent. are Hindus. Kanarese is the distinctive language of the State.

HISTORY.—The ancient history of the country is varied and interesting. Tradition connects the table-land of Mysore with many a legend enshrined in the great Indian epics, the Ramayana and the Mahabharata. Coming down to historical times, the north-eastern portion of the country formed part of Asoka's Empire in the third century B. C. Mysore then came under the rule of the Andhra dynasty. From about the third to the eleventh century A. D. Mysore was ruled by three dynasties, the north-western portion by the Kadambas, the eastern and northern portions by the Pallavas and the central and southern portions by the Gangas. In the eleventh century, Mysore formed part of the Chola dominion, but the Cholas were driven out early in the twelfth century by the Hoysalas, an indigenous dynasty with its capital at Halebid. The Hoysala power came to an end in the early part of the fourteenth century. Mysore was next connected with the Vijayanagar Empire. At the end of the fourteenth century, Mysore became associated with the present ruling dynasty. At first tributary to the dominant empire of Vijayanagar, the dynasty attained its independence after the downfall of Vijayanagar in 1565. In the latter part of the eighteenth century the real sovereignty passed into the hands of Haidar Ali and then his son Tippu Sultan. In 1799, on the fall of Seringapatam, the British Government restored the State comprised within its present limits, to the ancient dynasty in the person of Maharaja Sri Krishnaraja Wadiyar Bahadur III. Owing to the insurrections that broke out in some parts of the country, the management was assumed by the British Government in 1831. In 1881, the State was restored to the dynasty in the person of Sri Chamarajendra Wadiyar Bahadur under conditions and stipulations laid down in the Instruments of Transfer. That ruler with the assistance of Mr. (afterwards Sir) K. Seshadri Iyer, K.C.S.I., as Dewan, brought Mysore to a state of great prosperity. He died in 1894 and was succeeded by the present Maharaja Sir Sri Krishnaraja Wadiyar Bahadur, G.C.S.I., who was installed in 1902. In November 1913, the Instrument of Transfer was replaced by a Treaty which indicates more appropriately the relation subsisting between the British Government and the State of Mysore.

ADMINISTRATION.—The city of Mysore is the capital of the State, but Bangalore City is the administrative headquarters. His Highness the Maharaja is the ultimate authority in the State and the administration is conducted under his control, by the Dewan and four Members of the Council including the Extraordinary Member. The Chief Court consisting of three Judges is the highest judicial tribunal in the State. A Representative Assembly meets twice a year at Mysore—once in October during the Dasara and a second time on the occasion of the birthday of His Highness. In the October Session the Dewan presents to the Assembly an account of the Finances of the State of the preceding official year and deals also with the more important administrative measures. Representations about wants and grievances are heard and discussed. In the Birthday Session the Budget for the ensuing year is placed before the Assembly and its opinion invited. Such of the representations of the October Session as were not heard for want of time are taken up and discussed along with the fresh subjects brought up. There is also a Legislative Council consisting of 30 members, of whom 12 are officials, and 18 non-officials, thirteen elected and five nominated. The Council has been given the privileges of interpellation, discussion of the State budget and the moving of resolutions on matters other than the budget. All the important branches of the administration are controlled by separate heads of departments. For administrative purposes, the State is divided into 8 districts and subdivided into 68 talukas, each district being under a Deputy Commissioner and District Magistrate and each taluk under an Amildar and Subordinate Magistrate. The State maintains a military force of 3,881 including 923 in the Imperial Service Lancers and 748 in the Imperial Service Transport Corps.

The cash balance at the beginning of 1919-20 was 106 lakhs. Total receipts during the year 1918-19 were Rs. 313 lakhs and total disbursement 425. The principal revenue heads are:—Land Revenue Rs. 117 lakhs; Mining Royalty Rs. 12 lakhs; Forest revenue Rs. 42 lakhs; Excise Rs. 72 lakhs; Stamps Rs. 16 lakhs; Railways Rs. 18 lakhs and Electric Power Rs. 10 lakhs. Mysore pays an annual subsidy of Rs. 35 lakhs to the British Government besides contributing indirectly to the British Revenues under Customs and Salt.

ECONOMIC CONFERENCE.—The Mysore Economic Conference was organised in June 1911 with the object of creating and keeping alive public interest in matters connected with the economic progress of the State by a frequent interchange of views and discussions among those competent to deal with them and in order to associate men of enlightenment, public spirited citizens, prominent agriculturists, merchants and others with the officers of Government in such deliberations. The Conference meets annually at Mysore during the festivities in connection with His Highness the Maharaja's birthday. The Dewan is the President of the Conference. It has four Boards dealing with questions connected with Agriculture Education, Industries and Commerce and Chemical research and scientific advance and Committees for developing economic activities in local areas, such as districts, talukas and towns. Under the auspices of the Conference a monthly Journal

is issued in English and a weekly paper in Kannada, and bulletins on important subjects are periodically issued.

The economic work in the districts has been handed over to District Boards. The work in the Taluks has been delegated to taluk Boards and in the villages to Village Panchayats.

AGRICULTURE.—Nearly three-fourths of the population are employed in agriculture and the general system of land tenure is Ryotwari. The principal food crops are ragi, rice, jola, millets, gram and sugarcane and the chief fibres are cotton and san-hemp. Over 28,000 acres are under mulberry, the silk industry being the most profitable in Mysore next to gold mining. A Superintendent of Seri-culture has been appointed, arrangements are being made for the supply of disease—free seed and a central and 9 Taluka Popular Schools have been started. The Department of Agriculture is popularising agriculture on scientific lines by means of demonstrations, investigations and experiments. There is one Central Farm at Hebbal to deal with all classes of crops and two others, one at Hiriyur in connection with cotton and crops suited to localities where the rainfall is light and the other at Marathur in the region of heavy rainfall. A Sugarcane Farm has been opened under the new Krishnarajasagara works and Committees have been constituted in several districts for the development of the sugarcane cultivation. A Live-stock Expert has been appointed.

INDUSTRIES AND COMMERCE.—A Department of Industries and Commerce was organised in 1913 with a view to the development of Industries and Commerce in the State. Its main functions are stimulating private enterprise by the offer of technical advice and other assistance for starting new industries, undertaking experimental work for pioneering industries and developing existing industries and serving as a general bureau of information in industrial and commercial matters. A system of granting loans for the purchase of machinery and appliances has been introduced in the State. The manufacturing industries include two cotton mills, one woollen mill, nine cotton ginning mills, four cotton presses, and 92 silk filatures. There are also one oil mill, fifteen rice mills, nine sugar mills, sixteen brick and tile factories, one cigar factory, two tanneries, fifteen mechanical workshops, two distilleries, one silk reeling house, two flour mills, seven bone-crushing mills and coffee works, two dyeing factories, one hosiery, one brewery, one iron and brass foundry, one lacquer work factory, two taxidermic works, one saw-mill, one weaving factory, one Pharmaceutical work, one wood turning and one art Lithographic press. In addition there are fifty-four pumping plants for irrigation. The Sandalwood Oil Factory started on an experimental basis is now working on a commercial scale. A large factory is working at Mysore. Arrangements have commenced for establishing wood distillation and iron works in the State under an agreement with Messrs. Tata & Sons. Local Syndicates have been formed at Davangere and Mysore for establishing Cotton Mills at those places. A button factory, a soap factory and a metal working factory are the other concerns now run by the Government on a commercial scale. Concessions have been granted to a private gentleman in Mysore for the manufacture of matches as a home industry. An Arts and Crafts Depot has been opened to give special encouragement for inlay workers, sandalwood carvers and to those engaged in preparing high class silk, lace cloths and metalworks. The establishment of a Central District and Commercial Museums at District Headquarters has been sanctioned. A Chamber of Commerce has been established at Bangalore with branches at important trade centres with a separate division for dealing solely with questions relating to commercial developments in the State.

BANKING.—In 1913, a State-aided bank called the Bank of Mysore was started with its headquarters in Bangalore and agencies at many of the important places in the State. Besides this there are two Provincial Banks, 3 District Banks, 13 Federal Banking Unions and 1,402 Co-operative Societies working with a total working Capital of Rs. 78 Lakhs.

COMMUNICATIONS.—The Railway system radiates from Bangalore, various branches of the Madras and Southern Mahratta Railway running through the State. The length of the lines owned by the State and worked under contract by the Company is 271·48 miles, of which 9·88 are of broad gauge and the rest metre gauge. The Mysore-Arsikere Railway (102·95 miles) in length has been opened for traffic. The Kolar District Board Railway (63 miles) and the Bangalore-Chickballapur Light Railway (35 miles) both of 2'-6" gauge together with a tramway from Tarikere to Narasimharajapura (27 miles) 2 feet gauge have been opened and are being worked by State Agency.

Two lines, Chickjapur to Chitaldrug, 21 miles, metre-gauge, and Tadasa-Hebbe, 10 miles, 2 feet gauge, are nearing completion. The work on the Kemmangundi-Benkipur Tramway, Agasanahadlu-Benkipur Tramway commenced in October 1918 is in progress. The construction of the Shimoga-Arasalu Railway commenced in 1919 is also progressing. Several other projects were under survey and investigation during the year.

EDUCATION.—A separate University for Mysore was established on the 1st July 1916. It is of the teaching and residential type composed of the Central and Engineering Colleges at Bangalore, and the Maharaja's College at Mysore, with headquarters at Mysore. An important feature is that the University course is one of three years, what corresponds to the first year in other Universities being in the Collegiate High School which specially trains students for one year to fit them for the University Course. The colleges are efficiently equipped and organised and there is a training college for men located at Mysore. There is also a College for women at Mysore, *i.e.*, the Maharani's College.

With the introduction of compulsory education in select towns and the increase in the number of village schools, primary education has during recent years made considerable advance. Schools have been started for imparting instruction in agricultural, commercial, engineering

and other technical subjects. Adult education and vocational training have also been taken in hand. There were altogether in 1919-20, 9,573 public and 862 private educational institutions in the State. This gives one school to every 2·6 square miles of the area and to every 509 inhabitants.

PLACES OF INTEREST.—Mysore City, the capital, is a modern city laid out with fine roads and suburbs. The prominent buildings are the Palace, the Krishnaraja Hospital, the Chamarajendra Technical Institute, Government House, the Maharaja's College, the Maharani's College and the University Library.

Bangalore, the largest city in the State and the commercial and manufacturing centre, stands on a table land, 3,000 feet above the sea and is noted for its salubrious climate and luxuriant gardens. The principal places of interest are the Public Offices, the Central College buildings, the Muscum, the Lal Bagh, the Indian Institute of Science and the Indian Sanskrit Institute.

The historic town of Seringapatam, the famous Jog Falls, the Kolar Gold Fields, the Sivasamudram Falls, and Belur, Somnathpur and Halebid with their temples of exquisite architecture, are some of the other important places of interest in the State.

Resident in Mysore and Chief Commissioner of Coorg.—Lt.-Col. S. G. Knox.

Dewan.—Rajasevadhurina Sir M. Kantaraja Urs, K.C.I.E., C.S.I.

BARODA.

The State of Baroda is situated partly in Gujarat and partly in Kathiawar. It is divided into four distinct blocks: (1) the southern district of Navsari near the mouth of the Tapti river, and mostly surrounded by British territory; (2) central district, North of the Narbada, in which lies Baroda, the capital city; (3) to the North of Ahmedabad, the district of Kadi; and (4) to the West, in the Peninsula of Kathiawar, the district of Amreli, formed of scattered tracts of land. The area of the State is 8,182 square miles; the population is 2,126,512 of whom over four-fifths are Hindus.

HISTORY.—The history of the Baroda State as such dates from the break-up of the Mughal Empire. The first Maratha invasion of Gujarat took place in 1705. In later expeditions Pilaji Gaikwar, who may be considered as the founder of the present ruling family, greatly distinguished himself. Songhad was the headquarters till 1766. After 1723 Pilaji regularly levied tribute in Gujarat. His son Damaji finally captured Baroda in 1734, since when it has always been in the hands of the Gaikwars; but Mughal authority in Gujarat did not end until the fall of Ahmedabad in 1753, after which the country was divided between the Gaikwar and the Peshwa. In spite of the fact that Damaji was one of the Maratha chiefs defeated at Panipat by Ahmed Shah, he continued to add to his territory. He died in 1768, leaving the succession in dispute between two rival sons. He was succeeded in turn by his sons Sayaji Rao I. Fattesing Rao, Manaji Rao and Govind Rao. The last died in 1800, and was succeeded by Anand Rao. A period of political instability ensued which was ended in 1802 by the help of the Bombay Government, who established the authority of Anand Rao at Baroda. By a treaty of 1805 between the British Government and Baroda, it was arranged *inter alia* that the foreign policy of the State should be conducted by the British, and that all differences with the Peshwa should be similarly arranged. Baroda was a staunch ally of the British during the wars with Baji Rao Peshwa, the Pindari hordes and Holkar. But from 1820 to 1841, when Sayaji Rao II. was Gaikwar, differences arose between the two Governments, which were settled by Sir James Carnac, Governor of Bombay in 1841. Ganpat Rao succeeded Sayaji Rao in 1847. During his rule, the political supervision of Baroda was transferred to the Supreme Government. His successor Khande Rao, who ascended the *Gadi* in 1856, introduced many reforms. He stood by the British in the Mutiny. He was succeeded by his brother Malhar Rao in 1870. Malhar Rao was deposed in 1875 for "notorious misconduct" and "gross misgovernment," but the suggestion that he had instigated the attempt to poison Col. Phayre, the Resident, was not proved. Sayaji Rao III., a boy of 13 years of age, who was descended from a distant branch of the family, was adopted as heir of Khande Rao in 1875 and is the present Gaikwar. He was invested with full powers in 1881.

ADMINISTRATION.—An executive council, consisting of the principal officers of the State, carries on the administration, subject to the control of the Maharaja, who is assisted by a Dewan and other officers. A number of departments have been formed, which are presided over by officials corresponding to those in British India. The State is divided

into four *prants* each of which is subdivided into *Mahals* and *Peta Mahals* of which there are in all 42. Attempts have for some years been made to restore village autonomy, and village panchayats have been formed which form part of a scheme for local self-government. There is a Legislative Department, under a Legal Remembrancer, which is responsible for making laws. There is also a Legislative Council, consisting of nominated and elected members. A High Court at Baroda possesses jurisdiction over the whole of the State and hears all final appeals. From the decisions of the High Court, appeals lie in certain cases, to the Maharaja, who decides them on the advice of the Huzur Nyaya Sabha. The State Army consists of 5,084 Regular forces and 3,806 Irregular forces.

FINANCE.—In 1919-20, the total receipts of the State were Rs. 242 lakhs and the disbursements Rs. 181 lakhs. The principal Revenue heads were:—Land Revenue, Rs. 129 lakhs; Abkari, Rs. 35 lakhs; Opium, Rs. 11 lakhs; Railways, Rs. 11 lakhs; Interest Rs. 13 lakhs; Tribute from other States, Rs. 6 lakhs. British Currency was introduced in 1901.

PRODUCTION AND INDUSTRY.—Agriculture and pasture support 63 per cent. of the people. The principal crops are rice, wheat, gram, castor-oil, rapeseed, poppy, cotton, san-hemp, tobacco, sugarcane, maize, and garden crops. The greater part of the State is held on *ryotwari* tenure. The State contains few minerals, except sandstone, which is quarried at Songar, and a variety of other stones which are little worked. There are 63 industrial or commercial concerns in the State registered under the State Companies' Act. There are four Agricultural Banks and 491 Co-operative Societies in the Baroda State.

COMMUNICATIONS.—The B. B. & C. I. Railway crosses part of the Navsari and Baroda *prants*, and the Rajputana-Malwa Railway passes through the Kadi *prant*. A system of branch lines has been built by the Baroda Durbar in all the four *prants*, in addition to which the Tapti Valley Railway and the Baroda-Godhra Chord line (B. B. & C. I.) pass through the State. The Railways constructed by the State are about 550 miles in length and 73 miles are under construction. Good roads are not numerous.

EDUCATION.—The Education Department controls 2,873 institutions of different kinds, in 71 of which English is taught. The Baroda College is affiliated to the Bombay University. There are a number of high schools, technical schools, and schools for special classes, such as the jungle tribes and unclean castes. The State is "in a way pledged to the policy of free and compulsory primary education." It maintains a system of rural and travelling libraries. Ten per cent. of the population is returned in the census as literate. Total expense on Education is about Rs. 23 lakhs.

CAPITAL CITY.—Baroda City with the cantonment has a population of 94,712. It contains a public park, a number of fine public buildings, palaces and offices; and it is crowded with Hindu temples. The cantonment is to the north-west of the city and is garrisoned by an infantry battalion of the Indian Army. An Improvement Trust has been formed to work in Baroda City and has set itself an ambitious programme.

RULER.—His Highness Farzand-i-Khas-i-Dowlat-i-Englishia Maharaja Sir Sayaji Rao Gaekwar Sena Khas Khel, Samsher Bahadur, G.C.S.I., G.C.I.E., Maharaja of Baroda.

Resident.—Lt.-Col. D. B. Blakeway, C.I.E.

Dewan.—Mr. Manubhai N. Mehta, M.A., LL.B., C.S.I.

BALUCHISTAN AGENCY.

In this Agency are included the Native States of Kalat, Kharan and Las Bela. The Khan of Kalat is head of the Baluchistan tribal chiefs whose territories are comprised under the following divisions:—Jhalawan, Sarawan, Makran, Kachhi and Domki-Kaheri-Umrani. These districts form what may be termed Kalati Baluchistan, and occupy an area of 54,713 square miles. The inhabitants of the country are either Brahuis or Baluchis, both being Mahomedans of the Sunni sect. The country is sparsely populated, the total number being about 300,544. It derives its chief importance from its position with regard to Afghanistan on the north-western frontier of British India. The relations of Kalat with the British Government are governed by two treaties of 1854 and 1876, by the latter of which the Khan agreed to act in subordinate co-operation with the British Government. There are, however, agreements with Kalat in connection with the construction of the Indo-European telegraph, the cession of jurisdiction on the railways and in the Bolan Pass, and the permanent leases of Quetta, Nushki and Nasirabad. The Khan is assisted in the administration of the State by a Wazir-i-Azam lent by the British Government. The Governor-General's Agent in Baluchistan conducts the relations between the Government of India and the Khan, and exercises his general political supervision over the district. The revenue of the State is about Rs. 12,55,000. The present Khan is His Highness Beglar Begi Mir Sir Mahmud Khan of Kalat, G.C.I.E. He was born in 1864.

Kharan extends in a westerly and south-westerly direction from near Nushki and Kalat to the Persian border. Its area is 18,565 square miles; it has a population of 27,758 and an annual average revenue of about Rs.1,00,000.

The present Chief, Sardar Bahadur Nawab Habibullah Khan, was born about 1897 and succeeded his father Sardar Yakub Khan in 1911, when the latter was murdered by his uncle Amir Khan. The State is divided into

13 Niabats and the whole sources of income are chiefly agricultural.

Las Bela is a small State occupying the valley and delta of the Purali river, about 50 miles west of the Sind boundary. Area 7,132 square miles; population 50,697, chiefly Sunni Mahomedans, estimated average revenue about Rs. 3,72,000. The Chief of Las Bela, known as the Jam, is bound by agreement with the British Government to conduct the administration of his State in accordance with the advice of the Governor-General's Agent. This control is exercised through the Political Agent in Kalat. The Jam also employs an approved Wazir, to whose advice he is subject and who generally assists him in the transaction of State business.

Agent to the Governor-General for Baluchistan:—Hon. Lt.-Col. Sir Armine Dew, K.C.I.E.

RAJPUTANA AGENCY.

Rajputana is the name of a great territorial circle with a total area of about 130,462 square miles, which includes 18 Native States, two chiefships, and the small British province of Ajmer-Merwara. It is bounded on the west by Sind, on the north-west by the Punjab State of Bahawalpur, on the north and north-east by the Punjab, on the east by the United Provinces and Gwalior, while the southern boundary runs across the central region of India in an irregular zigzag line. Of the Native States 17 are Rajput, 2 (Bharatpur and Dholpur) are Jat, and one (Tonk) is Mahomedan. The chief administrative control of the British district is vested *ex-officio* in the political officer, who holds the post of Governor-General's Agent for the supervision of the relations between the several Native States of Rajputana and the Government of India. For administrative purposes they are divided into the following groups:—Alwar Agency; Bikanir Agency, Eastern Rajputana Agency, 3 States (Bharatpur, Dholpur Karauli); Haraoti and Tonk Agency, 3 States (principal States Bundi and Tonk); Jaipur Residency, 3 States (principal State, Jaipur); Kotah and Jhalawar Agency, 2 States; Mewar Residency; Southern Rajputana States Agency, 4 States (principal State, Banswara); Western Rajputana States Agency; 3 States (principal States, Marwar and Sirohi).

The Aravalli Hills intersect the country almost from end to end. The tract to the north-west of the hills is, as a whole, sandy, ill-watered and unproductive, but improves gradually from being a mere desert in the far west to comparatively fertile lands to the north-east. To the south-east on the Aravali Hills lie higher and more fertile regions which contain extensive hill ranges and which are traversed by considerable rivers.

COMMUNICATIONS.—The total length of railways in Rajputana is 1,576 miles, of which 739 are the property of the British Government. The Rajputana-Malwa (Government) runs from Ahmedabad to Bandikui and from there branches to Agra and Delhi. Of the Native State railways the most important is the Jodhpur-Bikaner line from Marwar Junction to Hyderabad (Sind) and to Bikaner.

INHABITANTS.—Over 50 per cent. of the population are engaged in some form of agriculture; about 20 per cent. of the total population are maintained by the preparation and supply of material substances; personal and domestic service provides employment for about 5 per cent. and commerce for 2½ per cent. of the population. The principal language is Rajasthani. Among castes and tribes, the most numerous are the Brahmans, Jats, Mahajans, Chamars, Rajputs, Minas, Gujars, Bhils, Malis, and Balais. The Rajputs are, of course, the aristocracy of the country, and as such hold the land to a very large extent, either as receivers of rent or as cultivators. By reason of their position as integral families of pure descent, as a landed nobility, and as the kinsmen of ruling chiefs, they are also the aristocracy of India; and their social prestige may be measured by observing that there is hardly a tribe or clan (as distinguished from a caste) in India which does not claim descent from, or irregular connection with, one of these Rajput stocks.

The population and area of the States are as follows:—

Name of State.	Area in square miles.	Population in 1911.
Mewar Residency—		
Udaipur	12,953	1,293,776
Banswara	1,946	165,463
Dungarpur	1,447	159,192
Partabgarh	886	62,704
Western States Residency—		
Jodhpur	34,963	2,057,553
Jaisalmer	16,062	88,311
Sirohi	1,964	189,127
Jaipur Residency—		
Jaipur	15,579	2,636,674
Kishangarh	858	87,191
Lawa	19	2,564
Haraoti-Tonk Agency—		
Bundi	2,220	218,730
Tonk	1,114	303,181
Shahpura	405	47,397
Eastern States Agency—		
Bharatpur	1,982	626,665
Dholpur	1,155	270,973
Karauli	1,242	156,786
Kotah-Jhalawar Agency—		
Kotah	5,684	639,089
Jhalawar	810	96,271
Bikaner	23,311	700,983
Alwar	3,141	791,688

Udaipur State (also called Meywar) was founded in about 646 A.D. The capital city is Udaipur, which is beautifully situated on the slope of a low ridge, the summit of which is crowned by the Maharajah's palaces, and to the north and west, houses extend to the banks of a beautiful piece of water known as the Pichola Lake in the middle of which stand two island palaces. It is situated near the terminus of the Udaipur-Chitor Railway, 697 miles north of Bombay. The present ruler is His Highness Maharajadhiraj Maharana Sir Fatch Singh Bahadur, G.C.S.I., G.C.I.E., who was born in 1849 and succeeded in 1884. He is the head of the Seesodia Rajputs and is the Premier Chief. The administration is carried on by the Maharana, assisted by two ministerial officers who form the chief executive department in the State. The revenue and expenditure of the State are now about 35 and 32 lakhs a year respectively. Udaipur is rich in minerals which are little worked. Its archæological remains are numerous, and stone inscriptions dating from the third century have been found.

Banswara State, the southernmost in Rajputana, became a separate State about 1527. Towards the end of the eighteenth century Banswara became more or less subject to the Marathas, and paid tribute to the Raja of Dhar. In 1812 the Maharawal offered to become tributary to the British Government on condition of the expulsion of the Marathas, but no definite relations were formed with him till the end of 1818. The present ruler is His Highness Ray Rayan Maharawal Sri Prithi Singh Bahadur, who was born in 1888 and succeeded his father in 1913. The normal revenue is about 8 lakhs and the expenditure is nearly equal to the income. The area of the State is 1,946 square miles, and the population 219,824. His Highness is entitled to a salute of 15 guns.

Dongarpur State, with Banswara, formerly comprised the country called the Bagar. It was invaded by the Mahrattas in 1818. As in other States, inhabited by hill tribes, it became necessary at an early period of British supremacy to employ a military force to coerce the Bhils. The State represents the *Gadi* of the eldest branch of the Sisodiyas and dates its separate existence from about the close of the 12th Century, when Mahup, the rightful heir to the Chittor Throne, migrated to these parts. The present Chief is His Highness Rai Rayan Maharawal Shri Lakshman Singhji born on 7th March 1908 and succeeded on 15th November 1918. His Highness being minor, the administration is carried on by the Executive Council of the State under the supervision of the Political Agent, Southern Rajputana States. No railway line crosses the territory, the nearest railway station, Udaipur, being 65 miles distant. Revenue a little above 5 lakhs.

Partabgarh State, also called the Kanthal, was founded in the sixteenth century by a descendant of Rana Mokal of Mewar. The town of Partabgarh was founded in 1698 by Partab Singh. In the time of Jaswant Singh (1775-1844), the country was overrun by the Marathas, and the Maharawal only saved his State by agreeing to pay Holkar a tribute of *Satim Shahi* Rs. 72,700, (which then being coined in the State Mint was legal tender throughout the surrounding Native States) in lieu of Rs. 15,000 formerly paid to Delhi. The first connexion of the State with the British Government was formed in 1804; but the treaty then entered into was subsequently cancelled by Lord Cornwallis, and a fresh treaty, by which the State was taken under protection, was made in 1818. The tribute to Holkar is paid through the British Government, and in 1904 was converted to Rs.36,350 British currency The present ruler is His Highness Maharawat Sir Raghunath Singh Bahadur, K.C.I.E., who was born in 1859 and succeeded in 1890. The State is governed by the Mahrawat with the help of the Dewan, and, in judicial matters, of a Committee of eleven members styled the Raj Sabha or State Council. Revenue about 5 lakhs: expenditure nearly 3¾ lakhs. The financial administration is under the direct supervision of the State.

Jodhpur State, the largest in Rajputana; also called Marwar, consists largely of sandy country. The Maharaja of Jodhpur is the head of the Rathor Clan of Rajputs and claims descent from Rama, the deified king of Ayodhya. The earliest known king of the clan lived in the sixth century from which time onwards their history is fairly clear. After the breaking up of their Kingdom at Kanauj they founded this State about 1212 and the foundations of Jodhpur City were laid in 1459 by Rao Jodha. The State entered into a treaty of subordinate alliance with the British Govt. in 1818. Jaswant Singh succeeded in 1873 and reformed the State. His son Sardar Singh was invested with powers in 1898, the minority rule having been carried on by his uncle Maharaja Sir Pratab Singh. He died in 1911 and was succeeded by his eldest son Maharaja Sumer Singh Bahadur, who was then 14 years of age. The administration of the State was carried on by a Council of Regency appointed by the Government, presided over by Major-General Maharaja Sir Pratab Singh, who abdicated the Gadi of Idar to serve the country of his birth. On the outbreak of the European War both the Maharaja and the Regent offered their services and were allowed to proceed to the Front. The young Maharaja was, for his services at the Front, honoured with an Honorary Majority in the British Army and K.B.E. and was invested with full ruling powers in 1916 and died on 3rd October 1918. He was succeeded by his younger brother Maharaja Umed Singhji Saheb Bahadur, who is a minor, the administration of the State being carried on by a Council of Regency presided over by Lieut.-General H. H. Maharaja Sir Pratap Singhji Saheb Bahadur as before. Revenue 115 lakhs: expenditure 100 lakhs.

Jaisalmer State is one of the largest States in Rajputana and covers an area of 16,062 square miles. The Rulers of Jaisalmer belong to the Jadon clan and are the direct descendants of Krishna. Jaisalmer City was founded in 1156, and the State entered into an alliance of perpetual friendship with the British Government in 1818. In 1844, after the British conquest of Sind the forts of Shahgarh, Garsia, and Ghotaru, which had formerly belonged to Jaisalmer, were restored to the State. The present Ruling Prince is His Highness Maharajadhiraja Maha-

rawal Shri Sir Jawaharsinghji Bahadur, K.C.S.I. Revenue about four lakhs.

Sirohi State is much broken up by hills of which the main feature is Mount Abu, 5,650 feet. The Chiefs of Sirohi are Deora Rajputs, a branch of the famous Chauhan clan which furnished the last Hindu kings of Delhi. The present capital of Sirohi was built in 1425. The city suffered in the eighteenth century from the wars with Jodhpur and the depredations of wild Mina tribes. Jodhpur claimed suzerainty over Sirohi but this was disallowed and British protection was granted in 1823. The present ruler is His Highness Maharaja Dhiraj Maharao Shri Sarup Ram Singh Bahadur. The State is ruled by the Maharao with the assistance of secretaries and other officials. Revenue about 8 lakhs; expenditure 7 lakhs.

Jaipur State is the fourth largest in Rajputana. It consists, for the most part, of level and open country. The Maharaja of Jaipur is the head of the Kachwaha clan of Rajputs, which claims descent from Kusa, the son of Rama, king of Ajodhya, and the hero of the famous epic poem the Ramayana. The dynasty in Eastern Rajputana dates from about the middle of the twelfth century, when Amber was made the capital of a small State. The Chiefs of that State acquired fame as generals under the Mughals in later centuries, one of the best known being Sawai Jai Singh in the eighteenth century who was remarkable as a great mathematician for his scientific knowledge. It was he who moved the capital from Amber and built the present city of Jaipur and elevated the State above the principalities around. On his death a part of the State was annexed by the Jats of Bharatpur and internal disputes brought Jaipur to great confusion. British protection was extended to Jaipur in 1818, but the State continued to be disturbed and a Council of Regency was appointed, which governed up to 1851, when Maharaja Sawai Ramsingh assumed full powers. He nominated as his successor K. Kaim Singh of Isarla who succeeded in 1880, under the name of Sawai Madho Singh II, and is the present ruler. He was born in 1861, and, in consideration of his youth, the administration was at first conducted by a Council under the joint presidency of the Maharaja and the Political Agent. He was invested with full powers in 1882. In 1887, his salute was raised from 17 to 19 guns as a personal distinction, followed in 1896 by two additional guns. In 1888 he was created a G.C.S.I. In 1901 a G.C.I.E., and in 1903 a G.C.V.O. In 1904 he was made honorary colonel of the 13th Rajputs, and in 1911 a Major-General and Lieutenant-General in 1921. In 1908 he was presented with the Honorary degree of LL.D. of Edinburgh University and in 1912, made a Donat of the Order of the Hospital of St. John of Jerusalem. He was made a G.B.E. in 1918. Jaipur City is the largest town in Rajputana and is one of the few eastern cities laid out on a regular plan. It contains in addition to the Maharaja's palace many fine buildings. The administration of the State is carried on by the Maharaja assisted by a Council of 10 Members. The Military force consists of about 5,000 infantry, 700 cavalry and 860 artillery men. The normal revenue is about 65 lakhs; expenditure about 59 lakhs. Among important events of His Highness's rule may be mentioned the raising of the Imperial Service Transport Corps in 1889-90; the construction of numerous irrigation works, hospitals and dispensaries. When the Great European War broke out the Government of India remembering the excellent past services of the Corps in the Frontier Expeditions of Chitral (1895-96) and Tirah (1897-98) requested the Durbar to send the Corps to Mesopotamia. Accordingly on the 3rd November 1914, the Corps consisting of 524 officers and men, 826 ponies and 360 carts proceeded on active service. Their services were often mentioned in despatches of the General Officers Commanding Mesopotamia Expeditionary Forces and published in the London and India Gazettes.

As soon as the Corps returned from Mesopotamia in May, 1919, its services were readily offered by the Durbar at the outbreak of hostilities with Afghanistan and it was mobilised for services with the North-West Frontier Force. The Corps fully maintained its former tradition and returned to depot on 19th January 1920.

Including His Highness the Maharaja's endowment of Rs. 25 lakhs to Indian People's Famine Trust Fund, His Highness has contributed no less than 48 lakhs of rupees to different funds and charitable institutions not only in India but in England. Besides the above gift His Highness has contributed about 26 lakhs of rupees towards the expenses of the War, including a sum of Rs. 7,25,250 towards the maintenance of the Jaipur Transport Corps on active service.

During the Great War His Highness subscribed to the Indian War Loan in Bonds of the total value of 25 lakhs of rupees.

H. H. has adopted in 1921 Maharaja Kumar Mansingh a scion of the Rajawat family of Isarda.

In the State itself His Highness during his reign of nearly 39 years has spent 1 crore and 72 lacs of rupees on works of public utility such as roads, irrigation works, railways and famine relief. When H. I. M. Queen Empress Mary visited Jaipur in 1911 His Highness granted to his subjects a remission of back rents amounting to 50 lakhs of rupees.

Kishangarh State is in the centre of Rajputana and consists practically of two narrow strips of land separated from each other with an area of 858 square miles (population 78,000) the northern mostly sandy, the southern generally flat and fertile. The Ruling Princes of Kishangarh belong to the Rathor clan of Rajputs and are descended from Maharaja Kishan Singh (Second son of Maharaja Udai Singh of Jodhpur) who founded the town of Kishangarh in 1611. The present ruler is Lieut.-Col. His Highness Maharajadhiraj Sir Madan Singh Bahadur, K.C.S.I., K.C.I.E., Umdai Rajhai-Buland Makan, who was born in 1884 and was invested with powers in 1905. He administers the State with the help of a Council. His Highness served in France in 1914-15 and was mentioned in despatches by Field-Marshal Lord French. Revenue 8 lakhs. Expenditure 5 lakhs.

Lawa State, or takurat of Rajputana is a separate chiefship under the protection of the British Government and independent of any Native States. It formerly belonged to Jaipur

and then became part of the State of Tonk. In 1867, the Nawab of Tonk murdered the Thakur's uncle and his followers, and Lawa was then raised to its present State. The Thakurs of Lawa belonged to the Naruka sept of the Kachwaha Rajputs. The present Thakur, Mangal Singh, was born in 1873, and succeeded to the estate in May, 1892. Revenue about Rs. 11,000.

Bundi State is a mountainous territory in the south-east of Rajputana. The Chief of Bundi is the head of the Hara sept of the great clan of Chauhan Rajputs and the country occupied by this sept has for the last five or six centuries been known as Haraoti. The State was founded in the early part of the thirteenth century and constant feuds with Mewar and Malwa followed. It threw in its lot with the Mahomedan emperors in the sixteenth century. In later times it was constantly ravaged by the Marathas and Pindaries and came under British protection in 1818 at which time it was paying tribute to Holkar. The present ruler of this State—which is administered by the Maharao Raja and a Council of 8 in an old-fashioned but popular manner—is His Highness Maharao Raja Sir Raghubir Singh Bahadur, G.C.I.E., G.C.V.O., G.C.S.I. He was born in 1869 and succeeded in 1889. Revenue about 10 lakhs: Expenditure 9·6 lakhs.

Tonk State—Partly in Rajputana and partly in Central India, consists of six Parganas separated from one another. The ruling family belongs to the Salarzai Clan of the Bunerwal Afghan tribe. The founder of the State was Amiruddaula Nawab Mahomed Amir Khan Bahadur, General of the Army collected at the end of the eighteenth century. The foundation of the State was laid down in the year 1817. His grandson was deposed. The present ruler of the State is His Highness Amiruddaula Wazirul-Mulk Nawab Sir Hafiz Muhammad Ibrahim Ali Khan Bahadur, G.C.S.I., G.C.I.E., The administration is conducted by the Nawab assisted by a Council of four members. Revenue 20,47,965, Expenditure: 19,44,693.

Shahpura Chiefship is a small pastoral State. The ruling family belongs to the Seesodia clan of Rajputs. The Chiefship came into existence about 1629, being a grant from the Emperor Shah Jahan to one Sujan Singh. The present Chief is Sir Nahar Singh, K.C.I.E., who succeeded by adoption in 1870 and received full powers in 1876. In addition to holding Shahpura by grant from the British Government the Raja Dhiraj possesses the estate of Kachhola in Udaipur for which he pays tribute and does formal service as a great noble of that State. Revenue 3 lakhs: Expenditure 2·6 lakhs.

Bharatpur State.—Consists largely of an immense alluvial plain, watered by the Banganga and other rivers.

The present ruling family of Bharatpur are Jats, of the Sinsinwar clan who trace their pedigree to the eleventh century. The family is of the Sinsinwal clan named so after their old village Sinsini. Bharatpur was the first State in Rajputana that made alliance with the British Government in 1803, helped Lord Lake with 5,000 horse in his conquest of Agra and battle of Laswari wherein the Maratha power was entirely broken and received 5 districts as reward for the service. In 1804, however, Bharatpur sided with Jaswant Rao Holkar against the British Government which resulted in a fight with the Government. Peace was re-established in 1805 under a treaty of alliance and it continues in force. The State, being usurped by Durjan Sal in 1825, the British Government took the cause of the rightful heir, Maharaja Balwant Singh Sahib. Bharatpur was besieged by Lord Combermere, and as the faithful subjects almost all joined the British Army, the result could not be otherwise than capture of the Capital and restoration of the State to its rightful owner. Bharatpur rendered valuable service to the British Government during the Mutiny. The present Chief is His Highness Major Shri Maharaja Vrijendra Sawai Kishen Singh Bahadur Jung, who was born in 1899 and succeeded in the following year his father Maharaja Ram Singh, who was deposed. Revenue 32 lakhs. Expenditure 31 lakhs.

Dholpur State, the easternmost State in Rajputana, has changed hands on unusual number of times. It was occupied by the British in 1803 and restored to the Gwalior Chief who formerly owned it, but by a fresh arrangement of 1805 it was constituted a State with other districts and made over to Maharaj Rana Kirat Singh, in exchange for his territory of Gohad which was given up to Sindhia. The ruling family are Jats of the Bamraolia clan, the latter name being derived from a place near Agra where the family held land in the twelfth century. The present chief—who is assisted in the administration by three Ministers—is Col. H. H. Maharaj Rana Sir Udaibhan Singh Lokinder Bahadur. He was born in 1893 and succeeded in 1911. He was created a K.C.S.I. in January 1918; attached to the Staff of the General Commanding Peshawar Afghan expedition 1919. Revenue 15 Lakhs; Expenditure 12 lakhs.

Karauli State is a hilly tract in Eastern Rajputana, of which the ruler is the head of the Jadon clan of Rajputs who claim direct descent from Krishna and were at one time very powerful. On the decline of the Mughal power the State was subjugated by the Marathas, but by the treaty of 1817 it was taken under British protection. Its subsequent history is of interest chiefly for a famous adoption case, in 1852. The present ruler is H. H. Maharaja Sir Banwar Pal Deo Bahadur Yadu-Kul-Chandra Bhal, G.C.I.E., who was born in 1864, installed in 1889, and invested with powers in 1889. He is assisted by a council of two members (Dewan Rai Bahadur Pundit Girija Kishor Dutt). The nearest Railway station is Hindaun City on N. M. S. Railway. Revenue 6 lakhs; Expenditure 5 lakhs.

Kotah State belongs to the Hara sect of the clan of Chauhan Rajputs, and the early history of their house is, up to the 17th century, identical with that of the Bundi family from which they are an offshoot. Its existence as a separate State dates from 1625. It came under British protection in 1817. The present ruler is H. H. Lieut.-Colonel Maharao Sir Umed Singh Bahadur, G.C.S.I., G.C.I.E., G.B.E., who was born in 1873 and invested with full powers in 1893. In administration he is assisted by a Diwan (Dewan Bahadur Chaube Raghunath Das, C.S.I.) The most important event of his

rule has been the restoration, on the deposition of the late chief of the Jhalawar State, of 15 out of the 17 districts which had been ceded in 1838 to form that principality. Revenue 41 lakhs; Expenditure 34 lakhs.

Jhalawar State (for history see under Kotah) consists of two separate tracts in the south-east of Rajputana. The ruling family belongs to the Jhala clan of Rajputs. The last ruler was deposed for misgovernment in 1896, part of the State was reassigned to Kotah, and Kunwar Bhawani Singh, son of Thakur Chhatarsalji of Fatehpur, was selected by Government to be the Ruler of the new State. He was born in 1874 and was created a K.C.S.I. in 1908. He is assisted in administration by a Council, has established many useful institutions, and has done much to extend education in the State. Revenue 6 lakhs.

Bikaner State, the second largest in Rajputana, consists largely of sandy and ill-watered land. It was founded by Bika, a Rathor Rajput, the sixth son of a Chief of Marwar, in the 15th century. Rai Singh, the first Raja, was one of Akbar's most distinguished generals, and built the main fort of Bikaner. Throughout the 18th century there was constant fighting between Bikaner and Jodhpur. In 1818 the Maharaja invited the assistance of British Troops to quell a rebellion, and subsequently a special force had to be raised to deal with the dacoits on the southern borders of the State. The Thakurs of the State continued to give trouble up to the eighties. The present Ruler is Major-General H. H. Maharaiah Sri Sir Ganga Singhji Bahadur, G.C.S.I., G.C.I.E., A.D.C. to the King, who was born in 1880 and invested with full powers in 1898. He raised an Imperial Service Camel Corps which served in China and Somaliland, and His Highness served in the former campaign himself, being mentioned in despatches. In 1900 he was awarded the first class Kaisar-i-Hind medal for the active part he took in relieving the great famine of 1899-1900. He is an honorary LL.D. of Cambridge. In administration His Highness is assisted by five secretaries, to each of whom are allotted certain departments; and there is a council of five members which is primarily a judicial body, but is consulted in matters of importance. The revenue of the State is now about sixty lakhs; there are no debts. A coal mine is worked at Palana, 14 miles south of the capital.

Alwar State is a hilly tract of land in the East of Rajputana. Its Rulers belong to the Lalawat Naruka branch of Kshatrias, Solar Dynasty. This ruling family is descended from Raja Udai Karanji, who was the common ancestor of both Alwar and Jaipur. The State was founded by Pratab Singh, who before his death in 1791 had secured possession of large territories. His successor sent a force to co-operate with Lord Lake in the war of 1803 and an alliance was concluded with him in that year. Disputes about successions mark the history of the State during the earlier part of the nineteenth century. The present chief, H. H. Lt.-Col. Sewai Maharaja Sir Jey Singhji Bahadur, G.C.I.E., K.C.S.I., who was born in 1882, succeeded his father in 1892 and was invested with powers in 1903. He carries on the administration with the assistance of four Ministers, Members of His Highness's Council and various heads of departments. The normal revenue and expenditure are about Rs. 40 lakhs a year. The State besides maintaining other forces, maintains also the Imperial Service Troops which His Highness the late Maharaja was the first prince in Rajputana to offer (in 1888) in the defence of the Empire. The capital is Alwar on the Rajputana-Malwa Railway, 98 miles west of Delhi.

RAJPUTANA.

Resident—Lt.-Col. H. B. St. John, C.I.E.

HARAOTI AND TONK.

Political Agent—Major H. R. Lawrence.

SOUTHERN RAJPUTANA STATE.

Political Agent—Major D. M. Field.

CENTRAL INDIA AGENCY.

Central India is the name given to the country occupied by the Native States grouped together under the supervision of the Political Officer in charge of the Central India Agency. These States lie between 21° 24′ and 26° 32′ N. lat. and between 74° 0′ and 83° 0′ E. long. The British districts of Jhansi and Lalitpur divide the agency into two main divisions—Bundelkhand and Baghelkhand lying to the east, and Central India proper to the west. The total area covered is 78,772 square miles, and the population (1911) amounts to 93,980. The great majority of the people are Hindus. The principal States are eight in number—Gwalior, Indore, Bhopal, Rewa, Dhar, Jaora, Datia and Orcha of which two, Bhopal and Jaora, are Mahomedan and the rest are Hindu. Besides these there are a multitude of petty States held by their rulers under the immediate guarantee of the British Government, but having feudal relations with one or other of the larger States. The total number of States amounts to 153. For administrative purposes they are divided into the following groups: Baghelkhand Agency, 12 States (principal State Rewa); Bhopal Agency, 19 States (principal State Bhopal); Bhopawar Agency, 21 States (principal State Dhar); Bundelkhand Agency, 22 States (principal States, Datia and Orcha); Gwalior Agency, 32 States (principal State, Gwalior); Indore Residency, 9 States (principal State, Indore); Malwa Agency, 38 States (principal State, Jaora). The Agency may be divided into three natural divisions, the plateau, lowlying, and hilly. The plateau tract includes the Malwa plateau, the Highland tract stretching from the

great wall of the Vindhyas to Marwar, the land of open rolling plains. The lowlying tract embraces Northern Gwalior and stretches across into Bundelkhand and Baghelkhand up to the Kaimur Range. The hilly tract lies along the ranges of the Vindhyas and the Satpuras. There agriculture is little practised, the inhabitants being mostly members of the wild tribes. The territories of the different States are much intermingled, and their political relations with the Government of India and each other are very varied. Eleven Chiefs have direct treaty engagements with the British Government.

The following list gives the approximate size, population and revenue of the eight principal States above mentioned :—

Name.	Area in square miles.	Population.	Revenue.
			Rs lakhs
Gwalior ..	25,133	3,102,279	140
Indore ..	9,506	1,007,856	70
Bhopal ..	6,902	730,383	30
Rewah ..	13,000	1,514,843	53
Dhar ..	1,783	154,070	9
Jaora ..	568	75,951	8
Datia ..	911	154,603	9
Orcha ..	2,079	330,032	11

Gwalior.—The house of Scindia traces its descent to a family of which one branch held the hereditary post of patel in a village near Satara. The head of the family received a patent of rank from Aurangzebe. The founder of the Gwalior House was Ranoji Scindia who is said to have held a military rank under the Peshwa Baji Rao. In 172o the Peshwa granted deeds to Puar, Holkar and Scindia, empowering them to levy "Chauth" and "Sardesmukhi" and retain half the amount for payment to their troops. In 1736 Ranoji Scindia accompanied Baji Rao to Delhi where he and Mulhar Rao Holkar distinguished themselves in military exploits. Ranoji fixed his headquarters at the ancient city of Ujjain, which for the time became the Capital of the Scindia dominions. During the time of Mahadji Scindia and Dowlat Rao Scindia Gwalior played an important part in shaping the history of India. Despite the partial reverses which Mahadji Scindia's troops suffered at the hands of the British in 1780 reverses which led to the treaty of Salbai (1782), Scindia's power remained unbroken. For the first time he was now recognized by the British as an independent sovereign and not as a vassal of the Peshwa.

In 1790 his power was firmly established in Delhi. While he was indulging ambitious hopes he fell a prey to fever which ended his remarkable career on 12th February, 1794. Himself a military genius, Mahadji Scindia's armies reached the zenith of their glory under the disciplined training of the celebrated French adventurer—De Boigne. Mahadji was succeeded by his grand-nephew Daulat Rao in whose service Perron, a Military Commander of great renown played a leading part. The strength of Scindia's Army was, however, considerably weakened by the reverses sustained at Ahmednagar, Assaye, Asirgarh and Laswari. Daulat Rao Scindia died in 1827. Till his death he remained in undisputed possession of almost all the territory which belonged to him in 1805.

Daulat Rao was succeeded by Jankoji Rao who passed away in the prime of life. On his demise in 1843 intrigue and party spirit were rampant and the Army was in a state of mutiny with the result that it came into collision with the British forces at Maharajpore and Pannihar.

Jankoji Rao was succeeded by Jiaji Rao, whose adherence to the British cause during the dark days of Mutiny, when his own troops deserted him, was unshakeable. In 1861 he was created a Knight Grand Commander of the Most Exalted Order of the Star of India and in 1877 was made a Councillor of the Empress. Subsequently he received other titles and entered into treaties of mutual exchange of territories with the British Government. He died on the 20th June 1886 and was succeeded by his son Maharaja Madho Rao Scindia.

The present ruler is Lieutenant-General H. H. Maharaja Sir Madho Rao Scindia, Alijah Bahadur, G.C.V.O., G.C.S.I., G.B.E., A.D.C. to the King. He succeeded in 1886 and obtained powers in 1894. In 1901 he went to China during the war; he holds the rank of honorary Lieutenant General of the British Army and the honorary degrees of LL.D., Cambridge, and D.C.L., Oxon. He is also a Donat of the Order of St. John of Jerusalem in England The Ruler of the State enjoys a salute of 21 guns. The State is in direct relations with the Government of India. The State administration is controlled by the Maharaja assisted by nine members of the Majlis-i- khas with portfolios.

The northern part of the State is traversed by the G. I. P. Railway and two branches run from Bhopal to Ujjain and from Bina to Baran. The Gwalior Light Railway runs for 250 miles from Gwalior to Bhind, from Gwalior to Sheopur and from Gwalior to Shivpuri. The main industries are cotton ginning, which is done all over the State; fine muslins made at Chanderi, leather work, etc. The State maintains three regiments of Imperial Service Cavalry, two battalions of Imperial Service Infantry and a transport corps. Lashkar, the capital city, is two miles to the south of the ancient city and the fort of Gwalior. Annual income about 2 crores and expenditure about 175 lakhs.

Indore.—The Holkars of Indore belong to the shepherd class, the founder of the house, Malhar Rao Holkar, being born in 1693. His soldierly qualities brought him to the front under the Peshwa, who took him into his service and employed him in his conquests. When the Maratha power was broken at the battle of Panipat, in 1761, Malhar Rao had acquired vast territories stretching from the Deccan to the Ganges. He was succeeded by a lunatic grandson who again was succeeded by his mother, Ahilya Bai, whose administration is still looked upon as that of a model ruler. Disputes as to the succession and other causes weakened this powerful State, and when it assumed a hostile attitude on the outbreak of war in 1817 between the British and the Peshwa, Holkar was compelled to come to terms. The Treaty of Mandasor in 1818 still governs the regulations existing between the State and

the British Government. In the Mutiny of 1857, when Holkar was unable to control his troops he personally gave every possible assistance to the authorities at Mhow.

In 1903 Sivaji Rao, who died in 1908, abdicated in favour of his son, His Highness Maharaja Tukoji Rao Holkar, the present ruler, who was born in 1890, and was formally invested with ruling powers in November 1911. In the administration His Highness is assisted by his Chief Minister and a Council of 5 Ministers. The State Army consists of 519 Imperial Service Troops and 1,629 State forces. The capital is Indore City on the Ajmer-Khandwa Section of the Rajputana-Malwa Railway. The ordinary revenue is estimated at about a crore of rupees.

Bhopal.—The principal Mussalman State in Central India ranks next in importance to Hyderabad among the Muhammadan States of India. The ruling family was founded by Dost Mohammed Khan, a Tirah Afghan He was granted a *Sanad* of Bairasia and Nazirabad *Purgannahs* in recognition of his meritorious services to the Emperor of Delhi. With the disintegration of the Mogul Empire Bhopal State developed into an independent State. In the early part of the 19th century, the Nawabs successfully withstood the inroads of Scindia and Bhonsla and by the agreement of 1817 Bhopal undertook to assist the British with a contingent force and to co-operate against the Pindari bands.

The present Ruler of the State, Her Highness Nawab Sultan Jahan Begum, C. I., G.C.S.I., G.C.I.E., G.B.E., is the third in the successive line of lady-rulers, who have ruled the destinies of the State with marked ability. Having succeeded in 1901, she personally conducts, and has introduced a number of reforms in, the administration of her State. Her eldest son, Hon. Colonel Nawab Mahommad Sir Nasrullah Khan, K.C.S.I., controls the Forest Department and her second son Hon. Major Nawabzada Mahommad Obaidullah Khan, C.S.I., who holds the rank of Brig-Gen. in the State Army, is the Commander-in-Chief of the State Forces, while the youngest Nawabzada Mahommad Hamidullah Khan, B.A., C.S.I., and Hon. Lieut.-Colonel in the Bhopal Army, is the head of her Highness' Secretariat. Khan Bahadur Maulvi Mohamed Matinuzzaman Khan, B.A., F.S.S., Revenue Minister, is in charge of the Revenue and Executive Branches of the States Services and Dabirulmulk Sir Israr Hasan Khan, Khan Bahadur. KT., C.I.E., Judicial Minister, controls the Judicial Department. The State maintains one regiment each of Imperial Service Cavalry and Infantry. The capital, Bhopal City, on the northern bank of an extensive lake is situated at the junction of the G. I. P. Ry. with the Bhopal Ujjain Railway.

Rewah.—This State lies in the Baghelkhand Agency and falls into two natural divisions separated by the scrape of the Kaimur range. The area is 13,000 sq. miles with a population of 14 lakhs. Its Chiefs are Baghel Rajputs descended from the Solanki clan which ruled over Gujarat from the tenth to the thirteenth century. In 1812, a body of Pindaries raided Mirzapur from Rewah territory and the Prince, who had previously rejected overtures for an alliance, was called upon to accede to a treaty acknowledging the protection of the British Government. During the Mutiny, Rewah offered troops to the British, and for his services then, various parganas, which had been seized by the Marathas, were restored to the Rewah Chief. The present chief is H. H. Maharaja Gulab Singhji Bahadur who was born in 1903. He was married in 1919 to the sister of His Highness the Maharaja of Jodhpur. Being a minor the administration is conducted by a Council of Regency with His Highness Maharaja Sir Sajjan Singhji Bahadur, K.C.S.I., Maharaja of Rutlam, as Regent of the State. The State force consists of about 1,700 men. The State or famous for its archæological remains and is rich in minerals, coal being mined at Umaria. The average receipts are 40 lakhs.

Dhar.—This State, under the Agency for Southern States in Central India, takes its name from the old city of Dhar, long famous as the capital of the Paramara Rajputs, who ruled over Malwa from ninth to the thirteenth century and from whom the present chiefs of Dhar—Powar Marathas—claim descent. In the middle of the 18th century the Chief of Dhar, Anand Rao, was one of the leading chiefs of Central India, sharing with Holkar and Scindia the rule of Malwa. But in 1819, when a treaty was made with the British, the State had become so reduced that it consisted of little more than the capital. The ruler is H. H. Maharaja Sir Udaji Rao Powar, K.C.S.I., K.B.E., who was born in 1886, and has control of all civil, criminal, and all administrative matters. There are 22 feudatories, of whom 13 hold a guarantee from the British Government. The average expenditure is about 12 lakhs.

Jaora State.—This State is in the Malwa Agency covering an area of about 600 square miles with a total population of 85,817, and has its headquarters at Jaora town. The Chiefs of Jaora claim descent from Abdul Majid Khan, an Afghan of the Tajik Khel, from Swat, who came to India to acquire wealth. The first Nawab was Ghafur Khan who obtained the State about the year 1818. The present chief is Major H. H. Nawab Sir Mahomad Iftikhar Ali Khan Bahadur, K.C.I.E., who was born in 1883 and is an Honorary Major in the Indian Army. The administration is at present controlled by a Council of State of which His Highness the Nawab is the President. Khan Saheb J. Rustamji, B.A., is the Chief Secretary to His High ness and Vice-President of the State Council. The Council is constituted of a President, a Vice-President and three other members. The soil of the State is among the richest in Malwa, being mainly of the best black cotton variety bearing excellent crops of poppy. The average annual revenue is Rs. 10 lakhs.

Rutlam—Is the premier Rajput State in the Malwa Agency. It covers an area of 871 square miles, including that of the Jagir of Khera in the Kushalgarh Chiefship, which pays an annual tribute to the Rutlam Darbar. The State was founded by Raja Ratansinghji, a great grandson of Raja Udai Singh of Jodhpur, in 1652. The Raja of Rutlam is the religious head of the Rajputs of Malwa, and important caste questions are referred to him for decision. The State enjoys full and final civil and criminal

powers. The present Chief of Rutlam is Colonel His Highness Maharaja Sir Sajjan Singh, K.C.S.I., who was born in 1880, educated at Daly College, Indore, received military training in Imperial Cadet Corps and invested with full powers in 1898. The administration is carried on under him by Rutlam State Council composed of three members. His Highness served in the war in France and Egypt from 1915 to 1918, was mentioned in despatches and received the Criox d'Officiers de legion d'Honneur. He is also Regent of Rewa State. Salute: 13 guns, local 15 guns.

Senior Member of Council—Khan Sahib D. F. Vakil.

Datia State.—The chiefs of this State, in the Bundelkhand Agency, are Bundela Rajputs of the Orchha house. The territory was granted by the chief of Orchha to his son Bhagwan Rao in 1626, and this was extended by conquest and by grants from the Delhi emperors. The present chief is H. H. Maharaja Lokendra Sir Govind Singh Bahadur, K.C.S.I., who was born in 1886 and succeeded in 1907. The heir-apparent, Raja Bahadur Balbhadra Singh (*b* 1907), is being educated at the Daly College.

Orchha State.—The rulers of this State are Bundela Rajputs claiming to be descendants of the Gaharwars of Benares. It was founded as an independent State in 1048 A. D. It entered into relations with the British by the treaty made in 1812. The present ruler is His Highness Sir Pratap Singh, G.C.S.I., G.C.I.E., who was born in 1854. He has the titles of His Highness Saramad-i-rajhai-Bundelkhand Maharaja Mahendra Sawai Bahadur. The present chief enjoys a salute of 17 guns. The State has a population of 330,032 and an area of 2,080 square miles. The capital is Tikamgarh, 36 miles from Lalitpur Station, on the G. I. P. Railway. Orchha, the old capital, has fallen into decay but is a place of interest on account of its magnificent buildings of which the finest were erected by Maharaja Bir Singh Deo, the most famous ruler of the [illegible] (1605-1627).

Agent to Governor-General—Lt.-Col. F. G. Beville, C.S.I. C.I.E., I.A.

Political Agent—L. M. Crump.

BAGHELKHAND.

Political Agent—Major E. J. D. Colvin.

Sikkim.

Sikkim is bounded on the north and north-east by Tibet, on the south-east by Bhutan, on the south by the British district of Darjeeling, and on the west by Nepal. The population consists of Bhutias, Lepchas, and Nepalese. It forms the direct route to the Chumbi Valley in Tibet. The main axis of the Himalayas, which runs east and west, forms the boundary between Sikkim and Tibet. The Singalila and Chola ranges, which run southwards from the main chain, separate Sikkim from Nepal on the west, and from Tibet and Bhutan on the east. On the Singalila range rise the great snow peaks of Kinchinjunga (28,146 feet), one of the highest mountains in the world. The Chola range which is much loftier than that of Singalila, leaves the main chain at the Dongkya La.

Tradition says that the ancestors of the Rajas of Sikkim originally came from eastern Tibet. The State was twice invaded by the Gurkhas at the end of the eighteenth century. On the outbreak of the Nepal War in 1814, the British formed an alliance with the Raja of Sikkim and at the close of the war the Raja was rewarded by a considerable cession of territory. In 1835 the Raja granted the site of Darjeeling to the British and received Rs. 12,000 annually in lieu of it. The State was previously under the Government of Bengal, but was brought under the direct supervision of the Government of India in 1906. The State is thinly populated, the area being 2,818 square miles, and the population 87,920, chiefly Buddhists and Hindus. The most important crops are maize and rice. There are several trade routes through Sikkim from Darjeeling District into Tibet. In the convention of 1890 provision was made for the opening of a trade mart but the results were disappointing, and the failure of the Tibetans to fulfil their obligations resulted in 1904 in the despatch of a mission to Lhasa, where a new convention was signed. Trade with the British has increased in recent years, and is now between 40 and 50 lakhs yearly. A number of good roads have been constructed in recent years. The present ruler, His Highness Maharajah Tashi Namgyal, C.I.E., was born in 1893 and succeeded in 1914. His Highness was invested with full ruling powers on the 5th April 1918. The title of a C.I.E. was conferred upon the Maharaja on the 1st January 1918. The average revenue is Rs. 2,62,000.

Officiating Political Officer in Sikkim:—Major F. M. Bailey, C.I.E.

Bhutan.

Bhutan extends for a distance of approximately 190 miles east and west along the southern slopes of the central axis of the Himalayas, adjacent to the northern border of Eastern Bengal and Assam. Its area is 18,000 square miles and its population, consisting of Buddhists and Hindus, has been estimated at 300,000. The country formerly belonged to a tribe called Tek-pa, but was wrested from them by some Tibetan soldiers about the middle of the seventeenth century. British relations with Bhutan commenced in 1772 when the Bhotias invaded the principality of Cooch Behar and British aid was invoked by that State. After a number of raids by the Bhutanese into Assam, an envoy (the Hon. A. Eden) was sent to Bhutan, who was grossly insulted and compelled to sign a treaty surrendering the Duars to Bhutan. On his return the treaty was disallowed and the Duars annexed. This was followed by the treaty of 1865, by which the State's relations with the Government of India were satisfactorily regulated. The State formerly received an allowance

of half a lakh a year from the British Government in consideration of the cession in 1865 of some areas on the southern borders. This allowance was doubled by a new treaty concluded in January 1910, by which the Bhutanese Government bound itself to be guided by the advice of the British Government in regard to its external relations, while the British Government undertook to exercise no interference in the internal administration of Bhutan. On the occasion of the Tibet Mission of 1904, the Bhotias gave strong proof of their friendly attitude. Not only did they consent to the survey of a road through their country to Chumbi, but their ruler, the Tongsa Penlop accompanied the British troops to Lhasa, and assisted in the negotiations with the Tibetan authorities. For these services he was made a K.C.I.E., and he has since entertained the British Agent hospitably at his capital. The ruler is now known as H. H. the Maharaja of Bhutan, Sir Uggen Wangchuk, K.C.S.I., K.C.I.E. At the head of the Bhutan Government, there are nominally two supreme authorities; the Dharma Raja, known as Shapting Renipoche, the spiritual head; and the Deb or Depa Raja, the temporal ruler. The Dharma Raja is regarded as a very high incarnation of Buddha, far higher than the ordinary incarnations in Tibet, of which there are several hundreds. On the death of a Dharma Raja a year or two is allowed to elapse, and his reincarnation then takes place, always in the Choje, or royal family of Bhutan.

Cultivation is backward and the chief crop is maize. The Military force consists of local levies under the control of the different chiefs. They are of no military value.

Nepal.

The kingdom of Nepal is a narrow tract of country extending for about 520 miles along the southern slope of the central axis of the Himalayas. It has an area of about 54,000 square miles, with a population of about 5,000,000, chiefly Hindus. The greater part of the country is mountainous, the lower slopes being cultivated. Above these is a rugged broken wall of rock leading up to the chain of snow-clad peaks which culminate in Mount Everest (29,002 feet) and others of slightly less altitude. The country before the Gurkha occupation was split up into several small kingdoms under Newar kings. The Gurkhas under Prithvi Narayan Shah overran and conquered the different kingdoms of Patan, Kathmandu, and Bhatgaon, and other places during the latter half of the 18th century and since then have been rulers of the whole of Nepal. In 1846 the head of the Rana family obtained from the sovereign the perpetual right to the office of Prime Minister of Nepal, and the right is still enjoyed by his descendant. In 1850 Jung Bahadur paid a visit to England and was thus the first Hindu Chief to leave India and to become acquainted with the power and resources of the British nation. The relations of Nepal with the Government of India are regulated by the treaty of 1816 and subsequent agreements by which a representative of the British Government is received at Kathmandu. By virtue of the same treaty Nepal maintains a Representative at Delhi and her treaty relations with Tibet allow her to keep a Resident at Lhassa of her own. Her relation with China is of a friendly nature. Ever since the conclusion of the treaty of 1816 the friendly relations with the British Government have steadily been maintained and during the rule of the present Prime Minister it has been at its height as is evidenced by the valuable friendly help in men and money which has been given and which was appreciatively mentioned in both the Houses of Parliament and by Mr. Asquith in his Guildhall speech in 1915. The message from His Majesty the King Emperor to the Nepalese Prime Minister sent on the termination of hostilities and published at the time as also the Viceroy's valedictory address to the Nepalese contingent on the eve of their return home after having laudably fulfilled their mission in India eloquently and gratefully acknowledged the valuable help rendered by Nepal during the four and a half years of war.

From the foregoing account of the history of Nepal it will be seen that the Government of the country has generally been in the hands of the Minister of the day. Since the time of Jung Bahadur this system of government has been clearly laid down and defined. The sovereign, or Maharajadhiraja, as he is called, is but a dignified figure-head, whose position can best be likened to that of the Emperor of Japan during the Shogunate. The present ruler, His Majesty Maharajadhiraja Tribhubana Bir Bikram Jung Bahadur Shah Bahadur Shum Shere Jung, ascended the throne on the death of his father in 1911. The real ruler of the country is the Minister who, while enjoying complete monopoly of power, couples with his official rank the exalted title of Maharaja. Next to him comes the Commander-in-Chief, who ordinarily succeeds to the office of Minister.

The present Minister at the head of affairs of Nepal is Maharaja Sir Chandra Shum Shere Jung Bahadur Rana, G.C.B., G.C.S.I., G.C.M.G., G.C.V.O., D.C.L. Thong-lin-pimma-Kokang-wang-Syan (Highest honour in the Chinese military order) and Honorary General in the British Army. He has been Prime Minister and Marshal of Nepal since June, 1901.

Rice, wheat and maize form the chief crops in the lowlands. Mineral wealth is supposed to be great, but, like other sources of revenue, has not been developed. Communications in the State are primitive. The revenue is about two crores of rupees per annum. The standing army is estimated at 45,000, the high posts in it being filled by relations of the Minister. The State is of considerable archæological interest and many of the sites connected with scenes of Buddha's life have been identified in it by the remains of inscribed pillars.

British Envoy: Lieut.-Col. W. F. T. O'Connor, C.I.E.

NORTH-WEST FRONTIER STATES.

The native states of the North-West Frontier Provinces are Amb, Chitral, Dir and Phulera. The total area is about 7,704 square miles and the population, mainly Mahomedan, is 1,622,094. The average annual revenue of the first three is about Rs. 4,65,000; that of Phulera is unknown.

Amb.—Is only a village on the western bank of the Indus in Independent Tanawala.

Chitral.—Runs from Dir to the south of the Hindu-Kush range in the north, and has an area of about 4,500 square miles. The ruling dynasty has maintained itself for more than three hundred years, during the greater part of which the State has constantly been at war with its neighbours. It was visited in 1885 by the Lockhart Mission, and in 1889, on the establishment of a political agency in Gilgit, the ruler of Chitral received an annual subsidy from the British Government. That subsidy was increased two years later on condition that the ruler, Amam-ul-Mulk, accepted the advice of the British Government in all matters connected with foreign policy and frontier defence. His sudden death in 1892 was followed by a dispute as to the succession. The eldest son Nizam-ul-Mulk was recognised by Government, but he was murdered in 1895. A religious war was declared against the infidels and the Agent at Gilgit, who had been sent to Chitral to report on the situation, was besieged with his escort and a force had to be despatched (April 1895) to their relief.

The three valleys of which the State consists are extremely fertile and continuously cultivated. The internal administration of the country is conducted by the Mehtar, Shuja-ul-mulk, and the foreign policy is regulated by the Political Agent.

Dir.—The territories of this State, about 5,000 square miles in area, include the country drained by the Panjkora and its affluents down to the junction of the former river with the Bajaur Rud. The Nawab of Dir is the overlord of the country, exacting allegiance from the petty chiefs of the clans Dir is mainly held by Yusufzai Pathans, the old non-Pathan inhabitants being now confined to the upper portion of the Panjkora Valley known as the Bashkar.

Political Agent for Dir, Swat and Chitral: Major W. G. Neale, I. A.

NATIVE STATES UNDER LOCAL GOVERNMENTS.

The Madras Presidency includes 5 Native States covering an area of 10,087 square miles. Of these the States of Travancore and Cochin represent ancient Hindu dynasties. Pudukottai is the inheritance of the chieftain called the Tondiman. Banganapalle and Sandur, two petty States, of which the first is ruled by a Nawab, lie in the centre of two British districts.

Name.	Area sq. miles.	Population.	Approx. Revenue in lakhs of rupees.
Travancore ..	7,129	3,428,975	128
Cochin ..	1,361	918,110	47
Pudukottai ..	1,178	411,878	16

Travancore.—This State occupies the south-west portion of the Indian Peninsula, forming an irregular triangle with its apex at Cape Comorin. The early history of Travancore is in great part traditional; but there is little doubt that H. H. the Maharaja is the representative of the Chera dynasty, one of the three great Hindu dynasties which exercised sovereignty at one time in Southern India. The petty chiefs, who had subsequently set up as independent rulers within the State, were all subdued, and the whole country, included within its present boundaries, was consolidated and brought under one rule, by the Maharaja Marthanda Varma (1729-58). The English first settled at Anjengo, a few miles to the north of Trivandrum, and built a factory there in 1684. In the wars in which the East India Company were engaged in Madura and Tinnevelly, in the middle of the 18th century, the Travancore State gave assistance to the British authorities. Travancore was reckoned as one of the staunchest allies of the British Power and was accordingly included in the Treaty made in 1784 between the East India Company and the Sultan of Mysore. To protect the State from possible inroads by Tippu, an arrangement was come to in 1788 with the East India Company, and in 1795 a formal treaty was concluded, by which the Company agreed to protect Travancore from all foreign enemies. In 1805 the annual subsidy to be paid by Travancore was fixed at 8 lakhs of rupees.

The present ruler is His Highness Maharaja Sir Rama Varma, G.C.S.I., G.C.I.E., who was born in 1857 and ascended the masnad in 1885. The government is conducted in his name with the assistance of a Dewan (Dewan Bahadur T. Raghavayya). The work of legislation is entrusted to a Council brought into existence in 1888. An assembly known as the Sri Mulam Popular Assembly meets once a year, when its members are able to bring suggestions before the Dewan. The State supports a military force of 1,472 men. Education has advanced considerably in recent years and the State takes a leading place in that respect. The principal food grain grown is rice, but the main source of agricultural wealth is the cocoanut. Other crops are pepper, areca-nut, jack-fruit and tapioca. Cotton weaving and the making of matting from the coir are among the chief industries. The State is well provided with roads, and with a natural system of back-waters, besides canals and rivers navigable for country crafts. Two lines of railways intersect the country, the Cochin-Shoranore in the north-west and the Tinnevelly-Quilon passing through the heart of the State. A third line, from Quilon to Trivandrum, was opened on the 1st January 1918. The capital is Trivandrum.

Political Agent: H. H. Burkitt, I.C.S.

Cochin.—This State on the south-west coast of India is bounded by the Malabar District of the Madras Presidency and the State of Travancore,

Very little is known of its early history. According to tradition, the Rajas of Cochin hold the territory in right of descent from Cheraman Perumal, who governed the whole country of Kerala, including Travancore and Malabar, as Viceroy of the Chola Kings about the beginning of the ninth century, and afterwards established himself as an independent Ruler. In 1502, the Portuguese were allowed to settle in what is now British Cochin and in the following year they built a fort and established commercial relations in the State. In the earlier wars with the Zamorin of Calicut, they assisted the Rajas of Cochin. The influence of the Portuguese on the west coast began to decline about the latter part of the seventeenth century, and in 1663 they were ousted from the town of Cochin by the Dutch with whom the Raja entered into friendly relations. About a century later, in 1759, when the Dutch power began to decline, the Raja was attacked by the Zamorin of Calicut, who was expelled with the assistance of the Raja of Travancore. In 1776, the State was conquered by Hyder Ali, to whom it remained tributary and subordinate, and subsequently to his son, Tippu Sultan. A treaty was concluded in 1791 between the Raja and the East India Company, by which His Highness agreed to become tributary to the British Government for his territories which were then in the possession of Tippu, and to pay a subsidy.

His Highness Raja Sri Sir Rama Varmah, G.C.S.I., G.C.I.E., who was born in 1852, and who ascended the Masnad in 1895, having abdicated in December, 1914, His Highness Sri Sir Rama Varmah, G.C.I.E., who was born on 6th October, 1858, succeeded to the throne and was duly installed as Raja on the 21st January 1915. The administration is conducted under the control of the Raja whose chief Minister and Executive Officer is the Dewan, DeWan Bahadur T. Vijayaraghava Charya. The forests of Cochin form one of its most valuable assets. They abound in teak, ebony, blackwood, and other valuable trees. Rice forms the staple of cultivation. Cocoanuts are largely raised in the sandy tracts, and their products form the chief exports of the State. Communications by road and back-waters are good, and the State owns a line of railway from Shoranore to Ernakulam, the capital of the State, and a Forest Steam Tramway used in developing the forests. The State supports a force of 24 officers and 250 men.

Political Agent : H. H. Burkitt, I.C.S.

Pudukkottai.—This State is bounded on the north and west by Trichinopoly, on the south by Madura and on the east by Tanjore. In early times a part of the State belonged to the Chola Kings and the southern part to the Pandya Kings of Madura. Relations with the English began during the Carnatic wars. During the siege of Trichinopoly by the French in 1752, the Tondiman of the time did good service to the Company's cause by sending them provisions, although his own country was on at least one occasion ravaged as a consequence of his fidelity to the English. In 1756 he sent some of his troops to assist Muhammad Yusuf, the Company's sepoy commandant, in settling the Madura and Tinnevelly countries. Subsequently he was of much service in the wars with Haidar Ali. His services were rewarded by a grant of territory subject to the conditions that the district should not be alienated (1806). Apart from that there is no treaty or arrangement with the Raja. The present ruler is His Highness Sri Brihadamba Das, Sir Marthanda Bhairava Tondiman Bahadur, G.C.I.E., who is eighth in descent from the founder of the family. He succeeded in 1886. The Collector of Trichinopoly is ex-officio Political Agent for Pudukkottai. The administration of the State, under the Raja, is entrusted to a State Council of three members, a Superintendent, Dewan and Councillor. The various departments are constituted on the British India model. The principal food crop is rice. The forests, which cover about one-seventh of the State, contain only small Timber. There are no large industries. The State is well provided with roads, but Pudukkottai is the only municipal town in the State.

Political Agent: Rai Bahadur V. Rama Rao, B. A.

Banganapalle.—This is a small State in two detached portions which in the eighteenth century passed from Hyderabad to Mysore and back again to Hyderabad. The control over it was ceded to the Madras Government by the Nizam in 1800. The present ruler is Nawab Meer Ghulam Ali Khan Bahadur. The chief food grain is cholam. The Nawab pays no tribute and maintains no military force. Sericulture, lac cultivation and weaving industries have lately been started in the State.

Political Agent: F. W. Stewart, I.C.S.

Sandur.—The State is almost surrounded by the District of Bellary, the Collector of which is the Political Agent. After the destruction of the Empire of Vijayanagar in 1565 the State came to be held by semi-independent chiefs under the nominal sovereignty of the Sultan of Bijapur and in 1728 one of these chiefs, a Poligar of Bedar tribe, was turned out by an ancestor of the present Raja named Siddoji Rao of the Bhosle family of the famous Maharatta Chief Sivaji; they were Senapathies of Sivaji. In Siva Rao's time the State came under the Madras Government and his heirs in perpetuity with full powers, Civil and Criminal. In 1876 the title of Raja was conferred on the Chief as a hereditary distinction. The present Ruler is H. H. Raja Srimanth Venkata Rao Raj Saheb. He was born in 1892. He married Rani Srimanth Tara Raje, sister of the Raja of Akalkot, in the Bombay Presidency. The State is administered by the Raja and the Dewan (Meherban K. Hanumantha Rao). The Raja pays no tribute and maintains no military force. The most important staple crop is cholam. Teak and sandalwood are found in small quantities in the forests.

The minerals of the State possess unusual interest. The hematites found in it are probably the richest ore in India. An outcrop near the southern boundary forms the crest of a ridge 150 feet in height, which apparently consists entirely of pure steel grey crystalline hematite (specular iron) of intense hardness. Some of the softer ores used to be smelted, but the industry has been killed by the cheaper English iron. Manganese deposits have also been found in three places, and during 1911 to 1914 over 223,000 tons of manganese ore were transported by one company.

Political Agent: A. F. G. Moscardi, I.C.S.

UNDER THE GOVERNMENT OF BOMBAY.

More than a half of the total number of the very various units counted as Native States in India are under the Government of Bombay. The characteristic feature of the Bombay States is the great number of petty principalities; the peninsula of Kathiawar alone contains nearly two hundred separate States. The recognition of these innumerable jurisdictions is due to the circumstance that the early Bombay administrators were induced to treat the *de facto* exercise of civil and criminal jurisdiction by a landholder as carrying with it a quasi-sovereign status. As the rule of succession by primogeniture applies only to the larger principalities, the minor states are continually suffering disintegration. In Bombay, as in Central India, there are to be found everywhere the traces of disintegration and disorder left by the eighteenth century. In no part of India is there a greater variety of principalities. The bulk of them are of modern origin, the majority having been founded by Marathas in the general scramble for power in the middle of the eighteenth century, but several Rajput houses date from earlier times. Interesting traces of ancient history are to be found at Sachin, Janjira and Jafarabad, where chiefs of a foreign ancestry, descended from Abyssinian admirals of the Deccan fleets, still remain. A few aboriginal chiefs, Bhils or Kolis, exercise an enfeebled authority in the Dangs and the hilly country that fringes the Mahi and the Narbada rivers.

The control of the Bombay Government is exercised through Political Agents, whose positions and duties vary greatly. In some of the more important States their functions are confined to the giving of advice and the exercise of a general surveillance; in other cases they are invested with an actual share in the administration; while States whose rulers are minors—and the number of these is always large—are directly managed by Government officers. Some of the States are subordinate to other States, and not in direct relations with the British Government; in these cases the status of the feudatories is usually guaranteed by Government. The powers of the chiefs are regulated by treaty or custom, and range downwards to a mere right to collect revenue in a share of a village, without criminal or civil jurisdiction, as in the case of the petty chiefs of Kathiawar.

The Native States in the Bombay Presidency number 377. Area 65,761 square miles. Population (1911) 7,411,675. They are divided for administrative purposes into the following agencies:—Bijapur Agency, 2 states; Cutch Agency, 1 state; Dharwar Agency, 1 state (Savanur); Kaira Agency, 1 state (Cambay); Kathiawar Agency, 187 states (principal states, Bhavnagar, Dhrangadhra, Gondal, Junagadh, Nawanagar); West Khandesh Agency, 20 states; Kolaba Agency, 1 state (Janjira); Kolhapur Agency, 9 states (principal state Kolhapur, with 9 feudatory states); Mahi Kantha Agency, 51 states (principal state, Idar); Nasik Agency, 1 state (Surgana); Palanpur Agency, 17 states (principal state, Palanpur); Poona Agency, 1 state (Bhor); Rewa Kantha Agency, 62 states (principal State, Rajpipla); Satara Agency, 2 states; Savantvadi Agency, 1 state; Sholapur Agency, 1 state; Sukkur Agency, 1 state (Khairpur); Surat Agency, 17 states; Thana Agency, 1 state (Jauhar). The table below gives details of the area, etc, of the more important States:—

State.	Area in sq. miles	Population. (in 1911).	Approx. Revenue in lakhs of rupees.
Bhavnagar ..	2,860	441,367	47
Cutch ..	7,616	513,429	25
Dhrangadhra ..	1,156	79,142	12
Gondal ..	1,024	161,916	15
Idar ..	1,669	202,811	6
Junagadh ..	3,284	434,222	26
Khairpur ..	6,050	223,788	15
Kolhapur ..	3,165	833,441	57
Navanagar ..	3,791	349,400	22
Palanpur ..	1,750	226,250	5
Rajpipla ..	1,517	161,588	9

Bijapur Agency.—This comprises the Satara Jaghir of Jath (980·8 square miles in area). On the annexation of Satara, in 1849, Jath and Daphlapur like other Satara Jaghirs, became feudatories of the British Government. The latter has more than once interfered to adjust the pecuniary affairs of the Jath Jaghir and in consequence of numerous acts of oppression on the part of the then ruler was compelled to assume direct management from 1874 to 1885. The small Estate of Daphlapur with an area of 96·8 square miles lapsed to the Jath Jaghir on the demise of its last ruler Ranibai Saheb Daphle in January 1917. The Chief of Jath who belongs to the Maratha caste, ranks as a first class Sardar. He holds a sanad of adoption, and the succession follows the rule of primogeniture. The gross revenue of the State is about 3 lakhs chiefly derived from land revenue. The Jath State pays to the British Government Rs. 6,400 per annum in lieu of horse contingent and Rs. 4,840 on account of Sardeshmukhi rights.

Political Agent.—C. G. Henderson, F.C.S., Collector of Bijapur.

Cutch.—The State is bounded on the north and north-west by Sind, on the east by the Palanpur Agency, on the south by the Peninsula of Kathiawar and the Gulf of Cutch and the south-west by the Indian Ocean. Its area, exclusive of the great salt marsh called the Rann of Cutch, is 7,616 square miles. The capital is Bhuj, where the ruling Chief (the Maharao His Highness Maha Rao Sri Khengarji

Savai Bahadur, G.C.S.I., G.C.I.E., resides. From its isolated position, the special character of its people, their peculiar dialect, and their strong feeling of personal loyalty to their ruler, the peninsula of Cutch has more of the elements of a distinct nationality than any other of the dependencies of Bombay. The earliest historic notices of the State occur in the Greek writers. Its modern history dates from its conquest by the Sind tribe of Samma Rajputs in the fourteenth century. The section of the Sammas forming the ruling family in Cutch were known as the Jadejas or 'children of Jada.' The British made a treaty with the State in 1815. There is a fair proportion of good arable soil in Cutch, and wheat, barley and cotton are cultivated. Both iron and coal are found but are not worked. Cutch is noted for its beautiful embroidery and silverwork and its manufactures of silk and cotton are of some importance. Trade is chiefly carried by sea. The ruling chief is the supreme authority. A few of the Bhayats are invested with jurisdictional powers in varying degrees in their own Estates and over their own ryots. A notable fact in connection with the administration of the Cutch State is the number and position of the Bhayat. These are Rajput nobles forming the brotherhood of the Rao. They were granted a share in the territories of the ruling chief as provision for their maintenance and are bound to furnish troops on an emergency. The number of these chiefs is 137, and the total number of the Jadeja tribe in Cutch is about 16,000. The British military force having been withdrawn from Bhuj, the State now pays Rs. 82,257 annually as an Anjar equivalent to the British Government. The military force consists of about 1,000 in addition to which, there are some irregular infantry, and the Bhayats could furnish on requisition a mixed force of four thousand.

Political Agent: Lt.-Col. Edward O'Brien.

Dharwar Agency.—This comprises only the small State of Savanur. The founder of the reigning family who are Mahomedans of Pathan origin was a Jagirdar of Emperor Aurangzebe. At the close of the last Maratha War the Nawab of Savanur, whose conduct had been exceptionally loyal, was confirmed in his possessions by the British Government. The State pays no tribute. The principal crops are jwari and cotton. The area is 70 square miles and population 16,825. The revenue is about Rs. 1,38,000. The present chief is Captain Abdul Majidkhan Dilerjang Bahadur.

Political Agent: H. L. Painter, I.C.S.

Kaira Agency.—This includes only the State of Cambay at the head of the Gulf of the same name. Cambay was formerly one of the chief ports of India and of the Anhilvada Kingdom. At the end of the thirteenth century it is said to have been one of the richest towns in India; at the beginning of the sixteenth century also it formed one of the chief centres of commerce in Western India. Factories were established there by the English and the Dutch. It was established a distinct State about 1730, the founder of the present family of Chiefs being the last but one of the Mahomedan Governors of Gujarat. The present Nawab is His Highness Mirza Hussein Yawar Khan who is a Shiah Mogul of the Najumisani family of Persia, and was born on the 16th May, 1911. His father, the late Nawab Jaffar Ali Khan, died on 21st January, 1915, leaving him a minor. The State is therefore under British Administration. The State pays a tribute of Rs. 21,924 to the British Government. Wheat and cotton are the principal crops. There is a broad gauge line from Cambay to Petlad, connecting with the B. B. & C. I. Railway at Anand. Cambay is a first class State having full jurisdiction. Revenue is about six lakhs. The area of the State is 350 square miles, population 71,715.

Political Agent: J. H. Garrett, I.C.S.

Kathiawar Agency.—Kathiawar is the peninsula or western portion of the Province of Gujarat, Bombay. Its extreme length is about 220 miles and its greatest breadth about 165 miles, the area being 23,445 square miles. Of this total about 20,882 square miles with a population of 2,542,535 is the territory forming the Political Agency subordinate to the Government of Bombay, established in 1822, having under its control nearly 200 separate States whose chiefs divided amongst themselves the greater portion of the peninsula. The Kathiawar Agency is divided for administrative purposes into four prants or divisions—Jhalawar, Halar, Sorath and Gohilwar—and the States have since 1863 been arranged in seven classes. Since 1822 political authority in Kathiawar has been vested in the Political Agent (now Agent to the Governor) subordinate to the Government of Bombay. In 1902 the designations of the Political Agent and his Assistants were changed to those of Agent to the Governor and Political Agents of the prants. Before 1863, except for the criminal court of the Agent to the Governor, established in 1831, to aid the Darbars of the several States in the trial of heinous crimes, interference with the judicial administration of the territories was diplomatic, not magisterial; and the criminal jurisdiction of the first and second-class chiefs alone was defined. In 1863, however, the country underwent an important change. The jurisdiction of all the chiefs was classified and defined: that of chiefs of the first and second classes was made plenary; that of lesser chiefs was graded in a diminishing scale. The four Political Agents of the prants resident in the four divisions of Kathiawar, now exercise residuary jurisdiction with large civil and criminal powers. Each Political Agent of a prant has a deputy, who resides at the headquarters of the prant or division, and exercises subordinate civil and criminal powers. Serious criminal cases are committed by the Deputies to the court of the Agent to the Governor, to whom also civil and criminal appeals lie. The Agent to the Governor is aided in this work by an officer known as the Judicial Assistant, who is usually a member of the Indian Civil Service. Appeals from his decisions lie direct to the Governor of Bombay in Council in his executive capacity. The Agent to the Governor is assisted at Headquarters by a Personal Assistant and two Deputy Political Agents. Of the latter the Daftardar is head of the Hazur Office and the Hazur Accounts Officer attends to Treasury business.

Agent to the Governor in Kathiawar: Lt.-Col. Wood (*Offg.*)

Bhavnagar.—This State lies at the head and west side of the Gulf of Cambay. The Gohel Rajputs, to which tribe the Ruler of Bhavnagar belongs, are said to have settled in the country about the year 1260, under Sajakji from whose three sons—Ranoji, Saranji and Shahji—are descended respectively the chiefs of Bhavnagar, Lathi and Palitana. An intimate connexion was formed between the Bombay Government and Bhavnagar in the eighteenth century when the chief of that State took pains to destroy the pirates which infested the neighbouring seas The State was split up when Gujarat and Kathiawar were divided between the Peshwa and the Gaekwar; but the various claims over Bhavnagar were consolidated in the hands of the British Government in 1807. The State pays an annual tribute of Rs. 1,28,060 to the British Government, Rs. 3,581-8-0 as Peshkashi to Baroda, and Rs. 22,858 as Zortalbi to Junagadh. During the minority of His Highness the Minor Maharaja Krishna Kumarsinhji who succeeded to the *gadi* on the death of his father, Maharaja Sir Bhavsinhji, K.C.S.I., on 17th July 1919, the administration of the State has been entrusted to a Council of Administration. The Council consists of Sir Prabhashankar D. Pattani, K.C.I.E., as President, and Major R. C. Burke as Vice-President. The other members of the Council are Messrs. I. K. Trivedi and S. A. Goghawala, M.A., LL.B.. One noteworthy feature in the administration is the complete separation of judicial from executive functions and the decentralisation of authority is another. The authority and powers of all the Heads of Departments have been clearly defined, and each within his own sphere is independent of the others, being directly responsible to the Council.

The chief products of the State are grain, cotton and salt. The chief manufactures are oil, copper and brass vessels and cloth. The Bhavnagar State Railway is 205 miles in length. The capital of the State is the town and port of Bhavnagar, which has a good and safe harbour for shipping and carries on an extensive trade as one of the principal markets and harbours of export for cotton in Kathiawar. Bhavnagar supports 300 Imperial Service Lancers and 282 Infantry of Armed Police.

Population (in 1921) was 426,404 of whom 86 per cent. were Hindus and 8 per cent Mahomedans.

Dhrangadhra State is a State of the First Class in Kathiawar with a population of nearly one lakh and an area of 1,167 square miles exclusive of the Dharangadhra portion of the Runn of Kutch. The Ruler of Dhrangadhra is the head of the Jhala family of Rajputs, originally called the Makvanas. This Rajput clan is of great antiquity having migrated to Kathiawar from the North, establishing itself first at Patri in the Ahmedabad District, thence moving to Halvad and finally settling in its present seat. Being the guardians of the North-Eastern marches of Kathiawar they had to suffer repeatedly from the successive inroads of the Mahomedans into that Peninsula, but after suffering the various vicissitudes of war they were confirmed in their possession of Halvad, its surrounding territories and the salt pans attached thereto by an Imperial Firman issued by Emperor Aurangzeb. The States of Vankaner, Limbdi, Wadhwan, Chuda, Sayla and Than-Lakhtar are offshoot from Dhrangadhra. His Highness Maharana Shri Sir Ghanshyamsinhji, K.C.S.I., Maharaja Raj Saheb is the ruler of the State and the titular head of all the Jhalas. The administration is conducted under the Maharaja's directions by the Dewan Rana Shri Mansinhji S. Jhala, C.I.E. The soil being eminently fit for cotton cultivation, the principal crops are long stapled cotton and cereals of various kinds. Excellent building and ornamental stone is quarried from the hills situated within the State. The capital town is Dhrangadhra, a fortified town, 75 miles West of Ahmedabad.

Dhrangadhra State owns the Railway from Wadhwan Junction to Halvad, a distance of 40 miles, which is worked by the B. B. & C. I. Railway. The State has been authorised to extend this line up to Mahya on the borders of the Runn.

Gondal State—The Ruling Prince of Gondal is a Rajput of the Jadeja stock with the title of H. H. Thakore Sahib, the present Ruler being H. H. Shri Bhagvat Sinhji, G.C.I.E. The early founder of the State, Kumbhoji I., had a modest estate of 20 villages. Kumbhoji II., the most powerful Chief of the House, widened the territories to almost their present limits by conquest; but it was left to the present ruler to develop its resources to the utmost, and in the words of Lord Reay, Governor of Bombay, by its "importance and advanced administration" to get it recognised as a First Class State. The State pays a tribute of Rs. 1,10,721. The chief products are cotton and grain and the chief manufactures are cotton and woollen fabrics and gold embroidery. Gondal has always been preeminent amongst the States of its class for the vigour with which public works have been prosecuted, and was one of the earliest pioneers of railway enterprise in Kathawar, having initiated the Dhasa-Dhoraji line: it subsequently built other lines in partnership with other Native States in Kathiawar. There are no export and import dues, the people being free from taxes and dues. Comparatively speaking Gondal stands first in Kathiawar in respect of the spread of education. Compulsory female education in the State has been recently ordered by His Highness. Rs. 13 lakhs has been spent on irrigation tanks and canals and water supply to the town of Gondal. The Capital is Gondal, a fortified town on the line between Rajkot and Jetalsar.

Junagadh State.—This State has an area of 3,336½ square miles and an average revenue of about 50 lakhs and is bounded on the north by the Bardas and Halar and on the west and south by the Arabian Sea. The river Saraswati, famous in the sacred annals of the Hindus, passes through the State. A sparsely wooded tract called the Gir, comprising about 500 square miles, is contained in the State and is well known as the last haunt in India of the lion. Until 1472, when it was conquered by Sultan Mahmud Begra of Ahmedabad, Junagadh was a Rajput State, ruled by Chiefs of the Chudasama tribe. During

the reign of the Emperor Akbar it became a dependency of Delhi, under the immediate authority of the Mughal Viceroy of Gujarat. About 1735, when the representative of the Mughals had lost his authority in Gujarat, Sher Khan Babi, a soldier of fortune, expelled the Mughal Governor, and established his own rule. The ruler of Junagadh first entered into engagements with the British Government in 1807. The Chief bears the title of Nawab, the present Nawab being ninth in succession from the founder of the family. He is His Highness Mahabat Khan, who was born in 1900 and succeeded in 1911. The agricultural products are cotton, shipped in considerable quantities from Veraval to Bombay, wheat and other grains. The coast line is well supplied with fair weather harbours. The State pays a tribute of Rs. 37,210 to the Gaekwar of Baroda and Rs. 28,394 to the British Government, but the Nawab receives contributions, called zortalbi, amounting to Rs. 92,421 from a number of chiefs in Kathiawar—a relic of the days of Mahomedan supremacy. The State maintains 100 Imperial Service Lancers. The Capital is Junagadh, situated under the Girnar and Datar hills, which is one of the most picturesque towns in India, while in antiquity and historical interest it yields to none. The Uparkot, or old citadel, contains interesting Buddhist caves, and the whole of the ditch and neighbourhood is honeycombed with caves or their remains. There are a number of fine modern buildings in the town. The famous Asoka Inscription of the Buddhistic time carved out on big bolster of black granite stone is housed at the foot of the Girnar Hill which is sacred to the Jains, the Shivaites, Vaishnavites and other Hindus.

Navanagar State, on the southern shore of the Gulf of Cutch, has an area of 3,791 square miles. The Maharaja of Navanagar is a Jadeja Rajput by caste, and belongs to the same family as the Rao of Cutch. The Jadejas originally entered Kathiawar from Cutch, and dispossessed the ancient family of Jethwas (probably a branch of Jats) then established at Ghumli. The town of Navanagar was founded in 1540. The present Jam Sahib is the well-known cricketer, H. H. Jam Sahib Shri Ranjitsinhji Vibhaji, who was born in 1872 and succeeded in 1907. The principal products are grain and cotton, shipped from the ports of the State. A small pearl fishery lies off the coast. The State pays a tribute of Rs. 1,20,093 per annum jointly to the British Government, the Gaekwar of Baroda and the Nawab of Junagadh. The State maintains a squadron of Imperial Service Lancers. The Capital is Navanagar (or Jamnagar) a flourishing place, nearly 4 miles in circuit, situated 5 miles east of the port of Bedi. Population 349,400. Revenue nearly Rs. 60 lakhs.

Revenue Secretary: Gokulbhai B. Desai.
Political Secretary: Parshuram B. Junnarkar, B.A., LL.B.
General Secretary: Hirabai M. Mehta, B.A. (Cantab.)

Kolaba Agency.—This Agency includes the State of **Janjira** in the Konkan, a country covered with spurs and hill ranges and much intersected by creeks and backwaters. The ruling family is said to be descended from an Abyssinian in the service of one of the Nizam Shahi Kings of Ahmednagar at the end of the fifteenth century. The most noticeable point in its history is the successful resistance that it alone, of all the states of Western India, made against the determined attacks of the Marathas. The British, on succeeding the Marathas as masters of the Konkan, refrained from interfering in the internal administration of the State. The chief is a Sunni Mahomedan; by race a Sidi or Abyssinian, with a title of Nawab. He has a sanad guaranteeing succession according to Mahomedan law and pays no tribute. Till 1868 the State enjoyed singular independence, there being no Political Agent, and no interference whatever in its internal affairs. About that year the maladministration of the chief, especially in matters of police and criminal justice, became flagrant; those branches of administration were in consequence taken out of his hands and vested in a Political Agent. The present ruler is H. H. Nawab Sidi Sir Ahmed Khan, G.C.I.E., who was born in 1862. The heir-apparent is Sidi Muhammad Khan, born on the 7th March 1914. The area of the State is 377 square miles, and the population 98,573. The average revenue is 6 lakhs. The State maintains an irregular military force of 246. The capital is Janjira, 44 miles south of Bombay Island. The Chief exercises full powers in Criminal, Civil and Revenue matters of the State including Jafarabad, a dependency of the Janjira State in Kathiawar. He is entitled to a dynastic salute of 11 guns. In recognition of services rendered in connection with the war his salute was raised on the 1st January 1918 to 13 guns personal and 13 permanent within the limits of his own State from the 1st January 1921.

Kolhapur Agency.—Kolhapur is a State with an area of 3,217 square miles and population of 833,441. Subordinate to Kolhapur are nine feudatories, of which the following five are important: Vishalgarh, Bavda, Kagal (senior), Kapsi and Ichalkaranji. The present ruling chief Col. Sir Shahu Chhatrapati Maharaja, G.C.S.I., G.C.I.E., G.C.V.O., [LL. D., (Camb.)], M.R.A.S., traces his descent from a younger son of Shivaji, founder of the Maratha power. The prevalence of piracy from the Kolhapur port of Malvan compelled the Bombay Government to send expeditions against Kolhapur in 1765, and again in 1792, when the Raja agreed to give compensation for the losses which British merchants had sustained since 1785, and to permit the establishment of factories at Malvan and Kolhapur. Internal dissensions and wars with neighbouring States gradually weakened the power of Kolhapur. In 1812 a treaty was concluded with the British Government, by which, in return for the cession of certain ports, the Kolhapur Raja was guaranteed against the attacks of foreign powers; while on his part he engaged to abstain from hostilities with other States, and to refer all disputes to the arbitration of the British Government. The principal articles of production are rice, jawar and sugar-cane and the manufactures are coarse cotton and woollen cloths, pottery and hard-

ware. The State pays no tribute, and supports a military force of 690. The nine feudatory estates are administered by their holders, except in the case of two whose holders are minors. Kolhapur proper is divided into five pethas or talukas and four mahals and is managed by the Maharaja, who has full powers of life and death. The Southern Mahratta Railway passes through the State and is connected with Kolhapur City by a line which is the property of the State.

Resident and Senior Political Agent for Kolhapur and the Southern Mahratta Country—Lt.-Col. J. W. B. Merewether, C.I.E.

Southern Maratha Country States.—The Agency consists of the following eight States:—

Name of State.	Area in square miles.	Population.	Tribute to British Government.	Average revenue.
			Rs.	Rs.
Sangi	1,112	227,146	1,35,000	10,75,756
Miraj (Senior)	339	80,281	12,557	3,12,989
Miraj (Junior)	210	36,400	7,388	2,55,263
Kurundwad (Senior)	185	38,375	....	1,54,369
Kurundwad (Junior)	114	34,084	9,618	1,73,669
Jamkhandi	524	100,304	20,515	9,41,105
Mudhol	368	62,831	2,671	3,52,916
Ramdrug	169	36,610	....	1,50,729
Total ..	3,021	616,121	1,87,749	34,16,787

Mahi Kantha.—This group of States has a total area of 3,124 square miles and a population of 412,631 including that of **Idar** which is 202,811. The revenue is about 14 lakhs. The Agency consists of the first class State of Idar and 51 small States. The Native State of Idar covers more than half the territory. It has an area of 1,669 square miles and an average revenue of Rs.10,01,725; eleven other States are of some importance; and the remainder are estates belonging to Rajput or Koli Thakurs, once the lawless feudatories of Baroda, and still requiring the anxious supervision of the Political Officer. H. H. Major-General Sir Partab Singh, a Rajput of the Rathor Clan, having been appointed regent of the State of Jodhpur, resigned the gadi of Idar in June 1911 and was succeeded by his adopted son Daulatsinhji, who is aged 39. His Highness had been on active service. Many relatives of the Maharaja and feudal chiefs whose ancestors helped to secure the country for the present dynasty, now enjoy large estates on service tenures, and there are numerous petty chiefs or *bhumias* who have held considerable estates from the time of the Raos of Idar, or earlier, and are under no obligation of service. The revenues of the State are shared by the Maharaja with these feudal chiefs. The Maharaja receives Rs. 52,427 annually on account of Khichdi and other Raj Haks from its subordinate Sardars, the tributory Talukas of the Mahi Kantha Agency and others, and pays Rs. 30,340 as tribute to the Gaekwar of Baroda through the British Government. The subordinate Sardars of Idar, known locally as pattawats, hold their estates on condition of military service, the quota being three horsemen for every 1,000 Rupees of revenue; but for many years this service has not been exacted and no military force is maintained at present. The second class States are Polo and Danta. The success of minor Rao Hamirsinghji has been recognised by Government to the Chiefship of the former, while the Ruler of the latter is Maharana Hamirsinghji.

Political Agent—Lt.-Col. W.M.P. Wood, C.I.E.

Nasik Agency.—This consists of one State Surgana, lying in the north-west corner of the Nasik District. Surgana has an area of 360 square miles and a population of 14,838. The ruling chief is Pratapraо Shankarrao Deshmukh, who is descended from a Maratha Pawar family. He rules the State subject to the orders of the Collector of Nasik. The revenue of the State is about Rs. 33,000.

Palanpur Agency.—This group of States in Gujarat comprises two first class States, Palanpur and Radhanpur, and a few minor States and petty talukas. Its total area is 6,393 square miles and the population is 515,092. The gross revenue is about 14½ lakhs. The territory included in the Agency has, like the more central parts of Gujarat, passed during historical times under the sway of the different Rajput dynasties of Anhilvada, the early

Khilji and Tughlak Shahi dynasties of Delhi, the Ahmedabad Sultans, the Mughal Emperors, the Mahrattas, and lastly the British. The State from which the Agency takes its name is under the rule of H. H. Taley Muhammad Khan, who is entitled Nawab and Dewan of Palanpur. He is descended from the Lohanis, an Afghan tribe who appeared in Gujarat in the fourteenth century. The connection of the British Government with the State dates from 1819 in which year the chief was murdered by a body of nobles. Two high roads from Ahmedabad pass through the State and a considerable trade in cotton, cloth, grain, sugar and rice is carried on. The State maintains a constabulary force of 600 and pays tribute of Rs. 38,000 to the Gaekwar of Baroda. The capital is Palanpur, situated at the junction of the Palanpur-Deesa Branch of the B. B. & C. I. Railway. It is a very old settlement of which mention was made in the eighth century.

Political Agent—Lt.-Col. N. S. Coghill.

Radhanpur is a State, with an area of 1,150 square miles, which is held by a branch of the Babi family, who since the reign of Humayun have always been prominent in the annals of Gujarat. The present chief is H. H. Jalalud-din Khanji, the Nawab of Radhanpur. He has powers to try his own subjects even for capital offences without permission from the Political Agent. The State maintains a Police force of 208. The principal products are cotton, wheat and grain. The capital is Radhanpur town, a considerable trade centre for Northern Gujarat and Cutch.

Rewa Kantha Agency.—This Agency, with an area of 4,956 square miles and a population of 665,099, comprises 61 States, of which Rajpipla is a first class State, 5 are second class, one is third class and the rest are either petty States or talukas. Among those petty States are Sanjeli in the north, Bhadarva and Umeta in the west, Narukot in the south-east, and two groups of Mehwas. The 26 Sankheda Mehwas petty estates lie on the right bank of the Narbada, while the 24 Pandu Mehwas petty estates including Dodka, Anghad and Raika, which together form the Dodka Mehwas are situated on the border of the Mahi.

The following are the statistics of area and population for the principal States:—

State.	Area in square miles.	Population.
Balasinor	189	40,563
Baniya	813	115,350
Chhota Udaipur	873	103,639
Lunavada	388	75,998
Narukot (Jambhughoda) ..	143	8,485
Rajpipla	1,517	161,588
Sunth	394	59,350
Other Jurisdictional States, Civil Stations and Thana Circles	639	100,126

Under the first Anhilvada dynasty (746-961), almost all the Rewa Kantha lands except Champaner were under the government of the Bariyas, that is, Koli and Bhil chiefs. In the eleventh, twelfth and thirteenth centuries chiefs of Rajput or part Rajput blood, driven south and east by the pressure of Muhammadan invasions, took the place of the Koli and Bhil leaders. The first of the present States to be established was the house of the Raja of Rajpipla.

Political Agent—J. Abbott, I.C.S.

Rajpipla.—This State lies to the south of the Narbada. It has an area of 1,517¼ square miles. The lands to the south of the Narbada for a few miles are very rich and fertile. Beyond that the Country for the most part is hilly. The family of the Maharaja of Rajpipla, H. H. Maharana Shri Vijayasinjhi is said to derive its origin from a Rajput of the Gohel clan. The State pays an annual sum of Rs. 50,000 on account of Ghasdana to the Gaekwar of Baroda. Cotton is the most important crop in the State. In the hills there are valuable teak forests. The capital is Nandod, which is connected with Anklesvar by railway built by the State.

Satara Jagirs.—Under this heading are grouped the following six States:—

State.	Area in sq. miles.	Population.	Revenue in lakhs.
Aundh	501	68,995	3
Phaltan	397	55,996	2
Bhor	925	144,601	5
Akalkot	498	89,082	4
Jath	884	69,810	2
Daphlapur	96	8,833	2

These were formerly feudatory to the Raja of Satara. In 1849 five of them were placed under the Collector of Satara, and Akalkot under the Collector of Sholapur. Subsequently, the Jagir of Bhor was transferred to the Collector of Poona and Jath and Daphlapur to the Southern

Mahratta country. The last two are now under the Collector of Bijapur. The ruling chiefs are as follows :—

State.	Ruling Chiefs.	Tribute to British Government.
		Rs.
Aundh ..	Bhavanrao Shrinivasrao *alias* Baba Saheb, Pant Pratinidhi.	....
Phaltan ..	Mudhojirav Janrav Nimbalkar	9,600
Bhor ..	H. H. Shankarrav Chimnaji, Pant Sachiv	4,684
Akalkot ..	Fatehsinh Shahai Raje Bhonsle *alias* Bapu Saheb	14,592
Jath ..	Ramrav Amritrav *alias* Aba Saheb Daphle	6,400
Daphlapur ..	Rani Bai Saheb Daphle, widow of Ramchandrarav Venkatrav Chavan Daphle.	....

Savantwadi.—This State has an area of 925 square miles and population of 266,486. The average revenue is 5½ lakhs. It lies to the north of the Portuguese territory of Goa, the general aspect of the country being extremely picturesque. Early inscriptions take the history of the State back to the sixth century. So late as the nineteenth century the ports on this coast swarmed with pirates and the country was very much disturbed. The present chief is Khem Savant V, *alias* Bapu Saheb Bhonsle. Rice is the principal crop of the State, and it is rich in valuable teak. The sturdy Marathas of the State are favourite troops for the Indian Army and supply much of the immigrant labour in the adjacent British districts. The Capital is Savantvadi, also called Sundar Vadi, or simply Vadi.

Sholapur Agency.—This contains the State of Akalkot which forms part of the tableland of the Deccan. It has an area of 498 square miles and a population of 81,250. In the beginning of the eighteenth century the Akalkot territory, which had formerly been part of the Mussulman kingdom of Ahmednagar was granted by the Raja of Satara to a Maratha Sardar, the ancestor of the present chief, subject to the supply of a contingent of horse. In 1849 after the annexation of Satara, the Akalkot Chief became a feudatory of the British Government.

Baria.—The State has an area of 813 square miles with a population of 137,289 and is situated in the heart of the Panchmahals district. The Capital Devgad Baria is reached by road from Piplod station on the B. B. & C. I. Railway, at a distance of eight miles. The average revenue of the State is about 8 lakhs. The State enjoys plenary powers and pays no tribute to the British Government or any other State. The Ruler Captain His Highness Maharaol Shree Ranjitsinhji enjoys a salute of eleven guns. He served in France and Flanders in the war and in the Afghan War, 1919. The staple crop is maize. The forests are rich in teak, wood and all sorts of jungle produce. There is a flourishing glass industry within the State. There is a large scope for forest industries.

The Sukkur Agency.—This consists of the Khairpur State, a great alluvial plain in Sind. It has an area of 6,050 square miles and a population of 223,788, and revenue of over 20 lakhs, 59 thousands. The present chief, H. H. Mir Sir Imam Buksh Khan Talpur, G.C.I.E., belongs to a Baloch family called Talpur. Previous to the accession of this family on the fall of the Kalhora dynasty of Sind in 1783, the history of Khairpur belongs to the general history of Sind. In that year Mir Fateh Ali Khan Talpur established himself as Rais or ruler of Sind ; and subsequently his nephew, Mir Sohrab Khan Talpur, founded the Khairpur branch of the Talpur family. In 1832 the individuality of the Khairpur State, as separate from the other Talpur Mirs in Sind, was recognised by the British Government in a treaty, under which the use of the river Indus and the roads of Sind were secured to the British. The chief products of the State are oil-seeds, ghee, hides, tobacco, fuller's earth, carbonate of soda, cotton, wool and grain. The manufactures comprise cotton fabrics and various kinds of silverware and metal work. There is an industrial school at the capital where lacquer work, carpets, pottery, etc., are produced. The Railway from Hyderabad to Rohri runs through the whole length of the State. The rule of the Mir is patriarchal, but many changes have been made in recent years introducing greater regularity of procedure into the administration. The Wazir, an officer sent from British service, conducts the administration under the Mir. The State supports a military force of 504 including an Imperial Service Camel and Baggage Corps which is 139 strong and served at the Front.

Political Agent: The Collector of Sukkur.

Surat Agency.—This is a small group of three second class States under the superintendence of the Collector of Surat.

State.	Ruling Chiefs.	Area in sq. miles.	Population.
Dharampur ..	Maharana Shri Mohandevji Narandevji	704	114,995
Bansda ..	Maharaval Shri Indrasinhji Pratapsinhji	215	44,594
Sachin ..	His Highness Nawab Sidi Ibrahim Muhammad Yakut Khan Mubazarat Daula Nasrat Jung Bahadur.	49	18,903

The joint revenue of these States is 16¼ lakhs. Tribute is paid to the British Government of Rs. 9,154. There is also attached to this Agency a tract of country known as the Dangs, which has an area of 999 square miles and a population of 29,353 and a revenue of Rs. 30,000. The country is divided into 14 Dangs or States of very unequal area, each under the purely nominal rule of a Bhil Chief with the title of Raja, Naik, Pradhan or Povar.

Thana Agency.—This includes the State of Jawhar, in the Thana District, on a plateau above the Konkan plain. It has an area of 310 square miles and a population of 49,693 and revenue of 3¾ lakhs. Up to 1294, the period of the first Mahomedan invasion of the Deccan, Jawhar was held by a Varli, not a Koli chief. The first Koli chief, obtained his footing in Jawhar by a device similar to that of Dido, when she asked for and received as much land as the hide of a bull would cover. The Koli chief cut a hide into strips, and thus enclosed the territory of the State. The present chief is Raja Vikramshah Patangshah, who administers the State, assisted by a Karbhari under the supervision of the Collector of Thana, who is Political Agent of the State.

UNDER THE GOVERNMENT OF BENGAL.

Cooch Behar.—This State, which at one time comprised almost the whole of the Northern Bengal, Assam and a part of Bhutan now known as the Duars, is a low-lying plain in North Bengal. It has an area of 1,307 square miles, a population of 592,472 and a revenue of nearly 33 lakhs. The ruling chief is H. H. Maharaja Sir Jitendra Narayan Bhup-Bahadur K.C.S.I., who married Rani Indira Debi, eldest daughter of H.H. Maharaja Sayaji Rao Gaekwar of Baroda in 1913 and succeeded his brother Maharaja Raj Rajendra Narayan in the same year. The eldest Maharaj Kumari was born to His Highness in October 1914 and a son and the Yuvaraj Kumar in December 1915. Since then one Maharaj Kumar and two Maharaj Kumaris have been born to their Highnesses. His Highness the Maharaja and his family belong to the Kshatriya Varna of Kshatriya origin. H. H. administers the State with the assistance of the State Council of which he is President. Cooch Behar once formed part of the famous kingdom of Kamup. British connection with it began in 1772 when owing to inroads of the Bhuteas, the assistance of the East India Company was invoked. The chief products of the State are rice, jute, mustard seed and tobacco. The capital is Cooch Behar, which is reached by the Cooch Behar State Railway, a branch from the Eastern Bengal State Railway System.

Hill Tippera.—This State lies to the east of the district of Tippera and consists largely of hills covered with dense jungles. It has an area of 4,116 square miles and a population of 303,801. The revenue from the State is about 12 lakhs and from the Zemindari in British territory a slightly smaller sum. The present ruler is Maharaja Birendra Kishore Deb Barman Manikya Bahadur, who is a Kshatriya by caste and comes of the Lunar race and is entitled to a salute of 13 guns. The military prestige of the Tripura Rajas dates back to the fifteenth century and a mythical account of the State takes the history to an even earlier date. Both as regards its constitution and its relations with the British Government, the State differs alike from the large Native States of India, and from those which are classed as tributary. Besides being the ruler of Tripura, the Maharaja also holds a large landed property situated in the plains of the Districts of Tripura, Naokhali and Sylhet. This estate covers an area of 600 square miles, and is held to form with the State an indivisible Raj. Disputes as to the right of succession have occurred on the occasion of almost every vacancy in the Raj producing in times gone by disturbances and domestic wars, and exposing the inhabitants to serious disorders and attacks from the Kukis, who were always called in as auxiliaries by one or other of the contending parties. The principles which govern succession to the State have recently, however, been embodied in a *sanad* which was drawn up in 1904. The chief products of the State are rice, cotton, *til*, tea and forest produce of various kinds, the traffic being carried chiefly by water. The administration is conducted by the Minister at Agartala, the capital, assisted by several assistants

Political Agent: D. H. Wares, I.C.S., *(ex-officio)*.

UNDER THE GOVERNMENT OF BIHAR AND ORISSA.

Under this Government there are the Chota Nagpur political States of Kharsawan and Seraikela, and the Orissa feudatory States, 24 in number. The total area is 28,656 square miles, and the total population 3,942,972. The revenue is about 70 lakhs. The inhabitants are hill-men of Kolarian or Dravidian origin, and their condition is still very primitive. The chief of **Kharsawan** belongs to a junior branch of the Porahat Raja's family. The State first came under the notice of the British in 1793, when, in consequences of disturbances on the frontier of the old Jungle Mahals, the Thakur of Kharsawan and the Kunwar of Saraikela were compelled to enter into certain agreements relating to the treatment of fugitive rebels. The chief is bound, when called upon, to render service to the British Government, but he has never had to pay tribute. His present sanad was granted in 1920. He exercises all administrative powers, executive and judicial, subject to the control of the Personal Assistant, Orissa Feudatory States (Deputy Commissioner of Singhbhum) and the Commissioner of Chota Nagpur. The Bengal Nagpur Railway runs through a part of the State. The adjoining State of Seraikela is held by the elder branch of the Porahat Raja's family.

Orissa Feudatory States.—This group of 24 dependent territories is situated between

the Mahanadi Delta and the Central Provinces, and forms the mountainous background of Orissa. The names of the individual States are Athgarh, Talcher, Mayurbhanj, Nilgiri, Keonjhar, Pal Lahara, Dhenkanal, Athmallik, Hindol, Narsinghpur, Baramba, Tigiria, Khanpara, Nayagarh, Ranpur, Daspalla and Baud. To these there were added in 1905 the following States: Bamra, Rairakhol, Sonpur, Patna and Kalahandi from the Central Provinces, and Gangpur and Bonai from the Chota Nagpur States. The total population is 3,961,805 with a revenue of Rs. 80,61,760. The Feudatory States have no connected or authentic history. Comprising the western and hilly portion of the province of Orissa they were never brought under the central government, but from the earliest times consisted of numerous petty principalities which were more or less independent of one another. They were first inhabited by aboriginal races, who were divided into innumerable communal or tribal groups each under its own chief or headman. These carried on incessant warfare with their neighbours on the one hand and with the wild beasts of the forests on the other. In course of time their hill retreats were penetrated by Aryan adventurers, who gradually overthrew the tribal chiefs and established themselves in their place. Tradition relates how these daring interlopers, most of whom were Rajputs from the north, come to Puri on a pilgrimage and remained behind to found kingdoms and dynasties. It was thus that Jai Singh became ruler of Mayurbhanj over 1,300 years ago, and was succeeded by his eldest son, while his second son seized Keonjhar. The chiefs of Baud and Daspalla are said to be descended from the same stock; and a Rajput origin is also claimed by the Rajas of Athmallik, Narsinghpur, Pal Lahara, Talcher and Tigiria. Nayagarh, it is alleged, was founded by a Rajput from Rewah, and a scion of the same family was the ancestor of the present house of Khandpara. On the other hand, the chiefs of a few States, such as Athgarh, Baramba and Dhenkanal, owe their origin to favourites or distinguished servants of the ruling sovereigns of Orissa. The State of Ranpur is believed to be the most ancient, the list of its chiefs covering a period of over 3,600 years. It is noteworthy that this family is admittedly of Khond origin, and furnishes the only known instance in which, amid many vicissitudes, the supremacy of the original settlers has remained intact. The States acknowledged the suzerainty of the paramount power and were under an implied obligation to render assistance in resisting invaders; but in other respects neither the ancient kings of Orissa nor their successors; the Mughals and Marathas, ever interfered with their internal administration. All the States have annals of the dynasties that have ruled over them; but they are made up in most part of legend and fiction and long genealogical tables of doubtful accuracy, and contain very few features of general interest. The British conquest of Orissa from the Marathas, which took place in 1803, was immediately followed by the submission of ten of the Tributary States the chiefs of which were the first to enter into treaty engagements.

The States have formed the subject of frequent legislation of a special character. They were taken over from the Marathas in 1803 with the rest of Orissa; but, as they had always been tributary states rather than regular districts of the native governments they were exempted from the operation of the general regulation system. This was on the ground of expediency only and it was held that there was nothing in the nature of British relations with the proprietors that would preclude their being brought under the ordinary jurisdiction of the British courts, if that should ever be found advisable. In 1882 it was held that the States did not form part of British India and this was afterwards accepted by the Secretary of State.

The staple crop in these States is rice. The forests in them were at one time among the best timber producing tracts in India, but until lately forest conservancy was practically unknown. The States have formed the subject of frequent legislation of a special character. The relations with the British Government are governed mainly by the sanads granted in similar terms to all the chiefs in 1894. They contain ten clauses reciting the rights, privileges, duties and obligations of the chiefs; providing for the settlement of boundary disputes, and indicating the nature and extent of the control of the Political Agent.

Political Agent: H. W. P. Scroope.

UNDER THE GOVERNMENT OF THE UNITED PROVINCES.

Three States: Rampur, Tehri and Benares are included under this Government:—

State.	Area Sq. Miles.	Population.	Revenue in lakhs.
Rampur ..	892	531,898	45
Tehri (Garhwal)	4,200	299,853	6
Benares ..	988	....	....

Rampur is a fertile level tract of country. The ruler Colonel His Highness Alijah Farzandi-Dilpizir-i-Daulat-i-Inglishia, Mukhlis-ud-Daulah, Nasir-ul-Mulk, Amir-ul-Umra, Nawab Sir Syed Mohammed Hamid Ali Khan Bahadur Mustaid Jung, G.C.S.I. G.C.I.E., G.C.V.O., A.D.C., to His Imperial Majesty the King Emperor. Born 31st August 1875, descended from the famous Sadats of Bahera. Succeeded in February 1889. His Highness is the sole surviving representative of the once great Rohilla power in India. He is the Premier Chief in the United Provinces, and rules over a territory of 892 square miles with a population of 531,217. His Highness is an enlightened Prince and is well educated in Arabic, Persian and English languages. He is a keen supporter of education for Mohammedans, and has travelled extensively in America and Europe. During the Mutiny of 1857 the then Nawab of Rampur displayed his unswerving loyalty to the British Government by affording pecuniary aid, protecting the lives of Europeans, and rendering

other valuable services which were suitably recognised by the Paramount Power. This State contributes towards the defence of the Indian Empire by maintaining a well-equipped and well trained battalion of Imperial Service Infantry and a cavalry unit consisting of two squadrons.

During the great War the Rampur I. S. Infantry was sent to East Africa where it rendered valuable services to the Imperial cause and returned to Rampur after a stay of about four years. A detachment of Imperial Service Lancers trained Government Horses at the Remount Depots of Bellary and Aurangabad while another escorted Government horses to Europe. During the Afghan War the two Regiments were sent on garrison duty in British India.

His Highness has three sons, the eldest Nawab Syed Raza Ali Khan Bahadur being the heir-apparent.

The State has an income of over fifty lakhs of rupees a year.

His Highness enjoys a permanent salute of 15 guns.

Tehri State (or Tehri Garhwal).—This State lies entirely in the Himalayas and contains a tangled series of ridges and spurs radiating from a lofty series of peaks on the border of Tibet. The sources of the Ganges and the Jumna are in it. The early history of the State is that of Garhwal District, the two tracts having formerly been ruled by the same dynasty. Parduman Shah, the last Raja of the whole territory, was killed in battle, fighting against the Gurkhas; but at the close of the Nepalese War in 1815. his son received from the British the present State of Tehri. During the Mutiny the latter rendered valuable assistance to Government. He died in 1859 without issue, and was succeeded by his near relative Bhawani Shah; and he subsequently received a *sanad* giving him the right of adoption. The present Raja is Captain H. H. Narendra Shah. The principal product is rice, grown on terraces on the hill sides. The State forests are very valuable and there is considerable export of timber. The Raja has full powers within the State. A unit of Imperial Service Sappers is maintained. The capital is Tehri, the summer capital being Pratapnagar, 8,000 feet above the sea-level.

Political Agent: The Commissioner of Kumaon.

Benares.—The founder of the ruling family of Benares was one Mansa Ram, who entered the service of the Governor of Benares under the Nawab of Oudh in the early eighteenth century His son, Balvant Singh, conquered the neighbouring countries and created a big state out of them over which he ruled till 1770. Raja Chet Singh succeeded him, but was expelled by Warren Hastings in 1781. In 1794, owing to the mal-administration of the estates which had accumulated under the Raja of Benares, an agreement was concluded by which the lands held by the Raja in his own right were separated from the rest of the province, of which he was simply administrator. The direct control of the latter was assumed by the Government, and an annual income of one lakh of rupees was assured to the Raja, while the former constituted the Domains. Within the Domains the Raja had revenue powers similar to those of a Collector in a British District, which were delegated to certain of his own officials. There was thus constituted what for over a century was known as the Family Domains of the Maharaja of Benares. On the 1st of April 1911 these Domains became a State consisting of the parganas of Bhadohi (or Konrh) and Chakia (or Kera Mangraur) with the town of Ramnagar and its neighbouring villages. The Maharaja's powers are those of a ruling chief, subject to certain conditions, of which the most important are the maintenance of all rights acquired under laws in force prior to the transfer, the reservation to Government of the control of the postal and telegraph systems, of plenary criminal jurisdiction within the State over servants of the British Government and European British subjects, and of a right of control in certain matters connected with excise. The present ruler is Lieut. Colonel H. H. Maharaja Sir Prabhu Narayan Singh Bahadur, G.C.S.I., G.C.I.E., who was born in 1855 and succeeded to the State in 1889. He is entitled to a salute of 15 guns and is a Hon. Lt.-Colonel in the Indian Army.

UNDER THE GOVERNMENT OF THE PUNJAB.

Under this Government there are 34 states, varying considerably in size and importance. Area, 36,532 square miles. Population (1911), 4,212,794. Revenue, about £1,000,000.

The Punjab states may be grouped under three main classes. The hill States, 23 in number, lie among the Punjab Himalayas and are held by some of the most ancient Rajput families in all India. Along the western half of the southern border lies the Muhammadan state of Bahawalpur. The remaining States, including the Sikh principalities of Patiala, Jind, Nabha, Kapurthala, Faridkot and Kalsia, and the Muhammadan chiefships of Maler Kotla, Pataudi, Loharu and Dujana, lie east of Lahore, and, with insignificant exceptions, occupy the centre of the eastern plains of the province.

The list below gives details of the area, population, and revenue of the more important states:—

Name.	Area square miles.	Population.	Revenue Approx. in lakhs.
Bahawalpur ..	15,000	780,394	27
Chamba ..	3,216	134,351	7
Faridkot ..	642	130,374	8
Jind ..	1,259	271,728	15
Kapurthala ..	630	268,244	25
Maler Kotla ..	167	71,144	14½
Mandi ..	1,200	181,110	5
Nabha ..	928	248,892	15
Patiala ..	5,412	1,407,659	72
Sirmur (Nahan)..	1,198	138,564	8

Bahawalpur.—This State, which is about 300 miles in length and about 40 miles wide, is divided lengthwise into three great strips. Of these, the first is a part of the Great Indian Desert; the central tract is chiefly desert, not capable of cultivation, identical with the Bar or Pat uplands of the Western Punjab; and the third, a fertile alluvial tract in the river valley, is called the Sind. The ruling family claims descent from the Abbaside Khalifas of Egypt. The tribe originally came from Sind, and assumed independence during the dismemberment of the Durrani empire. On the rise of Ranjit Singh, the Nawab made several applications to the British Government for an engagement of protection. These, however, were declined, although the Treaty of Lahore in 1809, whereby Ranjit Singh was confined to the right bank of the Sutlej, in reality effected his object. The first treaty with Bahawalpur was negotiated in 1833, the year after the treaty with Ranjit Singh for regulating traffic on the Indus. It secured the independence of the Nawab within his own territories, and opened up the traffic on the Indus and Sutlej. During the first Afghan War the Nawab rendered assistance to the British and was rewarded by a grant of territory and life pension. On his death the succession was disputed and for a time the State was in the hands of the British. The present Nawab is H. H. Nawab Sadiq Muhammad Khan, who was born in 1904 and succeeded in 1907 During his minority the State is managed by a Council of Regency. The chief crops are wheat, rice and millet. The Lahore-Karachi branch of the North-Western State Railway passes through the State. The State supports an Imperial Service Silladar Camel Transport Corps consisting of 372 men and 966 camels and a Mounted Escort consisting of 299 men and 166 camels, in addition to other troops. The capital is Bahawalpur, a walled town built in 1748.

Political Agent: Lt.-Col. A. J. O'Brien, C.I.E., C.B.E.

Chamba.—This State is enclosed on the west and north by Kashmir, on the east and south by the British districts of Kangra and Gurdaspur, and it is shut in on almost every side by lofty hill ranges. The whole country is mountainous and is a favourite resort of sportsmen. It possesses a remarkable series of copper plate inscriptions from which its chronicles have been completed.

Founded probably in the sixth century by Marut, a Surajbansi Rajput, who built Brahmapura, the modern Barmaur, Chamba was extended by Meru Varma (680) and the town of Chamba built by Sahil Varma about 920. The State maintained its independence, until the Moghal conquest of India.

Under the Moghals it became tributary to the empire, but its internal administration was not interfered with, and it escaped almost unscathed from Sikh aggression. The State first came under British influence in 1846. The part, west of the Ravi, was at first handed over to Kashmir, but subsequently the boundaries of the State were fixed as they now tand, and it was declared independent of Kashmir. The present chief is H. H. Raja Ram Singh, who was born in 1891, and succeeded in 1919. The principal crops are rice, maize and millets. There are some valuable forests which were partly leased to Government in 1864 for a term of 99 years, but the management of them has now been retroceded to the Chamba Durbar. The mountain ranges are rich in minerals which are little worked. The principal road to Chamba town is from Pathankot, the terminus of the Amritsar Pathankot branch of the North-Western Railway. Chamba town, on the right bank of the Ravi, contains a number of interesting temples, of which that of Lakshmi Narayan, dating possibly from the tenth century, is the most famous.

Faridkot.—The ruling family of this sandy level tract of land belongs to the Sidhu-Barar clan of the Jats, and is descended from the same stock as the Phulkian houses. Their occupation of Faridkot and Kot Kapura dates from the time of Akbar, though quarrels with the surrounding Sikh States and internal dissensions have greatly reduced the patrimony.

The present chief, Farzand-i-Saadat Nishan Hazarat-i-Kaisar-i-Hind Brar Bans Raja Har Indar Singh Bahadur was born in 1915 and succeeded his father in 1919. Under the orders of the Government of India the administration of the State has been entrusted to a Council of Administration consisting of a President and three members. The State has an area of 643 square miles with a population of 150,661 and has an annual income of 15 lakhs. The Ruler is entitled to a salute of 11 guns, and a visit and return visit from the Viceroy. The State possesses a company of Imperial Service Sappers.

Jind.—The three Native States of Jind, Patiala and Nabha form collectively the Phulkian States, the most important of the Cis-Sutlej States. This area is the ancestral possession of the Phulkian houses. It lies mainly in the great natural tract called the Jangal (desert or forest), but stretches north-east into that known as the Pawadh and southwards across the Ghaggar into the Nardak, while its southernmost tract, round the ancient town of Jind, claims to lie within the sacred limits of Kurukshetra. This vast tract is not, however, the exclusive property of the States; for in it lie several islands of British territory, and the State of Maler Kotla enters the centre of its northern border. On the other hand the States hold many outlying villages surrounded by British territory.

The history of Jind as a separate State dates from 1763 when the confederated Sikhs captured Sirhind town and partitioned the whole Jind Province. The Maharaja of Jind, H. H. Maharaja Sir Ranbir Singh, G.C.I.E., K.C.S.I., was born in 1879 and succeeded in 1887. He is descended from the ancestors of the Phulkian family. During the Sikh War and the Mutiny the Ruler of Jind was of great service to the British and was rewarded with a grant of nearly 600 square miles of land. The principal crops are wheat, barley and gram. The only industries of importance are the manufactures of gold and silver ornaments, leather and woodwork and cotton cloth. The capital is Sangrur which is connected by a State Railway with the North-Western Railway. Under His Highness' Court there is a Ministerial Council which controls all the departments of the State.

Kapurthala.—This State consists of three detached pieces of territory in the great plain of the Jullundur Doab. The ancestors of the ruler of Kapurthala at one time held possessions both in the Cis and Trans-Sutlej and also in the Bari Doab. In the latter lies the village of Ahlu, whence the family springs, and from which it takes the name of Ahluwalia. When the Jullundur Doab came under the dominion of the British Government in 1846, the estates north of the Sutlej were maintained in the independent possession of the Ahluwalia Raja, conditional on his paying a commutation in cash for the service engagements by which he had previously been bound to Ranjit Singh. The Bari Doab estates are held by the head of the house as a Jaghir in perpetuity, the civil and police jurisdiction remaining in the hands of the British authorities. For good services during the Mutiny, the present Maharaja's grandfather was rewarded with a grant of other States in Oudh. The present Ruler is H. H. Maharaja Sir Jagatjit Singh Bahadur, G.C.S.I., G.C.I.E., who was born in 1872 and succeeded in 1877. He was granted the title of Maharaja as an hereditary distinction in 1911. The rulers of Kapurthala are Sikhs and claim descent from Rana Kapur, a member of the Rajput House of Jaisalmer. Only a small proportion of the population however are Sikhs, the majority being Mahomedans. The chief crops are wheat, gram, maize, cotton and sugarcane. The town of Sultanpur in this State is famous for hand-painted cloths. The main line of the North-Western Railway passes through part of the State and the Grand Trunk Road runs parallel to it. A branch railway from Jullundur City to Ferozepur passes through the State. Kapurthala maintains a battalion of Imperial Service troops and a small force of local troops. The capital is Kapurthala.

Agent to the Lieutenant-Governor for Kapurthala, the Commissioner of the Jullundur Division.

Maler Kotla.—This State consists of a level sandy plain bounded by the district of Ludhiana on the north and by Patiala territory elsewhere. The Nawabs of Maler Kotla are of Afghan descent, and originally held positions of trust in the Sirhind province under the Moghal Emperors. As the Empire sank into decay during the eighteenth century, the local chiefs gradually became independent. The result was constant feuds with the adjacent Sikh States. After the victory of Laswari, gained by the British over Sindhia in 1803, and the subjugation and flight of Holkar in 1805, when the Nawab of Maler Kotla joined the British army, the British Government succeeded to the power of the Marathas in the districts between the Sutlej and the Jumna. The final treaty which affirmed the dependence of the State on the British Government was signed after the submission of Ranjit Singh in 1809. The present Nawab is H. H. Nawab Ahmud Ali Khan Bahadur, K.C.S.I., who was born in 1881 and succeeded in 1908. He was created Hon. Major in the Indian Army for his services during the war. The chief products are cotton, sugar and opium. The State supports two double companies of Imperial Service Sappers. The capital is Maler Kotla. Revenue 14½ lakhs.

Mandi.—This is a mountainous State in the upper reaches of the Beas. It has a history of considerable length, as it once formed part of the Suket State. Its relations with the British were determined after the battle of Sobraon in 1846. The present minor Chief H. H. Raja Jogindra Sen was installed in 1913. The administration is carried on by Pandit Maharaj Kishan, M.B.E., the Superintendent, and Pandit Lala Sri Gopal, Assistant Superintendent. The principal crops are rice, maize, wheat and millet. About three-fifths of the State are occupied by forest and grazing lands. It is rich in minerals. The capital is Mandi, founded in 1527, which contains several temples and other buildings of interest and is one of the chief marts for commerce with Ladakh and Yarkhand.

Nabha.—Nabha which became a separate State in 1763 is one of the 3 Phulkian States—Nabha, Patiala and Jind, and though second in point of population and revenue of the 3 sister States, it claims seniority being descended from the eldest branch. It consists of two distinct parts, the main portion comprising 12 separate pieces of territory scattered among the other Punjab States and Districts, forms the City of Nabha and the *Nizamats* of Phul and Amloh; the second portion forms the *Nizamat* of Bawal in the extreme south-east of the Punjab on the border of Rajputana; this Nizamat of Bawal was subsequently added to its territory as a reward from the British Government for the loyalty of the Rulers of Nabha. The State now covers an area of about 1,000 square miles and has a population of about 3 lakhs. The present Ruler is Shri Maharaja Ripudaman Singhji Malavendra Bahadur, who was born in 1883 and succeeded his father in 1911. The administration of the State is carried on by His Highness the Maharaja assisted by a Council of Ministers. The High Court is the head of the Judicial Department. The State supports one battalion of Imperial Service Infantry consisting of 600 men; besides this there are local forces of infantry, cavalry and artillery, etc., consisting of about 1,000 men all told and also a Transport Corps. For the preservation of the peace there is a Police force consisting of about 600 men.

The State is traversed by the main and 3 branch lines of the N.-W. Railway and the Rajputana Malwa Railway crosses the *Nizamat* of Bawal. A large portion of the State is irrigated by the Sirhind Canal. The crops of the State are gram, pulses, bajra, sugarcane, cotton, wheat and barley; to facilitate trade the Darbar has opened grain markets and Banks near the principal railway stations within the State territory. The chief industries of the State consist of the manufacture of silver and gold ornaments, brass utensils, and cotton carpets, lace and *gota*, etc. There are some ginning factories and a cotton steam press in the State which are working successfully. The State has so far contributed roughly about 45 lakhs of rupees to the various funds and loans in connection with the War, including a fully equipped Hospital Ship for Mesopotamia, people of the State have subscribed about 13 akhs to the Indian War Loans.

Patiala.—This is the largest of the Phulkian States, and the premier State in the Punjab.

Its territory is scattered and interspersed with small estates and even single villages belonging to other States and British districts. It also comprises a portion of the Simla Hills and territory on the border of Jaipur and Alwar States. Area 5,932 square miles. Population 1,499,739. Gross income Rs. one crore and thirty five lakhs. Its history as a separate state begins in 1762. Thd present Ruler, Major-General His Highness Farzand-i-Khas Daulat-i-Inglishia Mansur-ul-Zaman Amir-ul-Umra Maharaja Dhiraj Rajeshwar Sri Maharaja-i-Rajgan Sir Bhupindra Sing Mohinder Bahadur, G.C.S.I., G.C.I.E., G.B.E., was born in 1891 and succeeded 1900, and assumed the reins of Government in 1909 on attaining majority His Highness the Maharaja Dhiraj enjoys at present personal salute of 19 guns and he and his successors the distinction of exemption from presenting Nazar to the Viceroy in Durbar in perpetuity. The principal crops are grain, barley, wheat, sugar-cane, rapeseed, cotton and tobacco. A great part of the State is irrigated by the Sirhind and Western Jumna Canal distributarics. It possesses valuable forests. The State is rich in antiquities, especially at Pinjaur, Sunam, Sirhind, Bhatinda, Narnaul, etc. Besides possessing a Railway line of its own, known as Rajpura-Bhatinda Railway of 108 miles in length, the North-Western Railway, the E. I. Railway, the B. B.& C. I. Railway and the J. B. Railway traverse the State. His Highness maintains an Imperial Service contingent of a regiment of cavalry and two battalions of infantry. In addition to this the State Regular Forces consist of one battery of Horse Artillery, one regiment of Cavalry and two battalions of Infantry.

Since the State has entered into alliance with the British Government in 1809, it has rendered help to the British Government on all occasions such as Gurkha War, Sikh War, Mutiny of 1857, Afghan War of 1878-79, Tirah and N. W. F. campaign of 1897.

On the outbreak of the European War His Highness placed the entire resources of his State at the disposal of His Majesty the King Emperor and offered his personal services. The entire Imperial Service Contingent was on active service throughout the period of the War and served on various fronts in Egypt, Gallipoli, Mesopotamia and Palestine, winning numerous distinctions. Two mule and one camel corps were raised and placed at the service of the British Government for the period of the War, and in addition to furnishing nearly 28,000 recruits for the British Indian Army and maintaining the State Imperial Service Contingent at full strength, contributed substantially in money and material.

His Highnes was selected by His Excellency the Viceroy to represent the Ruling Princes of India at the Imperial War Conference and Imperial War Cabinet in June 1918 and during his stay in Europe His Highness paid visits to all the different and principal fronts in Belgium, France, Italy and Egypt (Palestine) and received the following decorations from the allied Sovereigns and Governments:—(*a*) Grand Cross of the Order of Leopold, Belgium, (*b*) Legion of Honour, France and (*c*) Grand Cross of the Order of the Crown of Italy and (*d*) Grand Cordon of the Order of the Nile.

Again in 1919 on the outbreak of hostilities with Afghanistan His Highness served personally on the frontier on the Staff of the General Officer Commanding, and the Imperial Service Contingent was on active service towards Kohat and Quetta fronts.

Sirmur (Nahan).—This is a hilly State in the Himalayas under the Political control of the Commissioner of Ambala Division. It history is said to date from the 11th century. In the eighteenth century the State was able to repulse the Gurkha invasion, but the Gurkhas were invited to aid in the suppression of an internal revolt in the State and they in turn had to be evicted by the British. In 1857 the Raja rendered valuable services to the British, and during the second Afghan War he sent a contingent to the North-West Frontier. The present Chief is Lieut.-Colonel H. H. Maharaja Sir Amar Prakash Bahadur, K.C.S.I., K.C.I.E., who was born in 1888 and succeeded in 1911. The main agricultural feature of the State is the recent development of the Kiarda Dun, a fertile level plain which produces wheat, gram, rice, maize and other crops. The State forests are valuable and there is an iron foundry at Nahan which was started in 1867 but, being unable to compete with the imported iron, is now used for the manufacture of sugar-cane crushing mills. The State supports an Imperial Service Corps of Sappers and Miners which served in the Great War. It was captured with General Townshend's force at Kut-al-Amara but the Corps has since been reconstituted and has again gone on service.

UNDER THE GOVERNMENT OF BURMA.

Under this Government there are four Shan States, two in the Mandalay Division (Hkmati Long and Mong Mit); and two in the Sagaing Division (Hsawnghsup and Singkaling Hkmati), the area of which is 7,374 square miles and the population about 67,051, consisting chiefly of Buddhists. There are in addition 48 petty States, 5 in the Northern Shan States. 43 in the Southern Shan States, with an area of 58,835 square miles and a population of 1,358,498 consisting of Buddhists and Animists.

The Shan States—Though a portion of British India, do not form part of Burma proper and are not comprised in the regularly administered area of the Province. They lie for the most part to the east of Upper Burma. They owed allegiance to the Burmese Government, but were administered by their own rulers (Sawbwas) and the British Government has continued to a certain extent the semi-independence which it found existing in 1885. As at present defined, the Shan States are divided into—

1. States under the supervision of the Superintendent, Northern Shan States, whose headquarters are at Lashio; area 16,594 square miles and population 480,390.

2. States under the supervision of the Superintendent and Political Officer, Southern Shan States, whose headquarters are at Taunggyi; area 36,154 square miles and population 836,574.

There are five States in the Northern and 37 in the Southern Shan States. There are in addition two Shan States under the supervision of the Commissioner of the Mandalay Division, namely, Hkmati Long north of the Myitkyina District and Mong Mit lying northeast of the Ruby Mines District. In the northwest of the Upper Chindwin District towards Manipur there are two small Shan States, Hsawnghsup and Singkaling Hkmati, whose administration is supervised by the Commissioner of the Sagaing Division.

The Northern Shan States are North Hsenwi in the north, South Hsenwi near the Salween in the east, Manglon in the south-east, Hsipaw in the south-west, and Tawngpeng in the northwest. The Wa States east of the Salween can hardly be said to be under British control. In ordinary matters the States are administered by their Sawbwas, who are assisted by amats, or ministers, in various departments. The Superintendent exercises general control over the jurisdiction of justice and is vested with wide revisionary powers. In revenue matters the Sawbwas administer their States in accordance with local customs which have been but little modified. Of prime importance in the economy of the country is the Mandalay Lashio railway, 180 miles in length, of which 126 miles lie within the Northern Shan States The line is a single track, and was constructed in the face of considerable engineering difficulties, of which not the least notable was the Gokteik gorge, now spanned by a viaduct. It had been proposed to continue the railway about 90 miles farther east to the Kunlong, where is a ferry over the Salween, and eventually to penetrate into Yunnan; but this extension is for the present in abeyance.

The most important of the Southern Shan States are Kengtung and Yawnghwe. Under the supervision of the Superintendent and Political Officer and his Assistants, the chiefs —known as Sawbwas, Myozas, and Ngwegunhmus—control their own States, exercising revenue, civil and criminal jurisdiction therein. There are in all 10 Sawbwas, 18 Myozas and 9 Ngwegunhmus.

Karenni.—This district consists of five States, with a total area of approximately 4,280 square miles and a population of 63,628, lying on the frontier south of the Shan States. The largest State is Kantarawadi with an area of 3,000 square miles, a population of nearly 40,000, and a gross revenue of about 1¼ lakhs of rupees. More than half of the inhabitants belong to the Red Karens, a people low in the scale of civilisation. An Assistant Political Officer is posted at Loikaw as Agent of the British Government, and a certain amount of control is exercised through him over the chiefs. The principal wealth of the country is teak timber, and the considerable alien population is largely supported by the timber trade, which, however, has declined greatly in the last few years. The Karens themselves are distinguished as hunters.

UNDER THE GOVERNMENT OF ASSAM.

The only State of importance under the Chief Commissioner of Assam is **Manipur**, which has an area of 8,456 square miles and a population of 346,222, of which about 60 per cent. are Hindus, and 36 per cent. animistic forest tribes. Manipur consists of a great tract of hilly country and a valley, about 30 miles long 20 miles wide, which is shut in on every side. The State adopted Hinduism in the early eighteenth century, when it came under a Naga Raja, who subsequently made several invasions into Burma. On the Burmese retaliating, Manipur negotiated a treaty of alliance with the British, in 1762. The Burmese again invaded Manipur during the first Burmese War and on the conclusion of peace, in 1826, Manipur was declared independent. The chief event in its subsequent history was the intervention of the British in 1891 to establish the claim of Kula Chandra Singh as Maharaja, followed by the treacherous murder of the Chief Commissioner, Mr. Quinton and the officers with him and the withdrawal of the escort which accompanied him. From 1891 to 1908 the State was administered by a Political Agent and Superintendent of the State during the minority of H. H. Raja Chura Chand Singh, The Raja was invested with ruling powers in 1908. The administration of the State is now conducted by the Durbar, consisting of the Raja as President a vice-president, a member of the Indian Civil Service whose services are lent to the State, three ordinary and three additional members who are all Manipuris. The staple crop of the country is rice. Forests of great variety cover the whole of the hill ranges.

Khasi and Jaintia Hills.—These petty chiefships, 25 in number, with a total area of about 3,900 square miles and a population of 136,000, are included under the Government of Assam. Most of the States have treaties or engagements with the British Government. The largest of them is Khyrim, the smallest is Nonglewai, which has a population of 246. Most of them are ruled by a chief or Siem. The Siemship usually remains in one family, but the succession was originally controlled by a small electoral body constituted from the heads of certain priestly clans. Of recent years there has been a tendency to broaden the elective basis, and the constitution of a Khasi State has always been of a very democratic character, a Siem exercising but little control over his people. Among many of the north-east frontier tribes there is little security of life and property, and the people are compelled to live in large villages on sites selected for their defensive capabilities. The Khasis seem, however, to have been less distracted by internal warfare, and the villages, as a rule, are small.

UNDER THE GOVERNMENT OF THE CENTRAL PROVINCES.

The Central Provinces include fifteen feudatory States subordinate to the administration, with an area of 31,174 square miles and a population of 2,117,002. One of the States, Makrai, lies within Hoshangabad District; the remainder are situated in the Chhattisgarh Division, to the different districts of which they were formerly attached. Their relations with Government are controlled by a Political Agent. The States vary greatly in size and importance. Sakti, the smallest, having an area of 138 square miles and Bastar the largest an area of 13,062 square miles. They are administered by hereditary chiefs, who hold on conditions of loyalty and good government set forth in patents and acknowledgments of fealty, but are nominally free from direct interference save in the case of sentences of death, which require the Chief Commissioner's confirmation. But, as a fact, the Government has exercised a very large amount of control, owing mainly to the frequency with which the States have been taken under direct management, because of either the minority or the misconduct of the chief.

The States pay a tribute to Government which amounts in the aggregate to about 2½ lakhs.

Statistics relating to the chief States are contained in the following table:—

State	Area.	Population 1911.	Revenue (approximate) in Lakhs.
	Sq. Miles.		
Bastar ..	13,062	433,310	3
Jashpur ..	1,963	174,458	1
Kanker ..	1,429	127,014	2
Khairagarh ..	931	155,471	3
Nandgaon ..	871	167,362	4
Raigarh ..	1,486	218,860	2
Surguja ..	6,055	248,703	2
Eight other States.	5,377	411,824	6
Total ..	31,174	2,117,002	23

Bastar.—This State, which lies to the south-east corner of the Provinces, is the most important of the group. It has an area of 13,062 square miles and a population of 433,310. The family of the Raja is very ancient, and is stated to belong to the Rajputs of the Lunar race. Up to the time of the Marathas, Bastar occupied an almost independent position, but a tribute was imposed on it by the Nagpur government in the eighteenth century. At this period the constant feuds between Bastar and the neighbouring State of Jeypore in Madras kept the country for many years in a state of anarchy. The chief object of contention was the Kotpad tract, which had originally belonged to Bastar, but had been ceded in return for assistance given by Jeypore to one of the Bastar chiefs during some family dissensions. The Central Provinces Administration finally made this over to Jeypore in 1863, on condition of payment of tribute of Rs. 3,000, two-thirds of which sum was remitted from the amount payable by Bastar. By virtue of this arrangement the tribute of Bastar was, until recently, reduced to a nominal amount. The cultivation of the State is extremely sparse. Rice is the most important crop. The State is ruled by the feudatory Chief, Raja Rudra Pratap Deo. He is a Donat of the Order of St. John of Jerusalem. The Dewan of the State (Khan Bahadur Hafiz Mohammad Walayatullah) is an extra Assistant Commissioner of the Central Provinces on deputation who has three assistants under him. After a recent period of disturbance the State has returned to complete tranquillity and precautions are being taken to remove all causes of unrest by better supervision over the minor State officials and a very considerate forest policy. The chief town is Jadgalpur on the Indravati River. The famous falls on the Indravati called the Chitrakote are 23 miles away from Jagdalpur.

Surguja.—Until 1905 this was included in Chota Nagpur State of Bengal. The most important feature is the Manipat, a magnificent tableland forming the southern barrier of the State. The early history of Surguja is obscure; but according to a local tradition in Palamau, the present ruling family is said to be descended from a Raksel Raja of Palamau. In 1758 a Maratha army overran the State, and compelled its chief to acknowledge himself a tributary of the Bhonsla Raja. At the end of the eighteenth century, in consequence of the Chief having aided a rebellion in Palamau against the British, an expedition entered Surguja; and, though order was temporarily restored, disputes again broke out between the Chief and his relations; necessitating British interference. Until 1818 the State continued to be the scene of constant lawlessness; but in that year it was ceded to the British Government under the provisional agreement concluded with Mudhoji Bhonsla of Berar, and order was soon established. The principal crops are rice and other cereals. The present Chief of the State is Maharaja Ramanuj Saran Singh Deo, C.B.E., who succeeded to the *gadi* in 1918 and enjoys full powers of a Feudatory Chief.

KASHMIR.

Kashmir (known to Indians as Jammu) lies to the east of the Indus and to the west of the Ravi. It is a mountainous country with just a strip of level land along the Punjab frontier, and intersected by valleys of which many are of surpassing beauty and grandeur. It may be divided physically into two areas: the north-eastern comprising the area drained by the Indus with its tributaries, and the south-western, including the country drained by the Jhelum, the Kishanganga and the Chenab. The dividing line between those two areas is the great central mountain range. The area of the State is 84,432 square miles, and the population 3,158,126.

HISTORY.—Various poets have left more or less trustworthy records of the history of the valley down to 1586, when it was conquered by Akbar. Srinagar, the capital, had by then been long established, though many of the fine buildings erected by early Hindu rulers had been destroyed by the Mahomedan kings who first appeared in the 12th century. In the reign of Sikandar the population became almost entirely Mahomedan. Akbar visited the valley three times. Jehangir did much to beautify it; but after Aurangzebe there was a period of disorder and decay, and by the middle of the eighteenth century the *Subah* of Kashmir was practically independent of Delhi. Thereafter it experienced the oppression of Afghan rule until it was rescued, in 1819, by an army sent by Ranjit Singh. Sikh rule was less oppressive than that of the Afghans. The history of the State as at present constituted is practically that of one man, a Dogra Rajput, Gulab Singh of Jammu. For his services to the Sikhs this remarkable man had been made Raja of Jammu in 1820, and he added largely to his territory by conquest. He held aloof from the war between the British and the Sikhs, only appearing as mediator after the battle of Sobraon (1846) when the British made over to him for Rs. 75 lakhs the present territories of the State. He had to fight for the valley and subsequently lost part of his State, Gilgit, over which the successors had at a heavy cost to reassert their claims. His son Ranbir Singh, a model Hindu, ruled from 1857 to 1885, when he was succeeded by his eldest son Major-General H. H. Maharaja Sir Partab Singh, G.C.S.I., G.C.I.E., G.B.E., LL.D., &c.

ADMINISTRATION.—For some years the administration of the State was conducted by a Council over which the Maharaja presided. In 1905 enhanced ruling powers were granted to His Highness, the State Council being abolished. Recently His Highness has been invested with the full powers of administration and authority enjoyed by his ancestors. In all matters of administration His Highness is assisted by a Chief Minister, a Revenue Minister, a Home Minister and a Judge of the High Court. General Raja Sir Hari Singh K.C.I.E. is in charge of the Military affairs as Commander-in Chief of the State Army. The portfolio of Chief Minister is held by Major General Rai Bahadur DeWan Bishen Das C.I.E., C.S.I. The British Resident has his headquarters at Srinagar; there is also a Political Agent at Gilgit responsible to the Government of India for the administration of the outlying petty States; and a British Officer is stationed at Leh to assist in the supervision of Central Asian trade. In the Dogras the State has splendid materials for an Army, which consists of 6,961 troops, of whom 3,370 are maintained as Imperial Service troops.

FINANCE.—The financial position of the State is strong, and it has more than 46 lakhs invested in Government of India securities. The total revenue last year was 93 lakhs, the chief items being land revenue, forests, customs and octroi.

PRODUCTION AND INDUSTRY.—The population is pre-eminently agricultural and pastoral. The system of land tenure has been described as "ryotwari in ruins," great complexity existing owing to the fact that there is no local law of rent and revenue. The principal food crop is rice, maize, cotton, saffron, tobacco, hops (autumn crops) and wheat, barley, poppy, beans (spring crops) are also grown. Sheep are largely kept. The State forests are extensive and valuable. A survey of the mineral resources of the State is being conducted under an expert. Vast fields of friable, dusty coal have been found. Gold has been found at Gulmarg, Sapphires in Padar Aquamarine in Skardu and lead in Uri. The industries of manufacture are chiefly connected with sericulture (the silk filature at Srinagar, the largest in the world, was destroyed by fire in July 1912), and oil-pressing The woollen cloth, shawls, and wood carving of the State are famous.

COMMUNICATIONS.—Great efforts have been made and are being made towards the improvement of wheeled traffic in the Kashmir State. The Jhelum Valley Road (196 miles) which links the Kashmir Valley with the Punjab and the North Western Province is used by wheeled traffic of sorts, *viz.*, Ekkas, Tangas, Carts, Motor Cars and Motor Lorries. The Banihal Cart Road (nearly as long as the Jhelum Valley Road) which is nearing completion, will soon join Kashmir with the Jammu Tawi Railway Station. Roads fit for pack-animals lead from Srinagar, the summer Capital of Kashmir, to the frontier districts of Gilgit and Leh. Internal village communications have also been much improved.

PUBLIC WORKS.—In 1904, a flood spill channel above Srinagar was constructed with a view to minimising the constant risk of floods; and it was hoped that the danger would be still further reduced by the carrying out of a scheme for lowering a part of the bed of the Jhelum, which has since been taken in hand. Good progress has been made with irrigation; but the most important schemes of recent years have been those for an electrical power station on the Jhelum River, and for a Railway into Kashmir. It was proposed to supply from this power station electrical energy for various State schemes (including the Jhelum dredging scheme) and for private enterprise and possibly for working the proposed Kashmir Railway. The works were completed about 1907, and the scheme according to the latest reports is working very satisfactorily. The proposal for a railway to Kashmir had been held in abeyance for the present.

EDUCATION.—In education Kashmir is still backward. In the State as a whole only 2 in every 100 persons can read and write. The number of educational institutions including two Colleges is 715.

Resident:—Lieut-Col. C. J. Windham, C.I.E.

Political Agent at Gilgit—Major D. L. R. Lorimer, C.I.E.

THE CHAMBER OF PRINCES.

The Report on Indian constitutional reforms by Mr. Montagu and Lord Chelmsford stated that it was desired to call into existence a permanent consultative body which would replace the conference of Princes which had periodically met at the invitation of the Viceroy. After pointing out the need for regular meetings of the Council, the Report said:—"We contem-

plate that the Viceroy should be **president**, and should as a rule preside, but that in his absence one of the Princes should be chairman. The rules of business would be framed by the Viceroy after consultation with the Princes, who might from time to time suggest modifications in the rules."

It was further suggested in the joint report that the Council of Princes should be invited annually to appoint a small **standing committee**, to which the Viceroy or the Political Department might refer decisions affecting the Native States, particularly questions dealing with custom or usage. The Joint Report also made recommendations for the appointment of commissions to inquire into disputes in which Native States might be concerned and into cases of misconduct, and for arranging for joint deliberation on matters of common interest between the Council of State and the Council of Princes.

At the end of January 1919 a Conference of the Ruling Princes was held at Delhi, to consider this scheme. The subject which gave rise to the longest discussion was the proposal in the Reform Scheme to divide the Native States into two categories, those possessing "full powers" of internal government and those not having such powers. Some of the Princes held that membership of the Council of Princes should be limited to the rulers enjoying full powers, whilst others considered that some measure of representation ought to be given to the smaller States; and the Conference came to no agreement on the matter. The proposal to institute a Council of Princes received, however, general support, and it was suggested that the new House should be called the **Narendra Mandal** (House of Princes)

The recommendations of the Conference were then placed before the Secretary of State, and in the next Conference held in November 1919 Lord Chelmsford propounded a general scheme for a Chamber of Princes approved by His Majesty's Government. The Conference after debating the question passed a resolution warmly accepting the scheme and expressing an earnest hope that the Chamber might be brought into existence during the ensuing year. On the occasion of the **formal inauguration** of the Chamber of Princes Lord Chelmsford, describing how he enlisted the advice and criticism of the Codification Committee of Princes which had been appointed by the Conference and how with their assistance the drafts of the Constitution of the Chamber with the first Regulations and Rules of Business, and the draft resolution concerning Courts of Arbitration and Commissions of Enquiry were moulded into practical shape, explained that difficulties had arisen in the selection of a suitable Indian designation for the Chamber which would for the present be known by the English title of the Chamber of Princes. He also said that another point on which the published constitution differed from the wording favoured by the Committee of Princes was the absolute prohibition of the discussion in the Chamber of the internal affairs of individual States and the actions of individual Rulers. The main function of the Chamber was to discuss matters affecting the States generally or of common concern to the States and to British India or the Empire at large. As regards the question of direct relations between the Government of India and the important States, a recommendation had been made to the Secretary of State for the transfer of the more important States in the Bombay Presidency, according to a scheme prepared by a special Committee, to be carried into effect at some future date, when the conditions appear to be favourable. A scheme would also shortly be placed before His Majesty's Government for the bringing of the important States of the Punjab into direct relations with the Government of India as soon as the necessary arrangements could be made. Gwalior State would soon be brought into direct touch with the Central Government through a Resident who would be independent of the Central India Agency and some of the Rajputana States, which were formerly in relations with a Local Resident, were now in direct relations with the Agent to the Governor-General in Rajputana.

The Chamber was formally inaugurated by the Duke of Connaught on February 8th, 1921.

Indian States' Tribute.

Many of the States pay tribute, varying in amount according to the circumstances of each case, to the British Government. This tribute is frequently due to exchanges of territory of settlement of claims between the Governments, but is chiefly in lieu of former obligations to supply or maintain troops. The actual annual receipts in the form of tribute and contributions from Indian States are summarised in the following table. The relations of the States to one another in respect of tributes are complicated, and it would serve no useful purpose to enter upon the question. It may, however, be mentioned that a large number of the States of Kathiawar and Gujarat pay tribute of some kind to Baroda, and that Gwalior claims tribute from some of the smaller States of Central India:—

States paying tribute directly to the Government of India.

	£
Tribute from Jaipur	20,667
„ „ Kotah	15,648
„ „ Udaipur	13,333
„ „ Jodhpur	6,533
„ „ Bundi	8,000
„ „ Other States	15,170
Contribution of Jodhpur towards cost of Erinpura Irregular Force	7,667
„ of Kotah towards cost of Deoli Iregular Force	13,333
„ of Bhopal towards cost of Bhopal Levy	10,753
„ of Jaora towards cost of United Malwa Contingent	9,142
Contributions towards cost of Malwa Bhil Corps	2,280
Central Provinces and Berar.	
Tribute from various States	15,696
Burma.	
Tributes from Shan States	28,524
„ „ other States	1,367
Assam.	
Tribute from Manipur	333
„ „ Rambrai	7
Bengal.	
Tribute from various States	4,514 (Cooch Behar).
United Provinces.	
Tribute from Benares	14,600
„ „ Kapurthala (Bahraich)	8,733
Punjab.	
Tribute from Mandi	6,667
„ „ other States	3,086
Madras.	
Tribute from Travancore	53,333
Peshkash and subsidy from Mysore	233,333
„ „ „ „ Cochin	13,333

Tribute from Kathiawar	31,129
„ „ various petty States	2,825
Contribution from Baroda States	25,000
„ „ Jagirdars, Southern Mahratta Country	5,765
Tribute from Cutch	5,484

It was announced at the Coronation Durbar of 1911 that there would in future be no Nazarana payments on successions.

Foreign Possessions in India.

Portugal and France both hold small territorial possessions in the Indian Peninsula.

The Portuguese possessions in India consist of the province of Goa, situated within the limits of the Bombay Presidency, on the Arabian Sea coast; the territory of Daman with the small territory called Pragana-Nagar Avely on the Gujarat coast, at the entrance to the Gulf of Cambay; and the little island of Diu, with two places called Gogla and Simbor, on the southern extremity of the Kathiawar Peninsula.

GOA.

Goa forms a compact block of territory surrounded by British districts. Savantwadi State lies to the north of it, the Arabian Sea on the west and North Kanara on the south, and the eastern boundary is the range of the Western Ghats, which separates it from the British districts of Belgaum and North Kanara. The extreme length from north to south is 62 miles and the greatest breadth from east to west 40 miles. The territory has a total area of 1,301 square miles and consists of the *Velhas Conquistas*, or Old Conquests, comprising the island of Goa, acquired by the Portuguese in 1510, and the neighbouring municipalities of Salcete, Bardez and Murmugao acquired in 1543; and of the *Novas Conquistas*, or New Conquests, comprising the municipalities of Pernem, Sanquelim, Ponda, Quepem, Canacona, Satari and Sanguem acquired in the latter half of the 18th century. The small island of Angediva situated opposite the port of Karwar, in the British district of North Kanara, forms Administratively a portion of the Canacona municipality. This was acquired in 1505. The whole country is hilly, especially the eastern portion, the predominating physical feature being the Western Ghats, which besides bounding the country along the north-east and south-east, jut off westward and spread across the country in a succession of spurs and ridges. There are several conspicuous isolated peaks, of which the highest, Songsagar, is 3,827 feet high.

The country is intersected by numerous rivers running westward from the Ghats, and the principal eight, which are all navigable, are in size of some importance. Goa possesses a fine harbour, formed by the promontaries of Bardez and Salsette. Half-way between these extremities lies the *cabo*, or cape, which forms the extremity of the island of Goa. This divides the whole bay into two anchorages, known as Aguada and Marmagao. Both are capable of accommodating the largest shipping from September to May, but Aguada is virtually closed during the south-west monsoon, owing to the high winds and sea and to the formation of sand bars across the estuary of the Mandovi river, which opens into Aguada. Marmagao is accessible at all times and is therefore the harbour of commercial importance. It is the terminus of the railway running to the coast from the inland British system of lines, a breakwater and port have been built there and the trade is considerable, being chiefly transit trade from British territory.

The People.

The total population in the whole Goa territory was 486,752 at the census of 1910. This gives a density of 343 persons to the square mile and the population showed an increase of 6 per cent. since the census ten years previously. In the Velhas Conquistas 91 per cent. of the population is Christian. In the Novas Conquistas Christians and Hindus are almost equally numerous. The Moslems in the territory are numbered in a few thousands. The Christians still very largely adhere to caste distinctions, claiming to be Brahmans, Charados and low castes, which do not intermarry. The Hindus are largely Maratha and do not differ from those of the adjacent Konkan districts of Bombay. All classes of the people, with the exception of Europeans, use the Konkani dialect of Marathi, with some admixture of Portuguese words. The official language is Portuguese, which is commonly spoken in the capital and the principal towns, as well as by all educated people. Nearly all the Christians profess the Roman Catholic religion and are spiritually subject to an archbishop, who has the titles of Primate of the East and Patriarch of the East Indies and exercises ecclesiastical jurisdiction also over a great portion of British India. (The Christians of Daman and Diu are subject to a Bishop who bears the titles of Bishop of Daman and Archbishop of Cranganore.) There are numerous churches in Goa, mostly built by the Jesuits and Franciscans prior to the extinction of the religious orders in Portuguese territory. The churches are in charge of secular priests. Hindus and Mahomedans now enjoy perfect freedom in religious matters and have their own places of worship. In the early days of Portuguese rule the worship of Hindu gods in public and the observance of Hindu usages were strictly forbidden and rigorously suppressed.

The Country.

One-third of the entire territory of Goa is stated to be under cultivation. A regular land survey was only recently made. The fertility of the soil varies considerably according to quality, situation and water-supply. The Velhas Conquistas are as a rule better cultivated than the Novas Conquistas. In both these divisions a holding of fifteen or sixteen acres would be considered a good sized farm, and the majority of holdings are of smaller extent. The staple produce of the country is rice, of which there are two good harvests, but the quantity produced is barely sufficient to meet the needs of the population for two-thirds of the year. Next to rice, the culture of cocoanut palms is deemed most important, from the variety of uses to which the products are applied. Hilly places and inferior soils are set apart for the cultivation of cereals and several kinds of fruits and vegetables are cultivated to an important extent. The condition of the agricultural classes in the Velhas Conquistas has improved during recent years,

owing to the general rise in the prices of all classes of agricultural produce and partly to the current of emigration to British territory. Stately forests are found in the Novas Conquistas. They cover an area of 116 square miles and are under conservation and yield some profit to the administration. Iron is found in parts of the territory; but has not been seriously worked. Manganese also exists and was worked to an important extent a few years ago.

Commerce.

In the days of its glory, Goa was the chief entrepot of commerce between East and West and was specially famous for its trade in horses with the Persian Gulf. It lost its commercial importance with the downfall of the Portuguese empire and its trade is now insignificant. Few manufacturing industries of any moment exist, and most manufactured articles in use are imported. Exports chiefly consist of cocoanuts, betel nuts, mangoes and other fruits and raw produce. A line of railway connects Marmagao with the Madras and Southern Mahratta Railway. Its length from Marmagao to Castle Rock, above the Ghats, where it joins the British system, is 51 miles, of which 49 are in Portuguese territory. The railway is under the management of the Madras and Southern Mahratta Railway administration, and the bulk of the trade of Marmagao port is what it brings down from and takes to the interior. The telegraphs in Goa territory are worked as part of the system of British India, and are maintained jointly by the British and Portuguese Governments. The Goa territory was formerly subject to devastating famines and the people now suffer heavy losses in times of drought. They are then supplied, though at great cost, with rice from British territory.

The Capital.

Nova Goa, the present capital of Portuguese India, comprehends Panjim and Ribandar, as well as the old city of Goa, and is six miles in extent. Old Goa is some five miles distant from the new city. Panjim occupies a narrow strip of land leading up to the Cabo, the cape dividing the Aguada bay from that of Marmagoa, and mainly slopes down to the edge of the Aguada. It was selected as the residence of the Portuguese Viceroy in 1759, and in 1843 it was raised to its present rank as the capital of Portuguese India. The appearance of the city, with its row of public buildings and elegant private residences, as seen from the water, is very picturesque and this impression is not belied by a closer inspection of its neat and spacious roads, bordered by decent, tidy houses. The most imposing public structures are the barracks, an immense quadrangular building the eastern wing of which accommodates the Lyceum, the Public Library and the Government Press. Other noticeable buildings are the Cathedral and various churches, the vice-regal palace, the High Court and so on. The square in the lower part of the town is adorned with a life-sized statue of Albuquerque standing under a canopy.

History.

Goa was captured for the Portuguese by Affonso de Albuquerque in 1510. Albuquerque promptly fortified the place and established Portuguese rule on a firm basis. From this time Goa rapidly rose in importance and became the metropolis of Portuguese power in the East. There was constant fighting with the armies of the Bijapur kingdom, but the Portuguese held their own and gained the surrounding territory now known as the Velhas Conquistas.

The subsequent history of the town is one of ostentation and decay. Goa reached its summit of prosperity at the end of the sixteenth century. The accounts of travellers show that the Goa of those days presented a scene of military, ecclesiastical and commercial magnificence which has had no parallel in the British capitals of India. But the Portuguese based their dominion in India on conquest by the sword and they laboured to consolidate it by a proselytizing organisation which throws the missionary efforts of every other European power in India into the shade. Old Goa, as the ruins of the old capital are called to-day, had a hundred churches, many of them of magnificent proportions, and the Inquisition which was a power in the land. The result showed how rotten was this basis and how feebly cemented the superstructure reared upon it.

Modern Times.

There was frequently recurring fighting and in 1741 the Marathas invaded the neighbourhood of Goa and threatened the city itself. An army of 12,000 men arrived from Portugal at the critical moment. The invaders were beaten off, and the Novas Conquistas were added to the Portuguese possessions. In 1844 the shelter given by Goa to fugitives from justice in British territory threatened to bring about a rupture with the British Government at Bombay. In 1852 the Ranes of Satari, in the Novas Conquistas revolted. In 1871 the native army in Goa mutinied and the king's own brother came from Lisbon to deal with the trouble and having done so disbanded the native army, which has never been reconstituted. But another outbreak among the troops took place in 1895 and the Ranes joining them the trouble was again not quieted until the arrival of another special expedition from Lisbon. The Ranes again broke out in 1901 and again in 1912, troops being again imported to deal with the last outbreak, which was only reported concluded in the summer of 1913.

Administration.

The Lisbon Government by Decree No. 3266, dated 27th July 1917, enacted new rules regarding the administration of Portuguese India under an Organic Charter (Carta Organica) in force since 1st July 1919. This Charter, regarding civil and financial administration of the colony was modified by rules Nos. 1005 and 1022, dated 7th and 20th August 1920, and decrees Nos. 7008 and 7030, dated 9th and 16th October.

As the principal organ of administration next to the Governor-General, and in collaboration with him, are working two councils—Legislative and Executive. The Executive Council is composed by the Governor-General, His Excellency Zaime Alberto de Castro Morais, Attorney General and four chiefs of Services appointed yearly by the

Governor-General subject to the approval of the Executive Power, and a member appointed yearly under identical circumstances. These chiefs in the present year are: the Secretary General, the Director of Public Works, the Head of Marine Department and the Director of Finances.

The Legislative Council is constituted by the member of the Executive Council and by non-official members. These members are: one representative for the Ilhas Municipality, one for the Bardez Municipality, one for the Marmugao and Salcete Municipalities, one for the Novas Conquistas Municipalities, one for the district of Daman and one for district of Diu; one citizen elected by the Commercial and Industrial Associations; one citizen elected by 90 highest tax payers; one citizen elected by the Associations of Agriculture and of Landowners; one citizen elected by the Attorneys of the Communities and one citizen elected by the Associations of Class.

Under the Presidency of the Governor of each district there is District Council, which in Goa is composed of—the Secretary General, President; the Attorney General's Delegate at the Civil Court of the Islands; the Deputy Chief Health Officer; the Engineer next to the Director of Public Works: the Deputy Director of Finances; the Chairman of the Municipal Corporation of the Islands; one member elected by the Commercial and Industrial Associations of the district one member elected by the 60 highest tax payers of Goa; one member elected by the Associations of Landowners and Farmers of the District and one member advocates elected by the Legislative Council among the legally qualified.

At Daman and Diu the corresponding body is composed of the local Governor as President, the Delegate of the Attorney General, the Chief of the Public Works Department, the Health Officer, the Financial Director of the district, the Chairman of the Municipal Corporation, two members elected by 40 highest tax payers of the District and one member elected by the Merchants, Industrialists and Farmers of the district.

Under the provisions of the above quoted Decree is also officiating in the capital of Portuguese India a special tribunal to take cognizance and decide all litigious administrative matters, fiscal questions and accounts. It is named *Tribunal Administrative Fiscaleds Contas* and is composed of the Chief Justice as President, two High Court Judges, the Fiscal Auditor and the citizens who are not government officers nor belong to the administration, bodies of corporations, whether they may be or may not be on acutal duty, elected by the Legislative Council, two of whom are advocates and the third a merchant, industrialist or landowner or a highest tax payer. In the decision of matters of account the Director of Finances also sits on the special tribunal.

Under the presidency of the Governor-General the following bodies are also working:—

Technical Council of Public Works.—Its members are all engineers on permanent duty in the head office, a military officer of highest rank in the army or navy, the Director of Finances, the Attorney-General, the Chief Health Officer and a Secretary being a clerk of the Public Works Department appointed by the Director of Public Works.

Council of Public Instruction.—This is composed of three members appointed by Government and six elected among the Professors, there being one elected by the Medical College of Nova-Goa, two by the Lyceum of Nova-Goa, one by the Commercial Institute, one by the Normal School and one by the Corporation of the Professors of Primary Instruction.

There is also Financial Council composed by the Fiscal Auditor and by the Judges of both Civil and Criminal Jurisdictions of the Judicial division of Ilhas.

DAMAN.

The settlement of Daman lies at the entrance to the Gulf of Cambay, about 100 miles north of Bombay. It is composed of two portions, namely, Daman proper, lying on the coast, and the detached pargana of Nagar Aveli, separated from it by a narrow strip of British territory and bisected by the B. B. & C. I. Railway. Daman proper contains an area of 22 square miles and 26 villages and has a population (1910) of 18,300. Nagar Aveli has an area of 60 square miles and a population (1910) of 29,020. The town of Daman was sacked by the Portuguese in 1531, rebuilt by the natives and retaken by the Portuguese in 1558, when they made it one of their permanent establishments in India. They converted the mosque into a church and have since built eight other places of worship. Of the total population the number of Christians is 1,586. The number of houses is 8,971, according to the same census. The native Christians adopt the European costume, some of the women dressing themselves after the present European fashion, and others following the old style of petticoat and mantle once prevalent in Spain and Portugal.

The soil of the settlement is moist and fertile especially in the pargana of Nagar Aveli, but despite the ease of cultivation only one-twentieth part of the territory is under tillage. The principal crops are rice, wheat, the inferior cereals of Gujarat and tobacco. The settlement contains no minerals. There are stately forests in Nagar Aveli, and about two-thirds of them consist of teak, but the forests are not conserved and the extent of land covered by each kind of timber has not been determined. Before the decline of Portuguese power in the East, Daman carried on an extensive commerce, especially with the east coast of Africa. In those days it was noted for its dyeing and weaving.

The territory forms for administrative purposes a single district and has a Municipal Chamber and Corporation. It is ruled by a Governor invested with both civil and military functions, subordinate to the Governor-General of Goa. The judicial department is administered by a judge, with an establishment composed of a delegate of the Attorney-General and two clerks. In Nagar Aveli the greater part of the soil is the property of the Government, from whom the cultivators hold their tenures direct. A tax is levied on all lands, whether alienated or the property of the State. The chief sources of revenue are land-tax, forests, excise and customs duties.

DIU.

Diu is an island lying off the southern extremity of the Kathiawar Peninsula, from which it is separated by a narrow channel through a considerable swamp. It is composed of three portions, namely, Diu proper (island), the village of Gogla, on the Peninsula, separated by the channel, and the fortress of Simbor, about 5 miles west of the island. It has a small but excellent harbour, where vessels can safely ride at anchor in two fathoms of water and owing to the great advantages which its position offers for trade with Arabia and the Persian Gulf, the Portuguese were fired at an early period with a desire to obtain possession of it. This they gained, first by treaty with the Sultan of Gujarat and then by force of arms. Diu became opulent and famous for its commerce. It has now dwindled into insignificance. The extreme length of the island is about seven miles and its breadth, from north to south, two miles. The area is 20 square miles. The population of the town of Diu, from which the island takes its name, is said to have been 50,000 in the days of its commercial prosperity. The total population of the island, according to the census of 1910, is 14,170, of whom 271 were Christians.

FRENCH POSSESSIONS.

The French possessions in India comprise five Settlements, with certain dependent lodges, or plots. They aggregate 203 square miles, and had a total population in 1912 of 282,386. The first French expedition into Indian waters, with a view to open up commercial relations, was attempted in 1603. It was undertaken by private merchants at Rouen, but it failed, as also did several similar attempts which followed. In 1642 Cardinal Richelieu founded the first Campagnie d'Orient, but its efforts met with no success. Colbert reconstituted the Company on a larger basis in 1664, granting exemption from taxes and a monopoly of the Indian trade for fifty years. After having twice attempted, without success, to establish itself in Madagascar, Colbert's Company again took up the idea of direct trade with India and its President, Caron, founded in 1668 the Comptoir, or agency, at Surat. But on finding that city unsuited for a head establishment he seized the harbour of Trincomalee in Ceylon from the Dutch. The Dutch, however, speedily retook Trincomalee; and Caron, passing over to the Coromandel coast, in 1672 seized St. Thome, a Portuguese town adjoining Madras, which had for twelve years been in the possession of Holland. He was, however, compelled to restore it to the Dutch in 1674.

The ruin of the Company seemed impending when one of its agents, the celebrated Francois Martin, suddenly restored it. Rallying under him a handful of sixty Frenchmen, saved out of the wreck of the settlements at Trincomalee and St. Thome, he took up his abode at Pondicherry, then a small village, which he purchased in 1683 from the Raja of Gingee. He built fortifications, and a trade began to spring up; but he was unable to hold the town against the Dutch, who wrested it from him in 1693, and held it until it was restored to the French by the Peace of Ryswick in 1697. Pondicherry became in this year, and has ever since remained, the most important of the French Settlements in India. Its foundation was contemporaneous with that of Calcutta. Like Calcutta, its site was purchased by a European Company from a native prince, and what Job Charnock was to Calcutta Francois Martin proved to Pondicherry. On its restitution to the French by the Peace of Ryswick in 1697, Martin was appointed Governor, and under his able management Pondicherry became an entrepot of trade.

Chandernagar, in Lower Bengal, had been acquired by the French Company in 1688, by grant from the Delhi Emperor; Mahé, on the Malabar Coast, was obtained in 1725-6, under the government of M. Lenoir; Karikal, on the Coromandel Coast, under that of M. Duma, in 1739. Yanam, on the coast of the Northern Circars, was taken possession of in 1750, and formally ceded to the French two years later.

Administration.

The military command and administration-in-chief of the French possessions in India are vested in a Governor, whose residence is at Pondicherry. The office is at present held by Monsieur L Gerbinis. He is assisted by a Chief Justice and by several "Chefs de Service" in the different administrative departments. In 1879 local councils and a council-general were established, the members being chosen by a sort of universal suffrage within the French territories. Seventeen Municipalities, or Communal Boards, were erected in 1907, namely, Pondicherry, Arlancoupam, Modeliarpeth, Oulgaret, Villenour, Tirouboúvane, Bahour and Nettapacam, for the establishment of Pondicherry; Karikal, Neravy, Nedouncadou, Tirunalar, Grande Aldée, Cotchéry, for the establishment

of Karikal, and also Chandernagar, Mahé and Yanam. On municipal boards natives are entitled to a proportion of the seats. Civil and criminal courts, courts of first instance and a court of appeal compose the judicial machinery. The army and establishments connected with the Governor and his staff at Pondicherry, and those of administrators at Chandernagar, Yanam, Mahe and Karikal, together with other headquarters charges, necessarily engioss a large proportion of the revenue. All the state and dignity of an independent Government, with four dependent ones, have to be maintained. This is effected by rigid economy, and the prestige of the French Government is worthily maintained in the East. Pondicherry is also the scene of considerable religious pomp and missionary activity. It forms the seat of an Archbishop, with a body of priests for all French India; and of the Missions Etrangeres, the successors of the Mission du Carnatic founded by the Jesuits in 1776. But the chief field of this mission lies outside the French Settlements, a large proportion of its Christians are British subjects and many of the churches are in British territory. The British rupee is the ordinary tender within French territories. A line of railway running *via* Villenour, from Pondicherry to Villupuram on the South Indian Railway, maintains communication with Madras and the rest of British India, and Karikal is linked to the same railway by the branch from Peralam. A Chamber of Commerce consisting of fifteen members, nine of them Europeans or persons of European descent, was reorganised by a decree of 7th March, 1914. The capital, Pondicherry, is a very handsome town, and presents, especially from the sea, a striking appearance of French civilisation.

People and Trade.

The Settlements are represented in Parliament at Paris by one senator and one deputy. These are at the present time Mons. E. Flandin and Mons. P. Bluysen, respectively. There were in 1920, 56 primary schools and 3 colleges, all maintained by the Government, with 240 teachers and 7,848 pupils Local revenue and expenditure (budget of 1921) Rs. 24,57,850. The principal crops are paddy, groundnut, and ragi. There are at Pondicherry 5 cotton mills, and at Chandernagar 1 jute mill; the cotton mills have, in all, 1,628 looms and 70,376 spindles, employing12,020 persons. There are also at work one oil factory and a few oil presses for groundnuts, one ice factory, one ironworks and a cocotine factory. The chief exports from Pondicherry are oil seeds. At the ports of Pondicherry, Karikal, and Mahé in 1920 the imports amounted to 673,076,798 francs and the exports to 23,805,649 francs. At these three ports in 1920, 244 vessels entered and cleared. Tonnage 42,343 T825. Pondicherry s visited by French steamers, sailing monthly between Colombo and Calcutta in connection with the Messageries Maritimes. The figures contained in this paragraph are the latest available and are corrected up to December 1920.

PONDICHERRY.

Pondicherry is the chief of the French Settlements in India and its capital is the headquarters of their Governor. It is situated on the Coromandel Coast, 105 miles from Madras by road and 122 by the Villupuram-Pondicherry branch of the South Indian Railway. The area of the Settlement is 115 square miles and its population in 1921 was 269,579. It consists of the four communes of Pondicherry. The Settlement was founded in 1674 under Francois Martin. In 1693 it was captured by the Dutch but was restored in 1699. It was besieged four times by the English. The first siege under Admiral Boscawen in 1748 was unsuccessful. The second, under Eyre Coote in 1761, resulted in the capture of the place, which was restored in 1765. It was again besieged and captured in 1778 by Sir Hector Munro, and the fortifications were demolished in 1779. The place was again restored in 1785 under the Treaty of Versailles of 1783. It was captured a fourth time by Colonel Braithwaite in 1793, and finally restored in 1816.

The Settlement comprises a number of isolated pieces of territory which are cut off from the main part and surrounded by the British District of South Arcot, except where they border on the sea. The Collector of South Arcot is empowered to deal with ordinary correspondence with the French authorities on these and kindred matters, and in this capacity is styled the Special Agent. At Pondicherry itself is a British Consular Agent accredited to the French Government; who is usually an officer of the Indian Army. The town is compact, neat and clean, and is divided by a canal into two parts, the Ville blanche and the Ville noire. The Ville blanche has a European appearance, the streets being laid at right angles to one another with trees along their margins reminding the visitor of continental boulevards, and the houses being constructed with courtyards and embellished with green venetians. All the cross streets lead down to the shore, where a wide promenade facing the sea is again different from anything of its kind in British India. In the middle is a screw-pile pier, which serves, when ships touch at the port, as a point for the landing of cargo, and on holidays as a general promenade for the population. Theré is no real harbour at Pon licherry; ships lie at a distance of about a mile from the shore, and communication with them is conducted by the usual *masula* boats of this coast. Facing the shore end of the pier is a statue of the great Dupleix, to whom the place and the French name owed so much.

CHANDERNAGAR.

Chandernagar is situated on the bank of the Hooghly, a short distance below Chinsura. Population (1921) 25,423. The town was permanently occupied by the French in 1688, though previously it had been temporarily occupied by them at a date given as 1672 or 1676. It did not, however, rise to any importance till the time of Dupleix. It changed hands between British and French various times during the Napoleonic wars and was finally restored to the French in 1816.

The former grandeur of Chandernagar has disappeared, and at present it is little more than a quiet suburban town with little external trade. The railway station on the East Indian Railway is just outside French territory 22 miles from Calcutta (Howrah). The chief administrative officer is the Administrator who is subordinate to the Governor of the French Possessions. The chief public institution is the College Dupleix, formerly called St. Mary's Institution, founded in 1882 and under the direct control of the French Government.

KARIKAL.

Karikal lies on the Coromandel Coast between the Tanjore District of Madras and the Bay of Bengal. The Settlement is divided into three communes, containing 110 villages in all, and covering an area of 53 square miles. It is governed by an Administrator subordinate to the Governor at Pondicherry. The population has in recent years rapidly decreased. In 1883 it was 93,055; in 1891, 70,526; in 1901, 56,595; in 1912, 56,579; and in 1921, 54,356 in 1915, 56,867; but the density is still very high, being 1,068 persons per square mile. Kumbakonam is the only taluk in Tanjore District which has a higher density. Each of the three communes—namely, Karikal, La Grande Aldee, and Nedungadu—possesses a mayor and council. The members are all elected by universal suffrage, but in the municipality of Karikal half the number of seats are reserved for Europeans or their descendants. The country is very fertile, being irrigated by seven branches of the Cauvery, besides many smaller channels.

The capital of the settlement is situated on the north bank of the river Arasalar, about 1½ miles from its mouth. It has a brisk trade in rice with Ceylon, and to a less extent with the Straits Settlements. It has no commerce with France, and very little with other French colonies. The port is merely an open roadstead, provided with a light-house 142 feet high, the light in which has a range of from 8 to 10 miles. In 1899 Karikal was connected with Peralem on the Tanjore District Board Railway. Karikal finally came into French possession on the settlement after 1815.

The Frontiers.

The history of the Indian frontiers for nearly three-quarters of a century is a reflection of the balance of power in Europe. As one Power after another, first Russia and then Germany, sought to secure the hegemony of Europe, and then to use that hegemony to overset the British Empire, in both cases by an attack on its position in Asia, so Great Britain was inexorably arrayed against each in turn. Now both have disappeared as great military Powers; as nature abhors a vacuum, so in foreign politics there is no vacuum. New problems have arisen over the vacancy left by the collapse of Russia and the defeat of Germany. It is impossible yet to say in what direction they will develope.

Effects of the War.—The effect of the war was to raise a whole crop of new problems in Asia Minor, and incidentally on the Indian Frontiers. When in an evil moment for Turkey Enver Pasha precipitated her into the war on the side of Germany, the area of conflict extended to Asia Minor. There the campaigns pursued a chequered course. The Russians were more than once somewhat severely pressed in the region of the Caucasus, but after the brilliant capture of Erzeroum they were secure until the success of the Bolsheviks in Russia itself induced the complete military collapse of the Empire and made the Turks and the Germans masters of what may for convenience be called the Russian zone in Asia Minor. In Syria the Turks remained masters of the situation until the sweeping victories of General Allenby smote them hip and thigh and so completely destroyed their military power that they were compelled first to sue for an Armistice and then accept the virtually unconditional peace of Sevres. In Mesopotamia the course of the war was chequered. At first the Allies carried all before them. Landing at the mouth of the Shatt-al-Arab, a strong British force fought its way to Basra and Kurna; next to Kut-al-Amara; but these successes brought disaster in their train. Lured by the spell of Baghdad, a weak British corps attempted to seize the historic city by a coup de main; the Turks were severely defeated at Ctesiphon but the large reinforcements which they had received made the position of the British troops impossible and they withdrew to Kut-al-Amara. After a protracted siege marked by desperate attempts to relieve the beleaguered garrison, they surrendered. Later under General Maude the British forces completely crushed the Turks and won their way first to Baghdad and then to Mosul and the confines of Kurdistan. But the legacy of the defeat of Ctesiphon was severe. The Turks overran a considerable part of Eastern Persia, and completed the work of destruction commenced by the armed scally wags who under German officers had been ravaging that unhappy land. The Russians who had advanced almost to within striking distance of Baghdad were forced to withdraw. Consequently when the victories of Maude opened the path again the country had been wrecked by plunder and anarchy.

Legacy of the Disorders:—A completely new system of administration had therefore to be established in Asia Minor and in Persia to replace that either overset or shaken by the war. The process of this has been infinitely tedious, and though at the end of the year 1921 events seemed to be moving towards a settlement, none such had been reached. An effort was made to regularise the situation in the old Turkish State by the Treaty of Sevres but that has not been ratified and for all practical purposes is dead. Under that Treaty the Turkish Government was retained in Constantinople, but Thrace, and Smyrna with a belt of country, were entrusted to the administration of Greece; France assumed mandates for Cilicia and Syria; a Zionist State under a British mandate was set up in Palestine; the Hedjaz and Mesopotamia were declared free, the Hedjaz under King Hussein and Mesopotamia under the mandate of Great Britain. But the long delay between the surrender of Turkey and the signing of the Peace Treaty introduced fresh confusions. Mustapha Kemal Pasha, at the head of a Young Turk movement, set up a government independent of Constantinople with its capital at Angora. The Constantinople Government was unable to make head against it. What is called the Turkish Government, that is the Government of Constantinople, has no authority in the country outside Constantinople itself, and there it retains a precarious authority with the support of the Allied troops. If that were withdrawn it would collapse in twenty-four hours. Whilst this puppet Government has been maintained in Constantinople, the *de-facto* government of the greater part of the Turkish State has been that of the Nationalists at Angora. This Government, in league with the Bolsheviks, has established and continued its authority throughout most of Asia Minor. In the course of the year 1921 the Greeks, mobilising all their available military strength, endeavoured to drive it from Angora. After considerable early successes they arrived at the defences of Angora, where the offensive broke down and the Greeks retired to their lines covering Smyrna. The French, recognising the realities of the situation, made an independent treaty with Mustapha Kemal Pasha and evacuated the mandated territory of Cilicia in favour of the Nationalists. Whilst this independent action of the French was the subject of much bitter protest, the necessity for their action has not been gainsaid. The French remain in Syria, the Zionist State of Palestine is upheld by five thousand British troops, and a small administrative area has been carved out of trans-Jordania for the Emir Abdullah, a son of the King of the Hedjaz. In the Hedjaz King Hussein is absolutely independent save for the subsidy which he draws from the British Government. But beset by faction at home and the threat of Ibn Saud, the Emir of Nejd, from without, his position is not a very secure one. The British Government pays the King of the Hedjaz a subsidy to rule the Hedjaz, and Ibn Saud another subsidy to refrain from turning him out.

To-wards the close of the year there were many stories of a pending attack by Ibn Saud on King Hussein, but these were contradicted. In Mesopotamia another son of King Hussein, the Emir Feisal, was installed as King, under a treaty with Great Britain as the mandatory power, and up to the close of the year his authority had not been openly called into question and the British forces in the country were substantially reduced.

Persia.—Events of capital importance occurred in Persia. In 1919 there was signed the Anglo-Persian Treaty, the purpose of which was, according to the principal author, Lord Curzon, to preserve the splendour and independence of Persia, with Great Britain as her benevolent friend. But the Persians persisted in regarding it in another light. They first interpreted it as a protection against the Bolsheviks. When the Bolsheviks attacked in the neighbourhood of Enzeli and Resht, and the small British forces in that zone withdrew before their advance, the Persians realised that they must rely on themselves for their defence. They had no use for the Treaty. They therefore refused to ratify it; they made their peace with the Bolsheviks; and the system of British assistance in the reorganisation of the finances and the army contemplated under the Treaty fell to the ground. Britain withdrew entirely from any special interest in Persian affairs; the South Persian Rifles, a force under British officers for the maintenance of order in Southern Persia, was disbanded; and Persians became entirely responsible for their own affairs. One change of power has succeeded another so quickly that it is impossible to know who is nominally in power and what form of government exists, save that there is still the shadow of the personal rule of the Shah. Whether of friendship, or because of the immense internal complications raised by the terrible famine, the Bolsheviks have apparently abandoned any hostile measures against Persia, who is given breathing time.

Afghanistan.—Events in Afghanistan have pursued an even more dramatic course. During the war His Majesty the Amir Habibullah Khan maintained his authority unimpaired, and his pledge of neutrality unbroken, though in deference to the pro-Turk and fanatical elements in the State he had to receive Turkish, Austrian and German delegations. The final victory of the Allies was the triumph of his policy; it also sounded the death knell of his enemies. Knowing that their time had come they removed him by assassination whilst he slept in his tent near Jelalabad. It was the intention of the revolutionaries to place his brother, Nasrullah Khan, on the throne, but public sentiment in Afghanistan revolted against the spectacle of a succession over the dead body of the murdered Amir. Moreover his son, Amanullah Khan, Governor of Kabul, secured the adherence of the Army and Nasrullah Khan had to make his submission. But the new Amir soon experienced the fate of all who ascend thrones through the agency of a Pretorian Guard. As the only means of allaying the discontents of the Army he launched it on an unprovoked war with India, inspired by the belief that not only would he find in this way a happy issue out of his difficulties, but that he would raise the tribesmen on the Frontier and that he would receive the support of the discontented elements in India. In this he was largely deceived. The large forces mobilised by the Indian Government soon shattered the armies of Afghanistan. Dacca was speedily occupied and there was nothing to prevent the occupation of Jelalabad and Kabul, but the knowledge that whilst it is not difficult to overthrow a King of Afghanistan, it is quite another matter to set up a durable administration in its stead. The Amir sued for peace and easy terms were accorded him. Subsequently a conference was held at Mussoorie, to settle the basis of a permanent peace with Afghanistan, and it is understood that definite agreement was reached on the main points. To consolidate this agreement in a Treaty, a British-Indian Mission under Sir Henry Dobbs left India for Kabul to arrange details. There certain difficulties intervened. Whilst there was no official pronouncement, it is understood that the principal difficulty arose from the conclusion of a very close Treaty between Afghanistan and the Bolsheviks. The fears that this would render the work of the Dobbs Mission nugatory were however dissipated when it was announced in November that a definite Treaty of peace had been signed. Details of this appear under the heading of Afghanistan. The Dobbs Mission thereupon returned to India.

The Outlook—Persia has now apparently secured what she wanted, complete freedom to manage her own affairs. A definite Treaty of Peace has regularised the relations of Great Britain and India with Afghanistan. But the war with Afghanistan has left its aftermath on the Frontier. The hopes of the Afghans were built on the belief that the Tribes would join them *en masse*. This they did not do. But the Wazirs seized the occasion to invade British territory; there was widespread trouble right into Baluchistan; and the Frontier Militia, who had been entrusted with the duty of preserving order, proved a broken reed. There was a long and troublesome campaign against the Wazirs, the end of which was that the Indian Government had to decide to occupy a central position in the country for the maintenance of peace. The Frontier remains in a state of considerable unrest, with frequent encounters with the Police. The duty of maintaining order has to be assumed by the Regular Army in place of the Frontier Militia pending the evolution of a new Frontier policy.

All who see clearly recognise that the primary necessity of the situation is now the establishment of peace with and within Turkey, and this can be attained only by the recognition of the Nationalist Government at Angora. Towards this events seem to be tending, but they are moving with desperate slowness.

PERSIAN GULF

THE PERSIAN GULF.

Our first appearances in the Persian Gulf was in connection with the long struggle for supremacy with the Portuguese, the French and the Dutch, who had established trading stations there. With the capture and destruction of the great entrepot which the Portuguese had established at Ormuz, and the supersession of the land route by the sea route, coupled with the appearance of anarchy in the interior, the importance of the Gulf declined. The Indian Government remained there primarily to preserve the peace, and this task it has since successfully performed. Piracy, which was as destructive as the ravages of the Barbary corsairs, was stamped out, the Trucial Chiefs who occupy the Pirate Coast were gradually brought into close relations with the British Government, and the vessels of the Royal Navy have since kept watch and ward in the Gulf, whilst our Consuls have regulated the external affairs of the Arab rulers on the Arabian Coast.

A Policy of Abnegation.

In return for these services Great Britain has claimed no selfish advantages. The waters of the Gulf are as free to the navigation of other flags as to the Red Ensign. The only territorial possession is the tiny station of Bassidu. Point after point has at one time or another been occupied by British troops. Muhammerah and the lower valley of the Karun valley were occupied during the war with Persian in 1857. Bushire was long held in the same connection, and still bears marks of our regime in the one tolerable road. The Island of Kharak was occupied from 1838 to 1842, and again in 1857. We had a military station at Kais during the Pirate wars, and a military and naval station at Kishm from 1820 to 1879. Jask was occupied as a cable station, but subsequently returned to Persia. The only surveys of the waters are British; the only cables are British; the few navigation marks are maintained by the British India Company, and two steamship services, a fast mail service and a slow trading service, are run by the same corporation. Apart from these direct acts, Great Britain might at any time have seized the whole Arabian Coast and the Persian shore. But in pursuit of a resolute self-denying ordinance she has kept the peace and demanded no reward.

European Intrusions.

Left to herself, Great Britain would desire no other policy. But the affairs of the Persian Gulf have passed into the region of international politics, and the past quarter of a century has witnessed successive efforts to turn the British position. Basing her interference on a treaty which gives her equal rights with Great Britain, France attempted to acquire a coaling station at Jissa, near Maskat, and subsequently obstructed British efforts to stamp out the slave trade, and the arms traffic, which was supplying weapons of precision to the tribes on our North-Western Frontier. Turkey, whether acting on her own volition, or as the *avant courier* of Germany, threatened the territory of the Sheikh of Bahrein, who is in special relations with us, and of the Sheikh of Koweit, who owns the only harbour which would make a Gulf terminus of the Baghdad Railway. Persia, stirred from Teheran, when Russian influence at the court of the Shah in Shah was supreme, established a foreign Customs service in the Gulf, and pressed our good friend, the Sheikh of Muhammerah. Russia and Germany sent heavily-subsidised merchant ships into the Gulf, in order to establish trading rights, and posted Consuls, where there was neither trade nor legitimate interest.

The Gulf and the Empire.

With these attacks there came also a closer appreciation of the bearing of the Persian Gulf on the defence of the Indian Empire. The strategic importance of these waters has been laid down by a writer of unchallenged authority and unbiassed mind. Writing in the *National Review*, Admiral Mahan said, "Concession in the Persian Gulf, whether by formal arrangement (with other Powers) or by neglect of the local commercial interests which now underlie political and military control, will imperil Great Britain's naval situation in the Farther East, her political position in India; her commercial interests in both, and the Imperial tie between herself and Australasia." Following this, successive British Governments have made declarations of policy which are satisfactory, as far as words can go. Speaking in the House of Lords on May 5, 1903, Lord Lansdowne, then Secretary of State for Foreign Affairs, said "We (*i.e.*, His Majesty's Government) should regard the establishment of a naval base or of a fortified port in the Persian Gulf by any other Power as a very grave menace to British interests which we should certainly resist with all the means at our disposal." This declaration of policy has since been endorsed by Sir Edward Grey. But the question which arises is whether, in view of the intrusion of foreign Powers with aggressive designs, and the changing conditions on the littoral, the purely negative policy which has hitherto satisfied Great Britain will suffice. It is a hard fact but a true one, that if British authority disappeared to-morrow, it would leave no other relic than the Abadan oil refinery; a few consular buildings and the tradition of justice and fair dealing. That is a question which can best be considered after a brief survey of the various jurisdictions which are established in the Gulf.

Maskat.

Maskat, which is reached in about forty-eight hours from Karachi, is outside the Persian Gulf proper. It lies three hundred miles south of Cape Musandim, which is the real entrance to the Gulf, but its natural strength and historical prestige combine to make it inseparable from the politics of the Gulf, with which it has always been intimately associated.

The approach to Maskat is dramatic. The mail steamer gently feels her way along a coast more black and forbidding even than the iron-bound littoral of the Gulf of Suez, which is so familiar to the eastward passenger. Sud-

denly there appear on the coast the white houses of the trading settlement of Mattra, which lies to the north of Maskat. Then with a sharp turn the bow of the steamer passes under a gaunt rock painted with the names of the warships which have visited Maskat for half a century, and enters the landlocked harbour. Twin fortresses erected by the Portuguese command the heights which overlook the town; the town itself clusters on the shore and climbs the high ground behind it, and itself is shut off from the Arabian desert by a stout wall on the landward side. Formerly Maskat was part of a domain which embraced Zanzibar, and the Islands of Kishm and Larak, with Bunder Abbas on the Persian shore. Zanzibar was separated from it by agreement, and the Persians succeeded in establishing their authority over the possessions on the eastern shore.

The relations between Britain and Maskat have been intimate for a century and more. It was under British auspices that the separation between Zanzibar and Maskat was effected, the Sheikh accepted a British subsidy in return for the suppression of the slave trade and in 1892 sealed his dependence upon us by concluding a treaty pledging himself not to cede any part of his territory without our consent. Foreign intrigues with Maskat did not commence until 1894, when the French, in pursuit of the pin-pricking policy through which they were avenging Egypt, and perhaps to assist Russia, established a consulate there. The Sultan was induced to cede to France a coaling station at Jissa, but this was such a clear violation of the Treaty of 1892 that it could not make good, and France had to accept the poor alternative of a leased depot. A more serious dispute arose over the use of the French flag to cover the slave trade. Native craft would secure the protection of the French flag by registering at Jibutil, and then defy the Sultan of Maskat, and they were enabled to traffic in slaves with impunity, inasmuch as there was rarely a French warship in the neighbourhood to search them. In April 1903 the trouble came to a head, and the French flagship Infernet was sent to Maskat to demand the release of dhows which had been arrested for a flagrant breach of the quarantine rules. This emphasised the necessity of a permanent settlement, and the question was referred to the Hague Tribunal, and a working compromise arranged. It was adjudged by the Hague Tribunal in 1905 that "after January 2, 1892, France was not entitled to authorise vessels belonging to subjects of H. H. the Sultan of Maskat to fly the French flag," except on condition that their "owners or fitters-out had established, or should establish, that they had been considered and treated by France as her protéges before the year 1863," though "owners of dhows who before 1892 had been authorised by France to fly the French flag retained this authorisation as long as France renewed it to the grantee." The conclusion of the *entente* with France put an end to these pinpricks, but one important issue remained outstanding until 1914. France claimed under the Anglo-French Treaty of 1862 freedom of trade with Maskat. There was carried on for years a lucrative arms traffic with the Gulf, rifles and ammunition being shipped from Europe to Maskat, and thence distributed all over the littoral and even to the North-West Frontier of India. The extent of this evil compelled the British Government to intervene, and elaborate arrangements were made to check the traffic by arresting the dhows carrying arms and by harrying the gunrunners ashore. In effect, the British warships had to witness the dumping of cargoes on the shore at Maskat, see them loaded into dhows, and trust to their own vigilance to arrest these consignments on the high seas. Prompted by the Colonial Party, the French Government refused to yield one jot of their treaty rights, in the hope that Great Britain would buy them out by surrenders at Gambia. The difficulty was largely overcome by the establishment of a bonded warehouse for arms at Maskat, where all consignments have to be deposited, and whence they are only issued under certificates of destination; and by an agreement negotiated in 1914 the French Government recognised the new Arms Traffic Regulations and abandoned the privileges and immunities secured to them by Treaty. Compensation was paid by the British Government to those French merchants whose stocks were rendered valueless by the Regulations.

In 1873 jurisdiction was given to the Vice-Admiralty Court at Aden and the consuls within the dominions of Zanzibar, Maskat, and Madagascar for the more effectual suppression of the slave trade on the East Coast of Africa. By an Order-in-Council which came into force on August 1, 1914, the Act had been extended so as to comprise the Court established by the Persian Coast and Islands Order-in-Council, 1907. Thus the Consuls-General for Fars and the coasts and islands of the Persian Gulf will be able to enforce the suppression of the slave trade in that neighbourhood which was agreed to be desirable in a treaty made with the Persian Government so long ago as 1882.

The Sultans have been in a difficult position for a good many years. They hold their capital of Maskat, the adjacent town of Matra, one or two other coast towns, and certain points in the interior, but as they possess few troops they find themselves unable to control the roving Beduin who wander at will over most of the State. When the Beduin wanted money they were wont to ride down to Matra, the centre of the date trade, and threaten to sack the town. The late Sultan, who died in 1913, was generally compelled to bribe them to go away. The rising which began in 1913 was a more serious affair. A Pretender, Sheikh Abdullah, seized the inland town of Semail, which stands in a spacious fertile valley where are grown most of the dates for which Maskat is famous. Great Britain has special interests at Maskat, based upon various documents, the chief of which is one drafted in 1891-92. The late Sultan asked us to protect him against the Pretender. We said we would protect his capital and coast, but could not send an expedition into the interior against the elusive Beduin. We sent Indian troops to Maskat.

The Pirate Coast.

Turning Cape Musandim and entering the Gulf Proper, we pass the Pirate Coast, controlled by the six Trucial Chiefs. The ill-name of this territory has now ceased to have any meaning, but in the early days it had a very real relation to the actual conditions. The pirates were the boldest of their kind, and they did not hesitate to attack on occasion, and not always without success, the Company's ships of war. Large expeditions were fitted out to break their power, with such success that since 1820 no considerable punitive measures have been necessary. The Trucial Chiefs are bound to Great Britain by a series of engagements, beginning with 1806 and ending with the perpetual treaty of 1853 by which they bound themselves to avoid all hostilities at sea, and the subsequent treaty of 1873 by which they undertook to prohibit altogether the traffic in slaves. The relations of the Trucial Chiefs are controlled by the British Resident at Bushire, who visits the Pirate Coast every year on a tour of inspection. The German attempt to obtain a concession from the Sheikh of Shargarh has been mentioned. A more serious question arose in 1912 when a landing party from H. M. S. Fox, searching for contraband arms at Debai, was fired at by the resident Arabs and five men killed and nine wounded. The Sheikh made ample amends to the British Resident, and submitted to a fine. There was at first the suspicion that this *emeute* arose from the spread of pan-Islamism on the coast, studiously fostered from Constantinople, and that it indicated a weakening respect for British authority. But fuller enquiries tended to show that it arose from an unfortunate series of misunderstandings. The commercial importance of the Pirate Coast is increasing through the rise of Debai. Formerly Lingah was the entrepot for this trade, but the exactions of the Belgian Customs officials in the employ of Persia has driven this traffic from Lingah to Debai. The Trucial Chiefs are—Debai, Abu Thabee, Shargah, Ajman, Um-al-Gawain and Ras-el-Kheyma.

Bahrein.

North of the Pirate Coast lies the little Archipelago which forms the chiefship of the Sheikh of Bahrein. Of this group of islands only those of Bahrein and Maharak are of any size, but their importance is out of all proportion to their extent. This is the great centre of the Gulf pearl fishery, which, in a good year, may be worth half a million pounds sterling. The anchorage is wretched, and at certain states of the tide ships have to lie four miles from the shore, which is not even approachable by boats, and passengers, mails and cargo have to be landed on the donkeys for which Bahrein is famous. But this notwithstanding the trade of the port is valued at over a million and a quarter sterling, and the customs revenue, which amounts to some eighty thousand pounds, makes the Sheikh the richest ruler in the Gulf.

Bahrein has passed through more than usually chequered experiences. Not the least formidable of these are the efforts of the Turks to threaten its independence. These took definite form in the third quarter of the last century, when Midhat Pasha, Vali of Basra, occupied the promontory of El Kater, as well as El Katif, over against Bahrein, and converted El Hasa into a district. The war with Russia put an end to these designs, but they were revived and the Turks at El Kater were a menace to Bahrein until the war diverted Turkish activities. The Sheikh by the treaty of 1861 entered into special engagements with the British Government, by whom his rights are guaranteed.

In the neighbourhood of Bahrein is the vast burying ground which has hitherto baffled archæologists. The generally accepted theory is that they are relics of the Phœnicians, who are known to have traded in these waters.

Political Agent, Major C. K. Daly.

Koweit.

In the north-west corner of the Gulf lies the port which has made more stir than any place of similar size in the world. The importance of Koweit lies solely in the fact that it is the one possible Gulf terminus of the Baghdad Railway. This is no new discovery, for when the Euphrates Valley Railway was under discussion, General Chesney selected it under the alternative name of the Grane—so called from the resemblance of the formation of the Bay to a pair of horns—as the sea terminus of the line. Nowhere else would Koweit be called a good or a promising port. The Bay is 20 miles deep and 5 miles broad, but so shallow that heavy expense would have to be incurred to render it suitable for modern ocean-going steamers. It is sheltered from all but the westerly winds, and the clean thriving town is peopled by some 20,000 inhabitants, chiefly dependent on the sea, for the mariners of Koweit are noted for their boldness and hardihood.

The political status of Koweit would baffle the ingenuity of the international jurist to find a definition. Nominally the Sheikh owns allegiance to the Sultan of Turkey, from whom he has accepted the honorary title of Kaimakam, or Local Governor. In practice, he has always been independent. In 1898, the Turks attempted to convert their nominal sovereignty into something more actual; but the Sheikh Mubarak approached the British Government and placed his interests under their special protection. When, however, the German surveyors earmarked Koweit for the terminus of their line, the position of the Sheikh was indirectly attacked. To the north of Koweit there is a deep indentation in the lowlying shore chiefly occupied by the swampy island of Bubyan. Here a long narrow channel runs to Umm Khasa, the Khor Abdulla. It is sometimes held to be an alternative to Koweit as a Gulf Terminus, and with a view to earmarking it, the Turks have established military posts at Umm Khasa and on Bubyan Island. Threatened by domestic feuds, raids by sea, and attack by land, Sheikh Mubarak, with a British backing, has fended off all assaults on his position, and with realisation of the fact that Basra must, in any circumstances, be the commercial terminus of the Baghdad Railway, the importance of Koweit has tended to recede.

Political Agent, Major J. C. More, D.S.O.

Muhammerah.

On the opposite side of the entrance to the Shatt-el-Arab lie the territories of a Sheikh who stands to the Persian Government in much the same relation as does the Sheikh of Koweit to the Government of Turkey—Sheikh Khazzal of Muhammerah. Nominally, he is subject to Teheran, on whose behalf he governs his territories as Governor; in practice he is more like a semi-independent vassal. In personal characteristics, too, Sheikh Khazzal had much in common with Mubarak; he has proved that he possesses many of the qualities of an administrator, and has resisted Persian encroachments on his authority in all directions save one—despite his strong antipathy to the agents of a centralised government, the Persians have installed an officer of their Belgian Customs service at Muhammerah. The town favourably situated near the mouth of the Karun River, has grown in importance since the opening of the Karun River route to trade through the enterprise of Messrs. Lynch Brothers. This route provides the shortest passage to Ispahan and the central tableland, and already competes with the older route by way of Bushire and Shiraz. This importance has grown since the Anglo-Persian Oil Company established refineries at Muhammerah for the oil which they win in the rich fields which they have tapped near Ahwaz. Its importance will be still further accentuated, if the scheme for a railway to Khorremabad by way of Dizful matures. A concession for a road by this route has long been held by a British Company, and surveys for a railway are being made. There is a tacit assurance from the Persian Government that if a practicable scheme is put forward, they will facilitate the work. Such a line, meeting the projected branch from Teheran to Khannikin, would intercept the trade of Central Persia and make Muhammerah the principal outlet for the commerce of the country. Sheikh Khazzal is believed to have formed an excellent working understanding with his brother chief across the water, and as the head of the great Kaab tribe he is no mean power in south-western Persia.

Vice-Consul at Ahwaz, Captain E. G. B. Peel.
Consul for Arabistan (Muhammerah), Asstt. Surgeon C. H. Lincoln.

Basra.

In a sense Basra and Turkish Arabistan can hardly be said to come within the scope of the Frontiers of India, yet they are so indissolubly associated with the politics of the Gulf that they must be considered in relation thereto. Basra is the inevitable sea terminus of the Baghdad Railway. It stands on the Shatt-el-Arab, sixty miles from its mouth, favourably situated to receive the whole water-borne trade of the Tigris and Euphrates Rivers The local traffic is valuable, for the richness of the date groves on either side of the Shatt-el-Arab is indescribable, there is a considerable entrepot traffic, whilst Basra is the port of entry for Baghdad and for the trade with Persia, which follows the caravan route *via* Kermanshah and Hamadan.

When the British expeditionary force seized Basra in the autumn of 1914, the port was one of possibilities only. The bar at the mouth of the river had to be crossed before the deep fairway up the Shatt-el-Arab was reached, and there were no port facilities in Basra itself. The steamers anchored in the stream and all cargo had to be lightered ashore. Some time elapsed before any improvements were effected. Then a new deep-water port, properly equipped with wharves alongside which steamers could anchor and discharge direct was constructed at Makina, a few miles north of Basra. Later great improvements were made in Basra itself. During the war Basra and Makina were scenes of immense activity, for they were the bases of the expeditionary force which from first to last absorbed nine hundred thousand men. Subsequently a railway was constructed from Basra to Nasriyeh, and this was finally prolonged to Bagdad itself. These improvements were however interrupted by the rising in Mesopotamia, which was most active in the Middle Euphrates, in the middle of 1920. The tribesmen cut the railway and all transport was returned to the discarded river route. This interruption was temporary and if the situation is cleared, Basra will become the great port of the Middle East. It will absorb all the trade of Iraq and of Persia, save the small proportion which flows eastwards. During the rising the people of Basra remained aloof. Their natural affinities are with Great Britain and India; all they ask is for an effective administration These conditions are so strong and the position of Basra at the head of the Persian Gulf is of such strategic importance, that even the most convinced advocates of the evacuation of Mesopotamia are equally convinced that it will be necessary to retain the Basra vilayet indefinitely under British control.

The Persian Shore.

The Persian shore presents fewer points of permanent interest. The importance of Bushire is administrative rather than commercial. It is the headquarters of Persian authority, the residence of the British Resident, and the centre of many foreign consuls. It is also the main entrepot for the trade of Shiraz, and competes for that of Ispahan. But the anchorage is wretched and dangerous, the road to Shiraz passes over the notorious kotals which preclude the idea of rail connection, and if ever a railway to the central tableland is opened, the commercial value of Bushire will dwindle to insignificance. Further south lies Lingah, reputed to be the prettiest port on the Persian coast, but its trade is being diverted to Debai on the Pirate Coast. In the narrow channel which forms the entrance to the Gulf from the Arabian Sea is Bunder Abbas. Here we are at the key of the Gulf. Bunder Abbas is of some importance as the outlet for the trade of Kerman and Yezd. It is of still more importance as a possible naval base. To the west of the town between the Island of Kishm and the mainland, lie the Clarence Straits which narrow until they are less than three miles in width, and yet contain abundance of water. Here, according to sound naval opinion, there is the possibility of creating a naval base which would command the Gulf. The great obstacle is the climate, which is one of the worst in the world. On the opposite shore, under the shadow of Cape Musandim, lies another sheltered deep-water anchorage,

Elphinstone's Inlet, where the climate conditions are equally vile. But between these two points there is the possibility of controlling the Gulf just as Gibraltar controls the Mediterranean. For many years Bunder Abbas loomed large in public discussions as the possible warm water port for which Russia was seeking. On the Mekran coast, there is the cable station of Jask, and the possible port of Chahbar. The British Government temporarily occupied Bushire in 1915 in circumstances narrated in Persia (q. v.)

Political Resident in the Persian Gulf, Lt.-Col. A. P. Trevor, C.S.I., C.I.E.

Residency Surgeon at Bushire—Major A. S. M. Peebles, I.M.S.

Consul at Bunder Abbas and Assistant to the Resident, Captain A. W. Fagan.

PERSIA.

The concentration of public attention on the Persian Gulf has been allowed to obscure the frontier importance of Seistan. Yet it has been a serious preoccupation with the Government of India. Seistan lies midway north and south between the point where the frontiers of Russia, Persia and Afghanistan meet at Zulfikar and that where the frontiers of Persia and of our Indian Empire meet on the open sea at Gwattur. It marches on its eastern border with Afghanistan and with Baluchistan, it commands the valley of the Helmand, and with it the road from Herat to Kandahar, and its immense resources as a wheat-producing region have been only partly developed under Persian misrule. It offers to an aggressive rival, an admirable strategic base for future military operations; it is also midway athwart the track of the shortest line which could be built to connect the Trans-Caspian Railway with the Indian Ocean, and if and when the line from Askabad to Meshed were built, the temptation to extend it through Seistan would be strong. Whilst the gaze of the British was concentrated on the North-West Frontier, and to possible lines of advance through Kandahar to Quetta, and through Kabul to Peshawar, there can be little doubt that Russian attention was directed to a more leisurely movement through Seistan, if the day came when she moved her armies against India.

Anglo-Russian Agreement.

Whether with this purpose or not, Russian intrigue was particularly active in Seistan in the early years of the century. Having Russified Khorassan, her agents moved into Seistan and through the agency of the Belgian Customs officials, "scientific missions" and an irritating plague cordon, sought to establish influence, and to stifle the British trade which was gradually being built up by way of Nushki. These efforts died down before the presence of the McMahon mission, which, in pursuance of Treaty rights, was demarcating the boundary between Persia and Afghanistan, with special reference to the distribution of the waters of the Helmand. They finally ceased with the conclusion of the Anglo-Russian Agreement. Since then the international importance of Seistan has waned. Whether on account of the Agreement, which bars the line of advance through Seistan, or because of the discovery of an easier route, we cannot determine, but Russian activities in railway construction were later diverted to the Trans-Persian route, which would take a direct line through Teheran from Baku, and meet the Arabian Sea at Bunder Abbas or Chahbar.

The natural conditions which give to Seistan this strategic importance persist. Meantime British influence is being consolidated through the Seistan trade route. The distance from Quetta to the Seistan border at Killa Robat is 465 miles, most of it dead level, and it has now been provided with fortified posts, dak bungalows, wells, and all facilities for caravan traffic. The railway was pushed out from Spezand, on the Bolan Railway to Nushki, so as to provide a better starting point for the caravans than Quetta. This railway was during the war extended to the Persian border.

NEW AGREEMENTS WITH PERSIA.

The condition of Persia during the war was one of helplessness. At the outset of hostilities German agents, who had carefully prepared the ground, raised the lawless element and spread over a large part of the country. They were expelled by the Russians, when they advanced from Kasvin to the neighbourhood of Baghdad. Later, on the fall of Kut, Turkish troops overran the western provinces; these had to beat a hasty retreat when the victories of General Maude took British arms to Baghdad. On the final collapse of Russia, the Turks again entered the country from the Caucasus, but before they could do much damage the crushing defeat of Turkey put an end to their activities. Simultaneously the efforts of the South Persian Rifles, organised with the co-operation of Great Britain, and of the expedition which passed through Persia to the Black Sea were responsible for restoring some semblance of order. In all these developments the Persian Government took little or no part; it was the sport of events which it could not effectively control or influence.

The cessation of hostilities created a new and perplexing situation in Persia. Thanks to Russian and British aid, that country had escaped with the bulk of her territories intact, but her administration remained weak and ineffective and offered an easy mark to Bolshevist intrigues which were clearly leading towards a war of conquest in Persia. With Russia in a state of chaos, Great Britain was the only country to which Persia could turn for aid, the only great power whose frontiers marched with those of Persia. What is more, open statements of policy had been made of a kind likely to reassure Persian statesmen in regard to the intentions of Great Britain. "We desire Persia to remain neutral during the War," said Lord Curzon in 1918, "and to retain its complete independence after the War." It was natural then that Persia should seek British assistance and the despatch of Sir Percy Cox to Teheran as British Minister, at the end of 1918, was the first step in negotiations of which the fruit was seen in August of the following year when it was announced that two

Railway Position in the Middle East.

agreements had been concluded with Persia. Of these one was political and aimed at binding more closely Anglo-Persian relations and promoting the progress and prosperity of Persia. To these ends Great Britain agreed,

To respect Persian integrity;

To supply experts for Persian administration;

To supply officers and equipment for a Persian force for the maintenance of order;

To provide a loan for these purposes;

To co-operate with the Persian Government in railway construction and other forms of transport.

Both Governments agreed to the appointment of a joint committee to examine and revise the Customs tariff.

The second agreement defined the terms and conditions on which the loan was to be made to Persia. The loan was for£2,000,000 at 7 per cent redeemable in 20 years. It was secured on the revenues and Customs' receipts assigned for the repayment of the 1911 loan and should these be insufficient the Persian Government was to make good the necessary sums from other sources.

The Present Position:—We have given the main points in the Anglo-Persian agreement, because few documents have been more misunderstood. Those who desire to study it in greater detail will find it set out in The Indian Year Book for 1921, page 138 *et seq* It has been explained that most Persians construed it into a guarantee of protection against all external enemies When the British troops in the north-west retired before the Bolsheviks, the Persians had no use for the Agreement and it soon became a dead instrument. It was finally rejected and the advisers who were to have assisted Persia under it withdrew This situation so created was described by Lord Curzon in the House of Lords in terms which are textually reproduced.—

"We had offered by the terms of the Anglo-Persian Agreement to reorganize the finances of Persia, and to enable her to create a national Army and proceed with the development of her means of communication and her internal resources. For this purpose the British Government had been willing to make a loan of £2,000,000 to the Persian Government. No more disinterested and single-minded attempt was ever made by a Western Power to re-establish the existence and secure the prosperity of an Eastern country. There were then, however, already obstacles in the path. There was the chronic instability of Persian Governments; the unwillingness of successive Ministries to summon the Mejliss: the atmosphere of incurable intrigue that prevailed among the Teheran politicians. The withdrawal of British forces from Kasvin and the neighbourhood was attended by an inevitable weakening of the influence we had been able to exercise at Teheran. Lastly, at that period the Persian Government was beginning to be afraid of Soviet Russia. At the same time that her Ministers were endeavouring to extricate themselves from or to repudiate the Anglo-Persian Agreement, they were negotiating a new treaty with the Soviet authorities at Moscow, which was signed last February.

"It was in the midst of this perplexing jumble of events that a Soviet Minister appeared at Teheran in April last and pursued the familiar Bolshevist methods—the exercise of ceaseless political propaganda and promises of money to those whose support he solicited, whilst always in the background there had been the presence of a Russian force

"It seemed to him that in the attitude that it had adopted towards the Anglo-Persian Agreement, the Persian Government had in the exercise of what was now called self-determination made its own choice. It had deliberately rejected the chance of recovering its fortunes with British aid It had preferred to fall back on the familiar game of playing off one foreign country against another, and in a last resort it was not unwilling to accept the caresses of the Soviet Government caresses which usually ended in strangling those to whom they were applied

"With regard to the present position of the South Persian Rifles, its present strength was about 6,000. It was the only stable element in the centre and south of Persia to preserve order and keep open the trade routes and for rendering invaluable services to the Persian Government. Up till March 31 of this year these forces were financed by the British and Indian Governments. They then withdrew their contribution. When the contribution was exhausted the forces would be disbanded. The Persian Government had expressed the warmest desire to take the force over, but they wanted to dispense with the British Officers. Unless the Persian Government saw wisdom in the interval, he could see that the trade routes would be again insecure and the lives of those who were engaged in business or otherwise would become precarious and there would be a return to the old conditions of anarchy and disorder."

The South Persian Rifles were disbanded in accordance with the policy here announced.

Sir Percy Lorraine assumed office as British Minister at Teheran in December 1921.

H. B. M.'s Consul General and Agent of the Government of India in Khorasan:—Lieut.-Colonel F. B. Prideaux, C.S.I., C.I.E.

H. B. M.'s Consul in Sistan and Kain:—Captain T. C. W. Fowle

Medical Officer and Vice-Consul:—Major R. F. D. MacGregor.

THE INDEPENDENT TERRITORY.

There yet remains a small part of British India where the King's writ does not run. Under what is called the Durand Agreement with the Amir of Afghanistan, the boundary between India and Afghanistan was settled, and it was delimited in 1903 except for a small section which was delimited after the Afghan War in 1919. But the Government of India have never occupied up to the border. Between the administered territory and the Durand line

there lies a belt of territory of varying width, extending from the Gomal Pass in the south, to Kashmir in the north: this is generically known as the Independent Territory. Its future is the keynote of the interminable discussions of frontier policy for nearly half a century.

This is a country of deep valleys and secluded glens, which nature has fenced in with almost inaccessible mountains. It is peopled with wild tribes of mysterious origin, in whom Afghan, Tartar, Turkoman, Persian, Indian, Arab and Jewish intermingle. They had lived their own lives for centuries, with little intercourse even amongst themselves, and as Sir Valentine Chirol truly said "the only bond that ever could unite them in common action was the bond of Islam." It is impossible to understand the Frontier problem unless two facts are steadily borne in mind. The strongest sentiment amongst these strange people is the desire to be left alone. They value their independence much more than their lives. The other factor is that the country does not suffice even in good years to maintain the population. They must find the means of subsistence outside, either in trade, by service in the Indian Army or in the Frontier Militia; or else in the outlet which hill-men all the world over have utilised from time immemorial, the raiding of the wealthier and more peaceful population of the Plains.

Frontier Policy.

The policy of the Government of India toward the Independent Territory has ebbed and flowed in a remarkable degree. It has fluctuated between the Forward School, which would occupy the frontier up to the confines of Afghanistan, and the school of Masterly Inactivity, which would leave the tribesmen entirely to their own resources, punishing them only when they raided British territory. Behind both the policies lay the menace of a Russian invasion, and that coloured our frontier policy until the Anglo-Russian Agreement. This induced what was called Hit and Retire tactics; in the half century which ended in 1897 there were nearly a score of punitive expeditions, each one of which left behind a legacy of distrust, and which brought no permanent improvement in its train. The fruit of the suspicion thus engendered was seen in 1897. Then the whole Frontier, from the Malakand to the Goma., was ablaze. The extent of this rising and the magnitude of the military measures which were taken to meet it compelled a consideration of the whole position. The broad outlines of the new policy were laid down in a despatch from the Secretary of State for India, which prescribed for the Government the "limitation of your interference with the tribes, so as to avoid the extension of administrative control over tribal territory." It fell to Lord Curzon to give effect to this policy. The main foundations of his action were to exercise over the tribes the political influence requisite to secure our imperial interests, to pay them subsidies for the performance of specific duties, but to respect their tribal independence and leave them, as far as possible, free to govern themselves according to their own traditions and to follow their own inherited habits of life without let or hindrance.

New Province.

As a first step Lord Curzon took the control of the tribes under the direct supervision of the Government of India. Up to this point they had been in charge of the Government of the Punjab, a province whose head is busied with many other concerns. Lord Curzon created in 1901, the North-West Frontier Province, and placed it in charge of a Chief Commissioner with an intimate frontier experience, directly subordinate to the Government of India. This was a revival of a scheme prepared by Lord Lytton in 1877, and often considered afterwards, but which had slipped for lack of driving power. Next Lord Curzon withdrew the regular troops so far as possible from the advanced posts, and placed these fortalices in charge of tribal levies, officered by a handful of British officers. The most successful of these is the Khyber Rifles, which steadfastly kept the peace of that historic Pass until 1919. At the same time the regular troops were cantoned in places whence they could quickly move to any danger point, and these bases were connected with the Indian Railway system. In pursuance of this policy frontier railways were run out to Dargai, and a narrow-gauge line, since converted to the broad-gauge, was constructed from Kushalgarh to Kohat at the entrance of the Kohat Pass, and to Thal at the mouth of the Kurram Valley. These railways have been completed by lines to Tonk and Bannu. By this means the striking power of the regula forces was greatly increased. Nor was the policy of economic development neglected. The railways gave a powerful stimulus to trade, and the Lower Swat Canal converted factious tribesmen into successful agriculturists. This policy of economic development is receiving a great development through the completion of the Upper Swat Canal (*q. v.* Irrigation). Now it is completed there are other works awaiting attention. For many this policy was completely justified by results.

A New Policy.

It saved us from serious complications for nearly twenty years, although the position could never be said to be entirely satisfactory particularly in Waziristan, peopled by the most reckless raiders on the whole border-line with a bolt hole into Afghanistan when pressed from the British side. It endured throughout the war and did not break down until the Amir of Afghanistan sought refuge from his internal troubles in a jehad against India. In this insane enterprise the Afghans placed less reliance in their regular troops, which have never offered more than a contemptible resistance to the British forces, than in the armed tribesmen. In this they were justified, for the most serious fighting was with the tribesmen. The tribal levies collapsed with almost universal swiftness. The Southern Waziristan Militia broke and there was serious trouble throughout the Zhob district. The Atridis, our most serious enemies in 1897, and the most powerful of the tribes on the North-West Frontier, remained fairly quiet throughout the actual hostilities with Afghanistan, but later, it was necessary to take measures against a leading malcontent and destroy his fort at Chora. But the Mahsuds and the Waziris

broke into open hostilities. Their country lies within the belt bounded by the Durand Line and the Afghan frontier on the west, and by the districts of Bannu and Dehra Ismail Khan on the east. Amongst them the Afghan emissaries were particularly active and as they could put in the field some 30,000 warriors, 75 per cent. armed with modern weapons of precision, they constituted formidable adversaries. They refused to make peace even when the Afghans caved in. They rejected our terms and active measures were taken against them. The earlier history of these measures is described in the Indian Year Book of 1920; they were continued until May of 1920. The fighting was the most severe in the history of the Frontier. The Mahsuds fought with great tenacity. Their shooting was amazingly good; their tactics were admirable, for amongst their ranks were many men trained either in the Militia or in the Indian Army; and more than once they came within measurable distance of considerable success. They were assisted by the fact that the best trained troops in the Indian Army were still overseas and younger soldiers were opposed to them. But their very tenacity and bravery were their own undoing; their losses were the heaviest in the long history of the Borderland and when the Mahsuds made their complete submission in September 1921 they were more severely chastened than at any time during their career.

The most formidable legacy of the war was the demand for a different frontier policy. It became evident that the old regime of levy posts and tribal militia backed up by heavy subsidies to the border tribes had come to an end. The exact policy which will take its place has yet to be determined. But it is certain that it will need large regular forces to protect the Border, supported by an adequate system of roads and railways. Further, there arose from the bitter fighting in Waziristan the need for a definite policy in that disturbed area. In the opinion of competent frontier officers there are only two courses; one is to enclose the country in a ring fence, the other to hold permanently strong places which will dominate the country and keep its turbulent people in subjection. The latter has in effect been decided upon. Lord Chelmsford indicated the broad outlines of this policy when in his opening speech at the last meeting of the Imperial Legislative Council he declared that it had been decided to retain commanding posts in Waziristan and open up the country by roads—on the principle of Wade's pacification of the Scottish Highlands; and to extend the railway from Jamrud through the Khyber Pass to the Afghan frontier.

AFGHANISTAN.

The relations of Afghanistan with the Indian Empire were dominated by one main consideration—the relation of Afghanistan to a Russian invasion of India. All other considerations were of secondary importance. For nearly three-quarters of a century the attitude of Great Britain toward successive Amirs has been dictated by this one factor. It was in order to prevent Afghanistan from coming under the influence of Russia that the first Afghan War of 1838 was fought—the most melancholy episode in Indian frontier history. It was because a Russian envoy was received at Kabul whilst the British representative was turned back at Ali Masjid that the Afghan War of 1878 was waged. After that the whole end of British policy toward Afghanistan was to build up a strong independent State, friendly to Britain, which would act as a buffer against Russia, and so to order our frontier policy that we should be in a position to move large forces up, if necessary, to support the Afghans in resisting aggression.

Gates to India.

A knowledge of the trans-frontier geography of India brought home to her administrators the conviction that there were only two main gates to India—through Afghanistan, the historic route to India, along which successive invasions have poured, and by way of Seistan. It was the purpose of British policy to close them, and of Russia to endeavour to keep them at any rate half open. To this end having pushed her trans-Persian railway to Samarkand. Russia thrust a military line from Merv to the Kushklinsky Post, where railway material is collected for its immediate prolongation to Herat. Later, she connected the trans-Siberian railway with the tran-Caucasian system, by the Orenburg-Tashkent line, thus bringing Central Asia into direct touch with her European magazines. Nor has Great Britain been idle. A great military station has been created at Quetta. This is connected with the Indian railway system by lines of railway which climb to the Quetta Plateau by the Bolan Pass and through the Chapper Rift, lines which rank amongst the most picturesque and daring in the world. From Quetta the line has been carried by the Khojak tunnel through the Khwaja Amran Range, until it leads out to the Afghan Border at New Chaman, where it opens on the route to Kandahar. The material is stocked at New Chaman which would enable the line to be carried to Kandahar in sixty days. In view of the same menace the whole of Baluchistan has been brought under British control. Quetta is now one of the great strategical positions of the world, and nothing has been left undone which modern military science can achieve to add to its natural strength. In the opinion of many military authorities it firmly closes the western gate to India, either by way of Kandahar, or the direct route through Seistan.

Further east the Indian railway system has been carried to Jamrud and is being pushed up to the Khyber Pass. A first class military road sometimes double, sometimes treble, threads the Pass to our advanced post at Landi Kotal, and then descends until it meets the Afghan frontier at Landi Khana. Later, a commencement was made with the Loi Shilman Railway, which, starting from Peshawar, was designed to penetrate the Mullagori country and provide an alternative advance to the Khyber for the movement of British troops for the defence of Kabul. For unexplained reasons, this line was suddenly stopped and is now

thrust in the air. In this wise the two Powers prepared for the great conflict which was to be fought on the Kandahar-Ghazni-Kabul line.

Relations with India.

Between the advanced posts on either side stands the Kingdom of Afghanistan. The end of British policy has been to make it strong and friendly. In the first particular it has largely succeeded. When the late Abdurrahaman was invited to ascend the throne, as the only means of escape from the tangle of 1879, none realised his great qualities. Previously the Amir of Afghanistan had been the chief of a confederacy of clans. Abdurrahaman made himself master in his own kingdom. By means into which it is not well closely to enter, he beat down opposition until none dared lift a hand against him. Aided by a British subsidy of twelve lakhs of rupees a year, increased to eighteen by the Durand Agreement of 1893, and subsequently to over 20 lakhs, he established a strong standing army and set up arsenals under foreign supervision to furnish it with arms and ammunition. Step by step his position was regularised. The Anglo-Russian Boundary Commission,—which nearly precipitated war over the Penjdeh episode in 1885,—determined the northern boundaries. The Pamirs Agreement delimited the borders amid those snowy heights. The Durand Agreement settled the border on the British side, except for a small section to the west of the Khyber which remained a fruitful source of trouble between Afghanistan and ourselves until 1919, when the Afghan claims and action upon the undemarcated section led to war. That section was finally surveyed and the frontier determined shortly after the conclusion of peace with Afghanistan. Finally the McMahon award closed the old feud with Persia over the distribution of the waters of the Helmand in Seistan. It was estimated by competent authorities that about the time of Abdurrahaman's death, Afghanistan was in a position to place in the field, in the event of war, one hundred thousand well-armed regular and irregular troops, together with two hundred thousand tribal levies, and to leave fifty thousand regulars and irregulars and a hundred thousand levies to maintain order in Kabul and the provinces. But if Afghanistan were made strong, it was not made friendly. Abdurrahaman Khan distrusted British policy up to the day of his death. All that can be said is that he distrusted it less than he distrusted Russia, and if the occasion had arisen for him to make a choice, he would have opposed a Russian advance with all the force at his disposal. He closed his country absolutely against all foreigners, except those who were necessary for the supervision of his arsenals and factories. He refused to accept a British Resident, on the ground that he could not protect him, and British affairs were entrusted to an Indian agent, who was in a most equivocal position. At the same time he repeatedly pressed for the right to pass by the Government of India and to establish his own representative at the Court of St. James.

Afghanistan and the War:—These relations were markedly improved during the reign of His Majesty the Amir Habibullah Khan. It used to be one of the trite sayings of the Frontier that the system which Abdurrahman Khan had built up would perish with him, for none was capable of maintaining it. Habibullah Khan more than maintained it. He visited India soon after his accession and acquired a vivid knowledge of the power and resources of the Empire. He strengthened and consolidated his authority in Afghanistan itself. At the outset of the war he made a declaration of his complete neutrality. It is believed—a considerable reticence is preserved over our relations with Afghanistan—that he warned the Government of India that he might be forced into many equivocal acts, but they must trust him; certainly his reception of Turkish, Austrian and German "missions" at Kabul, at a time when British representatives were severely excluded, was open to grave misconstruction. But a fuller knowledge induced the belief that the Amir was in a position of no little difficulty. He had to compromise with the fanatical and anti-British elements amongst his own people, inflamed by the Turkish preaching of a jehad, or holy Islamic war. But he committed no overact of hostility; as soon as it was safe to do so he turned the members of these missions out of the kingdom. At the end of the war his policy was completely justified; he had kept Afghanistan out of the war, he had adhered to the winning side; his authority in the kingdom and in Central Asia was at its zenith.

Murder of the Amir:—It is believed that if he had lived Habibullah Khan would have used this authority for a progressive policy in Afghanistan, by opening up communications and extending his engagements with India. He was courted by the representatives of Persia and the Central Asian States as the possible rallying centre of a Central Asian Islamic confederation. At this moment he was assassinated on the 20th February 1919. The circumstances surrounding his murder have never been fully explained; but there is strong ground for the belief that it was promoted by the reactionaries who had harassed him all his reign. These realised that with his vindication by the war their time of reckoning had come: they anticipated it by suborning one of his aides to murder him in his sleep. His brother, Nasrullah Khan, the nominee of the fanatical element, was proclaimed Amir at Jelalabad in his stead, but public opinion in Afghanistan revolted at the idea of the brother seizing power over the corpse of the murdered man. His sons, Hayat and Amanullah, were not disposed to waive their heritage. Amanullah was at Kabul, controlling the treasury and the arsenal and supported by the Army. Nasrullah found it impossible to make head against him and withdrew. The new Amir, Amanullah, at once communicated his accession to the Government of India and proclaimed his desire to adhere to the traditional policy of friendship. But his difficulties at once commenced; he had to deal with the war party in Afghanistan; he was confronted with the dissatisfaction arising from the manner in which the murderers of Habibullah had been dealt with; the fanatical element was exasperated by the imprisonment of Nasrullah; and the Army was so incensed that it had to be removed from Kabul and given occupa-

tion to divert its thoughts. A further element of complexity was introduced by the political situation in India. The agitation against the Rowlatt Act was at its height. The disturbances in the Punjab and Gujarat had taken place. Afghan agents in India, of whom the most prominent was Ghulam Hyder Khan, the Afghan postmaster at Peshawar, flooded Afghanistan with exaggerated accounts of the Indian unrest. The result of all this was to convince the Amir that the real solution of his difficulties was to unite all the disturbing elements in a war with India. On the 25th April his troops were set in motion and simultaneously a stream of anti-British propaganda commenced to flow from Kabul and open intrigue was started with the Frontier tribes, on whom the Afghans placed their chief reliance

Speedy Defeat:—The war caught the Army in India in the throes of demobilisation and with a large proportion of the seasoned troops on service abroad. Nevertheless the regular Afghan Army was rapidly dealt with Strong British forces moved up the Khyber and seized Dacca. Jelalabad was repeatedly bombed from the air and also Kabul Nothing but a shortage of mechanical transport prevented the British forces from seizing Jelalabad. In ten days the Afghans were severely defeated. On the 14th May they asked for an Armistice. With the usual Afghan spirit of haggling, they tried to water down the conditions of the armistice, but as they were met with an uncompromising emphasis of the situation they despatched representatives to a conference at Rawalpindi on the 26th July. On the 8th August a Treaty of Peace was signed which ran as follows:

ARTICLE 1.

From the date of the signing of this Treaty there shall be peace between the British Government, on the one part, and the Government of Afghanistan on the other.

ARTICLE 2.

In view of the circumstances which have brought about the present war between the British Government and the Government of Afghanistan, the British Government to mark their displeasure, withdraw the privilege enjoyed by former Amirs of importing arms, ammunition or warlike munitions through India to Afghanistan.

ARTICLE 3.

The arrears of the late Amir's subsidy are furthermore confiscated, and no subsidy is granted to the present Amir.

ARTICLE 4.

At the same time, the British Government are desirous of the re-establishment of the old friendship that has so long existed between Afghanistan and Great Britain, provided they have guarantees that the Afghan Government are, on their part, sincerely anxious to regain the friendship of the British Government. The British Government are prepared, therefore, provided the Afghan Government prove this by their acts and conduct, to receive another Afghan mission after six months for the discussion and settlement of matters of common interest to the two Governments and the re-establishment of the old friendship on a satisfactory basis.

ARTICLE 5.

The Afghan Government accept the Indo-Afghan frontier accepted by the late Amir. They further agree to the early demarcation by a British Commission of the undemarcated portion of the line west of the Khyber, where the resent Afghan aggression took place, and to accept such boundary as the British Commission may lay down. The British troops on this side will remain in their present positions until such demarcation has been effected.

At the same time the Afghan delegates were given a letter which officially recognised the freedom of Afghan foreign relations from British control. The changes brought about in the Middle East by the war had made it difficult for Great British to advise Afghanistan regarding her external affairs, unless such advice was desired. It was therefore thought better to terminate an agreement which had not in effect been very scrupulously observed even by the Amir's predecessors.

Post War Relations:— It will be seen that under this Treaty the way was paved for a fresh engagement six months afterwards During the hot weather of 1920 there were prolonged discussions at Mussoorie between Afghan Representatives and British officials under Sir Henry Dobbs These were private, but it is believed that a complete agreement was reached Certainly after an interchange of Notes which revealed no major point of difference it was agreed that a British Mission should proceed to Kabul to arrange a definite treaty of peace. This Mission crossed the Border in January 1921 and entered Kabul But no Treaty was signed until November of that year Nor is there any mystery as to the reasons for these delays even after the preliminary discussions had been completed; they are set out in a long Note to the Soviet Government which Lord Curzon published in September 1921 In this Note Lord Curzon pointed out that whilst under the Trade Agreement of March 16 the Soviet Government had pledged itself not to intrigue against the British Government, a violent anti-British propaganda had been carried on in the Near and Middle East The specific allegations concerning Afghanistan were embodied in the following paragraph:—

"Intense activity in Afghanistan aimed at imperilling the British power in India Among other things the Soviet has promised Afghanistan a subsidy of £100,000 a year, has sought to establish a bomb factory on the borders of India, and has directed Jemal Pasha's tampering with the tribesmen on the frontier."

The Russo-Afghan Treaty to which Lord Curzon referred, was signed on February 28th, 1921, at which time the Dobbs Mission was actually in Kabul It was the stumbling block to the negotiations. However after many alarums and excursions, the Treaty of Peace was signed in November and published in India. The main points in the Treaty are set out in the following communique:—

"Satisfactory written assurances that no Russian Consulates will be permitted in the Jalalabad, Ghazni and Kandahar areas having been received from the Afghan Government, a Treaty of Friendship with Afghanistan was signed in Kabul.

"Under the Treaty, which though subject to ratification is immediately operative, Great Britain reaffirms her recognition of Afghanistan's *complete independence*, and there is to be an interchange of Ministers in London and Kabul, and of Consuls in India and Afghanistan Afghanistan accepts the existing Anglo-Afghan frontier, with a slight re-alignment of the boundary demarcated by the British Commission in the autumn of 1919; and misunderstandings between the two Governments over the tribes on either side of the border having been removed, each Government engages to apprise the other beforehand of any major operations it may find it necessary to institute for the maintenance of order near the frontier. Subject to the continuance of friendliness and the provisions of any general Arms Traffic Convention that may hereafter come into force the privilege formerly enjoyed by the Afghan Government of importing munitions of war through India is restored, a rebate of customs duty (with a small reduction to cover registration expenses) is granted, subject to the usual conditions regarding goods in transit, on goods that pass through India from the ports into Afghanistan; goods imported by the Afghan Government for the public service are exempt from all duty. Provision is made in the Treaty for the conclusion of separate trade and postal conventions."

The main points of the Treaty are as follows:—

THE ANGLO-AFGHAN TREATY.

ARTICLE I.

The British Government and the Government of Afghanistan mutually certify and respect each with regard to the other all rights of internal and external independence.

ARTICLE II.

The two High Contracting Parties mutually accept the Indo-Afghan Frontier as accepted by the Afghan Government under Article V of the treaty concluded at Rawalpindi on the 8th August 1919, corresponding to the 11th Zipada, 1337 Hijra, and also the boundary west of the Khyber laid down by the British Commission in the months of August and September 1919, pursuant to the said Article, and shown on the map attached to this treaty by a black chain line, subject only to the re-alignment set forth in Schedule I annexed which has been agreed upon in order to include within the boundaries of Afghanistan the place known as Tor Kham, and the whole bed of the Kabul river between Shilman Khwala Banda and Palosai and which is shown on the said map by a red chain line. The British Government agrees that the Afghan authorities shall be permitted to draw water in reasonable quantities through a pipe which shall be provided by the British Government from Landi Khana for the use of Afghan subjects at Tor Kham, and the Government of Afghanistan agrees that British officers and tribesmen living on the British side of the boundary shall be permitted without let or hindrance to use the aforesaid portion of the Kabul river for purposes of navigation and that all existing rights of irrigation from the aforesaid portion of the river shall be continued to British subjects.

ARTICLE III.

The British Government agrees that a Minister from His Majesty the Amir of Afghanistan shall be received at the Royal Court of London like the Envoys of all other Powers and to permit the establishment of an Afghan Legation in London, and the Government of Afghanistan likewise agrees to receive in Kabul a Minister from His Britannic Majesty the Emperor of India and to permit the establishment of a British Legation at Kabul.

Each party shall have the right of appointing a Military Attache to its Legation.

ARTICLE IV.

The Government of Afghanistan agrees to the establishment of British Consulates at Kandahar and Jalalabad, and the British Government agrees to the establishment of an Afghan Consul-General at the headquarters of the Government of India and three Afghan Consulates at Calcutta, Karachi and Bombay. In the event of the Afghan Government desiring at any time to appoint Consular officers in any British territories other than India, a separate agreement shall be drawn up to provide for such appointments, if they are approved by the British Government.

ARTICLE VI.

As it is for the benefit of the British Government and the Government of Afghanistan that the Government of Afghanistan shall be strong and prosperous, the Government of Great Britain agrees that whatever quantity of material is required for the strength and welfare of Afghanistan, such as all kinds of factory machinery, engines and materials and instruments for telegraph telephones, &c., which Afghanistan may be able to buy from Great Britain or the British dominions or from other countries of the world, shall ordinarily be imported without let or hindrance by Afghanistan into its own territories from the ports of the British Isles and British India. Similarly the Government of Afghanistan agrees that every kind of goods, the export of which is not contrary to the internal laws of the Government of Afghanistan and which may in its judgment be in excess of the internal needs and requirements of Afghanistan and is required by the British Government, can be purchased and exported to India with the permission of the Government of Afghanistan. With regard to arms and munitions, the British Government agrees that for so long as it is assured that the intentions of the Government of Afghanistan are friendly and that there is no immediate danger to India to be feared from their importation into Afghanistan, such importation shall be permitted without let or hindrance. If, however, the Arms Traffic Convention is ratified by the

Great Powers of the world and comes into force, the right of importation of arms and munitions by the Afghan Government shall be subject to the proviso that the Afghan Government shall first have signed the Arms Traffic Convention and that such importation shall only be made in accordance with the provisions of that Convention. Should the Arms Traffic Convention not be ratified or lapse, the Afghan Government can, subject to the above-mentioned assurance, import from time to time into its own territory the arms and munitions mentioned above through the ports of the British Isles and British India.

ARTICLE VII.

No Customs duties shall be levied at British Indian ports on goods imported under the provisions of Article VI on behalf of the Government of Afghanistan, for immediate transport to Afghanistan, provided that a certificate signed by such Afghan authority or representative as may from time to time be determined by the two Governments shall be presented at the time of importation to the Chief Customs Officer at the port of import setting forth that the goods in question are the property of the Government of Afghanistan and are being sent under its orders to Afghanistan

The British Government agrees to the grant in respect of all goods imported into India at British ports for re-export to Afghanistan and exported to Afghanistan by routes to be agreed upon between the two Governments of a rebate at the time and place of export of the full amount of Customs duty, levied upon such goods, subject to a deduction of not more than one-eighth of such duty as recompense for the work of Customs registration, and provided that such goods shall be transported through India in sealed packages which shall not be opened or subdivided before their export from India.

The British Government declares that it has no present intention of levying Customs duty on goods or livestock of Afghan origin or manufacture, imported by land or by river into India or exported from Afghanistan to other countries of the world through India and the import of which into India is not prohibited by law. In the event, however, of the British Government deciding in the future to levy Customs duties on goods and livestock imported into India by land or by river from neighbouring States it will, if convenient, levy such duties on imports imported from Afghanistan. But in that event the British Government agrees that it will not levy higher duties on imports from Afghanistan than those levied on imports from such neighbouring States. Nothing in this Article shall prevent levy on imports from Afghanistan of the present Khyber tolls and of octroi in any town of India in which octroi is or may be hereafter levied, provided that there shall be no enhancement of the present rate of the Khyber tolls.

ARTICLE VIII.

The British Government agrees to the establishment of trading agencies by the Afghan Government at Peshawar, Quetta and Parachinar, provided that the personnel and the property of the said agencies shall be subject to the operations of all British laws and orders and to the jurisdiction of British Courts; and that they shall not be recognised by the British authorities as having any official or privileged position.

ARTICLE X.

The two High Contracting Parties agree to afford facilities of every description for the exchange of postal matter between their two countries, provided that neither shall be authorised to establish Post Offices within the territory of the other. In order to give effect to this Article a separate Postal Convention shall be concluded, for the preparation of which such number of special officers as the Afghan Government may appoint shall meet the officers of the British Government and consult with them.

ARTICLE XI.

The two High Contracting Parties having mutually satisfied themselves each regarding the goodwill of the other, and especially regarding their benevolent intentions towards the tribes residing closeto their respective boundaries hereby undertake each to inform the other in future of any military operations of major importance which may appear necessary for the maintenance of order among the frontier tribes residing within their respective spheres before the commencement of such operations.

ARTICLE XII.

The two High Contracting Parties agree that representatives of the British and Afghan Governments shall be appointed to discuss the conclusion of a separate Trade Convention to deal with measures necessary to carry out the provision of Article IX of this treaty and with any other matter relating to trade, the settlement of which may seem desirable in the interests of two High Contracting Parties. Until such a Convention is signed commercial relations shall be continued between the two countries on their present basis.

ARTICLE XIV.

The provisions of this treaty shall come into force from the date of its signature, and shall remain in force for three years from that date. In case neither of the High Contracting Parties should have notified twelve months before the expiration of the said three years the intention to terminate it, it shall remain binding until the expiration of one year from the day on which either of the High Contracting Parties shall have denounced it. This treaty shall come into force on signature by the delegations of the two High Contracting Parties and the two ratified copies of it shall be exchanged at Kabul within 2½ months of signature.

SCHEDULE I.

(Referred to in Article II.)

In the nulla-bed running from Landi Khana to Painda Khak Post, the Afghan frontier has been advanced approximately 700 yards, and the Tor Kham ridge, including Shamsa Kandao and Shamsa Kandao Sar, is comprised in Afghan territory. Further, the Afghan frontier has been advanced between the point where the present boundary joins the Kabul river and Palosai from the centre of the river to the right bank.

N.B.—This frontier readjustment was carried out in December 1921.

TIBET.

Recent British policy in Tibet is really another phase in the long-drawn-out duel between Great Britain and Russia in Central Asia. The earliest efforts to establish communication with that country were not, of course, inspired by this apprehension. When in 1774 Warren Hastings despatched Bogle on a mission to the Tashi-Lama of Shigatse,—the spiritual equal, if not superior, of the Dalai Lama of Lhasa—his desire was to establish facilities for trade, to open up friendly relations with a Power which was giving us trouble on the frontier, and gradually to pave the way to a good understanding between the two countries. After Warren Hasting's departure from India the subject slept, and the last Englishman to visit Lhasa, until the Younghusband Expedition of 1904, was the unofficial Manning. In 1885, under the inspiration of Colman Macaulay, of the Bengal Civil Service, a further attempt was made to get into touch with the Tibetans, but it was abandoned in deference to the opposition of the Chinese, whose suzerainty over Tibet was recognised, and to whose views until the war with Japan, British statesmen were inclined to pay excessive deference. But the position on the Tibetan frontier continued to be most unsatisfactory. The Tibetans were aggressive and obstructive, and with a view to putting an end to an intolerable situation, a Convention was negotiated between Great Britain and China in 1890. This laid down the boundary between Sikkim and Tibet, it admitted a British protectorate over Sikkim, and paved the way for arrangements for the conduct of trade across the Sikkim-Tibet frontier. These supplementary arrangements provided for the opening of a trade mart at Yatung, on the Tibetan side of the frontier, to which British subjects should have the right of free access, and where there should be no restrictions on trade. The agreement proved useless in practice, because the Tibetans refused to recognise it, and despite their established suzerainty, the Chinese Government were unable to secure respect for it.

Russian Intervention.

This was the position when in 1899 Lord Curzon, Viceroy of India, endeavoured to get into direct touch with the Tibetan authorities. Three letters which he addressed to the Dalai Lama were returned unopened, at a time when the Dalai Lama was in direct intercourse with the Tsar of Russia. His emissary was a Siberian Dorjieff, who had established a remarkable ascendancy in the counsels of the Dalai Lama. After a few years' residence at Lhasa Dorjieff went to Russia on a confidential mission in 1899. At the end of 1900 he returned to Russia at the head of a Tibetan mission, of which the head was officially described in Russia as "the senior Tsanite Khomba attached to the Dalai Lama of Tibet." This mission arrived at Odessa in October 1900, and was received in audience by the Tsar at Livadia. Dorjieff returned to Lhasa to report progress, and in 1901 was at St. Petersburg with a Tibetan mission, where as bearers of an autograph letter from the Dalai Lama they were received by the Tsar at Peterhoff. They were escorted home through Central Asia by a Russian force to which several Intelligence Officers were attached. At the time it was rumoured that Dorjieff had, on behalf of the Dalai Lama, concluded a treaty with Russia, which virtually placed Tibet under the protectorate of Russia. This rumour was afterwards officially contradicted by the Russian Government.

The Expedition of 1904.

In view of these conditions the Government of India, treating the idea of Chinese suzerainty over Tibet as a constitutional fiction, proposed in 1903 to despatch a mission, with an armed escort, to Lhasa to discuss the outstanding questions with the Tibetan authorities on the spot. To this the Home Government could not assent, but agreed, in conjunction with the Chinese Government, to a joint meeting at Khamba Jong, on the Tibetan side of the frontier. Sir Francis Younghusband was the British representative, but after months of delay it was ascertained that the Tibetans had no intention of committing themselves. It was therefore agreed that the mission, with a strong escort, should move to Gyantse. On the way the Tibetans developed marked hostility, and there was fighting at Tuna, and several sharp encounters in and around Gyantse. It was therefore decided that the mission should advance to Lhasa, and on August 3rd, 1904, Lhasa was reached. There Sir Francis Younghusband negotiated a convention by which the Tibetans agreed to respect the Chinese Convention of 1890; to open trade marts at Gyantse, Gartok and Yatung; to pay an indemnity of £500,000 (seventy-five lakhs of rupees); the British to remain in occupation of the Chumbi Valley until this indemnity was paid off at the rate of a lakh of rupees a year. In a separate instrument the Tibetans agreed that the British Trade Agent at Gyantse should have the right to proceed to Lhasa to discuss commercial questions, if necessary.

Home Government intervenes.

For reasons which were not apparent at the time, but which have since been made clearer, the Home Government were unable to accept the full terms of this agreement. The indemnity was reduced from seventy-five lakhs of rupees to twenty-five lakhs, to be paid off in three years, and the occupation of the Chumbi Valley was reduced to that period. The right to despatch the British Trade Agent to Lhasa was withdrawn. Two years later (June 1906) a Convention was concluded between Great Britain and China regulating the position in Tibet. Under this Convention Great Britain agreed neither to annex Tibetan territory, nor to interfere in the internal administration of Tibet. China undertook not to permit any other foreign State to interfere with the territory or internal administration of Tibet. Great Britain was empowered to lay down telegraph lines to connect the trade stations with India, and it was provided that the provisions of the Convention of 1890, and the Trade Regulations of 1893, remained in force. The Chinese Government paid the indemnity in three years and the Chumbi Valley was evacuated. The

only direct result of the Mission was the opening of the three trade marts and the establishment of a British Trade Agent at Gyantse.

The reason underlying the action of the British Government in modifying, in such material particulars, the Convention of Lhasa was apparent later. The Anglo-Russian Agreement was in process of negotiation, and under that Agreement Great Britain was pledging herself not to annex any portion of Tibetan territory, nor to send representative to Lhasa. A seventy-five year occupation of the Chumbi Valley would have been indistinguishable from annexation.

Chinese Action.

The sequel to the Anglo-Russian Agreement was dramatic, although it ought not to have been unexpected. On the approach of the Younghusband Mission the Dalai Lama fled to Urga, the sacred city of the Buddhists in Mongolia. He left the internal government of Tibet in confusion, and one of Sir Francis Younghusband's great difficulties was to find Tibetan officials who would undertake the responsibility of signing the Treaty. Now the suzerainty of China over Tibet had been explicitly reaffirmed. It was asserted that she would be held responsible for the foreign relations of Tibet. In the past this suzerainty, having been a "constitutional fiction," it was inevitable that China should take steps to see that she had the power to make her will respected at Lhasa. To this end she proceeded to convert Tibet from a vassal state into a province of China. In 1908 Chao Erh-feng, acting Viceroy in the neighbouring province of Szechuen, was appointed Resident in Tibet He proceeded gradually to establish his authority, marching through eastern Tibet and treating the people with great severity. Meantime the Dalai Lama, finding his presence at Urga, the seat of another Buddhist Pontiff, irksome, had taken refuge in Si-ning. Thence he proceeded to Peking, where he arrived in 1908 was received by the Court, and despatched, to resume his duties at Lhasa. Moving by leisured stages, he arrived there at Christmas 1909. But it was soon apparent that the ideas of the Dalai Lama and of the Chinese Government had little in common. The Dalai Lama expected to resume the temporal and spiritual despotism which he had exercised prior to 1904. The Chinese intended to deprive him of all temporal power and preserve him as a spiritual pope. The Tibetans had already been exasperated by the pressure of the Chinese soldiery. The report that a strong Chinese force was moving on Lhasa so alarmed the Dalai Lama that he fled from Lhasa, and by the irony of fate sought a refuge in India. He was chased to the frontier by Chinese troops, and took up his abode in Darjeeling, whilst Chinese troops overran Tibet.

Later Stages.

The British Government, acting on the representations of the Government of India: made strong protests to China against this action. They pointed out that Great Britain, while disclaiming any desire to interfere with the internal administration of Tibet, could not be indifferent to disturbances in the peace of a country which was a neighbour, on intimate terms with other neighbouring States on our frontier, especially with Nepal, and pressed that an effective Tibetan Government be maintained. The attitude of the Chinese Government was that no more troops had been sent to Tibet than were necessary for the preservation of order, that China had no intention of converting Tibet into a province, but that being responsible for the good conduct of Tibet, she must be in a position to see that her wishes were respected by the Tibetans. Finally, the Chinese remarked that the Dalai Lama was such an impossible person that they had been compelled again to depose him. Here the matter might have rested, but for the revolution in China. That revolution broke out in Szechuen, and one of the first victims was Chao Erh-feng. Cut off from all support from China, surrounded by a hostile and infuriated populace, the Chinese troops in Tibet were in a hopeless case; they surrendered, and sought escape not through China, but through India, by way of Darjeeling and Calcutta. The Dalai Lama returned to Lhasa, and in 1913, in the House of Lords on July 28, Lord Morley stated the policy of the British Government in relation to these changes. He said the declaration of the President of the Chinese Republic saying that Tibet came within the sphere of Chinese internal administration; and that Tibet was to be regarded as on an equal footing with other provinces of China, was met by a very vigorous protest from the British Government. The Chinese Government subsequently accepted the principle that China is to have no right of active intervention in the internal administration of Tibet, and agreed to the constitution of a conference to discuss the relation of the three countries. This Convention met at Simla when Sir Henry McMahon, Foreign Secretary to the Government of India; Mr. Ivan Chen, representing China; and Mr. Iong Chen Shatra, Prime Minister to the Dalai Lama, threshed out these issues. Whilst no official pronouncement has been made on the subject, it is understood that a Convention was initialled in June which recognised the complete autonomy of Tibet proper, with the right of China to maintain a Resident at Lhasa with a suitable guard. A semi-autonomous zone was to be constituted in Eastern Tibet, in which the Chinese position was to be relatively much stronger. But this Convention, it is understood, has not been ratified by the Chinese Government, owing to the difficulty of defining Outer and Inner Tibet, and in 1918 Tibet took the offensive and threw off the last vestiges of Chinese suzerainty. When the Chinese province of Szechuan went over to the South, the Central Government at Pekin was unable to finance the frontier forces or to withstand the Tibetan advance, which was directed from Lhasa and appeared to be ably managed. After the Tibetan army had occupied some towns on the confines of the Szechuan marshes, hostilities were suspended and an armistice was concluded. In the latter part of 1919, reports were circulated in China and Calcutta to the effect that this state of affairs had been interrupted by a Chinese invasion of Tibet; but the reports were contradicted by the Government of India. In response to several requests by His Holiness the Dalai Lama and his ministers that

a British Officer may be allowed to pay a friendly visit to Lhasa, the Government of India deputed for the purpose Mr. C. A. Bell, C.M.G., I.C.S., Political Officer in Sikkim, who is well known to the Dalai Lama. The party left Gyantse on the 8th November 1920.

Mr. Bell returned to India in 1921, when an official statement on the results of his work was published in the following terms. —

"The attention of the Government of India has been drawn to the renewed currency that is being given in the press to a report that Mr. Bell returned from Lhasa with the draft of a treaty with the Tibetan Government.

"The report is without any foundation and has already been contradicted. Mr Bell was sent to Lhasa at the pressing invitation of His Holiness the Dalai Lama, whose personal friendship Mr. Bell has long enjoyed, to discuss with the Tibetan Government the recent occurrences in Central Asia that had aroused their apprehensions and to advise them on their projects for the development of their country

"Mr. Bell was treated with marked cordiality, both by the Tibetan Government and the clergy and laity, during his stay in Lhasa and his mission has not only proved of assistance to the Tibetan Government, but has done much to strengthen those relations of neighbourly friendliness which it is the aim of the Government of India to maintain between India and Tibet."

Political Importance of Tibet.

The political importance of Tibet in relation to India has of necessity been changed by the Anglo-Russian Agreement. So long as that instrument is in force, it tends to decline. But no treaties are everlasting. The question has been admirably summed up by Sir Valentine Chirol ("The Middle Eastern Question"), written before the Agreement was reached. "What it would be impossible to view without some concern," he wrote, "would be the ascendance of a foreign and possibly hostile power at Lhasa, controlling the policy of a great politico-religious organisation whose influence can and does make itself appreciably felt all along the north-eastern borderland of India. Lhasa is the stronghold of Lamaistic Buddhism, a debased form of Buddhism largely overgrown with tantric philosophy—Lhasa is in fact the Rome of Central Asian Buddhism, and the many-storied Po ta-la on the hill to the west of the city is its Vatican, whence its influence radiates throughout innumerable lamaseries or Buddhist monasteries, not only into Turkestan and Mongolia and Western China, but across the Himalayas into the frontier States of our Indian Empire. Corrupt and degraded as it is, it is still unquestionably a power, and just because it is corrupt and degraded it might lend itself more readily to become for a consideration the tool of Russian ambitions.....Tibet as a Russian dependency would, at any rate, no longer be a *quantite negligeable*, and our north-eastern frontier, naturally formidable as it is, would require to be watched, just as every civilised country has to watch its frontiers, whatever they may be, where they march with a powerful neighbour, and most of all in India, where our frontier is fringed with semi-independent Native States, over which our authority is conditioned mainly on the hitherto unrivalled prestige of our Imperial power in Asia."

British Trade Agent, Yatung and Gyantse.—D. Macdonald.

THE NORTH-EASTERN FRONTIER.

The position on the northern frontier has been considered as if the British line were contiguous with that of Tibet. This is not so. The real frontier States are Kashmir, Nepal, Sikkim and Bhutan. From Chitral to Gilgit, now the northernmost posts of the Indian Government, to Assam, with the exception of the small wedge between Kashmir and Nepal, where the British district of Kumaon is thrust right up to the confines of Tibet, for a distance of nearly fifteen hundred miles there is a narrow strip of native territory between British India and the true frontier. The first of these frontier States is **Kashmir.** The characteristics of this State are considered under Native States (*q.v.*); it is almost the only important Native State in India with frontier responsibilities, and it worthily discharges them through the agency of its efficient Imperial Service troops—four regiments of infantry and two Mountain Batteries, composed mainly of the Rajput Dogras, who make excellent fighting material. One of the most important trade routes with Tibet passes through Kashmir—that through Ladak. Then we come to the long narrow strip of **Nepal.** This Gurkha State stands in special relations with the British Government. It is for all practical purposes independent, and the British resident at Khatmandu exercises no influence on the internal administration. The governing machine in Nepal is also peculiar. The Maharaj Dhiraj, who comes from the Sesodia Rajput clan, the bluest blood in India, takes no part in the administration. All power vests in the Prime Minister, who occupies a place equivalent to that of the Mayors of the Palace, or the Shoguns of Japan. The present Prime Minister, Sir Chandra Shamsher, has visited England, and has given conspicuous evidence of his attachment to the British Government. Nepal is the main Indian outpost against Tibet, or against Chinese aggression through Tibet. The friction between the Chinese and the Nepalese used to be frequent, and in the eighteenth century the Chinese marched an army to the confines of Khatmandu—one of the most remarkable military achievements in the history of Asia. Under the firm rule of the present Prime Minister Nepal has been largely free from internal disturbance, and has been raised to a strong bulwark of India. Nepal is the recruiting ground for the Gurkha Infantry, who form such a splendid part of the fighting arm of the Indian Empire. Beyond Nepal are the smaller States of **Bhutan** and **Sikkim**, whose rulers are Mongolian by extraction and Buddhists by religion. In view of Chinese aggressions in Tibet, the Government of India in 1910 strengthened their relations with Bhutan by increasing their subsidy from

fifty thousand to a lakh of rupees a year, and taking a guarantee that Bhutan would be guided by them in its foreign relations. Afterwards China had officially notified that Great Britain would protect the rights and interests of these States.

Assam and Burma.

We then come to the Assam border tribes—the Daflas, the Miris, the Abors and the Mishmis Excepting the Abors none of these tribes have recently given trouble. The murder of Mr Williamson and Dr. Gregorson by the Minyong Abors in 1911 made necessary an expedition to the Dihang valley of the Abor country on the N. E. frontier. A force of 2,500 and about 400 military police was employed from October 1911 to April 1912 in subduing the tribe. After two or three small actions the murderers were delivered up. The cost of the expedition was Rs. 21,60,000. At the same time friendly missions were sent to the Mishmi and Miri countries. Close contact with these forest-clad and leech-infested hills has not encouraged any desire to establish more intimate relations with them. The area occupied by the Nagasares runs northwards from Manipur. The Nagasares, a Tibeto-Burman people, devoted to the practice of head hunting, which is still vigorously prosecuted by the independent tribes. The Chin Hills is a tract of mountainous country to the south of Manipur. The corner of India from the Assam boundary to the northern boundary of the Shan States is for the most part included in the Myitkyina and Bhamo districts of Burma. Over the greater part of this area, a labyrinth of hills in the north, no direct administrative control is at present exercised. It is peopled by the Shans and the Kachins. Civilisation is said to be progressing and steps have been taken to prevent encroachments from the Chinese side. There is a considerable trade with China through Bhamo. On the Eastern frontier of Burma are the Shan States, with an area of fifty thousand square miles and a population of 1,300,000 These States are still administered by the Sawbwas or hereditary chiefs, subject to the guidance of Superintendents and Assistant Superintendents. The Northern Shan Railway to Lashio, opened in 1903, was meant to be a stage in the construction of a direct railway link with China, but this idea has been put aside, for it is seen that there can never be a trade which would justify the heavy expenditure. The Southern Shan States are being developed by railway connection. The five Karenni States lie on the frontier south of the Shan States. South of Karenni the frontier runs between Siam and the Tenasserim Division of Burma. The relations between the Indian Government and the progressive kingdom of Siam are excellent.

The Frontier during the war.

Unrest, which had been brewing for some time among the Kachins, came to a head in December 1914 and January 1915, when punitive operations were undertaken. The columns originally consisted of Burma Military Police, but as the disturbance appeared more general and likely to spread, regular troops were ordered up to Myitkyina. In the Kamaing and Mogaung Jurisdictions, and the adjoining unadministered territory, six columns operated during January and February. The slight opposition encountered was in all cases successfully overcome, the rebel stockades captured, and the implicated villages destroyed.

Manipur maintained a double company of service with the Army during the war and raised a labour corps for service in France. Unfortunately some of the Kuki tribes subjects of the Manipur State, alarmed at the prospect of being sent to the scene of war and being ill-advised and misinformed as to the strength of the British forces, opposed all attempts to recruit for the labour corps and eventually broke into open rebellion. The columns of the Assam Rifles sent against them met with serious opposition, and had a considerable number of casualties, before the campaign of pacification was successful.

Railways to India.

The prospect of linking Europe and Asia by a railway running eastwards through Asia Minor has fascinated men's minds for generations. The plans suggested have, owing to the British connection with India, always lain in the direction of lines approaching India. More than 40 years ago a Select Committee of the House of Commons sat for two years to consider the question of a Euphrates Valley railway. The Shah of Persia applied to the British Foreign Office for the investment of British capital in Persian railway construction many years before the end of the nineteenth century. A proposal was put forward in 1895 for a line of 1,000 miles from Cairo and Port Said to Koweit, at the head of the Persian Gulf. While these projects were in the air, German enterprise stepped in and made a small beginning by constructing the Anatolian railway system. Its lines start from Scutari, on the southern shore of the Bosphorus, opposite Constantinople, and serve the extreme western end of Asia Minor. And upon this foundation was based the Turkish concession to Germans to build the Baghdad Railway.

Meanwhile, Russia was pushing her railways from various directions into the Central Asian territory running along the northern frontiers of Persia and Afghanistan to the borders of Chinese Turkestan. The construction of a Trans-Persian railway, connecting India, across Persia, with the Russian lines between the Black Sea and the Caspian Sea came to the forefront after the conclusion of the historic Anglo-Russian agreement regarding Persia.

The Germans pushed forward their Baghdad railway project with a calculating shrewdness arising from their estimate of the value it would possess in their grand aim to overthrow the British Empire. The outbreak of the great war and the success of the Germans in inveigling Turkey into it saw the final stages of the construction of the railway pressed forward with passionate energy. Thus, before the overthrow of the Turks and Germans in Asia Minor and of the Germans in France the railway was completed and in use from Scutari across Anatolia, over the Taurus Mountains to Aleppo and thence eastward across the Euphrates to a point between Nisibin and Mosul. The Germans had also by that time constructed a line to Baghdad at the eastern end of the route, northwards from Baghdad to a point a considerable distance beyond Samara.

The war compelled the British to undertake considerable railway development northward from Basra, the port at the mouth of the Shat-el-Arab, the broad stream in which the Tigris and Euphrates, after their junction, flow into the head of the Persian Gulf. The system consists of a metre-gauge line from Basra *via* Nasarieh, on the Euphrates, thence northwards to Baghdad, the line passing a considerable distance westward to Kut-l-Amara, of historic fame. From Baghdad the line runs eastward approximately to the foot of the pass through which the Persian road crosses the frontier of that country. A line branches off in the neighbourhood of Kifri in the direction of Mosul. A line also runs westward from Baghdad to Feluja, on the Euphrates. With the Turkish Nationalists in control of Anatolia any question of the completion of the through Baghdad Line is indefinitely delayed.

The Trans-Persian line to join the Russian Caucasian system and the Indian railways first assumed proportions of practical importance in the winter of 1911. Both the Russian and the Indian railway systems were by then well developed up to the point likely to be the termini of a Trans-Persian line. The Russian system reached Julfa, on the Russo-Persian frontier in the Caucasus. During the war this line has been carried thence southward into the region east and south-east of Lake Urumia. The Indian railway system, on the borderland of India and Persia, was similarly much extended and improved during the war. No details have been published of proposals for the continuation of the Russo-Indian link under the restored conditions of peace. A new agreement which was negotiated between England and Persia specially provided for British assistance in the development of Persian natural resources and particularly for the extension and improvement of Persian roads suitable for motor traffic but the agreement came to naught.

There remains the possibility of linking the Russian and Indian railway system by way of Afghanistan. The suggestion has often been made in recent years that the Russian line from Merv to Herat, on the northern frontier of Afghanistan, should be linked to the Indian line which proceeds from Quetta to the Afghan border on Chaman The distance between the railway heads is about 250 miles. But there have always for strategic reasons been strong military objections to the railway across Afghanistan and after the death of the late Amir Habibullah the Afghan Government flatly opposed any suggestion for carrying the Indian or Russian railway system within their borders. What the present Afghan Government think about the matter was not shown up to the time this article was written, but the strange situation in Central Asia and beyond the Indian North-West Frontier does not suggest the early removal of the strategic difficulties.

Britain's special interests in regard to Persian communications have hitherto primarily been associated with lines running inland from the Persian Gulf, to supersede the old mule routes. Special importance has for many years been attached to schemes for a railway from Mohammerah (at the opening of the Karun Valley, where the Karun River runs into the Shat-el-Arab, just below Basra, northwards into the rich highland country of Western Persia where the valuable West Persian oil wells also lie. Britain has long established special relations with the Karun Valley and has a large trade there.

Foreign Consular Officers in India.

Name.	Appointment.	Port.
Argentine Republic.		
Mr. C. W. Rhodes	Vice-Consul	Calcutta.
Austria-Hungary.		
The Consul-General for Netherlands, Calcutta, is in charge of Austro-Hungarian interests.		
Belgium.		
Monsieur F. Janesens	Consul-General	Calcutta.
Monsieur W. Tolkowsky	Vice-Consul and Acting Consul.	Bombay.
Mr. D. J. MacGillivray (Ag.)	Consul	Karachi.
Mr. G. K. Walker (on leave)	Do.	Madras.
Mr. A. Walker (Ag.)	Do.	Do.
Mr. P. Dormans	Do.	Rangoon.
Mr. R. A. Scott (on leave)	Do.	Akyab.
Mr. F. A. Gaudie (Ag.)	Do.	Do.
Mr. J. Lince	Vice-Consul	Calcutta.
Bolivia.		
Kumar Shyama Kumar Tagore	Consul-General	Calcutta.
Sir A. W. Binning (on leave)	Vice-Consul	Rangoon.
Mr. G. R. Neilson (Ag.)	Do.	Do.
Brazil.		
Senor M. S. de Saint Brisson Marques (on leave)	Consul	Calcutta.
Mr. J. E. de l' Estrade (in Charge)	Do.	Do.
Mr. A. R. Braga (on leave)	Do.	Bombay.
Dr. E. F. Underwood (in Charge)	Do.	Do.
Mr D. Robertson	Vice-Consul	Rangoon.
Mr. C. H. Straker	Do.	Madras.
Mr. V. E. Nazareth	Do.	Karachi.
Mr. J. D. S. Nahapiet	Do.	Calcutta.
Chili.		
Senor Don P. A. Pacheco	Consul-General	Calcutta.
Vacant	Vice-Consul	Bombay.
Mr. H. Spencer	Consul	Madras.
Mr. J. G. Bendien (Ag.)	Vice-Consul	Bombay.
Mr. A. R. Leishman	Do.	Chittagong.
Mr. William Archbald (on leave)	Consul	Rangoon.
Mr. H. A. Rees (Ag.)	Do.	Do.
China.		
Mr. Chang Kuo Wai	Consul	Rangoon.
Costa Rica.		
Kumar Shyama Kumar Tagore	Consul	Calcutta.
Cuba.		
Senor W. F. Pais	Consul	Bombay.
Senor Don B. Martinez Y. Montalvan	Do.	Calcutta.
Czecho-Slovak Republic.		
Dr. Otokar Pertold	Consul	Bombay.

Name.	Appointment.	Port.
Denmark.		
Vacant	Consul-General	Calcutta.
Mr E P. J. de B. Oakley (Ag.)	Do.	Do.
Mr. E. H. Danchell	Consul	Bombay.
Mr. R. T. Menzies (on leave)	Do.	Madras.
Mr. W M. Browning (Ag)	Do.	Do.
Mr. C. J. J. Britton	Do.	Rangoon.
Vacant	Vice-Consul	Karachi.
Mr. H. B. Whitby (in Charge)	Do.	Calcutta.
Mr. P. T Christensen	Do.	Moulmein.
France.		
Monsieur L. E. R. Laronce	Consul-General	Calcutta.
Monsieur J. J. Serre	Vice-Consul	Do.
Monsieur R. P. M. Vadala	Consul	Bombay.
Mr. E. L. Price	Consular Agent	Karachi
Mr. F. E. L. Worke	Do.	Madras.
Vacant	Do.	Chittago.
Monsieur J. A. Swan	Do.	Rangoonng.
Vacant	Do.	Tellichery.
Germany.		
The Swiss Consular officers are in charge of German interests.		
Greece.		
Vacant	Consul	Calcutta
Guatemala.		
Mr. H. J. Sanders (on leave)	Consul	Calcutta.
Italy.		
Cav. G. Cecchi	Consul-General	Calcutta.
Cav. Dr. G. Gorio (on leave)	Consul	Bombay.
Cav. E. Mattoli (in Charge)	Do.	Do.
Mr. J. Mickle	Do.	Rangoon.
Vacant	Vice-Consul	Calcutta.
Vacant	Consular Agent	Madras.
Vacant	Do.	Akyab.
Signor Aldo Viola (on leave)	Do	Karachi.
Mr. E. L. Rogers (in Charge)	Do.	Do.
Mr. B. Sterling Galloway	Do.	Moulmein.
Mr. A. G. Hemmons	Do.	Bassein.
Japan.		
Mr. S. Nakaya (Ag.)	Consul-General	Calcutta.
Mr. Eishiro Nuida	Consul	Bombay.
Mr. T. T. Fuchi	Vice-Consul	Rangoon.
Liberia.		
Dr. Benode Behari Banerjee	Consul	Calcutta.
Dr. E. Freeman Underwood	Do.	Bombay.
Mexico.		
Mr. R. L. B. Gall	Consul	Calcutta.

Name.	Appointment.	Port.
Netherlands.		
Mr. W. P. Montyn	Consul-General	Calcutta.
Monsieur J. G. Bendien (on leave)	Consul	Bombay.
Mr. A. van Woerkom (Ag.)	Do.	Do.
Mr. D. van Wijngaarden (on leave)	Do.	Karachi.
Mr. C. van Amerongen (in Charge)	Do.	Do.
Mr. R. A. Scott (on leave)	Do.	Akyab.
Mr. F. A. Goudia (in Charge)	Do.	Do.
Mr W. Massink (on leave)	Do.	Rangoon.
Mr. M. J. ten Houte deLange (Ag.)	Do.	Do.
Mr. W. J. U. Turnbull (on leave)	Do.	Madras.
Mr. J. B. Cunliffe, C.I.E (Ag)	Do.	Do.
Vacant	Vice-Consul	Calcutta.
Mr. J. W. Kaan (in Charge)	Do.	Do.
Norway.		
Mr. H. A. Falsen	Consul-General	Calcutta.
Mr. C. H. Hardcastle	Consul	Bombay.
Mr. H. A. Rees	Do.	Rangoon.
Mr. J. F. Simpson	Do.	Madras
Captain H. W. Fox (on leave)	Vice-Consul	Chittagong.
Mr. W. J. Webster (Ag.)	Do.	Do.
Mr. J. C. Clark	Do.	Akyab.
Mr. J. McCracken	Do.	Bassein
Mr. A. D. Cowan (on leave)	Do.	Moulmein
Mr. J. B. Glass (Ag.)	Do.	Do.
Mr. D. J. Mac Gillivray (Ag.)	Do.	Karachi.
Mr. C. Hodding	Do.	Coconada.
Vacant	Do.	Tuticorin.
Mr. T. Logie (in Charge)	Do.	Do.
Persia.		
Khan Bahadur Haji Mirza Shujaet Ali Beg (Acting)	Consul-General	Calcutta.
Kumar Shyama Kumar Tagore	Vice-Consul-General	Do.
Mirza Ali Akbar Khan, B.A., Barrister-at-Law.	Consul	Bombay.
Khan Bahadur Haji Mirza Shujaut Ali Beg	Do.	Calcutta.
Vacant	Do.	Madras.
Mir Ayub Khan	Vice-Consul	Karachi.
Khan Bahadur Mirza Ali Akbar Shirazi	Do.	Rangoon.
Vacant	Do.	Moulmein.
Peru.		
Vacant	Consul	Rangoon.
Mr. J. A. Robin (temporarily in Charge)	Do.	Do.
Mr. H. C Sturges	Do.	Calcutta.
Portugal.		
Senhor C. J. dos Santos (on leave)	Consul-General	Bombay.
Mr. A. P. J. Fernandes (in Charge)	Do.	Do.
Dr. E. M. D'Souza	Consul	Rangoon.
Senhor A. A. Teixeira	Do.	Calcutta.
Vacant	Vice-Consul	Bombay.
Dr. A. B. da Fonseca	Do.	Karachi.
Senhor A. M. DeSouza	Do.	Rangoon
Senhor A. M. Teixeira	Do.	Madras.

Name.	Appointment	Port.
Siam.		
Luang Mitrakerm Raksha	Consul-General	Calcutta.

Mr. R. L. Rogers	Do.	Karachi
Vacant	Consular Agent	Bassein.
Vacant	Do.	Moulmein.
Vacant	Do.	Akyab.
Venezuela.		
Kumar Shyama Kumar Tagore	Consul	Calcutta.

The Home Government.

The Home Government of India represented for sixty years the gradual evolution of the governing board of the old East India Company. The affairs of the company were originally managed by the Court of Directors and the General Court of Proprietors. In 1784 Parliament established a Board of Control, with full power and authority to control and direct all operations and concerns relating to the civil and military government, and revenues of India. By degrees the number of the Board was reduced and its powers were exercised by the President, the lineal precursor of the Secretary of State for India. With modifications this system lasted until 1858, when the Mutiny, followed by the assumption of the Government of India by the Crown, demanded a complete change. Under the Act of 1858 (merged in the consolidating measures passed in 1915) the Secretary of State is the constitutional adviser of the Crown on all matters relating to India. He inherited generally all the powers and duties which were formerly vested either in the Board of Control, or in the Company, the Directors and the Secret Committee in respect of the Government and revenues of India.

The Secretary of State.

Until the Reform Act of 1919 came into force the Secretary of State had the unqualified power of giving orders to every officer in India, including the Governor-General, and to superintend, direct and control all acts, operations and concerns relating to the Government or revenues of India. In the relations of the Secretary of State with the Governor-General in Council no express statutory change was made, but Parliament ordained through the Joint Select Committee that in practice the conventions governing these relations should be modified; only in exceptional circumstances should he be called upon to intervene in matters of purely Indian interest where the Government and the Legislature of India are in agreement. On questions of fiscal policy, for example, in such circumstances his intervention when it does take place, is to be limited to safeguarding the international obligations of the Empire or any fiscal arrangements within the Empire to which the British Cabinet is a party. The relations of the Secretary of State and of the Government of India with provincial Governments are to be regulated by similar principles, so far as the reserved subjects for which Ministers are responsible are concerned.

Of the wide powers and duties still vested in the Secretary of State, many rest on his personal responsibility; others can be performed only in consultation with his Council, and for some of these the concurrence of a majority of the members of his Council voting at a meeting is required. The Act of 1919 greatly modified the rigidity of the law maintained for sixty years as to the relations of the Secretary of State with his Council, and he has fuller power than in the past to prescribe the manner, in which business is to be transacted. Though in practice the Council meets weekly (save in vacation periods) this has ceased to be a statutory requirement, the law now providing that there shall be a meeting at least once in every month.

The India Council.

The number of members of the Council was reduced by the Act to not less than eight and not more than 12, the Secretary of State being free to appoint within those limits. The period of office was reduced from 7 to 5 years, though the Secretary of State may, for special reasons of public advantage to be communicated to Parliament, re-appoint a member for another five years. Half the Council must be persons who have served or resided in India for at least ten years, and who have not left India more than five years before their appointment. The Act restored the old salary of £1,200, with an additional subsistence allowance of £600 for any member who was at the time of appointment domiciled in India. Lord Morley opened the door of the Council to Indians, and since 1917 the number of India members has been three.

Associated with the Secretary of State and the India Council is a Secretariat known as the India Office, housed at Whitehall. Appointments to the establishment are made by the Secretary of State in Council, and are subject to the ordinary Home Civil Service rules in relation to "junior situations."

In the past the whole cost of the India Office has been borne by the revenues of India, except that the Home Government made certain grants and remissions in lieu of a direct contribution amounting to £50,000 a year. The total net cost including pensions has been about £ 250,000 per annum. Last year, in conformity with the spirit of the new Act, an arrangement was made whereby the salary of the Secretary of State is placed on the Home estimates and the cost of the controlling and political functions exercised in Whitehall is also met from British revenues, while agency functions alone are chargeable to Indian revenues.

The High Commissionership.

The financial readjustment has been accompanied by a highly important administrative change provided for by the Act, in the creation of a High Commissioner for India in the United Kingdom with necessary establishments. With effect from October 1st, 1920, Sir William Meyer became the first High Commissioner, and took over control of the large Stores Department of the India Office, the accounts section connected therewith, and the Indian Students Branch, together with the supervision of the work of the Indian Trade Commissioner in the City. The further development of the functions and powers of the High Commissioner in discharging the agency work hitherto carried on by the India Office, and his gradual approximation to the position of a High Commissioner to the self-governing dominions will depend upon ensuing changes in the relations of the Government of India to the Secretary of State for India and Parliament. The clerical staff of the Stores Department at the India Office is being transferred to the Stores Depot off the

Thames in Belvedere Road, Lambeth. The High Commissioner and the rest of the staff transferred, have separate office accommodation at 42 Grosvenor Gardens, S.W. 1.

Another highly important change, which was to be effected at the beginning of the 1921 session, was the setting up by Parliament of a Joint Standing Committee on Indian affairs to consist of nine members of each House It is not proposed that any member of the Government should serve on the Committee. The purpose is to keep Parliament in closer touch with Indian affairs than has recently been possible, and to refer to the Committee draft rules and also Parliamentary Bills after they have received a second reading.

Secretary of State.

The Right Hon. Edwin S. Montagu, M.P.

Under-Secretaries of State.

Sir William Duke, G.C.I.E., K.C.S.I.

The Earl of Lytton.

Deputy Under-Secretary of State.

Sir Arthur Hirtzel, K.C.B.

Assistant Under-Secretary of State.

Sir Malcolm Seton, K.C.B.

Council.

Sir Charles Arnold White.

Sir Murray Hammick, K.C.S.I., C.I.E.

Sir Charles S. Bayley, G.C.I.E., K.C.S.I., I.S.O.

Sir William Didsbury Sheppard, K.C.I.E.

General Sir E. G. Barrow, G.C.B., G.C.S.I.

Sir James Bennett Brunyate, K.C.S.I., C.I.E.

Sahibzada Aftab Ahmed Khan.

Bhupendranath Basu.

Frederick Craufurd Goodenough.

Sir George O. Roos-Keppel, G.C.I.E., K.C.S.I.

Sir Malcolm Hogg.

Dadiba Merwanji Dalal.

Clerk of the Council, Sir Malcolm Seton.

Deputy Clerk of the Council, T. H. Dumbell.

Private Secretary to the Secretary of State, S. K. Brown.

Assistant Private Secretary, A. L. R. Parsons,

Political A.-D.-C. to the Secretary of State, Lieut.-Col. A. D'Arcy. G. Bannerman, C.I.E., C.V.O.

Private Secretary to Sir W. Duke, A. Dibdin.

Private Secretary to Lord Lytton, W. H. Turner.

Correspondence Departments.

SECRETARIES.

Controller of Finance, H. F. Howard, C.S.I., C.I.E.

Financial, W. Robinson, C.B.E.; C.H. Kisch, C.B.

Secretary, J. W. Bhore, I.C.S., C.B.E.

Chief Accountancy Officer, G. H. Stoker, O.B.E.

Personal Assistant, W. G. Crockett, C.B.E.

Joint Secretaries for Indian Students, N. C. Sen, O.B.E., and T. Quayle, D. Litt (Lond).

Stores Department Depot at Belvedere Road, Lambeth, S. E. 1.

Director-General, T. Ryan, C.I.E.

Deputy Director, R. R. Howlett.

Superintendent of Depot, Lt.-Col. S. S. W. Paddon, C.I.E.

Indian Trade Commissioner, (Winchester House, Old Broadstreet, E. C. 2) D. T. Chadwick, C.I.E., I.C.S.

Secretaries of State for India.

	Assumed charge.
Lord Stanley, P.C. (*a*)	1858
Sir Charles Wood, Bart. (*b*)	1859
Earl de Grey and Ripon, P.C. (*c*) ..	1866
Viscount Cranborne (*d*)	1866
Sir Stafford Northcote, Bart. (*e*)	1867
The Duke of Argyll, K.T., P.C.	1868
The Marquis of Salisbury, P.C. (2nd time)	1874
Gathorne Hardy, P.C., created Viscount Cranbrook, 14 May, 1878 (*f*)	1878
The Marquis of Hartington, P.C. (*g*) ..	1880
The Earl of Kimberly, P.C.	1882
Lord Randolph Churchill, P.C.	1885
The Earl of Kimberley, K.G., P.C. (2nd time)	1886
Sir Richard Assheton Cross, G.C.B., P.C., created Viscount Cross, 19 Aug., 1886	1886
The Earl of Kimberley, K.G., P.C. (3rd time)	1892
H. H. Fowler (*h*)	1894
Lord George F. Hamilton, P.C	1895
St. John Brodrick (*i*)	1903
John Morley, O.M. (*j*)	1905
The Earl of Crewe, K.G.	1910
Viscount Morley of Blackburn, O.M. ..	1911
The Earl of Crewe, K.G. (*k*)	1911
Austen Chamberlain, M.P.	1915
E. S. Montagu, M.P.	1917

(*a*) Afterwards (by succession) Earl of Derby.

(*b*) ,, (by creation) Viscount Halifax.

(*c*) ,, (by creation) Marquess of Ripon.

(*d*) ,, (by succession) Marquess of Salisbury.

(*e*) ,, (by creation) Earl of Iddesleigh.

(*f*) ,, (by creation) Earl Cranbrook

(*g*) ,, (by succession) Duke of Devonshire.

(*h*) ,, (by creation) Viscount Wolverhampton, G.C.S.I.

(*i*) ,, (by succession) Viscount Midleton.

(*j*) ,, (by creation) Viscount Morley of Blackburn, O.M.

(*k*) ,, (by creation) Marquess of Crewe, K.G.

The Army.

The great sepoy army of India originated in the small establishments of guards, known as peons, enrolled for the protection of the factories of the East India Company; but sepoys were first enlisted and disciplined by the French, who appeared in India in 1665. Before this detachments of soldiers were sent from England to Bombay, and as early as 1665 the first fortified position was occupied by the East India Company at Armagon, near Masulipatam. Madras was acquired in 1610, but in 1654 the garrison of Fort St. George consisted of only ten men. In 1661 Bombay was occupied by 400 soldiers, and in 1668 the number was only 285 of whom 93 were English and the rest French, Portuguese, and natives.

After the declaration of war with France in 1744 the forces were considerably increased, but this did not prevent the French capturing Madras in 1746. Following the French example, the English raised considerable sepoy forces and largely increased the military establishments. In 1748 Major Stringer Lawrence landed at Fort St. David to command the forces of the Company. The English foothold in India was then precarious and the French under Dupleix were contemplating fresh attacks. It became necessary for the English Company to form a larger military establishment. The new commandant at once set about the organisation and discipline of his small force, and the garrison was given a company formation. This was the beginning of the regular Indian Army of which Lawrence subsequently became Commander-in-Chief. In Madras the European companies were developed into the Madras Fusiliers; similar companies in Bengal and Bombay became the 1st Bengal and 1st Bombay Fusiliers. The native infantry were similarly organised by Lawrence and Clive. By degrees Royal Regiments were sent to India, the first being the 39th Foot, which arrived in 1754.

Struggle with the French.—From this time for a century or more the army in India was engaged in constant war. After a prolonged war with the French, whom Dupleix had by 1750 raised to the position of the leading power in India, the efforts of Stringer Lawrence, Clive, and Eyre Coote completed the downfall of their rivals, and the power of England was established by the battle of Plassey in Bengal, and at Wandewash in Southern India, where the French were finally defeated in 1761. A number of independent States, owning nominal allegiance to the Emperor at Delhi, had risen on the decline of the Mughal Empire, some ruled by Mahratta Princes and others by Musalman adventurers such as Hyder Ali of Mysore. A prolonged struggle ensued with the latter and his son and successor Tipu Sultan, which ended only with the defeat and death of Tipu and the capture of Seringapatam in 1799.

Reorganisation of 1796.—In 1796 the native armies, which had been organised on the Presidency system, were reorganised. The European troops were 13,000 strong and the natives numbered some 67,000, the infantry being generally formed into regiments of two battalions each. In Bengal regiments were formed by linking existing battalions of ten companies each with large establishments of English officers. The Madras and Bombay armies were at the same time reorganised on similar lines, and cavalry and artillery companies were raised.

In 1798 the Marquis Wellesley arrived as Governor-General firmly imbued with the necessity of destroying the last vestiges of French influence. In pursuance of this policy he reduced Mysore, where Tipu was intriguing with the French, and then turned his attention to the Mahratta States, in which Sindhia had established power over the Mughal Emperor at Delhi by means of a large regular army officered by Europeans under the French adventurer Perron. In campaigns against Sindhia in Hindustan by a British Army under General Lake, and in the Deccan against that prince and the Raja of Berar by an army under General Wellesley, afterwards Duke of Wellington, the power of these Chiefs was broken in the battles of Laswari and Assaye. French influence was finally destroyed, and the Mughal Emperor was released from the domination of the Mahrattas. Subsequently Holkar also was reduced, and British power established on a firm footing.

Mutiny at Vellore.—The Indian Army had been from time to time subject to incidents of mutiny which were the precursors of the great cataclysm of 1857. The most serious of these outbreaks occurred at the fort of Vellore in 1806 when the native troops suddenly broke out and killed the majority of the European officers and soldiers quartered in the fort, while the striped flag of the Sultan of Mysore, whose sons were confined there, was raised upon the ramparts. The mutiny was suppressed by Colonel Gillespie, who galloped over from Arcot at the head of the 19th Light Dragoons, blew in the gate of the fort, and destroyed the mutineers. This retribution put a stop to any further outbreaks in the army.

Overseas expeditions.—Several important overseas expeditions were undertaken in the early part of the nineteenth century. Bourbon was taken from the French; Ceylon and the Spice Islands were wrested from the Dutch, and Java was conquered in 1811 by a force largely composed of Bengal troops which had volunteered for this service.

In 1814 the Nepal War took place in which the brave Gillespie, who had distinguished himself in Java, was killed when leading the assault on the fort of Kalunga. The Gurkhas were overcome in this war after offering a stout resistance.

In 1817 hostilities again broke out with the Mahrattas, who rose against the British during the progress of operations against the Pindaris. Practically the whole army took the field and all India was turned into a vast camp. The Mahratta Chiefs of Poona, Nagpur, and Indore rose in succession, and were beaten respectively at Kirki, Sitabaldi, and Mehidpur. This was the last war in Southern India. The tide of

war rolled to the north never to return. In the Punjab, to which our frontier now extended, our army came into touch with the great military community of the Sikhs.

In 1824 the armies were reorganised, the double-battalion regiments being separated, and the battalions numbered according to the dates they were raised. The Bengal Army was organised in three brigades of horse artillery, five battalions of foot artillery, two regiments of European and 68 of native infantry, 5 regiments of regular and 8 of irregular cavalry. The Madras and Bombay armies were constituted on similar lines, though of lesser strength.

First Afghan War and Sikh Wars—In 1839 a British Army advanced into Afghanistan and occupied Cabul. There followed the murder of the British Envoys and the disastrous retreat in which the army perished. This disaster was in some measures retrieved by subsequent operations, but it had far-reaching effects on British prestige. The people of the Punjab had witnessed these unfortunate operations, they had seen the lost legions which never returned, and although they saw also the avenging armies they no longer regarded them with their former eyes. Sikh aggression led to hostilities in 1845-46, when a large portion of the Bengal Army took the field under Sir Hugh Gough. The Sikhs were defeated after stubborn fights at Mudki and Ferozeshahr, the opening battles, but did not surrender until they had been overthrown at the battles of Aliwal and Sobraon. Two years later an outbreak at Multan caused the Second Sikh War when, after an indecisive action at Chilianwala, our brave enemies were finally overcome at Gujerat, and the Punjab was annexed. Other campaigns of this period were the conquest of Sind by Sir Charles Napier, and the Second Burmese War, the first having taken place in 1824.

The conquest of the Punjab extended our frontier to the country inhabited by those turbulent tribes which have given so much trouble during the past sixty years while they have furnished many soldiers to our army. To keep order on this border the Punjab Frontier Force was established, and was constantly engaged in small expeditions which, while they involved little bloodshed, kept the force employed and involved much arduous work.

The Indian Mutiny.—On the eve of the mutiny in 1857 there were in the Bengal Army 21,000 British and 137,000 native troops; in the Madras Army 8,000 British and 49,000 native troops; and in Bombay 9,000 British and 45,000 native troops. The proportion of native to British was therefore too large for safety The causes of the mutiny were many and various. Among these were the annexation policy of Lord Dalhousie, especially that of Oudh from which the greater part of the Bengal Army was drawn; interference with the privileges of the sepoy with respect to certain allowances; and lack of power on the part of commanding officers either to punish or reward. The final spark which fired the revolt was the introduction of a new cartridge. The muskets of those days were supplied with a cartridge in which the powder was enclosed in a paper cover, which had to be bitten off to expose the powder to ignition. In 1857 a new cartridge was introduced with paper of a glazed texture which it was currently reported was greased with the fat of swine and oxen, and therefore unclean alike for Muhammadans and Hindus. This was interpreted as an attempt to destroy the caste and the religion of the sepoys. Skilful agitators exploited this grievance, which was not without foundation, and added reports that flour was mixed with bone-dust and sugar refined with the blood of oxen.

Disaffection culminated in mutiny at Berhampur and in an outbreak at Barrackpore where sepoy Mangal Pande attacked a European officer. The next most serious manifestation was the refusal of men of the 3rd Bengal Cavalry at Meerut to take the obnoxious cartridge. These men were tried and sentenced to long terms of imprisonment, their fetters being riveted on parade on the 9th May. Next day the troops in Meerut rose, and, aided by the mob, burned the house of the Europeans and murdered many. The troops then went off to Delhi. Unfortunately there was in Meerut no senior officer capable of dealing with the situation. The European troops in the place remained inactive, and the mutineers were allowed to depart unmolested to spread the flames of rebellion.

Delhi is the historic capital of India. On its time worn walls brood the prestige of a thousand years of Empire. It contained a great magazine of ammunition. Yet Delhi was held only by a few native battalions, who joined the mutineers. The Europeans who did not succeed in escaping were massacred and the Delhi Emperor was proclaimed supreme in India. The capital constituted a nucleus to which the troops who mutinied in many places flocked to the standard of the Mughal. An army was assembled for the recovery of Delhi but the city was not captured until the middle of September . In the meantime mutiny had spread. The massacres of Cawnpore and Jhansi took place, and Lucknow was besieged until its relief on the 27th September. The rebellion spread throughout Central India and the territory that now forms the Central Provinces, which were not recovered until Sir Hugh Rose's operations in 1858 ended in the defeat of the Rani of Jhansi.

Re-organisation after the Mutiny.—After the mutiny the Government of India was assumed by Queen Victoria and the East India Company ceased to exist The Company's European regiments were transferred to the Crown. The Bengal Army had almost disappeared and while a new army was raised for that Presidency the Madras and Bombay Armies were also reorganised. The native artillery was abolished, only mountain batteries and some field batteries of the Hyderabad Contingent being maintained. A Staff Corps of officers, borne on a general list for each Presidency, was instituted. The total strength on re-organisation was 65,000 British and 140,000 Indian troops.

Minor Campaigns—During the period until 1879, when the Second Afghan War began, there were many minor campaigns including the China War of 1860, the Ambeyla Campaign, and the Abyssinian War Then followed the Afghan War in which the leading figure was

Lord Roberts. There were expeditions to Egypt and China, and Frontier Campaigns of which the most important was the Tirah Campaign of 1897. There were also the prolonged operations which led up to or ensued upon the annexation of Burma, several campaigns in Africa, and the expeditions to Lhasa. But until 1914, since the Afghan War, the army of India, except that portion of the British garrison which was sent to South Africa in 1899, had little severe fighting, although engaged in many arduous enterprises.

Reforms.—During the period under review up to 1914 many reforms took place. Races considered of inferior military value were eliminated, their places in the ranks being taken by the warlike classes of the north. In this manner the greater part of the old Madras and Bombay armies lost its identity. Class regiments and class companies were formed, and regiments were linked in threes, each group with a regimental centre. Imperial Service troops were raised by the Chiefs for the service of the paramount power. In 1891 the Staff Corps of the three Presidencies were amalgamated, and in 1893 the appointment of Commander-in-Chief in the Bombay and Madras Armies was abolished. The number of British officers serving in Indian regiments was progressively increased, until the establishment was raised to 13 or 14, after having at one period sunk as low as 8 per battalion. The administrative services were improved, the Supply and Transport and the Ordnance and Military Works Services being reorganised.

Reforms received a great impetus during the term of office as Commander-in-Chief of **Lord Kitchener**, who arrived in India at the end of 1902 There had hitherto been no General Staff in India, all Staff work being carried out under orders issued from the offices of the Adjutant General and the Quartermaster General. The administrative services were under the Military Member of Council, who was independent of the Commander-in-Chief, who had to submit through the Military Member all proposals involving financial expenditure beyond his very limited powers. Lord Kitchener wished to remove what he considered the obstruction of the Military Department of the Government of India, and bring the entire army administration under the Commander-in-Chief. The proposal to abolish the Military Department was opposed by **Lord Curzon**, the Governor-General, who eventually resigned rather than assent to measures which he considered to be not in the best interests of the State. In place of the Military Department, a Military Supply Department was instituted with reduced powers, but this soon disappeared and an Army Department under control of the Commander-in-Chief in his capacity as Member of Council was established in its place.

Lord Kitchener's chief work lay in the reorganisation of the Army which was not based on war conditions but was scattered in units from which formations were organised for service. Nine Divisions were now formed, in addition to the Burma Division. These Divisions were organised for war, and could take the field intact, leaving behind sufficient troops for internal security.

Northern Command.

General Sir W. R. Birdwood, Bart. (G.O.C.-in-C.)
Brigadier-General C. M. Wagstaff (B.G., G.S.)
Col. F. E. G. Talbot.
Bt. Lt. Col H. N. A. Hunter, D.S.O.
Bt. Lol. W. H. Hastings.
Capt. K. C. D. Dawson, M.B.E.

Western Command.

Lt.-General Sir W. P. Braithwaite (G.O.C.-in-C.)
W. S. Leslie (B.D., G.S.) Br.-General Gwyer.
Major E. B. Powell, D.S.O.
Lt. H. W. Undehill.

Eastern Command.

Lt.-General Sir H. Hudson (G.O.C.-in-C.)
Br.-General G. H. N. Jackson (B.G., G.S.)
Captain H. E. Festing, D.S.O.
Lt. Surtees, M.C.

Southern Command.

Lt.-General Sir W. R. Marshall (G.O.C.-in-C.)
Br.-General W. H. Norman (B.G., G.S.)
Major H. G. Lee-Warner, D.S.O.
Major J. N. D. Dicklander.

The fighting races.—The fighting classes that contribute to the composition of the Indian Army have hitherto been drawn mainly from the north of India, but the experiences of the great war have caused some modifications in the opinions previously held as to the relative value of these and other fighting men. The numbers of the various estates and tribes enlisted in the Army have since the war undergone fluctuations, and it is not possible at present to give exact information as to their proportions. Previous to the war the Sikhs contributed very large numbers both to the cavalry and infantry, and the contribution of the Gurkhas was also large; it is probable that these classes preserve their preponderance. The Sikhs, who inhabit the Punjab originated in a sect founded near Lahore by a peasant in the early part of the sixteenth century and in the course of a hundred years grew into a formidable militant power. Muhammadans of various races contribute a still larger proportion to both the cavalry and infntry. These are drawn both from the north and the south of India, as well as from beyond the Frontier. They are all excellent fighting men, hardy and warlike, who have furnished soldiers to all the great powers of India for many hundreds of years. As cavalry the Muhammadans are perhaps unequalled by any other race in the East, being good horsemen and expert men-at-arms.

Next in point of numbers are the Gurkhas of Nepal, who were at the outbreak of war formed in twenty complete battalions, but these have been considerably increased. As fighters in the hills they are unsurpassed even by the Pathans of the North-West Frontier, but the Garhwalis are equally good mountaineers.

The professional military caste of India from time immemorial has been the Rajput, inhabiting not only Rajputana but the United Provinces and Oudh. Of fine physique and martial bearing, these warriors of Hindustan formed the backbone of the old Bengal Army, and have sustained the English flag in every campaign in the East. Their high caste and consequent

prejudices in no respect interfere with their martial instincts and efficiency in war. They furnish many battalions. The Garhwalis are Hill Rajputs, good and gallant soldiers, who have proved themselves equal to any other troops on the field of battle and have established an imperishable record in the war both in Europe and in the East. The two battalions which were all we had in 1914 have since been added to. The Jats are a fine and warlike race of Hindus found in the Delhi and Rohtak districts and adjoining territory. It was these people who held out so bravely at Bharatpur and repelled Lord Lake's army in 1805. They have proved themselves good soldiers on the battlefields of Europe. Dogras are good and steady soldiers found in the hilly districts of the Punjab. They fought well in Flanders and in Mesopotamia.

Among those who have rendered signal and gallant service in the war are the Mahrattas of the Deccan and the Konkan, who have revived the reputation held by their race in the days of Shivaji, the founder of the Mahratta Empire. It is probable that their proved efficiency in war will lead to their recruitment in larger numbers in future.

In addition to the castes that have been mentioned, low caste men from the south and other parts of India have filled the ranks of the Pioneer regiments and Sappers and Miners, and done their duty well in every campaign in which they have been engaged.

Summary of India's Effort in the War.—In a despatch by the Commander-in-Chief published in July, 1919, the whole operations of the Indian Army during the war are reviewed. His Excellency gives in it the following figures showing the extent of India's contribution in terms of men. On the outbreak of war, the combatant strength of the Indian Army, including reservists, was 194,000 Indian ranks; enlistments during the war for all branches of the service amounted to 791,000, making a total combatant contribution of 985,000. Of this number 552,000 were sent overseas. As regards non-combatants, the pre-war strength was 45,000; an additional 427,000 were enrolled during the war and 391,000 were sent overseas. The total contribution of Indian personel has thus been 1,457,000 of whom 943,000 have served overseas. Casualties amounted to 106,594, which include 36,696 deaths from all causes. The number of animals sent overseas was 175,000.*

THE ESHER REPORT.

It was announced in July, 1919, that the Secretary of State for India, with the concurrence of the Secretary of State for War, had appointed a committee to inquire into the administration and organisation of the Army in India.

The terms of reference were :—

1. To inquire into and report, with special reference to post-bellum conditions, upon the administration and, where necessary, the organisation of the Army in India, including its relations with the War Office and the India Office, and the relations of the two offices with one another.

2. To consider the position of the Commander-in-Chief in his dual capacity as head of the Army and member of the Executive Council, and to make recommendations.

3. To consider and report upon any other matters which they may decide are relevant to the inquiry.

The Report:—The Report was submitted to the authorities in May 1920 and published some months later. Among the outstanding recommendations in the mass of detailed proposals scattered through more than 100 foolscap pages and nowhere succinctly outlined are the following :—

Diminution of the detailed control exercised by the India Office. Membership of the India Council by an officer of high military rank to be abolished. The Military Department Secretary at the India Office to be a Deputy Chief of the Imperial General Staff, the Chief, either directly or through him, being the sole responsible military adviser of the Secretary of State.

The Commander-in-Chief in India to be the sole military adviser of the Government of India, and to be the administrative as well as the executive head of the Army, the Army Department and the Headquarters Staff being consolidated under him.

The Defence Committee set up in India during the war to be continued; a Military Council to be established; and decentralization to be promoted by the formation of four commands, each under an Army commander graded as a general officer commanding-in-chief.

Liberal and sympathetic treatment of all ranks in the Army in India, and the removal of such grievances as are shown to exist.

Existing services to be reorganized, and new services to be developed and equipped.

The Report Condemned:—The publication of the report evoked a storm of criticism in India, which protested *in toto* against the main principle underlying it, namely that the Army in India was not for the defence of India, but must be considered in relation to the general defence of the Empire. So strong was this criticism that the Government appointed a representative committee of the Legislatures, who focussed their opinion in a report which embodied the following resolutions :—

This Assembly recommends to the Governor-General in Council :

(*a*) That the purpose of the Army in India must be held to be the defence of India against external aggression and the maintenance of internal peace and tranquillity. To the extent to which it is necessary for India to maintain an army for these purposes, its organisation, equipment and administration should be thoroughly up to date, and, with due regard to Indian conditions, in accordance with present-day standards of efficiency in the British army so that when the Army in India has to co-operate with the British Army on any occasion,

* For a record of the services of the Indian Army in the War, see The Indian Year Book for 1920, p. 152, *et seq.*

there may be no dissimilarities of organisation, etc., which would render such co-operation difficult. For any purpose other than those mentioned in the first sentence the obligations resting on India should be no more onerous than those resting on the Self-Governing Dominions, and should be undertaken subject to the same conditions as are applicable to those Dominions.

(*b*) To repudiate the assumption underlying the whole Report of the Esher Committee:—

(1) That the administration of the Army in India cannot be considered otherwise than as part of the total armed forces of the Empire, and

(2) That the military resources of India should be developed in a manner suited to Imperial necessities.

Overseas Service:—II. This Assembly recommends to the Governor-General in Council that the Army in India should not as a rule be employed for service outside the external frontiers of India, except for purely defensive purposes, or with the previous consent of the Governor-General in Council in very grave emergencies, provided that this resolution does not preclude the employment on garrison duties overseas of Indian troops at the expense of His Majesty's Government and with the consent of the Government of India.

Organisation:—III. This Assembly recommends to the Governor-General in Council that the absence of full responsible Government in India, the differences in conditions between India and England and the provisions of the Government of India Act do not warrant differentiation in the army administration between India and England in regard to the ultimate control of, and responsibility for, the defence of the country, and that, in view of the desirability of assimilating the system of administration in India to that in the United Kingdom, which has been arrived at after prolonged experiments, and the desirability of emphasizing the principle of the ultimate supremacy of the civil power, it is essential that the Commander-in-Chief should, without prejudice to his official precedence, cease to be a member of the Governor-General's Executive Council, and that the Portfolio of Defence, including Supply, should be entrusted to a civilian member of the Executive Council, assisted by an Army Council including the Commander-in-Chief and other high military experts and a certain number of civilians, more or less on the model of the Army Council in England.

Supply:—IV. This Assembly recommends to the Governor-General in Council that if the Portfolio of Defence including Supply is not entrusted to a civilian member of the Executive Council as recommended above, the proposal of the majority of the Esher Committee for the creation of a separate department for Production and Provision under a member of the Executive Council be not accepted, and that the proposal of the minority, namely that the responsibility should be entrusted to a Surveyor-General of Supply who should be a civil member of the Commander-in-Chief's Military Council, be accepted. This would seem to have the merit of being more logical and economical and would have the further advantage of avoiding the addition of a civil member to the Executive Council in connection with military administration.

Senior Appointments:—V. This Assembly recommends to the Governor-General in Council that:

(*a*) The Commander-in-Chief and the Chief of the General Staff in India should be appointed by the Cabinet on the nomination of the Secretary of State for India in consultation with the Government of India and the Secretary of State for War.

(*b*) In the case of Army Commanders who are officers of the Indian Army the appointment should be by the Secretary of State for India on the nomination of the Government of India.

(*c*) Appointments to the offices mentioned against Serial Nos. 5, 6, 7, 8, 10, 12 (Report Schedule annexed to Section VI) should be made in the manner proposed for Army Commanders.

(*d*) The appointment of Secretary to the Military Department, India Office, should be made by the Secretary of State on the recommendation of the Government of India and after advice obtained from the Chief of the Imperial General Staff. He should *ex officio* have the status of a Deputy Chief of the Imperial General Staff and should have the right of attending the meetings of the Army Council when questions affecting India are discussed. He should not be under the orders of the Chief of the Imperial General Staff.

C. I. G. S.:—VI. This Assembly recommends to the Governor-General in Council that the Commander-in-Chief's right of correspondence with the Chief of the Imperial General Staff should be subject to the restriction that it does not commit the Government of India to any pecuniary responsibility or any line of military policy which has not already been the subject of decision by them; copies of all such correspondence at both ends being immediately furnished to the Government of India and the Secretary of State for India.

Indian Officers:—VII. This Assembly recommends to the Governor-General in Council:—

(*a*) That the King Emperor's Indian subjects should be freely admitted to all Arms of His Majesty's Military, Naval and Air forces in India and the ancillary services and the auxiliary forces, that every encouragement should be given to Indians including the educated middle classes, subject to the prescribed standards of fitness, to enter the commissioned rank of the Army, and that in nominating candidates for the entrance examination, unofficial Indians should be associated with the nominating authority.

(*b*) That not less than 25 per cent. of the King's Commissions granted every year should be given to His Majesty's Indian subjects to start with.

Indian Military College:—VIII. This Assembly recommends to the Governor-General in Council.—

(*a*) That adequate facilities should be provided in India for the preliminary training of Indians to fit them to enter the Royal Military College, Sandhurst.

(*b*) That the desirability of establising in India a Military College, such as Sandhurst, should be kept in view.

Pay:—IX. This Assembly recommends to the Governor-General in Council that, in the interest of economy and in view of the likelihood of the growth of the Indian element in the commissioned ranks, it is essential that before vested interests arise, the pay of all commissioned ranks in all branches of the Army should be fixed on an Indian basis with an overseas allowance in the case of British Officers and with a similar allowance for Indian officers holding the King's Commission, when serving overseas.

Territorial Army—X. This Assembly recommends to the Governor-General in Council that in view of the need for the preparation of India to undertake the burden of self-defence and in the interests of economy, it is essential that a serious effort should be made —

(*a*) To organise and encourage the formation of an adequate Territorial Force on attractive conditions.

(*b*) To introduce in the Indian Army a system of short colour service followed by a few years in the reserve.

(*c*) To carry out a gradual and prudent reduction of the ratio of the British to the Indian troops.

XI This Assembly recommends to the Governor-General in Council that officers in the Indian Territorial Force should have the rank of 2nd-Lieutenant, Lieutenant or higher rank, as the case may be, and that no distinction should be made between the Indian Territorial Force and the Indian Auxiliary Force in respect of the authority which signs the Commissions, and that officers in these two Forces should take rank *inter se* according to dates of appointment

Exchange of Officers:—XII. This Assembly recommends to the Governor-General in Council that no proposals for interchange of officers, between the British and Indian services should be carried out unless the following conditions are satisfied:

(*a*) That the cost to Indian revenue should not be thereby appreciably increased.

(*b*) That such proposals should not be allowed to interfere with a steady expansion in the proportion of King's Commissions thrown open to Indians in the Indian Army.

(*c*) That the interchange of British officers should, in no way, affect the control of the Government of India over the entire Army in India.

Economy:—XIII. This Assembly recommends to the Governor-General in Council that, having regard to the creation of two additional commands in India the Government of India do consider the expediency of reducing the size of the administrative staff at Army Head quarters.

XIV. This Assembly recommends to the Governor-General in Council that, as soon as the external and internal conditions of India permit, the Governor-General in Council should, with the concurrence of the Secretary of State, appoint a Committee adequately representative of non-official Indian opinion for the purpose of examining and reporting upon:

(*a*) The best method of giving effect to the natural rights and aspirations of the people of India to take an honourable part in the defence of their country and prepare the country for the attainment of full responsible government which has been declared to be the goal of British policy.

(*b*) The financial capacity of India to bear the burden of military expenditure;

(*c*) Her claim to equality of status and treatment with the Self-Government Dominions, and

(*d*) The methods of recruitment to the commissioned ranks of the Indian Army,

XV. This Assembly recommends to the Governor-General in Council that Anglo-Indians should be included in the terms "Indian subjects" or "Indians" wherever such terms occur in the above resolution.

Assembly's Decisions:—These resolutions were subject to full debate in the Imperial Legislative Assembly in the course of which Resolution No 3 proposing the creation of a Portfolio of Defence was negatived.

Resolution 4 was carried with the following amendment that the words from "if the portfolio" down to "recommended above" be omitted.

On Resolution No 7 an important amendment was carried by a bare majority and was accepted as a substantive proposition in the following form.—

This Assembly recommends to the Governor-General in Council that (*a*) That the King Emperor's Indian subjects should be freely admitted to all arms of His Majesty's Military, Naval and Air forces in India and the Ancillary services and the Auxiliary forces, that every encouragement should be given to Indians including the educated middle classes subject to the prescribed standards of fitness, to enter the commissioned ranks of the Army and that in nominating candidates for the entrance examinations, unofficial Indians should be associated with the nominating authority and in granting King's Commissions, after giving full regard to the claims to promotion of officers of the Indian Army who already hold the commission of His Excellency the Viceroy, the rest of the commissions granted should be given to cadets trained at Sandhurst. The general rule in selecting candidates for this training should be that the large majority of the selections should be from the communities which furnish recruits and as far as possible in proportionto the numbers in which they furnish such recruits."

Resolution 8 was carried with the following amendment:

"That for clause (*b*) the following clause be substituted:

"(*b*) That as soon as funds be available, steps should be taken to establish in India a Military College, such as Sandhurst, and the desirability of establishing in India training and educational institutions for other branches of the Army should be steadily kept in view."

Reserves.

The Indian Army Reserve dates from 1886. Under existing arrangements, it consists of men with not less than three years' colour service. Men passing into the Reserve still belong to their respective regiments, and come up for two months' training once in two years. In 1904 when the strength of the Reserve was about 24,500 men, it was decided to raise it gradually to 50,000 men, reducing the reserve pay from Rs. 3 to Rs. 2 a month and also to form an Indian cavalry reserve by extending the system to Silladar cavalry regiments. Reservists obtain a pension after 25 years' total service.

Reserve of Officers.—For some years there has been entertained what was called. The Indian Army Reserve of Officers—a small body of trained officers who would be available to replace the casualties amongst the British officers serving with the Indian troops in time of war. This branch of the service was however grievously neglected; the conditions of service were unattractive, the prospects of promotion were practically nil; and the military authorities preferred to rely on the expedient of multiplying the number of British officers serving with Indian troops in order to meet casualties, rather than to train up an effective reserve This policy tested by the war was found wanting The casualties amongst the British officers with the Indian regiments were very large indeed; these regiments lost their initiative when deprived of the officers on whom they had been taught to rely, and it was impossible to make the great gaps good from the ordinary officer class, because of their lack of knowledge of the Indian languages and Indian conditions An appeal for recruits for the Indian Army Reserve of Officers met with a very ready response. The first enrolments reached the substantial figure of fourteen hundred, a very large proportion of whom were drawn from the Volunteer Officers, or from the ranks of special corps like the Light Horse, who are ordinarily recruited from the officer class. The officers selected were put through a rapid course with British and Indian regiments; made to pass a language test, and when efficient were sent to serve with the Indian regiments at the front. They have done excellent service and have suffered many casualties; indeed, without this reinforcement of officers specially acquainted with Indian conditions, the efficiency of the Indian Regiments could not have been maintained. The numbers were raised to over 4,000.

Indian State Troops.

The voluntary movement towards co-operation in the task of Imperial defence that led to the formation of the force of Imperial Service Troops was initiated in 1887 by an offer made by the Nizam of Hyderabad, whose example was at once followed by a number of the leading Native Princes. The troops, which are under regular inspection by British Officers, though available for Imperial service when placed at the disposal of the British Government by their Rulers, belong to the States and are recruited from their subjects. Their armament is the same as that of the Native Army, and in training, discipline, and efficiency they have reached a high standard of excellence. They have done good service on the North-West Frontier and also in China and Somaliland. At the beginning of the decade (1901-02 to 1911-12) twenty-three States between them supplied a total of over 16,000 men. Some additional offers of contingents have since been accepted, and the total strength is approximately 22,271, towards which twenty-nine States contributed. The total included some 10,000 infantry, and 7,500 cavalry, while transport and camel corps contributed 2,700 and 700 men respectively. Sappers also numbered about 700. Gwalior contributes nearly 4,000 men, and Kashmir over 3,500; Patiala, Hyderabad and Alwar contribute over 1,000 each. On the outbreak of the war practically the whole body of Imperial Service Troops was immediately placed at the unfettered service of the King-Emperor. Many of these offers were gratefully accepted and large bodies of Imperial Service Troops proceeded to one or other of the theatres of the war. These Troops were re-named The Indian State Troops in December 1921.

The Imperial Cadet Corps.

The Imperial Cadet Corps was founded in 1901, with the object of providing military training for the scions of ruling and noble families. The Corps consists of about 20 young men of noble birth who have been educated at the Chiefs' Colleges. The course of instruction lasts between two and three years, and the cadets are taught military exercises and military science. Its headquarters are at Dehra Dun.

Indian Military College.

Draft prospectus relating to the conditions of admission to the Prince of Wales Royal Indian Military College, Dehra Dun, were made available in December 1921. The college which will be under the direct control of the Commander-in-Chief will provide public school education on English lines for Indian youths who subsequently desire to enter the Royal Military College, Sandhurst, with a view to obtaining commissions in the Indian Army.

It is intended for those who wish to make army their profession in life, and parents or guardians of candidates will be required to furnish a declaration to this effect. The total number of students for the first year will be 40 and they will join the college on 20th February 1922. The fee will be Rs. 1,500 for each school year and this is liable to enhancement if the circumstances require.

The Strength of the Army.

The following table gives the average strength of European troops, Regulars and Territorials and the main facts as regards their health in 1919 with comparative figures for the quinquennial period 1910-14 and for the years 1915 to 1918 inclusive:

Period.	Average strength.	Admissions.	Deaths.	Invalids sent home.	Average constantly sick.
1910-14 average	69,440	39,389	303	483	2,094·57
1915	44,891	36,952	267	889	1,754·19
1916	60,737	46,892	397	1,343	2,414·56
1917	80,825	62,372	390	1,337	3,686·45
1918	87,982	90,637	1,424	2,007	5,286·61
1919	56,561	54,982	438	4,324	3,245·84

THE INDIAN TROOPS.

The average strength of Indian troops including those on duty in China and Nepal and other stations outside India, but excluding those on Field Service, was 229,731 in 1919 as compared with 341,458 in 1918.

The following table gives below the actuals and ratios of sickness, deaths, and invaliding for the quinquennial period 1910-14 and for the year 1915 to 1919 inclusive:—

Period	Average strength	Admissions.	Deaths.	Invalids.	Average constantly sick.	Ratio per 1,000 of strength.			
						Admissions.	Deaths.	Invalids.	Average constantly sick.
1910-14 average..	130,261	71,213	573	699	2,662	544·6	4·39	5·4	20·7
1915 ..	119,985	89,315	1,026	5,415	4,065	744·4	8·55	45·1	33·9
1916 ..	130,076	105,333	1,248	3,745	5,250	757·4	8·97	26·9	37·7
1917 ..	191,242	141,787	2,201	3,421	6,556	741·4	11·51	17·9	34·3
1918 ..	341,458	292,393	9,959	6,539	13,897	856·3	29·17	19·2	40·7
1919 ..	229,731	176,313	2,742	4,999	9,191	767·5	11·94	21·8	40·0

The Auxiliary Force.

A full account of the Indian Defence Force and of the various Acts under which it was formed and maintained appeared on pp. 160 165 of The Indian Year Book for 1920. After the war the question of perpetuating the principle of universal training for European British subjects, which distinguished the Indian Defence Force was discussed between the Government of India, the local Governments and representative bodies. The general opinion was that universal training might be retained under adequate safeguards, but the principle of compulsion was eventually abandoned owing to a representation of the Secretary of State that the retention of compulsory military service was not acceptable in view of the expressed opinions of the Imperial Government with regard to the general question of conscription throughout the world. It was, however, recognised that the needs of India, in the matter o an adequate auxiliary force trained to a reasonable standard of efficiency constituted the chief consideration, and the Secretary of State decided that if this consideration demanded the adoption of a system of universal training the matter was one for determination by the Indian Legislature in framing the new measure.

PROVISIONS OF THE BILL.

In the statement of objects and reasons accompanying the Bill to constitute an Auxiliary Force for service in India, which was introduced in August 1920, it is explained that the replacement of the Indian Volunteers Force, which had been in existence for nearly 60 years, by the Indian Defence Force, was a war measure necessitated by the exigencies of the situation. Compulsory service was adopted to meet the needs of an Imperial emergency. Reversion to voluntary enrolment is now considered desirable, but it is essential to maintain and develop in the reconstituted Volunteer Force, the improvements in organization and in the standard of training effected under war conditions.

The necessity for a substantial amendment of the Indian Volunteers Act, 1869, had long been apparent. Under that enactment, no definite obligations were imposed on enrolled men in the matter of training, and the standard of efficiency varied widely in different units. It is now proposed to secure the requisite amendment by the substitution of a new measure in which the liabilities of those enrolled in the matter of training and service are clearly defined.

The main principle underlying these provisions is that the European and domiciled community, being employed for the most part in the public services or in commercial and industrial occupations of importance, cannot be regarded as available for any but purely local service, and further that military training must be restricted as far as possible to the earlier years of service in the force. Moreover conditions differ greatly in different localities and for this reason it has been found desirable to adjust req irements in the matter of training to the local conditions obtaining. This adjustment will be effected through the agency of Advisory Committees for every military area, power of varying the training in individual cases being entrusted to these bodies.

The liability to local service only is subject to provision that, in circumstances of emergency to be notified formally by Government any part of the force may be required to serve beyond the limits of the military area to which it belongs, but in no case out of India.

Scale of Training.—No term of service is specified, as was the case under the Indian Volunteers Act, 1869. Any enrolled person desirous of discharge during the first six years of his service will be required to satisfy the local Advisory Committee as to the validity of his reasons for desiring to leave the Force; but after completing six years of service he may be discharged at any time on application being made to the Commanding Officer and no reference to higher authority will be required.

The scale of training laid down in the Bill is based on the principle already indicated. On attaining the age of 31, a member of the force is entitled to be passed into the First Class of the Reserve and thereupon to undergo training on a reduced scale. On attaining the age of 40, he will be included in the Second Class of the Reserve, and will then be required to complete the annual musketry course only. It is permissible, however, for any person in the Reserve to undertake, from year to year, the liabilities imposed on persons belonging to a higher class.

Discipline.—Members of the Force will be subject to the provisions of the Army Act when called out and when embodied, or when attached to or training with any part of the Regular Forces, this rule being the same as that applied to the Territorial Force in England. Military discipline on other occasions will be enforced either under the summary powers of the Commanding Officer, or, in the case of more serious offences and in any case should the person charged so elect, by means of the ordinary Criminal Courts. In no case can a Commanding Officer order any form of imprisonment as a summary or minor punishment, and no military offence (as specified in clause 24 of the Bill) is punishable with imprisonment by a Magistrate unless it constitutes an offence so punishable under the ordinary law.

Period of Training.—The Bill excuses from preliminary training all who have completed the preliminary training under the Defence of the Realm Act or have served for a period of six months in the forces, and it provides also that every enrolled person who is not a commissioned officer of the auxiliary force but is

entitled to rank as an officer of the forces shall undergo such periodical training as may be laid down in the regulations.

The three classes.—Enrolled persons it is proposed to include in one of three classes—the active class, the first class of the reserve, or the second class of the reserve. These three classes will be composed respectively of the following :—

Active: every such person who is required by section 9 to undergo preliminary training and has completed or is deemed to have completed the same shall be included in the Active Class until the end of the training year in which he attains the age of thirty-one years ;

First Reserve: every such person who has completed the period of service in the Active Class as required by clause (a) or is enrolled after attaining the age of thirty-one years and before attaining the age of forty years, shall be included in the First (A) Class of the Reserve until the end of the training year in which he attains the age of forty years ;

Second Reserve: every such person who has completed the period of service in the First (a) class of the Reserve as required by clause (b) or is enrolled after attaining the age forty years, shall be included in the Second (B) Class of the Reserve until discharged from the Auxiliary Force, India, as hereinafter provided.

Performance of Service—The Bill provides for the discharge from the force after six years' service or alternatively by a competent military authority, and while serving no member is required to perform military service except :—

(a) When called out with any portion of the Auxiliary Force, India, by an order of the senior military officer present either to act in support of the civil power or to provide guards which, in the opinion of such officer, are essential ; or

(b) when any portion of the Auxiliary Force, India, to which he belongs has been embodied to support or supplement His Majesty's regular force, in the event of an emergency by a notification directing such embodiment issued by the Governor-General in Council or any Local Government empowered by the Governor-General in Council in that behalf and published in the *Gazette of India* or the local official Gazette, as the case may be ; or

(c) when attached at his own request to any regular forces.

Fines.—Any enrolled persons refusing to perform military service when called out or embodied is liable to be handed over to the military authorities and any enrolled member who neglects to report to the unit to which he has been posted on enrolment, to attend for medical examination, or to notify change of residence is liable to a fine of fifty rupees. Punishment of other offences specified in the Bill may be in fines to the extent of two hundred rupees.

Details of Training.—The Bill further provides for the following training :—

1. PRELIMINARY—(a) for infantry, 32 days, and the annual musketry course as laid down in regulations ;

(b) for other branches, 40 days, and the annual musketry or gun course as laid down in regulations ;

2. PERIODICAL.—(1) Active Class. (a) for infantry, 16 days in each training year, and the annual musketry course as laid down in regulations ;

(b) for other branches, 20 days in each training year, and the annual musketry or gun course as laid down in regulations ;

(2) FIRST (A) CLASS RESERVE—(a) for infantry 6 days in each training year, and the annual musketry course, as laid down in regulations;

(b) for other branches 10 days in each training year and the annual musketry or gun course as laid down in regulations

(3) SECOND (B) CLASS RESERVE—(a) for infantry, (b) for other branches. The annual musketry course as laid down for this Class in regulations.

A day consists of four hours of actual military drill or instruction, and may be made up of fractions of a day not more than four in number.

The Bill embodying these principles passed through Select Committee without substantial alteration. It became law, and it is understood that the expected number of enrolments was voluntarily made in 1921.

INDIAN TERRITORIAL FORCE.

A Government of India communiqué in regard to the Auxiliary Force, which was published in August 1920, stated :—

"While the reorganisation of the long established volunteer force is merely a matter of removing old defects and bringing the conditions of an obsolete system training into line with modern requirements, the question of organising the almost unlimited manpower of India in some way for the defence of this great dependency is a larger question which presents many difficulties. The Government of India, in response to the aspirations of those who desire to see the formation of a second line to the Indian Army whereby in time of need these great resources can be utilised to strengthen the military forces of the Empire in a measure bearing some relation to the vast population of India, have under consideration a Bill to constitute an Indian Territorial Force on the model of the old militia in England, which the Home Government, with all the experience of the recent war before them, have now decided to revive. This must of necessity be purely experimental at the outset, and the success of the experiment will depend on the response made by the people of India to this offer. The essence of the scheme lies in the training of men by means of **annual embodiment for a short period** in successive years, this system having stood the test of centuries in England. In this manner it is hoped to give the force such preliminary training in peace as will enable it after a comparatively brief term of intensive

training to take its place side by side with the regular Indian Army in time of war, although it is not suggested that the force should be required to serve overseas. In the absence of ascertained data the scheme must be tentative in the first instance and consequently it is not possible to include in a Bill details as to the conditions of service and training. The matter has received close attention from the Army in India Committee, a decision on whose recommendation must be awaited. Following the English model men from 18 to thirty years of age would be enlisted for a period of six years, and after such preliminary training as may be found necessary a provincial unit would be embodied annually for twenty-eight days of continuous training under a supervising staff of regular British and Indian officers.

"The scheme would necessarily involve the **Training of Indian Officers** of the Territorial Force for the efficient performance of their duties, and for the ultimate attainment of higher rank. For this purpose facilities would be afforded to Indian officers of the force to train for short periods with regular units and to qualify for definite standards of proficiency. It will be recognised that as the time suggested for annual training must necessarily be reduced to a minimum, the training during that period would have to be intensive, and that when embodied, units of the Indian Territorial Force would have to aim at a standard of discipline and smartness as high as that of the regular army. Consequently it would be necessary to apply to the force so far as circumstances permit the rules and regulations applicable to the regular army.

"The retention of the present **University Corps** as a University Training Corps would form an integral part of the scheme. Special regulations and a special course of training would be laid down on the lines of those already in existence, as in this case training could not be concentrated into a single short period. The course for the University Training Corps might include 90 hours' drill for recruits, to be completed in the first six months after enlistment, and subsequently two hours' weekly throughout the college term with a short period at camp during the vacation. Enrolment might be for four or six years, as considered desirable but a member of the University Training Corps, on leaving the University, would have the option of continuing his service with the unit or of transfer to a territorial unit or of discharge. The proposals of the Government of India are admittedly based on the views expressed by members of the Army in India Committee, a body on which Indian opinion was adequately represented. It is recognised that the matter is one of the highest importance as regards the future defence of India and that the problem requires the fullest consideration especially by the classes more intimately affected."

Conditions of Service—Full details as regards the terms and conditions of service in the Indian Territorial Force, are to be found in the I.T.F. Act of 1920, and the rules under the Act, 1921, published by the Government of India. Shortly the main conditions are as follows:—

ENROLMENT.—Enrolment is for six years with the exception that men who have two years' approved service in a University Corps or three years' approved service in His Majesty's Indian Forces, may enrol for four years.

Applicants must be non-European British subjects or subjects of Native States, of good character and antecedents, and between the ages of 18 and 31, unless they have three years' approved service in His Majesty's Indian Forces when they may enrol up to 35 years of age. Applicants will not be accepted unless they are at least 5 ft. 1 in. in height, 32—34 inches round the chest and physically fit. Persons at present serving in the Indian Army Reserve or Imperial Service or State Troops cannot enrol in the Indian Territorial Force but pensioners if eligible, may enrol without detriment to their pension.

SERVICE.—Every person enrolled shall be liable to perform military service when called upon to do so, but shall not be required to serve beyond the limits of India save under a special or general order of the Governor-General in Council.

TRAINING.—Every person enrolled shall be liable to be called up for 56 days' training during his first year of service, and 28 days each year of service afterwards.

PAY AND ALLOWANCE.—Every person enrolled, when called up for service or training, shall be entitled to such pay and allowances as are for the time being admissible to corresponding ranks of His Majesty's Indian Forces.

DISCIPLINE.—Every person enrolled, when called up for service or training, shall come under the Indian Army Act of 1911, with certain modifications.

DISCHARGE.—Every person enrolled shall be entitled to receive his discharge on the expiration of the period for which he was enrolled unless for the time being engaged in military service.

MILITARY EXPENDITURE.

The following memorandum on Military Expenditure was submitted in March 1921:—

The net military expenditure in the coming year, as already announced in the Financial Statement, is 62·20 crores compared with 26·11 crores in 1913-14, the last year before the war. The signing of the armistice found India with an army approximately double the size of the pre-war army, though all expenditure in connection with the excess over normal pre-war establishments was borne by the Home Government. Circumstances have militated against any considerable permanent reductions up to the present owing to operations in Waziristan and unrest in adjacent countries. The military authorities have been guided by considerations of obligations which the army may be called to meet in defence of India from external aggression, and they have been hampered in the work of reorganisation, not only from the frontier campaign, but also by the simultaneous task of demobilising large numbers of men engaged for the period of the war and disbanding units which are returning from mandatory terri-

tories overseas They have also to get rid of considerable numbers of regular soldiers for whom there is untortunately no longer employment. Among the principal lessons of the war the evils of improvisation of staffs on mobilisation were clearly exemplified during the opening stages, and it would be folly to revert to a system which proved inadequate in war. The actual costs of fighting soldiers is increased. The silladar system, by which the sowar had to feed his own horse and clothe, feed and equip himself, has been changed, and throughout the Indian Army the State will in future pay to feed, house, mount and equip a soldier completely, thus abolishing the old system which amounted to a contract between the State and the commanding officer. Again before the war the ancillary services were not self-contained, most of them personnel being borrowed from fighting units, and the fighting strength of the army was therefore a paper strength, a proportion of the personnel being counted twice over both in their units and as members of an administrative service. The defects of this system came prominently to notice when the army was mobilised in 1914 In future it has been arranged that the ancillary services shall be fully organised and self contained in peace and the fighting services have been considerably reduced, the men withdrawn therefrom being now included in the ancillary services. The Royal Air Force, the Signal Corps and the Mechanical Transport Service are three new services which demand highly skilled technical personnel, who can command high rates of pay in civil life. The market rates for skilled mechanics, both in England and in India, are very high as compared with the rates before the war, and the present idea is to start schools in the army to train boys for these duties, but until these have been in existence long enough to provide an output, it is necessary to take trained skilled adults at practically whatever rate they demand.

HIGHER STANDARDS:—In the matter of capital expenditure, it is now generally admitted that prior to the war the standard of efficiency of the Army in India in respect of armament, equipment and military stores generally was dangerously low, and it would be unreasonable to refuse to adopt a scale of armament which was proved to be necessary during the great war and which was adopted primarily as a means of saving men's lives and reducing the incidents of casualties Besides all this, the necessity of improving the condition of the living of the soldier, both British and Indian, is generally recognised. The accommodation provided for all ranks before the war was devoid of the ordinary amenities and comforts of modern times. Hospitals were defective and requirements in respect of strategic communication, both by rail and road, water supply and facilities for concentration had not been fulfilled In all these directions Government found that much leeway had to be made up and in every direction enhanced expenditure is the result Expenditure on the salaries of British service officers has increased by seventy-one lakhs because before the war the British service did not, broadly speaking, offer a living wage for its officers For officers of the Indian service there is a reduction of about thirty lakhs due to reduction in numbers, the pay of officers of the Indian army having been materially increased There is an increase of about six crores for British soldiers for an establishment over 6,000 less, the pay of the British soldier in India having been increased nearly 200 per cent since 1914 There is an increase of about 14 lakhs only under the heading of Indian soldiers but it is for a total strength nearly 8,000 less than in 1913-14, the pay of the Indian soldiers having also been materially increased during the intervening period.

SPECIAL EXPENDITURE :—A sum of 124 lakhs has been allotted to the Royal Air Force, which did not exist before the war, and one crore has been set aside to meet gratuities and muster out allowances in view of the forthcoming reduction in the army in India. A sum of 128½ lakhs is provided for giving effect to certain recommendations of the Esher Committee Pensions show an increase of three crores and three crores has been set aside to meet the additional charges which it is calculated will be incurred in connection with the occupation of Waziristan, including provision for the construction of roads, accommodation and blockhouses, installation of electric plant, water supply and sanitary measures, the upkeep of certain additional transport and the grant of field service concessions, including extra rations, extra clothing and batta to troops and followers.

THE EAST INDIES SQUADRON.

Since 1903 a squadron of the Royal Navy, known as the East Indies Squadron, has been maintained in Indian waters. It has naturally varied in strength from time to time, and of late years in particular there have been several changes in its composition, the most recent being in the direction of strengthening it, owing to the disappearance of strength in the other squadrons of the Eastern Fleet. In 1903 the squadron consisted of one second class and three smaller cruisers and four sloops or gunboats. In 1906, when the policy of withdrawal from Eastern waters was inaugurated, it consisted of two second class and two third class cruisers, and remained at this strength until 1910: when one second class cruiser was withdrawn and two smaller vessels substituted, and three cruisers were lent from the Mediterranean to assist in the suppression of the arms traffic in the Gulf. By 1913 the position of the East Indies squadron had considerably improved. The battleship Swiftsure had taken the place of the second class cruiser which had been flagship, and a modern second class cruiser replaced the Perseus.

The Squadron in 1920.—The latest Navy List shows the composition of the Squadron (Fourth Light Cruiser Squadron) as follows:—Southampton (flag), Caroline, and Comus: Sloops Espiegle, Crocus and Cyclamen: and special service vessel Triad (S.N.O. Persian Gulf).

The proportion of contributions from the overseas Dominions towards naval expenditure is shown in the following table issued with the last Navy Estimates that gave details :—

Received from	Nature of Service.	Total.
		£
India ..	Maintenance of His Majesty's Ships in Indian Waters ..	100,000
	Indian Troop Service (on account of work performed by the Admiralty)	3,400
	Repayment on account of services rendered by His Majesty's Ships engaged in the suppression of the Arms Traffic in the Persian Gulf	64,000
Australian Commonwealth Dominion of Canada.	Contributions on account of liability for Retired Pay of Officers and Pensions of Men lent from the Royal Navy.	10,800
Australian Commonwealth.	Survey of the N. W. Coast of Australia	7,500
Do.	Maintenance of an Australasian Squadron and of a branch of the Royal Navy Reserve	41,600
Dominion of New Zealand	Maintenance of an Australasian Squadron and of the Imperial Navy generally, also of a branch of the Royal Naval Reserve	100,000
Union of South Africa ..	General maintenance of the Navy	85,000
Newfoundland ..	Maintenance of a branch of the Royal Naval Reserve ..	3,000
	Total ..	415,300

India's Marine Expenditure.

Since 1869 India has paid a contribution of varying amounts to the Imperial Government in consideration of services performed by the Royal Navy. Under existing arrangements, which date from 1896-7, the subsidy of £100,000 a year, is paid for the upkeep of certain ships of the East India Squadron, which may not be employed beyond prescribed limits, except with the consent of the Government of India. The expenditure amounts to nearly £400,000 annually.

ROYAL INDIAN MARINE.

The Royal Indian Marine (The Sea Service under the Government of India) traces its origin so far back as 1612 when the East India Company stationed at Surat found that it was necessary to provide themselves with armed vessels to protect their commerce and settlements from the Dutch or Portuguese and from the pirates which infested the Indian coasts. The first two ships, the Dragon and Hoseander (or Osiander), were despatched from England in 1612 under a Captain Best, and since those days under slightly varying titles and of various strengths the Government in India have always maintained a sea service.

The periods and titles have been as follows:—

Hon. E. I. Co.'s Marine ..	1612—1686
Bombay " ..	1686—1830
Indian Navy " ..	1830—1863
Bombay Marine	1863—1877
H. M. Indian Marine	1877—1892
Royal Indian Marine ..	1892, Present day.

The Marine has always been most closely connected with Bombay, and in 1668 when the E. India Co. took over Bombay, Captain Young of the Marine was appointed Deputy Governor. From then until 1877 the Marine was under the Government of Bombay, and although from that date all the Marine Establishments were amalgamated into an Imperial Marine under the Government of India, Bombay has continued to be the headquarters and the official residence of the Director.

War Service of the Marine.

1612–1717 Continuous wars against Dutch, Portuguese and Pirates for supremacy of West Coast of India. 1744 War with France, capture of Chandernagore, and French ship Indienne. In 1756 Capture of Castle of Gheria 1774 Mahratta War, capture of Tannah. Latter part of the eighteenth century, war with French and Dutch, Capture of Pondicherry, Trincomalee, Jafnapatam, Colombo, etc. 1801 Egyptian campaign under Sir Ralph Abercrombie. 1803 War with France. 1810 Taking of Mauritius and capture of French ship in Port Louis. relief of Pekin, 1902-04, Somaliland Expendition, Suppression of Arms Traffic operations, Persian Gulf, 1912-14.

Service in the War 1914-18.—The Royal Indian Marine, though a small Service compared with the Army and Navy, has played a very active and conspicuous part in the European War. On the outbreak of the War the Service was under the administration of Captain (now Rear-Admiral) W. Lumsden, C.I.E., C.V.O., R.N. Director, Royal Indian Marine Captain Lumsden retired on the 12th of February 1918, and was succeeded by Captain N. F. J. Wilson, C.M.G., C.B.E., R.I.M., who held the post for the remainder of the period of the war

The first service performed by the Royal Indian Marine was the establishment at the large ports of Bombay, Calcutta, Aden, Karachi and Rangoon, of the Examination Services which in conjunction with the Military authorities safeguarded those ports from enemy action Most of the larger ships of the Royal Indian Marine which are in peace times unarmed, and are employed in carrying troops, etc., were armed and fitted in the Government Dockyard at Bombay, and handed over to the Royal Navy for services as Auxiliary Cruisers Most of the Royal Indian Marine personnel, both European and Indian, continued to serve on board these ships, some of which took part in actions. Early in 1915, the R.I.M.S. "Hardinge" took part in the defence of the Suez Canal and was struck by a Turkish 8-inch shell on the starboard side, carrying away the fore funnel and part of the bridge The "Comet" was sunk by the Turks during the battle of Ctesiphon in 1916. The "Lawrence" took part in the advance up the Tigris, and was in action at the taking of Kurna, and constantly under fire.

The chief service rendered by the Royal Indian Marine, however, has been in connection with **Marine transport** work. The Royal Indian Marine furnished base Transport staffs for Bombay, Karachi, Calcutta, Rangoon and Madras, as well as overseas staffs for Egypt, France, Mesopotamia and East Africa The fitting out of ships as Transports for the conveyance of Troops, animals, stores, etc., from India to the different theatres of War overseas and *vice versa*, the loading and unloading of ships, and the several duties connected therewith were also carried out by the Royal Indian Marine. The number of vessels taken up and fitted out in connection with the despatch of the first lot of troops from India numbered over 260, but this did not finish the task allotted to the Royal Indian Marine, as after the despatch of troops, the necessary seatransport for the carriage of reinforcements to all the theatres of War had to be arranged for. The number of troops, animals, and stores, conveyed by these ships is recorded in the Military Department of Government, but the mere details of numbers scarcely conveys any idea of the sustained efforts which the movement of these large numbers involved, and the work that was necessary to keep the vessels in a state of repair and efficiency, all of which fell on the Royal Indian Marine.

Neither the capacity of the two Royal Indian Marine Dockyards at Bombay and Calcutta, nor the personnel of the Royal Indian Marine, which was just sufficient for carrying on its functions during normal times, and perhaps in minor expeditions, could be expected to cope with the large amount of responsible work detailed above, and to carry it out expeditiously, and at the same time efficiently. The administrative staff of the Royal Indian Marine, however, rose to the occasion, and by engaging a large number of extra personnel, and with the help of the Royal Engineers' Department, Railways, and the Shipping Companies, performed the stupendous task with great credit to the Service, and to the benefit of the Empire.

Prize Ships.—On the outbreak of War, enemy vessels which were in Eastern Ports were seized and placed under the administration of the Director of the Royal Indian Marine. The number of vessels seized was 23 and this fleet represented a tonnage of over 1,00,000 and a value of over one million pounds sterling The arrangement for the employment of this fleet was not an easy task. The enemy crew had to be replaced and the ships manned and fitted as expeditiously as possible Though great difficulties were experienced, this was accomplished without any loss of time and the vessels were detailed for different duties. Very little is known to the public outside of the use which has been made of these Prizes. The valuable services rendered by this Fleet, and the important part it has played in the operations of the War, cannot be too highly spoken of. Besides the general Transport Service, they have performed duties as Colliers, Depot Ships, Prison Ships, Convalescent and Hospital Ships It will be interesting to note that ships of the Bombay Prize Steamship Section were the first German Prizes to be utilised in the whole of the Empire In order to relieve the congestion of cargo at Indian Ports due in a great measure to the removal of private vessels from Indian Trade for Imperial Transport Work, the Prize Ships for some time were also employed commercially. The Prize Ship Fleet also sustained together with the shipping of the world its quota of losses due to enemy action, though fortunately the casualties in the personnel have been very few. The officers, engineers, and crew of the Merchant Service by whom the vessels are manned maintained the best traditions of the Services to which they belong, by their devotion to duty. Many of them earned an honourable mention in the official despatches.

River Transport.—In addition to the fitting out of vessels, arranging for their despatch and for the Transport Staff, the management of Prize Steam Ships, etc., the Royal Indian Marine Service was called upon to provide River Transport for the advance of the British Force in Mesopotamia, and also to organise a River Transport Service in that country. The difficulties encountered in obtaining suitable river craft in India capable of navigating the Tigris and Euphrates are well known and need not be recapitulated. As, however, the demand was insistent such vessels as most nearly approximated to the required dimensions were taken up in India and despatched in tow to Mesopotamia. The despatch of

this huge flotilla, which numbered over 800 vessels and barges, over a distance varying between 1,600 to 3,000 miles was a big undertaking and was not carried through without loss, owing to the frail nature of many of the craft which were unfitted to face sea conditions. With these craft as they arrived, a River Service was organised by the Royal Indian Marine, and when the conduct of operations was taken over by the War Office in August, 1916, they found a river transport service in existence, the efficiency of which their Officers have frequently recognised. R. I. M. Officers served during the War in all theatres, *i.e.*, The Grand Fleet, France, North Sea, Mediterranean, Salonica, Palestine, Egypt, Red Sea, Mesopotamia, East Africa.

The first Director of I.W.T. in France Brig.-General G. S. Holland, C.B., C.I.E., D.S.O., was a retired R. I. M. Officer. He was succeeded by Brig.-General C Tuck, C.M.G., D.S.O., also a retired R. I. M. Officer.

At the commencement of the war in Mesopotamia the only chart of the Tigris up to Baghdad was the work of a R. I. M Officer The Marine Survey of India were employed at the commencement of operations in the surveys of rivers and lakes. India, however, continued to be the base of supply of troops and stores for Mesopotamia, and the fact that the War Office took over the operations, did not therefore relieve the strain on the Royal Indian Marine Services, whose work in carrying for tonnage, personnel for ships, transport staff, etc, continued. The actual numbers of craft taken up and despatched to Mesopotamia were 1,093, including River Steamers, Tugs, Launches, Barges, Motor Boats of every size and description. The Royal Indian Marine also transferred 213 Officers (38 Permanent, 175 Temporary) to the War Office for service in Mesopotamia, when the latter assumed charge of the operations.

Work of the Dockyards.—Such is a brief record of the services rendered by the Royal Indian Marine Service to the Empire in this great war, but the record cannot be considered even partially complete, without special reference to the work of the Dockyards These two establishments of inestimable value during the war. Besides undertaking the survey and fitting out of numbers of transports, the plans for fitting out by private firms of the remainder were all prepared by the Dockyard Officers, and their completion supervised by them. The immense flotilla for Mesopotamia nearly all passed through Dockyard hands, where they were docked, repaired and prepared for their sea voyage. Almost of greater importance are the repairs and overhaul of the East Indies Naval Squadron which is almost entirely dependent on Bombay Dockyard, for its repairs and stores. The fitting out of the **mine-sweeping** Flotilla was another of its energies and the building of six Trawlers for the same work was undertaken. In addition a considerable number of Barges, Oil flats, steam launches and Boats were built for Mesopotamia.

In consequence of the discovery that an enemy vessel had laid mines in Eastern Waters, the Royal Indian Marine was called upon in February, 1917, to organise a Patrol and Mine sweeping Service round the coast of India Royal Indian Marine and Merchant Vessels were fitted up and utilised for the purpose. They were manned by Royal Indian Marine and Merchant Service personnel, but for certain purposes were placed under the orders of the Commander-in-Chief, East Indies, in April 1918.

In addition to this and the Examination Service, the Royal Indian Marine supplied the personnel for a Patrol Service in the Bay of Bengal and on the Burma Coast to deal with the threat of the importation of arms into India. This Service remained in active employ until the danger was considered at an end.

Mention was made in Parliament of the good services rendered by the Royal Indian Marine in the War, and a large number of Royal Indian Marine Officers have been the recipients of honours for meritorious services, and both, they and other Royal Indian Marine personnel have several times been mentioned in despatches. The services of Warrant Officers and Crews have also been recognised by Government, by the grant of medals and in different other ways. 21 Officers, 9 Warrant Officers, and nearly 300 ratings have given their life in this War.

The numbers of Officers and Warrant Officers who have been the **recipient of honours** or been mentioned in despatches are as follows :—

OFFICERS.

Created	C. M. G.	.. ..	4 Officers.
,,	C. I. E.	.. ..	7 ,,
,,	C. B. E.	.. ..	1 Officer.

In addition to the above are 39 launches composed of service launches, target towing tugs, powder boats, military service launches, etc.

Dockyards.

There are two Royal Indian Marine Dockyards at Bombay and at Calcutta, the former being the more important. There are 5 graving docks and a wet basin at Bombay, together with factories which enables the whole of the repairs for the ships of the East India Squadron of the Royal Navy and for the ships of the Royal Indian Marine and local Governments to be carried out, and tugs, lightships, pilot schooners, launches, etc, constructed.

PRINCIPAL OFFICERS, BOMBAY DOCK YARD.

R. I. M. Officers

Commander of the Yard, Comdr. C. A. Scott, D.S.O., R.I.M

Chief Engineer of the Yard, Engr.-Capt. W. C. Constable, O.B.E., R.I.M.

CIVILIAN OFFICERS.

Chief Constructor, Mr. E. P. Newnham, C.I.E.

Constructor, Mr. F. Williams.

Appointments.

In addition to the regular appointments in the ships of the Royal Indian Marine, and in the R. I. M. Dockyards, the following appointments under local Governments are held by officers in the Royal Indian Marine :—

BOMBAY.

Port Officer, Assistant Port Officer, Principal Engineer and Ship Surveyor and 2nd and 3rd Engineers and Ship Surveyors to the Government of Bombay.

CALCUTTA.

Port Officer, Deputy Port Officer and Assistant Port Officer, Principal 2nd and 3rd Engineers and Ship Surveyors to the Government of Bengal.

BURMA.

Principal Port Officer, Burma, First & Second Assistant Port Officers, Rangoon. Principal Engineer and Ship Surveyor to Government of Burma.

Assistant Do. do. do. do.

Port Officer, Akyab, Moulmein and Bassein Marine Transport Officer, Mandalay, and Superintending Engineer, Mandalay.

MADRAS.

Presidency Port Officer and Deputy Conservator of the Port.

CHITTAGONG.

Port Officer, and Engineer and Ship Surveyor.

ADEN.—Port Officer.

KARACHI.—Port Officer.

PORT BLAIR.—Engineer and Harbour Master.

Finance.

The task of attempting to give any clear idea of the present state of Indian finance is extraordinarily difficult. By a slow process of evolution there had gradually grown up a more marked division between the finances of the Government of India and the finances of the great Provincial administrations, all leading towards greater provincial autonomy. But the finances of the Provinces were still included in the budget of the Government of India. Under the Reform Act of 1919 this separation was made absolute. The Provinces received entire control of certain heads of revenue, such as land revenue, excise, and other branches. In return they were called upon to make a contribution to the revenues of the Government of India, fixed in each Province, the actual figures being set out in the section dealing with the Government of India (q. v.). The Government of India also absorbed the whole proceeds of other heads of revenue, such as Customs, railway profits, and the major portion of the Income Tax. This is avowedly a transient expedient, it being intended that the separation shall ultimately be made still more arbitrary, for the provincial contributions to the revenues of the Government of India are intended some day to cease; in practice the Government of India have already had to make some abatements to necessitous Provinces.

Exchange:—Another complexity introduced in the Budget has arisen from the variations in the rate of Exchange. From 1898 onwards there was for all practical purposes stability in the rate of exchange of the rupee which was fixed at one shilling and four pence, or fifteen rupees to the pound sterling. But in the second year of the war, for reasons which are fully set out in the section on the Currency (q. v.), the rate of exchange began to rise. The primary cause of this rise was a large balance of trade and indebtedness in India, which could not be liquidated either by imports of bullion or credits abroad of the ordinary character, and a rise in the price of silver which made it impossible to coin rupees, for which there was an immense demand, at fifteen to the pound sterling without immense loss. But these later fluctuations did not introduce any complexities in the Budget, where the fixed rate of fifteen to one was maintained and any improvement on that rate was credited to revenue as a profit on exchange. But in 1920 quite another story was told. Acting on the recommendations of a Currency Committee which sat in 1919 and reported in December of that year, the Government of India adopted measures designed to fix the rupee at two shillings gold. Owing to the variations in the dollar-sterling exchange this forced the rupee as high as two shillings and ten pence half penny: and when the official policy failed, it was found that it had cost the exchequer Rs. 35 crores of rupees and the rupee fell as low as one and three pence eleven-sixteenths. After that greater stability was attained, and all official measures having been withdrawn, the rupee has become fairly stable at or about the old ratio of fifteen to one. But the tangle which the official policy entailed has not yet been straightened out. Certain securities which the Government of India held as a backing for the Paper Currency were revalued at the new ratio of ten to one. The figures based on this revaluation are now fictitious. Then in fixing what are called The Home Charges—that is the sum which the Government of India has to pay in London on account of interest on the debt, pay and pensions, and capital charges—a rate of transfer has to be adopted. In the Budget for the current year this rate is taken at one shilling and eight pence. It has not been realised; indeed it is doubtful whether a higher rate than one and four pence will be reached. Until therefore this tangle is unravelled, which may take some years, certain heads in the Budget are fictitious and allowance must be made therefor.

The Budget of 1920-21:—In presenting his Budget the Finance Member said that a year before he was able to record a period of considerable prosperity. There were certain anxieties in regard to the heavy load of floating debt, the inflation of the currency, and liabilities for war bonds of early maturity, but the outlook was bright. There was a general trade boom in the countries of the world though there were signs that the boom rested on no firm foundation. In the result the balance of trade in favour of India had risen to heights previously undreamt of. The 1919 monsoon was an excellent one, the public revenues had grown considerably, and the only seriously disturbing event was the cost of the Afghan war, which had converted a small surplus into a deficit of Rs. 23 crores. But the trade boom passed with uncanny rapidity, leaving behind it a severe trade depression. The rise in the rupee induced an immense import trade, with the result that the markets were overstocked. The power of India's principal customers to purchase her produce was severely curtailed. The large balance of trade in India's favour was converted into an adverse balance. The monsoon of 1920 was also unfavourable, the rainfall being twelve per cent. in defect. On top of these factors, and in consequence of them—though the incidence was exaggerated by the administrative action taken—came the decline in the Exchange which has already been mentioned.

A Big Deficit:—The effect of these forces was to leave the Government of India with a big deficit. The budget anticipated a revenue of 132 crores, an expenditure of 130 crores and a surplus of 2 crores. Certain adjustments had to be made, and allowing for these if the expectations on which the budget was framed had been realised, the year should have closed with a surplus of 10½ crores. But so far were the expectations from being realised that there

was a deficit of 11¾ crores, showing a total deterioration of 22 crores. The causes of this falling off are shown in the following table:—

(Crores.)

Customs revenue more			+7.3
Railways (inclusive of adjustment for exchange) worse			—7.6
Income-tax revenue more	Excess profits	1¾	+3.9
	Super-tax	1	
	Income-tax	1½	
Military expenditure more			-15·2
Profit on wheat purchases			+.9
Exchange charged to non-commercial revenue heads			—2.6
Paper Currency Reserve interest less			—1
Interest charges on debt more			—2·5
Land revenue less			—1·4
Opium revenue less			—·8
Net revenue from posts and telegraphs less			—·8
Other variations, representing mainly increases in civil expenditure			- 2·5
Net variation from budget			- 22 3

Budget for 1921-22:—The estimates for the current year provide for an expenditure chargeable to the Government of India of 129 crores, as against a revenue on the existing basis of taxation—including a contribution from the Provincial Governments of 98·3 lakhs of 110¼ crores. An item which loomed large in the estimated expenditure was the provision for Defence. The budget provided for an ordinary expenditure on the Indian Army of 58·20 crores, representing the minimum which the authorities were able to put forward. There were also four crores of extraordinary expenditure, 3 crores representing the special expenditure necessitated by the occupation of Central Waziristan and one crore representing the grant of compensatory concessions to troops disbanded under proposals for the reduction of establishments. In the end there remained this actual deficit on the accounts of 18 crores, which with the provision of a surplus of 1 crore necessitated the imposition of new taxation to the extent of 19 crores.

New Taxation:—The taxation proposals of the Finance Member are summarised under the following heads.

An increase in the general *ad valorem* duty of 7½ per cent. to 11 per cent. estimated to produce 3,84 lakhs;

A levy on matches of a specific duty of 12 annas per gross boxes, producing an additional 1,10 lakhs;

An increase in the duty on imported liquors, working out to 3 annas per degree of proof per gallon, yielding an increased revenue of 94 lakhs;

The raising of the *ad valorem* duty of 7½ per cent. to 20 per cent. on certain articles of luxury, such as motor cars, etc., producing an additional 1,14 lakhs;

An increase in the duty on foreign sugar from 10 to 15 per cent., yielding 65 lakhs;

An increase in the duty on manufactured tobacco to fifty per cent. producing 40 lakhs.

These were all the tariff changes. There was proposed, in addition, the raising of the surcharge on railway traffic to produce 5½ crores. An increase in postal charges to produce 2¼ crores.

These additional taxes were estimated to produce 16 crores. Then dealing with the payer of direct taxes certain changes were proposed in the Income tax. On this point the Finance Member said: "As regards ordinary Income-tax an examination of the figures show that even if it were not undesirable to do so we should not obtain much additional revenue by raising the present rates of the tax on the smaller incomes. We propose therefore to leave the lower grades of Income-tax alone and to increase the upper grades so as to lead to a maximum of 16 pies instead of 12 pies as at present. The result will be to increase substantially the tax on companies dividends for under the income-tax law the tax is levied on dividends at the maximum rate subject to certain refunds. As regards super tax on individuals we propose to increase the rates on higher grades of income so as to work upto a maximum of 4 annas in the rupee on any excess over 3½ lakhs of income. We estimate that the increases in income-tax and super-tax combined will yield a total additional revenue of 3¼ crores."

Capital Account:—Owing to its responsibility for financing railways and other public works, and of meeting charges in London, the Government of India has an important capital side to its Budget, which is known by the name of ways and means. This is of special interest to financiers, for it states the estimated borrowings of the Government and has a considerable influence on the rate of exchange. The ways and means section of the current budget is set out in the following statement:—

Capital requirements.

(Crores.)

(*i*) Railway capital outlay (inclusive of exchange)	17 8
(*ii*) Delhi capital outlay (inclusive of exchange)	1 1
(*iii*) Discharge of debt (War Bonds).	16·2
(*iv*) Loans to Provincial Governments	1·7
(*v*) Drawings by Provincial Governments from their balances	6·3
Total	43·1

Resources from which met.

(*vi*) Reduction of cash balances	6·6
(*vii*) Rupee loan	15·0
(*viii*) Sterling loan	5·0
(*ix*) Net receipts from Savings Bank Deposits and Cash Certificates	4·2
(*x*) Recovery in respect of money orders issued by Iraq Administration in 1919-20	3·5
(*xi*) Imperial surplus	·8
(*xii*) Net credit from exchange	5·0
(*xiii*) Other items	3·0
Total	43·1

Reception of the Budget —Although there was sharp criticism of the high military expenditure, which the Legislatures are determined to reduce, and much groaning over the new taxation, the reception given to the budget was not unfavourable. Under the Reform Scheme the Legislative Assembly has the power to vote certain heads of expenditure, and entire control over the legislation necessary to impose fresh taxes in the shape of tariff bills. Notwithstanding the fact that in its very first session the Assembly was confronted with this demand for the heaviest additional taxation in the history of the Government of India, it addressed itself to the task in a spirit of sober patriotism. The new taxation proposals were passed substantially as proposed, with certain modifications in the new Customs Schedule and in the increased postal charges. The new schedule is set out in the Customs Tariff (q. v.) and in the section which deals with Posts and Telegraphs (q v) When the Budget left the Legislative Assembly it provided for a total revenue of Rs 1,28,31,43,000; an expenditure of Rs. 1,27,60,43,000; and a surplus of 71,00,000.

At the time of writing there is every sign that the position will be worse than this, and that when the Finance Member presents his statement of income and expenditure so far from there being this small surplus there will be a considerable deficit. The ways and means section will be far worse than that stated above, it for no other reason because instead of the average rate of exchange being one and eight pence as estimated it will be about one and four pence.

The details of the budget are set out in the following table. As the manner in which the great heads of income like land revenue, railways, irrigation and customs are realised is described in separate articles (*q. v.*) they need not detain us here:—

	Accounts, 1919-1920.	Revised Estimate, 1920-1921.	Budget Estimate, 1921-1922.
REVENUE	£	£	£
Principal Heads of Revenue—			
Customs	21,16,69,935	32 37,80,000	37,73,28,000

THE LAND REVENUE.

The principle underlying the Land Revenue system in India has operated from time immemorial. It may be roughly formulated thus—the Government is the supreme landlord and the revenue derived from the land is equivalent to rent. On strictly theoretical grounds, exception may be taken to this statement of the case. It serves, however, as a substantially correct description of the relation between the Government and the cultivator. The former gives protection and legal security. The latter pays for it according to the value of his holding. The official term for the method by which the Land Revenue is determined is "Settlement." There are two kinds of settlements in India—Permanent and Temporary. Under the former the amount of revenue has been fixed in perpetuity, and is payable by the landlord as distinguished from the actual cultivator. The Permanent Settlement was introduced into India by Lord Cornwallis at the close of the eighteenth century. It had the effect intended of converting a number of large revenue farmers in Bengal into landlords occupying a similar status to that of landowners in Europe. The actual cultivators became the tenants of the landlords. While the latter became solely responsible for the payment of the revenue, the former lost the advantage of holding from the State. This system has prevailed in Bengal since 1795 and in the greater part of Oudh since 1859. It also obtains in certain districts of Madras.

Temporary Settlements.

Elsewhere the system of Temporary Settlements is in operation. At intervals of thirty years, more or less, the land in a given district is subjected to a thorough economic survey, on the basis of the trigonometrical and topographic surveys carried out by the Survey Department of the Government of India. Each village area, wherever the Temporary Settlement is in vogue, has been carefully mapped, property-boundaries accurately delineated, and records of rights made and preserved. Under the Permanent Settlement in Bengal the occupant does not enjoy these advantages. The duty of assessing the revenue of a district is entrusted to Settlement Officers, members of the Indian Civil Service specially delegated for this work. The duties of a Settlement Officer are thus described in Strachey's *India* (revised edition, 1911):—"He has to determine the amount of the Government demand, and to make a record of all existing rights and responsibilities in the land. He has a staff of experienced subordinates, almost all of whom are natives of the country, and the settlement of the district assigned to him is a work which formerly required several years of constant work. The establishment of agricultural departments and other reforms have however led to much simplification of the Settlement Officer's proceedings, and to much greater rapidity in the completion of the Settlements. All the work of the settlement officer is liable to the supervision of superior officers, the assessments proposed by him require the sanction of the Government before they become finally binding; and his judicial decisions may be reviewed by the Civil Courts. It is the duty of the settlement officer to make a record of every right which may form the subject of future dispute, whether affecting the interests of the State or of the people The intention is to alter nothing, but to maintain and place on record that which exists."

The Two Tenures.

Under the Temporary Settlement land tenures fall into two classes—peasant-holdings and landlord-holdings, or *Ryotwari* and *Zemindari* tenures. Broadly speaking, the difference between the two in a fiscal sense is that in Ryotwari tracts the *ryot* or cultivator pays the revenue direct: in *Zemindari* tracts the landlord pays on a rental assessment. In the case of the former, however, there are two kinds of *Ryotwari* holdings—those in which each individual occupant holds directly from Government, and those in which the land is held by village communities, the heads of the village being responsible for the payment of revenue on the whole village area. This latter system prevails in the North. In Madras, Bombay, Burma and Assam, ryotwari tenure is on an individual basis, and the Government enters into a separate agreement with every single occupant. The basis of assessment on all classes of holdings is now more favourable to the cultivator than it used to be. Formerly what was believed to be a fair average sum was levied on the anticipated yield of the land during the ensuing period of settlement. Now the actual yield at the time of assessment alone is considered, so that the cultivator gets the whole of the benefit of improvements in his holding subsequently brought about either by his own enterprise or by "unearned increment" The Government, however, may at a new settlement re-classify a holding so as to secure for itself a fair share in an increment that may have resulted from public works in the vicinity, such as canals and railways, or from a general enhancement of values. But the principle that improvements effected by private enterprise shall be exempt from assessment is now accepted by the Government and provided for in definite rules.

Incidence of the Revenue.

The incidence of the revenue charges varies according to the nature of the settlement, the class of tenure, and the character and circumstances of the holding. Under the Permanent Settlement in Bengal Government derive rather less than £3,000,000 from a total rental estimated at £12,000,000. Under Temporary Settlements, 50 per cent. of the rental in the case of *Zemindari* land may be regarded as virtually a maximum demand. In some parts the impost falls as low as 35 and even 25 per cent. and only rarely is the proportion of one-half the rental exceeded. In regard to *Ryotwari* tracts it is impossible to give any figure that would be generally representative of the Government's share. But one-fifth of the gross produce is the extreme limit, below which the incidence of the revenue charge varies greatly. About sixteen years ago the Government of India were invited in an influ-

entially signed memorial to fix one-fifth of the gross produce as the maximum Government demand. In reply to this memorial and other representations the Government of India (Lord Curzon being Viceroy) issued a Resolution in defence of their Land Revenue Policy. In it was stated that "under the existing practice the Government is already taking much less in revenue than it is now invited to exact" and "the average rate is everywhere on the down grade." This Resolution, together with the statements of Provincial Governments on which it was based, was published as a volume; it is still the authoritative exposition of the principles controlling the Land Revenue Policy of the Government of India In a series of propositions claimed to be established by this Resolution the following points are noted:—(1) In *Zemindari* tracts progressive moderation is the key-note of the Government's policy, and the standard of 50 per cent. of the assets is more often departed from on the side of deficiency than excess; (2) in the same areas the State does not hesitate to interfere by legislation to protect the interests of the tenants against oppression at the hands of the landlords; (3) in *Ryotwari* tracts the policy of long-term settlements is being extended, and the proceedings in connection with new settlements simplified and cheapened; (4) local-taxation (of land) as a whole is neither immoderate nor burdensome; (5) over-assessment is not, as alleged, a general or widespread source of poverty, and it cannot fairly be regarded as a contributory cause of famine. At the same time the Government laid down as principles for future guidance—(*a*) large enhancements of revenue, when they occur, to be imposed progressively and gradually, and not *per saltum*; (*b*) greater elasticity in revenue collection, suspensions and remissions being allowed according to seasonal variations and the circumstances of the people; (*c*) a more general resort to reduction of assessments in cases of local deterioration

Protection of the Tenants.

In regard to the second of the five propositions noted above, various Acts have been passed from time to time to protect the interests of tenants against landlords, and also to give greater security to the latter in possession of their holdings. The Oudh Tenancy Act of 1886 placed important checks on enhancement of rent and eviction, and in 1900 an Act was passed enabling a landowner to entail the whole or a portion of his estate, and to place it beyond the danger of alienation by his heirs. The Punjab Land Alienation Act, passed at the instance of Lord Curzon, embodied the principle that it is the duty of a Government which derives such considerable proportion of its revenue from the land, to interfere in the interests of the cultivating classes. This Act greatly restricted the credit of the cultivator by prohibiting the alienation of his land in payment of debt. It had the effect of arresting the process by which the Punjab peasantry were becoming the economic serfs of money-lenders. A good deal of legislation affecting land tenure has been passed from time to time in other provinces, and it has been called for more than once in Bengal, where under the Permanent Settlement (in the words of the Resolution quoted above), "so far from being generously treated by the Zemindars, the Bengal cultivator was rack-rented, impoverished, and oppressed."

Government and Cultivator.

While the Government thus interferes between landlord and tenant in the interests of the latter, its own attitude towards the cultivator is one of generosity. Mention has already been made of the great advantage to the agricultural classes generally of the elaborate systems of Land Survey and Records of Rights carried out and maintained by Government In the Administration Report of Bombay for 1911-12, it is stated:—"The Survey Department has cost the State from first to last many lakhs of rupees. But the outlay has been repaid over and over again. The extensions of cultivation which have occurred (by allowing cultivators to abandon unprofitable lands) have thus been profitable to the State no less than to the individual: whereas under a *Zemindari* or kindred system the State would have gained nothing however much cultivation had extended throughout the whole of 30 years' leases." On the other hand, the system is of advantage to the *ryots* in reducing settlement operations to a minimum of time and procedure. In the collection of revenue the Government consistently pursues a generous policy. In times of distress suspensions and remissions are freely granted after proper inquiry.

Land revenue is now a provincial head of revenue and is not shown in the All India accounts It may be taken roughly at £28 million, as compared with £84 million said to have been raised annually by Aurungzebe from a much smaller Empire.

The literature of the subject is considerable. The following should be consulted by readers who require fuller information:—"Land Revenue Policy of the Indian Government," 1902 (Superintendent of Government Printing); Baden Powell's "Land Systems of British India"; Sir John Strachey's "India, its Administration and Progress, 1911," (Macmillan & Co.); M Joseph Chailley's "Administrative Problems of British India" (Macmillan & Co., 1910), and the Annual Administration Reports of the respective Provincial Governments.

EXCISE.

The Excise revenue in British India is derived from the manufacture and sale of intoxicating liquors, hemp, drugs, toddy and opium. It is a commonplace amongst certain sections of temperance reformers to represent the traffic in intoxicating liquors as one result of British rule. There is, however, abundant evidence to show that in pre-British days the drinking of spirituous liquors was commonly practised and was a source of revenue.

The forms of intoxicating liquor chiefly consumed are country spirit; fermented palm juice; beer made from grain; country brands of rum, brandy, etc., locally manufactured malt beer and imported wine, beer and spirits. Country spirit is the main source of revenue, except in the Madras Presidency, and yields about two-thirds of the total receipts from liquors. It is usually prepared by distillation from the Mhowra flower, molasses and other forms of unrefined sugar, fermented palm juice and rice. In Madras a very large revenue is derived from fresh toddy. The British inherited from the Native Administration either an uncontrolled Out-Still System or in some cases a crude Farming System and the first steps to bring these systems under control were the limitation of the number of shops in the area farmed, and the establishment of an improved Out-Still System under which the combined right of manufacture and sale at a special shop was annually granted. This of course was a kind of control, but it only enabled Government to impose haphazard taxation on the liquor traffic as a whole by means of vend fees. It did not enable Government to graduate the taxation accurately on the still-head duty principle nor to insist upon a standard of purity or a fixed strength of liquor. Moreover for political and other reasons the extent of control could not at first be complete. There were tribes of aborigines who regarded the privilege of making their own liquor in their private homes as a long established right; and who believed that liquor poured as libations to their god should be such as had been made by their own hands. The introduction of any system amongst those peoples had to be worked very cautiously. Gradually, as the Administration began to be consolidated, the numerous native pot-stills scattered all over the country under the crude arrangements then in force began to be collected into Central Government enclosures called Distilleries, thus enabling Government to perfect its control by narrowing the limits of supervision; and to regularize its taxation by imposing a direct still-head duty on every gallon issued from the Distillery. Under Distillery arrangements it has also been possible to regulate and supervise thoroughly the manufacture of its liquor and its disposal subsequent to leaving the Distillery by means of a system of transport passes, establishment supervision, improved distribution and vend arrangements.

Various Systems.

The Out-Still System may be taken to include all systems prior in order of development to the imposition of Still-head duty. Briefly stated the stages of development have been — First: farms of large tracts; Second: farms of smaller areas; Third: farms of the combined right to manufacture and sell at particular places without any exclusive privilege over a definite area; Fourth: farms of similar right subject to control of means and times for distilling and the like. The Provincial Governments have had to deal with the subject in different ways suited to local conditions, and so the order of development from the lower forms of systems to the higher has not been always everywhere identical in details. Yet in its essence and main features the Excise Administration in most provinces of British India has progressed on uniform lines the key note lying in attempts, where it has not been possible to work with the fixed duty system in its simplest forms, to combine the farming and fixed duty systems with the object of securing that every gallon of spirit should bear a certain amount of taxation. The Out-Still System has in its turn been superseded by either the Free-supply system or the District Monopoly system. The Free-supply system is one of free competition among the licensed distillers in respect of manufacture. The right of vend is separately disposed of. The District monopoly system on the other hand is one in which the combined monopoly of manufacture and sale in a district is leased to a farmer subject to a certain amount of minimum still-head duty revenue in the monopoly area being guaranteed to the State during the term of the lease.

The recommendations of the Indian Excise Committee of 1905-06 resulted in numerous reforms in British India, one of them being that the various systems have been or are gradually being superseded by the Contract Distillery System under which the manufacture of spirit for supply to a district is disposed of by tender, the rate of still-head duty and the supply price to be charged are fixed in the contract and the right of vend is separately disposed of. This is the system that now prevails over the greater portion of British India. The other significant reforms have been the revision of the Provincial Excise Laws and regulations, and the conditions of manufacture, vend, storage and transport, an improvement in the quality of the spirit, an improved system of disposal of vend licenses, reductions and re-distributions of shops under the guidance and control of local Advisory Committees and gradual enhancement of taxation with a view to checking consumption.

Since the issue of the report of the Excise Committee 1905-06, no less than 213,000 square miles of territory were transferred from the out-still to the distilling system. In 1905-06 39 per cent of the total excise area and 28 per cent of the population of that area were served by out-stills, the proportions in 1912-13 were only 15 and 8 per cent. respectively.

Excise has now been made over entirely to the Provincial Governments, and the duties vary from province to province. The governing principle in fixing these rates is the highest duty compatible with the prevention of illicit distillation.

Sap of the date, palmyra, and cocoanut palms called toddy, is used as a drink either fresh or after fermentation. In Madras and Bombay the revenue is obtained from a fixed fee on every tree from which it is intended to draw the liquor and from shop licenses fees. In Bengal and Burma the sale of shop licenses is the sole form of taxation. Country brands of rum, and so-called brandies and whiskies, are distilled from grape juice, etc. The manufacture is carried out in private distilleries in various parts of India. A number of breweries has been established, mostly in the hills, for the manufacture of a light beer for European and Eurasian consumption. The uniform fee of 4 annas 6 pies per gallon is levied all over India at the time of issue.

Foreign liquor is subject to an import duty at the tariff rates, which are set out in the Customs Tariff (*q. v.*). It can only be sold under a license.

Since the war Brandy and Whisky are manufactured in considerable quantities at Baroda.

The base used is the Mhowra flower. It is drunk in big towns as a substitute for German spirit, and is excised at tariff rates.

DRUGS.—The narcotic products of the hemp plant consumed in India fall under three main categories, namely, ganja or the dry flowering tops of the cultivated female hemp plant charas, or the resinous matter which forms an active drug when collected separately; and bhang, or the dried leaves of the hemp plant whether male or female cultivated or uncultivated. The main features of the existing system are restricted cultivation under supervision, storage in Bonded Warehouses, payment of a quantitative duty before issue, retail sale under licenses and restriction on private possession. Licenses to retail all forms of hemp drugs are usually sold by auction.

OPIUM.—Opium is consumed in all provinces in India. The drug is commonly taken in the form of pills; but in some places, chiefly on social and ceremonial occasions, it is drunk dissolved in water Opium smoking also prevails in the City of Bombay and other large towns. The general practice is to sell opium from the Government Treasury, or a Central Warehouse, to licensed vendors. The right of retail to the public is sold by annual auction to one or several sanctioned shops.

The estimated opium revenue in 1921-22 is Rs. 3,72,85,000.

SALT.

The salt revenue was inherited by the British Government from Native rule, together with a miscellaneous transit dues. These transit dues were abolished and the salt duty consolidated and raised. There are four great sources of supply: rock salt from the Salt range and Kohat Mines in the Punjab; brine salt from the Sambha Lake in Rajputana, salt brine condensed on the borders of the lesser Rann of Cutch; and sea salt factories in Bombay, Madras and at the mouth of the Indus.

The Salt Range mines contains an inexhaustible supply. They are worked in chambers excavated in salt strata, some of which are 250 feet long, 45 feet wide and 200 feet high The Rajputana supply chiefly comes from the Sambhar Lake where brine is extracted and evaporated by solar heat. In the Rann of Cutch the brine is also evaporated by solar heat and the product is known as Baragara salt. In Bombay and Madras sea water is let into shallow pans on the sea-coast and evaporated by solar heat and the product sold throughout India. In Bengal the damp climate together with the large volume of fresh water from the Ganges and the Brahmaputra into the Bay of Bengal render the manufacture of sea salt difficult and the bulk of the supply, both for Bengal and Burma, is imported from Liverpool, Germany, Aden, Bombay and Madras.

Broadly, one-half of the indigenous salt is manufactured by Government Agency, and the remainder under license and excise systems. In the Punjab and Rajputana the salt manufactories are under the control of the Northern India Salt Department, a branch of the Commerce and Industry Department. In Madras and Bombay the manufactories are under the supervision of Local Governments. Special treaties with Native States permit of the free movement of salt throughout India, except from the Portuguese territories of Goa and Damaun, on the frontiers of which patrol lines are established to prevent the smuggling of salt into British India.

From 1888-1903 the duty on salt was Rs. 2-8 per maund of 82 lbs. In 1903, it was reduced to Rs. 2; in 1905 to Rs. 1-8-0; in 1907 to Re 1 and in 1916 it was raised to Rs. 1-4-0. The successive reductions in duty have led to a largely increased consumption, the figures rising by 25 per cent. between 1903-1908 The estimated salt revenue in 1921-22 is Rs. 7,00,66,000

CUSTOMS.

The import duties have varied from time to time according to the financial condition of the country. Before the Mutiny they were five per cent.; in the days of financial stringency which followed they were raised to 10 and in some cases 20 per cent. In 1875 they were reduced to five per cent., but the opinions of Free Traders, and the agitation of Lancashire manufacturers who felt the competition of the Indian Mills, induced a movement which led to the abolition of all customs dues in 1882. The continued fall in exchange compelled the Government of India to look for fresh sources of revenue and in 1894 five per cent. duties were reimposed, yarns and cotton fabrics being excluded, Continued financial stringency brought piece-goods within the scope of the tariff, and after various expedients the demands of Lancashire were satisfied by a general duty of 3½ per cent. on all woven goods—an import duty on goods by sea, an excise duty on goods produced in the country. The products of the hand-looms are excluded. These excise duties are intensely unpopular in India, for reasons set out in the special article dealing with the subject. In 1910-11, in order to meet the deficit threatened by the loss of the revenue on opium exported to China, the silver duty was raised from 5 per cent. to 4d. an ounce, and higher duties levied on petroleum, tobacco, wines, spirits, and beer. These were estimated to produce £1 million annually.

The Customs Schedule was completely recast in the Budget of 1916-17 in order to provide additional revenue to meet the financial disturbance set up by the war. The general import tariff, which had been at the rate of 5 per cent. *ad valorem* since 1894 was raised to 7½ per cent. *ad valorem*, except in the case of sugar; as India is the largest producer of sugar in the world the import duty on this staple was fixed at 10 per cent. There was also a material curtailment of the free list. The principal article of trade which was not touched was cotton manufactures. For the past twenty years the position has been that cotton twists and yarns of all kinds are free of duty while a duty at the rate of 3½ per cent. is imposed on woven goods of all kinds whether imported or manufactured in Indian mills. The Budget left the position as it stood. The Government of India would have been glad to see the tariff raised to 5 per cent. without any corresponding alteration of the excise, but were over-ruled by the Cabinet on the ground that this controversial matter must come up for discussion after the war. Finally the Budget imposed export duties on tea and jute. In the case of tea the duty was fixed at Re. 1-8-0 per 100 lbs; in the case of jute the export duty on raw jute was fixed at Rs. 2-4-0 per bale of 400 lbs., approximately equivalent to an *ad valorem* duty of 5 per cent.; manufactured jute was charged at the rate of Rs. 10 per ton on sacking and Rs. 16 per ton on Hessians.

The Customs Tariff was further materially modified in the Budget for 1917-18. In the previous year an export duty on jute was imposed at the rate of Rs. 2-4-0 per bale of 400 lbs. in the case of raw jute and Rs. 10 per ton on sackings, and Rs. 16 per ton on Hessians; these rates were doubled, with a view to obtaining an additional revenue of £500,000. The import duty on cotton goods was raised from 3½ per cent. to 7½ per cent. without any alteration in the Excise, which remained at 3½ per cent. This change was expected to produce an additional revenue of £1,000,000. The question of the Excise was left untouched, for the reason, amongst others, that the Government could not possibly forego the revenue of £320,000, which it was expected to produce. With these changes in operation the revenue from Customs in 1920-21 was Rs. 32,37,29,000.

The Customs Tariff was further raised in the Budget of 1921-22 in order to provide for the big deficit which had then to be faced. The general *ad valorem* duty was raised from 7½ to 11 per cent.; a special duty was levied on matches of 12 annas per gross boxes in place of the existing *ad valorem* duty of 7½ per cent. the duties on imported liquors was raised to 3 annas per degree of proof per gallon; the *ad valorem* duty of 7½ per cent was raised to 20 per cent. in the case of certain articles of luxury; the import duty on foreign sugar was increased from 10 to 15 per cent. and the duty on manufactured tobacco was raised by 50 per cent. The yield of the Customs Duties in 1921-22 is estimated at Rs. 18,58,07,000.

The Customs Department is administered by an Imperial Customs Service responsible to the Imperial Government in the Department of Commerce and Industry, but acting through the Local Governments. The senior Collectors are Covenanted Civilians specially chosen for this duty; the subordinates are recruited in India and in England **(Customs Tariff q. v.)**

Income Tax.

The income tax was first imposed in India in 1860, in order to meet the financial dislocation caused by the Mutiny. It was levied at the rate of four per cent. or a little more than 9½ d. in the pound on all incomes of five hundred rupees and upwards. Many changes have from time to time been made in the system, and the present schedule was consolidated in the Act of 1886. This imposed a tax on all incomes derived from sources other than agriculture which were exempted. On incomes of 2,000 rupees and upwards it fell at the rate of five pies in the rupee, or about 6¼d. in the pound; on incomes between 500 and 2,000 rupees at the rate of four pies in the rupee or about 5d. in the pound. In March 1903 the minimum taxable income was raised from 500 to 1,000 rupees. The income-tax schedule was completely revised, raised, and graduated in the Budget of 1916-17 in the general scale of increased taxation imposed to meet the deficit arising out of war conditions.

Since then the process has been almost continuous and in every financial difficulty the authorities turn to the Income Tax as a means of raising fresh revenue. The last revision was in the Budget of 1921-22, when the scale was fixed as follows:—

		Rate.
I.	When the taxable income is less than Rs. 2,000	*Nil.*
II.	When the taxable income is Rs. 2,000 or upwards and —	
	(*i*) the total income is less than Rs. 5,000	Five pies in the rupee.
	(*ii*) the total income is Rs. 5,000 or upwards, but is less than Rs. 10,000	Six pies in the rupee.
	(*iii*) the total income is Rs. 10,000 or upwards, but is less than Rs. 20,000	Nine pies in the rupee.
	(*iv*) the total income is Rs. 20,000 or upwards, but is less than Rs. 30,000	One anna in the rupee.
	(*v*) the total income is Rs. 30,000 or upwards, but is less than Rs. 40,000	One anna and two pies in the rupee.
	(*vi*) the total income is Rs. 40,000 or upwards	One anna and four pies in the rupee.

RATES OF REFUND.

	Amount.	Refund.
1.	Less than Rs. 2,000	One anna and four pies in the rupee.
2.	Rs. 2,000 or upwards, but less than Rs. 5,000	Eleven pies in the rupee.
3.	Rs. 5,000 or upwards, but less than Rs. 10,000	Ten pies in the rupee.
4.	Rs. 10,000 or upwards, but less than Rs 20,000	Seven pies in the rupee.
5.	Rs. 20,000 or upwards, but less than Rs 30,000	Four pies in the rupee.
6.	Rs. 30,000 or upwards, but less than Rs 40,000	Two pies in the rupee

SUPER-TAX.

(1) In respect of the first lakh of rupees of taxable income –	
(*a*) in the case of a Hindu undivided family –	
(*i*) in respect of the first seventy-five thousand rupees of taxable income	*Nil*
(*ii*) in respect of the next twenty-five thousand rupees of taxable income	One anna in the rupee
(*b*) In all other cases –	
(*i*) in respect of the first fifty thousand rupees of taxable income	*Nil.*
(*ii*) in respect of the next twenty-five thousand rupees of taxable income	One anna in the rupee.
(2) In respect of the first fifty thousand rupees of taxable income over one lakh of rupees	One and a half annas in the rupee
(3) In respect of the next fifty thousand rupees of taxable income	Two annas in the rupee.
(4) In respect of the next fifty thousand rupees of taxable income	Two and a half annas in the rupee.
(5) In respect of the next fifty thousand rupees of taxable income	Three annas in the rupee.
(6) In respect of the next fifty thousand rupees of taxable income	Three and a half annas in the rupee
(7) In respect of all taxable income over three and a half lakhs of rupees	Four annas in the rupee.

The total yield of the Taxes on Income in the current year are estimated at Rs 18,58,07,000.

THE DEBT.

On 31st March 1920, the national debt of India was 566 crores. This figure represents less than Rs. 24 per head of India's population; when compared with the public revenues, which in 1919-20 amounted to about 203 crores, constitutes a national indebtedness which, in comparison with the national resources, is very much smaller than that of most other nations. The reason why India is in this favourable position is mainly the care with which, in the long years of peace preceding the great war, her outlay was restricted to her available means whereby the accumulation of wasteful and unproductive debt was avoided. At the commencement of the war India found herself in a position when almost the whole of her debt represented productive outlay on railways and irrigation, normally yielding a return considerably in excess of the interest which she had to pay on the amount borrowed, including the interest on the small amount of debt which could be described as unproductive.

Productive Debt.—The following table shows the amount of the national debt of India both productive and non-productive, from time to time :—

(IN CRORES OF RUPEES.)

	Ordinary Debt.	Productive Debt.			Total of debt.
		Railways.	Irrigation.	Total.	
On 31st March—					
1893	97·0	136·5	28·9	165·4	262·9
1898	105·5	159·0	32 5	191·5	296·5
1903	88·7	192·1	37·2	229·3	318·0
1908	56·1	266·6	44·8	311·4	367·5
1913	37·5	317·7	56·1	374·1	411·6
1914	19·2	333·0	59·1	392·1	411·3
1915	3·3	349·8	61·6	411·4	414·7
1916	3·0	351·6	63·6	415·2	418·2
1917	10·5	353·6	61·9	418·5	429·0
1918	132·5	358·8	65·9	424 7	557·2
1919	129·9	365·5	66·7	432·2	562·1
1920	117·8	381·0	67·5	448·5	566·3

On the 31st March 1914, out of a total debt of 411 crores, only 19 crores represented ordinary or unproductive debt. The annual interest on the latter was only a crore, and on the productive debt about 13 crores, so that India's total interest charges then amounted to about 14 crores. On the other hand, railways and irrigation works, which had been financed from the productive debt, yielded in that year a return of nearly 23 crores, which left a margin of 9 crores of clear profit to the country, after meeting the interest charges on the entire debt. Even after the contribution of £100 millions to the cost of the war which India made in 1917, and which added over 30 per cent. to the national debt, the revenue from railways and irrigation amounted in the year 1918-19 to 33 crores, so that the revenue from productive expenditure amounted to 133 per cent. of the total interest charges. Had it not been for India's contribution of 150 crores to the expenses of the war the ordinary debt would have been completely wiped out in 1917, and the amount of the ordinary debt outstanding on 31st March 1919, namely, 129 9 crores was thus actually less than the amount of that contribution.

Financial Strength.—These are not the only facts which show the strength of India's financial position. The interest on her public debt is not only secured by the revenue from railways and irrigation works which were directly financed by borrowing, but is a charge on the public revenues as a whole. The following table shows the total revenue and expenditure of India (including the revenue and expenditure of the provinces) during the past six years.

	IN CRORES OF RUPEES.	
	Revenue	Expenditure
1912-13	130	119
1913-14	128	125
1914-15	122	128
1915-16	127	128
1916-17	147	132
1917-18	169	154
1918-19	185	190
1919-20	203	218

Form of Debt.—The existing rupee loans are of two kinds:—

(1) Those which Government has undertaken not to repay before a certain fixed date, but which are repayable at the option of Government at any time after that date, after giving notice.

(2) Those which Government has undertaken to repay either (*a*) on a certain fixed date, or (*b*) not earlier than a certain fixed and not later than another fixed date.

The following are the rupee loans now in existence:—

(*a*) NON-TERMINABLE LOANS.

1	2	3	4
Name of loan.	Half-yearly date of payment of interest.	Conditions of repayment. (Unless otherwise stated, repayment will be at par.)	Amount outstanding on Sept. 30th, 1920.
			Rs.
1 3½ per cent. loan of 1842-43..	1st February and 1st August.	Repayable at the option of Government after three months' notice.	20,84,34,000
2. 3½ per cent. loan of 1854-55.	30th June and 31st December.		29,35,58,000
3. 3½ per cent. loan of 1865 ..	1st May and 1st November.		34,00,94,000
4. 3½ per cent. loan of 1879 ..	16th January and 16th July.		3,61,03,000
5. 3 per cent. loan of 1896-97.	30th June and 31st December.		6,57,25,000
6. 3½ per cent. loan of 1900-01..	30th June and 31st December	Repayable not before 30th December 1920, and thereafter at the option of Government after three months' notice.	31,29,78,000
		TOTAL ..	1,25,68,92,000

(*b*) TERMINABLE LOANS.

	Name of loan.	Half-yearly date of payment of interest.	Conditions of repayment.	Amount outstanding on Sept. 30th 1920.
				Rs.
1	4 per cent Terminable Loan of 1915-16.	31st May and 30th November.	Repayable not before 30th November 1920 and not later than 30th November 1923.	4,99,86,000
2.	4 per cent. Conversion Loan of 1916-17.	1st April and 1st October.	Repayable not before 1st October 1931 and not later than 1st October 1936.	9,90,01,000
Indian War Loan 1917.	3. 5 per cent. War Loan, 1929-47.	15th February and 15th August.	Repayable not before 15th August 1929 and not later than 15th August 1947.	24,62,10,000
	4. 5½ per cent. War Bonds, 1920 *	15th February and 15th August.	Repayable on the 15th August 1920.	2,79,13,000
	5. 5½ per cent. War Bonds, 1922.*	15th February and 15th August.	Repayable on the 15th August 1922.	11,28,76,000
Indian War Loan 1918.	6. 5½ per cent War Bonds, 1921.*†	15th March and 15th September	Repayable on the 15th September 1921.	15,73,55,000
	7. 5½ per cent War Bonds, 1923*†	15th March and 15th September	Repayable on the 15th September 1923.	2,14,70,000
	8. 5½ per cent. War Bonds, 1925.*†	15th March and 15th September	Repayable (at Rs. 103 per cent) on the 15th September 1925.	4,17,35,000
	9 5½ per cent War Bonds, 1928.*†	15th March and 15th September	Repayable (at Rs. 105 per cent) on the 15th September 1928.	25,06,08,000
1919	10. 5 per cent. Loan, 1945-55.*	15th April and 15th October.	Repaybale at par not earlier than 15th October 1945 and not later than 15th October 1955.	21,22,01,000
			TOTAL ..	1,21,93,75,000

*N.B.**—The interest on the loans marked* is exempt from income-tax, but not from super-tax.

† These Bonds will be accepted at par during their currency, as the equivalent of cash for the purpose of subscription to any future long term loan, whatever its rate of interest may be.

There are also still in existence a few special loans, such as certain railway loans taken up by three Indian Chiefs, and a special 4 per cent. loan taken up by the Maharaja of Gwalior in 1887.

Sterling Debt.—Besides the rupee loans, the national debt of India consists of some £171 millions of sterling debt. In former years India was obliged to depend to a large extent on her borrowings in London to finance her expenditure on railways and irrigation, and the present sterling debt represents such of those loans as are still outstanding:—

(1) India 3½ per cent. stock, of which the amount outstanding on 30th Sept. 1920 was about £ 90 millions;

(2) India 3 per cent. stock, of which the amount outstanding on that date was about £65 millions;

(3) India 2½ per cent. stock, of which the amount outstanding on that date was about £ 11½ millions.

The remainder of the sterling debt is made up of certain railway debenture stocks, of which the amounts in each case are comparatively small, together with so much of India's contribution of £100 millions as has not been liquidated from the proceeds of the War Loans of 1917 and 1918; the amount of sterling debt outstanding on this account on the 30th September 1919 was about £22 millions representing the liability accepted by India for a corresponding amount of British War Loan.

Nature of Securities.—The three main forms in which the rupee debt is held are—(*i*) *Stock* or, as it is sometimes called *Book Debt*, (*ii*) *Bearer Bonds*; (*iii*) *Promissory Notes*.

(*i*) When debt is held in the form of *Stock*, the owner is given a certificate to the effect that he has been registered in the books of the Public Debt Office as the proprietor of a certain amount of Government stock. This certificate is known as a *Stock Certificate*, and it is by that name that this form of debt is generally known.

(*ii*) A *Bearer Bond* certifies that the bearer is entitled to a certain sum of rupees in respect of the loan to which the bond relates.

(*iii*) A *Promissory Note* contains a promise by the Governor General in Council, on behalf of the Secretary of State for India, to pay a certain person a specified sum either on a specified date or after certain notice (according to the terms of the particular loan to which the promissory note relates), and to pay interest thereon at a certain rate half-yearly on certain specified dates.

Each of the above three forms of security is convertible by the holder into either of the other two.

Other Government Securities.—*Treasury Bills and Post Office Cash Certificates* are also forms of Government securities.

Treasury Bills, when issued, are in respect of temporary borrowing by the Government of India, and usually have a currency of from three to twelve months. They are sold at a discount, and are paid at maturity at their full face value, the difference representing the yield on the investment. The lowest denomination issued is for Rs. 5,000. Their sale and payment at maturity are managed by the Presidency Banks.

Cash Certificates.—*Post Office Cash Certificates* are specially intended to facilitate the investment of small amounts and to encourage saving among people of small incomes. They have a currency of five years, at the expiry of which they will be repaid. The profit to the investor consists in the fact that they are sold for an amount less than the face value, thus, cash certificates of denominations of Rs. 10, Rs. 20, Rs. 50, Rs. 100, and Rs. 500 can at present be obtained on payment of Rs. 7-12, Rs. 15-8, Rs. 38-12, Rs. 77-8 and Rs. 387-8 respectively. The maximum amount for which certificates may be held by any one person is Rs. 10,000 face value. The special attraction of these Cash Certificates is that the investor's money is not necessarily locked up for the full term of five years. He can, if he wishes, obtain payment at any time during the currency of the certificate, and he will then receive an amount which, according to the time he has held the certificate, gradually increases at compound interest from the original purchase price up to the full face value of the certificate at the end of five years. In the case of the Cash Certificates issued in connection with the Indian War Loans the yield to the investor ranges from 4 per cent. a year, if he presents it for payment after having held it for one year only, to 5½ per cent. a year if he holds it for the full five years. The investor's profit is not subject to income-tax. These certificates are for sale all the year round and can be obtained at any Post Office which does savings bank business, and payment of the amount due can also be obtained at any such office.

AMOUNT of the RUPEE and STERLING DEBT and of the INTEREST thereon, annual INCREASE or REDUCTION of the DEBT; and the PROPORTION of the RUPEE DEBT held in LONDON, from 1820-21 to 1919-20.

Total ..	5,811,000	5,482,400

THE INDIAN MINTS.

The strong demand for rupees which characterised recent years was arrested in the year 1920-21 and the record coinages of 1918-19 and 1919-20 were followed by a period of comparative slackness at the Mints. Only 3,11,30,039 rupees were coined during the year, viz., 1,44 00,000 at the Calcutta Mint and 1,97,30,039 at the Bombay Mint, against 36,62,06,854 rupees struck at the two Mints in 1919-20. There was no coinage of fractional silver.

Uncurrent coins of the nominal value of Rs. 79,61,791 were received at the two Mints for re-coinage. Apart from these, the coinage was from purchased silver, the bulk of which consisted of bar silver and United States dollar bars.

Subsidiary coinage. In addition the following silver coinage was executed at the Bombay Mint on behalf of the Ceylon and Straits Governments:—

Denomination of coin	Tale.	Outturn value in standard tolas.	Government on whose behalf the coinage was executed.
	Rs.	Rs.	
Straits Dollars	10,000 121	78,45,871	Straits Government.
,, 50 Cents	6,479,464	25,55,026	
Ceylon 50 ,, ...	800,010	2,40,141	Ceylon Government.
,, 25 ,, ...	1,600,011	2,10,139	
,, 10 ,, ...	3,059,181	1,84,117	

Nickel and Bronze coinage.—The nickel and bronze coinage for the Government of India was comparatively light, but the Mints were also engaged in carrying out a certain amount of nickel and bronze coinage on behalf of Foreign Governments. Rs. 5,00,000 worth each of 8-anna and 4-anna nickels were coined for supply to the Mauritius Government. Apart from these, there was no coinage of 8-anna nickels and only 12,459,259 pieces of 4-anna coin valued at Rs. 31,14,815 were struck at the two Mints as compared with 26,304,006 pieces of 4-anna nickels coined during the previous year.

As in the previous year the coinage of 2-anna nickels was confined to the Calcutta Mint and of 1-anna nickels to the Bombay Mint and their nominal value amounted to Rs. 8,31,000 and Rs. 5,79,000 respectively as against Rs. 85,84,000 and Rs 76,74,6.8 in 1919-20. Besides the above 6,000,000 nickel five cent pieces for the Ceylon Government and 20,000,000 5 cent pieces for the Straits Government were coined at the two Mints.

The bronze coinage was as usual carried out entirely at the Calcutta Mint and consisted of pice, half pice and pie pieces of the aggregate value of Rs 15,29,800 as compared with Rs. 28,51,600 in 1919-20. The Calcutta Mint also coined 40,570,000 bronze 1 cent pieces for the Straits Government and 2,000,000 copper 1 cent pieces for the Ceylon Government.

HISTORY OF THE COINAGE.

The Indian mints were closed to the unrestricted coinage of silver for the public from the 26th June 1893, and Act VIII of 1893, passed on that date, repealed Sections 19 to 26 of the Indian Coinage Act of 1870, which provided for the coinage at the mints for the public of gold and silver coins of the Government of India. After 1893 no Government rupees were coined until 1897, when, under arrangements made with the Native States of Bhopal and Kashmir, the currency of those States was replaced by Government rupees. The re-coinage of these rupees proceeded through the two years 1897 and 1898. In 1899 there was no coinage of rupees; but in the following year it seemed that coinage was necessary, and it was begun in February 1900, the Government purchasing the silver required, and paying for it mainly with the gold accumulated in the Paper Currency Reserve. In that and the following month a crore of rupees was coined and over 17 crores of rupees in the year ending the 31st March 1910 including the rupees issued in connection with the conversion of the currencies of Native States. From the profit accruing to Government on the coinage it was decided to constitute a separate fund called the Gold Reserve Fund as the most effective guarantee against temporary fluctuations of exchange. The whole profit was invested in sterling securities, the interest from which was added to the fund. In 1906 exchange had been practically stable for eight years, and it was decided that of the coinage profits devoted to this fund, six crores should be kept in rupees in India, instead of being invested in gold securities. The Gold Reserve Fund was then named the Gold Standard Reserve. It was ordered in 1907 that only

one-half of the coinage profits should be paid into the reserve, the remainder being used for capital expenditure on railways. The Gold Standard Reserve was called into action before the year 1907-08 was out. Exchange turned against India, and in March 1908, the Government of India offered bills on the Secretary of State up to half a million sterling, while the Secretary of State sold £1,000,000 Consols in order to meet such demands. During April to August, further sterling bills were sold for a total amount of £8,058,000. On a representation by the Government of India, the Secretary of State agreed to defer the application of coinage profits to railway construction until the sterling assets of the Gold Standard Reserve amounted to £25,000,000. On the outbreak of the war in August 1914 the Reserve was drawn upon to meet the demands for sterling remittances, and Government offer to sell £1,000,000 of Bills weekly

Gold.

Since 1870 there had been no coinage of double mohurs in India and the last coinage of single mohur before 1918 in which year coinage was resumed, was in the year 1891-92

A Royal proclamation was issued in 1918 establishing a branch of the **Royal Mint at Bombay** It stated Subject to the provision of this proclamation the Bombay Branch Mint shall for the purpose of the coinage of gold coin, be deemed to be part of the Mint, and accordingly, (a) the Deputy Master of the Bombay Branch Mint shall comply with all directions he may receive from the Master of the Mint whether as regards the expenditure to be incurred or the returns to be made or the transmission of specimen coins to England or otherwise and (b) the said specimen coins shall be subject to the trial of the pyx under section 12 of the Coinage Act, 1870, so that they shall be examined separately from the coins coined in England or at any other branch of the Mint and (c) the Deputy Master of the Bombay Branch Mint and other officers and persons employed for the purpose of carrying on the business of the Branch Mint may be appointed, promoted, suspended and removed and their duties assigned and salaries awarded and in accordance with the provisions of section 15 of the Coinage Act, 1870. Pending the completion of the arrangements at the Branch Royal Mint, power was taken by legislation to coin in India gold mohurs of the same weight and fineness as the sovereign Altogether 2,109,703 pieces of these new coins of the nominal value of Rs 3,16,45,545, were struck at the Bombay Mint The actual coinage of sovereigns was begun in August, 1918, and 1,295,372 sovereigns were coined during the year. This branch of the Royal Mint was closed in April, 1919, owing to difficulties in supplying the necessary staff.

Act XXII of 1899, passed on the 15th September 1899, provided that gold coin (sovereign and half-sovereigns) shall be a legal tender in payment or on account at the rate of fifteen rupees for one sovereign.

With the receipt of large consignments of gold, the Bombay Mint made special arrangements for the **refining of gold** by the chlorine process and at the end of the year 1919-20 the Refinery Department was capable of refining a daily amount of 6,000 ounces of raw gold. The Refinery turned out 16,62,466 fine tolas of refined gold in 1920-21.

Silver.

The weight and fineness of the silver coins are :—

	Fine Silver grains	Alloy grains	Total grains.
Rupee . .	165	15	180
Half-rupee	82½	7½	90
Quarter-rupee or 4-anna piece	41¼	3¾	45
Eighth of a rupee or 2-anna piece	20⅝	1⅞	22½

One rupee	165 grains of fine silver
One shilling	80.1 grains of fine silver
One rupee	shillings 2 04 39

Copper and Bronze.

Copper coinage was introduced into the Bengal Presidency by Act XVII of 1835 and into the Madras and Bombay Presidencies by Act XXII of 1844

The weight of the copper coins struck under Act XXIII of 1870 remained the same as it was in 1835 It was as follows :—

	Grains troy.
Double pice or half-anna	200
Pice or quarter-anna . .	100
Half-pice or one-eighth of an anna . .	50
Pie being one-third of a pice or one-twelfth of an anna	33⅓

The weight and dimensions of bronze coins are as follows :—

	Standard weight in grains troy.	Diameter in millimetres.
Pice	75	25 4
Half-pice . . .	37½	21 15
Pie	25	17·45

Nickel.

The Act of 1906 also provides for the coinage of a nickel coin. It was directed that the nickel one-anna piece should thenceforth be coined as the Mint and issue. The notification also prescribed the design of the coin, which has a waved edge with twelve scollops the greatest diameter of the coin being 21 millimetres and its least diameter 19 8 millimetres. The desirability of issuing a half anna nickel coin was considered by the Government of India in 1909 but after consultation with Local Governments it was decided not to take action in this direction until the people had become thoroughly familiar with the present one-anna coin. The two-anna nickel coin was introduced in 1917-18 ; and the four-anna and eight anna nickel coins in 1919.

The Currency System.

The working of the Indian currency system which has commanded a large amount of public attention since 1893, was forced to the front in 1920, as the result of measures taken to stabilise the exchange value of the rupee after the fluctuations caused by the war. These assumed so much importance, and they continue to bulk so largely in all Indian economic questions, that we propose to give here a short summary of the Indian currency system in non-technical language.

I. THE SILVER STANDARD.

Prior to 1893 the Indian currency system was a mono-metallic system, with silver as the standard of value and a circulation of silver rupees and notes based thereon. But with the opening of new and very productive silver mines in the United States of America the supply of silver exceeded the demand and it steadily receded in value. The result was that the gold value of the rupee, which was nominally two shillings, fell continuously until it reached the neighbourhood of a shilling. These disturbances were prejudicial to trade, but they were still more prejudicial to the finances of the Government. The Government of India has to meet every year in London a substantial sum in the form of payment of interest on the debt, the salaries of officials on leave, the pensions of retired officials, as well as large payment for stores required for State enterprises. As the rupee fell in its gold value the number of rupees required to satisfy these payments rose. The total reached a pitch which seriously alarmed the Government, which felt that it might be called upon to raise a sum in rupees which would necessitate a considerable increase in taxation, which should be avoided if possible. It was therefore decided to take measures to raise and fix the gold value of the rupee for the purposes of exchange.

Closing the Mints.—The whole question was examined by a strong committee under the presidency of Lord Herschell, whose report is commonly called the Herschell Report. It was decided in 1893 to close the mints to the unrestricted coinage of silver. This step led, as was intended, to a gradual divergence between the exchange value of the rupee and the gold value of its silver content. Government ceased to add rupees to the circulation. Rupees remained unlimited legal tender and formed the standard of value for all internal transactions. Since Government refused, and no-one else had the power to coin rupees, as soon as circumstances led to an increased demand for rupees, the exchange value of the rupee began to rise. By 1898 it had approached the figure of one shilling and fourpence. Meantime, in response to the undertaking of Government to give notes or rupees for gold at the rate of fifteen rupees to the pound sterling, gold began to accumulate in the Paper Currency Reserve. These purposes having been attained, a second committee was appointed under the chairmanship of Sir Henry Fowler to consider what further steps should be adopted in the light of these conditions. The report of the Fowler Committee as it was called marked the second stage in Ind an currency policy.

II THE NEW STANDARD.

The Fowler Committee rejected the proposal to re-open the Mints to the free coinage of silver. They proposed that the exchange value of the rupee should be fixed at one shilling and fourpence, or fifteen rupees to the sovereign. They further suggested that the British sovereign should be made a legal tender and a current coin in India: that the Indian mints should be thrown open to the unrestricted coinage of gold; so that the rupee and the sovereign should freely circulate side by side in India. The goal which the Committee had in view was a gold standard supported by a gold currency. Now under the condition which compelled the Government of India to give either rupees or rupee notes for gold tendered in India, at the rate of fifteen rupees to the sovereign, it was impossible for the rate of exchange to rise above one shilling and fourpence, save by the fraction which covered the cost of shipping gold to India. But if the balance of trade turned against India, it was still possible for the rate of exchange to fall. To meet this the Fowler Committee recommended that the profits on coining rupees should not be absorbed in the general revenues, but should be set aside in a special reserve, to be called the Gold Standard Reserve. Inasmuch as the cost of coining rupees was approximately elevenpence halfpenny, and they were sold to the public at one and fourpence, the profits were considerable; they were to have been kept in gold, so as to be freely available when required for the support of exchange.

A 16 pence Rupee.—The Government of India professed to accept all the recommendations of the Fowler Committee; actually only a portion of them was put in practice. The official rate of exchange was fixed at one and fourpence. The sovereign and the half sovereign were declared unlimited legal tender in India. But after a first attempt, when sovereigns soon came back to the treasuries, no effort was made to support the gold standard by an active gold currency. The gold mint was not set up. The Gold Standard Reserve was established, but instead of holding the Reserve in gold, it was invested in British securities. These practices gave rise to conditions which were never contemplated by the Fowler Committee. Reference has been made to the Home Charges of the Government of India, which at the time amounted to about seventeen millions sterling a year. These are met by the sale of what are called Council Bills. That is to say, the Secretary of State, acting on behalf of the Government of India

sold Bills against gold deposited in the Bank of England in London. These Bills when presented in India were cashed at the Government Treasuries. Now if the Secretary of State sold Council Bills only to meet his actual requirements, it follows that the balance of trade in favour of India over and above this figure would be liquidated, as it is in other countries, by the importation of bullion or by the creation of credits. It is a fact that owing to the failure of the policy of encouraging an active gold circulation to support the gold standard, gold tended to accumulate in India in embarrassing quantities. In 1904 therefore the Secretary of State declared his intention of selling Council Bills on India without limit at the price of one shilling fourpence one-eighth—that is to say gold import point. The effect of this policy was to limit the import of gold to India, for it was generally more convenient to deposit the gold in London and to obtain Council Bills against it, than to ship the gold to India. Nevertheless as the Egyptian cotton crop was very largely financed in sovereigns it was sometimes cheaper and more convenient to ship sovereigns from Egypt, or even from Australia, than to buy Council Bills. Considerable quantities of sovereigns found their way into India and circulated freely, particularly in the Bombay Presidency, the Punjab and parts of the Central Provinces.

Sterling Remittance.—This system worked until 1907-08. A partial failure of the rains in India in 1907, and the general financial stringency all over the world which followed the American financial crisis in the autumn, caused the Indian exchange to become weak in November. This was one of the occasions contemplated, in a different form, by the Fowler Committee when it proposed the formation of the Gold Standard Reserve. There had been very heavy coining of rupees in India and the amount in the Reserve was ample. But the Reserve was in securities not in gold, and was therefore not in a liquid form, nor was the time an opportune one for the realisation of securities. Moreover the authorities did not realise that a reserve is for use in times of emergency. It had been assumed that in times of weakness it would be sufficient for the Secretary of State to stop selling Council Bills, and it would firm up; meantime he would finance himself by drawing on the funds in the Gold Standard Reserve. But it was apparent that the stoppage of the sales of Councils was not enough; there was an insistent demand for the export of gold, or the equivalent of gold. The Government of India refused and exchange fell to one and threepence twenty-three thirty-seconds. Ultimately the authorities had to give way. It was decided to sell in India a certain quantity of sterling bills on London at one and threepence twenty-nine thirtyseconds, representing gold export point, and the equivalent of the export of gold. These were met in London from the funds in the Gold Standard Reserve. Bills to the extent of between eight and nine millions sterling were sold, which regularised the position and the Indian export trade recovered. Thus were gradually evolved the main principles of the Indian currency system. It consisted of silver rupees and rupee notes in India, with the sovereign and half sovereign unlimited legal tender at the rate of fifteen rupees to the sovereign, or one and fourpence. The rate of exchange was prevented from rising above gold import point by the unlimited sale of Council Bills at gold point in London; it was prevented from falling below gold point by the sale of Sterling Bills (commonly called Reverse Councils) at gold export point in India. But it was not the system proposed by the Fowler Committee, for there was no gold mint and only a limited gold circulation; some people invented for it the novel term of the gold exchange standard, a term unknown to the law of India. It was described by one of the most active workers in it as a "limping standard."

III. THE CHAMBERLAIN COMMITTEE.

This brings us to the year 1913. There were many critics of the system. Some hankered for a return to the open mints; others objected to the practice of unlimited sales of Council Bills as forcing rupees into circulation in excess of the requirements of the country. But the general advantages of a fixed exchange were so great as to smother the voices of the critics, and the trade and commerce of the country adjusted itself to the one and fourpenny rupee. But there gradually grew up a formidable body of criticism directed against the administrative measures taken by the India Office. These criticisms were chiefly directed at the investment of the Gold Standard Reserve in securities instead of keeping it in gold in India; at a raid on that reserve in order temporarily to relieve the Government of the difficulty of financing its railway expenditure; at the transfer of a solid block of the Paper Currency Reserve from India to London; at the holding of a portion of the Gold Standard Reserve in silver in order to facilitate the coining of rupees; and at the unlimited sales of Council Bills at rates which prevented the free flow of gold to India, thus forcing token rupees into circulation in quantities in excess of the requirements of the country. The cumulative effect of this policy was to transfer from India to London an immense block of India's resources, aggregating over seventy millions, where they were lent out at low rates of interest to the London bankers, whilst India was starved of money until at one point money was not available for loans even against Government securities and the bank rate was artificially high. All these things were done, it was contended, on the *obiter dicta* of a small Finance Committee of the India Office, from which all Indian influence was excluded, and on which London banking influence was supreme. The India Office for long ignored this criticism, until it was summarised in a series of articles in *The Times*, and public opinion was focussed on the discussion through the action of the India Office in purchasing a big block of silver for coining purposes from Messrs. Montagu & Co., instead of through their recognised and constituted agents, the Bank of England. The Government could no longer afford to stand aloof and yet another Currency Committee was appointed under the chairmanship of Mr. Austen Chamberlain. This is known as the Chamberlain Committee.

New Measures.—The conclusions of this Commission were that it was unnecessary to support the Gold Standard by a gold currency; that it was not to the advantage of India to encourage the internal use of gold as currency; that the internal currency should be supported by a thoroughly adequate reserve of gold and sterling; that no limit should be fixed to the amount of the Gold Standard Reserve, one half of which should be held in gold; that the silver branch of the Gold Standard Reserve should be abolished; that Reverse Councils should be sold on demand; that the Paper Currency should be made more elastic; and that there should be two Indian representatives out of three on the Finance Committee of the India Office. The Committee dealt inconclusively with the accumulation of excessive balances in London, the general tenor of their recommendations being "not guilty, but do not do it again." They gave a passing commendation to the idea of a State Bank. Sir James Begbie, the only Indian banker on the Committee, appended a vigorous minute of dissent, in which he urged that the true line of advance was to discourage the extension of the token currency by providing further facilities for the distribution of gold when increases to the currency became necessary, including the issue of an Indian gold coin of a more convenient denomination than the sovereign or the half sovereign.

IV. CURRENCY AND THE WAR

The report was in the hands of the Government of India shortly before the outbreak of the war. Some immediate steps were taken, like the abolition of the silver branch of the Gold Standard Reserve, but before the Government could deal entirely with the temporising recommendations of the Commission, the war broke out. The early effects of the war were precisely those anticipated. There was a demand for sterling remittance which was met by the sale of Reverse Councils, £8,707,000, being sold up to the end of January 1915. There were withdrawals from the Post Office Savings Banks, and a net sum of Rs 8 crores was taken away. There was some lack of confidence in the Note issue, and a demand for gold; Notes to the extent of Rs. 10 crores were presented for encashment and the Government were obliged to suspend the issue of gold But these were transient features and did not demand a moratorium; confidence was soon revived and Exchange and the Note issue continued strong. The difficulties which afterwards arose were from causes completely unanticipated by all students of the Indian currency they arose from an immense balance of trade in favour of India, caused by the demand for Indian produce for the United Kingdom and the Allies and the decline in the export trade from these countries; a heavy expenditure in India on behalf of the British Government; and a phenomenal rise in the price of silver If we take the three years 1916-17 to 1918-19 the balance of trade in favour of India was £6 millions a year above the corresponding years of the previous quinquennium. The disbursements in India on behalf of the Government of the United Kingdom and the Allies were by December 1919 £240,000,000. This balance of trade and expenditure for Imperial purposes could not be financed either by the import of the precious metals, owing to the universal embargo on the movement of gold and silver nor by credits in India. It could be financed only by the expansion of the Note issue, against sterling securities in the United Kingdom, chiefly Treasury Bills, and the issue of coined rupees But simultaneously there was a reduction in the output of the silver mines of the world coinciding with an increased demand for the metal. The price of silver in 1915 was 27¼ pence per standard ounce. In May 1919 it was 58 pence, on the 17th December of that year it was 78 pence The main difficulties in India were not therefore the prevention of the rupee from falling below the ratio of 15 to one, but to keep it within any limits and to provide a sufficiency to meet the demand.

Rise in Exchange.—The measures adopted by the Government of India in these emergencies were to bring exchange under rigid control, confining remittance to the finance of articles of national importance. The next step was to raise the rate for the sale of Council Bills, so that silver might be purchased at a price which would allow rupees to be coined without loss. The following table shows how rates were raised from one shilling fourpence to two shillings fourpence:—

Date of Introduction	Minimum Rate for Immediate Telegraphic Transfers
3rd January 1917 .	1 4¼
28th August 1917 .	1 5
12th April 1918 ..	1 6
13th May 1919 .	1 8
12th August 1919 .	1 10
15th September 1919 .	2 0
22nd November 1919 ..	2 2
12th December 1919 .	2 4

Rise in Exchange.—Silver for coining was purchased in large quantities, the following table showing the amount acquired by the Government of India in the last five years:—

	In open Market (Standard Ounces).	From United States Dollar Reserve (equivalent in Standard Ounces).
1915–16	8,636,000	—
1916–17	124,535,000	—
1917–18	70,923,000	—
1918–19	106,410,000	152,518,000
1919–20 (to 30th November 1919)	14,108,000	60,875,000
Total ..	324,612,000	213,393,000

The total amount is thus 538,005,000 standard ounces.

Gold and silver were taken under control and measures taken to prevent export and melting. Gold went to a premium and ceased to function as currency. The Note issue was expanded, and small Notes of one and two and a half rupees were specially prepared to economise the use of silver rupees. The nature of this expansion is shown below :—

Date.	Lakhs of Rupees.					
	Gross Note Circulation.	Composition of Reserve.				Percentage of Total Metallic Reserve to gross Note Circulation.
		Silver.	Gold.	Securities.	Total.	
31st March 1914 ..	66,12	20,53	31,59	14,00	66,12	78·9
,, 1915 ..	61,63	32,34	15,29	14,00	61,63	77·3
,, 1916 ..	67,73	23,57	24,16	20,00	67,73	70·5
,, 1917 ..	86,38	19,22	18,67	48,49	86,38	43·9
,, 1918 ..	99,79	10,79	27,52	61,48	99,79	38·4
,, 1919 ..	153,46	37,39	17,49	98,58	153,46	35·8
30th November 1919 ..	179,67	47,44	32,70	99,53	179,67	44·6

The facilities for the encashment of Notes were reduced. In these ways the Government were able to maintain the broad convertibility of the Note issue and finance the essential trades and expenditure for the Imperial Government. It often meant sailing very near to the wind, but these measures carried the country through the war.

V. THE 1919 COMMITTEE.

The effect of these measures however was to jettison the currency policy pursued from 1893 to 1915, the main object of which was to stabilise the rupee at one and fourpence. The war being over, a Committee was appointed to advise in regard to the future of Indian exchange and currency. It sat in 1919 and reported towards the end of the year. Its main recommendations are summarised below :—

(*i*) It is desirable to restore stability to the rupee and to re-establish the automatic working of the Indian currency system.

(*ii*) The reduction of the fineness or weight of the rupee, the issue of 2 or 3-rupee coins of lower proportional silver content than the present rupee, or the issue of a nickel rupee, are expedients that cannot be recommended.

(*iii*) The maintenance of the convertibility of the note issue is essential, and proposals that do not adequately protect the Indian paper currency from the risk of becoming inconvertible cannot be entertained.

(*iv*) The rise in exchange, in so far as it has checked and mitigated the rise in Indian prices, has been to the advantage of the country as a whole, and it is desirable to secure the continuance of this benefit.

(*v*) Indian trade is not likely to suffer any permanent injury from the fixing of exchange at a high level.

If, contrary to expectation, a great and rapid fall in world prices were to take place, and if the costs of production in India fail to adjust themselves with equal rapidity to the lower level of prices, then it might be necessary to consider the problem afresh.

(*vi*) The development of Indian industry would not be seriously hampered by a high rate of exchange.

(*vii*) The gain to India of a high rate of exchange for meeting the Home charges is an incidental advantage that must be taken into consideration.

(*viii*) To postpone fixing a stable rate of exchange would be open to serious criticism and entail prolongation of Government control.

(*ix*) The balance of advantage is decidedly on the side of fixing the exchange value of the rupee in terms of gold rather than in terms of sterling.

(*x*) The stable relation to be established between the rupee and gold should be at the rate of Rs. 10 to one sovereign, or, in other words, at the rate of one rupee for 11·30,016 grains of fine gold, both for foreign exchange and for internal circulation.

(*xi*) If silver rises for more than a brief period above the parity of 2s. (gold), the situation should be met by all other available means rather than by impairing the convertibility of the note issue. Such measures might be (*a*) reduction of sale of Council Bills ; (*b*) abstention from purchase of silver ; (*c*) use of gold to meet demands for metallic currency. If it should be absolutely necessary to purchase silver, the Government should be prepared to purchase even at a price such that rupees would be coined at a loss.

(*xii*) Council Drafts are primarily sold not for the convenience of trade but to provide for the Home charges in the wider sense of the term. There is no obligation to sell drafts to meet all trade demands ; but, if without inconvenience or with advantage the Secretary of State is in a position to sell drafts in excess of his immediate needs, when a trade demand for them exists, there is no objection to his doing so, subject to due regard being paid to the principles governing the location of the reserves.

Council Drafts should be sold as now by open tender at competitive rates, a minimum rate being fixed from time to time on the basis of the sterling cost of shipping gold to India. At present this rate will vary ; but when sterling is again equivalent to gold, it will remain uniform,

The Government of India should be authorised to announce, without previous reference to the Secretary of State on each occasion, their readiness to sell weekly a stated amount of Reverse Councils (including telegraphic transfers) during periods of exchange weakness at a price based on the cost of shipping gold from India to the United Kingdom.

(*xiii*) The import and export of gold to and from India should be free from Government control.

(*xiv*) The statutory minimum for the metallic portion of the Paper Currency Reserve should be 40 per cent. of the gross circulation.

As regards the fiduciary portion of the reserve, the holding of securities issued by the Government of India should be limited to 20 crores. The balance should be held in securities of other Governments comprised within the British Empire, and of the amount so held not more than 10 crores should have more than one year's maturity and all should be redeemable at a fixed date. The balance of the invested portion above these 30 crores should be held in short-dated securities, with not more than one year's maturity, issued by Government within the British Empire.

The sterling investments and gold in the Paper Currency Reserve should be revalued at 2s. to the rupee. The depreciatio which will result from this revaluation, cannot be made good at once, but any savings resulting from the rise in exchange will afford a suitable means of discharging this liability in a limited number of years

(*xv*) With a view to meeting the seasonal demand for additional currency, provision should be made for the issue of notes up to five crores over and above the normal fiduciary issue as loans to the Presidency Banks on the security of export bills of exchange.

Minority Report.—The main object of the Committee, it will be seen, was to secure a stable rate of exchange, without impairing the convertibility of the Note issue, and without debasing the standard silver rupee in India, or substituting another coin of inferior metallic content which would be debasement in another form. In order to attain these ends it was imperative to fix a ratio for the rupee in relation to gold which would ensure that the Government was able to purchase silver for coining purposes without more than temporary loss. For reasons given in the report they fixed this point at two shillings gold ; all other recommendations are subsidiary thereto. But in this they were not unanimous ; an important member of the Committee, Mr. Dadaba Dalal, of Bombay, appended a minority report in which he urged the adoption of the following courses :—

(*a*) The money standard in India should remain unaltered ; that is, the standard of the sovereign and gold mohur with rupees related thereto at the ratio of 15 to 1.

(*b*) Free and unfettered imports and exports by the public of gold bullion and gold coins.

(*c*) Free and unfettered imports and exports by the public of silver bullion and silver coins.

(*d*) The existing silver rupees of 165 grains of fine silver at present in circulation to continue full legal tender.

(*e*) As long as the price of silver in New York is over 92 cents, Government should not manufacture silver rupees containing 165 grains fine silver.

(*f*) As long as the price of silver is over 92 cents Government should coin 2 rupee silver coins of reduced fineness compared with that of the present silver rupee and the same to be unlimited legal tender.

(*g*) Government to sell Council Bills by competitive tenders for the amount defined in the Budget as required to be remitted to the Secretary of State. The Budget estimate to show under separate headings the amount of Council Bills drawn for Home Charges, for Capital Outlay and Discharge of Debt. Council Bills to be sold for Government requirements only and not for trade purposes, except for the purpose mentioned in the next succeeding recommendation.

(*h*) "Reverse" drafts on London to be sold only at 1s. 3 29-32d. The proceeds of "Reverse" drafts to be kept apart from all other Government funds and not to be utilised for any purpose except to meet drafts drawn by the Secretary of State at a rate not below 1s. 4 3-32d. per rupee.

VI. THE TWO SHILLING RUPEE.

The fundamental recommendation of the Committee was that the rupee should be linked to gold and not to sterling, in view of the decline in the value of sterling ; that it should be linked at the rate of two shillings instead of the standard value, one and fourpence : all other recommendations were ancillary to this. But it is very important to bear in mind the twofold problem which confronted the Committee. It would be quite easy to fix any low ratio provided the paper currency were made inconvertible, or the rupee debased to such a point that the Government in providing rupee currency, were independent of the price of silver. But if the convertibility of the rupee were to be maintained, and if the rupee were not to be debased, it was essential that the new ratio should be one at which the Government could reasonably rely on purchasing without loss the silver necessary to meet the heavy demands for rupee in India. For reasons set out in the Report, the Committee came to the conclusion that the Government could reckon on purchasing silver for coining at a little under two shillings gold, and that powerfully influenced them in fixing the new ratio at two shillings gold.

The Report Adopted.—The Currency Committee's Report was signed in December 1919 ; but it was not until February 1920 that action was taken thereon. In the first week of that month a Notification was issued in India accepting the principal recommendations in the Report and notifying that the necessary official action would be taken thereon. This action covered a wide field, but for the sake of clarity in this narrative we shall concentrate on the main issue,

the changing of the official monetary standard from fifteen rupees to the sovereign to ten rupees to the sovereign and its effect on Indian currency and trade. That may be summarised in a sentence. A policy which was avowedly adopted to secure fixity of exchange produced the greatest fluctuations in the exchanges of any solvent country and widespread disturbance of trade, heavy losses to Government, and brought hundreds of big traders to the verge of bankruptcy.

Financial Confusion.—This result was produced by many causes. It has been explained above that the essential features of the Indian currency system are the free sales of Council Bills at gold export point in London to prevent exchange from rising above the official standard and the sale of Reverse Councils in India at gold export point to prevent exchange from falling below the official standard. Now when the Currency Report was signed the Indian exchanges were practically at two shillings gold. But between the signing of the Report and the taking of official action, there was a sensational fall in the sterling exchanges, as measured in dollars, the dollar-sterling rate, inasmuch as America was the only free gold market, being the dominating factor in the situation. Consequently the Indian exchanges were considerably below the two shillings gold rate when the Notification accepting the Currency Committee's Report was issued. The Indian exchanges were two shillings and fourpence, and weak at that; the gold rate was about two shillings ninepence. There was an immediate and prodigious demand for Reverse Councils, to take advantage of this high rate of exchange; the market rate jumped up to two shillings eightpence.

Effect of the Rise.—The effect of a rise in exchange has been well described in the words of the Currency Committee's Report; it is that a rising exchange stimulates imports and impedes exports, the effect of a falling exchange is the reverse.

Now when the official notification of the two shilling rupee was made the Indian export trade was weak. The great consuming markets of Great Britain and America were glutted with Indian produce. The continent of Europe, which was starved of Indian produce and in urgent need of it, had not the wherewithal to pay for it nor the means of commanding credit. The only Indian staples which were in demand were foodstuffs, and as the rains of 1920 failed over a wide area, the Government were not able to lift the embargo on the export for foodstuffs, save to a limited extent in the case of wheat. On the other hand, the import trade was strong. Orders had been placed for machinery and other manufactured goods during the war and after the Armistice for delivery at the discretion of manufacturers. These began to come forward.

Difficulties Accentuated.—In accordance with the principles laid down by the Currency Committee these difficulties were accentuated by the action of Government in raising exchange by an administrative act. The weak export trade was almost killed. At the same time the temptation of a high exchange gave powerful stimulus to the import trade and orders were placed for immense quantities of manufactured goods, in which textiles filled an important place. Afterwards other forces intervened which accentuated the difficulties of the situation. There was a severe commercial crisis in Japan and this checked the export of Indian cotton. Japan is the largest buyer of Indian cotton, and when her merchants not only stopped buying but began to re-sell in the Indian markets, the trade was severely shaken and stocks accumulated at a great rate. Even before the 1920 crop came into the market the stocks in Bombay were double those in the corresponding period of the previous year. The expectations of a revival in the buying power of the Continent which were held in many quarters were disappointed and throughout the year there was a heavy balance of trade against India, which made the stabilisation of exchange at the high ratio attempted a hopeless proposition.

Confession of Failure.—Government struggled long against these conditions in the desperate hope that a revival of the export trade would come to their assistance, but they were further handicapped by the variations of the sterling-dollar exchange, which at one time took the rate for Reverse Councils to two shillings tenpence half penny. They sold two millions of Reverse Councils a week, then five millions, then dropped down to a steady million. But their policy only aggravated the situation. In addition to arresting the export trade and stimulating the import trade at a time when the precise converse was demanded, their action created an artificial movement for the transfer of capital from India to England. Large war profits accumulated in India since 1914 were hurriedly liquidated and transferred to England. Then the difference between the Reverse Council rate and the market rate, which on some occasions was several pence, induced gigantic speculations. The Exchange Banks set aside all their available resources for the purpose of bidding for Bills, and at once sold their allotments at substantial profits. Considerable groups of speculators pooled their resources and followed the same course. In this way the weekly biddings for the million of Reverse Councils varied from a hundred and 20 millions to a hundred and thirty millions and the money market was completely disorganised. The biddings assumed such proportions that it was necessary to put up fifty lakhs of rupees to obtain the smallest allotment made, five thousand pounds, and Reverse Councils and the large profits thereon came under the entire control of the Banks and the wealthy speculators. Various expedients were tried to remedy the situation but without the slightest effect.

Sterling for Gold.—The first definite break from the recommendations of the Currency Committee came at the end of June, when the Government announced that instead of trying to stabilise the rupee at two shillings gold they would aim at stabilising it at two shillings sterling, leaving the gap between sterling and gold to be closed when the dollar-sterling rate became par. The effect of this was to alter the rate at which Reverse Councils were sold from the fluctuating rate involved in the fluctuations of dollar-sterling exchange to a fixed sterling rate, namely one shilling elevenpence nineteen thirty seconds. But this had little practical effect. The biddings for Reverse Councils continued on a very big scale, and the market rate for exchange was always twopence or threepence below the Reverse

Council rate. This practice continued until the end of September, when it was officially declared that Reverse Councils would be stopped altogether. Exchange immediately slumped to between one and sixpence and one and sevenpence, and it continued to range between these narrow points until the end of the year. The market made its own rate; it made a more stable rate than the efforts of Government to attain an administrative stability.

Other Measures.—Apart from the effort to stabilise exchange, which had such unfortunate results, the policy of Government had certain other effects. During the year all restrictions on the movement of the precious metals were removed, in accordance with the recommendations of the Currency Committee. This included the abandonment of the import duty on silver, always a sore point with Indian bullionists. Legislative action was taken to alter the official ratio of the sovereign from fifteen to one to ten to one; due notice of this intention was given to holders of sovereigns and of the gold mohurs which were coined as an emergency measure in 1918, and they were given the option of tendering them at fifteen rupees. As the gold value of these coins was above fifteen rupees only a limited number was tendered, although there was extensive smuggling of sovereigns into India to take advantage of the premium. Then measures were adopted to give greater elasticity to the Note issue. Under the old law the invested proportion of the Note issue was fixed by statute and it could be altered only by altering the law or by Ordinance. An Act was passed fixing the metallic portion of the Paper Currency Reserve at fifty per cent. of the Note Issue, the invested portion being limited to Rs. 20 crores in Indian securities and the balance in British securities of not more than twelve months currency. The invested portion of the Paper Currency Reserve was revalued at the new rate of exchange, and an undertaking was given that the profits on the Note issue would be devoted to writing off the depreciation, as also would be the interest on the Gold Standard Reserve when the total had reached £40 millions. Further, in order to give greater elasticity to the Note issue, power was taken to issue Rs. 5 crores of emergency currency in the busy season against commercial bills. These measures, save the alteration of the ratio, were generally approved by the commercial public.

Results.—It remains to sum up the results of these measures. In a pregnant sentence in their report the Currency Committee say that whilst a fixed rate of exchange exercises little influence on the course of trade, a rising exchange impedes exports and stimulates imports, a falling exchange exercises a reverse influence. Here we have the key to the failure of the currency policy attempted. At the moment when it was sought suddenly and violently to raise the rate of exchange by the introduction of the new ratio of two shillings gold, the export trade was weak and the import trade in obedience to the delivery of long deferred orders was strong. The very principle enunciated by the Currency Committee wrecked the policy which they recommended. The rising rate of exchange scotched the weak export trade and gave a great stimulus to imports. Unexpected forces, such as the financial crisis in Japan, the lack of buying power on the Continent, and the movement for the transfer of capital from India to England at the artificially high rate of exchange stimulated these forces, but they had their origin in the attempt by administrative action artificially and violently to raise the rate of exchange. If let alone, the natural fall in exchange would have tended to correct the adverse balance of trade; the official policy exaggerated and intensified it. The effects on Indian business were severe. Exporters found themselves loaded with produce for which there was no foreign demand; importers found themselves loaded up with imported goods, bought in the expectation of the continuance of a high rate of exchange, delivered when it had fallen one and fourpence from the highest point reached. Immense losses were incurred by all importers, who when the year closed were struggling to liquidate their stocks in almost desperate conditions. The Government sold £55 millions of Reverse Councils before abandoning their effort to stabilise exchange at the new ratio; the loss on these—that is the difference between the cost of putting the funds down in London and in bringing them back to India—was Rs 35 crores of rupees. Government sold £53 millions of gold, without breaking or seriously affecting the premium on gold. The Secretary of State, in the absence of any demand for Council Bills, was able to finance his expenditure in England only through the lucky chance of heavy expenditure on behalf of the Imperial Government for the forces in Mesopotamia—this expenditure being made in India and set off by payments in London. The only advantages were a considerable contraction of the Note Issue and the silver token currency. In September the Viceroy announced that 1,238 lakhs of silver rupees had been returned to the currency making the metallic reserve 57 per cent., whilst the Note Issue had been reduced from Rs. 185 crores to 153 crores. These forces are set out in greater detail in the table below.

Public Criticism.—The Government's policy was bitterly criticised in India, especially by those engaged in commerce and industry. Their main complaint was that Government had no right to interfere with the established standards of value; that a high exchange was prejudicial to Indian trade and industry; that the sale of Reverse Councils was sacrificing the sterling resources of the country at ruinously low rates—the term "organised loot" was frequently used—and that exchange should be left to find its own level, with only the fixed legal minimum of one and fourpence, above which no Reverse Councils should be sold. Whilst it is not open to doubt that the recommendations of the Committee were conceived and applied in perfect honesty, however mistaken, unfortunately a large body of Indian commercial opinion could see in them nothing more than a deliberate attempt to stimulate the export trade of England at the expense of India and a very bitter feeling was produced by this widespread belief. Later, when the importers were hard hit, there was a demand from various quarters for the resumption of the sale of Reverse Councils but to this Government turned a deaf ear on the ground that without the collateral support of a revival of the export trade this would have no effect and Government would devote all their energies to the revival of the export trade.

Events in 1921.—It is a truism to say that exchange is not a force, but the expression of a force, namely the balance of trade, visible and invisible. From the narrative which has been given above two points emerge, namely that the Currency Committee of 1919 made a fatal error in concluding that silver would remain at anything like its war level, and that therefore it was necessary to raise the rupee to two shillings gold in order to be in a position to maintain the convertibility of the rupee by fresh rupee coining without loss on demand; and that the balance of trade in favour of India would be strong enough to maintain the new ratio. Silver fell like the stick of a rocket from its war level; the balance of trade has continued against India. For the official year ended March 31st, 1921, the balance of trade against India was Rs. 79 crores. Exchange fell to slightly below one and fourpence. Then there was a recovery, and in July, August-September of 1921 the balance of trade was in favour of India. Thereupon exchange began to rise. The process was stimulated by a good deal of speculation and the rate touched one and sixpence. But the October trade figures showed a big balance against India, and the November figures told the same tale. For the eight months of the current year the adverse trade balance is Rs. 25 crores. Exchange has therefore remained weak in the neighbourhood of one and fourpence, at which point it is relatively stable. When it fell it induced the export of gold; when it rose it induced the import of gold and silver, especially of gold for which there is a ready demand.

Improved Machinery.—In various ways the machinery for the adjustment of the trade balance of India has improved, without direct official action. Formerly in every season there was a frantic rush for Council Bills to provide the funds to finance the movement of the crops, and this in turn necessitated heavy purchases of silver and working the mints night and day in order to provide the necessary rupees. There are many signs that these conditions have materially changed. The Paper Currency Reserve is now so fully stocked with rupees that coining on a large scale is unlikely for some considerable time to come. Then the currency note is increasingly popular. Large areas like Bengal and Burma, where the cultivator would formerly take nothing but coined rupees in payment for his produce, now favour the Note; indeed in the current year the Note was more often at a premium than at a discount. Then whenever the price is favourable there is an immediate demand for gold for India. Moreover, in time of crisis that gold comes out. It used to be said that India was a sink for the precious metals and that all the gold and silver that went in was lost to the world's currency for ever; that is no longer the case and there were considerable shipments of gold from India in the current year. All these forces have tended to produce greater fluidity and stability. There are others. The supply of banking money in India is much larger, and that banking money is much more mobile since the three Presidency Banks of Bengal, Bombay and Madras have been merged into the Imperial Bank of India. Money can now be moved much more freely between the great centres than formerly. The issue of Treasury Bills by the Government of India has also exercised a balancing effect. Formerly money was almost a drug in the market during the slack season. The trade of India is now better distributed over the year and there is always an outlay for money in Treasury Bills; the Banker who had to be cautious lest he overloaded himself with deposits which were useless in the slack season can now take deposits with the confidence that they can be used all the year round, if not in trade then in Treasury Bills. This applies especially to the Exchange Banks, who can now keep their money in India during the slack season, instead of sending it to other quarters for remunerative employment. We cannot dogmatise now, because the demand for Indian produce is on a much smaller scale than it used to be and we do not know what would happen if there were a great revival of the export trade. But all the signs go to show that India has emerged from the stage when the export trade can only be financed during a good year by a frantic demand for Council Bills, a rush into the silver market and prodigious coining of token rupees.

VII. THE RESERVES.

Composition of the Currency Reserve held against the note circulation at the end of each month.

(In lakhs of rupees).

*The Railways.

The history of Indian Railways very closely reflects the financial vicissitudes of the country. Not for some time after the establishment of Railways in England was their construction in India contemplated, and then to test their applicability to Eastern conditions three experimental lines were sanctioned in 1845. These were from Calcutta to Raniganj (120 miles), the East Indian Railway; Bombay to Kalyan (33) miles, Great Indian Peninsula Railway; and Madras to Arkonam (39 miles), Madras Railway. Indian Railway building on a serious scale dates from Lord Dalhousie's great minute of 1853, wherein, after dwelling upon the great social, political and commercial advantages of connecting the chief cities by rail, he suggested a great scheme of trunk lines linking the Presidencies with each other and the inland regions with the principal ports. This reasoning commended itself to the Directors of the East India Company, and it was powerfully reinforced when, during the Mutiny, the barriers imposed on free communication were severely felt. As there was no private capital in India available for railway construction, English Companies, the interest on whose capital was guaranteed by the State, were formed for the purpose. By the end of 1859 contracts had been entered into with eight companies for the construction of 5,000 miles of line, involving a guaranteed capital of £52 millions. These companies were (1) The East Indian; (2) the Great Indian Peninsula; (3) the Madras; (4) the Bombay, Baroda and Central India; (5) the Eastern Bengal; (6) the Indian Branch, now the Oudh and Rohilkund State Railway; (7) the Sind, Punjab and Delhi, now merged in the North Western State Railway; (8) the Great Southern of India, now the South Indian Railway. The scheme laid the foundations of the Indian Railway system as it exists to-day.

Early Disappointments.

The main principle in the formation of these companies was a Government guarantee on their capital, for this was the only condition on which investors would come forward. This guarantee was five per cent. coupled with the free grant of all the land required; in return the companies were required to share the surplus profits with the Government, after the guaranteed interest had been met; the interest charges were calculated at 22*d.* to the rupee; the Railways were to be sold to Government on fixed terms at the close of twenty-five years and the Government were to exercise close control over expenditure and working. The early results were disappointing. Whilst the Railways greatly increased the efficiency of the administration, the mobility of the troops, the trade of the country, and the movement of the population, they failed to make profits sufficient to meet the guaranteed interest. Some critics attributed this to the unnecessarily high standard of construction adopted, and to the engineers' ignorance of local conditions; the result was that by 1869 the deficit on the Railway budget was Rs. 166½ lakhs. Seeking for some more economical method of construction, the Government secured sanction to the building of lines by direct State Agency, and funds were allotted for the purpose, the metre gauge being adopted for cheapness. Funds soon lapsed and the money available had to be diverted to converting the Sind and Punjab lines from metre to broad-gauge for strategic reasons. Government had therefore again to resort to the system of guarantee, and the Indian Midland (1882-85), since absorbed by the Great Indian Peninsula; the Bengal-Nagpur (1883-87), the Southern Maratha (1882), and the Assam-Bengal (1891) were constructed under guarantees, but on easier terms than the first companies. Their total length was over 4,000 miles.

Famine and Frontiers.

In 1879, embarrassed by famine and by the fall of the exchange value of the rupee, Government again endeavoured to enlist unaided private enterprise. Four companies were promoted.—the Nilgiri, the Delhi-Umballa-Kalka, the Bengal Central, and the Bengal North-Western. The first became bankrupt, the second and third received guarantees, and the Tirhut Railway had to be leased to the fourth. A step of even greater importance was taken when Native States were invited to undertake construction in their own territories, and the Nizam's Government guaranteed the interest on 330 miles of line in the State of Hyderabad. This was the first of the large system of Native State Railways. In the first period up to 1870 4,255 miles were opened, of which all save 45 were on the broad gauge; during the next ten years there were opened 4,239, making the total 8,494 (on the broad gauge 6,562, the metre 1,865, and narrow 67). Then ensued a period of financial ease. It was broken by the fall in exchange and the costly lines built on the frontier. The Penjdeh incident, which brought Great Britain and Russia to the verge of war, necessitated the connection of our outposts at Quetta and Chaman with the main trunk lines. The sections through the desolate Harnai and Bolan Passes were enormously costly; it is said that they might have been ballasted with rupees; the long tunnel under the Khojak Pass added largely to this necessary, but unprofitable outlay.

Rebate Terms Established.

This induced the fourth period—the system of rebates. Instead of a gold subsidy, companies were offered a rebate on the gross earnings of the traffic interchanged with the main line, so that the dividend might rise to four per cent. but the rebate was limited to 20 per cent. of the gross earnings. Under these conditions, there were promoted the Ahmedabad-Prantej, the South Behar, and the Southern Punjab, although only in the case of the first were the terms strictly adhered to. The Barsi Light Railway, on the two feet six inches gauge, entered the field without any guarantee, and with rolling stock designed to illustrate the carrying power of this gauge. The rebate terms being found unattractive in view of the competition of 4 per cent. trustee stocks; they were revised in 1896 to provide for an

* *We have held back this section until February 21 for later figures but they are not available.*

absolute guarantee of 3 per cent. with a share of surplus profits, or rebate up to the full extent of the main line's net earnings in supplement of their own net earnings, the total being limited to 3½ per cent. on the capital outlay. Under these terms, a considerable number of feeder line companies was promoted, though in none were the conditions arbitrarily exacted. As these terms did not at first attain their purpose, they were further revised, and in lieu was substituted an increase in the rate of guarantee from 3 to 3½ per cent. and of rebate from 3½ to 5 per cent. with equal division of surplus profits over 5 per cent. in both cases. At last the requirements of the market were met, and there has since been a mild boom in feeder railway construction and the stock of all the sound companies promoted stands at a substantial premium.

Railway Profits Commence.

Meantime a much more important change was in progress. The gradual economic development of the country vastly increased the traffic, both passenger and goods. The falling in of the original contracts allowed Government to renew them on more favourable terms. The development of irrigation in the Punjab and Sind transformed the North-Western State Railway. Owing to the burden of maintaining the unprofitable Frontier lines, this was the Cinderella Railway in India—the scapegoat of the critics who protested against the unwisdom of constructing railways from borrowed capital. But with the completion of the Chenab and Jhelum Canals, the North-Western became one of the great grain lines of the world, choked with traffic at certain seasons of the year and making a large profit for the State. In 1900 the railways for the first time showed a small gain to the State. In succeeding years the net receipts grew rapidly. In the four years ended 1907-08 they averaged close upon £2 millions a year. In the following year there was a relapse. Bad harvests in India, accompanied by the monetary panic caused by the American financial crisis, led to a great falling off in receipts just when working expenses were rising, owing to the general increase in prices. Instead of a profit, there was a deficit of £1,240,000 in the railway accounts for 1908-09. But in the following year there was a reversion to a profit, and the net Railway gain has steadily increased. For the year ended March 1919 this gain amounted to £ 10,858,379. Although in a country like India, where the finances are mainly dependent upon the character of the monsoon, the railway revenue must fluctuate, there is no reason to anticipate a further deficit, but every ground for hoping that the railway profits will fill the vacuum in the Indian revenues caused by the cessation of the opium trade with China.

Contracts Revised.

A very important factor in this changed position is the revision of the original contracts under which the guaranteed lines were constructed. The five per cent. dividend, guaranteed at 22*d.* per rupee, and the half-yearly settlements made these companies a drain on the State at a time when their stock was at a high premium. The first contract to fall in was the East Indian, the great line connecting Calcutta with Delhi and the Northern provinces. When the contract lapsed, the Government exercised their right of purchasing the line, paying the purchase-money in the form of terminable annuities, derived from revenue, carrying with them a sinking fund for the redemption of capital. The railway thus became a State line; but it was released to the Company which actually works it. Under these new conditions the East Indian Company brought to the State in the ten years ended 1909; after meeting all charges, including the payments on account of the terminable annuity by means of which the purchase of the line was made, and interest on all capital outlay subsequent to the date of purchase, a clear profit of nearly ten millions. At the end of seventy-four years from 1880, when the annuity expires, the Government will come into receipt of a clear yearly income of upwards of £2,700.000, equivalent to the creation of a capital of sixty to seventy millions sterling. No other railway shows results quite equal to the East Indian, because, in addition to serving a rich country by an easy line, it possesses its own collieries and enjoys cheap coal. But with allowance for these factors, all the other guaranteed companies which have been acquired under similar conditions as their contracts expired, have proportionately swelled the revenue and assets of the State. It is difficult to estimate the amount which must be added to the capital debt of the Indian railways in order to counterbalance the loss during the period when the revenue did not meet the interest charges. According to one estimate it should be £50 millions. But even if that figure be taken Government have a magnificent asset in their railway property.

Improving Open Lines.

These changes induced a corresponding change in Indian Railway policy. Up to 1900 the great work had been the provision of trunk lines. But with the completion of the Nagda-Muttra line, providing an alternative broad gauge route from Bombay to Delhi through Eastern Rajputana, the trunk system was virtually complete. A direct broad gauge route from Bombay to Sind is needed, but chiefly for strategic purposes. The poor commercial prospects of the line and the opposition of the Rao of Cutch to any through line in his territories, keep this scheme in the background. There does not exist any through rail connection between India and Burma, although several routes have been surveyed: the mountainous character of the region to be traversed, and the easy means of communication with Burma by sea, rob this scheme of any living importance. Further Survey work was undertaken in November 1914, the three routes to be surveyed being the coast route, the Manipur route, and the Hukong valley route. The metre gauge systems of Northern and Southern India must also be connected and Karachi given direct broad-gauge connection with Delhi, a project that is now under investigation. But these works are subordinate to the necessity for bringing the open lines up to their traffic requirements and providing them with feeders. The sudden

increase in the trade of India found the main lines totally unprepared. Costly works were necessary to double lines, improve the equipment, provide new and better yards and terminal facilities and to increase the rolling stock. Consequently the demands on the open lines have altogether overshadowed the provision of new lines. Even then the railway budget was found totally inadequate for the purpose, and a small Committee sat in London, under the chairmanship of Lord Inchcape, to consider ways and means. This Committee found that the amount which could be remuneratively spent on railway construction in India was limited only by the capacity of the money market. They fixed the annual allotment at £12,000,000 a year. Even this reduced sum cannot always be provided.

Government Control.

As the original contracts carried a definite Government guarantee of interest, it was necessary for Government to exercise strong supervision and control over the expenditure during construction, and over management and expenditure after the lines were open for traffic. For these purposes a staff of Consulting Engineers was formed, and a whole system of checks and counterchecks established, leading up to the Railway Branch of the Public Works Department of the Government of India. As traffic developed, the Indian Railways outgrew this dry nursing, and when the original contracts expired, and the interests of Government and the Companies synchronised, it became not only vexatious but unnecessary. Accordingly in 1901-02 Mr. Thomas Robertson was deputed by the Secretary of State to examine the whole question of the organisation and working of the Indian Railways, and he recommended that the existing system should be replaced by a Railway Board, consisting of a Chairman and two members with a Secretary. The Board was formally constituted in March 1905. The Board is outside, but subordinate to the Government of India in which it is represented by the Department of Commerce and Industry. It prepares the railway programme of expenditure and considers the greater questions of policy and economy affecting all the lines. Its administrative duties include the construction of new lines by State agency, the carrying out of new works on open lines, the improvement of railway management with regard both to economy and public convenience, the arrangements for through traffic, the settlement of disputes between lines, the control and promotion of the staff on State lines, and the general supervision over the working and expenditure of the Company's lines. Two minor changes have taken place since the constitution of the Railway Board. In 1908, to meet the complaint that the Board was subjected to excessive control by the Department of Commerce and Industry, the powers of the Chairman were increased and he was given the status of a Secretary to Government with the right of independent access to the Viceroy; he usually sits in the Imperial Legislative Council as the representative of the Railway interest. In 1912 in consequence of complaints of the excessive interference of the Board with the Companies, an informal mission was undertaken by Lord Inchcape to reconcile differences. The constitution of the Board is now undergoing further inquiry, and the development generally favoured in the establishment of a Railway Member of the Viceroy's Executive Council.

Management.

The Railways managed by Companies have Boards of Directors in London. They are represented in India by an Agent, who has under him a Traffic Manager, a Chief Engineer, a Locomotive Superintendent, a Storekeeper, a Police Superintendent, (who is appointed by Government), and an Auditor The State Railways are similarly organised.

Clearing House.

Proposals have several times been made for the establishment of a Clearing House but the distances are too great. The work which would ordinarily be done by the Clearing House is done by the Audit Office of each Railway.

The Railway Conference.

In order to facilitate the adjustment of domestic questions, the Railway Conference was instituted in 1876. This Conference was consolidated into a permanent body in 1903 under the title of the Indian Railway Conference Association. It is under the direct control of the railways, it elects a President from amongst the members, and it has done much useful work.

The Indian Gauges.

The standard gauge for India is five feet six inches. When construction was started the broad gauge school was strong, and it was thought advisable to have a broad gauge in order to resist the influence of cyclones. But in 1870, when the State system was adopted it was decided to find a more economical gauge, for the open lines had cost £17,000 a mile. After much deliberation, the metre gauge of 3 feet 3⅜ inches was adopted, because at that time the idea of adopting the metric system for India was in the air. The original intention was to make the metre gauge lines provisional, they were to be converted into broad gauge as soon as the traffic justified it: consequently they were built very light. But the traffic expanded with surprising rapidity, and it was found cheaper to improve the carrying power of the metre gauge lines than to convert them to the broad gauge. So, except in the Indus Valley, where the strategic situation demanded an unbroken gauge, the metre gauge lines were improved and they become a permanent feature in the railway system. Now there is a great metre gauge system north of the Ganges connected with the Rajputana lines and Kathiawar. Another System in Southern India embracing the Southern Maratha and the South India Systems. These are not yet connected, but the necessary link from Khandwa by way of the Nizam's Hyderabad-Godaveri Railway, cannot be long delayed. All the Burma lines are on the metre gauge. Since the openin of the Barsi line, illustrating the capacity of the two feet six inch gauge, there has been developed a tendency to construct feeders on this rather than on the metre gauge.

STATISTICAL POSITION.

During the year 1919-20, in spite of the cessation of hostilities between the principal powers, little relief was experienced from the demands on Indian Railways. The Military concentration on the North-Western Frontier, labour unrest in Europe, and disturbances in India impeded the improvement and re-equipment that was hoped for and might otherwise have been expected.

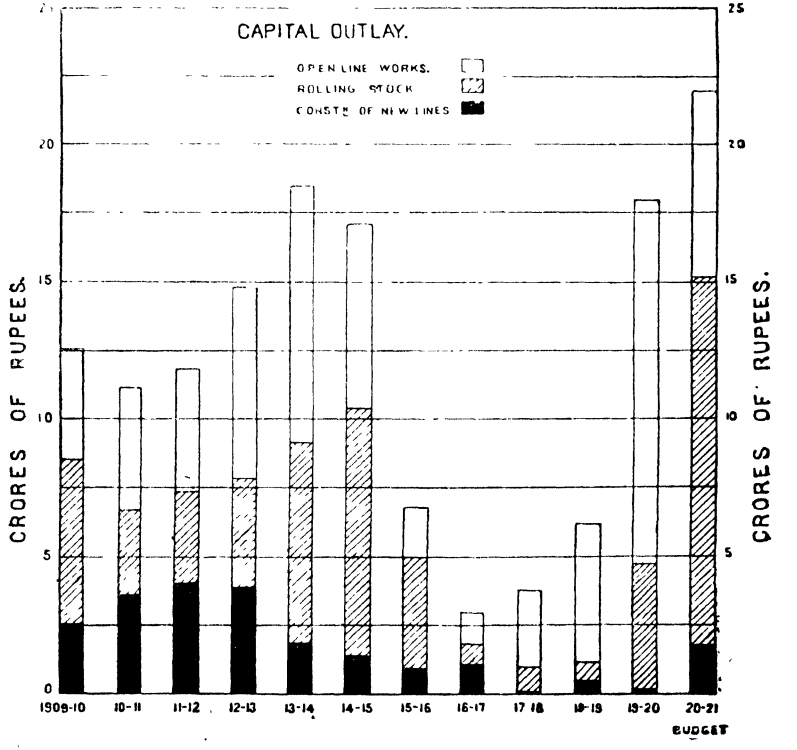
Gross earnings showed an increase over the figures of the preceding year of nearly three crores of rupees. On the other hand the percentage of working expenses to gross earnings increased considerably. This was partly due to the fact that the conditions of service of railway servants were improved by material increases in the scale of wages and salaries, and partly due to the very high prices demanded for materials, essential both for maintenance purposes and for raising the standard of efficiency that had been relaxed during the years of the war. This process of improvement necessarily tends to increase working expenses, and it will no doubt take time to reduce such costs to normal proportions, owing to the amount of lost ground that has to be recovered and to the fact that the available supplies of railway material throughout the world are not at present equal to the demand.

The capital outlay incurred by the Government in the purchase and construction of its railways, including the liability which remains to be discharged by means of Annuity and Sinking Fund payments, amounted at the end of 1919-20 to £380,768,116.

The outlay incurred during 1919-20 was £12,054,706, distributed as follows:—

	Rs.
Open Line Works (including Suspense)	13,31,01,592
Rolling-stock	4,56,36,000
New Lines	20,83,000
Total . .	18,08,20,592
Equivalent at Rs. 15 to £1 to . .	12,054,706

The following diagram shows graphically how these figures compare with those of past years. The distribution of the grant of £21·98 millions (Rs. 2,198 lakhs) which has been sanctioned for the financial year 1920-21 is also added for purposes of comparison :—



During the year 1919-20 the actual capital expenditure fell short of the sanctioned grant for the year by Rs. 8·48 crores. This lapse was attributable mainly to the credit to the capital account of gain by exchange on sterling outlay in England and to the difficulties attendant on the supply of railway materials from England.

The capital expenditure provided for in the budget for 1920-21 is Rs. 2,198 lakhs (Net). This is again a record figure and is partly accounted for by the heavy liability carried over from the previous year owing to the failure of the supply of English materials in 1919-20. The programme has been designed to provide, as far as possible, for the improvement of traffic facilities, which have been unavoidably deferred during the war and are now urgently required to meet a rapidly expanding trade. It has been possible therefore only to spare a small amount for lines in progress and new construction. Provision has, however, been made for the replacement of some of the lines which were dismantled during the war.

The actual capital outlay on railways, which have been financed by private enterprise, such as branch lines promoted by Companies, District Board Lines, Indian State Lines, etc., amounted at the end of 1919-20 to Rs. 70,27,66,000. The capital expenditure on such lines during the year was as follows:—

	Rs.
Branch Line Companies' Railways ..	28,32,000
District Board Lines	22,000
Indian State Lines	49,32,000
TOTAL	77,86,000

Private Enterprise.—The Branch Line Terms, as they are now generally called, have undergone no change but the question of their revision is one of the matters to come under the consideration of the Indian Railways Committee.

As the Branch Line Terms stand at present, their main feature is the grant by the Government of India of financial assistance to companies or local bodies obtaining concessions for the construction of feeder lines to existing railways in one or other of the following forms:—

(1) a firm guarantee by Government of a return of 3½ per cent. on share capital as actually paid up;

(2) a rebate paid by the parent line from its net earnings from traffic brought to it by the branch, sufficient to make up a dividend of 5 per cent. on share capital as actually paid up; the liability of the parent line being, however, limited to the total of its net earnings from such traffic

Concessionaries are also given the option, under certain circumstances of raising a portion of their capital under guarantee terms and the remainder under rebate terms while in the province of Assam, in consideration of the relatively less developed state of the country and the difficulty experienced in obtaining capital for private railway enterprise under the ordinary terms, it has been provided that the Local Administration may, in approved cases, supplement the Imperial Guarantee of 3½ per cent. described above by the grant from provincial funds of an additional guarantee for a specified term of years of 1 per cent on the share capital as actually paid up.

No concessions were granted during the year either to companies or to local bodies for the construction of new railways; but following the policy described in previous reports, the Railway Board have carried on negotiations with branch line promoters in regard to projects which were already either under consideration before the war or have since been put forward. The result has shown that the present branch line terms require considerable revision as most of the projects have had to be held over owing to the inability of promoters to finance their construction under the existing terms and present financial conditions.

Pending, however, the consideration of the whole subject by the Indian Railways Committee, the Railway Board have decided to deal, on their merits, with the more urgent and important projects awaiting construction.

IMPORTANT LINES UNDER CONSTRUCTION.

Southern Shan States Railway.—The first and second sections of this railway from Thazi to Aungban was opened for traffic in March 1915. Considerable progress is being made on the construction of the third section from Aungban to Heho. The greater portion of the formation earthwork, together with some masonry work on bridges, was carried out by Turkish prisoners of war during the year. The remainder of the work is now in progress and the laying of rails has commenced.

Itarsi-Nagpur Railway.—The whole project, 238 miles in length, will, when completed, form part of a direct through North and South broad gauge connection, but as so far constructed, it furnishes an additional outlet for the traffic of the Pench Valley Coal-fields, an important source of coal supply.

The Northern Section, Itarsi to Amla (80·56 miles), was completed and opened for traffic in September 1914. The Eastern Section, Amla to Parasia or the Pench Valley Branch (53·86 miles) was completed and opened for traffic in November 1915.

On the Southern Section, Amla to Nagpur (103·74 miles), the work on tunnels and earthwork is in hand only between Amla and Pandhurna; all other work on this section has been held up owing to the inability at present to provide the necessary funds.

Overhead Connection at Bombay.—The construction of the Bombay overhead connection from Tank Bunder on the Bombay Harbour Branch to Victoria Terminus (2·12 miles, double line) was commenced in 1912. The construction involves much heavy work in the heart of the city and the delay in completion is due to the difficulty in obtaining the necessary steel and girder work. When completed, this construction will provide easy and rapid communication between the busi-

ness centre of Bombay and the cotton market and grain warehouses near Mazagaon.

The Secunderabad-Gadwal Railway.—This line is the property of His Exalted Highness the Nizam's Government, and when completed will link up the metre-gauge system of the Hyderabad State with the metre-gauge sections of the Madras and Southern Mahratta and South Indian Railways, thus affording an outlet to the Port of Mormugao from the southern parts of the Hyderabad States.

The section from Secunderabad to Wanaparti Road (103·30 miles) have been open to traffic since April 1917. The construction of the further extension is held up due to the present difficulty in obtaining the necessary permanent-way material.

The open sections are being worked by the Nizam's Guaranteed State Railways Company.

Nushki Extension Railway.—The extension of the Quetta-Nushki Railway was started in September 1916. The first 13 miles of line, from Nushki to Ahmedwal, was opened for passenger traffic in April 1919, and a further 101·92 miles, from Ahmedwal to Dalbandin, on the 1st October 1919. The construction of a further extension from Dalbandin to Mirjawa (185·00 miles) is well advanced, and it is anticipated that it will be opened for traffic in 1920-21.

The country passed through is desert but topographically easy, being a series of gentle undulations of sand and shingle merging into stone covered with clay and salty conglomerate.

NEW CONSTRUCTION IN INDIAN STATES.

The progress of new construction in Indian States has suffered from the universal shortage in the supply throughout the world of permanent-way materials and rolling-stock.

The following is the only new line sanctioned during the year—

MYSORE.

	Length in miles.
Nanjangud-Hardanhalli (metre-gauge	27·12

The following table gives a complete list of railways which were under construction in Indian States during the year :—

BARODA STATE.

Railways.	Length in miles.
1. Choranda-Koral (2-6″ gauge) ..	11 68
2. Bhoyani Road-Bechraji (metre-gauge)	22 12
3. Motipura-Tankhala (2′-6″ gauge)	26 29

BHAVNAGAR.

Savar Kundla-Mahuva with branch to Port Albert Victor (metre-gauge)..	54·30

JAIPUR.

1. Palsana-Sikar (metre-gauge) ..	16·80
2. Sikar-Jhunjnu (metre-gauge) ..	39·85

JODHPUR.

Marwar-Sanderao (metre-gauge) ..	77 83

JUNAGAD.

Jambur-Una (metre-gauge)	37·22

MYSORE.

1. Tadasa-Hebbe (2′-0″ gauge) ..	9·58
2. Chickjajur-Chitaldrug (metre-gauge)	20·90
3. Shimoga-Arasalu (metre-gauge) ..	26·80
4. Kammangundi-Benkipur (2′-0″ gauge)	22 80
5. Agasanhadlu-Benkipur (2′-0″ gauge)	24·50
6. Nanjangud-Hardanhalli (metre-gauge)	27·12

The following railways have been held in abeyance during the year for the reasons mentioned :—

The Okhamandal (metre-gauge, 37·02 miles) in the Baroda State has been postponed until the construction of the Jamnagar-Dwarka Railway, which has since been sanctioned.

The Anjar-Bachau (2′-6″ gauge, 23·75 miles) in the State of Cutch, and the Wanaparti Road-Gadwal (metre-gauge, 13 45 miles) in the Hyderabad State, have both been postponed owing to the difficulty in obtaining the requisite permanent-way.

Amongst the Indian States which now own railways are:—

Hyderabad (875 miles), Baroda (546 miles), Bhavnagar (206 miles), Gondal (128 miles), Mysore (433 miles), Jodhpur (635 miles), Bhopal (77 miles), Patiala (108 miles), Morvi (93 miles), Junagad (154 miles), Porbandar (41 miles), Kashmir (16 miles), Kolhapur (29 miles), Bikaner (498 miles), Rajkot (4 miles), Jetpur (8 miles), Cooch Behar (33 miles), Gwalior (474 miles), Mewar (67 miles), Navanagar (54 miles), Rajpipla (39 miles), Dhrangadra (40 miles), Kotah (37 miles), Parlakimedi (25 miles), Cambay (12 miles), Maler Kotla (45 miles), Jind (59 miles), Cochin (65 miles), Travancore (96 miles), Cutch (37 miles), Jaipur (122 miles), Mourbhanj (32 miles), Dholpur (52 miles), Sangli (5 miles), Bahawalpur (22 miles) and Chhota Udaipur (11 miles).

The total mileage of railways in Indian States open to traffic at the close of the year was 5,178 miles distributed between the various gauges as under—

	Miles.
5′-6″ gauge	962
3′-3¾″ or metre-gauge	3,318
2′-6″ gauge	596
2′-0″ gauge	302

Fuel.—In 1919, the coal mined in India amounted to 22,628,037 tons against 20,722,493 tons in 1918. Despatches of coal by the East Indian and Bengal-Nagpur Railways from the coal-fields of Bengal and Bihar and Orissa exceeded those of the previous year by 16,967 tons.

The total quantity of coal despatched from the main coal-fields of India is as follows. —

	Tons.
Bengal, Bihar and Orissa collieres..	15,524,397
Singareni collieries	543,386
Pench Valley ,, ...	257,895
Umaria ,, ...	157,151
Total despatched by rail .	16,482,829

The regular use of oil-fuel for locomotives on certain sections of the Great Indian Peninsula and of the North-Western Railways continues. At the end of the year under review, there were on the North-Western Railway 129 engines burning oil-fuel and a storage capacity of 19,300 tons of the same fuel on the Karachi District.

Accidents.—The total number of persons of all classes killed by causes beyond their own control was 157 against 66 and the number injured 500 against 332 in 1918-19, the increase was chiefly due to the large number of persons killed in the derailment between Uchhri and Chhab stations on the North Western Railway and the collisions referred to below.

Out of a total of 520 millions passengers travelling 470 were killed and 1,395 injured, while of the former 85 were killed through causes beyond their own control.

Labour Unrest.—During the year 1919-20 the continued labour unrest amongst railway employees resulted in a number of strikes. The economic situation and the general unrest after the war gave rise to these outbreaks, but in the majority of cases the workmen ceased work without informing those in authority what their grievances were. Strikes of importance occurred on the Bengal and North-Western, Rohilkund and Kumaon and East Indian Railways. That which occurred at the Jamalpur shops of the East Indian Railway resulted in some 10,000 workmen staying out from the 1st December 1919 to the 15th January 1920 when the men resumed work unconditionally

As a result of the rise in the cost of living, wages went up all over the country during the year—though in some localities more than in others, and the grant of increased pay or of special temporary allowances, was, as a consequence, general on railways. The increases given to the lowest paid establishments were in many cases 50 per cent. over pre-war rate, other grades benefitted in proportion

Railway Committee.—Several important questions regarding the whole future of the Indian Railways were raised by the termination of the contract with the East Indian Railway. In order to carry the administration for the war period, the East Indian Railway contract was temporarily renewed and an Indian Railway committee was appointed in 1920 to investigate the whole question of railway management and railway finance. This Committee commenced investigation in India in the cold weather of 1920 under the presidency of Sir W. M. Acworth.

Results of Working.

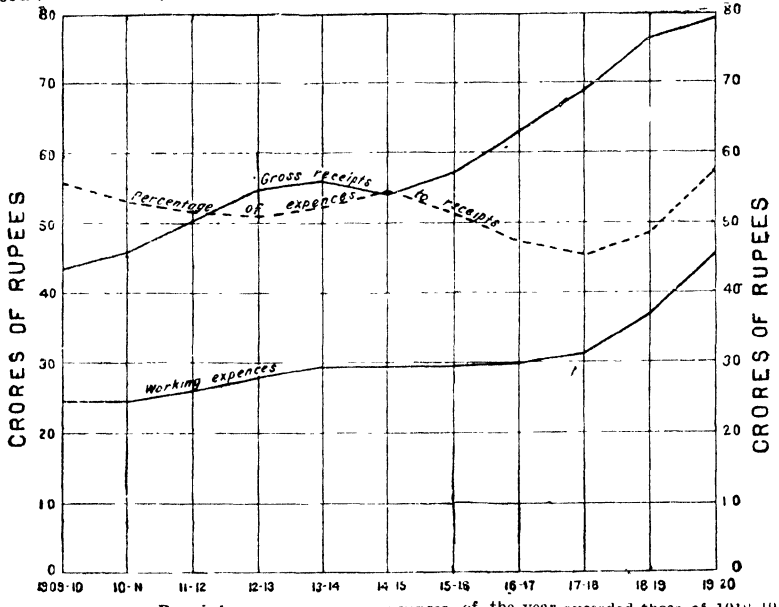
The following table compares the financial results attained in the working of the State Railways during the year 1918-19 with those of previous years (in the case of money the figures are shown in thousands) '—

——	1914-15.	1915-16.	1916-17.	1917-18.	1918-19.	1919-20.
	£	£	£	£	£	£
Capital at charge at end of each year	361,500	364,858	365,483	366,463	369,213	379,809
REVENUE.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
Gross traffic receipts.—State Railways	54,15,78	57,26,43	62,94,69	68,92,13	76,25,70	79,09,95
Deduct.—Working Expenses	29,52,87	29,53,00	29,96,86	31,35,81	37,07,67	46,46,75
Net Receipts ..	24,62,91	27,73,43	32,97,83	37,56,32	39,18,03	33,63,20
	£	£	£	£	£	£
Equivalent in sterling Rs. 15=£1	16,419	18,489	21,986	25,042	26,120	22,421
Percentage of return on capital at charge ..	4·54	5·06	6·02	6·83	7·07	5·90

The net working profit from State Railways, after meeting interest and other miscellaneous charges, and certain Annuity and Sinking Fund payments which go to the discharge of debt, amounted in the year 1919-20 to £ 6,963,817.

Expenditure.

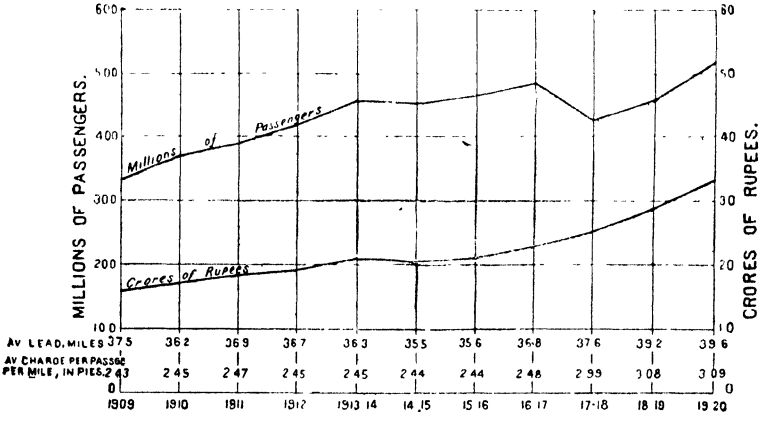
The gross receipts and revenue expenditure of the State lines worked by the State and companies for the past eleven years compared in the following diagram :—



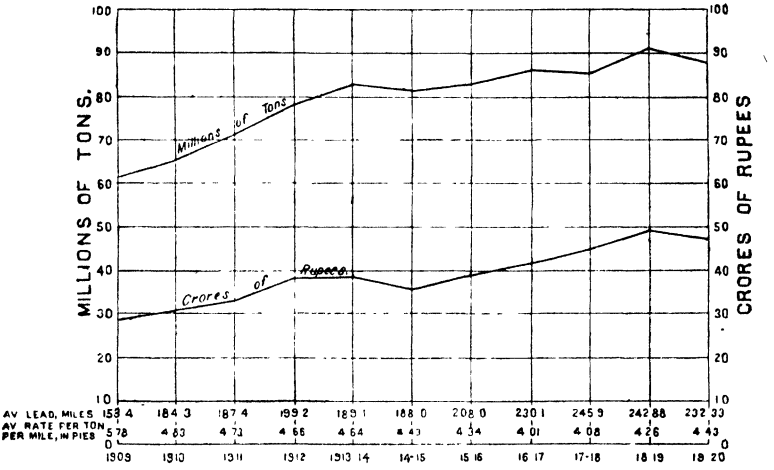
Receipts.

The receipts during the year 1919-20 amounted to Rs. 79.10 crores or Rs. 2.84 crores more than the actuals of 1918-19. This substantial improvement was attributable mainly to the increase in railway traffic. The working expenses of the year exceeded those of 1918-19 by Rs. 8·39 crores. The increase was due to a larger programme of special repairs and renewals to the enhanced scales of pay of all grades sanctioned generally on railways and to the increase in the train mileage run.

Passenger Traffic.—The numbers of passengers carried and the earnings therefrom on all Indian railways are compared below :—



The increase in the passenger traffic compared with 1918-19 was chiefly due to the general development of traffic after the termination of the war.



The decrease in the goods traffic as compared with 1918-19 was partly due to the large falling off in military stores owing to the cessation of hostilities and partly to the smaller traffic in coal, edible grains and sugar.

The gross earnings of railways other than State lines, such as District Boards' lines, Indian State lines, etc., during 1919-20 amounted to Rs. 1,023·88 lakhs, as compared with Rs. 993·37 lakhs in 1918-19, being an increase of only Rs. 30·51 lakhs, and as the working expenses were more by Rs. 35·09 lakhs than the previous year the net earnings showed a decrease of Rs. 4·58 lakhs, having fallen from Rs. 495·63 lakhs in 1918-19 to Rs. 491 05 lakhs in 1919-120. These net earnings yielded a return on the capital outlay Rs. 68,50,70 lakhs on open lines, that is, on mileage earning revenue, of 7·17 per cent. as against 7·36 per cent. in 1918-19.

During the year 1919-20, 119·34 miles of railway were opened to traffic bringing the total mileage open (after allowing for dismantlements, and minor corrections due to realignments, etc.) up to 36,735 miles. The additional mileage was made up as follows :—

—	5′ 6″ gauge.	3′ 3⅜″ gauge.	2′ 6′ gauge.	2′ 0″ gauge.	Total.
	Miles.	Miles.	Miles.	Miles.	Miles.
State lines worked by the State ..	..	6·25	..	..	6·25
Branch line Companies' railways under guarantee terms, worked by the main line.	..	50·81	..	..	50·81
Branch line Companies' railways under rebate terms, worked by the main line.	13·98	..	..	..	13·98
Unassisted Companies' lines	..	..	20·50	..	20·50
District Board lines	..	22·94	..	..	22·94
Indian State lines worked by Indian States.	..	4·86	..	..	4·86
TOTAL ..	13·98	84·86	20 50	..	119·34

Ten Years' Progress.—The progress made during the past ten years is summarised in the following table :—

Gauge.	Mileage open at the end of									
	1910.	1911.	1912	1913-14.	1914-15.	1915-16.	1916-17	1917-18.	1918-19.	1919-20.
5′6″ ..	16,701	17,016	17,189	17,641	17,827	18,060	18,182	17,876	17,994	17,990
3′ 3¾″ ..	13,530	13,759	14,165	14,389	14,552	14,671	14,806	14,989	15,078	15,181
2′ 6″ ..	1,436	1,632	1,692	2,171	2,402	2,539	2,683	2,839	2,906	2,926
2′ 0″ ..	432	432	438	452	504	563	615	629	638	638
TOTAL ..	32,099	32,839	33,484	34,656	35,285	35,833	36,286	36,333	36,616	36,735

The decrease in the 5′ 6″ gauge mileage during the year 1917-18 is due to the dismantling of the whole of the Sutlej Valley railway and small portions of the North Western, East Indian, Madras and Southern Mahratta and Oudh and Rohilkhand Railways, the materials of which were required by Government in connection with the prosecution of the war.

New Works.—The total mileage under construction, or sanctioned for construction, at the close of the year was :—

	5′-6″ gauge.	3′-3¾″ gauge.	2′-6″ gauge.	2′-0″ gauge.	Total.
	Miles.	Miles.	Miles.	Miles.	Miles.
State lines worked by the State ..	185·00	..	22·00	..	207·00
State lines worked by Companies ..	180·19	117·37	8·43	..	606·20
Branch line Companies' railways under guarantee terms, worked by the Branch line Companies	..	..	27·00	..	27·00
Branch line Companies' railways under guarantee terms, worked by the main line	..	23·30	..	..	23·30
Branch line Companies' railways under rebate terms, worked by the main line.	..	..	92·94	..	92·94
District Board lines	..	68·57	..	..	68·57
Indian State lines worked by Indian States	..	442·20	46·09	56·88	545·17
Indian State lines worked by the main line	..	153·81	98·45	..	252·26
TOTAL ..	665·40	805·25	294·91	56·88	1,822·44

The rate of progress on most of the new lines comprised in this statement was impeded by the difficulties still experienced in obtaining supplies of the essential materials for their construction. The following paragraphs show the position on some of the more important projects.

THE CHIEF RAILWAYS IN INDIA.

The Assam-Bengal Railway, which is constructed on the metre gauge, starts from Chittagong and runs through Surma Valley across the North Cachar Hills into Assam. It is worked under a limited guarantee by a company whose contract is terminable in 1921.

Mileage open	.. ..	1,020·90.
Capital outlay	..	Rs. 18,69,08,000.
Net earnings	..	Rs. 23,90,000.
Earnings per cent.	.. ..	1·29.

Bengal and North-Western.

The Bengal and North-Western Railway was constructed on the metre gauge system by a company without any Government assistance other than free land and was opened to traffic in 1885. The system was begun in 1874 as the Tirhut State Railway. In 1890 this line was leased by Government to the Bengal and North-Western Railway. Since then extensive additions have been made in both sections. It is connected with the Rajputana metre gauge system at Cawnpore and with the Eastern Bengal State Railway at Khatihar and the Oudh and Rohilkhand Railway at Benares.

Mileage open	.. ..	2,063·82.
Capital outlay	..	Rs. 17,72,06,000.
Net earnings	..	Rs. 1,12,24,000.
Earnings per cent.	.. ..	8·03.

Bengal-Nagpur.

The Bengal-Nagpur Railway was commenced as a metre gauge from Nagpur to Chhatisgarh in the Central Provinces in 1887. A company was formed under a guarantee which took over the line, converted it to the broad gauge and extended it to Howrah, Cuttack and Katni. In 1901 a part of the East Coast State Railway from Cuttack to Vizagapatam was transferred to it and in the same year sanction was given for an extension to the coal fields and for a connection with the Branch of the East Indian Railway at Harlharpur.

Mileage open	..	2,746·44.
Capital outlay	..	Rs. 44,91,58,000.
Net earnings	..	Rs. 2,72,61,000.
Earnings per cent.	..	6·10

Bombay Baroda.

The Bombay, Baroda and Central India Railway is one of the original guaranteed railways. It was commenced from Surat *via* Baroda to Ahmedabad, but was subsequently extended to Bombay. The original contract was terminable in 1880, but the period was extended to 1905; and then renewed under revised conditions. In 1885 the Rajputana Malwa metre gauge system of State railways was leased to the Company and has since been incorporated in it. On the opening of the Nagda-Muttra, giving broad gauge connection through Eastern Rajputana with Delhi the working was entrusted to this Company. On the acquisition of the Company in April 1907 the purchase price was fixed at £11,685,581.

Burma Railways.

The Burma Railway is an isolated line, and although various routes have been surveyed there is little prospect of its being connected with the Railway system of India in the near future. In reply to a question in the Imperial Legislative Council in 1919, Sir Arthur Anderson said —" During 1914-15 extensive survey operations were carried out to ascertain the best alignment for a railway connection along the coast route between Chitagong and certain stations on the Burma Railways south of Mandalay. A rival route via the Hukong Valley between the northern section of the Assam-Bengal Railway and the section of the Burma Railways north of Mandalay was to have been surveyed during the following year but was postponed because of the war. It is now proposed to commence this survey during the coming cold weather, and on its completion, Government will have sufficient information to enable them to decide which route shall be adopted. Thus no arrangements for the construction of a line have yet been made nor has any concession been granted, but it is probable that the line selected will be built at the cost of Government and worked by one or other of the main lines which it will connect." It was commenced as a State Railway and transferred in 1896 to a Company under a guarantee.

Eastern Bengal.

The Eastern Bengal State Railway was promoted under the original form of guarantee and was constructed on the broad gauge. The first portion of the line running to Calcutta over the Ganges was opened in 1862. In 1874 sanction was granted for the construction on the metre gauge of the Northern Bengal State Railway, which ran from the north bank of the Ganges to the foot of the Himalayas on the way to Darjeeling. These two portions of the line were amalgamated in 1884 into one State Railway.

The East Indian.

The East Indian Railway is one of the three railways sanctioned for construction as experimental lines under the old form of guarantee. The first section from Howrah to Pandua was opened in 1854 and at the time of the Mutiny ran as far as Raniganj. It gives the only direct access to the port of Calcutta from Northern India and is consequently fed by all the large railway systems connected with it. In 1880 the Government purchased the line, paying the shareholders by annuities, but leased it again to the company to work under a contract which is terminable in 1919.

Great Indian Peninsula.

The Great Indian Peninsula Railway is the earliest line undertaken in India. It was promoted by a Company under a guarantee of 5 per cent. and the first section from Bombay to Thana was open for traffic in 1853. Sanction was given for the extension of this line *via* Poona to Raichur, where it connects with the Madras Railway, and to Jubbulpore where it meets the East Indian Railway. The feature of the line is the passage of the Western Ghats, these sections being 15¾ miles on the Bhore Ghat and 9¼ miles on the Thul Ghat which rise 1,131 and 972 feet. In 1900 the contract with the Government terminated and under an arrangement with the Indian Midland Railway that line was amalgamated and leased to a Company to work.

Earnings per cent.	..	7.03.

Madras Railway.

The Madras Railway was the third of the original railways constructed as experimental lines under the old form of guarantee. It was projected to run in a north-westerly direction in connection with the Great Indian Peninsula Railway and in a south-westerly direction to Calicut. On the expiry of the contract in 1907 the line was amalgamated with the Southern Mahratta Railway Company, a system on the metre gauge built to meet the famine conditions in the Southern Mahratta Country and released to a large Company called the Madras and Southern Mahratta Railway Company. The mileage is 3,169 01.

The North-Western.

The North-Western State Railway began its existence at the Smd-Punjab-Delhi Railway, which was promoted by a Company under the original form of guarantee and extended to Delhi, Multan and Lahore and from Karachi to Kotri. The interval between Kotri and Multan was unbridged and the railway traffic was exchanged by a ferry service. In 1871-72 sanction was given for the connection of this by the Indus Valley State Railways and at the same time the Punjab Northern State Railway from Lahore towards Peshawar was begun In 1886 the Sind-Punjab-Delhi Railway was acquired by the State and amalgamated with these two railways under the name of the North-Western State Railway. It is the longest railway in India under one administration.

Capital outlay	..	Rs. 1,02,25,08,000.
Net earnings	..	Rs. 5,11,05,000.
Earnings per cent	..	5.00

Oudh and Rohilkhand.

Oudh and Rohilkhand Railway was another of the lines constructed under the original form of guarantee. It began from the north bank of the Ganges running through Rohilkhand as far as Saharanpur where it joins the North-Western State Railway. It was not until 1887 that the bridge over the Ganges was completed and connected with the East Indian Railway. To effect a connection between the metre gauge systems to the North and those to the South of the Ganges, a third rail was laid between Bhuriwal and Cawnpore. The Company's contract expired in 1889 when the Railway was purchased by the State and has since been worked as a State Railway.

Earnings per cent.	..	6.20.

The South Indian.

The South Indian Railway was one of the original guaranteed railways. It was begun by the Great Southern India Railway Company as a broad gauge line; but was converted after the seventies to the metre gauge. This line has been extended and now serves the whole of the Southern India, south of the south-west line of the Madras Railway. Between Tuticorin and Ceylon a ferry service was formerly maintained, but a new and more direct route to Ceylon *via* Rameshwaram was opened at the beginning of 1914. As the original contract ended in 1907, a new contract was entered upon with the Company on the 1st of January 1908.

Mileage open	..	449.80.
Capital outlay	..	Rs. 7,22,98,000.
Net earnings	..	Rs. 58,19,000.
Earnings per cent.	..	8.05.

The Native States.

The principal Native State Railways are The Nizam's, constructed by a company under a guarantee from the Hyderabad State; the Kathiawar system of railways, constructed by subscriptions, among the several Chiefs in Kathiawar; the Jodhpur-Bikaner Railway, constructed by the Jodhpur and Bikaner Chiefs; the system of railways in the Punjab, constructed by the Patiala, Jind, Maler Kotla, and Kashmir Chiefs; and the railways in Mysore, constructed by the Mysore State.

INDIA AND CEYLON.

The possibility of connecting India and Ceylon by a railway across the bank of sand extending the whole way from Rameswaram to Mannar has been reported on from time to time, since 1895 various schemes having been suggested.

The South Indian Railway having been extended to Dhanushkodi, the southernmost point of Rameswaram Island, and the Ceylon Government Railway to Talaimannar, on Mannar Island, two points distant from each other

about 21 miles across a narrow and shallow strait, the project has again been investigated with the idea of connecting these two terminal stations by a railway constructed on a solid embankment raised on the sand bank known as "Adam's Bridge", to supersede the ferry steamer service which has been established between these two points.

In 1913, a detailed survey was made by the South Indian Railway Company, and a project has now been prepared. This project contemplates the construction of a causeway from Dhanushkodi Point on the Indian side to Talaimannar Point on the Ceylon side, a length of 20.05 miles of which 7.19 will be upon the dry land of the various lands, and 12.86 will be in water. The sections on dry land will consist of low banks of sand pitched with coral and present no difficulty. The section through the sea will be carried on a causeway which it is proposed to construct in the following way. A double row of reinforced concrete piles, pitched at 10 feet centres and having their inner faces 14 feet apart, will first be driven into the sand. These piles will then be braced together longitudinally with light concrete arches and chains and transversely with concrete ties, struts and chains. Behind the piles slabs of reinforced concrete will be slipped into position, the bottom slabs being sunk well into the sand of the sea bottom. Lastly, the space enclosed by the slabs will be filled in with sand.

The top of the concrete work will be carried to six feet above high water level, and the rails will be laid at that level. The sinking of the piles and slabs will be done by means of water jets. This causeway, it is expected, will cause the suspended sand brought up by the currents, to settle on either side bringing about rapid accretion and eventually making one big island of Rameswaram island and Mannar island.

If this method of construction is adopted, it is estimated that the total cost of the causeway and works at the two terminal points, *viz*:— Dhanushkodi and Talaimannar will be approximately 111 lakhs.

Indo-Burma Connection.

The raids of the Emden in the Bay of Bengal in 1914, and the temporary interruption of communications between India and Burma, stimulated the demand for a direct railway connection between India and Burma. Government accepted the position and appointed Mr. Richards, M. Inst. C.E., to be the engineer-in-charge of the surveys to determine the best route for a railway from India to Burma. The coast route appears to be the favoured one. This would start from Chittagong, which is the terminus and head-quarters of the Assam-Bengal Railway and a seaport for the produce of Assam. The route runs southwards through the Chittagong district, a land of fertile rice fields intersected by big rivers and tidal creeks and it crosses the Indo-Burma frontier, 94 miles from the town of Chittagong. For about 160 miles further it chiefly runs through the fertile rice lands of Arrakan and crosses all the big tidal rivers of the Akyab delta. These include the Kalidan river which drains 4,700 miles of country and even at a distance of about 30 miles from its mouth is more than half a mile wide. About 260 miles from Chittagong the railway would run into the region of mangrove swamps which fringe the seacoast north and south of the harbour of Kaukkphu stretching out into the mangrove swamps like ribs from the backbone. Innumerable spurs of the Arrakan Yoma have to be crossed. Yoma is a mountain ridge which extends from Cape Negrais northwards until it loses itself in a mass of tangled hills east of Akyab and Chittagong. At its southern end the height of the ridge is insignificant but it has peaks as high as 4,000 feet before it reaches the altitude of Sandway and further north it rises much higher. It is a formidable obstacle to railway communication between India and Burma This route is estimated to cost about £7,000,000 and would have to be supplemented by branch lines to Akyab where there is at present a considerable rice traffic and the cost of this would have to be added to the £7,000,000 already referred to.

The other routes examined have been the Hukong Valley route and the Manipur route which were surveyed by the late Mr. R. A. Way many years ago. The Manipur route is estimated to cost about £5,000,000 as it has to cross three main ranges of hills with summit levels of 2,650, 3,600 and 8,900 feet long. Altogether there would be about four miles of tunnelling through the three main ridges and through other hills and more than 100 miles of expensive undulating railway with grades as steep as 1 in 50 and 11,000 feet of aggregate rise and fall. The Hukong valley route seems to be the cheapest one as it is estimated to cost £3,500,000. This line is only about 284 miles long and it presents fewer engineering difficulties than either the Coast or the Manipur route. One hundred and fifty miles of this route lie in open country capable of cultivation though at present it is only very thinly populated. Only one range of hills has to be crossed and this can be negotiated with a summit tunnel of 5,000 feet long at a height of 2,500 feet. There are less than fifty miles of very heavy work and only about 4,500 ft. aggregate of rise and fall.

It is understood that the construction of this line will constitute one of the first charges on the Railway Budget when normal conditions are restored.

INDIAN RAILWAYS COMMITTEE, 1920-21.

The Report has been published of the Committee appointed by the Secretary of State for India to inquire into the administration and working of the Indian railways. The Chairman of the Committee was Sir William M. Acworth, and the nine members were :—

Sir Henry P. Burt, late President of the Indian Railway Board, Chairman of the Bengal and North Western and Rohilkund & Kumaon Railway Companies.

Sir Rajendra Nath Mookerjee, of Calcutta.

Sir Arthur R. Anderson, late President, Indian Railway Board.

Sir George C. Godfrey, Agent, Bengal-Nagpur Railway Company.
The Hon. Mr. V. S. S. Sastri, Member of the Indian Council of State.

Mr. E. H. Hiley, formerly of the Great Northern and North Eastern Railways, and late General Manager of the New Zealand Government Railways.
Sir Henry Ledgard, of Cawnpore
Mr. Purshotamdas Thakurdas of Bombay, and
Mr. James Tuke, Director of Barclay's Bank and The British Linen Bank.
The Secretary to the Committee was Mr. T. Ryan, C.I.E., of the Indian Finance Department, and Mr. E. R. Pole, of the Chief Accountant's Department, Great Western Railways, acted as Assistant Secretary.

Origin of the Inquiry:—The appointment of the present Committee was the outcome of deliberations on the future of the East Indian Railways, a line managed by a company whose contract was terminable in 1919. During the past decade a demand by Indian politicians for the more complete nationalisation of the Indian railways has become increasingly vocal; protests have been frequent against the existing form of management of the State lines by non-resident companies holding only a relatively small pecuniary interest in the properties which they managed, and influenced, or believed by a large section of the Indian public to be influenced, mainly or solely by solicitude for their own dividends, and only in a secondary degree, or not at all, interested otherwise in the good of Indian trade or the comfort of the travelling Indian public.

The departmental discussions of the East Indian Railway case, in this atmosphere, led to the decision that, though the existing working arrangement should be continued (with a modification of the profit-sharing terms) until the end of 1924, the direction of the line should thereafter be transferred to India—either to direct State or to company management. It was decided at the same time that opportunity should be taken in the intermediate period to conduct a detailed investigation into the various questions that had arisen. The scope of the proposed inquiry was enlarged, with the result that the following terms of reference were eventually laid down:—

(1) To consider, as regards railways owned by the State, the relative advantages financial and administrative, in the special circumstances of India, of the following methods of management:—
(*a*) Direct State management;
(*b*) Management through a company domiciled in England and with a board sitting in London;
(*c*) Management through a company domiciled in India and with a board sitting in India;
(*d*) Management through a combination of (*b*) and (*c*);
And advise as to the policy to be adopted at and when the existing contracts with the several railway companies can be determined. (In considering the question of the East Indian Railway the Committee will take note of the decision to remove the management of that railway to India, which was arrived at when the contract with the present company was extended on the amended terms in 1919.)

(2) To examine the functions, status and constitution of the Railway Board and the system of control exercised by the Government of India over the railway administration, and to recommend such modifications, if any, as are necessary for the adequate disposal of the railway business of the Government.

(3) To consider arrangements for the financing of railways in India, and in particular the feasibility of the greater utilisation of private enterprise and capital in the construction of new lines.

(4) To report whether the present system of control by Government of rates and fares and the machinery for deciding disputes between railways and traders are satisfactory, and if not, to advise what modifications are desirable.

(5) To make recommendations that may seem germane to the inquiry.

A letter from the India Office to the Committee made it clear that attention need not be limited rigidly to the railways owned by the State, and that the expression "Government of India" was not to be interpreted in a restricted local sense.

The Report: The Report is a document of 90 pages and contains references to three considerable volumes of evidence and written statements. There exists also a fifth volume of confidential evidence, which will not be published, and the contents of which, we understand, are relatively brief. The Report is a self-contained document signed by all the members, and is accompanied by only one short reservation; but perusal shows that this appearance of unanimity is somewhat artificial. A large measure of agreement was attained: the Committee are at one in their comments on the existing state of affairs, in their proposals for a radical reconstitution of the Government administrative machinery and methods of control, in their observations on the relations between the public and the railways serving them, and in their comments and suggestions on certain other matters cognate to their inquiry. But they have not seen eye to eye on one of the most important of the major questions referred to them. On the question of management they are only unanimous—and even here are not all influenced by quite the same considerations—to the extent of holding that the time has come when the existing system of management through companies domiciled in Great Britain should be brought to an end according as the several contracts permit; but they are sharply divided as to the policy to be adopted for future railway management in India, and their views as to how capital should be obtained in future necessarily show a corresponding divergence.

The division is practically equal; for the technical majority which condemns company management, lock, stock and barrel, as a possible system of dealing with the State-owned railways in the special conditions of India, and which favours direct State management as the only practical alternative, consists of the Chairman (Sir W. M. Acworth) with only four members. The minority, consisting of the other five members of the Committee, evinces a decided leaning towards management by companies—but by companies domiciled and

having their headquarters in India, unlike those now in existence—and advocates the adoption of this policy in the case of the East Indian Railway when a change has to be made in 1924, and possibly in the case of the Great Indian Peninsula Railway, whose contract is terminable in 1925; this party on the committee would leave the other railways to be dealt with on their merits when their existing working contracts can be determined—at various dates ranging from 1928 in the case of the Burma Railways to 1950 in that of the Bengal-Nagpur Railway.

The occufrence of this division of opinion has led the Committee to arrange their report in the order indicated in the preceding outline, the opposing views taken on the subject of management and the associated question how capital monies required in future should be obtained being set forth in separate sections towards the end of the Report. In the following summary we follow much the same order of presentation.

Summary of Report.—The opening chapter of the Report is a formal introduction followed by the quotation of correspondence with the Government arising from the suggestion by the Bengal Chamber of Commerce that an *ad interim* report should be issued dealing specially with the methods of raising additional capital urgently required to bring the railways up to a proper standard. The reply to that suggestion showed that the Committee felt that this question involved their whole reference, and that though agreeing with the Chamber as to the urgent need for large capital outlay they did not see their way to anticipate their report in which the whole subject would be dealt with from the point of view of permanent policy.

The committee proceed, by extensive quotations from evidence, to show that the entire railway system is physically inadequate. Congestion, they say, has become normal and there is urgent need of drastic measures of reform and reconstruction. The complaints made date from before the war period, though they were naturally intensified by the conditions of recent years. It is held that the defects criticised are due primarily to the failure of Government to provide adequate funds both for capital and for renewals. The existing financial system is described as a paralysing one, unsuited to the needs of a great commercial enterprise. Stress is laid on the fact that the Government of India's railway investment has been directly profitable as well as being further profitable indirectly through the benefit to the country. It is shown that it would have paid the Government to have provided capital freely, whereas it has neither allowed the companies to increase their share capital, nor itself made a sufficient provision of funds.

Financial Importance.—The subordinate position of the railway administration is shown not to be in accord with its financial importance. The Member of Council in charge is also responsible for two other departments which make great demands upon his attention, and with his present multifarious duties he cannot attend to the railways. The Railway Board is in the position of a stepchild; it is overloaded with routine and trammelled by unnecessary restrictions, while it has not been empowered to exercise necessary authority in matters of policy. The Board's existing organisation is such that it cannot possess the necessary local knowledge; it is consequently ineffective and does not enjoy public confidence. Engineering inspection is overdone, there being seven inspection "circles," in each of which an inspecting officer has to inspect every mile of railway annually; while on the other hand there is no provision for the local supervision of traffic operation and for supervising the relations between the railways and the public. The forms of accounts and statistics are out of date, the statistics being extremely voluminous but of little practical use. It is suggested that in making appointments and promotions undue regard is had to the relative seniority of the officers concerned.

Railways and Public.—The relations of the railways with the public are unsatisfactory, and greater control of rates and fares is necessary. The public have no means of redress in cases of differences with railway authorities; appeals to the Railway Board are dealt with perfunctorily, often indeed being referred back for disposal to the very railways against which complaints are made; and the provisions of the Indian Railways Act for the appointment of special Commissions to deal with particular classes of complaint are so cumbrous and inapt that they have never once been carried into practice during the 32 years that the Act has been in force. There is a strong demand for a more accessible court of appeal, and the Committee believe that its creation would prevent much misunderstanding and ill-feeling.

Serious delays occur in settling claims, while irregularities in connection with the provision of wagons for the transport of goods have grown from the practice of petty gratuities, of the nature of tips, to "a system of organised blackmail." The Committee consider that neither the local nor central railway authorities have taken this matter up with sufficient vigour. They do not accept the excuses made for the continuance of the practice, it is admittedly difficult to prove and punish in particular cases, but they hold that the remedy lies in prevention, and that this would not be impossible if all concerned were sufficiently in earnest. The Committee lay stress also upon the grievances of the third-class passengers, especially in regard to the extraordinary overcrowding which is common on the railways. They admit that until funds can be supplied in quantity sufficient very greatly to increase facilities their complaints cannot be removed, but they think that some improvements could be secured by greater efforts of foresight and supervision without heavy cost being involved.

Department of Communications.—These criticisms are the principal ones leading up to the following specific recommendations:—

There should be created a Department of Communications responsible for railways, ports, inland navigation, road transport (so far as it is dealt with by the Central Government), and posts and telegraphs. The Member of Council in charge must be an experienced administrator, but need not himself be a technical expert. The Railway Board should be replaced by a

Railway Commission, consisting of a technical Chief Commissioner responsible to the Member of Council for Communications and four other Commissioners, one of whom should be second in command to the Chief Commissioner at headquarters, and in charge of finance, statistics, establishments and the headquarters secretariat. The three remaining Commissioners should be in charge respectively of Western, Eastern and Southern geographical divisions They would normally be engaged at headquarters, but should devote a substantial portion of their time to personal visits to their divisions. It is considered that by this limitation of responsibility each Commissioner would acquire a more intimate local knowledge, connoting the ability to deal authoritatively with difficulties and to redress grievances, than is possible to the Railway Board as at present constituted. The technical staff at headquarters should be strengthened, especially on the traffic side, and should comprise six directors in charge, respectively of accounts, civil engineering, mechanical engineering, traffic (operating), traffic (commercial), and posts with inland navigation and road transport.

Railway Budget Separated.—The Finance Department of the Government of India should cease to control the internal finance of the railways. The railway budget should be separate from the general budget, and be presented to the Legislative Assembly (the new body in India which corresponds more or less to the House of Commons) by the Member in charge of Communications. The Railway Department should be responsible for earning and expending its own income and for providing such net revenue as may be required to meet interest on the Government's railway debt. Subject to independent audit by the Government of India, the Railway Department should employ its own audit and accounting staff (the Government audit and accounts officers are at present responsible to the Finance and not to the Railway Department). The present forms of accounts and statistics should be thoroughly overhauled with expert assistance

The reconstituted Railway Department should be relieved from control by the India Office and the Government of India, except on large questions of finance and general policy. It should delegate increased powers of day to day management to local railway administrations, but, on the other hand, should exercise greater authority than at present in matters such as the initiation and enforcement of reforms, and ought to have some control over the appointments of the principal officers on company worked lines The number of engineering inspectors should be reduced to three, and three new inspectors of traffic should be appointed, one for each territorial division. To give the Indian public the necessary voice in railway management Central and Local Advisory Councils are proposed; the former to be under the chairmanship of the member for Communications, and not to consist of more than 25 members, of whom three or four should represent the departments of Government concerned with railway matters, and eight or nine should be nominated by the principal trade and industrial associations. A similar number of members should represent agricultural interests and the travelling public; these might be nominated by the provincial legislative councils. The Local Advisory Councils should be of about half the size of the Central Council and should be similar in constitution, but would have the local railway Agents as chairmen.

Rates Tribunal.—A rates tribunal, with an experienced lawyer chairman and one railway and one commercial member, should be established, with jurisdiction over all questions of the reasonableness of rates and facilities. This body should investigate the conditions attached to owner's and railway risk notes, and should frame standard forms. In certain circumstances an appeal against decisions of the rates tribunal should lie to the Governor-General in Council. Delays in settling claims must be reduced, and this can be ensured by the improved supervisory machinery now recommended. The utmost possible efforts must be made to stamp out the serious and widespread abuses connected with the allocation of goods wagons. The treatment of lower-class passengers requires special attention and supervision. Some alleviation of conditions can be effected, pending improvement of facilities by additional expenditure

A reasonable general increase should be made in rates and fares, and the existing surtaxes on goods traffic should be withdrawn. Greater facilities are necessary for training Indians for the higher railway posts, and the process of their employment should be accelerated.

Branch lines of railway should, as far as possible, be constructed and worked by the main lines

When financial conditions again permit of railway development, the native Indian States should be called into council and be invited to take part in working out a common scheme of development

The Department of Communications should inquire into the allegation of unfair competition with inland waterways, a matter which has attracted some attention, particularly in Madras.

The Committee recommend an investigation by an expert commission of the gauge question, Sir Henry Burt, however, dissents from this holding that such an investigation at this stage would furnish a new reason for postponing expenditure which all agree is urgently necessary to meet present requirements. He considers that the question of gauge is one which must be considered separately in relation to any new railway project and not as a general issue.

The Committee agree that management by companies of English domicile should not be continued after the existing guaranteed companies' contracts can be terminated, and that these companies should not be allowed further to increase their share capital. No steps should be taken for establishing a system of combined companies with English and Indian domicile.

Nationalisation.—Dealing further with the question of management, in a separate section of the Report, the majority, comprising the Chairman, Mr. Sastri, Mr. Hiley, Mr. Purshotamdas Thakurdas and Mr. Tuke,

made it clear that in addition to the reasons for which the entire Committee advocate the abandonment of the English guaranteed company system—the broad ground, that is, that it does not correspond with modern Indian conditions—these five go further and hold that the system has never worked, and cannot be made to work, satisfactorily, in relation to the State owned railways of India. They observe that no one has suggested that the State-owned lines should be disposed of out and out to companies —a suggestion that, in any event, would find no acceptance; they do not believe that, as a matter of practical politics, companies substantially independent could be formed in India to work the State owned lines, and they urge that without substantial independence the advantages claimed for private enterprise cannot be secured. To speak of the advantages ordinarily associated with private management in the conditions which must obtain is, in their judgment, "to be misled by a mere name." The majority recommend, therefore, that, according as the companies' contracts fall in, the undertakings should be managed directly by the State. It follows that all future capital must be raised directly by Government, and it is held that there is no reason why this should not be done to the extent necessary if Government will deal with the matter on business-like principles. Money required to put the existing railways into proper condition should be raised, even at to-day's price, as fast as it can be economically spent, but the immediate raising of capital for extensions is not recommended. This part of the Committee consider that Government borrowing should be effected by ordinary sterling loans in England and by rupee loans earmarked for railway purposes in India. Finally, they recommend that a systematic organisation should be established to familiarise Indians, mainly through Indian agencies, with the idea of subscribing to Government loans, specially to encourage the masses of the people who have not hitherto been accustomed to investment.

Company Management.—In another section of the Report the minority, consisting of Sir H. P. Burt, Sir R. N. Mookerjee, Sir A. R. Anderson, Sir G. Godfrey and Sir H. Ledgard, traverse the special objections alleged against the company system. They defend the existing companies from the attack of the majority, though admitting that future company management should be located in India. They recommend a continuance of both State and company management, with a decided leaning in favour of the latter where possible, and they deprecate the adoption of a policy of State management only. They propose a scheme for creating Indian domiciled companies to manage the East Indian and possibly the Great Indian Peninsula Railway, the cases of other lines to be considered on their merits later on, when the contracts become terminable. They agree that much capital must be raised direct by the Government of India, but advocate also the use of Indian domiciled companies, such as they propose, to provide additional funds. They press that no channel through which money can be obtained ought to be neglected, and suggest, for instance, that further debenture loans through the existing companies might be negotiated. They agree that money should be raised as fast as it can be economically spent, but do not wish new development to be arrested, and consider that private enterprise should be enlisted to provide capital for extensions. In their opinion Government borrowings, both in England and India, should be advertised as for railway purposes. They recommend enlisting the assistance of all banks when money is required, and that independent offers of loans on special conditions should be considered.

The Committee unanimously endorse the recommendations of the Mackay Committee of 1907, that in periods of easy money funds should be raised in excess of immediate requirements, and both parties are agreed that the Oudh and Rohilkhand Railway might advantageously be merged in the East Indian Railway system.

Main results of working of all Indian Railways treated as one system.

Irrigation.

In the West irrigation is a rare luxury, designed where it exists to increase the productivity of a soil sure of a certain crop under a copious and well distributed rainfall. In great parts of the East, and especially in India, it is a necessity to existence. For in India there are large tracts, such as the deserts of Sind and the South-West Punjab, which are practically rainless; there are others, such as the Deccan plateau, where cultivation is exceedingly precarious, owing to the irregularity of the rainfall and the long intervals when the crops may be exposed to a blazing sun and a desiccating wind; there are some crops, like rice and sugar-cane, which, except in a few highly favoured districts, can only be matured by the aid of irrigation. There are great areas where a single crop, which is called the *kharif*, or rain crop, can in normal years be raised by the unassisted rainfall, but where the second crop, the *rabi* or cold weather crop, is largely dependent on irrigation. Inasmuch as in India sixty-five per cent. of the population is still dependent upon agriculture for the means of livelihood, this brief summary indicates the enormous importance of irrigation to the community.

Its Early History.—It is natural, in such conditions, that irrigation in India should have been practised from time immemorial. In the history and imagery of the East, there is no figure more familiar than the well, with primitive means for raising the water, followed to-day much as they were in Bible days. In the early records of the peoples of India, dating back to many years before the Christian era, there are frequent references to the practice of irrigation. Wells have been in use from time immemorial; most of the innumerable tanks in Southern India have been in use for many generations; the practice of drawing off the flood waters of the Indus and its tributaries by means of small inundation canals has been followed from a very early date; and in the submontane districts of Northern India are still to be found the remains of ancient irrigation channels, which have been buried for centuries in the undergrowth of the forests. But in the direction of constructing large and scientific works for the utilisation of the surplus waters of the great river little was done before the advent of British rule, and they are comparatively of recent date.

The State Intervenes.—Irrigation works in India may be divided into three main heads—wells, tanks and canals. The greatest and the most impressive are the canals, and these may arrest attention first, because they constitute one of the most enduring monuments to British rule. They have in British India been constructed by direct State agency. In the early days of modern irrigation, certain works in the Madras Presidency were carried out by a guaranteed company, and the Orissa canal project was commenced through the same agency. Both Companies fell into difficulties, and the system into disfavour; during the Viceroyalty of Lord Lawrence it was decided that all irrigation works which promised a reasonable return on the capital expenditure should be constructed through direct agency and should be constructed by the State from loan funds as productive public works.

The British Inheritance.—The British Government in India inherited a few major irrigation works. One of these was the Grand Anicut—the local term for barrage—stretching across the width of the Cauvery River in Madras. In the Punjab there were a few canals, chiefly inundation—that is above the normal bed of the river and fed from the flood current—constructed by the Muhammedan and Sikh rulers, and owing to its proximity to Delhi, the waters of the Jumna were brought to the neighbourhood of the city by the Mughals. It is doubtful if these works ever irrigated any considerable areas or conferred much benefit on the people, but they suggested the model on which the British engineers worked. In Southern India, Sir Arthur Cotton constructed the upper Anicut across the Coleroon River, so as to secure the full level required for the utilisation of the Grand Anicut across the Cauvery. He also designed the works which, constructed and improved at an outlay of three crores, irrigate more than two million acres in the Godaveri and Kistna deltas. In Northern India Sir Probyn Cautley constructed the great Ganges Canal which takes off from the river near Hardwar, and which in magnitude and boldness of design has not been surpassed by any irrigation work in India or elsewhere. In this way were laid the foundations of the irrigation system in India. The work was gradually pushed forward. In Northern India a great system of canals was constructed, chiefly in the Punjab and the United Provinces. Some of these, like the great Chenab Canal, ought to be classed amongst the wonders of the world. It irrigates nearly two million acres, or about two-fifths of the cultivable area in Egypt, with an ordinary discharge of eleven thousand cubic feet per second, or about six times that of the Thames at Teddington. The Chenab and the Jhelum Canals brought under irrigation great areas of Government waste, and thereby allowed the system of State colonisation, which relieved the congestion on the older villages of the Punjab, and established colonies of over one million of people on what had been the desolate abode of a handful of nomads. In the Bombay Deccan a few protective works were constructed, like Lake Fife and Lake Whiting, drawing their supplies from the Ghats and spilling them over the arid tracts of the Deccan. In Madras there was completed the boldest and most imaginative irrigation work in the world; by the device of constructing a reservoir at Periyar, on the outer slopes of the ghats, and carrying the water by means of a tunnel through the intervening hill, the Madras Government turned the river back on its watershed and poured its waters over fertile lands starved by want of moisture. But these Deccan works did not pay. The cultivators would not use the water in years of good rainfall, and there was not enough to go far in seasons of drought; the inevitable result of such conditions was to concentrate attention upon the remunerative works on the rivers of the Punjab, and to leave protective irrigation to wilt for want of funds.

The Irrigation Commission.—In order to substitute policy for spasmodic effort, the Irrigation Commission was appointed by Lord Curzon's Government in 1901. It made a

detailed survey of the conditions of the country, and produced the report which is the foundation of Indian Irrigation policy to-day. The figures compiled by the Commission illustrate the progress which had been made up to that period. They showed that out of an area of 226 million acres annually under crop in the irrigating provinces of British India, in round numbers 44 million acres, or 19½ per cent. were ordinarily irrigated. Of the total area irrigated 18½ million acres or 42 per cent. was watered by State works (canals and tanks), and 25½ million acres, or 58 per cent. from private works, of which rather more than one half was from wells. During the previous quarter of a century the area irrigated by Government works had been increased by 8 million acres, or by eighty per cent. and the Commission estimated that during the same period the area under private irrigation had increased by at least three million acres or a total addition to the irrigated area in British India of 11 million acres or 33 per cent. Including the Native States the area under irrigation annually within the British Empire was placed at 53 million acres (19 million from canals, 16 million from wells, 10 million from tanks, and 8 million from other sources). The Commission reported that the field for the construction of new works of any magnitude on which the net revenue would exceed the interest charges was limited, being restricted to the Punjab, Sind and parts of Madras—tracts for the most part not liable to famine. They recommended that works of this class should be constructed as fast as possible, not only because they would be profitable investments, but also because they would increase the food supply of the country. Then addressing themselves to the question of famine protection, they worked out a very interesting equation. Taking the district of Sholapur, in the Bombay Deccan, perhaps the most famine-susceptible district in India, they calculated that the cost of famine relief in it was 5 lakhs of rupees a year. From this deduction, and making allowance for the advantage of famine avoidance as compared with famine relief, they said that the State was justified in protecting the land in such district at a cost of 221 rupees per acre. For the general protection of the Bombay Deccan they recommended canals fed from storage lakes in the Ghats, where the rainfall has never been known to fail even in the driest years. For Madras they recommended the investigation of the old Tungabhadra project, and of a scheme for storage work on the Kistna. They proposed that Government should undertake the construction of protective works for the rice-growing districts of the Central Provinces and the Ken Canal project in Bundelkhand. The Commission further sketched out a rough programme of new major works to be constructed in different parts of India, which would cost not less than 44 crores of rupees and would result in an increase of 6,500,000 acres to the irrigated area. They estimated that the construction of these works would impose a permanent yearly burden of nearly 74 lakhs on the State, through the excess of interest charges on capital cost over the net revenue produced from the works. Against this would have to be set the reduction in the cost of future famines resulting from the construction of the works, which the Commission put at 31 lakhs per annum. The balance of 43 lakhs would represent the net annual cost of the works to the State, or the price to be paid for the protection from famine which the works would afford, and for all other indirect advantages which might be attributed to them. The principal effect of the Irrigation Commission's report was to substitute policy for spasmodic effort, and the progress since made has been remarkable.

Irrigation Dues.—The charges for irrigation, whether taken in the form of enhanced land revenue or of occupiers' and owners' rates, vary very much, depending on the kind of crop, the quantity of water required for it and the time when it is required, the quality of the soil, the intensity or constancy of the demand, and the value of irrigation in increasing the outturn. In the immediate vicinity of Poona a rate of Rs. 50 an acre is paid for sugarcane. This is quite an exceptional rate, it obtains over only a limited area, and is made practicable only because the cultivators, by high manuring, can raise a crop valued at nearly eight-hundred rupees an acre. On other parts of the Mutha canal the rate varies from Rs. 40 to Rs. 12, and on other canals in the Bombay Deccan from Rs. 25 to Rs. 10 per acre. In Madras the maximum rate for sugarcane is Rs. 10, and in the Punjab it does not exceed Rs. 8-8. The rate charged for rice varies in Madras from Rs. 5 to 2, and in Bengal from Rs. 2-8 to Rs. 1-8 per acre. In both these provinces irrigation is practically confined to rice; in the Punjab, where this crop is not extensively grown, the rate varies from Rs. 7 to Rs. 3-4 per acre. The ordinary rate in the Punjab for wheat, which is the principal crop, varies from Rs. 4-4 to Rs. 3-12, and for fodder crops from Rs. 3 to 2-8 per acre. The average rate realised from major works for irrigation of all kinds is about Rs. 3-8 per acre, the provincial averages being Rs. 1-9 in Sind and Bengal; Rs. 3-4 in the Punjab; Rs. 4-8 in Madras, the United Provinces and the Bombay Deccan. The charges for irrigation may be taken as varying from 10 to 12 per cent. of the value of the crop, except in Bengal and the Bombay Deccan, where the average is little more than six per cent.

Canals and Navigation.—Twenty years ago a great deal was heard about the desirability of constructing navigation canals, either in conjunction with irrigation or for transport, pure and simple. The idea is now exploded. It received a certain stimulus from the unprofitable character of Indian railways, and the handsome earnings of the irrigation works; it received its quietus when the railways turned the corner. Broadly speaking it may be said that navigation and irrigation rights clash; navigation is not only costly, but it cannot be maintained during the season of short supply, except to the detriment of irrigation. Outside the deltaic tracts of Bengal, Orissa, Madras and Sind, navigable canals will never be of much use for the purpose of inland navigation. There is however considerable scope for connecting canals to improve the facilities for navigation on the great river system of Eastern Bengal. This is a question which is now engaging the attention of the Government.

IRRIGATION OPERATIONS DURING 1919-20.

The purpose of artificial irrigation being to supplement the rainfall on which the production of crops so largely depends, the demand for canal irrigation varies in each year with the nature of the monsoon and the extent of the rain. In the year under review the Arabian Sea monsoon appeared in the Peninsula at about the normal date, while the Bay current arrived in north-east India about a week before the usual time. Up to about the middle of July both currents were exceedingly fitful and were mainly confined to the Central Provinces and the adjoining districts to the east, to the detriment of north-west India where, consequently, intense hot weather conditions prevailed. The monsoon began to penetrate into north-west India about the 12th of July and by the 24th had spread over practically the whole area. During the rest of the month the current was very active and there was abundant rain over most of the Peninsula and north-west India. In August the monsoon was well above its average strength but the rainfall was concentrated into northern and central India at the expense of the Peninsula. This distribution was reversed in September, the Peninsula generally receiving abundant rain and northern and central India less than its proper share. The monsoon rains of the year, though only 5 per cent. in excess of the normal, contrasted very favourably with those of 1918, which were as much as 18 per cent. in defect. In the major irrigating provinces the rainfall was below normal only in Sind.

Total Area Irrigated.—During the year 1919-20, the total area irrigated by all classes of works in India, excluding the areas irrigated in the Indian States, amounted to over 28 million acres or 3 million acres more than in the previous year. Towards this area Productive Works contributed 18,876,234 acres, Protective Works 717,377 acres, and Minor Works, 8,551,253 acres.

Comparisons.—The following table compares the area irrigated by Government works, excluding Indian States, during the year under review with the average area so irrigated during the previous triennium :—

Province	Productive.		Protective.		Minor.		Total

Total Area Irrigated.—The area irrigated by Government irrigation works in 1919-20 is the largest on record, exceeding the previous record of the year 1916-17 by 2,117,900 acres.

The area irrigated by Productive Works was greatest in the Punjab, where over 8¾ millions acres were recorded, last year's figure being exceeded by more than a million acres. The Madras Presidency came next with an area of nearly 3¾ million acres while in the United Provinces and Sind, the area irrigated by Productive Canals amounted to 3 and 1⅓ million acres, respectively. Bihar and Orissa contributed 847,000 acres, the North-West Frontier Province 367,000 acres, and Burma 317,000 acres.

The total capital outlay, direct and indirect, to the end of the year 1919-20 on Productive Irrigation Works, excluding navigation works but including expenditure incurred on irrigation works under construction, amounted to a little over Rs. 5,835 lakhs. The gross revenue for

the year amounted to Rs. 810 lakhs and the working expenses to Rs. 242 lakhs. The net revenue was therefore Rs. 568 lakhs, which represents a return of 9¾ per cent. on the total capital outlay Of the several provinces, the return on capital outlay was highest in the Punjab, where the canals yielded 14.44 per cent In Madras, including schemes which have proved unremunerative, the percentage of return was 10 75, while in the United Provinces a return of 10·25 per cent. was realized.

Protective Works.—The total area irrigated by the thirty-eight Protective Works in operation during the year under review amounted to 717,400 acres. In the United Provinces, where works of this class have been in operation longer than in the other provinces, the area irrigated was 229,300 acres. The Central Provinces came next with 150,100 acres. Protective Works irrigated 134,700 acres in the Deccan and Gujarat, 108,500 acres in the Madras Presidency and 94,700 acres in Bihar and Orissa.

The total capital outlay to the end of the year under review on Protective Irrigation Works amounted to 1,112 lakhs. The net revenue for the year was over four lakhs, which is equivlant to 0·37 per cent. on the total capital outlay This low return is partly due to the fact that the capital account is at present inflated by expenditure on works under construction which have not yet commenced to earn revenue. The net revenue earned was, however, double that of the previous year.

Minor Works.—The minor works are, for purposes of accounting, sub-divided into three classes as described below :—

Class I.—Works for which Capital and Revenue Accounts are kept.—These are works, the estimated capital cost of which exceeds Rs. 50,000 and the revenue from which is expected to cover the total working expenses.

Class II.—Works for which only Revenue Accounts are kept.—These are generally works costing less than Rs. 50,000.

Class III.—Works for which neither Capital nor Revenue Accounts are kept.—The works of this class consist mainly of small tanks and field embankments or small drainage schemes to prevent deterioration of land or to effect improvements of land with a view to rendering it fit for cultivation.

One hundred and twenty-two minor works of the first class described above were in operation at the close of the year 1919-20, one hundred and fifteen being irrigation works and seven navigation works, the area irrigated by the former amounting to 2,005,066 acres The total capital outlay on irrigation works of this class at the close of the year was Rs. 446¼ lakhs, and the net revenue amounted to nearly Rs. 40 lakhs, representing a return of 8·9 per cent. on capital. On the seven purely navigation works, the total capital outlay at the end of 1919-20 amounted to 242¼ lakhs. The working of the navigation canals resulted in a loss of Rs. 3 lakhs. The net revenue realized during 1919-20 from Class I Irrigation and Navigation Works as a whole represented a return of 5·35 per cent. on a total capital outlay of Rs. 688¼ lakhs. The total area irrigated by minor works of all classes amounted to 8,551,000 acres, or two-sevenths of the whole area irrigated during the year by Government canals.

Total cropped area.—A comparison of the acreage of crops matured during 1919-20 by means of Government irrigation systems with the total area under cultivation in the several provinces is given beow :—

Province	Net area cropped.	Area Irrigated by Government irrigation works	Percentage of irrigated area to total cropped area.	Capital cost of Government irrigation works to end of 1919-20 in lakhs of rupees.	Estimated value of crops raised on areas receiving State irrigation in lakhs of rupees.
	Acres.	Acres.		Rs.	Rs.
Burma	14,862,000	1,487,000	10·0	2,76	5,70
Bengal	24,470,000	110,000	0·4	2.59	83
Bihar and Orissa	25,900,000	945,000	3·6	6,32	9 57
United Provinces of Agra and Oudh.	34,959,000	3,452,000	9 9	13,25	28,66
Ajmer-Merwara	286,000	27,000	9 4	35	9
Punjab	25,364,000	9,835,000	38·8	22,51	62,41
North-West Frontier Province.	2,675,000	367,000	13·7	2.77	2,53
Sind	4,389,000	3,482,000	79·3	3,35	10,68
Bombay Deccan	23,807,000	401,000	1·7	5,16	3,84
Central Provinces (excluding Berar).	16,930,000	326,000	2·0	3,71	2,26
Madras	38,210,000	7,695,000	20·1	11,72	46,98
Baluchistan	217,000	20,000	10·6	44	8
Total ..	212,069,000	28,145,000	13·3	79,34	1,73,63

It will be seen that 13 per cent. of the cropped area was irrigated by Government irrigation works, and that the estimated value of the crops so irrigated amounted to nearly 2¼ times the total capital expended on the works.

Canal Colonies.—One of the most interesting developments is the Canal Colonies of the Punjab. In the early eighties the drier districts and waste lands began to receive attention. The Lower Sohag and Para Canals, which take out from the right bank of the Sutlej opposite Fazilka, and the Sidhnai on the left bank of the Ravi above its junction with the Chenab, were constructed between 1883 and 1887 and, besides being immediately successful, they afforded valuable experience in colonization. The Sidhnai Canal, to which the supply is ensured by a needle dam across the river, irrigates some 350,000 acres annually and gives a net return of between 30 and 40 per cent. upon a capital outlay of rather more than 13 lakhs of rupees. The Lower Chenab Canal, for the irrigation of the lower portion of the tract lying between the Chenab and the Ravi rivers, was opened as an inundation canal in 1887, but from the outset it suffered from deposits of silt, and it was realized that without a weir across the river at its head, to ensure its supply, it would be a complete failure. As soon as the supply was assured by the weir, Colonel Jacob, R. E., pressed for the extension of the canal into the large areas of crown waste which were till then lying practically valueless. This extension was sanctioned in 1891 and the colonization of the waste lands then commenced. The Lower Chenab Canal is easily the most productive work in India. It irrigates about 2¼ million acres annually and produces a net revenue of 128 lakhs of rupees on a capital outlay of 325 lakhs, a return of nearly 40 per cent. The accumulated surplus revenues of this canal, after paying interest charges, amount to no less than 1,388 lakhs of rupees.

Lower Jhelum Canal, 1898-1902.—The Lower Jhelum Canal project was sanctioned in 1888, but work on it was postponed for want of funds till the Lower Chenab Canal had made considerable progress and it was not until 1898 that the work was taken up in earnest. It was opened for irrigation in 1902, although construction was not quite completed.

In the case of both the Lower Chenab and Lower Jhelum Canals, construction and irrigation went on side by side, since the tract being dry and inhospitable, the canals had themselves to bring water for the construction of the masonry works. The canal commands the lower portion of the tract between the Chenab and the Jhelum, and is another extremely lucrative work, irrigating about 800,000 acres annually, and returning over 20 per cent. on an outlay of 162 lakhs of rupees.

The Triple Project.—The Triple Canal Project was commenced in 1905; of its three component parts, the Upper Chenab Canal was opened in 1912, the Lower Bari Doab Canal in 1913, and the Upper Jhelum Canal in 1915. A reference to the map will show that the four rivers, Jhelum, Chenab, Ravi and Sutlej, flow convergingly in a south-westerly direction, the first named being the most northerly. The particular problem confronting the Punjab engineers was the irrigation of the tract between the Sutlej and the Ravi, and since the supply of the latter river was required in its entirety for the existing Upper Bari Doab and Sidhnai canals, a canal from the Sutlej naturally offered the easiest solution. A project for the irrigation of the lower Bari Doab from the Sutlej was prepared, but, as the result of representations made by Colonel Jacob and Sir J. Wilson, the Irrigation Commission of 1901-02 advised the consideration, in preference to it, of a project to irrigate the Doab by water brought from the river Jhelum across the rivers Chenab and Ravi. Under this project water is carried by the Upper Jhelum Canal from Mangla on the river Jhelum to a point above Khanki, the headworks of the existing Lower Chenab Canal, on the Chenab. This renders it possible, without interference with existing irrigation, to draw off water from the Chenab at Merala, forty miles above Khanki, and to convey it by the Upper Chenab canal to the Ravi at Balloki, crossing the latter river by means of the Balloki level crossing. The water is thus delivered on to the Ravi-Sutlej tract for irrigation by the Lower Bari Doab Canal.

The Frontier.—Equally remarkable results have been achieved on the Frontier. The introduction of irrigation by the Lower Swat Canal has changed completely the character of the tract served. Before the advent of the canal it was uninhabited and practically uninhabitable, covered with thorn bushes and not a tree to be seen. It is now, and was even in 1894, when the completion report was written, dotted throughout with villages occupied by a law-abiding and contented peasantry, and the wilderness of thorn has given place to a vast sheet of cultivation, while avenues of trees have sprung up along the roads as well as along the canal and its distributing channels. The state of the tract is in every way a vast contrast to what it was when the surveys for the canal were in progress, at which time no officer was allowed to leave cantonments without himself being armed and being attended by an armed escort.

Indian Soldier Colony.—An area of 171,500 acres has been reserved in the Lower Bari Doab colony for distribution to Indian officers, non-commissioned officers and soldiers who rendered distinguished service in the great war, and the distribution is being made under the orders of the Commander-in-Chief through the agency of the Indian Soldiers' Board on the recommendations of Officers Commanding units.

WELLS AND TANKS.

So far we have dealt only with the great irrigation schemes. They are essentially exotic, the products of British rule; the real eastern instrument is the well. The most recent figures give thirty per cent. of the irrigated area in India as being under wells. Moreover the well is an extremely efficient instrument of irrigation. When the cultivator has to raise every drop of water which he uses from a varying depth, he is more careful in the use of it; well water exerts at least three times as much duty as canal water. Again, owing to the cost of lifting, it is generally used for high grade crops. It is estimated that well-irrigated lands produce at

least one-third more than canal-watered lands. Although the huge areas brought under cultivation by a single canal scheme tend to reduce the disproportion between the two systems, it must be remembered that the spread of canals increases the possibilities of well irrigation by adding, through seepage, to the store of subsoil water and raising the level.

Varieties of Wells.—Wells in India are of every description. They may be just holes in the ground, sunk to subsoil level, used to a year or two and then allowed to fall into decay. These are temporary or kacha wells or they may be lined with timber, or with brick or stone. They vary from the kacha well costing a few rupees to the masonry well, which will run into thousands, or in the sandy wastes of Bikanir, where the water level is three hundred feet below the surface, to still more. The means of raising the water vary in equal degree. There is the *picottah*, or weighted lever, raising a bucket at the end of a pivoted pole, just as is done on the banks of the Nile. This is rarely used for lifts beyond fifteen feet. For greater lifts bullock power is invariably used. This is generally harnessed to the *mot*, or leather bag, which is passed over a pulley overhanging the well, then raised by bullocks who walk down a ramp of a length approximating to the depth of the well. Sometimes the *mot* is just a leather bag, more often it is a self-acting arrangement, which discharges the water into a sump automatically on reaching the surface. By this means from thirty to forty gallons of water are raised at a time, and in its simplicity, and the ease with which the apparatus can be constructed and repaired by village labour, the *mot* is unsurpassed in efficiency. There is also the Persian wheel, an endless chain of earthenware pots running round a wheel. Recently attempts have been made, particularly in Madras, to substitute mechanical power, furnished by oil engines, for the bullock. This has been found economical where the water supply is sufficiently large, especially where two or three wells can be linked. Government have systematically encouraged well irrigation by advancing funds for the purpose and exempting well watered lands from extra assessment due to improvement. These advances, termed *takavi*, are freely made to approved applicants, the general rate of interest being 6½ per cent In Madras and Bombay ryots who construct wells, or other works of agricultural improvement, are exempt from enhanced assessment on that account. In other provinces the exemption lasts for specific periods, the term generally being long enough to recoup the owner the capital sunk.

Tanks.—Next to the well, the indigenous instrument of irrigation is the tank. The village or the roadside tank is one of the most conspicuous features in the Indian scene. The Indian tank may be any size. It may vary from a great work like Lakes Fife and Whiting in the Bombay Presidency or the Periyar Lake in Travancore, holding up from four to seven billion cubic feet of water, and spreading their waters through great chains of canal, to the little village tank irrigating ten acres. They date back to a very early stage in Indian civilisation. Some of these works in Madras are of great size, holding from three to four billion cubic feet, with water spreads of nine miles. The inscriptions of two large tanks in the Chingleput district of Madras, which still irrigate from two to four thousand acres are said to be over 1,100 years old. Tank irrigation is practically unknown in the Punjab and in Sind, but it is found in some form or other in all other provinces, including Burma, and finds its highest development in Madras. In the ryotwari tracts of Bombay and Madras all but the smallest tanks are controlled by Government. In the zemindari tracts only the large tanks are State works. According to the latest figures the area irrigated from tanks is about eight million acres, but in many cases the supply is extremely precarious. So far from tanks being a refuge in famine they are often quite useless inasmuch as the rainfall does not suffice to fill them and they remain dry throughout the season.

Bibliography.—"Irrigation in India: Review for 1919-20" (Govt. Press, Calcutta. Price, As. 12. It has been decided that, in future, the full review shall only be published triennially and that, in the intermediate years supplements shall be issued dealing with the year in question and bringing up to date the information contained in the previous triennial publication. The annual review for 1919-20 forms the second of these supplements; the first triennial review will deal with irrigation in India up to the end of the year 1920-1921.

BUILDINGS AND ROADS.

The Buildings and Roads Branch of the Public Works Department embraces all the operations of the Department which are not classed under the special heads of Railways and Irrigation. It includes the extension and maintenance of the road system, the construction and repair of all the buildings required for the proper discharge of the functions of government in all its branches, and a large miscellaneous class of works of public improvement, including lighthouses, harbours, embankments, boat bridges, and ferries, and the water supply and sanitation of towns.

The operations of this branch of the Department are classed primarily under the head of Civil Works, the expenditure on which is chiefly met from provincial resources. The classification of this expenditure for 1914-15 under the various heads is shown in the following table :—

——	Central Provinces and Berar.	Burma.	Assam.	Bengal	Bihar and Orissa.	United Provinces of Agra and Oudh.	Punjab.	North-West Frontier Province.	Madras.	Bombay.	India General.	Total.
	£	£	£	£	£	£	£	£	£	£	£	£
Imperial	72,050	49,661	2,533	89,409	26,255	74,920	37,148	208,198	36,842	89,536	230,674	908,226
Provincial*	529,551	775,734	364,270	831,581	664,327	507,741	610,853	..	1,086,986	756,747	..	6,127,790
Total ..	601,601	825,395	366,803	920,990	690,582	582,661	648,001	208,198	1,123,828	837,283	230,674	7,036,016

* Includes expenditure by the Civil Department in addition to that by the Public Works Department.

Expenditure by Civil Officers from Imperial Funds ..	£	52,995
Expenditure in England	£	87,739
Grand Total	£	7,176,750

The extension of local Government in India has thrown a large portion of the smaller class of public works into the hands of the local Boards. Speaking generally, the Boards maintain their own establishments, but in the case of any works of unusual difficulty they have recourse to the professional skill of the Public Works Officers.

The School of Oriental Studies.

This School was established by Royal Charter in June 1916. The purposes of the School (as set out in the Charter) are to be a School of Oriental Studies in the University of London to give instruction in the languages of Eastern and African peoples, Ancient and Modern, and in the Literature, History, Religion, and Customs of those peoples, especially with a view to the needs of persons about to proceed to the East or to Africa for the pursuit of study and research, commerce or a profession, and to do all or any of such other things as the Governing Body of the School consider conducive or incidental thereto, having regard to the provision for those purposes which already exists elsewhere and in particular to the co-ordination of the work of the School with that of similar institutions both in this country and in our Eastern and African Dominions and with the work of the University of London and its other Schools.

The School was created as the outcome of the Reports of two Government Committees, the first Treasury Committee presided over by the late Lord Reay, the second an India Office Committee presided over by the first Lord Cromer. The School provides London with a centre for Oriental teaching adequate to the needs of the metropolis and of the Empire, and one that removes the reproach that London has been without an Oriental School comparable to those of Paris, Berlin, and Petrograd.

The School possesses noble and adequate buildings, in Finsbury Circus, provided for them by Government under the London Institution (Transfer) Act of 1912. The sum of £25,000 required for the alteration and extension of the buildings of the London Institution for the purposes of the School was voted by Parliament. The School buildings are quiet, although they are in the heart of the City. The School provides teaching in more than forty languages In a considerable proportion of the spoken languages instruction is given by teachers belonging to the countries where the languages in question are spoken, as it is the aim of the School to provide as far as possble both European and Oriental Lecturers in the principal languages included in the curriculum.

Courses on the History, Religions, and Customs of Oriental and African countries form a special feature in the teaching of the School Inter-collegiate arrangements have been made with University College for instruction in Phonetics, modern phonetic methods being used to facilitate the acquirement of correct pronunciation. Inter-collegiate arrangements will also be made with the London School of Economics for instruction in the Sociology and Anthropology of the less civilised races.

Courses are also provided in Indian Law and the History of India, and arrangements are made from time to time for special courses of lectures to be given by distinguished orientalists not of the staff of the School.

Patron, H. M. the King. *Chairman of the Governing Body*, Sir John Hewett, G.C.S.I., K.B E., C.I.E. *Director*, Professor Sir E. Denison Ross, C.I.E., PH.D.

Trade.

The broad characteristics of the trade of India are familiar to readers of the Indian Year Book. India is chiefly an agricultural country, for 72 per cent. of its people are directly dependent upon agriculture for their means of livelihood. Consequently, the prosperity of the land is largely determined by the character of the south-west monsoon rains. An area which every year grows larger is protected by irrigation and the extension of these works, together with the increased resisting power of the people and the growth of the manufacturing industry, is expected to make the population immune to the shock of such famines as those of 1896-97, 1899-1900 and 1918-19. But many of the irrigation works, such as tanks and wells, depend on the rains for their replenishment. Consequently, the rains mainly determine the export trade and the consequent purchasing power of the people. Another feature that arises from these conditions is that the imports are chiefly manufactured goods and the exports produce.

The main conclusions to be drawn from the trade statistics of the last official year are indicated in the annual Review of the Trade of India by Mr. H. A. F. Lindsay, Director-General of Commercial Intelligence, from which the following details are mainly drawn.

The year 1920-21 carried Indian trade one more stage on its slow return to normal conditions. The previous year had witnessed an unprecedented boom when Indian exports increased monthly from Rs. 22½ crores in April 1919 to the record figure of Rs. 31½ crores in March 1920. Imports had also increased during the same months from nearly Rs. 14½ to nearly Rs. 24 crores. The total trade of that year, imports and exports combined, had reached the record value of Rs. 535 crores. The pace was too fast, however and before the year 1919-20 had closed, it had given the first clear indications that the inevitable reaction was at hand.

Before long, deflation both of exchange and prices—a necessary preliminary to a return to normal trade conditions—set in. On the 1st of April 1920 silver was quoted at 72⅛*d.* per ounce, by 31st March 1921 it had fallen continuously; (except for an upward tendency noted in July, August, and September) to 33⅛*d.* The sterling value of the rupee had fallen steadily during the same period from 2*s.* 4*d.* to 1*s.* $3\frac{11}{16}$*d.* On the evidence of index numbers the United Kingdom, America and Japan, who are India's best customers and took between them nearly 46 per cent. of her exports in 1920-21, showed early in the year all the symptoms of congested stocks and slackening demands. Countries normally taking Indian goods and on the right side of the exchange fence found themselves for the most part in possession of ample stocks and would take no more. Russia and Central Europe were known to be short, but unable to buy.

Fortunately the slump found India, commercially and financially, in a strong position. Her currency does not show the signs of inflation so marked in other countries. Deflation of her note-issue was carried out to the extent of Rs. 19 crores from Rs. 185 crores in January 1920 to Rs. 166 crores in March 1921. During the same period, their metallic backing in India increased from nearly Rs. 75 to Rs. 90 crores, of which Rs. 24 crores consisted of gold valued at Rs. 10 to the £1. Financial stringency was at no time during the year so apparent or so keenly felt as in Europe and America. During the war, her goods were in keen demand, and on the credits thus obtained she has been able to lay deep and strong foundations for industrial and commercial expansion. It is a relevant fact that, in spite of adverse trade conditions, which operated persistently throughout 1920-21, the total trade of the year, imports and exports combined, reached the very high figure of Rs. 592 crores and thus exceeded the record (Rs. 535 crores) of the previous year.

By the end of the financial year European continental countries had already begun to purchase Indian goods in small quantities and to send her some exports in return and the 1921 rains were ample and well distributed.

Imports of Merchandise.

The volume of imports generally affords a pretty safe indication of the extent firstly of stocks and secondly of credits; always provided that extraneous controls and restrictions are absent or ineffectual, and that the laws of demand and supply have full play. The following table is instructive in this connection:

Imports.

Five yearly averages.	Rs (lakhs)
Five years ending 1903-04 .	78,42
,, ,, ,, 1908-09	1,11,85
,, ,, ,, 1913-14 (pre war)	1,45,85
,, ,, ,, 1918-19 (war-period) . . .	1,47,80

Imports.

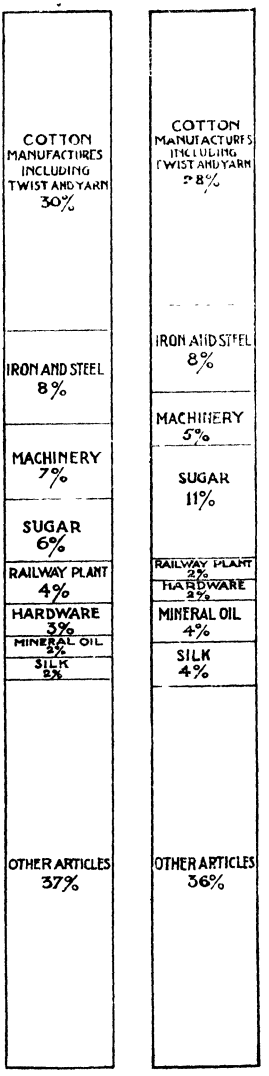
Yearly totals.	Rs. (lakhs)
Year 1913-14 (pre-war) .	1,83,25
,, 1914-15 . . .	1,37,93
,, 1915-16	1,31,99
,, 1916-17	1,49,63
,, 1917-18	1,50,42
,, 1918-19	1,69,03
,, 1919-20	2,07,97
,, 1920-21	3,35,60

The demand for imported goods in India was starved during the artificial trade conditions of the war. During 1918-19 there was a recovery, but only a partial recovery, as war conditions were fully operative during eight months

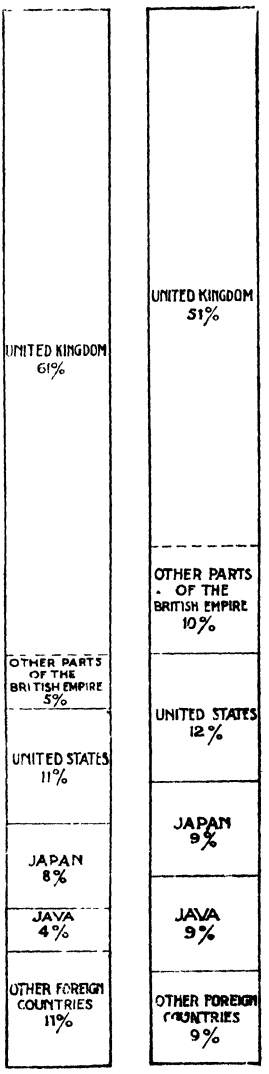
IMPORTS.

Share of the Principal Articles and Countries in the Import Trade of British India in 1920-21, as compared with the year 1919-20.

(1) Share of Principal Articles.



(2) Share of Principal Countries



of that year, while the remaining four months were not sufficient to cover more than the preliminary steps towards decontrol and towards a return to peace conditions of manufacture. In the result, imports, in spite of high prices, did not attain even the values of 1913-14 During 1919-20 the recovery was more marked, and a total of nearly Rs. 208 crores of imports was reached. The theorist would say that satiety point had been reached. But if 1919-20 was a record year for imports, it was no less so for exports, and the balance in India's favour, on the year's exchange of merchandise, was as high as Rs. 119 crores. Exchange was high, credits were good, foreign prices were still rising. It is true that local stocks were also rising, but it must not be forgotten that in important lines such as piece-goods, dyes, sugar, provisions and mineral oils, India is accustomed to work on ample margins, which have been roughly estimated at nine and in some cases as much as twelve months' supplies. When one compares India's purchasing power in 1919-20 with that of 1913-14, and discounts the rising prices of the post-war year, one is not surprised either at the volume of her import during 1919-20 or at the continuance of her purchases on an increasing scale well into 1920-21. It is true that, at the time of writing, there are indications of a glut. But the indications seem to come more from scattered centres of distribution than from the ample districts which they feed and which furnish collectively during seasons of plenty the vast demands of India. The monsoon of 1920 was poor, and the district demands were limited in consequence. Were these demands released, it would perhaps be found that the glut is more apparent than real. To what extent foreign purchases will be curtailed as a result of the increase in the general rate of import duty from 7½ to 11 per cent from 1st March 1921 still remains to be seen

The following table compares the values of the chief imports during each of the past three years, with the values recorded during 1913-14, the last pre-war year .—

	1913-14 (pre-war year).	1918-19	1919-20	1920-21
	Rs. (lakhs).	Rs. (lakhs)	Rs (lakhs)	Rs. (lakhs).
Cotton goods	62,14	51,68	54,72	88,54
„ twist and yarn	4,16	8,87	4,36	13,58
Iron and steel	16,01	12,15	16,33	31,30
Machinery of all kinds, including belting	8,26	5,86	9,58	24,09
Railway plant and rolling stock	10,03	1,04	4,59	14,13

Salt	88	2,33	2,10	-2,28

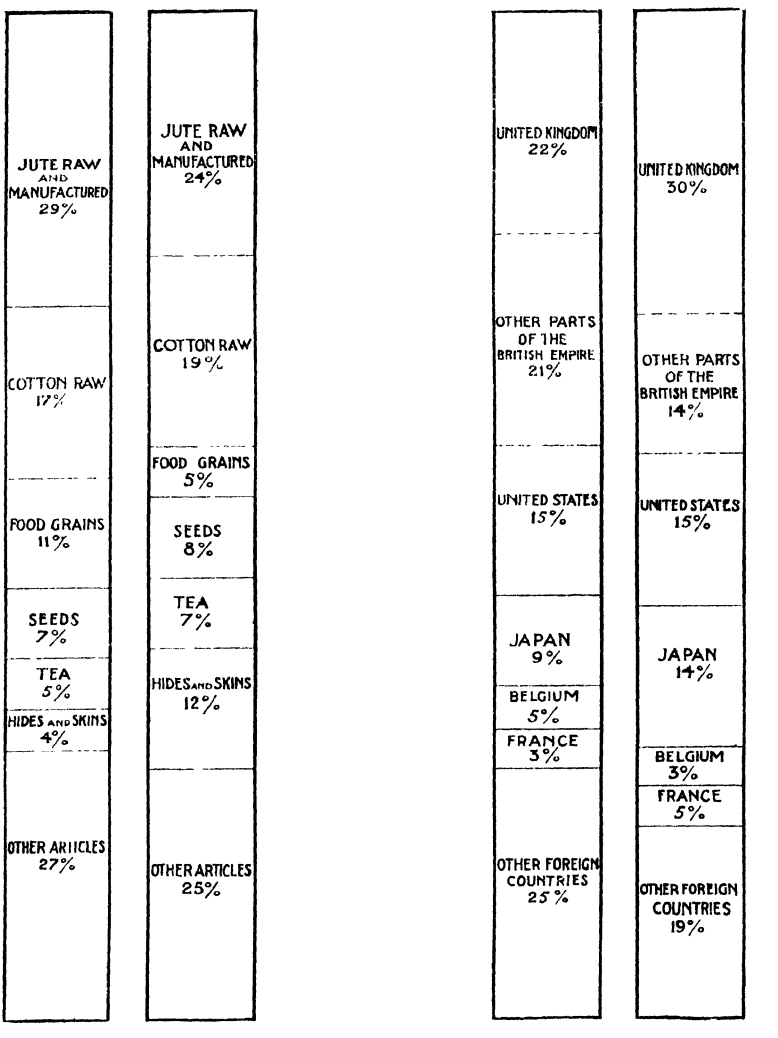
EXPORTS.

As already shown, 1919-20 was a year of records. The combined trade of that year, imports, exports and re-exports, had amounted to Rs. 534¾ crores, a total never before attained. Exports and re-exports had together reached a total value of Rs. 326¾ crores, also a record for one year. Including movements of bullion, official remittance and rupee paper on private account, there had been a record balance of trade of Rs. 95 crores in India's favour. Finally, the last month of that year, March 1920, had registered a new record in the value of one month's exports of Indian merchandise which had totalled Rs. 30 crores.

The volume of exports declined steadily from that month to Rs. 27 crores in April 1920, the first month of the year under review, Rs. 20½ crores in September and Rs. 17 crores in March 1921. Total exports for the year at Rs. 238 crores were less even than during the last pre-war year (1913-14, Rs. 244 crores) in spite of the higher level of prices. The reasons are not far to seek. The general cost of living, wages and costs of production rose, reducing margins of profit. The monsoon was short and official control of the export of foodgrains, a considerable item in India's foreign trade, had to be retained. Foreign countries in a position to buy had bought to excess and countries starved of

EXPORTS.

Share of the Principal Articles and Countries in the Export Trade of British India in 1920-21, as compared with the year 1919-20.



goods had not sufficient exchange strength to place orders. Such orders as were forthcoming contracted from a forward to a spot basis. Stocks in India rose. The slump was general and acute.

The slump itself was a natural and not unhealthy reaction from the frenzied buying which had followed the redistribution of wealth during the war, and the subsequent reorganisation of industries in the comparative security of peace conditions. Indian produce and manufactures had been in keen demand, but it yet remains to be seen to what extent they had passed into consumption or had merely accumulated in foreign markets. The conditions naturally varied with the commodity. All that can be said with safety is that the climax occurred during January-February 1920, when prices and exchange reached their highest levels, and that foreign orders diminished rapidly thereafter. Subsequent purchases were made from hand to mouth, on falling prices, freights and exchange, and behind stocks which could only be liquidated at a loss. An important factor was the weakness of the monsoon of 1920, necessitating the retention of official control of exports of wheat and rice within specified limits of quantity and price. The exports of other food grains and flour were also kept under control. The practical effect of these orders was to restrict foreign dealings in what are normally important items of India's export trade, and to keep the prices at levels reasonable to both producer and consumer in India.

A factor of considerable importance to the export trade was the steady decline in the sterling value of the rupee from 2*s*-4*d* on the 1st April 1920 to 1*s*.-3 *d* on the 31st March 1921; that is to say, conversely, the appreciation of the rupee value of sterling from approximately Rs. 8-9-0 to approximately Rs. 15 per £. The effect of this tendency was naturally to modify the decline in rupee prices, which did not in general show so violent a fall in India as the corresponding rates expressed, in foreign currency, in foreign markets. The decline in freight rates was a contributing factor. The effect on India's export trade varied considerably with the commodities handled, and especially with the conditions of payment. On the whole, although Indian prices declined more gradually (owing to declining exchange) than prices in foreign markets, her export trade was severely hit, since steady forward business had been rendered impracticable.

An interesting feature of the year's trade is that the wide margins of price between superior and inferior qualities of the same classes of goods—characteristic of the war period—were generally maintained. This tendency was due to several causes.

DIRECTION OF TRADE.

A noteworthy feature in the direction of India's trade in 1920-21 was an increase in the share of the British Empire in the total trade as compared with the preceding year, from 51 to 56 per cent, with a corresponding decrease in the share of foreign countries from 49 to 44 per cent. The important variations as compared with 1919-20 are stated below:—

(1) A remarkable increase in the percentage share of the United Kingdom in imports from 50.5 to 61 per cent accompanied by a decrease in exports from 29·6 to 21·9 per cent, resulting in a net increase in the total trade from 37.7 to 44.1 per cent. In the pre-war year 1913-14 the shares were 64 per cent in imports, 24 per cent, in exports, and 40.7 per cent. in the total trade.

(2) A decrease in the share of His Majesty's Dominions and other British possessions in imports from 10 to 5 per cent with an increase in their share in the export trade from 14 to 21 per cent, the net result being a decrease in the total trade fom 13 to 12 per cent.

(3) The whole British Empire had 56 per cent. of the total trade (66 per cent. of the imports and 43 per cent of the exports) as against 51 per cent. (61 per cent. of the imports and 44 per cent. of the exports) in 1919-20.

(4) A decrease in the share of the United States of America in imports from 12.1 to 10.5 per cent, although in exports her position remained practically unchanged, namely nearly 15 per cent. thus recording a net decrease in the total trade from 13.8 to 12.4 per cent.

(5) An all-round decrease in Japan's share in the trade, namely, under imports from 9.2 to 7.9 per cent. and under exports from 14·3 to 9.5 per cent. resulting in a net decrease in her share in the total trade from 12.3 to 8.6 per cent.

DIVISION BETWEEN COUNTRIES.

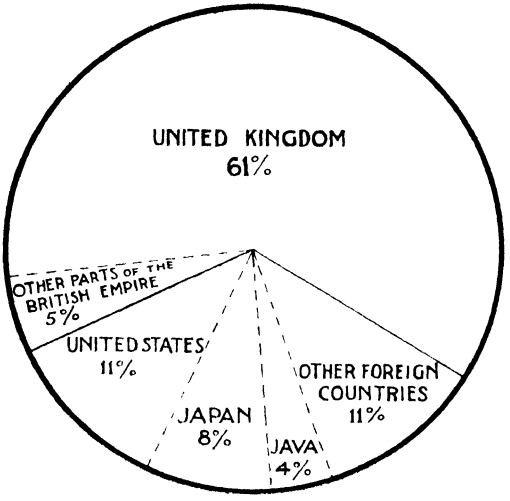
Imports from the United Kingdom showed an increase in value of no less than Rs. 100 crores or 95 per cent to Rs. 205 crores. In the pre-war year the value had amounted to Rs. 117½ crores only. The value of the exports to the United Kingdom decreased by 42 per cent, to Rs. 56 crores as compared with 1919-20, the value recorded in the pre-war year being Rs. 58 crores. Nearly 40 per cent. of the total imports consisted of cotton manufactures including twist and yarn, which were valued at Rs. 81 crores as against Rs. 51 crores or 48 per cent. of the imports in the preceding year, The other important groups, namely, metals and manufactures, machinery, railway plant and rolling stock, accounted for 29 per cent. or nearly one-third of the total imports as against 23 per cent. in 1919-20.

The quantity of cotton piecegoods imported rose by 32 per cent. to 1,292 million yards from 976 million in 1919-20, but this was 58 per cent. below the imports in the pre-war year. The value of the imports of iron and steel more than doubled from Rs. 10 crores to Rs. 22 crores, of machinery and millwork nearly trebled from Rs.6 crores to Rs. 17½ crores, while railway plant and

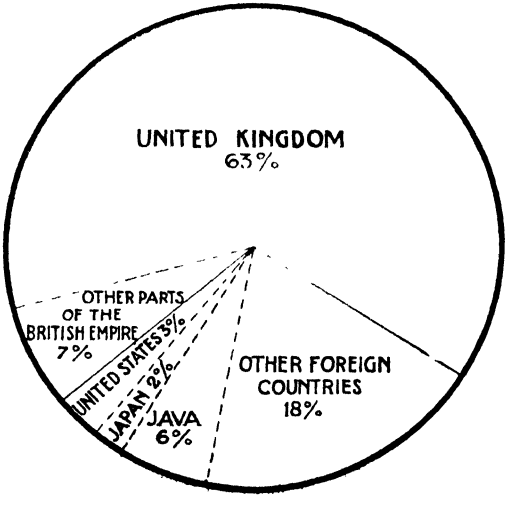
SOURCES OF IMPORTS.

Share of Principal Countries in the Import Trade of British India in 1920-21 as compared with the Average of the five pre-war years, 1909-10 to 1913-14.

1920-21



1909-10 to 1913-14
(Pre-war Average)



rolling stock increased from Rs. 4 crores to Rs. 13 crores, and hardware and liquors amounted to Rs. 5 and Rs. 3¾ crores as against Rs. 2 crores each in 1919-20. Other articles which showed noticeable increases were paper and pasteboard (+Rs. 2,25 lakhs), woollen goods (+Rs. 3,39 lakhs), electrical instruments (+Rs. 2,09 lakhs), mixed or yellow metal for sheathing (+Rs. 1,34 lakhs), motor cars (+Rs. 1,86 lakhs), provisions (+Rs. 64 lakhs), haberdashery and millinery (+Rs 84 lakhs), stationery (+Rs. 80 lakhs), cement (+Rs. 56 lakhs), paints and colours (+Rs 53 lakhs), and leather (+Rs. 70 lakhs).

The principal articles exported were tea, (over Rs. 10 crores), raw and manufactured jute (nearly Rs. 10 crores), seeds (Rs. 7 crores) food grains (Rs. 4½ crores), raw and tanned hides and skins (Rs. 3½ crores), and raw wool and raw cotton (about Rs. 2 crores each). These articles represented 70 per cent. of the total exports to the United Kingdom as against nearly 80 per cent. in 1919-20. The shipments of tea decreased by 26 per cent. as compared with 1919-20 to 249 million lbs. Raw jute declined by no less than 56 per cent to 136,000 tons, while jute bags and gunny cloth were exported to the extent of 48 millions in number and 94½ million yards, respectively, as against 58 millions in number and 100 million yards in the preceding year. The total quantity of all kinds of seeds exported was 286,000 tons, showing a decrease of 217,000 tons or 43 per cent. as compared with 1919-20. Cotton seeds accounted for a decrease of 146,000 tons, linseed of 32,000 tons, and rapeseed of 49,000 tons, while groundnuts increased by 15,700 tons. There was a remarkable fall in raw hides and skins. The quantity of raw hides and skins amounted to 5,800 tons and of tanned hides and skins to 5,300 tons as against 18,800 and 25,900 tons, respectively, in 1919-20. Food grains mainly rice and wheat, had been conditionally released for export and showed an increase of 170,000 tons to 279,000 tons. Shipments of rubber, coffee, bones, and manganese ore improved, while there were decreases under raw cotton, shellac, fodder, bran and pollards, coir manufactured, mica, paraffin, wax, tobacco, cocoanut oil and teak wood.

As regards other British Possessions the total imports fell by Rs 2 crores to Rs. 18 crores, while the exports rose from Rs. 47 crores to Rs. 54 crores or an increase of 15 per cent.

As compared with the pre-war year 1913-14, the value of the imports from almost all the Continental countries increased with the exception of Germany and Austria Under exports there was a marked decrease in the case of France, Italy, Germany, Austria, Sweden and the Netherlands, accompanied by an increase in the trade with Belgium, Norway, Spain and Switzerland How much of the increase in the imports from Belgium and the Netherlands is due to the transit of goods from Germany, it is not possible to estimate, but the proportion is probably high. Imports from the United States of America increased and exports thereto declined. Imports from Java fell and there was a decrease in the exports to China and Japan. As in the preceding year, the United States occupied the second place in India's foreign trade in 1920-21.

The most interesting feature of India's foreign trade was the revival of the trade with Continental countries, especially Germany and Belgium. The value of the total trade with Germany increased to Rs. 13½ crores as against Rs. 1½ crores in 1919-20, although this is only about one-third of the pre-war level. Imports were valued at Rs. 4¾ crores, consisting mostly of alizarine and aniline dyes (Rs. 1,17 lakhs), iron and steel (Rs 57 lakhs), salt (Rs. 35 lakhs), glass and glassware (Rs. 20 lakhs), paper and pasteboard (Rs. 19 lakhs), machinery and millwork (Rs. 17 lakhs), and cotton manufacturers (Rs. 9 lakhs). The value of exports amounted to Rs. 8¾ crores, of which raw cotton accounted for Rs. 3½ crores and raw jute Rs. 2¼ crores. Rice, not in the husk, was exported to the extent of about 51,000 tons, valued at Rs. 79 lakhs. Before the close of the year the export trade in raw hides with Germany showed signs of revival.

CUSTOMS REVENUE

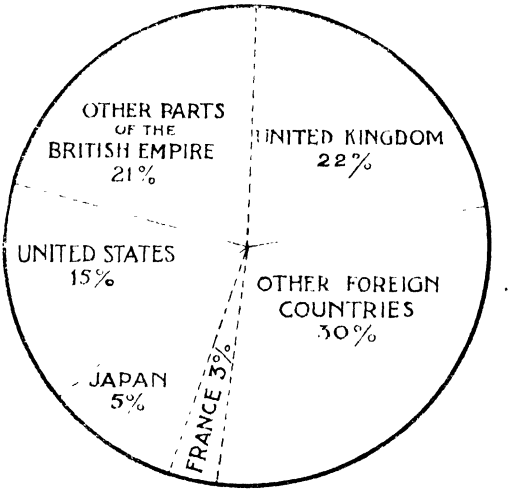
The chief event of the year was the amendment of the second Schedule to the Indian Tariff Act, 1894, which was embodied in the Indian Finance Act, 1921, and took effect from 1st March, 1921. The general *ad valorem* tariff rate on imported articles, which had stood at 7½ per cent. since March 1916, was raised to 11 per cent. A specific rate of duty of 12 annas per gross of boxes, in place of the previous 7½ per cent. *ad valorem* duty, was imposed on matches; and a duty of 20 per cent. was levied on certain articles of luxury such as confectionery, motor cars motor cycles and pneumatic rubber tyres (excluding lorries), silk piece-goods, fireworks, clocks and watches, electroplated ware, gold and silver plate, musical instruments, cinematograph films, toys, etc The special rates of duty on imported liquors, foreign sugar, and tobacco other than unmanufactured tobacco were increased; cotton machinery, hitherto free was brought under the 2½ per cent. rate, and metallic ores of all sorts were made free. By Notification the imports of grain, pulse and flour were exempted from duty throughout the year. The revised rates were in force for only one month of the year under review, namely, March 1921.

The gross sea and land customs revenue (excluding salt revenue) collected during the year under review reached the unprecedented level of Rs. 31,88 lakhs, an increase of no less than Rs. 9,40 lakhs or 42 per cent. over the preceding year and of Rs. 20,54 lakhs or 181 per cent. over the pre-war year 1913-14. To the total customs revenue realised during the year, import duties contributed Rs. 23,08 lakhs or 72 per cent. export duties Rs. 4,83 lakhs or 15 per cent. the excise duty on cotton manufactures Rs. 2,35 lakhs or 7 per cent. and that on motor spirit Rs. 54 lakhs or 2 per cent.; land customs and miscellaneous yielded approximately

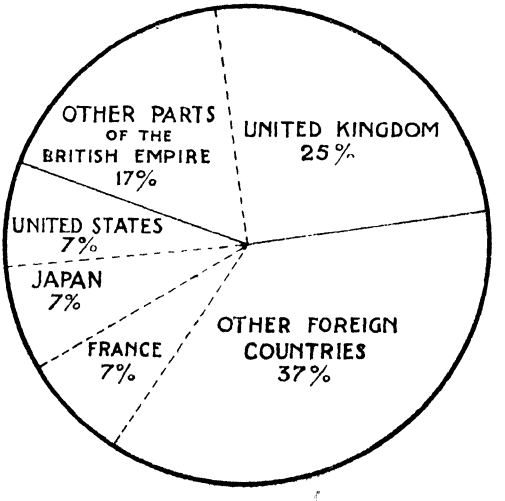
DESTINATIONS OF EXPORTS.

Share of Principal Countries in the Export Trade of British India in 1920-21, as Compared with the Average of the five pre-war years, 1909-10 to 1913-14.

1920-21



1909-10 to 1913-14 (Pre-war Average)



Rs. 1,08 lakhs or 4 per cent. Under imports the most noticeable increases were in cotton goods (+Rs. 2,60 lakhs), carriages and carts, including motor cars and cycles (+Rs. 77 lakhs), liquors (+Rs. 50 lakhs), hardware and cutlery, and paper (+Rs. 47 lakhs each), tobacco (+Rs. 42 lakhs), machinery (+Rs. 34 lakhs), instruments and woollens (+Rs. 27 lakhs each), iron and steel (+Rs. 21 lakhs), and railway plant (+Rs. 20 lakhs). On the other hand, petroleum showed a decrease of Rs. 31 lakhs and sugar of Rs. 19 lakhs.

SHIPPING.

As to the nationality, number, and tonnage of vessels which entered and cleared at ports in British India, the total net register tonnage of vessels including native craft was 15,473,000 tons in the year under review as against 13,000,000 tons in 1919-20 and 17,386,000 tons in the pre-war year 1913-14. This showed an increase of 19 per cent over the preceding year, although still 11 per cent. below the pre-war year. Of the total tonnage entered and cleared during the year 15,191,000 tons or 98 per cent. were accounted for steamers and 282,000 tons or only 2 per cent. by sailing vessels (Indian and foreign). The number of vessels that entered and cleared with cargoes and in ballast increased to 8,503 from 8,228 in 1919-20. Of these, the number of steamers was 5,886 against 5,195, sailing vessels 7256 against 601, and native craft 1,891 against 2,432. The average tonnage per steamer was 2,531 as gainst 2,440 in the preceding year and 2,683 in the pre-war year. The clearances of vessels with cargoes and in ballast engaged in overseas trade are shown in the following statement :—

Tonnage clearances with cargoes and in ballast.

	1913-14 (pre-war year).		1919-20		1920-21	
	Tons (1,000).	Per cent.	Tons (1,000)	Per cent.	Tons (1,000).	Per cent.
British ships (including British Indian) .	6,679	(76)	5,435	(84)	5,935	(80)
Foreign ships	2,083	(24)	1,067	(16)	1,492	(20)
TOTAL .	8,762	(100)	6,502	(100)	7,427	(100)

The share of British ships decreased to 80 per cent. from 84 per cent. in 1919-20, while that of foreign ships had a corresponding increase to 20 per cent. from 16 per cent. As compared with the pre-war year 1913-14, however, the share of British ships rose in 1920-21 by 4 per cent. and that of foreign ships fell to the same extent. The total clearances showed an increase of 14 per cent. over the preceding year. These figures do not take into account Government vessels or vessels chartered on Government account.

The tonnage of vessels cleared with cargoes and in ballast to the United Kingdom was 1,454,000 tons, a decrease of 24 per cent. as compared with 1919-20 and of 23 per cent. as compared with 1913-14. There was an increase in the clearances to Japan and the United States while Egypt showed a fall. The percentage share of Bengal in the total tonnage of entries and clearances was 32 against 23 in the pre-war year 1913-14, of Bombay 27 against 24, of Sind 11 against 12, of Madras 16 against 25, and of Burma 14 against 16.

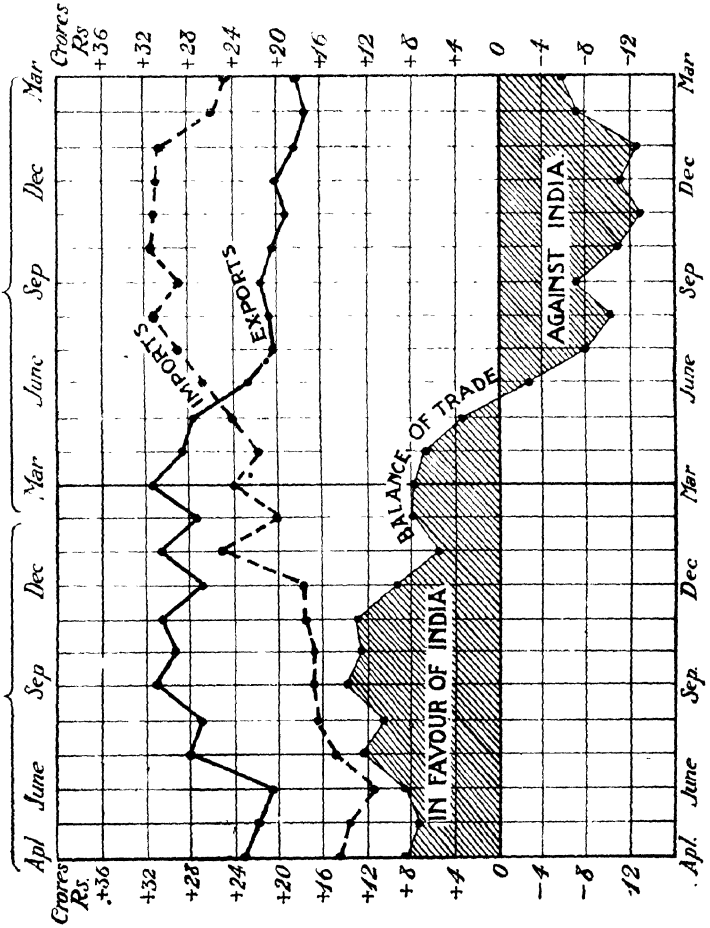
THE BALANCE OF TRADE.

The outstanding feature of the year's trade was the excess of imports over exports of private merchandise by over Rs. 79 crores. In the preceding year exports had exceeded imports in value by Rs. 126 crores and in 1918-19 by nearly Rs. 85 crores. In the first two months of the year under review exports held their own, but imports were fast gaining on them and the favourable margin of Rs. 7 crores in April 1920 was reduced to Rs. 4 crores in May, and was converted to an adverse balance of Rs. 3 crores in June. From that month the adverse balance continued to the end of the year, the highest figures recorded being Rs. 13 crores in November, 1920, Rs. 12 crores in December, 1920, and again Rs. 13 crores in January, 1921.

Another feature of the year was a net export of treasure on private account, valued at Rs. 1½ crores as against a net import of Rs. 11 crores in 1919-20 and of Rs. 29½ crores in the pre-war year.

India was successful in buying the greater part of her silver requirements cheap and in exporting her gold when it was dear. In the end, the demand for silver outweighed the propensity to hoard gold, and gold exports, facilitated by low exchange levels, ultimately exceeded the imports of silver. Rupee-sterling exchange may be described as having responded to the general influence exercised first by a rising and then by a declining balance of trade. Subject to this dominant influence it felt the attraction exerted by the world price of silver. And finally, during the last half of 1920-21 it fluctuated from day to day, on its downward career, between the point at which it was profitable to import silver and that at which it paid to export gold, the margin of profit being influenced by fluctuations in the value of £1 in terms of dollars, or the "crossrate" as it is popularly termed.

Imports, Exports, and Balance of Trade in India (Private Merchandise only).



A special feature of the later years of the war, and of subsequent years also, was the insistence of Exchange Banks in India on the production of cover, at first as a condition to financing export trade, and later (when the balance turned) to financing imports. The insistence on cover for export bills during 1917 and 1918 encouraged export firms to take up import business in order that they might be able to provide the necessary cover themselves, and thus avoid the premium demanded for cover in the open market. This development stimulated the demand for foreign goods, and the imports business, once engaged, was retained by many firms and helped to swell the volume of orders for foreign goods during 1920.

A second point of importance is the undoubted remittance (on favourable exchange rates during 1919-20) of funds earmarked for the purchase of goods from abroad, and particularly of machinery and plant. The later months of 1919 and the earlier months of 1920 saw many successful appeals to the public for funds to finance industrial enterprise in India. These funds were remitted, in many instances, while exchange was high, to finance plant and machinery, which on delivery during 1920-21, had thus already been paid for. That is to say, the effect on exchange of an unknown, but perhaps appreciable, proportion of the imports of 1920-21 had already spent itself in 1919-20.

Conversely, contracts for the purchase of piece-goods, provisions, hardware and other commodities, representing expenditure from the income rather than the capital of India, were in many instances repudiated, pending the recovery of the sterling value of the rupee. The total value of such "cold-storage" bills has been estimated on good authority, towards the end of March 1921, at Rs 30 crores for piece-goods and Rs. 20 crores for other commodities of this class. That is to say, accounts to the extent of Rs. 50 crores still remained to be settled on 1st April 1921, for goods which figure in the import trade of 1920-21.

TRADE OF INDIA, 1921.

During the eight months ended November, 1921, as compared with the corresponding period of 1920, the value of the imports decreased by Rs. 49 crores or 22 per cent. to Rs. 174 crores, and the total exports, including re-exports, decreased by Rs. 33 crores or 18 per cent. to Rs. 149 crores. The exports of Indian Merchandise showed a decrease of Rs. 28 crores or 17 per cent. and re-exports decreased by Rs. 4 crores or 33 per cent. The grand total of imports, exports, and re-exports amounted to Rs. 323 crores, as against Rs. 405 crores, a decrease of Rs. 82 crores or 20 per cent.

Imports of treasure (private and Government) decreased by nearly Rs. 6,82 lakhs to Rs. 18,38 lakhs. Gold bullion fell by Rs. 14,17 lakhs to Rs. 2,22 lakhs, and sovereigns and other British gold coin by Rs. 1,48 lakhs to Rs. 1,72 lakhs, while other coined gold rose by nearly Rs. 3,10 lakhs to Rs. 3,89 lakhs. Imports of silver increased by Rs. 5,74 lakhs to nearly Rs. 10,55 lakhs. Exports of treasure also increased by Rs. 11,08 lakhs to Rs. 18,53 lakhs.

Balance of Trade.—India's balance of trade during the eight months, April to November, 1919, 1920 and 1921, is shown in the following table :—

	Eight Months, April to November.		
	1919	1920	1921
	Rs. (lakhs)	Rs. (lakhs)	Rs. (lakhs)
Exports of Indian merchandise (private) .. .	1,97,67	1,68,36	1,39,92
Exports of Foreign merchandise (re-exports) .. .	12,31	13,46	9,05
Imports of Foreign merchandise (private) . .	1,21,96	2,23,02	1,74,22
Net exports of merchandise (private) .	88,02	—41,20(*a*)	—25,25(*a*)
Net imports of gold (private) .	2,29	5,57	—8,56(*b*)
Net imports of silver (private) ..	- 1(*b*)	1,64	8,46
Net imports of treasure (private) ..	2,28	7,21	—10(*b*)
Council Bills and telegraphic transfers paid in India .	25,84	..	..
Telegraphic Transfers from the Bank of Montreal paid in India.	2,26	..	..
Sterling Bills on London sold in India .. .	20	28,55	..
Enfaced Rupee paper (net imports) .. .	60	53	—1,42
Interest on Enfaced Rupee paper .. .	18	14	15
Balance of trade in favour of India ..	57,06	....	....
Balance of trade against India ..	....	20,53	23,88

It will be seen from the above table that the balance of trade, so far as shown by the statistics of merchandise, treasure, Council Bills, and Enfaced Rupee paper, was against India to the extent of Rs. 23,88 lakhs in the eight months ended November, 1921, as compared with Rs. 20,53 lakhs against, and Rs. 57,06 lakhs in favour of, India in the corresponding period of 1920 and 1919, respectively.

(*a*) Net imports. (*b*) Net exports.

INDIAN FISCAL COMMISSION.

The Government of India in October, 1921, appointed a Commission of officials and non-officials with the following terms of reference :—"To examine with reference to all the interests concerned the tariff policy of the Government of India, including the question of the desirability of adopting the principle of Imperial preference, and to make recommendations."

The personnel of the Commission was nominated as follows :—President, Sir Ibrahim Rahimtulla, Kt.; Vice-President, Mr. J. M Keynes; Members : Mr. Seshagiri Ayyar, M L.A., Mr Ghaneshyamdas Birla, Mr. J. C Coyajee, Sir Maneckjee Dadabhoy, M C.S., Mr Jamnadas Dwarkadas, M.L.A., Sir Edgar Holberton, M.L.A., Mr. R. A Mant, I.C.S., Mr. Narottam Morarji, Mr C. W. Rhodes, M.L.A., and Sir M. De P. Webb, M.L.A., Mr. H G. Haig, I C.S., was officially appointed secretary and Mr. F. F. Rogers, assistant secretary.

The Commission held its initial meetings, to discuss preliminaries, in Bombay, in mid-November and began hearing evidence on 26th November, at Karachi. Its tour through India and Burma will terminate at Delhi on 8th March. Before the meeting of the commission an elaborate questionnaire in connection with it was issued to any who cared to apply for it and the invitation to associations and individuals to give evidence was couched in the widest terms.

THE SUGAR COMMITTEE.

The Report of the Indian Sugar Committee appointed by the Government of India in October 1919, to investigate the possibility of organizing and developing the sugar industry in India was published in August, 1921. The Committee as orginally constituted consisted of Mr. J. Mackenna, C I E, I C S, Agricultural Adviser to the Government of India, President; Mr. F Noyce, C B.E, I C.S, Vice-President; Mr. J W. Macdonald, Managing Director of Messrs Henry Tate and Sons, the well-known sugar refiners of London, Mr. W W. Craib, late Sugar Planter of Demerara and Cuba, Sir Frank Carter, C I.E., C B.E., of Messrs Turner, Morrison and Company, Calcutta, Sardar Jogendra Singh, Taluqdar of Oudh, Mr B. J Padshah of Messrs Tata Sons and Company, Bombay, and Mr. Wynne Sayer of the Indian Agricultural Service, with Mr. A. E Gilliat, I C.S., as Secretary. On Mr. Mackenna's resignation in April, 1920, Mr Noyce succeeded him as President and Mr. G Clarke, Agricultural Chemist, United Provinces, was appointed to the Committee.

In the introductory chapter to the Report, the considerations which led to the appointment of the Committee are emphasized. These were the very low production of sugar to the acre in India as compared with the other great cane growing countries of the world and the dependence of the country on foreign supplies to supplement its own outturn. It is pointed out that the average production of sugar to the acre in India, is only 1·07 tons against 1·96 tons in Cuba, 4·12 tons in Java and 4·61 tons in Hawaii. The comparison is even less favourable to India, if it is remembered that 99 per cent. of the sugar produced in India is in the form of "gur" which is in reality a sweetmeat and yields not more than 50 per cent. of refined sugar, whilst the cane sugar from other countries yields on the average 90 per cent. the residue in each case consisting of molasses and waste. In actual sugar, therefore, India's production per acre is less than one-third that of Cuba, one-sixth that of Java and one-seventh that of Hawaii. In spite of its 2¾ million acres under sugar, seven times the acreage of Java, the imports of sugar during the four pre-war years, averaged 724,000 tons, valued at Rs. 12·71 crores and during the four war years 532,000 tons, valued at Rs. 13·43 crores The bulk of this came from Java.

Java Sugar.—Chapter II of the Report is devoted to an examination of the causes which have secured for the sugar industry in Java its present strong position. The first of these is the scientific work carried out by the Research Station Association of the Java Sugar Industry at Passarocan and Semarang and its staff of advisers of groups of factories This work is not subsidised in any way by the Government of the Netherlands Indies, the funds for it, some Rs. 12 lakhs annually, being provided by the industry itself The second is the system of leasing land from the Javanese landholders, which gives the factories entire agricultural control over it and enables cultivation to be carried out in a thoroughly efficient manner. The third is the up-to-date character of the factories

Possible Increases.—The Report proper is divided into three parts, one devoted to problems of agriculture and irrigation, one to manufacturing questions and one to questions of organization In Part I the prospects of increasing both the area under cane and the yield per acre are examined province by province. It is only in Burma and Assam that the Committee see any hope of a material extension of the area under unirrigated cane. In both provinces, though the area under cane is at present small, the climatic advantages are great, as is shown by the excellent thick canes which are already grown, and large areas of waste land are available for capitalist grants. For both provinces, the Committee recommend the appointment of a committee of three selected officers to explore likely areas and to suggest suitable sites for research stations. In Burma, the outlook for popularising cane growing among small cultivators is considered promising but in Assam their indolence and inefficiency and the scattered nature of their cane cultivation render any extension except through the development of a factory industry improbable. Bengal is ruled out as a likely field for expansion for various reasons, the most important being the competition of jute. Outside the provinces mentioned and North Bihar, cane can seldom be grown successfully without irrigation and the

extension of cane cultivation must therefore depend very largely on the provision of additional irrigation facilities. In the United Provinces, which already contribute nearly half the cane growing area of India, the execution of the Sarda Canal Project should add another 100,000 acres. In the Punjab, which stands second, although the short monsoon period and the extremes of temperature will always be a serious handicap to an extension of cane, the lower costs of cultivation compensate for lower yields as compared with tropical India. A considerable expansion of the cane area may therefore be looked for under both old and new canals, given the stimulus of high prices, and it is recommended that the possibilities of the tracts to be opened up by the new canals projected should be tested by the grant of land for the cultivation of improved canes by intensive methods on the lines of the grants already made for growing improved varieties of cotton. In Bihar the prospects of cane in the Sone canal area are considered excellent provided the tract can be drained and a drainage survey is recommended. In Bombay, an ultimate area of 150,000 acres under excellent cane, five times the present acreage, is anticipated but a remedy must be found for the difficulty arising from waterlogging and recommendations are made with a view to this end. The outlook for cane in Mysore is specially favourable provided irrigation supplies can be concentrated. Prospects of extension in Madras, in spite of its tropical advantages are not hopeful owing to the ingrained preference of the cultivator for rice, unless a factory industry growing its own cane on leased land develops nor, except under wells, are they any better in the Central Provinces, the policy of the Local Government being to ensure that its irrigation supplies are used for food grains. In the Central Provinces, the United Provinces, the Punjab and Bombay, much can be done to promote cane growing under wells and it is recommended that the Agricultural Engineering Department in these provinces should be strengthened for the purpose of dealing with well boring and pumping installations.

Improvements.—The two great means of securing an improvement in yield are the introduction of better varieties and the adoption of improved methods of cultivation. The agricultural practices and the varieties of cane grown in the different provinces are so widely diversified that it is impossible to do more than give the barest indication of the recommendations made in the Report in regard to them. In the United Provinces, it is held that the enhancement of yield to be obtained by applying improved methods of cultivation to the local thin and medium canes, though limited, is appreciable and that improvement in this direction is likely to be more rapid than in the direction of introducing better varieties. Superior thick and medium varieties must, however, be introduced if the Provinces are to contribute materially towards the solution of the cane problems of India and the feasibility of introducing them has already been demonstrated at Shahjehanpur. In Bihar, improvements in agricultural practice and consequently in yield can for the present only be looked for in North Bihar where the great need of the European planters is improved varieties responding to intensive cultivation. When this need is met, a beginning may be made in introducing the improved varieties and methods to the small cultivator. In Bombay, the problem on the Deccan canals is the reduction of the high costs of cultivation and extensive propaganda to demonstrate the value of the work already done at Manjri is recommended. In all provinces except Bengal, the Central Provinces and the North West Frontier Province, it is proposed that research stations working under an Imperial Research Institute should be established solely for work on cane. In the excepted provinces, there is not at present sufficient justification for separate cane research stations and cane work would remain in the hands of the local Agricultural Department.

Manures.—The Committee regard the provision of a cheap supply of nitrogenous fertilizers as the most important of the general agricultural problems relating to cane and indeed as the most insistent problem of Indian agriculture. An investigation of the possibilities of utilizing the power from hydro-electric schemes in India for the fixation of nitrogen by the cyanamide and other processes is therefore recommended. Deeper ploughing is the first essential for improved cane cultivation and the introduction or power plants for crushing cane, threshing and pumping would enable better ploughs to be used as it would reduce the strain on the bullocks. On large estates, cane cultivation with steam tackle will be found both effective and economical whilst on smaller estates there is great scope for the use of motor tractors. The most important work of the Agricultural Department is the demonstration of improved agricultural methods and the spread of better implements and even outside the areas for which in the provincial chapters a special demonstration staff has been recommended for work on cane, it is suggested that a staff should be similarly organised for general work and given instruction at the cane research stations. It is insisted that demonstration should be carried out on the cultivators' own fields. One of the great obstacles to the extension of cane cultivation is its high cost and the lack of capital to meet it. The co-operative movement must contribute to remove this and must make advances to cane growers on a more liberal scale and for longer periods than to growers of other crops. Factories should make advances to cane growers through their co-operative societies whenever this is possible.

Non-Cane Sugars.—As regards possible sources of sugar supply other than cane, the Committee are not hopeful of any extension of the palmyra sugar industry which is handicapped in South India by shortage of tappers and in Upper Burma by shortage of fuel. They consider that there are great possibilities of improving the yield and quality of the gur made from the juice of the date palm in Eastern Bengal and recommend that the investigations already carried out on this question should be prosecuted to a conclusion, before any attempt is made to develop other date palm areas. It is only in the North West Frontier Province and the Punjab that beet sugar offers any prospects and there further experiment is necessary under more diversified agricultural conditions and closer chemical supervision. The Peshawar Valley

in the former province seems to offer a unique opportunity for a combined cane and sugar factory.

Manufacture.—Part II of the Report which discusses manufacturing questions opens with a statement of the problem which is how to reduce the loss or inversion of 34 per cent. of the sucrose in the cane which takes place in the manufacture of gur and of 29 per cent. which takes place in the manufacture of sugar in India as compared with the results obtained in up-to-date factories in other countries. It has to be decided by what lines of improvement these losses can be most materially reduced. The most hopeful are the introduction of less costly and more efficient methods of making gur on a small scale and an extension of the manufacture of sugar direct from cane in large factories combined with improvements in the processes followed. The direct manufacture of white sugar in small factories is condemned on the ground of high cost of production, heavy losses of crystalline sugar and the unduly high proportion of molasses. The refining of gur in large factories is considered to have no future before it on account of the low quality of the raw material and the heavy losses inevitable with the combination of processes by which the sugar is manufactured which renders the industry incapable of withstanding efficient competition from factories making sugar direct from cane in normal times. An investigation into the possibilities of manufacturing gur in large factories, of manufacturing muscovado sugar or other intermediate product direct from cane in small factories and of introducing the manufacture of white sugar from muscovado sugar or other intermediate product in large factories is recommended but the Committee consider the prospects in these directions very limited.

Gur.—It is held that the first essential for the improvement of the manufacture of gur which represents 99 per cent. of the total quantity of cane sugar at present produced in India is the substitution of small power plants for the bullock mill, the proper adjustment and working of which are rendered impossible by the strain involved on the bullocks. It is therefore recommended that the Agricultural Engineering Department of each province should endeavour to evolve a standard design of power plant suited to the local canes and capable of crushing one and two tons of cane an hour respectively. All the improved furnaces so far designed are considered defective in the arrangement of the pans and the incomplete combustion of the gases. A plan of a furnace designed to remove these defects is attached to the Report.

Cane Supplies:—The smallness and inefficiency of the Indian sugar factories are attributed mainly to their difficulties in obtaining adequate supplies of cane. None of the factories in India works up to its full capacity and half of them only crush half the cane their mills could deal with. The problem for solution is therefore to concentrate the area on which the factories draw for their cane and to ensure supplies at the right time. The grant of Government waste land to factories which is strongly recommended offers only a partial remedy as suitable lands are only available in Assam and Burma and to a problematical extent on canals which have yet to be constructed in the Punjab. Whilst it is admitted that the compulsory acquisition of land by Govt. and its subsequent lease to factories would be the easiest and speediest way of overcoming the difficulty, the Committee, with the exception of Mr. Padshah, are opposed on principle to such acquisition except in certain restricted cases such as the acquisition of small blocks as centres of demonstration and seed supply and for the installation of tube wells and pumping plants. They hold that the better way in the true interests of all concerned is greater efforts on the part of factories, in which they should receive assistance from Government officers, to obtain land on lease on the Java model, the grant to cane growers on suitable terms of shares in a factory or participation in its profits and, above all, the payment to growers for their cane on an adequate scale. The scale recommended is one based on a price for cane equal to one half the price of the sugar produced from it. Several suggestions for new railway lines in North Bihar and elsewhere which would be of great benefit to the factory industry are mentioned. The licensing of factories by Government, *i.e*, the grant to factories of a practical monopoly of working in a particular area is not recommended, except by Messrs. Padshah and Sayer, as it is held that no efficient factory paying full value for cane and entering into close relations with the cultivators in its neighbourhood need fear competition whilst the possibility of competition is a valuable stimulus to efficiency. Inside the factory, the adoption of various mechanical improvements such as the Java system of lifting cane loads bodily on to the carrier and of a mill consisting of two crushers in front of a train of three three-roller mills with two macerations is suggested. The need for better supervision and above all for more efficient chemical control is insisted on and a system of chemical and analytical records which will enable all losses to be traced is formulated. The committee admit that many of their conclusions regarding the prospect of sugar production by factory methods in Upper India are speculative and that unless initiative is forthcoming, capital is likely to concentrate in new and undeveloped areas such as Burma and Assam to the neglect of the great cane growing tracts of Upper India. They therefore recommend that, in order that the possibilities of these tracts may be properly explored, Government should erect a pioneer factory in Upper India outside the present factory zone—the Karnal or Rohtak district of the Punjab is suggested as a suitable locality—and that this should be run on purely commercial lines by a directorate of five, a managing director, the Director of the Sugar Research Institute, another official nominated by Government and two non-officials nominated by the Sugar Board, the managing director and the factory staff being recruited on special terms and allowed to participate in profits.

A Sugar Board.—This brings the Committee to questions of organization which are dealt with in Part III of the Report. They hold that the organization of the sugar industry on the Java model adapted to suit the needs

of India is essential to progress. Such an organization must be largely official at the outset but the object should be to hand it over almost entirely to non-official control at as early a stage as possible. It should take the form of an Indian Sugar Board with five official and six non-official members. In the first instance, all the members would have to be nominated by Government but the first duty of the Board should be to evolve a scheme to secure representative appointments. Simultaneously with the establishment of the Board should be that of an Imperial Research Institute with three divisions, agricultural, chemical and engineering, which should control the work on the research stations proposed for the provinces as well as that on the cane-breeding station at Coimbatore, the excellent work in progress at which should be continued on its present lines except that the attempt to evolve improved varieties of cane for Upper India which will withstand the indifferent usage of the ordinary canegrower should be abandoned as impracticable. The functions of the Sugar Board would be to control the policy of the Research Institute and the administration of its funds, to advise Government on all matters affecting the sugar industry and to supervise the issue and receipt of returns by the Research Institute. The cost of the Board would be negligible as membership would be honorary. As regards that of the Institute, the sugar industry should be expected to contribute and the first representative Board should evolve a practical scheme of contribution. It is held that the peculiar conditions of India especially the importance of the gur industry preclude the complete elimination of Government interest in the Institute and that, therefore, even when the industry is in a position to take over the main control, its funds should be provided by a voluntary levy on factories supplemented by a Government subsidy to ensure consideration of the interests of the small grower. The work of the Board and the Institute must be supplemented by the establishment of a Sugar School forming an integral part of the Institute and providing the specialised technical training in field and factory which will qualify men to enter the sugar industry as competent workers. The Sugar School should eventually be affiliated to a University and should then confer a B. Sc. degree on successful students. A site in the Basti or Kheri district of the United Provinces is suggested as suitable for the location of the Research Institute and the headquarters of the Sugar Board.

Tariffs.—The Committee consider that the present tariff combined with the advantages resulting from ocean and railway freights should provide ample protection for the Indian sugar industry and that, if a scheme of Imperial preference is adopted generally—it is pointed out incidentally that the only part of the Empire which would benefit as regards sugar is Mauritius—it should take the form of a proportionate reduction on the present tariff. A number of recommendations are made with a view to secur an improvement in crop forecastes and other statistical information relating to sugar.

ABSORPTION OF GOLD (both coin and bullion) IN INDIA.

Note.—The figures in this table have been revised. The quinquennial average figures are inserted only for comparative purposes. The progressive total of additions to stock (item 9) and net progressive absorption (item 10) are calculated on the annual figures and are not based on these averages. Item 9 is the sum of the yearly figures in item 5 and item 10 the sum of the yearly figures in item 8.

(*a*) Excludes gold imported and exported on behalf of the Bank of England.

(*b*) Rupees figures for 1919-20 have been converted at the rate of Rs 10= £1.

COMMERCIAL INTELLIGENCE SYSTEM.

The Commercial Intelligence Department, India, was founded in 1905 under the control of a Director General of Commercial Intelligence. Its primary object was the supply to the public of such information as would stimulate Indian trade development.

As now constituted the Department serves the purpose of a Central Bureau at which information on subjects of commercial interest is collected and disseminated to the public, and from which replies are posted to enquiries by business men on commercial matters. It is situated at 1, Council House Street, Calcutta, the headquarters of the Director-General. The information collected by the Department and intended for general publication is printed in its weekly official organ, the "**Indian Trade Journal.**" The principal features of the "Journal" are (*a*) information as to Tariff Changes in the United Kingdom and elsewhere which affect Indian interests, (*b*) Summaries of the leading features of consular and other trade reports, (*c*) Abstracts of the proceedings of the various Chambers of Commerce in India, (*d*) Abstracts of crop reports and forecasts, (*e*) Government orders, *communiques* and other notices affecting trade, and (*f*) anonymous enquiries for securing trade introductions. It also contains analyses of Indian trade statistics.

A Commercial Museum has been permanently organised as a part of the Commercial Intelligence Department with the object of bringing together purchasers and suppliers of Indian manufactures. It thus supplements the existing resources of the Department as a bureau of information, and stimulates the development of the natural resources of the country. The Museum contains samples of such goods of Indian manufacture as have been received for exhibition together with information as to prices and the names of the manufacturers and commercial agents. The exhibits have been carefully grouped and catalogued. Order books are available in which orders may be registered direct with the manufacturers or their respective commercial agents. An Enquiry Office is attached to the Museum, which is also located at 1, Council House Street, Calcutta, and is open on week days from 10-30 a.m. to 5-30 p.m. and on Saturdays from 10-30 a.m. to 2-30 p.m. *Admission Free.*

THE INDIAN DEPARTMENT OF STATISTICS.

One of the many lessons of the War is that statistics must increasingly become the guide of Government as the haphazard methods of the past are outgrown. Statistics are no longer the mere by-products of departmental accounting, nor are they merely ancillary to administration in the narrow sense, but they are a scheme of organisation in themselves framed with the broadest purposes in view They are the quantitative expression of the activities of the people and are, therefore, of the greatest significance. Similarly the War taught the United Kingdom as it did the United States that statistics were winning the war for these countries, especially in regard to the food-supply and the rationing of raw materials. In the United States during the year which followed the entrance of that country into the War, the statistical organisation doubled its scope. Similarly in India as in the Dominions of Canada, Australia, New Zealand and South Africa, the War showed that a centralised statistical system was advantageous not merely in regard to the methods of presentation and publication, but in regard to the skill with which the statistics could be collected. In 1917 it will be remembered Italy reorganised her statistics remembering doubtless the effectiveness of the *Statistisches Reichs Amt* as a weapon of Germany. The War has demonstrated that statistics are not merely a record of what has been, but of use in showing what will be. As the Dominion Statistician of Canada has pointed out: "The duty of a statistical organisation is to assist directly in the day to day problems of administration, as well as to provide a theoretical background."

The scope of the Department is in a nut shell that the Department should be the central thinking office on the subject of Indian statistics Mr. A. L. Bowley has pointed out that among the functions of a central statistical office are the following: "Cognizance of all the statistics of more than departmental importance which are published officially . . . . . Misleading statistics must be suppressed, overlapping must be stopped, careful plans must be devised for filling in the gaps at present left, and preparations made for investigation of matters likely to become of public importance. All Bills involving or affecting the collection of statistics should be considered by it . . . . Publications for the use of the public should in some cases be edited by it, with careful definitions, and with short analyses and criticism stating accurately and intelligibly the purport and meaning of their contents; in other cases, where a department already exists for such publication, there should be co-operation with a view to carrying out the purposes already indicated."

The year 1919-20 was an important year in the activities of the Department of Statistics in India. A conclusion was come to with regard to the future scope of the Department and of its reorganisation. The Department continued to be the central storehouse of statistics of all kinds, not merely those relating to commerce, but also those relating to other economic and social phenomena, such as labour statistics, especially statistics of the cost of living, wages, etc., industries, finance, education, law and justice, and vital statistics.

The Department is attempting more and more to become a national laboratory for the collection of economic and social phenomena on behalf of Government. There are as yet no statistics acts for the collection of statistics as is the case with Canada, Australia, New Zealand and South Africa. There are, however, legislative enactments dealing with the collection of statistics of census, foreign trade, and other similar matters. There is, however, no one act by which statistics can at present be collected. In the near future especially in regard to Census of Industrial Production, an act similar to that in the Dominions or in the United Kingdom will be necessary.

Since the forties of the last century, the publication of statistics has been systematically undertaken by the India Office. **The history of statistical development** in the Government of India is briefly as follows: In 1871, a Director-General of Statistics was appointed. The first occupant of the post was Sir William Hunter. He was concerned chiefly with the organisation of a statistical survey of the Indian Empire which began in 1869. In 1895 it was considered that the disconnected manner in which Indian statistics were compiled and published by the various departments of the Government of India seriously detracted from their value and that intelligent examination, collation and discussion were necessary in order to secure uniformity and to render these statistics as useful as they might and should be, a Director-General of Statistics was therefore appointed in 1895 This arrangement continued until 1905 when the office became a part of the new office of the Director-General of Commercial Intelligence. From the 1st of April 1914, the Department of Statistics was formed as the experience of working of the Commercial Intelligence Department had shown that a Commercial Intelligence Department and a Central Statistical Department could not consistently with efficiency be combined under the charge of one officer.

There are at present **ten sections** which deal with different kinds of work:—Section (*i*) deals with administration, pay and pensions, records, distribution of publications and correspondence connected therewith, etc. Section (*ii*) deals with wholesale and retail prices and cost of living indexes. It is to this section that is entrusted the working out of data on the fall in the purchasing power of money. Section (*iii*) deals with statistics of rural, urban and industrial wages. The statistics of wages include not merely money or nominal wages, but real and effective, that is, in calculating real wage rates, the increase in the cost of living is taken into account. Section (*iv*) deals with a series of important judicial administrative, educational and vital statistics. In recent years, developments in education and sanitation have made these statistics of great importance as they are the basis of education and of public health, one might even say of the moral tone of the whole range of social life. Section (*v*) deals with rail and river-borne trade statistics which in a country such as India is of very great importance, especially during times of high prices, scarcity and famine. Section (*vi*) deals with similar statistics relating to the rail and river-borne and frontier trade for the Presidency of Bengal. This is in fact provincial work which will eventually be transferred to the Director of Industries, Bengal. Section (*vii*) the largest section of the department deals with foreign commerce, imports and exports of merchandise, treasure, especially customs duties, coasting trade, shipping, etc. Section (*viii*) deals with the trade carried across the land frontier of India which extends to a distance of no less than 4,800 miles. Section (*ix*) another important division of the department deals with the main industry of the country, namely, agriculture. In recent years, the Government of India and local Governments have devoted much attention to the improvement of these statistics, especially statistics relating to the crop forecasts. Owing to a highly developed system of land revenue, the statistics of area under crops are perhaps better than those of any other country in the world. In regard, however, to estimates of outturn this cannot be said, although considerable improvements have been made on the suggestion of the Central Statistical Department. In addition to agricultural statistics this section deals with cattle census, tea and coffee production, rubber production and other matters connected with agriculture and land revenue. Section (*x*) which will shortly be divided into two sections deals at present mainly with industrial and financial statistics. Statistics relating to the working of factories, industrial concerns of all kinds, joint stock companies, co-operative societies and banks are also handled by this section. Financial statistics are scrutinised and compiled in this part of the office.

Staff.—At the head of the Department is the Director who will in future be assisted by a gazetted officer of wide statistical experience and by three superintendents. The Department consists of about 100 assistants. There are two divisions in the Department, an upper and a lower. The upper division consists of supervising staff with men who are mostly distinguished university graduates in mathematics or economics and the lower division of compiler amongst whom there are many graduates of the University.

It will thus be seen that the work of the Department of Statistics resembles the work effected by the Central Bureau of Statistics in the Dominions. It differs, however, in a large degree from similar work done at the Board of Trade. In the United Kingdom, there is no Central Department of Statistics. The Board of Trade, however, is the office concerned with general statistical work probably more than any other. Several departments of the Government of the United Kingdom prepare and publish statistical information dealing with matters pertaining to the respective departments. For example, the Board of Customs and Excise publishes statistics of imports and exports (in consultation with the Board of Trade); the Ministry of Agriculture the agricultural statistics of England and Wales and prices; the Ministry of Health the statistics of census and public health, etc.; the Ministry of Labour retail prices, wages and statistics of strikes and lock-outs; the Home Office statistics of

mines, minerals, and crime and statistics of a similar nature; the Board of Inland Revenue statistical information relating to general revenue matters, income-tax, duties, stamps, and estate duties. The Department of Statistics in India has not only to compile the all-India figures from provincial or local returns but has to digest, summarise, rearrange and in many cases to convert statistical data.

The work of the Department was put on a solid foundation by Mr. J. E. O'Conor who held office from 1895 to 1902 and at present an attempt is being made to build a structure of growing usefulness, especially in regard to domestic and foreign commerce on this foundation. There is and must inevitably be a tendency to expansion in the work of the Department.

As the decennial census is in a country with 330 millions a matter of considerable organisation, the Government of India have placed this under a special Officer called the **Census Commissioner** (Mr. J. T. Marten) who is for official purposes subordinate to the Department of Education as the Department of Education in the Government of India is responsible for public health.

Recent labour troubles throughout the country and the obligations in connexion with labour, undertaken by India as a signatory of the Treaty of Peace, have made it necessary to develop the **labour statistical work** of the Department. Local Governments, such as the Government of Bombay and the Government of Madras, have formed, or are in the process of forming, labour bureaux of their own This will be of great advantage to the Central Statistical Office, especially in regard to the collection of more accurate information regarding the movement of wages and prices.

Under the reorganisation, three features of the centralised statistical bureau will be developed In the first place, a staff of experienced clerks capable of being shifted from section to section during times of pressure of work will be a feature of the new statistical office as statistical work in the various sections has much ebb and flow. Another line of development will be the increased use of **mechanical appliances** in statistical work. During the year 1920 machines were obtained from England and have already been greatly in use in the work of the Department where labour saving is important. India, however, is far behind the United Kingdom, France, the United States, and especially the Dominions, in regard to machinery for statistical work. The War and the consequent scarcity of male labour revolutionised statistical work in the United Kingdom and to-day punching, sorting, and tabulating by machinery are the order of the day. The Hollerith and especially the Powers card punching and electric tabulating machines have revolutionised statistical compilation and the day is not far distant when the whole of the customs statistics will be compiled by machinery in one central office in the Government of India instead of by a large army of clerks in the local customs houses and in the Department of Statistics. Another feature of the bureau which calls for mention is the Library. During the year arrangements were made to house the **statistical library** which contains statistics of every country in the world with the library of the Commercial Intelligence Department and the Controller of Patents Special steps have in the past few years been taken to make the library the outstanding library in India in (1) works on statistical technique and (2) statistical publications of the different countries of the world. Up to date works on Economics and Finance are also available. The amalgamation of the library has reduced overlapping and has rendered some of the previously inaccessible works generally available. The work of the Imperial Library in Calcutta has not been interfered with and indeed the Librarian of the Imperial Library has at all times been of assistance.

As is evident from what has been said the re-organisation of the Department is still in process of completion. The demands made on the Department by the Government of India, local Governments and the public have far exceeded the expectations. Indian States have co-operated in a way which has brought the Department into the closest possible touch with these States which are important in the statistical conspectus of India. On the suggestion of the Conference of Ruling Princes and Chiefs of India, which met in Delhi in 1917, a class is held annually in Calcutta. 29 officials attended the class held in November 1919, representing Hyderabad, Baroda, Mysore, Travancore, Gwalior, Patiala and other large States. A class was again held in January 1921 and 8 attaches were deputed for training.

The Department is always glad to forward information of a statistical nature relating to commerce, industry, labour, prices, wages, cost of living, education and other statistics and promptly attends to inquiries, written or verbal.

The **address** of the Department is:—Department of Statistics, India, No. 1, Council House Street, Calcutta.

INDIAN COTTON DUTIES ACT.

The origin of this fiscal measure dates back to 1894 when the embarrassment caused to the finances of India by the fall in exchange drove the Government of India to the necessity of adopting measures to increase their sources of revenue. Among these measures was the re-imposition of the Customs Tariff which had been in force prior to 1882 subject, however, to this difference that cotton yarns and fabrics, which had formerly been subjected to an import duty, were in 1894, excluded from the list of dutiable articles. This partial re-imposition of import duties had been recommended by the Herschell Commission which, in reporting in 1893 on the currency question, had favoured this method of adding to the revenue as being the least likely to excite opposition. In point of fact, however, this recommendation which was carried into effect in the Indian Tariff Act of March 1894 gave rise to very marked opposition. In support of their policy the Government appealed to the Resolutions passed in 1877 and reaffirmed in 1879 by the House of Commons, the first of which had condemned the levy of import duties on cotton fabrics imported into India as "being contrary to sound commercial policy," while the latter called upon the Government of India to effect "the complete abolition of these duties as being unjust alike to the Indian consumer and to the English producer." It was, however, an open secret that the decision to exclude from the list of dutiable articles cotton yarns and fabrics was not the decision of the Government of India but that of the Secretary of State. It was pertinently pointed out that the volume of trade in cotton goods and yarns then represented nearly one-half of the total imports from abroad, and that the exemption of these important commodities when practically every single other commodity was being subjected to an import duty could not be justified on its merits as a sound fiscal measure, much less when it was an admitted fact that the Budget would still show a deficit.

Excise Duties Imposed.—The opposition to this measure, though it failed to secure its rejection in the Legislative Council, was strong enough to induce the Secretary of State to reconsider the matter. Yielding to the united representations of the Government of India and of Indian public opinion, His Majesty's Government eventually agreed to the re-imposition of import duties on cotton yarns and fabrics provided that it could be shown that such a measure was necessitated by the position of Indian finances, and that it was combined with an Excise duty which would deprive the import tax of any protective character. Accordingly in December 1894, consequent on the further deterioration in the financial position, two bills were introduced in the Legislative Council. The first of these subjected cotton yarns and fabrics to the general import duty of 5 per cent. *ad valorem*. The second imposed an Excise duty on all cotton yarns of 20's and above produced by Mills in British India. In introducing this latter Bill the then Finance Minister, Sir James Westland, was careful to explain that the policy underlying its provisions had been imposed on the Government of India by the Secretary of State in pursuance of the Resolution of the House of Commons quoted above. The provisions of this particular Bill are of little interest. From the first it was recognised that they were unpractical, Lancashire and Indian spinners disagreed as to the point at which the line should be drawn exempting Indian yarns from the Excise Duty. Practical difficulties were pointed out by Indian spinners as to the impossibility of spinning precisely to a particular count. From the Lancashire point of view it was contended that the Bill offered facilities for evasion while it was admitted that under the system adopted in the Bill, the taxation of Indian and Lancashire products was not being carried out on a similar basis.

Act of 1896—The Act was in fact doomed to be short-lived, and in December 1895 the Government of India were compelled to re-consider the whole position and to introduce an entirely new measure which became law in January 1896 as the Indian Cotton Duties Act II of 1896. This measure proceeded from two conclusions, namely, that no attempt should be made to obtain any duty from yarns whether imported or locally manufactured, and that an equal rate of duty should be applied to all woven goods whether imported or of Indian origin. With the object of conciliating the opposition, the rate of duty was fixed at 3½ per cent. as opposed to the general rate of Customs duty of 5 per cent. The main provisions of the Act provided that the assessment for the purposes of collecting the Excise duty should be based on returns submitted by the mill-owners; and that provision should be made for a rebate in the case of woven goods exported out of India. No control beyond a requirement that statistical returns should be furnished was attempted in respect of spinning mills. On the other hand certain concessions in the matter of import duty on Mill stores were made by executive order so as to place Indian Mills on a footing more or less equal to their Lancashire competitors.

Criticisms of the Measure.—It is not possible within the limits of the present article to do more than summarise the criticisms with which this measure was received in India. Much of the opposition was based on grounds of a transient character; as for instance that the Indian industry was then in a state of continued depression and that it had been hard hit, particularly in respect of its export trade, by the currency legislation, and by the uncertainty as to the fiscal policy of Government. In some quarters objection was offered to the exemption of yarn, which it was alleged, would place the Indian hand weaving industry at an advantage with the Indian power weaving industry. But the hostility to this measure, as also to the earlier measures already described, clearly proceeded from the feeling that the policy of the Government of India and of the Secretary of State had been dictated by Lancashire, and that the action of Lancashire was due not so much to the fact that there was any real competition between Indian and Manchester goods, but to a desire to handicap the Indian industry

whose progress was already causing uneasiness to Lancashire interests. It was argued that the imports from Lancashire were practically all of the higher counts, which, for climatic and other reasons, Indian mills could not produce; that in any case the advantage to the Indian millowner of the import duty was inconsiderable and was counterbalanced by certain drawbacks, arising from the inferiority of Indian labour, which could not be overcome; and that this advantage, such as it was, could scarcely be said to have a protective character, in view of the higher cost of initial equipment in the case of an Indian mill which has to import its machinery, and of working expenses consequent on the scarcity of skilled labour and on the necessity of importing stores required in the production of cloth. Finally, from the standpoint of the consumer, very severe criticism was directed against the reduction, in favour of imported cotton goods, of the general rate of duty from 5 per cent. to 3½ per cent. on the ground that the effect of the legislation would relieve the richer classes who were consumers of the finer Manchester fabrics and impose new taxation on the poorer classes whose requirements were met by the Indian mills.

New Factors in the Situation.—Since the passing of this measure into law the policy of the Government of India in this respect has frequently been the subject of attack in the press and in the Legislative Councils while it has also formed the subject of continued representations by the industrial interests affected and political organizations. In more recent years the agitation in favour of the abolition of the Excise duties has been revived by the growth in England of a strong body of public opinion in opposition to the policy of Free Trade. Advantage has been taken of this new phase in English economic thought to press on behalf of India the acceptance of a policy of Protection and the removal of the Excise duties is now claimed by the opponents of this measure as a necessary corollary of the application to the British Empire of the principles associated with the name of Mr. Chamberlain. A new factor in the situation which has strengthened the position of those who are in opposition to the Excise duties is to be found in the severe competition which Indian mills have to face in China as well as in India from the Japanese industry. The Japanese market was lost to India in the early years of this century. More recently, however, Japan has entered as a competitor with India into the China market, while within the last few years it has pushed its advantage as against the Indian millowner in the Indian market itself. On two occasions within the last ten years the question of Excise duties has come prominently to the front as a result of debates in the Viceroy's Council. The official attitude is firmly based on the position that the Excise duties stand and fall with the import duties. Against such an attitude all arguments based either on the advantages of a Protectionist as opposed to a Free Trade policy or on the handicap to which the present system exposes the Indian millowner can, of course, make no head way. The Government of India are confronted with a heavy recurring loss in their revenues as a result of the abolition of the opium traffic.

Policy of 1917.—The policy of Government towards the Cotton Duties underwent a further development in 1917. In the budget of that year provision was made for interest and sinking fund charges on £ 100 millions, the contribution of India towards the cost of the war. This demanded in addition to the natural increase in the revenues fresh taxation to the extent of £ 3 millions per annum. Amongst the expedients adopted to produce this revenue was the raising of the import duty on cotton goods from 3½ per cent to 7½ per cent. which is the general tariff rate. At the same time the cotton excise duty was fixed to remain at the previous figure of 3½ per cent thus giving the indigenous industry a slight protection to the extent of 4 per cent. The question of the abolition of the Excise entirely had to be dismissed from consideration in view of the demands upon the exchequer, as it was estimated to produce in 1917-18 £ 320,000. By means of the increase in the tariff on Cotton Duties the Finance Member estimated to produce an additional £ 1 million per annum. The proposal was received with immense satisfaction in India as a step towards the righting of what is almost everywhere regarded as a reverse economic wrong. It aroused very vehement protests in Lancashire where the cotton industry organised its political vote and brought great pressure to bear upon the Secretary of State to withdraw the measure. Mr. Austen Chamberlain, the then Secretary of State for India, stood firm and with the Government at his back refused to budge an inch from the position which he had taken up in supporting the Government of India in this matter. There were anxious moments in the House of Commons when the Labour Party joining with the Irish Nationalists and the Lancashire vote mobilised its forces against the Government especially as the attitude of Mr. Asquith and his following was obscure. In the end Mr. Asquith gave his support to the Government policy on the understanding that this, in common with all other fiscal issues, would be reconsidered at the end of the war. With this support, the Bill was carried through the House of Commons by a large majority. The policy laid down in 1917 has been maintained. The Excise Duty remains stationary at 3½ per cent for purely revenue purposes. The imports of piecegoods have been subjected to the same tariff as other imports in all variations of the Customs duties. When the general tariff was raised to 11 per cent. in the Budget of 1921, piece goods shared the general lot. There were some mutterings from Lancashire, but when it was realised that these duties were fixed by the Legislative Assembly, which would not listen to any proposal for differential treatment, the murmurs subsided.

THE INDIAN COTTON COMMITTEE.

A resolution issued by the Government of India in September 1917 announced the appointment of a Committee to examine the possibilities of increasing the cultivation of long-stapled cotton in India, of improving existing methods of ginning and marketing cotton, of preventing adulteration, damping and mixing, of improving the accuracy of the cotton forecasts and, generally, of making the statistical information published by Government of greater utility to the cotton trade. The Committee were also directed to submit recommendations in regard to the staff required and the organization necessary for the development of the cultivation of long-stapled cotton in tracts which they considered suitable for that purpose.

Personnel.—The Committee consisted of the following:—Mr. J. MacKenna, C.I.E., I.C.S., Agricultural Adviser to the Government of India, President. Mr. N. N. Wadia, C.I.E., Ex-Chairman, Bombay Mill Owners Association, Mr. F. Hodgkinson, Member of the Council of the British Cotton Growing Association, Mr. H. F. Ashton, Executive Engineer, Punjab, Mr. G. S. Henderson, Imperial Agriculturist, and Mr. W. Roberts, Principal, Lyallpur Agricultural College, Members. Mr. F. Noyce, I.C.S., Secretary.

The **Report** of the Committee, which was issued in April, 1919, opens with an introductory chapter which gives an outline of the general position in regard to the world's supply of cotton which led to the appointment of the Committee. To this chapter is appended a tabular statement showing the trade and botanical classification of every variety of cotton grown in India with its length of staple and ginning percentage, the tract in which the variety is grown and its estimated area and outturn in a normal season. It is explained that cotton of which the staple is three quarters of an inch or over is regarded as long staple cotton for the purposes of Bombay, whilst, for the purposes of the Lancashire mills, long staple cotton must be a "commercial inch" in length, the actual measurement being somewhat less, and rather over seven-eighths of an inch. The Committee conclude that, so far as separate figures are available, of the 4,728,000 bales of cotton produced by India in a normal season, 726,000 fall within the Lancashire definition of long staple cotton and an additional 478,000 bales within the Bombay definition.

Division of the Report.—The Report proper is divided into two parts, the first of which is devoted to the agricultural and irrigational aspects of the problems with which the Committee dealt and the second to their commercial aspect. The first part is again divided into chapters in which the cotton growing Provinces and Native States are dealt with separately and ends with some general recommendations regarding agricultural work on cotton. The second part contains four chapters only, one on general commercial questions, more especially the question of preventing malpractices in ginning and pressing factories, one on cotton forecasts and statistics, one in which the establishment of an East Indian Cotton Association in Bombay is recommended, and one in which the formation of a Central Cotton Committee to act as a link between the Agricultural Department and the trade is advocated.

Agricultural Problems.—The Report emphasizes that, of the methods by which an improvement in the quality and an increase in the outturn of Indian cotton can be secured, botanical work is the most important and reveals the success of the efforts the Agricultural Department has already made in this direction. In the Punjab, the United Provinces, the Central Provinces, Madras and the Broach, Kumpta-Dharwar and Khandesh tracts of Bombay, it has already evolved strains of cotton superior to the indigenous varieties either in staple, yield or ginning percentage (that is, the percentage of lint to the total outturn of lint and seed) and sometimes in all three. In the Central Provinces, where there were, at the time the Report was written, about 700,000 acres under the short-stapled *roseum* variety, the improvement has been in yield and ginning percentage, in the Punjab where there were 276,000 acres under "Punjab American" cotton in 1917-18, the improvement has been in staple and ginning percentage, whilst, in the Tinnevelly tract in Madras with 220,000 acres under the improved variety evolved by the Agricultural Department and known as *Karunganni*, the improvement has been in yield, staple and ginning percentage. It is in these three tracts that the Agricultural Department has achieved its most striking successes in evolving superior strains of cotton. In the Broach and Kumpta-Dharwar tracts, its superior strains have made much less headway, partly owing to the lack of a suitable organisation to push them and partly to the fact that Broach and *Kumpta* cotton are varieties which are possessed of very stable characteristics and it is, therefore, difficult to secure anything in the nature of a recognizable improvement in them. This is also the case in the "Westerns" tract in Madras. The two improved strains which the Agricultural Department has put out in this and the adjacent "Northerns" tract have not proved sufficiently superior to the local cottons to justify their being persevered with. A fresh start has recently been made with two other selections, No. 25 in the case of Westerns and No. 14 in the case of Northerns, and the Committee recommend that these should be given an exhaustive trial. In the Broach tract, where the incursion of the short-stapled cotton known as *goghari* is proving a serious menace to the reputation of Broach cotton, they recommend that the Agricultural Department should endeavour to evolve a type of Broach cotton as superior to *goghari* in staple as is the present Broach cotton when grown pure and superior to it in yield and ginning percentage. They do not consider that the very short-stapled variety of *neglectum* cotton known as *roseum* in the Central Provinces and Khandesh and "Aligarh white-flowered cotton" in the United Provinces should represent the end of the Agricultural Department's efforts to improve the indigenous varieties in those tracts and desire that further attempts

should be made to evolve a superior variety of *neglectum* or *indicum* cotton or a cross between them which can compete successfully with the superior shorter-stapled varieties in the matter of profit to the cultivator For the Punjab, they recommend further trials with the varieties of American cotton known as 280 F. and 285 F which are superior in staple, though not at present in yield and ginning percentage, to the 4 F. variety of which the Punjab American crop now almost entirely consists. These recommendations apply to tracts in which much botanical work has already been done, but there are large tracts which have been left practically untouched botanically. Hyderabad, which produces about one-seventh of the cotton grown in India, is one of these Others are the Cocanada tract in Madras and the Dholleras tract in Bombay. Very little botanical work has been done on the indigenous cottons in the Punjab, on Cambodia in Madras or on the cottons of Burma. The Committee, therefore, recommend that botanical work in these tracts should be taken up at once and in earnest. They also recommend that the important work on cotton breeding, initiated by Mr. Leake at Cawnpore, should be further developed.

An **increase in the outturn** of cotton can be secured not only by an improvement in the variety grown but also by improvements in agricultural practice. The Report points out that the outturn of cleaned cotton to the acre in India is only 85 pounds, whereas in the United States it is 200 pounds, and that improvements in agricultural practice should very considerably reduce this difference. Detailed recommendations are made for each Province and Native State, the most important improvements advocated being the spread of the practice of sowing in lines and of interculture and the working out of suitable rotations including, wherever possible, heavy yielding leguminous fodder crops.

As regards the **organization of the Agricultural Department**, the Committee recommend a large increase in the number of seed farms in order to permit of the control of the selection and distribution of pure seed by the Department in the manner best suited to the local conditions of each tract. They consider that the demonstration of the usefulness of improved agricultural implements and of the advantages resulting from the use of manures and from good cultivation should ordinarily be carried out on the lands of selected cultivators, but that, where the establishment of large demonstration farms is considered desirable, an accurate profit and loss account should be maintained. As for the assistance to be given by the Agricultural Department to the cultivator in getting a better price for a superior product, the Committee recommend an extension of the system of auction sales of unginned cotton which have proved so successful in spreading the 4 F. variety of American cotton in the Punjab. They consider, however, that the Agricultural Department should not, in any one case, attempt to deal with more than 60,000 maunds of cotton, which would give it control over sufficient seed for 400,000 acres. After that the sales should be handed over to other agencies but the Department would still be called upon for advice and assistance in regard to such matters as grading, classification, and the settlement of disputes. The additions to the staff of the Agricultural Department recommended by the Committee for all these purposes, in addition to nine Botanists, an Entomologist for the United Provinces and an Imperial Mycologist, are one Director of Agriculture for Sind, thirteen Deputy Directors of Agriculture belonging to the Indian Agricultural Service and three Assistant Directors who would be members of the Provincial Agricultural Service. For Native States, the additions proposed are two Directors of Agriculture, two Deputy Directors and one Botanist. Both in British territory and in Native States, the subordinate staff would be increased proportionately.

Irrigational Problems—The possibilities of the extension of the cultivation of long staple cotton under irrigation in the cotton growing Provinces of North India—the Punjab, the North-West Frontier Province, the United Provinces and Sind—are examined in great detail in the Report The Committee are very emphatically of opinion that Sind holds out greater possibilities than any other part of India for the growth of superior cotton and strongly recommend that the project for constructing a barrage across the Indus at Sukkur, which would ensure a perennial water supply to some 1½ million acres of land in that Province, should be carried out immediately. They estimate that this would mean an area of 660,000 acres under cotton, of which two-thirds should be cotton of longer staple than any at present grown in India and at least 1⅛ inches in length.

In the Punjab, the Committee anticipate a total of 465,000 acres under American cotton on existing canals in the course of two or three years, an increase of 189,000 acres on the area in 1917, and a further addition of 200,000 acres if three large projects, the Sutlej River Project, the Haveli Project and the Sind Sagar Doab Project, are carried out. Messrs. Wadia and Hodgkinson, however, hold that no irrigation project in the Punjab which may affect the supply of water in the Indus should be undertaken until the Sukkur Barrage Project has been carried out or until a decision that it should be abandoned has been arrived at. In the United Provinces, the Committee consider that the area under the Cawnpore American variety might increase from 2,000 acres to 135,000 acres under the Ganges and Agra Canals, provided a sufficiently high premium for it can be assured. They hold that there are some small possibilities for Punjab American in the North-West Frontier Province, for Cambodia in the east of the Central Provinces and for Cambodia or Upland Georgian on lands which formerly grew poppy in Central India. The cultivation of Cambodia under wells should spread in Madras. A thorough investigation of the possibilities of tube wells and of pump irrigation in the Punjab and the United Provinces is recommended. Broadly speaking, therefore, the extension of irrigation means the cultivation of more American cotton as, in the Peninsula, where the longer stapled indigenous varieties are grown, cotton is not irrigated except in the case of Cambodia under wells in Madras. The only recommendation in the Report in regard to the indigenous varieties under irrigation is that liberal Government loans (*takav* should be granted

for the construction of wells in North Gujarat where greatly increased yields have been obtained under such conditions.

Commercial Problems.—The main problem dealt with by the Committee in the second part of the Report is that of securing to the cultivation an adequate price for the pure or superior varieties of cotton grown as the outcome of the recommendations in the first part. With this object, the Committee recommend the establishment in other parts of India of open markets on the Berar system in which the purchaser of cotton should be able to see exactly what he is buying and to pay for it accordingly. The cotton tracts of the Bombay Presidency except Sind and of the Madras Presidency except the Coconada tract and the Punjab Canal Colonies are considered specially suitable for the establishment of such markets. Other measures proposed are the publication of cotton prices in up-country markets in a way which would enable the cultivator to realise their true significance, an extension of the activities of co-operative sale societies and the standardization of weights on the basis of a cotton maund of 28 pounds, which would prevent the cultivator from being cheated by unscrupulous middlemen. More important than any of these recommendations is the proposal that all ginning and pressing factories should be licensed. The Report states that the malpractices from which the cultivator and the village money lender are responsible are of minor importance compared with those which are carried on in these factories and that it is in them that the bulk of the adulteration, mixing and damping, which have so injuriously affected the reputation of Indian Cotton, takes place. It is, therefore, recommended that all ginning factories to be erected hereafter should conform to the plan for a model factory published with the Report and that all ginning and pressing factories already in existence should be required to conform to the conditions laid down regarding the provision of sufficiently wide platforms for unginned cotton and lint, the paving of press houses and of the compounds of ginning factories, the maintenance of machinery in proper order, the submission of returns, the use of standard weights, the disposal of seed and so on. A preliminary to the issue of licenses would be the assignment to all factories of distinctive numbers and marks, which would enable the cotton dealt with by them to be traced. Licenses would only be issued to factories which conformed to the published plan or were brought up to the standard laid down and would be withdrawn for breach of the conditions mentioned above or on proof of such malpractices as damping, mixing, or adulteration. Complaints would be made by the sufferers and would be investigated by Committees on which the cotton trade would be adequately represented. In order still further to prevent the adulteration or mixing of waste or short staple cotton with long staple cotton, it is recommended that the transport of cotton waste by rail except from one spinning or weaving mill to another or to a port of shipment such as Bombay should be entirely prohibited as well as the transport by sea from one port to another. The transport by rail of cotton either ginned or unginned, loose or in bales, would also be prohibited except to *bona fide* consumers such as spinning or weaving mills or to ports for disposal there or shipment outside India. In cases in which this course would involve hardship transport under license is suggested.

Statistical Information.—The most important recommendations in regard to the improvement of cotton forecasts are that measures should be taken to impress upon the primary reporting agencies the meaning of the term 'normal' and its equivalent in annas, that the yield of cotton should invariably be reported in terms of unginned cotton, the necessary conversion into terms of ginned cotton and of the anna estimate into American notation being made in the office of the Provincial Director of Agriculture, that special care should be taken in estimating the outturn of cotton when grown with other crops and that more use should be made of non-official agencies such as large firms, large and small landholders and ginning factories. The Committee consider that a 'twelve-anna' crop should everywhere be regarded as representing a normal crop unless there are special reasons to the contrary. They also recommend that the work of submitting estimates of outturn should everywhere be handed over to the Agricultural Department as soon as possible and that the results obtained on Government farms should be utilized more largely than at present, especially for purposes of comparison with previous years and for ascertaining ginning percentages. They hold that the submission of returns of cotton ginned and pressed by ginning and pressing factories should be made compulsory by legislation, the penalty for failure being the withdrawal of the license of the factory.

Establishment of a Central Cotton Trade Association.—The Committee suggest not only the better organization of the Agricultural Department but also of the Cotton Trade. The way in which this is to be secured is by the establishment of a Central Cotton Trade Association in Bombay, to be known as the East India Cotton Association which, as far as the control of the cotton trade is concerned, will take the place of the seven distinct bodies representing different branches of the trade which were in existence at the time the Report was written and still exist, though the functions of two of the most important of them, the Bombay Cotton Trade Association and the Bombay Cotton Exchange, are at present exercised by the Cotton Contracts Board. It is intended that the East India Cotton Association should be the permanent successor of the latter. Mr. N. N. Wadia, a member of the Committee, was entrusted with the duty of drawing up a suitable scheme for the latter. This he did in consultation with the Directors of the Liverpool Cotton Association and Mr. N. S. Glazebrooke, Ex-Chairman of the Bombay Cotton Trade Association, and the scheme is at present under the consideration of the Government of India.

Establishment of a Central Cotton Committee.—Finally, the Committee make provision for much closer connexion between the Agricultural Department and the Cotton Trade. They point out the evils which have resulted in the past from the ignorance of the Agricultural Department and the trade of what the other was doing. It is proposed that the Central

Cotton Committee to which all connected with cotton, whether agriculturally or commercially, will be able to turn to for advice or assistance should consist of about twenty members. The nine official members would be the Agricultural Adviser to the Government of India, who would be President, six agricultural experts working on cotton from the six great cotton growing Provinces, the Director General of Commercial Intelligence, and the Director of Statistics. The remaining members, with the exception of a representative of the Co-operative Department, who might be either an official or a non-official, would represent Chambers of Commerce and similar bodies and would also include a representative of Lancashire. The functions of the Committee would be almost entirely advisory but its advice would carry very great weight. It would be of special importance in connexion with legislation proposed on any matters connected with cotton, which would invariably be referred to it, and also in regard to the working of the system of licensing ginning and pressing factories. The penalty of the withdrawal of the license of an offending factory would only be inflicted upon its recommendation. It would assist the Provincial Agricultural Departments in obtaining authoritative valuations of new varieties of cotton and in getting accurate spinning tests carried out. For this purpose a Technologist would be added to its staff. The Committee would work to a large extent through Provincial and Local Sub-Committees whose constitution would be similar to its own though they would be on a smaller scale. Great stress is laid on the necessity of obtaining a Secretary of first class organizing ability.

Cost of the proposals.—The cost of the additions to the staff of the Agricultural Department proposed by the Committee is estimated at Rs. 14 lakhs per annum. An annual grant of at least Rs. 2 lakhs per annum for the Central Cotton Committee is recommended in addition to this. It is suggested that funds might be provided, if considered desirable, by the imposition of a case of eight annas a bale on all cotton used in the mills in India or exported.

Action taken on the Report.—In a Resolution, dated August 2nd, 1919, the Government of India, whilst with a few exceptions, leaving to the discretion of Local Governments the adoption of the recommendations of the first part of the Report, desired them to lose no time in considering the recommendations in respect of additional appointments in the Agricultural Department. The Government of India stated that they were undertaking a detailed examination of the recommendations in the second part and that precedence would be given to the proposals for the formation of a Central Cotton Committee and to those for licensing ginning and pressing factories.

So far from losing no time in considering the Report, the Provincial Governments treated it in a very dilettante spirit, and in Bombay in particular months slipped by without any manifestation of Government interest. Meantime there was a progressive deterioration of some of the good staple crops, Broach suffering from such an invasion of low grade seed that its crop ceased to be a staple crop in the old sense of the term, and the fine Surat cotton was threatened with a similar fate. The proposal to reorganise the Bombay Cotton Trade in one efficient organisation, to be called the East India Cotton Association, failed through the jealousy of the small speculative element, resentful of any form of control. The Cotton Contracts Board came to an end in 1921 but its demise caused such confusion that control had to be temporarily re-established. There is some hope that from the lesson of this confusion a stronger organisation will emerge, but that is still doubtful. The first meeting of the Central Committee recommended in the Report was not held until July 1921, when it assembled in Bombay. Amongst the subjects discussed was the proposal of the Committee for the licensing of ginning and pressing factories and the restriction of the transportation of cotton, kappas and waste to prevent fraudulent mixing. Other subjects discussed were the provision for cotton research, particularly in cotton technology, and arrangements for the supply of trade and agricultural information.

ADULTERATION OF PRODUCE.

In August 1917 the Department of Commerce and Industry, Government of India, issued a long memorandum to Chambers of Commerce in India on the subject of the adulteration of Indian produce. This memorandum said:—Cotton is still watered; jute is still watered; groundnuts, hides, indigo, oils are freely adulterated; this at least is common knowledge. It is unnecessary to dilate on the loss to Indian trade which this practice of adulteration must involve, but it appears to the Government of India to be specially important at the present time to endeavour to focus attention on the matter. It seems reasonable to suppose that the present war will be followed by a period of keen competition among industrial nations for materials of all descriptions and for products which India should be in a specially favourable position to supply. But it cannot be expected that India will be able to capture and retain the extended markets which should fall to her share, if steps are not taken to effect a radical improvement in the reputation which, the Government of India fear, some of her products have only too justly merited.

Attitude of Government.—After reviewing the facts concerning the adulteration of wheat, cotton, jute, leather, hemp, and bees' wax the memorandum continued:—it will be seen from the preceding sketch of previous discussions on this subject that the Government of India have been consistently opposed to any attempt to meet the evil by legislative measures. They have held the view that any such measures would be extremely difficult to carry into effect, would seriously hamper trade, and would probably, in any case, prove ineffectual as a practical remedy.

They have maintained the opinion that the proper agency for dealing with these abuses is the trade itself, and that no intervention on the part of Government is desirable. To these views they are still inclined to adhere. At the same time, they would welcome any suggestions on the subject, and would be glad to co-operate, if further discussion should show that any action on their part is at once feasible and desirable It seems to them, however, more probable that the situation could be most satisfactorily dealt with without any intervention on the part of Government. If the leading exporting firms of any particular commodity in India would arrange with their leading buyers that the latter should insist on freedom from adulteration, an improvement could probably be more readily effected by this means than by any action on the part of Government. This would seem to be the most fruitful line of attack, but it has also been suggested that Chambers of Commerce in India might organise some system of certifying to the purity of products before export. This suggestion seems worthy of consideration.

Adulteration of Ghee.—In the autumn of 1917, considerable feeling was evoked in Calcutta by the practice of adulterating ghee. For instance, a panchayat of Marwaris excommunicated five ghee dealers, in one case two partners were excommunicated for one year and ordered to pay Rs. 1,00,000 towards the purchasing of grazing ground for cattle. In another case a father and son were fined Rs. 25,000 and in other cases the fines ranged from Rs. 500 to Rs. 1,000. Feeling waxed so strong that a deputation asked the Governor to move the Government of India to pass an ordinance, pending legislation, penalising both the adulteration of ghee and the selling or stocking of adulterated ghee. Shortly afterwards an Emergency Bill was introduced, by Sir S. P. Sinha, in the Bengal Legislative Council, to amend the Calcutta Municipal Act, with special reference to ghee adulteration. Sir Satyendra, in introducing the Bill, said that the existing law had failed to check the practice of adulterating ghee and selling adulterated ghee in Calcutta. In view of the evils resulting from widespread adulteration it was considered necessary that more stringent measures should be taken to provide for the purity of the article and to penalise the manufacture, storage, and sale of ghee that was adulterated. In this Bill a definition for adulteration had been introduced by which ghee must not consist of any article which was not extracted from milk. The penalty imposed under the Bill for offences ranged from a fine of Rs. 200 to Rs. 1,000. The Bill was taken up for consideration after suspending the rules of business and passed.

Burma Ghee Adulteration Act.—In Burma a similar Bill was passed in October, 1917, when the mover of the Bill explained that all that the Bill proposed was to ensure that a purchaser who desires to obtain ghee should be entitled to receive an article which was derived exclusively from milk. If purchaser desired a cheaper substitute, the Bill did not prevent him from obtaining it. It did, however, prevent him from receiving such substitute under the impression he was purchasing ghee. It was not anticipated that the Bill would effect any dislocation of any established trade. It would be necessary for manufacturers and dealers of mixtures which had hitherto been sold under the name of ghee to arrange to sell such mixture under distinctive names in order that the customer might be fully aware he was not purchasing ghee. If such names were speedily adopted, the evils resulting from the sale of these mixtures as ghee would be prevented without any loss or dislocation of industry.

THE CIVIL VETERINARY DEPARTMENT.

To the Civil Veterinary Department, which originated in 1892 as an expansion of the military horse-breeding department, is entrusted the performance or supervision of all official veterinary work in India, other than that of the Army. Its duties fall under the main heads of cattle disease and cattle breeding, horse and mule breeding, and educational work in veterinary colleges.

In 1905 and the following years both the superior and the subordinate establishments were considerably increased; but the strength of the subordinate staff in most provinces was still far short of the sanctioned establishment, the demand for veterinary graduates being greater than the supply, and the European staff remained small in proportion to the volume of work calling for attention The post of Inspector-General, Civil Veterinary Department, was abolished with effect from the 1st April 1912, the duties being transferred partly to local Governments and partly to the Agricultural Adviser to the Government of India. Of late years small veterinary departments, modelled on the Civil Veterinary Department, were started in several native states.

Banking.

On the 27th January 1921 the Imperial Bank of India, constituted under the Imperial Bank of India Act, XLVII of 1920, was established, taking over the undertakings and business of the three Presidency Banks of Bengal, Bombay, and Madras.

The Bank is controlled by Local Boards at Calcutta, Bombay and Madras, and by a Central, Board of Governors, consisting of the Presidents and Vice-Presidents of the Local Boards, the Controller of Currency, or other Officer nominated by the Governor-General-in Council, certain non-officials, not exceeding four, also nominated by the Governor-General in Council, the Secretaries of the Local Boards and the two Managing Governors.

The Bank has Local Head Offices at Calcutta, Bombay, and Madras, an office in London, and Branches at the following places

CALCUTTA :
Bara Bazaar
Clive Street.
Park Street.

BOMBAY :
Byculla
Mandvi
Sandhurst Road.

Arrangements are in hand for opening further Branches at:—Ambala, Amritsar Asansol, Bareilly, Chandpur, Gorakhpur, Larkhana, Madaripore, Meerut, Moradabad, Muzaffarpore, Mymensingh, Peshawar, Rawalpindi and Serajgunge.

In Schedule I Part 1 of the Act, the various descriptions of business which the Bank may transact are laid down, and in Part 2 it is expressly provided that the Bank shall not transact any kind of banking business other than that sanctioned in Part 1.

Briefly stated, the main classes of business sanctioned are :—

(1) Advancing money upon the security of :—

(*a*) Stocks, &c., in which a trustee is authorised by Act to invest trust monies.

(*b*) Securities issued by State aided Railways, notified by the Governor-General-in-Council.

(*c*) Debentures, or other securities issued under Act, by, or on behalf of, a District Board.

(*d*) Goods, or documents of title thereto, deposited with, or assigned to the Bank.

(*e*) Accepted Bills of Exchange or Pro Notes.

(*f*) Fully paid shares and debentures of Companies with limited liability or immoveable property or documents of title relating thereto, as collateral security where the original security is one of those specified in *a*, *b*, *c*, *d* and, if authorised by the Central Board, in *e*.

(2) With the sanction of the Local Government, advancing money to Courts of Wards upon security of estates in their charge.

(3) Drawing, accepting, discounting, buying and selling bills of exchange and other negotiable securities payable in India and Ceylon, and subject to the directions of the Governor-General in Council, the discounting, buying and selling of bills of exchange payable outside India for and from or to such Banks as may be approved.

(4) Investing the Banks' funds in the securities referred to in (1) *a*, *b*, *c*.

(5) Making Bank Post Bills and Letters of Credit payable in India and Ceylon.

(6) Buying and selling gold and silver.

(7) Receiving deposits.

(8) Receiving securities for safe custody.

(9) Selling such properties as may come into the Bank's possession in satisfaction of claims.

(10) Transacting agency business on commission.

(11) Acting as Administrator, and winding up estates.

(12) Drawing bills of exchange and granting letters of credit payable out of India for the use of principles in connection with (11) and also for private constituents for *bona fide* personal needs.

(13) Buying, for the purpose of meeting such bills, &c., bills of exchange payable out of India at any usance not exceeding six months.

(14) Borrowing money in India.

(15) Borrowing money in England upon security of assets of the Bank, but not otherwise.

The principal restrictions placed on the business of the Bank in Part 2 are as follows:

(1) It shall not make any loan or advance:—

(*a*) For a longer period than six months;

(*b*) upon the security of stock or shares of the Bank;

(*c*) save in the case of estates specified in Part I (Courts of Ward) upon mortgage or security of immovable property or documents of title thereof.

(2) The amount which may be advanced to any individual or partnership is limited.

(3) Discounts cannot be made or advances on personal security given, unless such discounts or advances carry with them the several responsibilities of at least two persons or firms unconnected with each other in general partnership.

The Balance Sheet of the Bank as at 30th June 1921 was as follows:—

Liabilities	Rs	a.	p.	Assets	Rs	a.	p.
Subscribed Capital	10,65,75,000	0	0	Government Securities	15,17,39,984	14	8

Note.—(The Banks have power under Sec. 36 (*i*) to draw Bills of Exchange payable out of India under certain stated circumstances, but this permission is of comparatively little importance.)

THE EXCHANGE BANKS.

The Banks carrying on Exchange business in India are merely branch agencies of Banks having their head offices in London, on the Continent, or in the Far East and the United States. Originally their business was confined almost exclusively to the financing of the external trade of India; but in recent years most of them, while continuing to finance this part of India's trade, have also taken an active part in the financing of the internal portion also at the places where their branches are situated.

At one time the Banks carried on their operations in India almost entirely with money borrowed elsewhere, principally in London—the home offices of the Banks attracting deposits for use in India by offering rates of interest much higher than the English Banks were able to quote. Within recent years however it has been discovered that it is possible to attract deposits in India on quite as favourable terms as can be done in London and a very large proportion of the financing done by the Exchange Banks is now carried through by means of money actually borrowed in India. No information is available as to how far *each* Bank has secured deposits in India but the following statement published by the Director-General of Statistics in India shows how rapidly such deposits have grown in the aggregate within recent years.

Exchange Banks' Investments.

Turning now to the question of the investment of the Banks' resources, so far as it concerns India, this to a great extent consists o the purchase of bills drawn against imports and exports to and from India.

The financing of the import trade originate and is carried through however for the most part by Branches outside India, the Indian Branches' share in the business consisting principally in collecting the amount of the bills at maturity and in furnishing their other branches with information as to the means and standing of the drawees of the bills, and it is as regards the export business that the Indian Branches are more immediately concerned The Exchange Banks have practically a monopoly of the export finance in India and in view of the dimensions of the trade which has to be dealt with the Banks would under ordinary circumstances require to utilise a very large proportion of their resources in carrying through the business. They are able however by a system of rediscount in London to limit the employment of their own resources to a comparatively small figure in relation to the business they actually put through. No definite information can be secured as to the extent to which rediscounting in London is carried on but the following figures appearing in the balance sheets dated 31st December 1920 of the undernoted Banks will give some idea of this.

LIABILITY ON BILLS OF EXCHANGE RE-DISCOUNTED AND STILL CURRENT.

	£
Chartered, Bank of India, Australia and China.	9,585,000
Eastern Bank, Ld.	2,887,000
Hongkong and Shanghai Banking Corporation.	16,276,000
Mercantile Bank of India, Ld. ..	4,382,000
National Bank of India, Ld... ..	7,467,000
Imperial Bank of Persia .	625,000
	41,222,000

The above figures do not of course relate to re-discounts of Indian bills alone, as the Banks operate in other parts of the world also, but it may safely be inferred that bills drawn in India form a very large proportion of the whole.

The bills against exports are largely drawn at three months' sight and may either be "clean" or be accompanied by the documents relating to the goods in respect of which they are drawn. Most of them are drawn on well known firms at home or against credits opened by Banks or financial houses in England and bearing as they do an Exchange Bank endorsement they are readily taken up by the discount houses and Banks in London. Any bills purchased in India are sent home by the first possible Mail so that presuming they are rediscounted as soon as they reach London the Exchange Banks are able to secure the return of their money in about 16 or 17 days instead of having to wait for three months which would be the case if they were unable to rediscount. It must not be assumed however that all bills are rediscounted as soon as they reach London as at times it suits the Banks to hold up the bills in anticipation of a fall in the London discount rate while on occasions also the Banks prefer to hold the bills on their own account as an investment until maturity.

The Banks place themselves in funds in India for the purpose of purchasing export bills in a variety of ways of which the following are the principal:—

(1) Proceeds of import bills as they mature.

(2) Sale of drafts and telegraphic transfers payable in London and elsewhere out of India.

(3) Purchase of Council Bills and Telegraphic Transfers payable in India from the Secretary of State.

(4) Imports of bar gold and silver bullion.

(5) Imports of sovereigns from London, Egypt or Australia.

The remaining business transacted by the Banks in India is of the usual nature and need not be given in detail.

The following is a statement of the position of the various Exchange Banks carrying on business in India as at 31st December 1920 :—

In Thousands of £.

—	Capital.	Reserve.	Deposits.	Cash and Investment.
Chartered Bank of India, Australia & China	3000	3660	48702	12821
Comptoir National D'Escompte de Paris.	10000	2688	142272	15884
Eastern Bank, Ltd.	995	225	8556	3575
Hongkong & Shanghai Banking Corpn...	2375	5582	71418	24776
Imperial Bank of Persia	650	280	3228	4874
International Banking Corpn. (1919)	1000	1640	16466	4986
Mercantile Bank of India	1050	1100	15893	4973

Bank of Taiwan	4500	968	24279	9407
P. & O. Banking Corpn. Ltd. (31st May 1921)	2500		2662	2169

JOINT STOCK BANKS.

Previous to 1906 there were few Banks of this description operating in India, and such as were then in existence were of comparatively small importance and had their business confined to a very restricted area. The rapid development of this class of Bank, which has been so marked a feature in Banking within recent years, really had its origin in Bombay and set in with the establishment of the Bank of India and the Indian Specie Bank in 1906. After that time there was a perfect stream of new flotations, and although many of the new Companies confined themselves to legitimate banking business, on the other hand a very large number engaged in other businesses in addition and can hardly be properly classed as Banks.

These Banks made very great strides during the first few years of their existence, but it was generally suspected in well informed circles that the business of many of the Banks was of a very speculative and unsafe character and it was a matter of no great surprise to many people when it became known that some of the Banks were in difficulties.

The first important failure to take place was that of the People's Bank of India and the loss of confidence caused by the failure of that Bank resulted in a very large number of other failures, the principal being that of the Indian Specie Bank

The public have for the time being lost much of their confidence in this class of Bank and deposits to a very large extent have been withdrawn and it is feared that a large portion of the money has gone back into hoards. This is very unfortunate as many of the Banks, particularly the older established concerns, have always been recognised as being conducted on safe and prudent lines.

The following shows the position of the better known existing Banks as it appears in the latest available Balance Sheets :—

In Lakhs of Rupees.

—	Capital.	Reserve.	Deposits.	Cash and Investments
Allahabad Bank, Ld.	35	35	934	296
Alliance Bank of Simla, Ld. (1st July 1920).	88	51	1335	619
Bank of Baroda, Ld.	23	14	516	213
Bank of India, Ld.	100	70	1054	430
Bank of Mysore, Ld.	20	6	119	53
Central Bank of India, Ld.	49	20	1369	512
Madras Bank, Ld.	10	2	29	10
Karachi Bank, Ld. (1919)	2	....	28	3
National Financing and Commission Corporation, Ld., now converted into The Bank of Morvi, Ld. (1st July 1920).	40	1	80	58
Oudh Commercial Bank, Ld.	5	2	7	1
Punjab National Bank, Ld.	20	15	379	123
Tata Industrial Bank, Ld.	223	15	1195	589
Union Bank of India, Ld.	59	....	52	24

The principal Banks which have gone into liquidation during the last three or four years are given below along with a Statement of their Capital, Reserve and deposits as at the date of the latest available Balance Sheets :—

In Lakhs of Rupees.

	Capital.	Reserve.	Deposits.
Bank of Upper India, Meerut (1917)	10	....	....
Cosmopolitan Bank ,, ...	1	....	....
Gorakhpur Bank, Gorakhpur ,, ...	3	....	...
Cashmiri Bank, Fyzabad ,, ...	1	....	....
Standard Bank, Bombay ,, ...	10	....	....
Bombay Provincial Bank (1919)	2	...	....
Central Brotherhood Urban Bank of India & Ceylon Ld., Simla. (1919)	1		...

Growth of Joint Stock Banks.

The following figures appearing in the Report of the Director-General of Statistics shew the growth of the Capital, Reserve and Deposits of the principal Joint Stock Banks registered in India :—

In Lakhs of rupees.

Russo-Asiatic Bank .. .	Ditto .	64, Old Broad St., E. C. 2.
International Banking Corporation	Ditto . . .	36, Bishopsgate, E. C. 2.

INDIAN PRIVATE BANKERS AND SHROFFS.

Indian private Bankers and Shroffs flourished in India long before Joint Stock Banks were ever thought of, and it seems likely that they will continue to thrive for some very considerable time to come. The use of the word "Shroff" is usually associated with a person who charges usurious rates of interest to impecunious people, but this is hardly fair to the people known as "shroffs" in banking circles, as there is no doubt that the latter are of very real service to the business community and of very great assistance to Banks in India. Under present conditions the Banks in India can never hope to be able to get into sufficiently close touch with the affairs of the vast trading community in India to enable them to grant accommodation to more than a few of these traders direct, and it is in his capacity as middleman that the shroff proves of such great service. In this capacity also he brings a very considerable volume of business within the scope of the Presidency Banks Act, and enables the Presidency Banks to give accommodation which, without his assistance, the Banks would not be permitted to give. The shroff's position as an intermediary between the trading community and the Banks usually arises in something after the following manner. A Shopkeeper in the bazaar, with limited means of his own, finds that, after using all his own money, he still requires say Rs. 25,000 to stock his shop suitably. He thereupon approaches the shroff, and the latter after very careful inquiries as to the shopkeeper's position grants the accommodation, if he is satisfied that the business is safe. The business, as a rule, is arranged through a hoondee broker, and in the case referred to the latter may probably approach about ten shroffs and secure accommodation from them to the extent of Rs. 2,500 each. A hoondee usually drawn at a currency of about 2 months is almost invariably taken by the shroffs in respect of such advances.

A stage is reached however when the demands on the shroffs are greater than they are able to meet out of their own money, and it is at this point that the assistance of the Banks is called into requisition. The shroffs do this by taking a number of the bills they already hold to the Banks for discount under their endorsement, and the Banks accept such bills freely to an extent determined in each case by the standing of the shroff and the strength of the drawers. The extent to which any one shroff may grant accommodation in the bazaar is therefore dependent on two factors, *viz.*, (1) the limit which he himself may think it advisable to place on his transactions, and (2) the extent to which the Banks are prepared to discount bills bearing his endorsement. The shroffs keep in very close touch with all the traders to whom they grant accommodation, and past experience has shewn that the class of business above referred to is one of the safest the Banks can engage in.

The rates charged by the shroffs are usually based on the rates at which they in turn can discount the bills with the Banks and necessarily vary according to the standing of the borrower and with the season of the year. Generally speaking, however, a charge of two annas per cent. per mensem above the Bank's rate of discount, or 1½ % is a fair average rate charged in Bombay to a first class borrower. Rates in Calcutta and Madras are on a slightly higher scale due in a great measure to the fact that the competition among the shroffs for business is not so keen in these places as it is in Bombay.

The shroffs who engage in the class of business above described are principally Marwaries and Multanis having their head Offices for the most part in Bikanir and Shikarpur, respectively, the business elsewhere than at the Head Offices being carried on by "Moonims" who have very wide powers.

It is not known to what extent native bankers and shroffs receive deposits and engage in exchange business throughout India, but there is no doubt that this is done to a very considerable extent.

THE BANK RATE.

Each Presidency Bank fixed its own Bank rate, and the current rate of each Bank determined to a great extent the rates for all important classes of business within the Bank's sphere of influence. The rates in the three Presidencies were not always uniform, but it seldom happened that a difference of more than 1% existed, more particularly as regards Bombay and Bengal, which seemed to be in closer touch with each other than appeared to be the case with Madras.

The rate fixed represents the rate charged by the Banks on demand loans against Government securities only and advances on other securities or discounts are granted as a rule at a slightly higher rate. Ordinarily such advances or discounts are granted at from one-half to one per cent. over the official rate; but this does not always apply and in the monsoon months, when the Bank rate is sometimes nominal, it often happens that such accommodation is granted at the official rate or even less.

The following statement shows the average Bank Rate of each Bank since 1884:—

Year.	Bank of Bombay.			Bank of Bengal.			Bank of Madras.		
	1st Half-year.	2nd Half-year.	Yearly average.	1st Half-year.	2nd Half-year.	Yearly average.	1st Half-year.	2nd Half-year.	Yearly average.

BANKERS' CLEARING HOUSES.

The principal Clearing Houses in India are those of Calcutta, Bombay, Madras, and Karachi, and of these the first two are by far the most important. The members at these places consist of the Imperial Bank, most of the Exchange Banks and English Banking Agency firms, and a few of the better known of the local Joint Stock Banks. No Bank is entitled to claim to be a member as of right and any application for admission to a Clearing must be proposed and seconded by two members and be subject thereafter to ballot by the existing members.

The duties of settling Bank are undertaken by the Imperial Bank at each of the places mentioned and a representative of each member attends at the office of that Bank on each business day at the time fixed to deliver all cheques he may have negotiated on other members and to receive in exchange all cheques drawn on him negotiated by the latter. After all the cheques have been received and delivered the representative of each Bank advises the settling Bank of the difference between his total receipts and deliveries and the settling Bank thereafter strikes a final balance to satisfy itself that the totals of the debtor balances agrees with the total of the creditor balances. The debtor Banks thereafter arrange to pay the amounts due by them to the settling Bank during the course of the day and the latter in turn arranges to pay on receipt of those amounts the balances due to the creditor Banks. In practice however all the members keep Bank accounts with the settling Bank so that the final balances are settled by cheques and book entries thus doing away with the necessity for cash in any form.

The figures for the Clearing Houses in India above referred to are given below:—

Total amount of Cheques Cleared Annually.

In lakhs of Rupees.

Agriculture.

As crops depend on the existence of plant food and moisture in the soil so the character of the agriculture of a country depends largely on its soil and climate. It is true that geographical situation, the character of the people and other considerations have their influence which is not inconsiderable, but the limitations imposed by the nature of the soil and above all by the climate tend to the production of a certain class of agriculture under a certain given set of conditions.

The climate of India, while varying to some extent in degree, in most respects is remarkably similar in character throughout the country. The main factors in common are the monsoon, the dry winter and early summer months, and the intense heat from March till October. These have the effect of dividing the year into two agricultural seasons, the *Kharif* or Monsoon and the *Rabi* or Winter Season each bearing its own distinctive crops. From early June till October abundant rains fall over the greater part of the continent while the winter months are generally dry although North-Western India benefits from showers in December and January. The distribution of the rainfall throughout the year, which is of considerable importance to agriculture, is none too favourable, but is not quite so bad as is often represented. The rainfall is greatest at what would otherwise be the hottest time of the year, *viz.*, mid-summer and when it is most needed. It should be remembered that in a hot country intermittent showers are practically valueless as evaporation is very rapid. The distribution of rainfall such as is common in England, for example, would be of little use to Indian soils.

Soil.—For the purpose of soil classification India may be conveniently divided into two main areas in (1) The Indo-Gangetic plains, (2) Central and Southern India. The physical features of these two divisions are essentially different. The Indo-Gangetic plains (including the Punjab, Sind, the United Provinces, Bengal, Bihar and Assam) form large level stretches of alluvium of great depth. The top soil varies in texture from sand to clay, the greater part being a light loam, porous in texture, easily worked, and naturally fertile. The great depth of the alluvium tends to keep down the soil temperature. Central and Southern India on the other hand consist of hills and valleys. The higher uplands are too hot and too near the rock to be suitable for agriculture which is mainly practised in the valleys where the soil is deeper and cooler and moisture more plentiful. The main difference between the soils of the two tracts is in texture and while the greater part of the land in Northern India is porous and easily cultivated, and moist near to the surface large stretches in Southern and Central India consist of an intractable soil derived from the Deccan trap, sticky in the rains, hard and crumbly in the dry weather and holding its moisture at lower levels.

Agricultural Capital and Equipment.—India is a country of small holdings and the vast majority of the people cultivate patches varying in size from one to eight acres. Large holdings are practically unknown, and are mainly confined to the planting industries. Farming is carried on with a minimum of capital, there being practically no outlay on fencing, buildings, or implements. The accumulation of capital is prevented by the occurrence of famine and the high rate of interest and extravagance of expenditure in marriage celebrations. The organization of co-operative credit which has been taken in hand by Government and which has already proved successful in many provinces will undoubtedly lead to an increase in Agricultural capital.

Equipment.—For power the ryat depends chiefly on cattle which, as a rule, are light and active but possess little hauling power. The necessary tilth for crops is brought about by frequency of ploughings, the result being that the soil is seldom tilled as it should be. This is not chiefly due to want of knowledge on the part of the people but through want of proper equipment. The Indian agriculturist, as a rule, possesses an intimate though limited knowledge of the essentials of his own business, and fails, not only through ignorance, but also through lack of ways and means.

Implements are made of wood although ploughs are usually tipped with iron points and there is a great similarity in their shape and general design. The introduction of iron ploughs has made much progress in the last few years and many hundred thousand are now in use. The levelling beam is used throughout the greater part of the country in preference to the harrow and roller; and throughout Northern India the plough and the levelling beam are the only implements possessed by the ordinary cultivator.

In the heavier soils of the Deccan trap a cultivating implement consisting of a single blade, resembling in shape a Dutch hoe, is much used. Seed drills and drill hoes are in use in parts of Bombay and Madras but throughout the greater part of the country the seed is either broadcasted or ploughed in. Hand implements consist of various sizes of hoes, the best known of which are the *kodal* or spade with a blade set at an angle towards the labourer who does not use his feet in digging, and the *khurpi* or small hand hoe. Of harvesting machinery there is none, grain is separated either by treading out with oxen or beating out by hand, and winnowing by the agency of the wind.

Cultivation.—Cultivation at its best is distinctly good but in the greater part of the country it has plenty of room for improvement. As in any other country success in agriculture varies greatly with the character of the people, depending largely as it does on thrift and industry. In most places considering the large population cultivation is none too good. Agriculture suffers through lack of organization and equipment. Owing to the necessity of protection against thieves, in most parts the people live in villages, many of them at considerable distances from their land. Again, holdings, small though they are, have become sub-divided without any regard for convenience Preparatory tillage generally consists of repeated ploughings, followed as seed time approaches by harrowings with the levelling beam. The *Rabi* crops generally receive a more thorough cultivation than the *Kharif*, a finer seed bed being necessary owing to the dryness of the growing season. Manure is

AGRICULTURAL PRODUCE.

The following table shows the area under the principal crops, in British India, and their territorial distribution, for 1919-20. The sown area is always greater than the area of cultivated land, owing to double cropping. The figures represent acres :—

Province.	Rice.	Wheat.	Barley.	Other Food Grains and Pulses.	Total Food Grains and Pulses.	Oilseeds.	Sugar.	Cotton.	Jute.	Total Area sown.	Net sown Area after deducting Area sown more than once.

generally applied to the maximum extent available, both to *Kharif* and to *Rabi* crops. Seeding is either done broadcast or by drilling behind a wooden plough or drill. Thinning and spacing are not nearly so well done as they might be, and intercultivation is generally too superficial. Harvesting is done by sickle where the crops are cut whole, and there is little waste involved. On the whole the methods of the ryot if carried out thoroughly would be quite satisfactory, but it is doubtful if this could be done with the number of cattle at his disposal.

Irrigation is necessary in order to grow full crops on the land, over the greater part of the country owing to insufficient rainfall and the vagaries of the monsoon. Canal irrigation has been greatly extended over the Punjab, Sind, United Provinces and Madras through Government canals which, in addition to securing the crops over existing cultivated land, have converted large desert tracts into fertile areas. The Punjab and parts of the United Provinces are naturally well suited to canal irrigation owing to the frequency of their rivers. The water is generally taken off at a point a little distance from where the rivers leave the hills and is conducted to the arid plains below. The main canal splits up into diverging branches, which again subdivide up into distributaries from which the village channels receive their supplies. Water rates are levied on the matured areas of crops, Government thus bearing a part of the loss in case of failure. Much of the land is supplied by what is termed flow irrigation, *i.e.*, the land is directly commanded by the canal water, but a great deal has to be lifted from one to three feet the canal running in such cases below the level of the land. Rates for lift irrigation are, of course, lower than those for flow.

Irrigation canals are generally classed into (1) perennial and (2) inundation canals. Perennial canals, which give supplies in all seasons generally have their headworks near the hills, thus commanding a great range of country. Farther from the hills, owing to the very gradual slope of the land and the lowness of the rivers in the cold weather, perennial irrigation is difficult and inundation canals are resorted to. These canals only give irrigation when the rivers are high. As a rule, in Northern India they begin to flow when the rivers rise owing to the melting of the snow on the hills in May and dry up in September

Irrigation from Wells.—About one-quarter of the total irrigation of the country is got from lifting water from wells ranging in depth from a few feet to over fifty feet. Their numbers have greatly increased in recent years largely through Government advances for their construction. The recurring cost of this form of irrigation has, however, greatly increased owing to the high price of draught cattle and the increasing cost of their maintenance.

Tank irrigation is common in Central and Southern India. Large quantities of rain water are stored in lakes (or tanks) and distributed during the drier seasons of the year. The system of distribution is the same as that by canal.

Manures.—Feeding of animals for slaughter being practically unknown in India, the amount of farm yard manure generally available in other countries from this source thus does not exist. This is partially if not entirely made up for by the large numbers required for tillage and the amount of cows and buffaloes kept for milk. Unfortunately fuel is very scarce and a greater part of the dung of animals has to be used for burning. Most of the trash from crops is used up for the same purpose and the net return of organic matter to the soil is thus insignificant. In some parts cakes of oil seed are used as manures for valuable crops like tea and sugarcane but in the greater part of the country the only manure applied is the balance of farm yard manure available after fuel supplies have been satisfied. Farm yard manure is particularly effective and its value is thoroughly appreciated but the people have much to learn in the way of storage of bulky manures and the conservation of urine.

Rice.—A reference to the crop statistics shows that rice is the most extensively grown crop in India, although it preponderates in the wetter parts of the country, *viz.*, in Bengal, Bihar and Burma and Madras. The crop requires for its proper maturing a moist climate with well assured rainfall. The cultivated varieties are numerous, differing greatly in quality and in suitability for various conditions of soil and climate, and the people possess an intimate acquaintance with those grown in their own localities. The better qualities are sown in seed beds and transplanted in the monsoon Broadcasted rice is grown generally in lowlying areas and is sown before the monsoon as it must make a good start before the floods arrive. Deep water rices grow quickly and to a great height and are generally able to keep pace with the rise in water level.

For transplanted rice the soil is generally prepared after the arrival of the monsoon and is worked in a puddle before the seedlings are transplanted. The land is laid out into small areas with raised partitions to regulate the distribution of the water supply. The seedlings are planted in small bunches containing from 4 to 6 plants each and are simply dibbled into the mud at distances of 6 to 12 inches apart. Where available, irrigation water is given at frequent intervals and the fields are kept more or less under water until the crop begins to show signs of ripening.

Wheat.—Wheat is grown widely throughout Northern India as a winter crop, the United Provinces and the Punjab supplying about two-thirds of the total area, and probably three-quarters of the total outturn in India. The majority of the varieties grown belong to the Species Triticium Vulgare. Indian wheats are generally white, red and amber coloured and are mostly classed as soft from a commercial point of view. The grains are generally plump and well filled but the samples are spoiled through mixtures of various qualities. Indian wheat is generally adulterated to some extent with barley and largely with dirt from the threshing floor and although there is a good demand in England and the Continent for the surplus produce, prices compare unfavourably with those obtained for Canadian and Australian produce. The crop is generally grown after a summer fallow and, except in irrigated tracts, depends largely on the conservation of the soil moisture from the previous monsoon.

Rains in January and February are generally beneficial but an excess of rainfall in these months usually produces rust with a diminution of the yield. On irrigated land 2 to 4 waterings are generally given. The crop is generally harvested in March and April and the threshing and winnowing go on up till the end of May. In good years the surplus crop is bought up at once by exporters and no time is lost in putting it on the European market as other supplies are at that time of year scarce. In years of famines the local price is generally sufficiently high to restrict exports.

The Millets.—These constitute one of the most important group of crops in the country, supplying food for the poorer classes and fodder for the cattle. The varieties vary greatly in quality, height and suitability to various climatic and soil conditions. Perhaps the two best known varieties are Jowar (*Sorghum vulgare*) tall growing with a large open head, and Bajra with a close rat-tail head and thin stem. Generally speaking the jowars require better land than the bajras and the distribution of the two crops follows the quality of the soil. Neither for jowar nor bajra is manure usually applied and cultivation is not so thorough as for wheat, the main objective being to produce a fine seed bed. The crop is generally sown in the beginning of the monsoon and so it requires to be thoroughly weeded. In the case of jowar, however, very large areas are sown as a *rabi* crop. It is often grown mixed with the summer pulses and other crops in which case thin seedings are resorted to. The subsidiary crops are harvested as they ripen either before the millet is harvested or afterwards. The produce is consumed in the country.

Pulses are commonly grown throughout India and the grain forms one of the chief foods of the people. Most kinds do well but are subject to failure or shortage of yield owing to a variety of circumstances among which rain at the time of flowering appears to be one of the most important. They are therefore more suitable to grow as mixed crops especially with cereals, and are generally grown as such. Being deep rooted and practically independent of a Nitrogen supply in the soil they withstand drought and form a good alternation in a cereal rotation. The chief crops under this heading are gram, mash, mung and moth, gram forming the main winter pulse crop while the others are grown in the summer. The pulses grow best on land which has had a good deep cultivation. A fine seed bed is not necessary. For gram especially the soil should be loose and well aerated. Indian pulses are not largely exported although they are used to some extent in Europe as food for dairy cows.

Cotton is one of the chief exports from India and the crop is widely grown in the drier parts of the country. The lint from Indian cotton is generally speaking short and coarse in fibre and unsuited for English mills. Japan and the Continent have, in the past, been the chief buyers. The crop is grown during the summer months and requires a deep moist soil and light rainfall for its proper growth. Rain immediately after sowing or during the flowering period is injurious. In parts of Central and Southern India the seed is sown in lines and the crop receives careful attention but over Northern India it is sown broadcast (often mixed with other crops) and from the date of sowing till the time of picking is practically left to itself. The average yield, which does not amount to more than 400 lbs. per acre of seed cotton, could doubtless be greatly increased by better cultivation.

Sugarcane.—Although India is not naturally as well suited for sugarcane growing as many other tropical countries, some 3½ millions of acres are annually sown. The crop is mostly grown in the submontane tracts of Northern India. The common varieties are thin and hard, yielding a low percentage of juice of fair quality, but cane of the highest quality and yield is grown in South India. In India white sugar is not made by the grower who simply boils down the juice and does not remove the molasses. The product called gur or gul is generally sold and consumed as such, although in some parts a certain amount of sugar-making is carried on. The profits, however, are small owing to the cheapness of imported sugar and there appears to be some danger to the crop if the present taste for gur were to die out. The question has been taken up by Government and a cane-breeding station has been recently opened near Coimbatore in Madras with the object of raising seedling canes and otherwise improving the supply of cane sets. A number of sugar factories of a modern type have been set up within recent years in Bihar and the United Provinces. The chief difficulty seems to be the obtaining of a sufficiently large supply of canes to offset the heavy capital charges of the undertakings.

Oilseeds.—The crops classified under this heading are chiefly sesamum, linseed and the cruciferous oilseeds (rape, mustard, etc.). Although oilseeds are subject to great fluctuation in price and the crops themselves are more or less precarious by nature—they cover an immense area.

Linseed requires a deep and moist soil and is thus grown chiefly in Bengal, Bihar, the United Provinces and the Central Provinces. The crop is grown for seed and not for fibre and the common varieties are of a much shorter habit of growth than those of Europe. The yield varies greatly from practically nothing up to 500 or 600 lbs. of seed per acre. The seed is mainly exported whole but a certain amount of oil pressing is done in the country.

Sesamum (or Gingelly) is grown mostly in Peninsular India as an autumn or winter crop. The seed is largely exported.

The Cruciferous Oilseeds form an important group of crops in Northern India where they grow freely and attain a fair state of development. They are one of the most useful crops in the rotation. They occupy the land for a few months only, and owing to their dense growth leave the soil clean and in good condition after their removal. A number of varieties are grown differing from each other in habit of growth, time of ripening, and size and quality of seed. The best known are rape, toria, and sarson. The crop is generally sown in September or early October and harvested from December to February. The crop is subject to the attack of aphis (green fly) at the time of flowering and sometimes suffers considerable damage from this pest. The seed

is very subject to injury from rain and great care has to be taken in the drying. The produce is largely exported whole, but there is a considerable amount of local oil-pressing—the cake being in demand for feeding purposes.

Jute.—Two varieties of the plant are cultivated as a crop, Capsularis and Olitorius. Jute growing is confined almost entirely to Eastern Bengal, in the Ganges-Brahmaputra Delta. The crop requires a rich moist soil. Owing to river inundation this part of India receives a considerable alluvial deposit every year and the land is thus able to sustain this exhausting crop without manure. The crop is rather delicate when young, but once established requires no attention, and grows to a great height (10 to 11 feet). Before ripening the crop is cut and retted in water. After about three weeks submersion the fibre is removed by washing and beating. At the recent high range of prices jute may be considered to have been, for the last few years, the best paying crop in India.

Tobacco is grown here and there all over the country chiefly, however, in Bengal, Bihar, Bombay, Madras and Burma. Of two varieties cultivated Nicotiana Tabacum is by far the most common. Maximum crops are obtained on deep and moist alluvium soils and a high standard of cultivation including liberal manuring is necessary. The crop is only suited to small holdings where labour is plentiful as the attention necessary for its proper cultivation is very great. The seed is germinated in seed beds and the young plants are transplanted when a few inches high, great care being taken to shield them from the sun. The crop is very carefully weeded and hoed. It is topped after attaining a height of, say, 2 ft., and all suckers are removed. The crop ripens from February onwards and is cut just before the leaves become brittle. By varying the degree of fermentation of the leaves different qualities of tobacco are obtained. A black tobacco is required for *Hooka* smoking and this is the most common product but a certain amount of yellow leaf is grown for cigar making.

Live-stock consist mainly of cattle buffaloes and goats, horses not being used for agricultural purposes. Sheep are of secondary importance.

For draught purposes cattle are in more general use than buffaloes especially in the drier parts of the country, but buffaloes are very largely used in the low lying rice tracts. For dairying buffaloes are perhaps more profitable than cows as they give richer milk and more of it: but they require more feeding. The poorer people depend largely on the milk of goats of which there are an enormous number throughout India. Cattle breeding is carried on mainly in the non-cultivated tracts in Central and Southern India, Southern Punjab and Rajputana, where distinct breeds with definite characters have been preserved. The best known draught breeds are Hansi, Nellore, Amritmehal, Gujrat, Malvi, and the finest milk cows are the Sahiwal (Punjab) Gir (Kathiawar) and Sind. Owing, however, to the encroachment of cultivation on the grazing areas well-bred cattle are becoming scarce and some of the breeds are threatened with extinction. Efforts to improve the quality of the cattle in the non-breeding districts by the use of selected bulls have hitherto been frustrated by the promiscuous breeding which goes on in the villages.

Dairying.—Though little noticed, dairying forms a very large indigenous industry throughout India. The best known products are native butter (ghee) and cheese (dahi). During recent years a considerable trade in tinned butter has sprung up in Gujrat (Bombay Presidency). While pure *ghee* and milk can be procured in the villages, in the towns dairy products can scarcely be bought unadulterated.

AGRICULTURAL PROGRESS.

The Agricultural Departments in India as they now exist may be said to be a creation of the last twenty years. There have for a good many years past been experimental farms, under official control, in various parts of India, but they were in the past to a large extent in the hands of amateurs, and the work of the Agricultural Departments, with which all the major provinces were provided by about 1884, was in the main confined to the simplification of revenue settlement procedure and the improvement of the land records system. In 1901 the appointment of an Inspector-General of Agriculture gave the Imperial Agricultural Department for the first time an expert head, and placed the Government of India in a position to enlarge the scope of their own operations and to co-ordinate the work being done on independent lines in various provinces. At that time the staff attached to the Government of India consisted of an Agricultural Chemist and a Cryptogamic Botanist, while trained Deputy Directors of Agriculture were employed only in Madras, Bombay and the United Provinces and the Economic Botanist in Madras was the only provincial representative of the more specialised type of appointments. Within the next few years a number of new appointments were made, so that by March 1905 there were altogether 20 sanctioned agricultural posts; of these seven were Imperial, including a number of specialist appointments attached to the Agricultural Research Institute and College, the establishment of which at Pusa in Bengal was sanctioned in 1903. A great impetus was given to the development of the Agricultural Departments by the decision of the Government of India in 1905 to set apart a sum of 20 lakhs (£133,000) a year for the development of agricultural experiment, research, demonstration and instruction. Their ultimate aim, as then expressed, was the establishment of an experimental farm in each large tract of country in which the agricultural conditions are approximately homogeneous, to be supplemented by numerous small demonstration farms; the creation of an agricultural college teaching up to a three years' course in each of the larger provinces; and the provision of an expert staff in connection with these colleges for purposes of research as well as education. The eventual cost, it was recognised, would largely exceed 20 lakhs a year. The Pusa Research Institute and College alone has cost nearly £150,000 including equipment. A part of the cost was met from a sum of £30,000 placed at Lord Curzon's dis-

posal by Mr. Phipps, an American visitor to India. This example of munificence has recently been followed by Sir Sassoon J. David, who placed the sum of £53,300 at the disposal of the Government of Bombay for the establishment of vernacular agricultural schools and the improvement of agricultural methods, in commemoration of the visit of Their Imperial Majesties to India.

Record of Progress.

At the beginning of 1921 there were over 100 posts in the Indian Agricultural Service, besides that of Agricultural Adviser to the Government of India, which replaced that of Inspector-General, the latter having been abolished at the end of the year 1911-12, the rapid advance of the provincial departments having rendered its continuance unnecessary The officers serving directly under the Government of India included the Director of the Pusa Institute, who was also Principal of the Agricultural College, a cotton specialist, two mycologists, two entomologists, two agricultural chemists and two economic botanists Some of these were supernumerary officers undergoing training. The provincial agricultural departments vary in strength. Generally speaking, each of the larger provinces has at least two or three Deputy-Directors of Agriculture (most provinces have more), an Agricultural Chemist and an Economic Botanist. In several provinces the principalship of the Agricultural College is a separate appointment and among the remaining officers are a fibre expert in Eastern Bengal and Assam, and a "scientific officer for planting industries in Southern India" in Madras. The Government of Madras have also a mycologist and an entomologist of their own. The posts so far referred to have hitherto necessarily been filled almost exclusively by the appointment of trained specialists from the United Kingdom. There are also in the various provinces a considerable number of locally appointed Assistant Professors (in the Agricultural Colleges), Assistant Agriculturists and Entomologists, Agricultural Inspectors, Superintendents of Farms, etc., and subordinate officers. It is an essential part of the scheme adopted that facilities for the best agricultural training shall be made available in India, in order that the country may become self-supporting, so far as possible, in regard to the scientific development of agricultural methods on lines suited to local conditions. Provincial agricultural colleges, which are also research stations, have within the last few years been established in Madras, Bombay, Bengal, the United Provinces, the Punjab and the Central Provinces. The Central College at Pusa is intended to provide for more advanced training, and has also been in the habit of giving short practical courses in subjects not at present taught in the provincial colleges. The Provincial Directors of Agriculture were for many years selected from the ranks of the Indian Civil Service, but are now usually expert agriculturists. They still in some provinces have other functions besides the supervision of the Agricultural Department; but in all the larger provinces except the United Provinces the appointment of Director of Agriculture has since 1905 been separated from that of Director of Land Records. Proposals for the expansion and reorganisation of the Agricultural Department were formulated several years ago and have received much consideration and large developments have followed.

Work of the Departments.

The work of the Agricultural Department has two main aspects. On the one hand, by experiment and research, improved methods or crops are developed, or the means of combating a pest are worked out; on the other hand, ascertained improvements must be demonstrated and introduced as far as possible into the practice of the Indian cultivator. There is an essential difference between agricultural departments in the East and in the West in that, whereas the latter have arisen to meet the spontaneous demands of the cultivators of the soil, the former are entirely the creation of a government anxious to give all the assistance it can to its agricultural subjects. The demand for improved agriculture has not in India, except in special cases, come from the cultivator, and it is necessary for the Department to put forth every effort, first to ascertain the needs of the cultivators and then to demonstrate how they can most effectively be met. It is only a few years since work on modern lines was commenced by the reorganised agricultural departments, and, in the first place, a great deal of spade work had to be performed. An important advance in the direction of bringing the provincial agricultural departments more closely into touch with one another was made in 1905 by the creation of the Board of Agriculture. The Board, which includes the Imperial and provincial experts, meets biennially to discuss the programme of agricultural work, and agricultural questions generally, and makes recommendations which are submitted to the Government of India for consideration.

Machinery.

The rapid extension in India in recent years of the use of machinery in connection with agriculture and irrigation has created a demand for expert assistance to meet which Agricultural Engineers have been appointed in Bombay and several other Provinces to advise cultivators as to engines, pumps, threshing machinery, etc. Experiments have at various times and in various parts of India been made with steam ploughing machinery and since the war trials have been made with the petroleum driven tractors that were specially developed in England during the war. But while there is everywhere immense scope for the employment of the most modern machinery, progress is greatly hampered by the laissez faire attitude of the manufacturers of it. The reports of the Agricultural Departments constantly bear witness of this. Makers have generally no direct representatives in India being content with representation by agents in the large towns. There are no stocks of machinery in the country, spare parts are difficult to get and exorbitant prices are often charged for them.

Information and assistance in regard to the choice of implements suitable for various conditions has, under present circumstances, to be interpreted and brought home to Indian cultivators largely by the agricultural departments which have therefore to do a good deal of this work. Up to the present, the departments perform to a certain extent the functions of

dealers in implements, but it is becoming difficult to control the work as the area covered by the introduction is gradually becoming large.

Particular Crops.

Cotton from the first received much of the attention of the new departments. Very striking results have already been achieved, both with Cambodia and other exotic varieties and with the improvement of the types already grown. The Government of India appointed in 1917 a special committee to investigate and recommend measures for the improvement and increase of Indian cotton production. Its president was the Agricultural Adviser to the Government of India, and its other five members represented not only government departmental experts but representatives of the trade in Bombay and Lancashire. The Committee devoted several months to travelling throughout the cotton growing tracts and holding inquiries in the cities and in 1919 presented a valuable report reviewing the general Indian cotton situation, indicating the general lines which sound advance must pursue and recommending important steps to improve the organisation of supervision and assistance for the benefit of cultivators and the trade. Many of the suggestions of their report have now been brought into practice.

Wheat also has been the subject of prolonged experiments. One of the first results of the investigations carried out at Pusa was the demonstration of the fact that varieties with milling and baking qualities similar to those of the best wheats on the English market could be grown to perfection in Bihar. By the application of modern methods of selection and hybridisation these high grain qualities were successfully combined with high yielding power, rust-resistance, and strong straw.

Another crop with which considerable success has been attained is **Ground-nut**, the cultivation of which had at the beginning of the decade fallen off, owing partly to the prevalence of a fungoid disease and partly to deficient rainfall. Exotic varieties with a better yield have been introduced in Bombay, and in Burma cultivation has advanced with extraordinary rapidity.

In 1919 the Government of India appointed a powerful Committee to investigate and recommend measures for the improvement of Indian sugar-cane and the development of the Industry. This Committee travelled throughout India, and also went to Java, and their report was published in 1921.

Fruit cultivation has been the object of much encouraging attention from the departmental officials in Baluchistan, the temperate regions of the Himalayan slopes and elsewhere and valuable work has been done in the investigation of fruit disease and insects injurious to fruit by special officers of the scientific branches of the Department.

Fodder cultivation on modern lines has received a good deal of attention during the past few years, especially in the Bombay Presidency, where special steps have been taken to develop it under famine conditions and to utilise cactus as fodder in famine years.

Cattle Breeding which is in a very backward state in India has received great attention in all provinces of India, both to improve breeds and to induce the people to devote more care to a problem so closely wrapped up with their welfare. In the latter direction success has been limited, but in the former most valuable results have been obtained. A typical example is the case of the special breeding of milch cattle at the Government of India farm at Pusa and at other farms associated with it in this work. In one herd of country cattle, strict selection for milk yield has rendered possible the elimination from the herd of all cows giving less than 3,500 lb. of milk in the lactation period of 10 months from calving. In another herd records concerning hundreds of animals during ten years have shown that a cross of a well bred Ayrshire bull with an Indian cow will double the milk yield of the Indian breed. One cow of this kind at Pusa gave 10,000 lb. of milk in one year.

Meteorology.

The meteorology of India like that of other countries is largely a result of its geographical position. The great land area of Asia to the northward and the enormous sea expanse of the Indian Ocean to the southward are determining factors in settling its principal meteorological features. When the Northern Hemisphere is turned away from the sun, in the northern winter, Central Asia becomes an area of intense cold. The meteorological conditions of the temperate zone are pushed southward and we have over the northern provinces of India the westerly winds and eastward moving cyclonic storms of temperate regions, while, when the Northern Hemisphere is turned towards the sun, Southern Asia becomes a super heated region drawing towards it an immense current of air which carries with it the enormous volume of water vapour which it has picked up in the course of its long passage over the wide expanse of the Indian Ocean, so that at one season of the year parts of India are deluged with rain and at another persistent dry weather prevails.

Monsoons.—The all-important fact in the meteorology of India is the alternation of the seasons known as the summer and winter monsoons. During the winter monsoon the winds are of continental origin and hence, dry, fine weather, clear skies, low humidity and little air movement are the characteristic features of this eason. The summer rains cease in the provinces of the North-West Frontier Province and the Punjab about the middle of September after which cool westerly and northerly winds set in over that area and the weather becomes fresh and pleasant. These fine weather conditions extend slowly eastward and southward so that by the middle of October, they embrace all parts of the country except the southern half of the Peninsula, and by the end of the year have extended to the whole of the Indian land and sea area, the rains withdrawing to the Equatorial Belt. Thus the characteristics of the cold weather from October to February over India are:—Westerly winds of the temperate zone over the extreme north of India; to the south of these the north-east winds of the winter monsoon or perhaps more properly the north-east Trades and a gradually extending area of fine weather which, as the season progresses, finally embraces the whole Indian land and sea area. Two exceptions to these fine weather conditions exist during this period, *viz.*, the Madras coast and the north-west of India. In the former region the north-east winds which set in over the Bay of Bengal in October coalesce with the damp winds of the retreating summer monsoon, which current curves round over the Bay of Bengal, and, blowing directly on to the Madras coast gives to that region the wettest and most disturbed weather of the whole year, for while the total rainfall for the four months June to September, *i.e.*, the summer monsoon, at the Madras Observatory amounts to 15.36 inches the total rainfall for the three months October to December amounts to 29.48 inches. The other region in which the weather is unsettled, during this period of generally settled conditions, is North-west India. This region during January, February and part of March is traversed by a succession of shallow storms from the westward. The number and character of these storms vary very largely from year to year and in some years no storms at all are recorded. In normal years, however, in Northern India periods of fine weather alternate with periods of disturbed weather (occurring during the passage of these storms) and light to moderate and even heavy rain occurs. In the case of Peshawar the total rainfall for the four months, December to March, amounts to 5.26 inches while the total fall for the four months, June to September, is 4.78 inches, showing that the rainfall of the winter is, absolutely, greater in this region than that of the summer monsoon. These two periods of subsidiary "rains" are of the greatest economic importance. The fall in Madras is, as shown above, of considerable actual amount, while that of North-west India though small in absolute amount is of the greatest consequence as on it largely depend the grain and wheat crops of Northern India.

Spring Months.—March to May and part of June form a period of rapid continuous increase of temperature and decrease of barometric pressure throughout India. During this period there occurs a steady transference northward of the area of greatest heat. In March the maximum temperatures, slightly exceeding 100, occur in the Deccan; in April the area of maximum temperature; between 100° and 105°, lies over the south of the Central Provinces and Gujarat; in May maximum temperatures, varying between 105° and 110°, prevail over the greater part of the interior of the country while in June the highest mean maximum temperatures exceeding 110° occur in the Indus Valley near Jacobabad. Temperatures exceeding 120° have been recorded over a wide area including Sind, Rajputana: the West and South Punjab and the west of the United Provinces, but the highest temperature hitherto recorded is 126° registered at Jacobabad on June 12th, 1897. During this period of rising temperature and diminishing barometric pressure, great alterations take place in the air movements over India, including the disappearance of the north-east winds of the winter monsoon, and the air circulation over India and its adjacent seas, becomes a local circulation, characterised by strong hot winds down the river valleys of Northern India and increasing land and sea winds in the coast regions. These land and sea winds, as they become stronger and more extensive, initiate large contrasts of temperature and humidity which result in the production of violent local storms. These take the forms of dust storms in the dry plains of Northern India and of thunder and hailstorms in regions where there is inter-action between damp sea winds and dry winds from the interior. These storms are frequently accompanied with winds of excessive force, heavy hail and torrential rain and are on that account very destructive.

By the time the area of greatest heat has been established over North-west India, in the last week of May or first of June, India has become the seat of low barometric pressures relatively to the adjacent seas and the whole character of the weather changes. During

the hot weather period, discussed above, the winds and weather are mainly determined by local conditions. Between the Equator and Lat. 30° or 35° south the wind circulation is that of the south-east trades, that is to say from about Lat. 30°-35° south a wind from south-east blows over the surface of the sea up to about the equator. Here the air rises into the upper strata to flow back again at a considerable elevation to the Southern Tropic or beyond. To the north of this circulation, i.e., between the Equator and Lat. 20° to 25° North, there exists a light unsteady circulation, the remains of the north-east trades, that is to say about Lat. 20° North there is a north-east wind which blows southward till it reaches the thermal equator where side by side with the south-east Trades mentioned above, the air rises into the upper strata of the atmosphere. Still further to the northward and in the immediate neighbourhood of land there are the circulations due to the land and sea breezes which are attributable to the difference in the heating effect of the sun's rays over land and sea. It is now necessary to trace the changes which occur and lead up to the establishment of the south-west monsoon period. The sun at this time is progressing slowly northward towards the northern Tropic. Hence the thermal equator is also progressing northward and with it the area of ascent of the south-east trades circulation. Thus the south-east trade winds cross the equator and advance further and further northward, as the thermal equator and area of ascent follows the sun in its northern progress. At the same time the temperature over India increases rapidly and barometric pressure diminishes, owing to the air rising and being transferred to neighbouring cooler regions—more especially the sea areas. Thus we have the southern Trades circulation extending northward and the local land and sea circulation extending southward until about the beginning of June the light unsteady interfering circulation over the Arabian Sea finally breaks up, the immense circulation of the south-east Trades, with its cool, moisture laden winds rushes forward, becomes linked on to the local circulation proceeding between the Indian land area and the adjacent seas and India is invaded by oceanic conditions—the **south-west monsoon** proper. This is the most important season of the year as upon it depends the prosperity of at least five-sixths of the people of India.

When this current is fully established a continuous air movement extends over the Indian Ocean, the Indian seas and the Indian land area from Lat. 30° S. to Lat. 30° N. the southern half being the south-east trades and the northern half the south-west monsoon. The most important fact about it is that it is a continuous horizontal air movement passing over an extensive oceanic area where steady evaporation is constantly in progress so that where the current enters the Indian seas and flows over the Indian land it is highly charged with aqueous vapours.

The Current enters the Indian seas quite at the commencement of June and in the course of the succeeding two weeks spreads over the Arabian Sea and Bay of Bengal up to their extreme northern limits. It advances over India from these two seas. The Arabian sea current blows on to the west coast and sweeping over the Western Ghats prevails more or less exclusively over the Peninsula, Central India, Rajputana and north Bombay. The Bay of Bengal current blows directly up the Bay. One portion is directed towards Burma, East Bengal and Assam while another portion curves to south at the head of the Bay and over Bengal, and then meeting with the barrier of the Himalayas curves still further and blows as a south-easterly and easterly wind right up the Gangetic plain. The south-west monsoon continues for three and a half to four months, *viz.*, from the beginning of June to the middle or end of September. During its prevalence more or less general though far from continuous rain prevails throughout India the principal features of the rainfall distribution being as follows. The greater portion of the Arabian Sea current, the total volume of which is probably three times as great as that of the Bengal current, blows directly on to the west coast districts. Here it meets an almost continuous hill range, is forced into ascent and gives heavy rain alike to the coast districts and to the hilly range, the total averaging about 100 inches most of which falls in four months. The current after parting with most of its moisture advances across the Peninsula giving occasional uncertain rain to the Deccan and passes out into the Bay where it coalesces with the local current. The northern portion of the current blowing across the Gujarat, Kathiawar and Sind coasts gives a certain amount of rain to the coast districts and frequent showers to the Aravalli Hill range but very little to Western Rajputana, and passing onward gives moderate to heavy rain in the Eastern Punjab, Eastern Rajputana and the North-west Himalayas. In this region the current meets and mixes with the monsoon current from the Bay.

The monsoon current over the southern half of the Bay of Bengal blows from south-west and is thus directed towards the Tenasserim hills and up the valley of the Irrawady to which it gives very heavy to heavy rain. That portion of this current which advances sufficiently far northward to blow over Bengal and Assam gives very heavy rain to the low-lying districts of East Bengal and immediately thereafter coming under the influence of the Assam Hills is forced upwards and gives excessive rain (perhaps the heaviest in the world) to the southern face of these hills. The remaining portion of the Bay current advances from the southward over Bengal, is then deflected westward by the barrier of the Himalayas and gives general rain over the Gangetic plain and almost daily rain over the lower ranges of the Himalayas from Sikhim to Kashmir.

To the south of this easterly wind of the Bay current and to the north of the westerly wind of the Arabian Sea current there exists a debatable area running roughly from Hissar in the Punjab through Agra, Allahabad and part of Chota Nagpur to Orissa, where neither current of the monsoon prevails. In this area the rainfall is uncertain and would probably

be light, but that the storms from the Bay of Bengal exhibit a marked tendency to advance along this track and to give it heavy falls of occasional rain.

The Total Rainfall of the monsoon period (June to September) is 100 inches over part of the west coast, the amount diminishes eastward, is below 20 inches over a large part of the centre and east of the Peninsula and is only 5 inches in South Madras; it is over 100 inches on the Tenasserim and South Burma coast and decreases to 20 inches in Upper Burma; it is over 100 in the north Assam Valley and diminishes steadily westward and is only 5 inches in the Indus Valley.

The month to month distribution for the whole of India is:—

May	.. 2·6	inches
June	.. 8·3	,,
July	..11·9	,,
August	..10·5	,,
September	.. 7·2	,,
October	.. 3·2	,,

Cyclonic storms and cyclones are an almost invariable feature of the monsoon period. In the Arabian Sea they ordinarily form at the commencement and end of the season, *viz.*, May and November, but in the Bay they form a constantly recurring feature of the monsoon season. The following gives the total number of storms recorded during the period 1877 to 1901 and shows the monthly distribution:—

	Jan.	Feb.	Mar.	Apl.	May	June
Bay of Bengal ..	..	..	1	4	13	28
	July	Aug.	Sep.	Oct.	Nov.	Dec.
Bay of Bengal	41	36	45	34	22	8
	Jan.	Feb.	Mar.	Apl.	May	June
Arabian Sea	..	..	..	2	15	
	July	Aug.	Sep.	Oct.	Nov.	Dec.
Arabian Sea	2	..	1	1	5	..

The preceding paragraphs give an account of the normal procession of the seasons throughout India during the year, but it must be remembered, that every year produces **variations from the normal**, and that in some years these variations are very large. This is more particularly the case with the discontinuous element rainfall. The most important variations in this element which may occur are:—

(1) Delay in the commencement of the rains over a large part of the country, this being most frequent in North Bombay and North-west India.

(2) A prolonged break in July or August or both.

(3) Early termination of the rains, which may occur in any part of the country

(4) The determination throughout the monsoon period of more rain than usual to one part and less than usual to another part of the country. Examples of this occur every year.

About the middle of September fine and fresh weather begins to appear in the extreme north-west of India. This area of fine weather and dry winds extends eastward and southward, the area of rainy weather at the same time contracting till by the end of October the rainy area has retreated to Madras and the south of the Peninsula and by the end of December has disappeared from the Indian region, fine clear weather prevailing throughout. This procession with the numerous variations and modifications which are inseparable from meteorological conditions repeats itself year after year.

(*For monsoon of* 1921, *see page* 331).

MONSOON OF 1921.

The Arabian Sea Monsoon broke on the Malabar coast on the 2nd, about the usual date, and in the interior of the Peninsula on the 3rd. After a slight delay it reached Bombay and the central parts of the country on the 9th and extended into Gujerat on the 10th. The Bay monsoon reached Bengal as early as the 26th May, nearly a fortnight before the normal date, and extended into Bihar and Orissa on the 8th June and into the United Provinces on the 12th Both the currents were active between the 18th and 23rd, giving widespread rain in the United and the Central Provinces. But on the 25th a break set in over the whole field of the Arabian Sea current and lasted till the 4th July. During the next two days the monsoon strengthened in the Peninsula and within a week it had extended into the United Provinces and the Punjab Till then the rainfall in north-west India had been very scanty, Gujarat and Rajputana having received less than a seventh of their normal amount. Fortunately a vigorous monsoon prevailed during the next four weeks over the greater part of the country. In the last week of July its activity was aided by a storm, which travelled from the head of the Bay to Baluchistan, causing widespread and locally heavy rain along its track Another partial break set in about the middle of August in the north of the Peninsula and the greater part of north-west India, this lasted with occasional interruptions, until the end of the month in north-west India and until the middle of September in the Deccan. Over the rest of the country the monsoon continued fairly active throughout August. In September three depressions moving eastwards over northern India concentrated the rainfall to an unusual extent in the United Provinces, Gujrat, Rajputana East and the Central parts of the country. The monsoon withdrew from north-west India on the 23rd, a week after its usual date.

The rainfall of the period over the plains of India as a whole was nearly normal, being in excess by only 0·8″ or 2 per cent. The distribution was somewhat unequal a slight deficiency occurring over the greater part of the Peninsula, and an excess in the United Provinces and most of north-west India Sind received double its usual amount and the excess amounted to about 10 per cent in Baluchistan and the south-west Punjab and about 20 per cent in the United Provinces, the North-West Frontier Province, Gujerat and south-east Madras. Mysore and the Madras Deccan fared worst with deficiencies approximating to 25 per cent, while the totals for the Bombay, Deccan and Hyderabad were about 13 per cent. in defect.

The following table gives detailed information of the rainfall of the period :—

DIVISION.	RAINFALL, JUNE TO SEPTEMBER 1921.			
	Actual.	Normal.	Departure from normal.	Percentage departure from normal
	Inches.	Inches.	Inches	
Burma	86.1	84 0	+ 2 1	+ 3

The Textile Industry.

India has been the home of the cotton trade from the earliest times. Its cotton, known as white wool, was well known to the ancients and its cloth was familiar to the West in the days of the overland route. The name Calico comes from the fine woven goods of Calicut, and the products of the Dacca handlooms are still remarkable as the finest muslins human skill can produce.

Indian Cotton.

The exports of Indian cotton began to assume importance with the opening of the sea route. They received an immense stimulus during the American Civil War, when the close blockade of the Confederate ports produced a cotton famine in Lancashire, and threw the English spinners back on India for their supply of raw material. When the war broke out the shipments of Indian cotton were 528,000 bales, but during the last year of the war they averaged 973,000 bales. Most of this cotton was sold at an enormously inflated price, and induced a flow of wealth into Bombay, the great centre of the trade, for which there was no outlet. The consequence was an unprecedented outburst of speculation known as the "Share Mania," and when the surrender of Lee re-opened the Southern Ports widespread ruin followed. It is estimated that the surplus wealth brought into the country by the American Civil War aggregated £ 92 millions. Since then the cultivation of Indian cotton, although interrupted by famine, has steadily increased. For the last season for which returns are available 1919-20 the total area in all the territories reported on was computed at 23,063,000 acres which is 2,025,000 acres or nearly 10 per cent. over the revised figures of last year. The total estimated outturn was 5,845,000 bales of 400 lbs. which is 47 per cent. larger than the revised estimates of last year. To this figure may be added some 1,000 bales estimated as the production in Native States in Bihar and Orissa which make no return.

Bombay, the Central Provinces and Hyderabad are the chief producing centres. The following table gives the rough distribution of the outturn. The figures are the estimated figures for the past season, and are not exact, but they indicate the distribution of the crop :—

Provinces and States.	1920-21 (Provisional estimates.) Area (acres).	Yield (bales.)
Bombay (including Indian States)	5,308,000	876,000
Central Provinces and Berar	4,478,000	511,000
Madras (including Indian States)	2,223,000	356,000
Punjab (including Indian States)	2,116,000	581,000
United Provinces (including Indian States)	1,161,000	336,000
Sind (including Indian States)	279,000	42,000
Burma	376,000	63,000
Bengal (including Hill Tipperah)	70,000	21,000
Bihar and Orissa (*a*)	76,000	15,000
North-West Frontier Province	27,000	5,000
Assam	34,000	12,000
Ajmer-Merwara	42,000	15,000
Hyderabad	2,214,000	341,000
Central India	1,388,000	163,000
Baroda	792,000	127,000
Rajputana	371,000	81,000
Mysore	111,000	11,000
Total	21,016,000	3,556,000

The distribution of the export trade is indicated in the appended table.

Exports of Cotton.—A portion of the Indian crops of the season 1919-20 and a portion of the crop of the season 1920-21 came into statistical consideration in the exports during the year 1920-21. The exports amounted to 7½ million cwts. valued at Rs. 41½ crores, against 8½ million cwts. valued at Rs. 58½ crores in 1919-20. This represents 40.24 per cent. of the total value of raw materials exported from India and 17·46 per cent. of the total exports. The exports showed a decrease of 13·48 per cent. in quantity and 29·02 per cent. in value. The average declared value per unit fell from Rs. 68 to 56 or by 17·64 per cent. whereas the total decrease was Rs. 17 crores. The United Kingdom and Japan had larger receipts during the war period as compared with those in the earlier period. The principal purchasers of cotton other than Japan are in normal years Germany, Belgium, Italy, Austria-Hungary and France.

(*a*) Excluding Indian States for which the yield is roughly estimated at 1,000 bales.
† Bales of 400 lbs. each.

Bombay is the great centre of the cotton trade. The **principal varieties** are Dholleras, Broach, Oomras (from the Berars), Dharwar and Coomptas. Broach is the best cotton grown in Western India. Hinganghat cotton, from the Central Provinces, has a good reputation. Bengals is the name given to the cotton of the Gangetic valley, and generally to the cottons of Northern India. The Madras cottons are known as Westerns, Coconadas, Coimbatores and Tinnevellys. The best of these is Tinnevelly. Cambodia cotton has been grown with success in Southern India, but it shows a tendency to revert. The high prices of cotton realised of recent years have given a great impetus to cultivation. Government have also been active in improving the class of cotton produced, by seed selection, hybridization and the importation of exotic cottons. Although these measures have met with a considerable measure of success, they have not proceeded far enough to leaven the whole outturn, which still consists for the most part of a short-staple early maturing variety, suitable to soils where the rainy season is brief.

Reference has been made to the popularity of the Indian handloom cloths in the earliest days of which we have record. This trade grew so large that it excited alarm in England; and it was killed by a series of enactments; commencing in 1701, prohibiting the use or sale of Indian calicoes in England. The invention of the spinning jenny and the power loom and their development in England converted India from an exporting into an importing country, and made her dependent on the United Kingdom for the bulk of her piece-goods. The first attempt to establish a cotton mill in India was in 1838, but the foundations of the industry were really laid by the opening of the first mill in Bombay in 1856. Thereafter, with occasional set backs from famine, plague and other causes, its progress was rapid.

The following statement shows the quantity (in pounds) of yarn of all counts spun in all India for the twelve months, April to March, in each of the past three years: —

	1918-19.	1919-20.	1920-21.
BRITISH INDIA.			
Bombay	427,638,345	439,799,625	469,944,9
Madras	42,787,344	44,346,268	41,240,677
Bengal	32,507,148	35,229,179	33,329,116
United Provinces	34,390,651	35,181,284	37,060,104
Ajmer-Merwara	2,056,501	1,964,851	2,030,944
Punjab	3,919,719	3,359,107	2,780,078

Central Provinces and Berar	34,279,946	34,188,442	31,269,565
TOTAL ..	580,560,714	597,355,290	621,655,441
FOREIGN TERRITORY.			
Indian States of Indore, Mysore, Baroda, Nandgaon, Bhavnagar, Hyderabad, Wadhwan, Gwalior (Ujjain) and Pondicherry (*a*)..	34,479,750	38,404,983	38,347,156
GRAND TOTAL ..	615,040,464	635,760,273	660,002,597

(*a*) Including the production of one mill only.

The spinning of yarn is in a large degree centred in Bombay, the mills of that province producing nearly 75 per cent. of the quantity produced in British India. The United Provinces of Agra and Oudh and Madras produced about 5 per cent. and 7 per cent. respectively, while Bengal and the Central Provinces produced 5 and 5 per cent. Elsewhere the production is as yet very limited.

Bombay Spinners.

Here is a detailed statement of the quantity (in pounds) and the counts, or numbers, of yarn spun in Bombay island :—

	1918-19.	1919-20.	1920-21.

Above 40	4,555,242	3,559,967	2,067,168
Wastes; &c.	231,158	275,295	354 892
Total ..	615,040,464	635,760,273	660,002,597

In the early days of the textile industry the energies of the millowners were largely concentrated on the production of yarn, both for the China market, and for the handlooms of India. The increasing competition of Japan in the China market, the growth of an indigenous industry in China and the uncertainties introduced by the fluctuations in the China exchanges consequent on variations in the price of silver compelled the millowners to cultivate the Home market. The general tendency of recent years has been to spin higher counts of yarn, importing American cotton for this purpose to supplement the Indian supply, to erect more looms, and to produce more dyed and bleached goods. This practice has reached a higher development in Bombay than in other parts of India, and the Bombay Presidency produces nearly 87 per cent. of the cloth woven in India. The United Provinces produces 2·4 per cent., the Central Provinces 3·8 per cent. and Madras about 2·5 per cent. Grey and Bleached goods represent nearly 70 per cent. of the whole production.

Analysis of Woven Goods.

The following brief extract is taken from the statement of the quantity (in pounds and their equivalent in yards) and description of woven goods produced in all India, including Native States :—

	1918–19.	1919–20.	1920–21.
Grey and Bleached piece-goods—			
Pounds	257,839,998	276,632,412	263,564,482
Yards	1,076,711,011	1,164,073,101	1,129,882,568
Coloured piece-goods—			
Pounds	85,601,778	102,146,317	98,387,636
Yards	374,015,149	475,706,126	450,967,178
Grey and coloured goods other than piece-goods—			
Pounds	3,743,704	3,320,418	3,484,852
Dozens	721,172	658,768	707,449
Hosiery—			
Pounds	260,968	293,738	410,784
Dozens	148,696	159,357	117,249
Miscellaneous—			
Pounds	1,826,837	1,250,221	1,407,503
Cotton goods mixed with silk or wool—			
Pounds	307,165	203,830	226,529
Total—			
Pounds	349,580,450	383,846,936	367,481,791
Yards	1,450,726,160	1,639,779,227	1,580,849,746
Dozens	869,868	818,125	824,698

Bombay Woven Goods.

The output of woven goods during the three years in the Bombay Presidency was as follows. The weight (in pounds represents the weight of all woven goods ; the measure in yards represents the equivalent of the weight of the grey and coloured piece-goods.)

	1918–19.	1919–20.	1920–21.
Pounds	275,801,034	306,248,898	292,370,172
Yards	1,197,421,958	1,352,606,307	1,304,806,802
Dozens	746,471	634,476	632,757

The grand totals for all India are as follows :—

	1918–19.	1919–20.	1920–21.
Pounds	349,580,450	383,846,936	367,481,791
Yards	1,450,726,160	1,639,779,227	1,580,849,746
Dozens	869,868	818,125	824,698

Progress of the Mill Industry.

Earnings of Labour.

In 1917 wages in the Bombay cotton industry were increased by ten per cent. to meet the higher cost of food. They were raised a further ten per cent. in 1919. We give the average wages, it being understood that the Bombay rate is at least ten per cent. higher.

The Jute Industry.

Considering its present dimensions, the jute industry of Bengal is of very recent origin. The first jute mill in Bengal was started at Rishra in 1855, and the first power-loom was introduced in 1859. The original outturn was 8 tons per day. In 1909 it had grown to 2,500 tons per day, it is now 3,000 tons per day, and it shows every indication of growing and expanding year by year. Another interesting thing about the jute industry of Bengal is that, although it is practically a monopoly of Scotsmen from Dundee, the industry itself owes its inception to an Englishman. The founder of the industry was George Acland, an Englishman, who began life as a midshipman in the navy, and was for some years in the East India Marine Service. He quitted this service while still a young man, and engaged in commercial pursuits in Ceylon, where he was successful. Later on he turned his attention to Bengal, and arriving in Calcutta about 1853 he got into touch with the management of the paper works, then at Serampore, where experiments were being tried with country grasses and fibre plants to improve the quality or cheapen the manufacture of paper. This seems to have suggested to Acland the manufacture of rhea, and in 1854 he proceeded to England, with a view to obtaining machinery and capital in order to manufacture goods from that material. During this trip he visited Dundee, and while there Mr. John Kerr, of Douglas Foundry, suggested to him the importing of machinery into Bengal "where the jute comes from and spin it there." This suggestion bore fruit, for shortly afterwards Acland placed orders with Kerr for a few systems of preparing and spinning machinery, and returned to India the same year accompanied by his two sons and a few Dundee mechanics who were to assist him in erecting and operating the first jute mill in Bengal. This, as has been stated, was at Rishra, the site of the present Wellington mills, near Serampore, and here, in 1855, the first machine spun jute yarns were made. As not infrequently happens the pioneer got very little out of his venture. After several ups and downs the Acland interest in the Rishra mill ceased in 1867, and the company which Acland had formed in 1854 was wound up in 1868.

Power-looms.—The pioneer's example was followed by Mr. George Henderson of that ilk and firm, and in 1859 the Borneo Jute Co. was launched under his auspices. To this company is due the credit of introducing the power-loom for jute cloth. Unhampered by the financial difficulties which had burdened the Aclands, the Borneo Jute Co. made rapid progress, doubling their works in 1864, and clearing their capital twice over. In 1872 the mills were turned into a limited liability company, the present "Barnagore Jute Manufacturing Co., Ld." Four other mills followed in succession—Gouripore, Serajgunge, and India Jute Mills.

"From 1866 to 1873," writes Mr. David Wallace in "The Romance of Jute," "the five mills excepting the Rishra mill simply coined money and brought the total of their looms up to 1,250." To illustrate the prosperity of the industry at this period we may take the dividends paid by the Barnagore Company. On the working of their first half year, a 15 per cent. interim dividend was declared, which seemed to justify the enormous capital at which the company was taken over from the Borneo Company, and shares touched 68 per cent. premium. The dividend for the first year, ending August 1873, was 25 per cent., for 1874, 20 per cent., and for 1875 10 per cent. Then came a change. The investing public had forgotten the effect of the Port Canning bubble, and the condition of the jute industry in 1872-73 seeming to offer a better return than coal or tea, both of which had just enjoyed a boom, it was only necessary to issue a prospectus of a jute mill to have all the shares snapped up in the course of an afternoon.

In 1872–73 three new companies were floated locally—the Fort Gloster, Budge Budge and Sibpore, and two Home companies, the Champdany and Samnugger, all of which commenced operations in 1874. In 1874–5 eight other mills were launched—the Howrah, Oriental (now Union), Asiatic (now Soorah), Clive, Bengal Pressing and Manufacturing Co. (now the Bellaghatta-Barnagore branch mill), Rustomjee (now the Central), Ganges (registered in England), and Hastings, owned by Messrs. Birkmyre Bros., of Greenock fame—in all thirteen new companies, coming on all of a heap and swelling the total looms from 1,250 up to 3,500. This was too much of a strain for the new industry, and for the next ten years all the mills had a severe struggle. The older ones all survived the ordeal, but four of the new concerns—the Oriental, the Asiatic, the Bengal Pressing and Manufacturing Co. and the Rustomjee—became moribund, to appear again later on under new names and management. Fort Gloster also suffered badly.

Between 1875 and 1882 only one new mill was put up. This was Kamarhatty, promoted by Messrs. Jardine, Skinner & Co., which came into being in 1877, as the result of Dr. Barry's visit to Calcutta in 1876, when he transferred the agency of the Gouripore Co. from Messrs. Jardine, Skinner & Co. to his own firm. This mill, together with additions made by some of the other mills, brought the total looms up to 5,150 in 1882. By the end of 1885 the total was further augmented by the Hooghly, Titaghur, Victoria and Kanknarrah mills, bringing the number of looms at work up to 6,700. From this period on to 1894 no new mills came into existence except the Calcutta Twist Mill, with 2,460 spindles, since merged into the Wellington branch of the Champdany Co. Between 1896 and 1900 the following new mills were started:—the Gordon Twist Mill with 1,800 spindles (now acquired by Anglo-India), Khardah, Gondolpara (French owned), Alliance, Arathoon, Anglo-India, Standard, National, Delta (which absorbed the Serajgunge), and the Kinnison. A lull of four years witnessed large extensions to the existing mills, after which came the following series of new

mills, besides further heavy extensions—Dalhousie, Alexandra, Naihati, Lawrence, Reliance, Belvedere, Auckland, Kelvin and Northbrook.

Progress of the Industry.

THE record of the jute industry may well be said to be one of uninterrupted progress. The following statement shews **quinquennial averages** from the earliest year for which complete information is available with actuals for the last three years; and the figures in brackets represent the variations for each period, taking the average of the quinquennium from 1879-80 to 1883-84 as 100. It will be seen that the number of looms and spindles in operation and that of persons employed have increased to a very much larger extent than either the number of mills at work or the amount of capital employed :—

	Number of mills at work.	Authorised Capital (in lakhs of Rs.)	Number (in thousands) of Persons employed.	Looms.	Spindles.
1879-80 to 1883-84 ..	21 (100)	270·7 (100)	38·8 (100)	5·5 (100)	88 (100)
1884-85 to 1888-89 ..	24 (114)	341·6 (126)	52·7 (136)	7 (127)	138·4 (157)
1889-90 to 1893-94 ..	26 (124)	402·6 (149)	64·3 (166)	8·3 (151)	172·6 (196)
1894-95 to 1898-99 .	31 (148)	522·1 (193)	86·7 (223)	11·7 (213)	244·8 (278)
1899-1900 to 1903-04 ..	36 (171	680 (251)	114·2 (294)	16·2 (295)	334·6 (380)
1904-05 to 1908-09 ..	46 (219)	960 (355)	165 (425)	24·8 (451)	510·5 (580)
1909-10 to 1913-14 ..	60 (286)	1,209 (443)	208·4 (537)	33·5 (609)	691·8 (786)
1914-15 .. .	70 (333)	1,394·3 (515)	238·3 (614)	38·4 (698)	795·5 (904)
1915-16	70 (333)	1,322·6 (488)	254·1 (655)	39·9 (725)	812·4 (923)
1916-17 .. .	74 (352)	1,395·5 (516)	262·6 (677)	39·7 (722)	824·3 (937)
1917-18 .. .	76 (362)	1,428 5(528)	266· (686)	40·6 (738)	834 (948)
1918-19	76 (362)	1,477 2(546)	275·5 (710)	40· (727)	839·9 (954)
1919-20	76 (362)	1,563·5(577)	280·4 (723)	41·0 (745)	856·3 (973)

The production of the mills has increased to a still greater extent. The following figures show the exports of jute manufactures and the declared values for the same periods :—

	Jute manufactures. Gunny bags in millions of number.	Gunny cloths in millions of yards.	Value in lakhs of Rs.
1879-80 to 1883-84	54·9 (100)	4·4 (100)	124·9 (100)
1884-85 to 1888-89	77 (140)	15·4 (350)	162·9 (130)
1889-90 to 1893-94	111·5 (203)	41 (932)	289·3 (232)
1894-95 to 1898-99	171·2 (312)	182 (4,136)	518 (415)
1899-1900 to 1903-04..	206·5 (376)	427·2 (9,709)	826·5 (662)
1904-05 to 1908-09	257·8 (469)	698 (15,864)	1,442·7 (1,154)
1909-10 to 1913-14	339·1 (618)	970 (2,045)	2,024·8 (1,621)
1914-15	397·6 (724)	1,057·3 (24,030)	2,582 (2,067)
1915-16	794·1 (1447)	1,192·3 (27,098)	3,797·8 (3,041)
1916-17	805·1 (1,466)	1,230·9 (27,975)	4,167·2 (3,336)
1917-18	758·4 (1,38.)	1,196 8 (27,200)	4,284·3 (3,430)
1918-19	583·1 (1,062)	1,103·2 (25,072)	5,265·2 (4,215)
1919-20	342·7 (624)	1,275·1 (28,980)	5,001·5 (4,004)

Up to the last quinquennium the **exports of raw jute** were marked by increases from year to year though the improvement was not so rapid as in the case of manufactures. A slight decrease in the exports occurred in 1909-10 as compared with the figures for the preceding quinquennial period and a further decline in 1910-11, but a marked recovery was made in 1911-12 which was accentuated in 1912-13 :—

	Jute, raw, in millions of cwt.	
1879-80 to 1883-84	7·5	(100)
1884-85 to 1888-89	8 9	(119)
1889-90 to 1893-94	10	(133)
1894-95 to 1898-99	12·3	(164)
1899-1900 to 1903-04 ..	12·7	(169)
1904-05 to 1908-09	15·09	(201)
1909-10..	14·6	(195)
1910-11..	12·7	(169)
1911-12..	16·2	(216)
1912-13..	17 5	(233)
1913-14..	15·4	(205)
1914-15..	10·1	(135)
1915-16..	12	(160)
1916-17..	10·8	(144)
1917-18..	5·6	(74)
1918-19..	7·9	(105)
1919-20..	11·8	(157)

The total quantity of jute manufactures exported by sea from Calcutta during the official year ending 31st March 1918 was 716,000 tons as against 784,800 tons in the preceding year 1916-17 and 603,500 tons in the pre-war year 1913-14. In 1917-18 gunny bags contributed 404,000 tons and gunny cloth 307,000 tons as against 461,800 tons and 317,800 tons, respectively in the preceding year (1916-17) and 324,300 tons and 275,100 tons respectively in the pre-war year (1913-14). The total value of jute manufactures exported during the year 1917-18 was £28 millions as against £27 millions in the preceding year and £19 millions in the pre-war year (1913-14).

The price of raw jute reached a very high point in 1906-07, the rate being Rs. 65 per bale; in 1907-08 it dropped to Rs. 42 per bale, and the fall was accentuated in 1908-09 and 1909-10, the price having declined to 36·4 and Rs. 31 per bale respectively. In 1910-11 the price rose again to Rs. 41-8-0, to Rs. 51-4-0 in 1911-12 and further to Rs. 76-12-0 in 1913-14. The following are the quinquennial average prices per bale (400 pounds) of ordinary jute calculated from the prices current published by the Bengal Chamber of Commerce :—

	Price of jute, ordinary, per bale of 400 lbs. Rs.	a.	p.	
1879-80 to 1883-84	23	8	0	(100)
1884-85 to 1888-89	23	3	2	(99)
1889-90 to 1893-94	32	6	5	(138)
1894-95 to 1898-99	30	12	0	(131)
1899-1900 to 1903-04 ..	32	1	7	(137)
1904-05 to 1908-09	44	13	6	(191)
1909-10..	31	0	0	(132)
1910-11..	41	8	0	(177)
1911-12..	51	4	0	(218)
1912-13..	54	12	0	(233)
1913-14..	76	12	0	(327)
1914-15..	54	8	0	(232)
1915-16..	48	4	0	(205)
1916-17..	50	12	0	(216)
1917-18	38	8	0	(164)
1918-19	60	0	0	(255)
1919-20	77	8	0	(330)

The average **prices of gunny cloth** have been as follows :—

	Price of Hessian cloth 10½oz. 40" per 100 yds. Rs.	a.	p.	
1879-80 to 1883-84	10	7	11	(100)
1884-85 to 1888-89	8	0	7	(77)
1889-90 to 1893-94	10	6	6	(99)
1894-95 to 1898-99	9	11	8	(93)
1899-1900 to 1903-04 ..	10	2	10	(97)
1904-05 to 1908-09	11	14	1	(112)
1909-10..	9	3	6	(88)
1910-11..	9	5	6	(89)
1911-12..	11	14	0	(113)
1912-13..	16	6	0	(156)
1913-14..	17	0	0	(162)
1914-15..	12	4	0	(117)
1915-16..	20	10	0	(197)
1916-17..	17	6	0	(166)
1917-18..	33	8	0	(319)
1918-19..	33	0	0	(314)
1919-20..	28	0	0	(267)

The 1921 crop.—The final figures of outturn for the three provinces work out as follows :—

Province.	Bales. 1921.	1920.
Bengal (including Cooch Behar)..	7,637,630	5,304,836
Bihar and Orissa (including Nepal)	570,720	388,356
Assam	332,400	259,000
Total ..	8,540.750	5,962,192

Province.	Area in acres. 1919.	1920.
Bengal (including Cooch Behar)	2,498,145	2,205,323
Bihar and Orissa	203,430	178,750
Assam	137,300	*124,600
Total ..	2,838,875	*2,508,673

* Revised.

The Indian Jute Mills Association now one of the most important, if not the most important, of the bodies affiliated to the Bengal Chamber of Commerce, was started under the following circumstances:—In 1886 the existing mills, finding that, in spite of the constant opening up of new markets, working results were not favourable, came to an agreement, with the late S. E. J. Clarke, Secretary to the Chamber of Commerce, as trustee, to work short time. The only mills which stood out of this arrangement were the Hooghly and Serajgunge. The first agreement, for six months dating from 15th February 1886, was subsequently renewed at intervals without a break for five years up to February 15, 1891. The state of the market at the time of the renewals dictated the extent of the short time, which varied throughout the five years between 4 days a week, 9 days a fortnight and 5 days a week. Besides short time, 10 per cent. of the sacking looms were shut down for a short period in 1890. An important feature of this agreement was a mutual undertaking by the parties not to increase their spinning power during the currency of the agreement, only a few exceptions being made in the case of a few incomplete new mills.

The officials of the Association are:—

Chairman.—Mr. D. P. McKenzie, M.L.C.

Members of Committee.—Sir Alex. Murray, Mr. D. S. K. Greig, Mr. J. Bell Robertson and Mr. G. F. Rose.

Working days.—With the introduction of the electric light into the mills in 1896, the working day was increased to 15 hours, Saturdays included, which involved an additional amount of cleaning and repairing work on Sundays. In order to minimise this Sunday work and give them a free Sunday, an agitation was got up in 1897 by the Mill European assistants to have the engines stopped at 2 or 3 p.m. on Saturdays. The local Government took the matter up, but their action went no further than applying moral suasion, backed by a somewhat half-hearted threat. The Mill Association held meetings to consider the question and the members were practically agreed as to the utility of early closing on Saturdays, but, *more suo*, could not trust themselves to carry it out without legislation. Unfortunately the Government of India refused to sanction the passing of a Resolution by the provincial Government under the Factory Act and the matter was dropped. Only a year or two ago the Jute Mills Association in despair brought out an American business expert, Mr. J. H. Parks, to advise them on the possibility of forming a jute trust with a view to exercising some control over the production and price of jute. Mr. Parks came, and wrote a report which the Association promptly pigeon-holed because the slump was over and the demand was so prodigious that there was no need to worry about the price of jute.

An Association, styled the **Calcutta Jute Dealers Association**, has lately been formed in Calcutta to promote and to guard the common interests of its members as dealers in jute for local consumption. The members are balers and brokers of jute for sale to the jute mills in and around Calcutta. Committee:—Mr. Geo. Morgan, M.L.C., *Chairman*, Members:—Messrs. H. K. Banks, G. C. Moon, H. F. Mytton, H. M. Sherman and A. Smith.

Effects of the War.—The official review of the Trade of India in 1916-17 says:—The value of the exports of raw jute increased in 1916-17 by nearly Rs. 65 lakhs to Rs. 1,629 lakhs. The quantity exported, however, was less than in the preceding year. The estimated yield of the crop was 12 per cent. above that of the previous year, *viz.*, 1,490,000 tons or 8,340,000 bales. Owing to the lack of tonnage and other abnormal circumstances brought about by the war, the quantity exported was 10 per cent. below that of the previous year. Of the consumers the United Kingdom and Italy took less, while the United States, France (mainly *via* Dunkirk), Russia (*via* Vladivostok) and Brazil took greater quantities. There were, of course, no exports to enemy countries which, took more than 27 per cent. in the five years ending 1913-14, the pre-war year. The increase in the value accompanied by a decrease in the volume of exports was due to the very high range of prices during the months of September, October, November and December. Towards the close of the year under review prices steadily declined, and have since gone still lower.

Jute Manufactures.—The value of the exports now approximates to Rs. 42 crores. In spite of the war with its attendant difficulties of freight and finance, the exports of gunny cloth showed an increase of Rs. 241 lakhs of which Rs. 163 lakhs were due to higher prices and Rs. 78 lakhs to an increase in the volume of exports. There were also an increase of Rs. 118 lakhs in the value of gunny bags exported. The number of bags shipped increased while the weight decreased, sand bags for war purposes being lighter than the ordinary bags for transporting grain. Exports to Australia in 1916-17 were a record. The United Kingdom with Australia took more than half of the number of bags exported while the United States took more than half of the quantity of cloth exported.

There were 74 mills at work throughout the year with 30,697 looms and 824,315 spindles. The number of persons employed was 262,552. There were no difficulties as regards the supply of labour. Four new mills came into existence. It is improbable that these, with one exception, can begin manufacturing to any extent until after the war.

Hemp and Jute Substitutes.

Experiments have been made during the last few years by the Agricultural Department of the Government of India with the **Deccan hemp** plant (*Hibiscus cannabinus*), which yields a fibre very similar to jute. As a result, a new variety of the plant, known as Type 3, has been obtained, which it is now proposed to introduce into several parts of India, and, as a beginning, the variety is to be grown on a number of estates in Bihar. A sample of the fibre prepared from this variety by the usual methods of retting was 10 ft. to 12 ft. long, of an exceptionally light colour, well cleaned, and of good strength. It was valued at £18 per ton with Bimlipatam jute at £12 10s., and Bengal first mark jute at

£17 per ton. Deccan hemp has been grown fairly extensively in Bombay, the Central Provinces, and Madras, where it is used for ropes and cordage and also for the manufacture of a coarse sackcloth. A valuable feature of the plant is its suitability for cultivation in such parts of India as are not suitable for jute.

Prior to the war, the United Kingdom's requirements of hemp were mainly supplied by the following countries in order of importance:—the Philippine Islands, New Zealand, India, Russia, Italy and Germany. The opinion appears to be held that the effect of the war will be to cause very considerable changes in the character of the fibre market. There will probably be labour difficulties, it is thought, in the preparation of the hemp crops of Russia and Hungary, and it is not unlikely that the world will look to countries such as India for the supply of fibres which may be used as substitutes for the European varieties of hemp. There can be no doubt that one of the early effects of the war was to firm up hemp prices. As far as Indian hemp is concerned, values were persistently depreciated during the first six months of 1914 owing to large stocks held; but the closure of the Russian hemp market on the outbreak of war resulted in a marked improvement in values, and there was a keen demand and a considerable rise in price.

THE WOOL INDUSTRY.

Wool exported from India consists not only of wool grown in India itself, but of imports from foreign sources, these latter coming into India both by land and by sea. Imports by sea come chiefly from Persia, but a certain quantity from Persia also comes by land, while the main imports are from Afghanistan, Central Asia, Tibet and Nepal. Quetta, Shikarpur, Amritsar and Multan are the main collecting centres for wool received by land from Afghanistan and Persia, whence it is almost invariably railed to Karachi for subsequent export overseas.

Imports and Exports.—A considerable amount of wool is imported annually from Tibet and, in normal years, from Afghanistan. In 1913-14 imports of wool manufactures from the British Empire were valued at Rs 223 lakhs and from foreign countries at Rs. 132 lakhs. In 1919-20 those figures fell to Rs. 138 lakhs and Rs. 22 lakhs. But in 1920-21 imports of woollen manufactures rose to Rs 553 lakhs.

The export trade in wool was seriously hit by trade depression in 1920-21. Control was abolished in July 1920, but in spite of that exports, which had amounted to 47 million lbs in 1918-19 and to 36 million lbs in the following year, fell in 1920-21 to 23 million lbs.

Production in India.—The production of wool in India is estimated at 60 million lbs, the estimate being arrived at from the available figures of the number of sheep in the country and their estimated yield per fleece, the average quantity of wool yielded per sheep per annum being taken at only 2 lbs.

All Indian wools are classed in the grade of **carpet wools**, and it is correct to say of perhaps fully half the breeds of sheep found on the plains of India that they yield a kind of hair rather than of wool. They are reared chiefly on account of the mutton, and the fleece has been generally regarded as of subsidiary interest. In many respects, in actual fact, the Indian plains sheep approximate more nearly to the accepted type of the goat rather than of the sheep. Short remarks in his manual on Indian cattle and sheep, particularly with respect to the Madras type, that they "resemble a greyhound with tucked up belly, having some coarseness of form, the feet light, the limbs bony, sides flat and the tail short."

Mill manufacture.—The number of woollen mills at work in British India in 1902 was three, with an authorised capital of Rs. 38,50,000, and employing 23,800 spindles and 624 looms. The number of persons employed in the industry then was 2,559, and the quantity of woollen goods produced 2,148,000 lbs. At the end of 1917 the number of mills had risen to five, with an authorised capital of Rs. 2,56,50,000 employing 39,608 spindles and 1,155 looms. The weight of goods produced then was 9,744,264 lbs. and the number of persons employed 7,824. With regard to Indian States, there was one mill in Mysore in 1903 with a capital of Rs. 6,00,000, employing 1,430 spindles and 45 looms. The quantity of goods produced was 1,136,000 lbs. and the number of persons employed 297. In 1907 there was still only the one mill working in an Indian State—the authorised capital had been increased to Rs. 15,00,000, the quantity of goods produced to 1,724,087 lbs, and the number of persons employed to 563. Three of the mills manufacture all classes of woollen and worsted goods, the remainder manufacturing blankets only. The existence of these mills in India proved of great service to Government in the meeting of war requirements, and they were all employed to their fullest capacity in supplying army demands for greatcoat cloth, serges, puttees, flannels, blankets and hosiery. Their total capacity, however, was not sufficient to meet the full requirements of the army, and consequently their supplies had to be supplemented by large imports from home. The bulk of the wool used by the Indian mills is Indian wool, although it is supplemented to some extent by the importation of merinos and cross-breds from Australia for the manufacture of the finer classes of goods. Their market for manufactured goods is almost entirely in India itself.

Blanket weaving and carpet manufacture are carried on in various parts of the country, notably in the Punjab and the United Provinces. Woollen pile carpets are made in many of the jails. Amritsar had a considerable trade at one time in weaving shawls from *pashm*, the fine under fleece of the Tibetan goat, but its place has been taken to some degree by the manufacture of shawls from imported worsted yarns, but more generally by the manufacture of carpets of a fine quality which find a ready sale in the world market. This work is done entirely on hand looms and the carpets fetch a high price.

Bibliography.—Notes on wool in India. By A. H. Silver and J. K. Mehta, (Govt. Press, Calcutta: 1919).

Hydro-Electric Development.

India promises to be one of the leading countries of the world in regard to the development of hydro-electric power and great strides in this direction have already been made. India not only specially lends itself to projects of the kind, but peremptorily demands them. Cheap motive power is one of the secrets of successful industrial development and the favourable initial conditions caused by the war, the enthusiasm for industrial development which has seized nearly all classes of educated Indians, and the special attention which the circumstances of the war have compelled Government to direct towards the scientific utilisation of Indian natural resources all point to a rapid growth of industrial enterprise in all parts of India within the next few years. Indeed, the process, for which sound foundations had been laid before the war, is now rapidly under way. India is severely handicapped compared with other lands as regards the generation of power by the consumption of fuel, coal or oil. These commodities are all difficult to obtain, and costly in India except in a few favoured areas. Coal supplies, for example, are chiefly centred in Bengal and Chota Nagpur and the cost of transport is heavy. Water power and its transmission by electricity offer, on the other hand, immense possibilities, both as regards the quantity available and the cheapness at which the power can be rendered, in all parts of India.

Water power schemes, pure and simple, are generally difficult in India, because the power needs to be continuous, while the rainfall is only during a small portion of the year. Perennial rivers with sufficient water throughout the year are practically non-existent in India. Water, therefore, must be stored for use during the dry season. Favourable sites for this exist in many parts in the mountainous and hilly regions where the heaviest rainfalls occur and the progress already made in utilising such opportunities by the electrical transmission of power affords high encouragement for the future. Further, hydro-electric schemes can frequently be associated with important irrigation projects, the water being first used to drive the turbines at the generating stations and then distributed over the fields. Water, as was pointed out in an interesting paper on the subject presented to the Indian Industrial Commission of 1916-18 by Mr.R.B. Joyner, C.I.E., M. Inst.C.E., lately in the Irrigation Branch of the Bombay Public Works Department and engaged in the Tata's Hydro-Electric Works in Western India up to the time of his death, "can be stored in this country at a third or a quarter of the cost which there would be in other countries. This is not merely on account of the cheaper labour, which would be the chief reason in an earthen dam, but in masonry or concrete dams. It is also because we do not use cement, which, for some reason not well-known to me, is generally deemed essential elsewhere, though it cannot really be so suitable."

The Industrial Commission emphasized the necessity for a Hydrographic Survey of India. On this recommendation the Government of India in 1918 appointed the late Mr. G. T. Barlow, C.I.E., then Chief Engineer, Irrigation Branch, United Provinces, to undertake the work, associating with him Mr. J. W. Meares, M.I.C.E., Electrical Adviser to the Government of India. Mr. Barlow died, but Mr. Meares issued a preliminary report in September, 1919, summarising the present state of knowledge of the problem in India and outlining a programme of investigation to be undertaken in the course of the inquiry. Mr. Meares showed that industries in India now absorb over a million horse power, of which only some 285,000 h.p. is supplied by electricity from steam, oil or water. The water power so far actually in sight amounts to 1¼ million horse-power, but this excludes practically all the great rivers, which are at present unmvestigated. Thus the minimum flow of the seven great rivers eastward from the Indus is stated to be capable of giving not less than three million horse-power for every thousand feet of fall from the Himalayas, while similar considerations apply to rivers in other parts. Some doubt is expressed as to the estimate of seven million horse-power in the Irrawaddy and Chindwin rivers, given in the report of the London Conjoint Board of Scientific Studies.

The Report points out that the Bombay Presidency holds a unique position owing to its great existing and projected schemes at Lonavla, the Andhra Valley, the Nila Mula and the Koyna Valley and has the still greater advantage of possessing a firm ready to develop its resources.

Bombay Hydro-Electric Works.

The greatest water-power undertakings in India—and in some respects the greatest in the world—are the Tata hydro-electric schemes recently brought to fruition, and constantly undergoing expansion, for the supply of power in the city of Bombay. Bombay is after London the most populous city in the British Empire and it is the largest manufacturing town in Asia. Its cotton mills and other factories use over 100,000 horse power of mechanical energy and until a year or two ago this was almost entirely provided by steam, generated by coal coming from a distance—mostly Bengal. The Tata Hydro-Electric Power Scheme, now an accomplished fact, marked one of the big steps forward made by India in the history of its Industrial development. It was the product of the fertile brain of Mr. David Gostling, one of the well known characters of Bombay, a little over a decade ago. The exceptional position of the Western Ghats, which rise 2,000 feet from sea-level within a very short distance of the Arabian Sea, and force the monsoon as it sweeps to land, to break into torrential rain at the mountain passes was taken full advantage of, and the table lands behind the Ghats form a magnificent catchment area to conserve this

heavy rainfall in. Mr. Gostling pressed the scheme on the attention of Mr. Jamsetji Tata for years, and with perseverance collected data which he laid before that pioneer of the larger industries in India. He summoned the aid of experts from England to investigate the plan. The scheme was fully considered for six long years. Meanwhile both Mr. J. N. Tata and Mr. David Gostling passed away, but the sons of the former continued the work of their father and on Mr. Gostling's death, Mr. R. B. Joyner's aid was sought to work out the Hydraulic side of the undertaking.

The scheme completed, a syndicate secured the license from Government and an endeavour was made to enlist the support of financiers of England who tried to impose terms which were not acceptable. Meanwhile, the attention of Sir George Clarke (now Lord Sydenham), then Governor of Bombay, and an engineer of distinction himself, was drawn to the scheme. The interest shown by him drew the attention of Indian Chiefs in the Presidency of Bombay and outside it to its possibilities, funds flowed in and a company with an initial capital of 1,75,00,000 Rupees was started.

The hydro-electric engineering works in connection with the project are situated at and about Lonavla above the Bhor Ghat. The rainfall is stored in three lakes at Lonavla, Walwhan and Shirawta, whence it is conveyed in masonry canals to the forebay or receiving reservoir. The power-house is at Khopoli, at the foot of the Ghats, whither the stored water is conveyed through pipes, the fall being one of 1,725 feet. In falling from this height the water develops a pressure of 750 lbs. per square inch and with this force drives the turbines or water wheels. The scheme was originally restricted to 30,000 Electrical horse power, but the Company, in view of the increasing demand for power from the Bombay mills, decided to extend the works by building the Shirawta Dam and issued further Shares bringing the capital to Rs. 3,00,00,000, the capacity of the scheme being increased to more than 40,000 electrical horse power. Issued Capital 7 per cent. Preference 8,735 shares fully paid and Ordinary 18,000, out of which 10,000 are fully paid and 8,000 new shares, on which Rs. 400 have been called up. There is also a Debenture Loan of Rs. 85 lakhs. The works were formally opened by H. E. the Governor of Bombay on the 8th February 1915. At present there are altogether 44 mills with motors of the aggregate B. H. P. of 52,000 H. P. in service. In addition to the cotton and flour mills which have contracted to take supply from the Company for a period of ten years, the Company have entered into a contract with the Bombay Electric Supply and Tramways Company, Limited, and supplies energy to five of their substations. There remain many prospective buyers of electrical energy and the completion of the Company's full scheme will not suffice for all such demands. Besides the Bombay cotton mills, which alone would require about 100,000 horse power, there are, for instance, tramways, with possibilities of suburban extensions. The probable future demand is roughly estimated at about 160,000 H. P.

Investigations undertaken by Mr. H. P. Gibbs, with a view to further developing the electrical supply led to the discovery of a highly promising water storage site in the valley of the Andhra River, situated near the present lakes previously overlooked, as altogether different treatment and design were required. In this instance the draw off point is 11 miles upstream from the dam and at a level 112 ft. above the lowest river bed level at the dam. The water is taken through a tunnel 8,700 ft. long driven in solid trap rock through the scarp of the ghauts of which the pressure pipes are an extension. Seventy feet of the upper water in the lake can be drawn off comprising 75 per cent. of the total amount of water stored, both above and below draw off level. A scheme was prepared, to be carried out by a separate company and providing for holding up the Andhra River by a Dam, about a third of a mile long and 192 feet high, at Tokerwadi. This dam will hold up a lake nearly twelve miles long, the further end of which approached the brink of the Ghats at Khand. Here, a tunnel, a mile and a quarter long, will carry the water to the surge chamber, whence it will enter the pipes for a vertical drop of about 1,750 feet to the generating station at Bhivpuri, about 17 miles from the generating station at Khopoli. The scheme is designed to yield 100,000 horse power in its full development. A new company to operate the scheme was formed on the 31st August 1916, with an initial capital of Rs. 2,10,00,000, divided into 160,000 Ordinary shares of Rs. 1,000 each and 5,000 Preference shares of Rs. 1,000 each, this being the Andhra Valley Power Supply Company, Limited. This Company will pay annually to the Tata Hydro-Electric Power Supply Company 15 per cent. upon the profits (after making certain deductions), or a sum of Rs. 50,000, whichever shall be the larger sum, the intention being that the new company shall pay annually to the Tata Hydro-Electric Power Supply Company a minimum sum of Rs. 50,000. The areas intended to be supplied by this Company are the town and island of Bombay and the Suburban Municipalities of Bandra and Kurla. The Hydraulic Works consisting of the Dam, the Tunnel and the Pipe Lines, are already well in hand and have shown three seasons' satisfactory progress. Contracts for machinery have been satisfactorily entered into with manufacturers of repute. It is estimated that supply of power will commence next year.

Just as the Andhra project has been developed as a northward extension of the original scheme, so a southward development also originated by Mr. Gibbs and developable on lines similar to those of the Andhra project, is now being carried out under the name of the Nila-Mula scheme, the name arising from the fact that the valleys of the Nila and Mula rivers are being dammed for the conservation of water for it. A company entitled The Tata Power Co., Ltd., was floated in the autumn of 1919 for the purpose, having a capital of Rs. 9 crores, divided into 30,000 7½% cumulative preference shares of Rs. 1,000 each and 60,000 shares of Rs. 1,000 each, the first and present issue being of 10,000 preference shares and 35,000 ordinary shares. One lake will be formed and from it water will be conducted direct through a short tunnel to a pipe descent to a turbine power house 1,750 feet below the forebay. The head

of water will suffice to generate 150,000 horse power and the length of the transmission line to Bombay will be 70 miles. Half of the scheme, *i. e.*, for the supply of 75,000 h. p., will first be completed and is expected to come into operation in about four years the construction works at present are in progress and lands on being acquired for the Dam and the lake sites.

Nearly 100 miles southward of this Messrs. Tata propose to erect two dams in the huge valley of the Koyna river, proposed by Mr. A. T. Arnall and developable on lines similar to the two projects by Mr. Gibbs above mentioned partly to supply power to Bombay and partly to develop a great assembly of electro-chemical industries near the power installation. The preliminary.
investigations for this scheme are still proceeding. The catchment area for the lake will be 346 square miles and there will be a total storage after the rains of 112,600 million cubic feet, which will be sufficient to supply a normal load of 350,000 horse power for 8,000 hours per year The preliminary estimates provided for a capital of Rs. 8·10 lakhs to carry out the scheme.

Mysore Installation.

The first hydro-electric scheme undertaken in India or, indeed, in the East, was that on the River Cauvery, in Mysore State, which was inaugurated, with generating works at Sivasamudram, in 1902. The Cauvery rises in the British district of Coorg, and flows right across Mysore. The first object with which the installation was undertaken was the supply of power to the goldfields at Kolar. These are 92 miles distant from Sivasamudram and for a long time this was the longest electrical power transmission line in the world. Current is also sent to Bangalore, 59 miles away, where it is used for both industrial and lighting purposes.

The initial undertaking has constantly been expanded since its inauguration, so that its total capacity, which was at first 6,000 horse power, is now approximately 25,000 h.p. This is the maximum obtainable with the water which the Cauvery affords and, therefore, with the number of consumers, large and small, rapidly increasing, the necessity of a completely new installation elsewhere, to be operated in parallel with or separately from that at Sivasamudram, has been recognised. Two projects offer themselves. The first would involve the use of the River Shimsha, a tributary of the Cauvery which has natural falls, and the second, known as the Mekadatu project, would have its power house on the Cauvery, 25 miles down-river from Sivasamudram and just within the borders of Mysore State, adjacent to the Madras Presidency. The head of water available at Sivasamudram is 400 feet, that on the Shimsha 618 feet net, which would generate 39,500 e. h. p. At Mekadatu the Cauvery runs in rapids and a dam and a channel 20,000 feet long with a 22½ feet bed would be necessary. There would be three generating units, each giving an output of 4,000 e. h. p. Future extensions yielding an additional 8,000 h. p. could be made. The progressive spirit which has marked the management of the works since their inception now characterises the manner in which the problem of further extensions are being considered.

Works in Kashmir.

A scheme of much importance from its size, but more interesting because of the developments that may be expected from it than for the part which its current supply already plays in the life of the countryside, is one installed a few years ago by the Kashmir Durbar, utilising the River Jhelum, near Baramulla, which lies thirty-four miles north-west of Srinagar. The head-works of the Jhelum power installation are situated six and a half miles from the power house and the main connection between the two is a great timber flume. These works and the forebay at the delivery end of the flume have a capacity for carrying water sufficient for the generation of 20,000 electrical horse power. Four pipes 600 feet long lead from the forebay to the power house, and from forebay to water-wheel there is an effective head of 395 feet. There are four vertical waterwheels, each coupled on the same shaft to a 1,000 k.w., 3-phase, 2,300 volt, 25-period generator running at 500 r.p.m., and each unit is capable of taking a 25 per cent. overload, which the generator end is guaranteed to maintain with safety for two hours. The power house is of sufficient capacity to allow of 15,000 k.w. generating plant being installed within it. Two transmission lines run side by side as far as Baramulla, 21 miles distant, at which point one terminates. The other continues to Srinagar, a further 34 miles. The installation at Baramulla was originally utilised for three floating dredgers and two floating derricks, for dredging the river and draining the swampy countryside and rendering it available for cultivation, but these operations have temporarily been curtailed, so that only one dredger is now in operation. The lighting of Baramulla has been taken in hand with satisfactory results and it is expected that the lighting demand will rapidly increase and that a small demand for power will soon spring up. At Srinagar, the line terminates at the State silk factory, where current is supplied not only for driving machinery and for lighting, but for heating. The greater part of Srinagar city is now electrically lighted and during the past year a motor load of over 100 k.w. has been connected with the mains, motors being hired out to consumers by the Electrical Department. This step was taken with a view to educating the people in the use of electric power and it has been entirely successful.

Silk.

In the early days of the East India Company the Indian Silk trade prospered greatly, and various sub-tropical races of the Silkworm were introduced. But the trade gradually declined for the following reasons:—

In the seventeenth and eighteenth centuries India's chief competitor in the silk trade was the Levant Company. Successful efforts, however, were made to acclimatise in Europe one or two races of a temperate worm, procured from China and Japan. When sericulture became part of the agriculture of France and Italy, a quality of silk was produced entirely different from that of India and Turkey, and its appearance created a new demand and organized new markets.

All subsequent experience seems to have established the belief that the plains of India, or at all events of Bengal, are never likely to produce silk that could compete with this new industry. On the lower hills of Northern India, on the other hand, a fair amount of success has been attained with this (to India) new worm, as, for example, in Dehra Dun and Kashmir. In Manipur, it would appear probable that *Bombyx mori*, possibly obtained from China, has been reared for centuries. The caprice of fashion has, from time to time, powerfully modified the Indian silk trade. The special properties of the *korah* silk were formerly much appreciated but the demand for them has now declined. This circumstance, together with defective systems of rearing and of hand-reeling and weaving, accounts largely for the present depression in the mulberry silk trade of India.

Mulberry-feeding worms.—Sir George Watt states that in no other country does the necessity exist so pressingly as in India to treat the subject of silk and the silk industries under two sections, *viz.*, Bombycidae, the domesticated or mulberry-feeding silk worms; and Saturniidae, the wild or non-mulberry-feeding worms. In India the mulberry worm (Bombyx Mori) has been systematically reared for many centuries, there being six chief forms of it. In the temperate tracts of India various forms of *Morus alba*, (the mulberry of the European silk-producing countries), are grown specially as food for the silkworm. This is the case in many parts of the plains of Northern India, Baluchistan, Afghanistan, Kashmir, and along the Himalaya at altitudes up to 11,000 feet. The other species even more largely grown for the Indian silkworm is *M. Indica* of which there are many distinctive varieties or races. This is the most common mulberry of Bengal and Assam, as also of the Nilgiri hills.

India has three well-known purely indigenous silkworms . the *tasar*. the *muga* and the *eri*. The first is widely distributed on the lower hills, more especially those of the great central table-land, and feeds on several jungle trees. The second is confined to Assam and Eastern Bengal, and feeds on a laurel. The third exists in a state of semi-domestication, being reared on the castor-oil plant. From an art point of view the *muga* silk is the most interesting and attractive, and the cocoon can be reeled readily. The *eri* silk, on the other hand, is so extremely difficult to reel that it is nearly always carded and spun—an art which was practised in the Khasi Hills of Assam long before it was thought of in Europe.

Experiments and results.—Numerous experiments have been made with a view to improving sericulture in India. French and other experts are agreed that one of the causes of the decline of the silk industry in India has been the prevalence of diseases and parasites among the worms, the most prevalent disease being pebrine. M. Lafont, who has conducted experiments in cross breeding, believes that improvement in the crops will be obtained as soon as the fight against pebrine and other diseases of the worms is taken up vigorously by the producers of seed and the rearers of worms, while improvement in the quality of the cocoons will be obtained by rearing various races, pure and cross breds.

In Kashmir and Mysore satisfactory results have been obtained. In the former State sericulture has been fostered on approved European principles with Italian reeling machinery, seed being imported annually on a large scale. In 1897 in Mysore Mr. Tata, after selecting a plantation and site for rearing houses, sent to Japan for a Superintendent and trained operatives. The Mysore authorities have made a grant of Rs. 3,000 a year to the Tata farm in return for instruction given to the people of Mysore in Japanese methods of growing the mulberry and rearing the insects. The products of the Mysore State are exported to foreign countries from Madras. The work of the Salvation Army is also noteworthy in various parts of India. They have furnished experts, encouraged the planting of mulberry trees, and subsidised several silk schools. The draft prospectus has been issued of a silk farm and institute to be started at Simla under the auspices of the Salvation Army. The Lieut. Governor of the Punjab has permitted the school to be called after his name, and the Punjab Government made a grant of Rs. 2,000 towards the expenses. Sir Dorabji Tata has also made a donation of Rs. 1,000. The Bengal Silk Committee under the guidance of some French experts have conducted cross-breeding experiments with a view to establish a multivoltine hybrid of European quality. There is a Government sericultural farm at Berhampore, where, it is said, a pure white multi-voltine of silk worm is reared. The results of the Bengal Committee's labours may be summed up as follows : the only really effective method of dealing with the problem is to work up gradually to a point at which the whole of the seed cocoon necessary for the province will be supplied to rearers under Government supervision, and to establish gradually a sufficient number of large nurseries throughout the silk districts of the province.

In 1915 there was issued by the Agricultural Research Institute, Pusa, a *Bulletin* (No. 48 of 1915) entitled "First Report on the Experiments carried out at Pusa to improve the Mulberry Silk Industry." In a short Prefatory note Mr. Bainbrigge Fletcher (Imperial Entomo-

logist) explains that the object of the Bulletin is to place on record some of the more important experiments which were commenced at Pusa in the year 1910 and have since been carried on in the endeavour to fix a superior multivoltine race of the Mulberry Silkworm which would not degenerate and which would yield silk better both in quality and outturn than that supplied by the multivoltine races which are reared at present.

Central Nurseries.—The report of the Agricultural Department, Bengal, for the year ending June 30, 1913, gives an account of a scheme which has been devised with the object of reclaiming the silk industry. The aim of the scheme is gradually to establish throughout the silk districts a sufficient number of central nurseries with rearing houses and thus enable the whole of the seed cocoons required in the province to be supplied under Government supervision. It is believed that this is the only really effective method of dealing with the problem. A number of the existing smaller nurseries were closed during 1913 and others are being converted into enlarged and improved central nurseries with rearing houses complete. The ultimate success of the scheme depends largely on the willingness of the rearers to pay an adequate price for pure seed.

A pamphlet was published in 1915, by Mr. M N. De, Sericultural Assistant at Pusa, which contains practical hints on improved methods which are recommended to be used for reeling mulberry silk in Bengal and other silk producing districts. It has been found that, by the provision of two small pulleys to the ordinary Bengal type of reeling machine, superior thread can be obtained, the cost of the extra apparatus is merely nominal (five or six annas per machine), whilst the suitability of the machine for cottage workers is maintained. By attention to such simple points as the stifling and storage of cocoons and the temperature and quality of the water used in the reeling pans, great improvements can be effected in most silk centres in Bengal and other districts.

Exports of Silk.—As a result of the war the trade has showed in some degree signs of revival from its decadent condition, both as regards its volume and value. The value of exports during 1915-16 improved by Rs. 12 lakhs to Rs. 27½ lakhs, of which raw silk accounted for Rs. 24 lakhs. In 1916-17 the total exports rose to Rs. 54½ lakhs. Post-war exports show a decline compared with those in the year 1913-14 For example in 1920-21 exports of silk yarn amounted to 783,448 lbs., compared with 1,167,530 lbs in 1913-14; Silk piece-goods exported were 22,432,974 yards compared with 27,338,272 yards; and Silk mixed goods exported were 1,913,448 yards compared with 8,163,963 yards.

Imperial Silk Specialist.—At the end of 1915 it was decided that the first step to be taken to revive the silk industry should be the employment of a qualified expert who, after a careful study of the conditions not only in India but in other silk-producing countries, will formulate recommendations for the consideration of Government. With the approval of the Secretary of State, Mr. H. Maxwell Lefroy, formerly Imperial Entomologist and now Professor at the Imperial College of Science and Technology, South Kensington, was appointed to the temporary post of Imperial Silk Specialist.

Indigo.

Indigo dyes are obtained from the Indigofera, a genus of Leguminosae which comprises some 300 species, distributed throughout the tropical and warm temperate regions of the globe, India having about 40. Western India may be described as the headquarters of the species, so far as India is concerned, 25 being peculiar to that Presidency. On the eastern side of India, in Binar, Bengal, Assam and Burma, there is a marked decrease in the number of species but a visible increase in the prevalence of those that are met with.

There is evidence that when Europeans first began to export the dye from India, it was procured from the Western Presidency and shipped from Surat. It was carried by the Portuguese to Lisbon and sold by them to the dyers of Holland, and it was the desire to obtain a more ample supply of dye stuff that led to the formation of the Dutch East India Company and so to the overthrow of the Portuguese supremacy in the East. Opposition to indigo in 17th century Europe was keen owing to its interference with the wood industry, but it was competition to obtain indigo from other sources than India that led to the first decline of the Indian indigo industry. In the middle of the eighteenth century, when the cultivation of indigo in the West Indies had been given up—partly on account of the high duties imposed upon it and partly because sugar and coffee were found to be more profitable—the industry was revived in India, and, as one of the many surprises of the industry, the province of Bengal was selected for this revival. It had no sooner been organised, however, than troubles next arose in Bengal itself through misunderstandings between the planters, their cultivators and the Government, which may be said to have culminated in Lord Macaulay's famous *Memorandum* of 1837. This led to

another migration of the industry from Lower and Eastern Bengal to Tirhut and the United Provinces. Here the troubles of the industry did not end, for the researches of the chemical laboratories of Germany threatened the very existence of any natural vegetable dye. They first killed the maddar dye of Europe, then the safflower, the lac and the *al* dyes of India, and are now advancing rapidly with synthetic indigo, intent on the complete annihilation of the natural dye. Opinions differ on many aspects of the present vicissitude; meantime the exports from India have seriously declined, and salvation admittedly lies in the path of cheaper production both in cultivation and manufacture. These issues are being vigorously faced and some progress has been accomplished, but the future of the industry can scarcely help being described as of great uncertainty. The issue is not the advantage of new regulations of land tenure, but one exclusively of natural *versus* synthetic indigo. (See Watt's "Commercial Products of India.") In this connection it may be noted that increases in the price of coal in England, due to labour difficulties, have greatly strengthened the position of natural indgo. In February 1915 a conference was held at Delhi when the possibility of assisting the **natural indigo industry** was considered from three points of view—agricultural, research and commercial. The agricultural or botanical side of the question is fully discussed by Mr. and Mrs Howard of Pusa in Bulletins Nos. 51 and 54 of the Agricultural Research Institute. Other aspects of the question were fully examined last year in the Agricultural Journal of India by Mr. W. A. Davis, Indigo Research Chemist to the Government of India. An **Indigo Cess Bill** was passed in the Imperial Legislative Council in 1918. It provides for a cess on indigo exported from India for the scientific investigation of the methods of cultivation and manufacture of indigo, the proceeds of the cess being received and expended by Government.

Decline of the Industry.—Since synthetic indigo was put upon the market, in 1897, the natural indigo industry of India has declined very rapidly; apart from slight recoveries in 1906-07 and 1911-12, the decline continued without a break until the revival due to the impossibility of obtaining artificial dyes in sufficient quantities during the war. The figures for the last few years may be contrasted with those for the five years ending in 1897, in which the area under indigo averaged 2,400 square miles and the value of the exports over £3,000,000 a year.

—	Area under Indigo.	Quantity Exported.	Value of Exports.
	Acres.	Cwts.	£
1901-02 ..	791,000	89,750	1,234,837
1902-03 ..	646,000	65,377	803,738
1903-04 ..	707,000	60,410	717,468
1904-05 ..	477,000	49,252	556,405
1905-06 ..	384,000	31,186	390,918
1906-07 ..	421,000	35,102	466,985
1907-08 ..	394,000	32,490	424,849
1908-09 ..	284,000	24,946	326,986
1909-10 ..	289,000	18,061	234,544
1910-11 ..	276,000	16,939	223,529
1911-12 ..	271,000	19,155	250,535
1912-13 ..	220,000	11,857	147,000
1913-14 ..	176,000	10,939	142,000
1914-15 ..	148,400	17 142	599,940
1915-16 ..	314,300	41,942	1,385,428
1916-17 ..	756,400	33,500	1,383,000

Present Position.—The crop is most important in Bihar and Madras; in the Punjab and United Provinces it now occupies little over 100 square miles altogether. In Bengal the crop is largely raised by British planters, in the other provinces chiefly by native cultivators. Scientific research work on questions connected with cultivation and manufacture has been carried out by the Bihar Planters' Association, with the aid of a grant from Government since 1897.

The cessation of the imports of synthetic dyes from Germany during the war brought about a recovery in the indigo trade which was mainained in 1919-20. In 1920-21 the exports collapsed to less than one third of the previous year. Only 10,250 cwts of indigo were exported mainly to Japan (5,800 cwts.). Egypt (1,400 cwts.) and the United Kingdom (1,100 cwts.) Japan took a little over a fourth of the previous year's requirements; the reduction in the demand was due to over-trading and high stocks in Japan. Egypt took less than a fourth as she met her requirements by German synthetic dyes. Asiatic Turkey took only 700 cwts. in place of 3,400 cwts. in 1919-20. In Bihar and Orissa the weather was unfavourable and the area sown was greatly reduced as a result of the increased cultivation of food crops, while in Madras, owing to a favourable season, the area increased. The total yield of indigo in India during the year was estimated at 40,000 cwts., an increase of 6 per cent. over 1919-20. Prices of Bihar indigo in the local sales ranged betwsen Rs. 247-8 to Rs. 480 per factory maund in 1920-21 The cess on indigo exports yielded only Rs. 13,000.

Tea.

Tea cultivation in India is chiefly in Assam, Bengal and Southern India, the cultivation elsewhere being comparatively unimportant. The latest available official general statistics are those for the year 1920. (The statistics of production deal, for seasonal reasons, with the calendar year 1920 and those of trade with the official fiscal year 1920-21.) They show a total area of 701,100 acres under tea, or 1·3 per cent. more than in 1917. Of this area, 647,300 acres were plucked in 1920. The total number of plantations was 5,054 against 4,221 in 1919. The area under cultivation increased in the 5 years ended 1914 by 10 per cent. but in the quinquennium 1905-1909 the increase in production was only 1 per cent. The average production per acre for the whole of India, excluding Burma (where the produce of the tea gardens is almost wholly converted into wet pickled tea, which is eaten as a condiment, was 534 lbs. in 1920 as compared with 588 lbs. in 1919.

Area and Production.

The total area under tea was divided between the different Provinces as follows :—

	Acres.
Assam—	
Brahmaputra Valley	266,030
Surma Valley (Cachar and Sylhet) ..	154,133
Total, Assam ..	420,200
Bengal	172,400
Bihar and Orissa (Chota Nagpur) .	2,100
United Provinces	6,723
Punjab	9,744
Madras	41,149
Travancore and Cochin	47,105
Burma	1,700
Grand Total ..	701,103

The total production in 1920 was 345,339,576 lbs. against 377,055,639 lbs. in the preceding year divided between the different parts of India as follows :—

	Lbs.
Assam	234,314,061
Bengal .. .	71,696,567
Bihar & Orissa . ..	384,514
United Provinces	1,491,887
Punjab	1,663,547
Madras	12,255,755
Travancore & Cochin	23,399,123
Burma	134,122
Total ..	345,339,576

Features of the Trade.

The quantity exported by sea in 1920-21 was 285,752,000 lbs., as against 379,196,000 in the preceding year, which was the highest on record. The decrease amounts to 25 per cent.

The main features of the year's exports were : (1) an increase in the exports to Arabia, Asiatic Turkey, Ceylon and Egypt, and (2) a large decrease in the exports to the United Kingdom, France, Cape Colony, the United States, Canada, and Chile. Shipments to the United Kingdom, which has been India's best customer throughout, decreased by 88 million lbs to 249 million lbs. Russia, the next best customer in pre-war days did not take any tea from India in 1920-21, by direct shipment. The other countries in Europe took very little Indian tea direct from India, the total shipments to Europe excluding the United Kingdom being only 192,000 lbs. as against 1,747,000 lbs. in 1919-20. The total exports to Africa also showed a decline of 300,000 lbs., although an increased quantity was taken by Egypt, the principal African consumer of Indian tea. Shipments to America also declined by over 5 million lbs., all the principal importers, namely, Canada, the United States, and Chile having diminished their imports. Exports to Asiatic countries, however, showed an increase of nearly 3 million lbs, all the four principal importers, namely, Arabia, Ceylon, Persia, and Asiatic Turkey, having taken larger quantities. Australia, New Zealand and the Fiji Islands together took a million pounds less than in the preceding year. The bulk of the exports by land goes to Afghanistan and other countries beyond the North-West Frontier. If the exports both by sea and by land are taken together, the net decrease in 1920-21 was nearly 95 million lbs. or 25 per cent.

EXPORTS AND PRICES.

The following table shows the quantity of Tea exported by sea and by land to Foreign Countries from India, Ceylon, and China in the years 1896-97 to 1920-21 with variations in index numbers, taking the figure of 1896-97 as 100‡ :—

	India.	Ceylon.*	CHINA†		Java.
			Black and green.	Brick, table & dust	
	lbs.	lbs.	lbs.	lbs.	lbs.
1896–97	150,421,245 [100]	110,095,194 [100]	161,538,933 [100]	78,567,333 [100]	...
1897–98	152,344,905 [101]	114,460,318 [104]	137,097,600 [85]	75,781,867 [98]	..
1898–99	158,539,488 [105]	122,395,518 [111]	147,967,200 [91]	68,017,067 [87]	. .
1899–1900	177,163,999 [118]	129,661,908 [118]	153,669,067 [95]	71,205,067 [91]	. .
1900–01	192,300,658 [128]	149,264,603 [136]	144,270,933 [90]	52,190,667 [66]	.

1912–13	281,815,329 [187]	196,632,380 [169]	127,826,800 [79]	69,733,200 [89]	61,691,452 [241]
1913–14	291,715,041 [194]	197,419,430 [179]	103,038,000 [64]	70,061,600 [89]	64,938,907 [253]
1914–15	302,556,697 [201]	191,838,946 [174]	114,689,200 [71]	84,307,733 [107]	71,322,504 [278]
1915–16	340,433,163 [226]	214,900,383 [195]	143,662,000 [89]	93,776,667 [119]	101,603,335 [396]
1916–17	292,594,026 [194]	208,090,279 [189]	126,260,800 [78]	79,259,723 [101]	98,006,121 [382]
1917–18	360,623,768 [240]	195,231,592 [177]	89,115,333 [55]	10,445,866 [139]	80,236,200 [313]
1918–19	326,645,780 [217]	180,817,744 [164]	43,422,933 [27]	10,445,866 [13]	61,853,000 [241]
1919–20	382,033,694 [254]	208,560,943 [189]	71,801,200 [44]	20,182,400 [26]	118,541,200 [431]
1920–21	287,524,697 [191]	184,770,231 [168]	38,908,800 [24]	1,809,867 [2]	93,680,400 [365]

* The figures for years previous to 1905-06 and also from 1917-18 to 1920-21 relate to the calendar year as it has been found impossible to procure complete data for the official year.

† For calendar year.

‡ In the case of Java the figure for 1905-06 has been taken as 100, earlier figures not being available.

The following statement illustrates the variations in prices of Indian tea sold at auction sales in Calcutta and in average declared values of exports by sea in 1889-90 and the six years ending 1920-21 the average price of 1901-02 to 1910-11 being taken as 100 in each case :—

Year.	Average price of Indian tea.		Average declared value of Exports by Sea.	
	Price.	Variation.	Price	Variation.
	As. p		As p	
1889-90	7 7	126	8 2	117
1915-16	8 11	149	9 5	135
1916-17	8 8	144	9 2	131
1917-18	7 3	121	7 10	112
1918-19	8 0	133	8 9	125
1919-20 . . .	8 0	133	8 8	124
1920-21	5 1	85	6 10	98

The following table shows the quantity of tea, green and black, produced, exported available for consumption in India during the years 1916-17 to 1920-21 (the figures in the last column being calculated after adding stocks left from previous year and left at end of year) :—

	Production.	Net exports.	Available balance
	lbs.	lbs.	lbs.
1916-17	370,313,559	283,345,512	38,968,047
1917-18	371,296,338	346,676,007	42,120,331
1918-19	380,458,975	312,017,339	50,441,636
1919 20	377,055,639	370,372,501	29,807,138
1920-21	345,339,576	276,510,111	43,958,465

Note —The stocks at the end of 1916-17, 1917-18 and 1918-19 were abnormally high owing to lack of freight.

Quantity of Indian Tea exported by sea* (distinguished according to countries of final destination) and by land, in the years 1916-17 to 1920-21.

* Including shipments from the State of Travancore.

(*a*) Tea consigned from British India to Ceylon is almost entirely transhipped at Colombo to other countries and does not, therefore, appear in the Ceylon Customs Returns as imports into Ceylon.

the rainfall and on the prevention of erosion and sudden floods.

(*b*) Forests which afford a supply of valuable timbers for commercial purposes, such, for example, as the teak forests of Burma, the sal forests of Northern, Central, and North-Eastern India, and the deodar and pine forests of the North-Western Himalaya.

(*c*) Minor forests, containing somewhat inferior kinds of timber, and managed for the production of wood, fodder, grazing and other produce for local consumption; these forests are of great importance in agricultural districts.

(*d*) Pasture lands.—These are not "forests" in the generally understood sense of the term, but grazing grounds managed by the Forest Department merely as a matter of convenience.

These four classes of forest are not always sharply divided from each other, and one and the same tract may to a certain extent be managed with more than one object.

Administration.—The forest business of the Government of India is carried out in the Department of Revenue and Agriculture. The Inspector-General of Forests is the head of the Forest Department and is the technical adviser to the Government of India in forest matters.

Territorial charges.—The various provinces are divided into one or more Forest Circles, each in charge of a Conservator of Forests; provinces containing three or more circles also have a Chief Conservator who is the head of the Department for his province. Circles are divided into a number of Forest Divisions, in charge of members of the Imperial or Provincial Forest Service, these Divisions in most cases correspond to civil districts. Each Division contains a number of Ranges in charge of junior members of the Provincial Service or of Forest Rangers or Deputy Rangers; heavy Divisions are also sometimes divided into Subdivisions. The Ranges are further subdivided into a number of beats or protective charges held by Forest Guards or in some cases by Foresters.

Non-territorial charges.—Apart from territorial charges there are various important posts of a non-territorial nature connected with Forest Research and Education, the preparation of Forest Working Plans, and other special duties. Among special posts may be mentioned that of Assistant Inspector-General of Forests, who in addition to Secretariat work, helps the Inspector-General of Forests in the scrutiny of working plans referred to in section 6.

The Forest Service.—The Forest Service comprises three branches:—

(1) The Imperial Service with a total personnel of 257 officers, consisting of the Inspector-General of Forests, Chief Conservators, Conservators, Deputy and Assistant Conservators. The Officers of this service are recruited in the United Kingdom, the present system of recruitment being by selection subject to the possession of an honours degree in some branch of Natural Science of an English, Welsh or Irish University, or of the B.Sc. degree in Pure Science of a Scottish University. Probationers are at present trained at a University possessing a forest school approved by the Secretary of State (Oxford, Cambridge and Edinburgh at present), this training being supplemented by a practical course, partly on the continent of Europe. A Forest Engineering branch has lately been added to the service.

(2) The Provincial Service with a total personnel of 260 officers, consisting of Extra Deputy and Extra Assistant Conservators. Officers for this service are recruited in India and trained at the Forest Research Institute, Dehra Dun, though a certain number of posts in this service are filled by the promotion of specially promising Rangers.

(3) The Subordinate Service, consisting of Forest Rangers (about 840), Deputy Rangers (about 900), Foresters (about 2,000) and Forest Guards (about 11,500). The Rangers are at present trained at three different centres—the Forest College at Dehra Dun (for provinces other than Burma, the Central Provinces and Madras), the Burma Forest School at Pyinmana (for Burma), and the Madras Forest College at Coimbatore (for Madras and the Central Provinces). These three institutions were established in 1878, 1898 and 1912 respectively. A scheme is now under consideration for the further decentralization of the training of Rangers, and it is probable that before long the number of training centres will be increased. The training of subordinates below the rank of Ranger is carried out in various local forest schools and training classes.

Research.—For the first fifty years of the existence of the Forest Department in India no attempt was made to organize the conduct of forest research, and thus to co-ordinate and elaborate the scientific knowledge so necessary to successful economic working. A commencement in organized forest research was at last made in 1906 by the establishment, at the instance of Sir Sainthill Eardley-Wilmot, then Inspector-General of Forests, of a Forest Research Institute at Dehra Dun. From that time onwards research work has been prosecuted energetically in spite of deficient accommodation. The Forest Research Institute, which is under the administrative control of the Inspector-General of Forests, is in the charge of a President. There are five main branches of research, namely Sylviculture, Forest Botany, Forest Economic Products, Zoology and Chemistry, each branch being in charge of a research officer. In addition specialists are appointed temporarily when necessary and are attached to the Institute to carry out investigations in subjects of particular economic importance. Thus a cellulose expert has been employed for some time to investigate possible new sources of paper-making materials, of which the forest of India contain abundant supplies, while more recently a tanning expert has been engaged to study the question of tanning materials.

Forest Products.—Forest produce is divided into two main heads—(1) Major produce, that is timber and firewood, and (2) Minor produce, comprising all other products such as bamboos, leaves, fruits, fibres, grass, gums, resins, barks, animal and mineral products, etc.

The average annual volume of timber and fuel and the value of minor produce removed from State forests during the five years, 1914-15 to 1918-19, is given in the following statement:—

Forest produce removed from State forests, average per annum for the period 1914-15 *to* 1918-19.

Agency of exploitation.	Major produce (volume).		Minor produce (value).			
	Timber	Fuel	Bamboos.	Grazing and fodder grass.	Other minor produce.	Total.

Forest Industries.—The important role which the forests of a country play in its general commercial welfare and in providing employment for its population is not always fully recognized. Fifteen years ago it was estimated that in Germany work in the forests provided employment for 1,000,000 persons while 3,000,000 persons, earning £30,000,000 a year, were employed in working up the raw material yielded by the forests It accurate estimates were available for India, they would no doubt show that apart from the jungle population which is directly dependent on the forests and the large numbers of wood-cutters, sawyers, carters, carriers, raftsmen and others working in and near them, employment on an excessive scale is provided to persons engaged in working up the raw products. Among these latter may be mentioned carpenters, wheelwrights, coopers, boat-builders, tanners, rope-makers, lac-manufacturers, basket-makers, and many other classes of skilled labourers. The Indian census of 1911 gave 1,191,367 people and their dependents so employed in British India, and a further 394,097 in Native States, but these are probably below the actuals, as much forest labour is not whole-time labour, devoting seven or eight months in the year to forest work and the rest to agriculture. With the opening up of the forests, the extension of systematic working, the wider use of known products, and the possible discovery of new products, a steady and extensive development of industries dependent on the forests of India may be confidently anticipated in the future.

A detailed consideration of the many important forest industries would fill a large volume; all that can be done here is to review shortly a few of them by way of example.

Pine-resin.—It is now well over a quarter of a century since forest officers in the North West of India began to realize the potentialities of the wide pine belt along the foot hills and lower slopes of the Himalaya. Many of them being French-trained, it was not surprising that the splendidly organized tapping of the maritime pine of the Landes should serve them as a model, and so from the very start the conservative cup and lip method in use in France was adopted, thus ensuring the best possible yield of resin with the minimum risk of injury to the tree. And so from small beginnings in the United Provinces, and later in the Punjab, the industry has grown till now (for the year ending on 31st March 1919) the resin collection in the United Provinces and the Punjab amounts to 125,633 maunds net (4,615 tons), the operations covering 97,525 acres of forest with 2,756,142 blazes or channels in work, giving employment to at least 4,000 operatives.

Paper.—In 1904 there were eight paper mills in British India and Indian States, with an output of 20,100 tons of paper annually, the daily average number of persons employed being 4,266. In 1920, the number of mills had

increased to nine, the output to 29,400 tons, and the average number of operatives employed to 5,759. Of the mills the Titagarh concern, with an output of 17,943 tons, is the largest and probably the best managed. The present demand for paper is supplied by the nine mills referred to, by imports, and to a very small extent by hand-made paper prepared locally.

Turning to the question of paper-pulp, India imported no less than 13,250 tons of pulp in 1912-13, that is in pre-war times, while by 1919-20 the amount had fallen to 9,400 tons owing to the high cost of obtaining the half-stuff and to shipping difficulties. In spite of great difficulties in obtaining chemicals during the war, the Indian mills not only maintained their output but actually increased it, a fact strongly indicating the possibilities of expanding the output in this country, now that more normal conditions prevail.

The most important raw materials used in India at the present day for the production of half-stuff is "sabai," "bhabar" or "baib" grass, *Ischoemum angustifolium*, which is obtained from the forests of Bengal, Chota Nagpur, Orissa, Nepal and the United Provinces. The other materials used in India for the manufacture of paper are rags of poor quality, hemp, jute, gunny bags, waste paper and old ropes. Since the war began, limited quantities of "munj" grass, *Saccharum munja*, have been used, though the yield of pulp from this grass is not high, while in many parts of the country its value is considerable owing to the demand for other purposes.

The two most important substances from which pulp is prepared all over the world are wood and grasses, of which wood claims 90 per cent. of the outturn. In India, owing to the large number of species and the generally mixed character of the forests very few timbers are available which fulfil the necessary conditions to ensure the success of a pulping concern, namely concentrated large supplies coupled with suitability for the manufacture of pulp. The few timbers that meet the above conditions are not available for pulp as the timber is required as timber in the ordinary development of the country.

Under the natural order *Gramineæ* we have bamboos and grasses, both of which are available in large quantities in certain localities of British India, and some of which have, from experiments, given very favourable results. Up to date the best results have been obtained with *Bambusa polymorpha* (kyathaungwa), a species which occurs in great abundance in Burma. *Cephalostachyum pergracile* (tinwa) and *Dendrocalamus strictus* (the common male bamboo) have given almost equally good results, while *Bambusa arundinacea* (the thorny bamboo) and *Melocanna bambusoides* (the single-stemmed bamboo) have given results little inferior to the best as yet obtained. All these species are available in very large quantities and can be extracted at relatively cheap rates. The scheme for making bamboo-pulp has now been taken up by several firms, leases having been granted by the Forest Department in Burma, Chittagong and Bombay, and consequently the manufacture of pulp from bamboo will soon, it is hoped, be an accomplished fact.

The elephant grasses, found in certain localities of India and Burma, afford material nearly as promising for the manufacture of pulp as that yielded by bamboos.

Matches.—India is almost entirely dependent for its supplies of matches on imports from other countries. The bulk of the matches come from Japan, Sweden and Norway, while in pre-war times smaller quantities came from Austria-Hungary, Belgium and Germany. About 20 years ago India made a definite attempt to manufacture its own matches, one of the first factories to be erected on modern lines being that of the Gujrat Islam Manufacturing Co., Ld., at Ahmedabad. At the present time the number of match factories in India has not increased, for although new ones have been established, some of the older and smaller ones have disappeared. While some of the concerns are able to make moderate profits, others are not and, generally speaking, match making in India cannot be said to have emerged from the experimental manufacturing stage, and very close study, expert knowledge and keen business methods will have to be applied before this industry in India can be placed on a satisfactory basis.

The most universally used wood in India for match-making is *Bombax malabaricum*, the "simul" or cotton tree. The timber of this tree makes up into a strong good box of fair appearance. It yields fair sticks, the drawbacks to the timber being that it discolours, that it does not allow of the stick being cut uniformly square in section, and that the waste in conversion is considerable. A far superior stick can be obtained from *Abies pindrow* and *Picea morinda*, the silver fir and spruce respectively. The chief drawback to these species lies in the difficulty of extraction from the high elevations at which they grow in the Himalayas, a difficulty which, however, can probably be overcome by mechanical extraction. Many other species of timber occur which are fairly suitable for match making, amongst which may be mentioned *Anthocephalus cadamba*, *Bombax insigne Boswellia serrata*, *Evodia fraxinifolia*, *Givotia rottleriformis*, *Populus euphratica* and *Trewia nudiflora*.

Antiseptic Treatment.—The idea of protecting timber by artificial means is a very old one. The use of paints and tars was well known to the Romans, while that of charring and smoking timber, to protect it from decay, dates back to the later Egyptian period. It was not, however, until modern times that it became possible, with the help of science and machinery, to treat timber so as to give it thorough protection against decay and insect attack.

The primary factor governing the treatment of timber in any country is the procurability of a good grade of cheap coal-tar creosote. This oil is not at present available in large quantities in India, most of the supplies having to be imported.

Financial Results.—The steady growth of forest revenue, expenditure and surplus during the past 50 years is shown in the following statement, which gives annual averages for quinquennial periods:—

Financial Results of Forest Administration in British India from 1864-65 *to* 1918-19 *(in lakhs of rupees).*

Quinquennial period.	Gross revenue (average per annum).	(Expenditure average per annum)	Surplus (average per annum).	Percentage of surplus to gross revenue.
	Lakhs.	Lakhs.	Lakhs.	Lakhs.
1864-65 to 1868-69	37·1	23·8	13·6	36·4
1869-70 to 1873-74	56·3	39·3	17·0	30·2
1874-75 to 1878-79	66·6	45·8	20·8	31·2
1879-80 to 1883-84	88·2	56·1	32·1	36·4
1884-85 to 1888-89	116·7	74·3	42·4	36·3

1899-1900 to 1903-04	196·6	112·7	83·9	42·7
1904-05 to 1908-09	257·0	141·0	116·0	45·1
1909-10 to 1913-14	296·0	163·7	132·3	44·7
1914-15 to 1918-19	371·3	211·1	160·2	43·1

Prospects.—The past work of the Forest Department has already borne fruit, not only in a steady rise of revenue but also in the improved condition of the forests resulting from careful protection and tending. Much has been done in the way of opening up the forests to regular exploitation; but there is still room for enormous development in this respect, for there are extensive areas of valuable forest as yet almost untouched, and these represent a vast capital locked up and not only lying idle but even deteriorating. Perhaps the two most pressing needs at present are the introduction of improved sylvicultural systems and the extension of roads and other export works to facilitate and cheapen extraction. These two must proceed simultaneously, since they are inter-dependent, for it is obvious that timber and other produce can be extracted far more economically if it is available in large quantities within a limited radius than if it is scattered in small quantities over large tracts of country; indeed this question must often decide whether extraction is possible or not. Sylviculture teaches us how to effect this concentration and is therefore the bed-rock on which future results, financial and otherwise, must rest; it is of little avail to seek and develop new markets for timbers and other products if these cannot be produced in regular and sufficient quantities and extracted at a reasonable cost.

Bibliography.—Quinquennial Review of Forest Administration in British India for the period 1914-15 to 1918-19. (Simla: Government Press). A large number of bulletins and other publications has been issued by the Forest Research Institute, and of these a list can be obtained from the Superintendent, Government Printing, India, Calcutta.

RUBBER CULTIVATION.

The most important rubber-yielding tree found growing naturally in the Forests of India is *Ficus elastica*, a very large tree of the outer Himalayas from Nepal eastwards, in Assam, the Khasia Hills and Upper Burma. It has also been cultivated in Assam in the Chardúar plantation in the Tezpur Sub-Division, as also in the Kulsi plantation of the Gauhati Sub-Division in the Kamrup Division. There are also a number of other rubber-yielding trees found in the Indian and Burman forests from which rubber can be collected on terms quoted by Government. Attempts have been made to cultivate Para, Ceara and Castilloa in various parts of India and Burma. In India proper the chief attempts were made on the west coast, about 180 acres being planted from 1908 onward at Gersoppa. Similar attempts have been made in Madras: but at present Para rubber is being grown as a commercial product rather in Burma than the rest of India.

The **production of rubber in India** is confined to Assam, Burma, and the Madras Presidency.—

	Acres.	No. of trees.
Assam	4,681	137,430
Madras	12,022	1,636,476
Burma	29,544	4,911,399
Total ..	46,247	6,685,305

The yield of Assam plantations is relatively small and the number of trees to the acre is much less than in Madras and Burma. The outturn of Madras in 1913 was more than double that of Burma, where most of the trees being less than six years old are not yet productive. All planting is stump planting about 9 to 12 months old. The trees can be tapped in four years from the date of planting. The average yield in Burma from 4 to 6 years old trees is 1½ to 3 lbs. per tree per year. The capital invested is from £22 to £25 per acre. The average cost of production is about 1*s.* 6*d.* to 1*s.* 10½*d* per lb. The Government of India has now decided to collect annual statistics relating to the production of rubber.

There has been a steady development in the **exports of rubber** from India. There was in 1920-21 a record export of 14 million lbs. of rubber which was 11 per cent above last year's although the demand created by the war had fallen off. This was chiefly due to the increased area tapped, namely 69,000 acres which was estimated to yield nearly 14 million lbs. The value fell by 8 per cent to Rs. 155 lakhs owing to the slump in the rubber market. The United Kingdom absorbed 76 per cent, Ceylon 12 per cent and the United States of America 10 per cent. Madras had nearly 70 per cent of the trade and Burma 30 per cent. During the year no royalty was levied on exports. The report of the Industrial Commission points out that **rubber manufacture** has not been started in India. "This industry", it adds, "is one of those that are essential in the national interest and should be inaugurated, if necessary, by special measures."

Bibliography.—For fuller details see "Dictionary of the Economic Products of India" and the abridged edition of the same published in 1908 under the title "The Commercial products of India" by Sir George Watts; and the "Commercial Guide to the Forest Economic Products of India" by R. S. Pearson, published by the Government Press, Calcutta, 1912.

MATCH FACTORIES.

Imports of matches in 1920-21 fell off from 15 to less than 12½ million gross in quantity and from Rs. 2,05 to Rs. 1,67 lakhs in value. Japan still holds the first place with Rs. 1,29½ lakhs as compared with less than Rs. 35 lakhs from Sweden.

In normal years matches are also imported from Austria-Hungary, Germany and Belgium. In the opinion of the Forest experts at Dehra Dun there is an abundance of raw material in this country for match manufacture.

Indian timbers for matches.—In an article on the Indian match industry which appeared in the *Indian Agriculturist* the woods of the following species are said to be employed in Burma for match splints: *Bombax insigne, B. malabaricum* (simul), *Anthocephalus Cadamba* (kadam), *Sarcocephalus cordatus, Spondias mangifera* (amra), and *Engelhardtia spicata* (palash). These woods are not the best for the purpose, but are those most easily procurable. There are other kinds of white wood, such as poplar, pine, willow, and alder, in abundant quantities, but they are difficult to extract and transport and are therefore costly.

The attempts to manufacture matches in India have not hitherto been attended with great success, but recently two well-equipped factories have been started in Burma which give promise of good results. One of these is in Rangoon and is owned by Chinese; the other is at Mandalay, and is under European management. Further investigations are said to be necessary in order to settle the question as to the most suitable woods to employ, and when these have been brought to a satisfactory conclusion it is thought that Burma will be able to produce matches of first-class quality. It may be added that in 1912, the latest year for which complete statistics are available, there were six match factories in India.

The **Law in India** prohibiting the importation of the old sulphur matches as from July 1st, 1913, has not seriously affected the position of the Swedish manufacturers, as they were able to supply another "strike-anywhere" match to take the place of the kind then prohibited, but as the new kind is dearer to manufacture the prices have gone up, and are likely to rise still further.

PAPER MAKING.

This industry before the war did not make the headway in India that had been anticipated, there being only 11 mills at work now with an authorised capital of Rs. 49½ lakhs, from which the output in 1916-17 was 31,900 tons compared with 26,450 tons, the pre-war quinquennial average. Further increases in outturn are hampered by the inability to secure new machinery and the irregular arrivals of chemicals of which the cost continues steadily to rise.

Imports of paper and pasteboard increased materially in quantities and very materially in value in 1920-21. So far as printing paper is concerned, imports before the war had averaged about 16,000 tons annually; imports during the war averaged only 13,500 tons and obviously stocks had to be replenished. The imports in 1918-19 were 9,700 tons and in 1919-20 10,000; during the year under review the quantity rose to nearly 28,000 tons. With regard to values there was actually a decline from Rs. 90½ lakhs in 1918-19 to Rs. 63½ lakhs in 1919-20, the fall being due chiefly to high exchange. Falling exchange and high prices as well as heavier imports account for the big increase to Rs. 2,85 lakhs in 1920-21. Similarly the declared value of imported writing paper and envelopes increased from Rs. 45 lakhs in 1919-20 to Rs. 2,03½ lakhs in 1920-21. Paper manufactures increased from Rs 21 lakhs to Rs. 40½ lakhs; other kinds of paper from Rs 75 to Rs. 1,55 lakhs; pasteboard, millboard and cardboard from Rs. 30 to Rs. 46 lakhs. The total trade in paper and pasteboard declined from Rs. 2¾ crores in 1918-19 to less than Rs. 2¼ crores in 1919-20 but increased to over Rs. 7¼ crores in 1920-21. Imports of paper and pasteboard on Government account declined from Rs. 13 lakhs in 1919-20 to nearly 10¾ lakhs in 1920-21 indicating possibly a smaller consumption. The production of the Indian paper mills in 1920 amounted to 29,400 tons as compared with 31,000 in 1919 and 31,400 in 1918.

There are five large paper mills in the country working on up-to-date Western lines, *viz.*, at Titagarh, Kankinara and Raniganj in Bengal, the Upper India Couper Mills at Lucknow and the Reay Mill at Poona. There are also two smaller mills at Bombay and Surat which make only country paper, and there are one or two other mills which recently were not working. The five large mills have a large Government connection, as the greater part of Government orders for paper is placed in India.

The existence of the local industry depends chiefly on the supply of Sabai grass which on account of unfavourable seasons sometimes yields short crops. It is of great importance, therefore, to look for materials affording a constant outturn, and various reports have been published on the available paper-making materials. Considerable attention has been devoted to **Bamboo**, since 1875 when it was found that this plant—of which there are four chief varieties in India—yielded a fibrous paper stock which made a quality of paper superior to esparto grass and at a considerably less cost. It was at that time estimated that one acre of bamboo would yield 10 tons of dried stems equivalent to 6 tons of merchantable cellulose. In 1905 Mr. R. W. Sindall was invited by Government to visit Burma with a view of enquiring into the possibility of manufacturing paper pulp. His report on the subject appeared in March 1906. He made numerous experiments with bamboo and woods of Burma and laid down lines along which further enquiry should be made. Subsequently Mr. W. Raitt, a pulp expert, was engaged at the Forest Research Institute in conducting tests on the treatment of bamboos by the soda and sulphate processes, the treatment of bamboo before boiling, with remarks on the utilisation of nodes and internodes. His results were embodied in the "Report on the investigation of Bamboo or Production of Paper-pulp," published in 1911 Mr. R. S. Pearson of the Forest Service, Dehra Dun, as the outcome of enquiries made throughout India published in 1912 a note on the Utilization of Bamboo for the manufacture of Paper-pulp. The yield per acre from bamboo is larger than that of grasses usually used for paper. The cost of working into pulp has been estimated to yield a product cheaper than imported unbleached spruce sulphite and unbleached sabai grass pulp. In 1915 Mr. Dhruva Sumanas published a pamphlet, Dendrocalamus Strictus Bamboo of the Dangs, as the result of investigations carried on in Bansda State.

In a paper read before the Royal Society of Arts in 1921 Mr. Raitt gave an answer to the question. "*What India can do* to fill the gap in the world's shortage of paper?" He said that he thought it was "a modest estimate to say that from bamboo, taking only that which is available under 'possible' manufacturing conditions, Burma, Bengal and South West India could produce ten million tons of pulp per annum, and Assam from Savannah grasses three million. India could therefore produce pulp for the whole world."

The leading Indian **paper grass** for the last thirty years has been the bhaib, bhabar, or sabai grass of Northern India. It is a perennial grass plentiful in drier tracts from Chota Nagpur and Rajmahal to Nepal and Garhwal. The Calcutta mills draw their supplies from Sahibganj, Chota Nagpur and the Nepal Terai. The quantity annually exported from Sahibganj is between three to four lakhs of maunds. The cutting in these districts is said to commence in October when the plants are six or seven feet high. Sabai grass yields from 36·6 to 45·5 per cent. of bleached cellulose. A report by Mr. R. S. Pearson, Forest Economist, Dehra Dun, on the use of **elephant grasses** in Assam was issued in 1919. The most important species of grass found in the areas in which investigation has been made are Khagra (*Saccharum spontaneum*) and Batta (*Saccharum narenga*), with patches of Nal (*Phragmites karka*) on the more swampy ground. Hand samples of the above grasses were sent to England to be tested on a laboratory scale, while several tons were sent to an Indian paper mill to be made into paper. The results were satisfactory and proved that a very fair quality of paper can be produced from these grasses at a relatively low price. Small samples of such paper can be obtained by persons interested in these grasses from the Forest Economist, Forest Research Institute, Dehra Dun, who can also supply further details.

Mines and Minerals.

Total value of Minerals for which returns of Production are available for the years 1919 and 1920.

(*a*) Export values.
(*b*) Includes the value of ochre produced in the Panna and Baramuda States.
1 The increases or decreases are shown in sterling values, taking the rupee at 2*s*. (The true average for 1919, was 1*s*. 8$\frac{11}{16}$*d*., and for 1920, 2*s*. 016*d*.)

The feature which stands out most prominently in a survey of the mineral industries of India is the fact that until recent years little has been done to develop those minerals which are essential to modern metallurgical and chemical industries, while most striking progress has been made in opening out deposits from which products are obtained suitable for export, or for consumption in the country by what may conveniently be called direct processes. In this respect India of to-day stands in contrast to the India of a century ago. The European chemist armed with cheap supplies of sulphuric acid and alkali, and aided by low sea freights and increased facilities for internal distribution by the spreading network of railways has been enabled to stamp out, in all but remote localities, the once flourishing native manufactures of alum, the various alkaline compounds, blue vitriol, copperas, copper, lead, steel and iron, and seriously to curtail the export trade in nitre and borax. The reaction against that invasion is of recent date. The high quality of the native-made iron, the early anticipation of the processes now employed in Europe for the manufacture of high-class steels, and the artistic products in copper and brass gave the country a prominent position in the ancient metallurgical world, while as a chief source of nitre India held a position of peculiar political importance until, less than forty years ago, the chemical manufacturer of Europe found among his by-products, cheaper and more effective compounds for the manufacture of explosives.

With the spread of railways, the development of manufactures connected with jute, cotton and paper, and the gradually extended use of electricity the demand for metallurgical and chemical products in India has steadily grown. Before long the stage must be reached at which the variety and quantity of products required, but now imported, will satisfy the conditions necessary for the local production of those which can be economically manufactured only for the supply of groups of industries.

Coal.

Most of the coal raised in India comes from the Bengal—Gondwana coal-fields. Outside Bengal the most important mines are those at Singareni in Hyderabad, but there are a number of smaller mines which have been worked at one time or another.

Provincial production of coal during the years 1919 and 1920.

Rajputana	14,760	18,216
Total ..	22,628,037	17,962 214

Output in 1920—There was a decrease of over 4½ million tons, or over 20 per cent, in the output of coal This decrease was due largely to Bengal and Bihar and Orissa; Assam shewed a distinct increase There was a general increase in the pit's mouth value everywhere, except in Assam, in the fields of Bengal the rate of increase was as much as Re 1-5-4, in Bihar and Orissa it was As 8. The recent discovery of two unexposed seams of good steam coal in the Talchir coalfield, the possibility of which was foreseen by Blanford in 1872, may do something to alleviate the present congestion of coal transport.

Price—Average Price (per ton) of Coal extracted from the Mines in each province during the year 1920

Gondwana coalfields	18,782,584	22,238,802	17,526,444
Tertiary coalfields	401,754	389,235	435,770
Total . ..		22,628,037	17,062,214

Employees.—The average number of persons employed daily in the coal-fields decreased by 13,410, or about six and a half per cent. The average output per person employed was less than in the preceding year, namely 94·37 tons, as against 111·05. The total number of fatal accidents was 189, corresponding to a death rate of ·99 per thousand persons employed, which compares favourably with 287 fatal accidents and a death rate of 1·11 per thousand in 1919. The average number of persons employed daily in 1919 was 203,752 and in 1920 190,342.

IRON ORE.

Bengal and Bihar and Orissa are the only provinces in India in which iron ore is mined for smelting by European methods. Iron smelting, however, was at one time a widespread industry in India and there is hardly a district away from the great alluvial tracts of the Indus, Ganges and Brahmaputra in which slag heaps are not found. The primitive iron smelter finds no difficulty in obtaining sufficient supplies of ore from deposits that no European ironmaster would regard as worth his serious consideration Early attempts to introduce European processes for the manufacture of pig-iron and steel were recorded in 1830 in the South Arcot District. Since that date various other attempts have been made but none proved a success before that now in operation near Barakar in Bengal The site of the **Barakar Iron-Works** was originally chosen on account of the proximity of both coal and ore supplies. The outcrop of iron stone shales between the coal-bearing Barakar and Raniganj stages stretches east and west from the works, and for many years the clay ironstone nodules obtainable from this formation formed the only supply of ore used in the blast furnaces. Recently magnetite and hematite have been obtained from the Manbhum and Singhbhum districts, and the production from the last named district has largely replaced the supplies of ore hitherto obtained near the iron-works. The Bengal Iron and Steel Company, Limited, have now given up the use of ores obtained from the neighbourhood of Barakar and Raniganj and are now obtaining most of their ores from the Kolhan Estate, Singhbhum. Some years ago the Bengal Iron Steel Co., Ltd., secured two deposits of iron-ore in Saranda (Singhbhum) forming parts of two large hill masses known as Notu Buru and Buda Buru respectively. Recent prospecting in this part of Singhbhum has led to the discovery of numerous additional deposits of iron-ore, the extension of which has been traced into Keonjhar and Bonai States in Orissa, a total distance of some 40 miles in a S. S. W. direction At Pansira Buru, a portion of Notu Buru, the deposit has been opened up, and now feeds the Barakar ironwork. Pansira Buru rises to over 2,500 feet above sea level, the low ground on the west side being at about 1,100 feet above sea-level. The uppermost 400 to 450 feet of this hill has now been opened up, and the workings indicate the existence of a deposit about a quarter of a mile long, perhaps 400 feet thick and proved on the dip for about 500 feet. The ore body appears to be interbedded with the Dharwar slates, from which it is separated by banded hematite-jaspers. The ore itself is high-grade micaceous hematite, often lateritised at the outcrop. Cross-cuts into the interior of the deposit show that the hematite becomes very friable not far below the outcrop. In fact the characteristics of this ore, including the surface lateritisation, are almost exactly reproduced in the iron-ore deposits of Goa and Ratnagiri. **The Tata Iron and Steel Company** at Sakchi possesses slightly richer and purer ore-bodies in the Raipur district, supplies of ore are at present drawn from the deposits in Mayurbhanj The ore-deposits have all been found to take the form of roughly lenticular leads or bodies of hematite, with small proportions of magnetite, in close association with granite on the one hand and granulitic rocks on the other. These latter have been noted in the field as charnockites, the term being employed, rather loosely no doubt, but probably in the main correctly, to cover types of pretty widely varying acidity. In still more intimate association with the ores than either of the foregoing were found masses of dense quartz rocks, frequently banded, and banded quartz-iron-ore rocks. These last are of the types so commonly associated with Indian iron-ores, but are here not so prominent as is usually the case

Output - There was a slight decrease in the output of iron ore in 1920. The Tata Iron and Steel Co. produced 221,606 tons of pig iron and 113,222 tons of steel, including rails, and 1,183 tons of ferro-manganese The Bengal Iron and Steel Co produced 89,650 tons of pig iron and 31,775 tons of iron castings In the Central Provinces the number of indigenous furnaces rose from 159 to 225. The Burma Corporation are extracting limonite near Maymyo for use as flux in lead smelting

MANGANESE ORE.

This industry commenced some twenty years ago by quarrying the deposits of the Vizagapatam district, and from an output of 674 tons in 1892, the production rose rapidly to 92,008 tons in 1900 when the richer deposits in the Central Provinces were also attacked, and are now yielding a larger quantity of ore than the Vizagapatam mines. India now alternates with Russia as the first manganese-producing country in the world. The most important deposits occur in the Central Provinces, Madras, Central India, and Mysore—the largest supply coming from the Central Provinces. The uses to which the ore is put are somewhat varied. The peroxide is used by glass manufacturers to destroy the green colour in glass making, and it is also used in porcelain painting and glazing for the brown colour which it yields. The ore is now used in the manufacture of ferromanganese for use in steel manufacture. Since 1904, when the total output was 150,190 tons, the progress of the industry has been remarkable owing to the high prices prevailing. In 1905 production reached 247,427 tons; the following year it was more than doubled (571,495 tons), and in 1907 the figures again rose to 902,291 tons In 1909, on account of the fall in prices the out-

put contracted to 642,675 tons, but it almost regained its former position in 1910 when the production rose to 800,907 tons. In 1911 it fell to 670,290 tons. In 1916 the output was 645,204 tons valued F.O.B. at Indian Ports at £1,487,026. The ore raised in the Central Provinces is of a very high grade, ranging from 50 to 54 per cent. of the metal, and in consequence of its high quality is able to pay the heavy tax of freight over 500 miles of railway, besides the shipment charges to Europe and America, for the whole of the ore is exported to be used principally in steel manufacture in the United Kingdom, Germany, and the United States.

Manganese was one of the minerals which were largely affected by the war, the exports being restricted almost entirely to consignments to the United Kingdom, with a comparatively small quantity to the United States; the quantity produced in 1920 amounted to 736,439 tons, as compared with 537,995 tons in the previous year. In 1920-21 exports of manganese ore increased to 780,000 tons from 382,000 in the preceding year. The bulk went to the United Kingdom, Belgium and America where stocks had been allowed to run short.

GOLD.

The greater part of the total output of gold in India is derived from the Kolar gold field in Mysore. During the last decade the production of this mine reached its highest point in 1905 when 616,758 ounces were raised. In 1906 the quantity won was 565,208 ounces and this figure fell to 535,085 ounces in 1907. The figures for the latter years reveal a small improvement. The Nizam's mine at Hutti in Hyderabad comes next, but at a respectable distance, to the Kolar gold field. This mine was opened in 1903. The only other mines from which gold was raised were those in the Dharwar district of Bombay and the Anantapur district of Madras. The Dharwar mines gave an output of 2,993 ounces in 1911 but work there ceased in 1912. The Anantapur mines gave their first output of gold during the year 1910, the amount being 2,532 ounces, valued at Rs. 1,51,800. Gold mining was carried on in the North Arcot district of Madras from 1893 till 1900, the highest yield (2,854 ounces) being obtained in the year 1898. The Kyankpazat mine in Upper Burma was worked until 1903, when the pay chute was lost and the mine closed down. In 1902 dredging operations were started on the Irrawaddy river near Myitkyina, and 216 ounces of gold were obtained in 1904; the amount steadily increased from year to year and reached 8,445 ounces in 1909, but fell to 5,972 ounces in 1910 increasing again to 6,390 ounces in 1911 and being in 1913, only 5,393 ounces. The gold craze, which was prevalent in Rangoon a few years ago, has disappeared as suddenly as it sprang up. The Burma Gold Dredging Company holds a right to dredge for gold in the bed of the Irrawaddy river and notwithstanding the obstacles encountered from time to time in the shape of floods, etc., the company has so far been fairly successful in its operations. The small quantity of gold produced in the Punjab, the Central Provinces, and the United Provinces is obtained by washing. Gold washing is carried on in a great many districts in India, but there is no complete record of the amount obtained in this way. The average earnings of the workers are very small, and the gold thus won is used locally for making jewellery.

There was again a decrease, amounting to 8,193 ozs. in the output of gold; the decrease in the previous year was 28,853 ozs. The output in the Mysore fields fell by 12,290 ozs., but a portion of this was compensated by the rise in production of Hyderabad and Madras. The Dalbhoom Gold and Minerals Prospecting Co., Ld., and the Hutti (Nizam's) Gold Mines, Ld., have ceased operations in Singhbhum and Hyderabad respectively. The Nundydroog Co., Ld., was reconstructed during the year.

PETROLEUM.

Petroleum is found in India in two distinct areas—one on the east, which includes Assam, Burma, and the islands off the Arakan coast. This belt extends to the productive oil fields of Sumatra, Java, and Borneo. The other area is on the west, and includes the Punjab and Baluchistan, the same belt of oil-bearing rocks being continued beyond the borders of British India to Persia. Of these two the eastern area is by far the most important, and the most successful oil fields are found in the Irrawaddy valley. Yenangyaung is the oldest and most developed of these fields. Native wells have been at work here for over 100 years, and in 1886, prior to the annexation of Upper Burma, the output is estimated to have averaged over 2 million gallons a year. Drilling was begun in 1887. The Yenangyat field yielded a very small supply of petroleum before 1891, in which year drilling was started by the Burma Oil Company. Singu now holds the second place among the oil fields of India. Petroleum was struck at the end of 1901, and in 1903, 5 million gallons were obtained. In 1907 and 1908 the production of this field was 43 million gallons, and after a fall to 31¼ million gallons in 1910 it rose to 56½ million gallons in 1912. Several of the islands off the Arakan coasts are known to contain oil deposits but their value is uncertain. About 20,000 gallons were obtained from the eastern Barongo Island near Akyab, and about 37,000 gallons from Ramri Island in the Kyaukpyu district during 1911. Oil was struck at Minbu in 1911, the production for that year being 18,320 gallons which increased to nearly 4 million gallons in 1912. The existence of oil in Assam has been known for many years and an oil spring was struck near Makum in 1867. Nothing more, however, was done until 1883, and from that year up till 1902 progress was slow. Since that year the annual production has been between 2½ and 4 million gallons.

On the west, oil springs have been known for many years to exist in the Rawalpindi and other districts in the Punjab. In Baluchistan geological conditions are adverse, and though some small oil springs have been discovered, attempts to develop them have not hitherto been successful.

(*a*) Value of petroleum produced in Burma has been calculated at annas 4-6-0 per gallon.

Imports of **Kerosine Oil** amounted in 1913-14 to 68,850,000 gallons. This figure fluctuates considerably from year to year, having risen in 1919-20 as high as 94,135,000 gallons, and having fallen in 1920-21 to 57,192,000 gallons.

Amber, Graphite and Mica.—Amber is found in very small quantities in Burma, the output for 1919 bring 7·4 cwts. valued at £616. Graphite is found in small quantities in various places but little progress has been made in mining except in Travancore. The total output in 1920 was 100 tons. India has for many years been the leading producer of mica, turning out more than half of the world's supply. In 1914, owing to the war, the output was only 38,189 cwts. compared with 43,650 cwts. in 1913. Owing to necessary restrictions with regard to the export of mica, the output fell off considerably in the year 1915, but subsequent demand in the United Kingdom for the best grade of ruby mica led to a considerable increase in production during the following years. The declared output of mica in 1919 shows a decrease of nearly 9,000 cwts., over that of the previous year, having dropped from about 54,700 cwts. to 45,700 cwts. In 1920 the output declined by 700 cwts. and the value of the exports was £1,065,438.

Tin, Copper, Silver and Lead.—The only persistent attempt to mine tin is in Burma. The output was for some time insignificant but rose in 1913 to 116 tons valued at £46,000 which fell to £38,000 in 1914. In 1919 Burma yielded 42,353 cwts. Copper is found in Southern India, in Rajputana, and at various places along the outer Himalayas, but the ore is smelted for the metal alone, no attempt being made to utilize the by-products. After a set-back the industry recovered in 1920 the outturn was 28,167 tons valued at £42 250 The only **Lead** mine of any importance being worked in the Indian Empire is that of Bawdwin, where a very large body of high-grade lead-zinc-silver ore has now been blocked out. For many years the smelting operations of the Company were directed to recovering lead and silver from the slags left by the old Chinese miners. Those slags, however, are now practically exhausted, and the mine has reached a stage of development at which a steady output of ore is assured In 1920 the output was 23,821 tons valued at Rs. 97,56,213.

Silver is obtained as a by-product in the smelting of the lead-zinc ores of Bawdwin. The total output in 1920 was 2,164,854 oz. valued at Rs 83,37,361.

Zinc.—A monograph on zinc ores issued by the Imperial Institute in 1917 says that during the past fifty years zinc ores have received but little attention in India, and no production was recorded until 1913. In 1914 the production was 8,553 tons, and although the output fell to 196 tons in 1915, there is a prospect of India becoming an important producer of zinc ore in the future. Important silver-lead-zinc deposits occur at Bawdwin, in Tawngpeng State, one of the Northern Shan States in Upper Burma. The mines are connected with the Mandalay-Lashio Branch of the Burma railways by a narrow-gauge line 51 miles long, the lines meeting at Manhpwe, which is about 544 miles from Rangoon. They were worked for many centuries by the Chinese for silver, and have long been known to contain zinc ore; until recently, however, no serious attempt appears to have been made to market the ore for its zinc values. In 1907 the present undertaking was started by the Burma Mines, Ltd., with the idea of recovering the lead from the old slag heaps left by the Chinese, estimated at 125,000 to 160,000 tons, and later to work the deposit. Smelting operations on these slags were first carried out at Mandalay, but later the works were transferred to Namtu, about 13 miles below the mines on the narrow-gauge railway. The deposits, which comprise an area of about 2,500 acres, have now been taken over by the Burma Corporation, Ltd., and one is being worked.

Gem Stones.—The only precious and semi-precious stones at present mined in India are the diamond, ruby, sapphire, spinel, tourmaline, garnet, rock-crystal, agate, cornelian, jadeite and amber. Amber has already been referred to; of the rest only the ruby, sapphire and jadeite attain any considerable value in production and the export of the latter has declined owing to the disturbances in China, which is the chief purchaser of Burmese jadeite. The output of diamonds is comparatively unimportant The output of the ruby mines in 1920 was 155,604 carats valued at Rs. 6,19,820

Wolfram.—The output of Wolfram in 1920 fell from 3,521 tons to 2,346.

Radio-active Minerals.—The General Report of the Director of the Geological Survey of India for 1913 includes a brief report by R. C. Burton on an occurrence of pitchblende at mica mines near Singar, Gaya district, Bengal. The pitchblende occurs as rounded nodules in a pegmatite that is intrusive in mica schists. Other minerals occurring in the pegmatite are mica, triplite, ilmenite, tourmaline, and uranium ochre; whitish columbite, zircon, and torbernite have also been recorded. Of these minerals triplite is stated to be the commonest.

The importance of the find of uranium oxide impregnating the triplite led to the discovery of weathered pitchblende, and as the pits were deepened the weathering became less and less until pure pitchblende was obtained. In the six months from July 1913 to February 1914, eight hundredweight of pitchblende was obtained from Abrakhi Hill together with six tons of uranium earth debris, five to six hundred tons of triplite and two tons of tantalite. These ores were raised under a prospecting license in respect of Abrakhi Hill alone and in March 1914, a mining lease for thirty years was obtained in respect of sixty square miles of the Singar estate. The first intention was to work only the five square miles round Abrakhi and a syndicate was formed for this purpose, which on the outbreak of war, was refused a Trading License on account of the German element in it.

Labour in Mines.

The question of the labour supply presents difficulties which are not encountered in countries where mining is a special calling. The majority of the persons working at the Indian coal mines are agriculturists, and the supply of labour, as experience has recently shown, depends to a material extent on the condition of the agricultural industry. "The major portion of those employed," says a report by the

Department of Statistics, "are the aboriginal Dravidians from the mountainous country of Chota Nagpur and the Central Provinces, but a large number of other castes is also employed, particularly in the outlying fields. The majority of the workmen follow the vocation of agriculture as well as mining and return to their homes during the period of sowing and reaping, the result being that at such times the output of many of the mines is greatly restricted. At the Makum collieries of the Assam Railway and Trading Company, where the labour question continues to be a very difficult one, nearly a third of the total labour force are Mekranis, Chinese, and Nepalese. The Chinese have, however, proved unsatisfactory, and it is unlikely that they will in future be recruited." With the increase in the depth of working the need for a skilled mining class will become accentuated, and if the price of coal remains at a sufficiently high level, further development in the introduction of coal-cutting plants may take place. During the period of high prices some nine years ago cutting plants were introduced in order to augment the output. These worked successfully, but the cost proved to be high and as labour conditions improved the machines were discarded.

Inspection of Mines.

During the year 1919 the average number of persons working in and about the mines regulated by the Indian Mines Act was 249,156. This is an increase of 11,418 persons or 48 per cent. Of these persons 156,741 worked underground and 92,415 on the surface. One hundred and fifty-one thousand eight hundred and forty-one were adult males, 89,565 were adult females and 7,750 were children under 12 years of age. Those employed in coal mines numbered 190,052, which is 13,783 in excess of those employed in 1918

Accidents.—During the year 1919 at mines regulated by the Indian Mines Act, 1901, there were 252 fatal accidents, being an increase of 43 over the number which occurred in 1918, and an increase of 84 as compared with the average number of the preceding five years.

These accidents involved the loss of 312 lives, which is an increase of 69 over the number of lives lost in 1918. Of these persons 250 were males and 62 were females. It is remarkable that the number of females killed was almost double that of the previous year. In three separate accidents the number of lives lost was 14, 7 and 6, respectively. In two cases 4 lives, in six cases 3, and in eighteen cases 2 lives were lost.

The causes of these accidents have been classified as follows:—

(*a*) Misadventure	124
(*b*) Fault of deceased	90
(*c*) Fault of fellow workman	15
(*d*) Fault of subordinate officials ..	4
(*e*) Fault of management	9

More than half of the accidents were due to falls of roof and sides, which numbered 128 or 18 more than in the previous year. Many of the accidents could have been avoided—says the Report of the Chief Inspector of Mines—by closer and more skilled supervision. If the inspections of mine officials were more frequent there would be fewer cases of accidents to persons working in unauthorized places.

The number of **accidents occurring in shafts** was 34, or almost double the number which occurred in the previous year. In one such accident no less than 14 lives were lost. The principal increase was in accidents due to persons falling in shafts and things falling into shafts. It should be remembered that year by year there are fewer mines in which the mineral is brought to the surface through inclines, and the number of shafts is constantly increasing. Most of the accidents were due to carelessness, usually on the part of the deceased.

There was a large increase in the number of accidents occurring on haulage roads. The number of such accidents was 40, as compared with 21 in 1918 Fourteen were caused by tubs running wild on mechanical haulage roads and sixteen were due to other causes on similar roads. Ten took place where tubs were being pushed by hand. Most of the accidents could have been avoided by ordinary care. The practice of sitting and even sleeping on haulage roads should be more sternly prohibited. At many mines the provision of separate travelling roads and insistence on their use has largely reduced the danger to work-people from accidents of this class.

There was only one fatal explosion of **fire-damp**, causing one death, but three explosions by which persons were burnt took place. The improvement in respect of this class of accident is directly due to the increased use of safety lamps at mines where fire-damp is known to occur.

Only three accidents, causing three deaths, were due to **electrocution**, which is the same number as in 1918. In view of the large increase in the use of electrical machinery in mines this is satisfactory.

The **death rate** per thousand persons employed was 1·25 while that of the preceding 5 years was 1·02. At coal mines only these figures were 1·37 and 1·11, and at mines other than coal 0·88 and 0·74. At mines in the United Kingdom during the 10 years ending with and including 1918 the average death rate per thousand persons employed underground was 1·51.

The death rate per million tons raised at coal mines only was 11·95, while that of the preceding 5 years was 9·80. At coal mines in the United Kingdom during the 10 years ending with and including 1917 the death rate per million tons raised was 5·08

"The large increase in the death rate from accidents is deplorable", writes the Chief Inspector. "Perhaps the chief reason for the increase was the shortage of skilled mine managers. The great demand for the produce of the mines has called for increased output and more strenuous operation. Under such conditions risks are liable to be taken which would not be considered justifiable at other times."

The deaths occurring in each class of mines were as follows:—260 in coal mines, 19 in wolfram mines, 12 in manganese mines, 10 in mica mines, 4 in copper mines, 3 in limstone mines, 3 in an iron mine and one in a steatite mine.

Chief Inspector of Mines in India: G. F. Adams, M. INST. C. E. *Officiating Chief Inspector*: R. R. Simpson.

Monographs on Mineral Resources published by the Imperial Institute.

CHEMICAL SERVICES COMMITTEE.

The Chemical Services Committee, which was appointed by the Government of India in October 1919, under the Presidentship of Professor J. F. Thorpe, issued its report and made its recommendations in 1920.

The terms of reference to the Committee were:—

(1) To consider whether an all-India Chemical Service is the best and most suitable method of overcoming the difficulties and deficiencies pointed out by the Indian Industrial Commission. (2) In the event of the Committee approving the principle of an all-India Service, to devise terms of recruitment, employment and organisation; to indicate the extent to which chemists already in Government employ should be included in that service; and to suggest what should be the relations of the proposed organisation with the public and with Departments of the Government of India and of Local Governments. (3) In particular to frame proposals for the location, scope and organisation of institutions for chemical research.

The following is a summary of the chief recommendations:—

(1) That a chemical service should be constituted.

(2) That the service should be called the Indian Chemical Service.

(3) That the service should be controlled by a Director-General.

(4) That a Central Imperial Chemical Research Institute should be erected at Dehra Dun under the Director-General of the Chemical Services as Director, assisted by a number of Deputy Directors.

(5) That each Deputy Director should be in charge of a separate Department and that, in the first instance, there should be four Departments, (*a*) Inorganic and Physical Chemistry, (*b*) Organic Chemistry, (*c*) Metallurgical Chemistry, (*d*) Analytical Chemistry.

(6) That a Provincial Research Institute under the control of the Local Government should be erected in each Province near the chief seats of industry in that Province, and that each Provincial Research Institute should be under a Director of Research.

(7) That the **functions of the Central Imperial Institute** should be as follows:—

To create new industries and to carry out the development of new processes up to the "semi-large" scale, or further if necessary: to investigate those problems of a fundamental character, arising from the work of the Provincial Institutes, which have been transferred to the Central Institute by the Local Director of Research in consultation with the Director General. Such problems will be those which have no apparent immediate practical importance, but which in the opinion of the Director-General and the Director of Researches are likely to lead to discovery of fundamental industrial importance affecting the industries of the country generally assist in the co-ordination of the work in progress in the Provinces, both by means of personal discussion between the officers of the Central and Provincial Institutes during the course of the tours made by the Director-General and the Deputy Directors, and by means of periodical conferences of Provincial and Imperial officers to carry out such analytical work as may be required and to correlate the methods of analysis in general use throughout the country; to maintain a Bureau of information and Record Office; and to issue such publications as are considered necessary.

(8) That the **functions of the Provincial Research Institutes** should be as follows:—

To maintain close touch with the works chemists and with the works generally and to work out any problems which may be submitted to them; to develop and place on an industrial scale new industries which have been previously worked out on the laboratory and "semi-large" scale by the Central Imperial Institute; to carry out such other work as may be necessary to establish and foster new industries peculiar to the Province; to carry out such analytical work of a chemical character as may be required in the Province, and to erect and control substations in such parts of the Province as the development of industry may require.

(9) That, under 8 above, arrangements should be made by which a firm supplying a problem should have the use of the solution for an agreed period of time prior to its publication.

(10) That members of the service should be lent to private firms as occasion demanded and should during the period of their service be paid an agreed sum by the firms.

(11) That the Research Institutes should not undertake manufacture in **competition with private enterprise**, but that chemical industries developed in accordance with 8 above should be handed over to private firms as soon as practicable.

(12) That whenever necessary experts, should be employed to establish chemical industries based on known processes.

(13) That the work of the Central Imperial Institute should be controlled by a **Board** of which the Director-General will be Chairman and which will comprise the Deputy Directors and such other persons as the Government of India may determine.

(14) That the Central Imperial Institute should have no administrative control over the Provincial Research Institute, but that no appointment as Director of Research should be made without consulting the Director-General.

(15) That the Director-General and Deputy Directors should visit Provincial Research Institutes periodically and co-ordinate the work done in each

(16) That chemists employed at Provincial Research Institutes should be appointed in the first instance by the Local Government in consultation with the Director of Research and the Director-General.

(17) That chemists so appointed should be members of the Chemical Service and should be seconded for service under the Provincial Governments and be paid by them.

(18) That agricultural chemists should not at present be included in the service.

(19) That a Ministry of Science should be created as soon as practicable.

(20) That the Deputy Director in charge of Analytical Chemistry should co-ordinate the methods of analysis in use throughout India and should act in an advisory capacity to the various Provincial Government Analysts who should be attached to each Provincial Research Institute.

(21) That Provincial Government Analysts should be under the control of the Directors of Research and should take over the chemcial work now carried out by the Chemical Examiner and the Government Test House.

(22) That the question of the connection of the Indian Institute of Science, Bangalore, with the Chemical Service should await purposals from the Council of the Institute.

(23) That a Bureau of Information and Record Office, a Library, and a Museum should be attached to the Central Imperial Institute and to each Provincial Research Institute.

(24) That a **Chemical Survey of India** should be carried out at the earliest possible moment.

(25) That the Government of India should give maintenance and equipment grants to students to enable them to undergo the training in chemical research required for recruitment.

(26) That liberal grants, free from the customary accounts, restrictions, should be given for the initiation of the scheme and for the development of industries through the medium of chemical research.

Action on this report has for the time being been suspended pending the appointment of a successor to Sir Thomas Holland.

CREMATION.

Cremation as a means of disposing of the dead is commonly adopted throughout India by the Hindus, but has been little adopted among the Europeans in India. A crematorium was started some years ago in Calcutta close to the Lower Circular Road Cemetery, at a cost of Rs. 40,000. But the return for this expenditure is disappointing. Only five or six cremations take place in Calcutta each year, in spite of the fact that the fee for cremation has been fixed by the Cremation Society of Bengal at the very low figure of Rs. 30, subject to reductions in the case of poor families. The reason for this is thought to be that, when possible, Europeans go home to die, and the Native Christians and Eurasians are very largely Roman Catholics among whom a prejudice exists against this form of the disposal of the dead. In Bombay arrangements have recently been made for a small area in the Sewri Cemetery to be walled in, and for cremations to be carried on within it in the primitive style of the country, but in such a way as to preserve the ashes

Stock Exchanges.

There are about 416 Share and Stock Brokers in **Bombay**. They carry on business in the Brokers' Hall, bought in 1899 from the funds of the **Share and Stock Brokers' Association** formed to facilitate the negotiations and the sale and purchase of Joint Stock securities promoted throughout the Presidency of Bombay. Their powers are defined by rules and regulations framed by the Board of Directors and approved by the general body of Brokers The Board has the power to fix the rates in times of emergencies. It is composed of Kikabhai Premchand (President); Manekalal Jethabhai, N. P. Karani, K.B.P. Shroff, Vurjivandas Tribhovandas, Amratlal Kahdas, Kaikhosroo H Patch, Choonilal Virchand Jehangir Bhicaji, J P, J S Gazdar, Gulamhusen Madubhai, Nanabhai Tulakchand, Hirachand Vasanji, Jamnadas Morarji, J P, Dadabhai S. Madon HONORARY SECY AND TREASURER —A H. Madan

At first the admittance fee for a broker was Rs. 5 which was gradually raised to Rs. 7,000 The fee for the Broker's card has increased and it was recently sold by public auction for Rs. 21,800. The rules of the Association were revised in October 1916 and from the New Year the purchaser of shares has to pay the stamp and transfer fee instead of the seller There are two classes of Exchange Brokers, Europeans and Indians, the latter being certified for recognition by the native Stock Exchange. Business in Government Paper and all other Trustees' Authorised Securities is carried on under the rules of the Bombay Stock Exchange, but in the street outside the hall.

In November 1917 a second Stock Exchange was opened in Bombay, with its headquarters in Apollo Street. The directors of this exchange known as the **Bombay Stock Exchange, Ltd.**, are Sir Sarupchand Hukamchand, Kt., Rameshwardas Birla, Lachhmandas Daga, Rai Bahadur Jamnalal R Bachhraj, Kastorbhai M Nagarsheth, Madanlal Chaudhry, Jyotendra L. Mehta, Shriram Ramnarayan, Fatechandji Ruiya, Naranji Dayal, Dulichand Dalmia and Fazalbhai Ibrahimbjhai Rahimtulla. This separate Exchange came to an end in 1921, when it was merged in the older body.

For many years the **Calcutta** Share Market had its meeting place in various gullies in the business quarter and was under no control except that of established market custom In 1908 the **Calcutta Stock Exchange Association** was formed, a building was leased in New China Bazar Street now called Royal Exchange Place, a representative committee was formed, and the existing trade customs were focussed into rules drawn up for the conduct of business. Admittance as a member of the Stock Exchange is by vote of the committee, and the entrance fee is at present Rs. 500. The market custom differs very materially from that of most other Stock Exchanges since there are no settlement days, delivery is due the second day after the contract is passed and sales of securities are effected for the most part under blank transfers. Another difference in procedure as compared with the London Stock Exchange is that there are no "Jobbers" in the Calcutta market. The Dealers who take their place, more or less, are not compelled to quote a buyer's and a seller's rate and are themselves Brokers as well as dealers, calling upon the Banks and other clients and competing with Brokers.

There are about 150 members, besides outside brokers, the former consisting of European, Jewish, Marwari, and Bengalee firms. The Marwaris predominate. The volume of *bona fide* Investment business is comparatively small and insufficient for the number of Brokers. The principal business transacted on the Calcutta Stock Exchange is connected with the shares in Jute Mills, Coal Companies, Tea Companies registered in India, Miscellaneous industrial concerns (such as Paper, Flour, Sugar), Railway and Transit Companies and Debentures, the latter comprising those of Industrial concerns and Trustees, Investment Securities, namely, Municipal and Port Trust Debentures. When speculative operations are being actively engaged in, which frequently take the form of forward contracts for delivery in three months' time, the value of securities changing hands may aggregate as much as a crore of Rupees per month, but since the trade is not constant and one year differs very much from another, it would be difficult to estimate what the average annual turn-over would amount to. The association has an honorary secretary and is not at present affiliated to the Bengal Chamber of Commerce.

The **Madras** Stock Exchange situated No 9 Broadway (in Tata Industrial Bank Buildings) consists of about 100 Members of which 25 are working Members. It was opened on 6th April 1920 and deals principally in Mill shares Business is regulated by rules drawn up by the Directors There is a Board of arbitration The Directors are Abdul Hussain Kalhb, Rai Bahadur Bansi Lal Abeercband, Goculdass Gowardandas, Hassasingh Jessasingh, M. Jammal Mohamed Saib, C M. Kothari (Hon. Secry and Treasurer), M. C. T Muthia Chetty, C G. Naravan Doss, and Ramjee Callianjee Seth. There is an admittance membership card of Rs. 1 000 and an annual subscription of Rs. 100. The original 100 members were elected by the first Directors and each of the working members have deposited a security of Rs 3,000 which is held by the Stock Exchange Committee A membership card sold recently by auction changed hands at Rs. 3,125.

Industrial Arts.

The ancient industrial arts of India formed two distinct groups. The first included those allied to, and dependent upon, architecture; the second comprise those applied to articles devoted to religious ritual; military weapons and trappings, domestic accessories; and to personal adornment.

The articles of the first group were intended for some fixed and definite position, and the style of their design and the character of their workmanship were dictated by that of the building with which they were incorporated. Those of the second group were movable, and the range of their design was less constricted and their workmanship was more varied. Examples of work in both groups are so numerous, and the arts comprise such a diversity of application, that only a cursory survey can be attempted within the limits of a short review. Although the design and treatment differ in the two groups, the materials used were often the same. These materials cover a very wide range but space only permits of reference to work applied to the four materials upon which the Indian craftsman's skill has been most extensively displayed. These are stone, wood, metal and textiles.

Before dealing separately with each of these materials a few words upon the principal Indian styles are necessary. The two distinctive styles are Hindu and Mahomedan. The former may be termed indigenous, dating as it does from remote antiquity, the latter was a variation of the great Arabian style, which was brought into India in the fourteenth century, and has since developed features essentially Indian in character. The art of both Hindus and Mahomedans is based upon religion and the requirements of religious ritual. The obvious expression of this is shown in the different motifs used for their ornament. In Hindu art all natural forms are accepted and employed for decorative purposes; but in that of the Mahomedans, nearly all natural forms are rejected and forbidden. The basis of Mahomedan decoration is therefore mainly geometrical. In each of them, racial characteristics are strikingly exhibited. The keynote of Hindu work is exuberance, imagination and poetry; that of Mahomedan, reticence, intellect and good taste. The Hindus are lavish, and often undiscriminating, in their employment of ornament; the Mahomedans use more restraint. In fact the two styles may be compared, without straining the analogy, to the Gothic and classic styles in Europe. In both styles the fecundity of ideas and invention in design are marvellous, and the craftsmanship often reaches a very high standard. Hindu art had been subjected throughout the ages to many foreign influences, but the artistic instincts of the people have proved so conservative that, whether these alien ideas came from the east or the west, they have been absorbed, and are now stamped with a definite Indian character. Recognition of this fact alone should relieve the anxiety of those critics who fear that the penetration of Western art and culture into India at the present time will eventually rob Indian art of its national character.

Stone Work.—Carved stone work is the principal form of decoration employed in Hindu temples. In variety and scope it ranges from the massive figures in the Buddhist and Brahminical Cave Temples, and the detached sculpture of the temples of Southern India, to the delicately incised reliefs and elaborately fretted ornament of the Jain temples at Mount Abu. A curious fact in relation to Hindu work is that priority of date appears to have no relation to artistic development. It is not possible to trace as in the case of Greek, Roman and Mediæval craftwork, the regular progressive steps from art in its primitive state to its culminating point and its subsequent decay. Styles in India seem to spring into existence fully developed, the earlier examples often exhibiting finer craftsmanship than those of a later date. There can be little doubt that stone carving in India was simply the application of the wood carvers' art to another material. The treatment of stone by the Hindu craftsmen, even in the constructive principles of their buildings, bears a closer resemblance to the practice of the wood-worker than to that of the stone mason. The earlier wooden examples from which the stone buildings and their decorations were derived have long since disappeared, but their influence is apparent. The keynote of Hindu design is rhythmic rather than symmetrical; that of their craftsmanship, vigour rather than refinement. In the carving of the human figure and of animals great power of expressing action is shown, and this spontaneous feeling is preserved despite the greatest elaboration and detail. The industry displayed is amazing, no amount of labour appears to have daunted the Hindu craftsmen in carrying out their huge and intricate schemes of decoration.

The stone carving on Mahomedan buildings, except where Hindu carvers have been allowed a free hand, is much more restrained than that on Hindu temples. The fact that geometrical forms were almost exclusively used, dictated lower relief and greater refinement in the carving, while the innate good taste of the designers prompted them to concentrate the ornament upon certain prominent features, where its effect was heightened by the simplicity of the rest of the building. The invention displayed in working out geometrical patterns for work screens, inlay, and other ornamental details appears to be inexhaustible; while wonderful decorative use has been made of Arabic and Persian lettering in panels and their framing. To obtain a rich effect the Hindus relied upon the play of light and shade upon broken surfaces, the Mahomedans to attain the same end used precious materials, veneering the surfaces of their buildings with polished marble which they decorated with patterns of mosaic composed of jade, agate, onyx and other costly stones. Although the art of inlaying and working in hard stones was of Italian origin, it proved to be one eminently suited to the genius of the Indian craftsman; and many wonderful examples of their skill in the form of book rests, tables, thrones, footstools, vases and sword handles are extant to show the height of proficiency they attained. The treatment of precious stones by Indian jewellers may here be referred

to. Sir George Birdwood states that "the Indian jeweller thinks of producing the sumptuous, imposing effect of dazzling variety of rich and brilliant colours and nothing of the purity of his gems." This is true in a general sense and "full many a gem of purest ray serene" was utterly ruined by crude cutting and piercing. But although as early as the sixteenth and seventeenth centuries diamonds and precious stones from the Indian mines were taken to Europe to be cut, many of the finest jewels found their way back to the treasure houses of Indian princes.

Wood Work.—With a fine range of timbers suitable for the purpose, wood has played a great part in the construction and decoration of Indian buildings. Unfortunately, most of the ancient wood work has been destroyed by the action of the climate and the teeming insectivorous life of India: and that which escaped these enemies was wiped out by fire and the sword. It is therefore only possible to conjecture the height of artistic development these buildings and their decorations displayed by the copies in stone which have been preserved. Few if any examples of a date earlier than the sixteenth century are to be found. Many of these, and specimens of a later date to be seen in towns and cities throughout the country, are masterpieces of design and craftsmanship. The carved timber fronts and inner courtyards of houses in Ahmedabad, Nasik, and other parts of Western India are notable for their picturesqueness and beauty; the structural beams, the overhanging balconies, with their screens and supporting brackets, being carved in a manner which unites richness of effect with good taste and propriety. Of furniture, as the term is now understood, few examples were in use in India before Europeans introduced their own fashions. These were confined to small tables and stools, book rests, clothes chests and screens, the designs of which conformed somewhat closely to the architectural style of the period. Many of these were decorated with inlays of coloured woods, ivory and metal; while in some cases the wooden basis was entirely plated with copper, brass or silver. In Southern India, where close grained sandalwood is grown, jewel cases and boxes are enriched with carving executed with the attention to detail and the finish generally associated with the carving of ivory. Coloured lac was freely used to decorate many articles of furniture, especially those turned on the lathe; and rich colour effects were obtained in this, perhaps the most distinctive and typically Indian development of decoration as applied to woodwork.

Metal Work.—With the exception of weaving, the metal working industry employed and still employs the greatest number of artistic craftsmen in India. Copper and brass have always been the two metals most widely used for domestic purposes by Mahomedans and Hindus. The shapes of many of these humble vessels are among the most beautiful to be found in the country. They exhibit that sense of variety and touch of personality which are only given by the work of the human hand; and the shapes are those which grow naturally from the working of the material with the simplest implements. In the technical treatment of brass and copper Indian craftsmen have shown a taste and skill unsurpassed by those of other nations, except in the department of fine casting. In this, and in the working of gold and silver, a higher standard of technical and constructive exactness has been reached by the metal workers of Europe and Japan. It may be taken as an axiom that the more beautiful the shape of an article is, and this especially applies to metal work, the less need exists for the decoration of its surface. It is equally true that the highest test of craftsmanship is the production of a perfect article without any decoration. The reason being that the slightest technical fault is apparent on a plain surface, but can be hidden or disguised on one which is covered with ornament. The goldsmiths and silversmiths of India were extremely skilful and industrious, but judged by this test their works often exhibit a lack of care and exactness in the structural portion and a completely satisfactory example of perfectly plain work from the hands of the gold and silversmiths of India is rarely to be met with. Much of the excessive and often inappropriate ornamentation of the articles that they produced owed its application as much to the necessity of hiding defective construction as it did to any purely decorative purpose. For many generations, ornaments of gold and silver were regarded in the light of portable wealth, a practice which naturally made for massiveness. These solid ornaments are most effective and picturesque; and, despite an enormous output of elaborate and delicate work from their hands, the most valuable contribution of the Indian metal workers to the sum total of man's artistic use of the precious metals will probably be found to lie in a certain barbaric note which distinguishes these pieces—a note not present in the craft work of other countries. In the design of Hindu gold and silver ornaments, religious symbols have been extensively used. The ornaments which bedeck the early sculptured figures, and those depicted in the paintings at the Cave Temples of Ajanta are precisely the same in design and use as similar articles made at the present time, thus affording a striking evidence of the inherent conservatism of the Hindu people and its effect upon an industrial art that makes a closer personal appeal than any other.

Textiles.—The textile industry is the widest in extent in India and is that in which her craftsmen have shown their highest achievements. Other countries, east and west of India have produced work equal, if not superior, in stone, wood, and metal; but none has ever matched that of her weavers in cotton and wool, or excelled them in the weaving of silken fabrics. Some of the products of the looms of Bengal are marvels of technical skill and perfect taste, while the plum bloom quality of the old Cashmere shawls is an artistic achievement which places them in a class by themselves. Weaving being essentially a process of repetition, was the first to which machinery was applied, and modern science has brought power loom weaving to such a state of perfection that filaments of a substance finer even than those of Dacca, which astonished our ancestors, are now produced in the mills of Lancashire. But

for beauty of surface and variety of texture, no machine-made fabrics have ever equalled the finest handwork of the ancient weavers of India. Many of the most beautiful varieties of Indian textile work have disappeared, killed by the competition of the power loom: and it is to be feared that under modern conditions they are never likely to be revived. In other branches of art as applied to textiles India does not hold so pre-eminent a position as in that of weaving. The printed silks and calicoes of the seventeenth and eighteenth centuries deservedly held a high place in the estimation of Western nations, whose craftsmen learnt many valuable lessons from the technical skill, and artistic taste they display. In embroidery and fine needlework the West and the Far East have more than held their own, while nothing approaching the tapestries made in Europe in the middle ages has been produced in India. The nearest approach to these is in carpets and rugs This art was introduced from Persia, but Indian craftsmen have never succeeded in equalling the finest work of their instructors either in colour or design.

Modern Conditions.—In the foregoing sketch of the ancient industrial art of India, as applied to the four principal materials employed, only a general indication of its more striking characteristics has been possible. A volume would be required to give a detailed description of any one of them, and would leave many other minor arts to be considered. All these branches of art came into existence, were developed and flourished in India when social and economic conditions were vastly different from those of the present day. Like similar artistic crafts carried on in Europe up to the end of the eighteenth century, they were executed by hand labour. The processes involved had not been discovered by scientific inquiry, such as is now understood by the phrase, but were the outcome of generations of slowly built up experience. We now come to the effect upon them of the changed conditions which have revolutionised industrial art in Europe during the last century.

The invention of the steam engine, and the application of mechanical power and scientific research to industry in Europe, mark the dividing line between ancient and modern industrial art. Not only on its technical side is this so, but the effect of these changes has been to alter the character of the work itself and the spirit which animated the craftsmen. In place of the ancient ideal of variety in design and treatment, which meant a limited output, the modern one of uniformity and unlimited output has been substituted. The capitalist has displaced the master craftsman ; the organised factory, the small workshop ; specialisation and division of labour have taken the place of general proficiency among the artisans ; the function of the designer has been separated from that of the craftsman; local markets have been extended to serve the whole world; and the skilled handicraftsman has, in a great measure, become a machine-minder. It took about one hundred years of gradual change for the craftsmen of Europe fully to adjust themselves to these altered conditions ; and during the greater portion of that period India protected by the difficulties of transport, continued its immemorial practice. Fifty years ago this protective barrier was removed by the opening of the Suez Canal, and the handicraftsmen of India have since been struggling to avoid the same fate which overtook those of Europe half a century before. With less time to adapt themselves to the changed conditions the Indian craftsmen have had to meet the competition of European rivals already fully equipped with new and unknown weapons. Even before this period of intense competition, observers interested in Indian craftwork had noticed evidences of its deterioration. The falling off, both in design and workmanship, was attributed to the conservative practice of the craftsmen ; to the gradual loss of foreign markets, and to the long period of internal disorder which had deprived them of both the patronage of the rulers of an earlier age and the stimulating contact with foreign craftsmen who had previously been attracted to the splendid courts at Delhi and Agra. During the same period, an even greater degradation in design had overtaken the craftwork of Europe. This was due to entirely different causes, namely to the introduction of machinery. Attention had been so concentrated upon speedy production, mechanical accuracy and commercial organisation that beauty of design had been almost entirely neglected. This was so forcibly demonstrated at the International Exhibition of 1851 that efforts were at once made to bring art and industry together once more. Schools of Art and Museums were founded throughout England and the same system was copied in a tentative and timid fashion in India. The function of these institutions was accurately estimated in England, where the artistic industries were already highly organised and were commercially successful, and whose products were to be found in every market of the world. Their business was to assist these industries by training a body of efficient designers capable of furnishing the factories with suitable designs, new or old, and in any style, to satisfy the requirements of customers in any country. It was never supposed for an instant that a School of Art could lead an industry. In India their function was as completely misunderstood as were the causes of the depression in Indian craftwork. The schools were not only expected to lead the industries which were living, but to revive those which were moribund, and resurrect those which were dead. Archæologists ignoring the economic factor vainly conceived and propounded the idea that the salvation of the industrial arts was to be found in strict adherence to ancient methods of work and a repetition of the old patterns at a time when the home markets of the craftsmen were swamped with cheap machine-made goods printed in the old pattern which had been copied and adopted by European designers. In India, the cart was put before the horse, and, instead of first reorganising the artistic crafts, and placing them on a commercial basis that would have afforded them a decent chance of meeting Western competition, and then instituting art and craft schools in every industrial centre to assist them, an entirely inadequate number of art schools was founded and the crafts were left to shift for themselves. The Japanese have demonstrated the possibility of transforming a nation of

individual artistic craftsmen into one of co operative industrial craftsmen; and however much one may regret the necessity, the only road to the economic revival of craftwork in India is that which has already been taken by Western nations and Japan. That work of the same quality, or even of a similar character to that which was done in the past, will be produced under the new system cannot be expected. Both in Europe and Japan the change has been followed by deterioration in design, and India cannot hope to escape where others have suffered. But the artistic instinct and a love of beautiful things are widespread and firmly rooted in the Indian character. The craftsmen possess powers of invention in design equal to that of any other people, but these have been suppressed for a century by the depressing conditions with which they have had to contend. If the artistic industries can be established upon a basis in conformity with, and not in antagonism to, modern economic conditions, the artistic instinct and technical skill of Indian craftsmen will revive and India will regain the honourable place she once held in the world of art. In the report of the Indian Industrial Commission the need for some State-aided system of industrial and commercial organisation of the industrial arts with an expanded scheme of technical and artistic instruction for the craftsmen has been recognised; and valuable suggestions were made by experts who gave their evidence when the Commission visited the different Provinces. The success of the scheme recommended by the Commission will depend entirely upon the energy with which it is applied, and the practical knowledge and the assistance required by each of the different crafts on the part of those who control it. If, in addition, the same financial assistance and encouragement are given by the Imperial and Local Governments to the Indian craftsmen that have been bestowed by their own Government upon the art workers of Japan, industrial art in India will quickly emerge from the cloud of depression, which has hung over it for a century past, into the sunlight of prosperity.

The Fisheries of India.

The fisheries of India, potentially rich, as yet yield a mere fraction of what they could were they exploited in a fashion comparable with those of Europe, North America or Japan. The fishing industry, particularly the marine section, has certainly expanded considerably within the last 50 years concurrently with improvement in the methods of transport and increase in demand for fish, cured as well as fresh, from the growing populations of the great cities within reach of the seaboard. The caste system, however, exerts a blighting influence on progress; fishing and the fish trade are universally relegated to low caste men who alike from their want of education, the isolation caused by their work and caste, and their extreme conservatism, are among the most ignorant, suspicious and prejudiced of the population, extremely averse from amending the methods of their forefathers and almost universally without the financial resources requisite to the adoption of new methods, even when convinced of their value. Higher caste capitalists have hitherto fought shy of association with the low caste fishermen, and, except in the case of joint stock companies to engage in large operations on new lines, these capitalists cannot be counted upon to assist in the development of Indian fisheries. As in Japan, it appears that the general conditions of the industry are such that the initiative must necessarily be taken by Government in the uplift and education of the fishing community and in the introduction and testing of new and improved apparatus and methods.

The first local Government to lead the way was that of Madras, which in 1905 initiated an investigation of the industry, both marine and fresh-water, appointing Sir F. A. Nicholson to supervise operations. Bengal followed suit in 1906, and from these beginnings have sprung the local Fisheries Departments of Madras, Bengal, and Behar and Orissa. Bombay, the remaining seaboard province, has comparatively small fresh-water interests compared with Madras and Bengal, and as it happens that her marine fisheries are favoured with good harbours and the most enterprising race of sea-fishermen in India, there was less urgent need for State help in the industry. Hence fisheries there are only now becoming the subject of Government solicitude, their care being apportioned to the newly created Department of Industries, which imported a steam trawler from England in 1921, now engaged upon the survey of the local trawl grounds.

Madras.

The Madras coast line of 1,750 miles is margined by a shallow-water area within the 100 fathom line of 40,000 square miles; outside of a mere fringe inshore, this vast expanse of fishable water lies idle and unproductive. The surf-swept East coast is singularly deficient in harbours whereon fishing fleets can be based, and so from Ganjam to Negapatam, the unsinkable catamaran, composed of logs tied side by side, is the only possible sea-going fishing craft. Its limitations circumscribe the fishing power of its owners and consequently these men are poor, and the produce of their best efforts meagre compared with what it would be if better and larger boats were available and possible. The West coast is more favoured. From September till April, weather conditions are good enough to permit even dugout canoes to fish daily. The people of this coast are fond of fish and, as no difficulty is found in beaching canoes and boats throughout this season, the fishing population is a large one. The 1911 Census gave 75,013 adults as subsisting on fishing industries in Malabar and S. Kanara, a small number after all, considering the immense wealth of these seas. The chief fishes are sardines, mackerel, catfishes and jewfishes (*kora* or *gol*); the two first overshadow all others. So greatly in excess of food requirements are the catches of sardines that every year large quantities are turned into oil and manure. Fishing outside the 5-fathom line is little in evidence, save by Bombay boats (Ratnagiri) which are engaged in drift netting for bonito, seer and other medium-sized fishes. These strangers are enterprising fishers and bring large catches into Malpe and Mangalore and other convenient centres; the material is largely cured for export.

Fish-curing is practised extensively everywhere on the Madras coasts; its present success is due primarily to Dr. Francis Day who, after an investigation during 1869-71 of the fisheries of the whole of India, pressed for the grant to fishermen of duty-free salt for curing purposes within fenced enclosures. He advocated much else, but the time was not ripe and the salt concession was the sole tangible result of his long and honourable efforts. His salt suggestions were accepted by the Madras Government, and from 1882 a gradually increasing number of yards or bonded enclosures were opened at which salt is issued free of duty and often at rates below the local cost of the salt to Government. At present about 140 of such yards are scattered along the coast and over 50,000 tons of wet fish are annually cured therein.

The **pearl** and **chank** fisheries in Palk Bay and the Gulf of Mannar are Government monopolies. The former are now of little value and no remedial measures seem possible; the latter have been brought to a high state of efficiency and bring in substantial returns, the net profit for 1920-21 was Rs. 37,196. Chanks or conches (*Turbinella pirum*) are handsome porcelain—white shells of great thickness and considerable size, much in demand in Bengal, particularly Dacca, where the industry centres, for manufacture into bangles.

The **inland fisheries** of Madras compare unfavourably with those of Bengal. Many of the rivers dry up in the hot season and few of the many thousands of irrigation tanks throughout the province hold water for more than 6 to 9 months. As a consequence inland fisheries are badly organized and few men devote themselves to fishing as their sole, or even main, occupation. The custom is to neglect or ignore the fishery value of these streams and tanks so long as they are full of water; only when the streams shrink to pools and the tanks to puddles do the owners or lessees of the fishing rights turn out to catch fish. The result is a dearth of fish throughout the greater part of the year,

a glut for a few days, and often much waste in consequence. The chief fresh-water fishes of economic importance are the murrel, notable for its virtue of living for considerable period out of water, various carps, and catfishes, the hilsa (in East Coast rivers only), and the catla. In the Nilgiris, the Rainbow trout has been acclimatised and thrives well. The Government working in conjunction with the Nilgiri Game Association maintain a hatchery at Avalanche, where quantities of fry are hatched and reared for the replenishment of the streams of the plateau.

The Madras Department of Fisheries. As Government attention has been given in Madras over a longer period to the improvement of fisheries, and a larger staff concentrated upon the problems involved than elsewhere, this Presidency has now the proud position of knowing that her fisheries and collateral industries are better organized and more progressive than those in other provinces. The credit for the wonderful success which has been achieved and the still greater promise of the future, is due in large measure to the wise and cautious plans of Sir F. Nicholson, who from 1905 to 1918 had the guidance of affairs entrusted to him. In 1905 he was appointed on special duty to investigate existing conditions and future potentialities ; in 1907, a permanent status was given by the creation of a Fisheries Bureau, and this in turn has developed into a separate Department of Government, now administered by Mr. James Hornell, F.L.S., as Director. The higher staff consists of a Marine Biologist, three Assistant Directors and a Cannery Manager. The first is charged primarily with the investigation of the life-histories of the principal food-fishes of the coast ; the others have charge respectively of (*a*) the departmental fisheries (pearling, chanks beche-de-mer, etc.) and with experiments in the developments of inshore and deep-sea fishing methods ; (*b*) the co-operative and socio-economic side of the Department's operations, (*c*) inland pisciculture, and (*d*) the experimental and demonstrational fish cannery at Chaliyam in South Malabar. Other Officers have charge respectively of sections dealing with education and industrial work, which include a Training Institute for village teachers, fish-curing yards, and oil and guano factories.

The public fish-curing yards now under the control of the Salt and Abkari Department will eventually pass into the charge of the Fisheries Department ; at present as a trial measure, 6 yards have been transferred and are now being operated directly under the latter Department, with a view to the introduction of better methods, and improved hygiene. Other newly opened yards are also being administered on model lines by the Department. Its activities are so varied and far reaching that it is difficult even to enumerate them in the space available, much less to give details So far its most notable industrial successes have been the reform of manufacturing processes in the fish-oil trade, the creation of a fish-guano industry, the establishment of a fish cannery and the development of canned goods other than sardines, which alone had been canned previously in Malabar, and the opening of an oyster farm conducted under hygienic conditions. (For details see the Bulletins of the Department, issued from the Government Press, Madras ; twelve volumes have been issued to date). All this work has been carried on under serious handicap for want of suitable accommodation for the research staff ; prior to the war proposals were elaborated for headquarters buildings in Madras comprising laboratories, experimental hatcheries, and a large public aquarium ; postponed owing to war conditions these are again under discussion. In Madras the Department controls a small public aquarium, deservedly popular as the first and only one on the Asiatic mainland.

Fishing rights in the large irrigation tanks were transferred from Government to local authorities many years ago ; these tanks are now being reacquired by Government in order that they may be restocked periodically by the Department ; the results so far have shown a profit on the operations. To breed the necessary fry, three fish farms are in operation, and the construction of three more is in progress. In these the chief fish bred are the Gourami, obtained from Java, the Murrel and *Etroplus suratensis*, which has the excellent attribute of thriving and breeding as well in brackish as in fresh water ; all three protect their eggs while developing a useful habit ; both the *Gourami* and *Etroplus* are largely vegetarian in diet. A further activity is represented by the breeding of small fishes specially addicted to feed upon the aquatic larvæ of mosquitoes. These are supplied in thousands to municipalities and other local authorities at a nominal price, for introduction into mosquito-haunted sheets of water; these anti-malarial operations have proved most successful in those places where the local authorities have given proper attention to the directions given. The educational work of the Department is becoming one of its most important branches whether it being specially training teachers for schools in fishing villages, in training men in the technology of curing, canning, and oil manufacture : in co-operative propaganda and in the supply of zoological specimens for the use of college classes and museums. The last named has filled a long-felt want and is contributing materially to the advancement of the study of zoology throughout India ; there is now no need to obtain specimens from Europe.

The development of deep-sea fishing is engaging the attention of Government ; splendid trawl grounds are indicated off Cape Comorin extending over an area of some 4,000 square miles ; other promising areas are known elsewhere, but so far the limiting factors are the lack of cold storage accommodation at any port in the Presidency, and the want of a deep-water harbour in the south, where steam-trawlers can discharge direct into store.

Welfare Work.—A remarkable feature in the work of the Madras Fisheries Department is the energy which it devotes to the improvement of the condition of the fisherfolk. On Sir Frederick Nicholson's initiative the department has always recognized the duty of spreading among them education and the habits of thrift, temperance and co-operation. The work has been specially successful on the west coast. The number of fishermen's co-operative societies last year had risen to 65. The paid-up-capital of these societies amounted to over three quarters

of a lakh of rupees; over 2 lakhs were disbursed by them in loans. These societies it is reported worked satisfactorily, allowance being made for the inexperience and illiteracy of the members. But the formation and working of co-operative societies are not the only social activity among these fishermen. There is a vigorous temperance society at Mangalore. The Collector of South Kanara has granted sites for the construction of village halls for the fishermen in two villages and the fishermen have themselves collected Rs. 3,000 for the building. In another village, Kizhur, the fishermen have already completed a building in which they hold meetings while an elementary school carries on its work in the same building. In Madras itself at Nadukuppam a temperance organisation has got to work with the assistance of the Fisheries Department. To promote the education of fishermen a training institution was opened in the middle of 1918 at Calicut to train teachers to work in elementary schools for the fisherfolk. The pupil teachers under training are familiarized with the work carried on in the fishery stations at Tanur and Chaliyam. They are given practical instructions in fishing, a boat having been purchased for the purpose. By the end of 1920 29 schools for the fisherfolk were being maintained by the department on the west coast with a total of 1,400 pupils. Nine of these were new schools started during the year by the department. In some places the villagers themselves started the schools and then handed them over to the department. In other places schools were opened by the department at the request of the fishermen. Local men are appointed as honorary managers of schools.

Bengal & Bihar & Orissa.

The fishing value of this extensive deltaic region lies primarily in the enormous area occupied by inland waters—rivers, creeks, jheels, and swamps, to say nothing of paddy fields and tanks. These swarm with fish and, as the Hindu population are free to a large extent from the aversion to a fish-diet which is widely prevalent among the better castes in the south the demand for fish is enormous. Rice and fish are indeed the principal mainstays of the population and not less than 80 per cent. of the people consume fish as a regular item of diet. It is calculated that 1·6 per cent. of the population is engaged in fishing and its connected trades, a percentage that rises to 2·6 in the Presidency, Raj Shahi, and Dacca Divisions. 644,000 persons in Bengal subsist by fishing with 324,000 maintained by the sale of fish, and this in spite of the fact that fishing is not considered an honourable profession. As a fresh-water fisherman the Bengali is most ingenious, his traps and other devices exceedingly clever and effective—in many cases too effective—so eager is he for immediate profit, however meagre this may be. The greatest inland fishery is that of the hilsa (*Clupea ilisha*) which annually migrates from the sea in innumerable multitudes to seek spawning grounds far up the branches of the Ganges and the other great rivers. Other valued and abundant fishes are the rohu (*Labeo rohita*) and the katla, (*Catla catla*); prawns abound everywhere. Of important fishes taken in the lower reaches of the rivers and in the great network of creeks spread throughout the Sunderbans, the bekti (*Lates calcarifer*) and the mullets are the most esteemed; apart from these estuarine fish the most valuable sea-fishes are the mango-fishes (*Polynemus,*) pomfrets and soles. The Sea-fisheries are as yet little exploited, the fishermen of Orissa, where alone coastal fishing is of any local importance, having no sea-craft save catamarans of inferior design and construction.

Following the inquiry begun in 1906 by Sir K. G. Gupta, an investigation of the steam trawl potentialities of the head of the Bay of Bengal was undertaken, the trawler *Golden Crown* being employed for the purpose. The results showed that there are extensive areas suitable for trawling and capable of yielding large quantities of high class fish. Much attention was devoted during these trawl cruises to the acquisition of increased knowledge of the marine fauna, the results being published in the Records and Memoirs of the Indian Museum. For various reasons, the chief perhaps being the hostility of vested interests, the lack of cold storage facilities and the loss of time involved by the trawler having to bring her catches to Calcutta instead of sending them by a swift tender, the experiment was financially a failure and was dropped. With ever-increasing demand for fish in Calcutta and the concurrent rise in prices, the prospects of remunerative steam-trawling are now much more promising and there seems a prospect of one or more steam trawling companies being floated in the immediate future. The trade is a difficult one to organize and without a rare combination of technical fishery knowledge and far sighted and comprehensive organization the danger run by the investing public will be considerable. Originally one Fisheries Department served the needs of the two provinces of Bengal and Bihar and Orissa. Separation was effected recently and at the present time fisheries in Bengal are administered temporarily by the Department of Agriculture, whereas in Bihar and Orissa, they form a section of the Department of Industries.

The Bengal Fisheries Department has of necessity a more limited scope for its activities than in the case of Madras. Practically no coastal minor industries exist, neither do the natural conditions lead us to suppose that any can be created without extreme difficulty, and in the absence of a great trawl industry which alone might be able to call into existence factories devoted to the utilization of fish by-products. Apart from this, much can be done by its officers for the uplift of the general fishing population with a view to free them from the tyranny of the mahajans (fish contractors and middlemen) and enable them to put more capital into their business and to conduct it co-operatively. This is necessarily extremely slow work, but the Department has made a beginning and once a few societies can be made successful, the news of the benefits conferred on the members will constitute the best possible form of propaganda. With the advent of the Reforms, fresh life has been infused into the Department and proposals are under consideration for a thorough-going reorganisation, having for its main object an intensive development of the great potentialities of the inland and estuarine

fisheries, which constitute the true fishery wealth of Bengal. Among these are included the establishment of a biological station where the life-histories of food fishes will be studied, the introduction of improved fishing methods and of new species of fish superior to the indigenous under certain conditions, the erection of an experimental cannery, etc.

Fresh-water murrels are used extensively at Dacca in the manufacture of cheap pearl buttons. The Dacca bangle factories carry on an important local industry of very ancient standing; their material is almost entirely obtained from the South Indian and Ceylon chank fisheries already alluded to.

Bombay.

Whereas Bengal's fisheries are at present confined principally to inland waters, those of Bombay are concerned, save in Sind, almost entirely with the exploitation of the wealth of the sea. Bombay is favoured with a coast line abounding with excellent harbours for fishing craft, a fair-weather season lasting for some seven months, and a fishing population more alive to their opportunities and more daring than those of the sister Presidencies. Bombay sea-fisheries are of very great importance financially as well as economically and, though there is less necessity for a special department to develop marine industries, there is ample scope for most useful work in improving curing methods, in introducing canning, and in the development of minor marine industries particularly those connected with the utilization of bye products. With this end in view the recent Director of Industries, Mr. P. J Meade, C.I.E., I.C.S., obtained the sanction of Government to include 'Fisheries' within his purview, and there are now two officers in the Department engaged upon fishery investigation and development. A steam trawler was bought for work in Bombay waters in 1920 and began work in May 1921 off Bombay. Up to the present the results have not come up to expectations, but till a full year has elapsed, it would be premature to consider the enterprise a failure. A private syndicate which began work a month earlier than the Government experiment has had better results but this has been attained only by exploiting grounds at a long steaming distance from Bombay.

The more important sea-fish are pomfrets, soles and sea-perches among which are included the valuable Jew-fishes (*Sciæna* spp) often attaining a very large size and notable as the chief source of "fish-maws" or "sounds," largely exported from Bombay for eventual manufacture into isinglass. The finest of Bombay fishing boats hail from the coast between Bassein and Surat. These boats are beautifully constructed, attain a considerable size, and are capable of keeping the sea for weeks together. In the season they fish principally off the Kutch and Kathiawar coasts and in the mouth of the Gulf of Cambay. Their main method of fishing is by means of huge anchored stow nets, which are left down for several hours and hauled at the turn of the tide. The chief catches are bombil (Bombay ducks), pomfrets and jew-fishes. The first named are dried in the sun after being strung through the mouth upon lines stretched between upright posts. South of Bombay the fishermen of Ratnagiri and Rajpur make use of another and lighter class of fishing boat specially designed for use in drift-net fishing. Fine hauls of bonito, seer (a large form of mackerel) and allied fishes are often made during the season from September to January and later of shark and rayfish. For the latter specially large and powerful nets are employed For part of the fair season when fishing is not usually remunerative many of the larger Bombay fishing boats are employed as small coasters a fact which shows how large they run in size.

In **Sind** considerable sea-fishing is carried on in the neighbourhood of Karachi chiefly for large and coarse fish, as shark, rays and jewfishes The edible oyster trade of Karachi was once extensive, the creeks of the Indus producing a species of oyster superior to that found in Bombay and Madras backwaters and estuaries. Unrestricted exploitation of beds of limited extent inflicted great harm, and now, when various salutary restrictions are imposed, the beds are slow to respond. Occasionally large deposits of the window pane oyster (*Placuna placenta*) are found in the Indus creeks and as these produce seed pearls in abundance, Government leased the beds to the highest bidder. The pearls are largely exported to China for use in medicine Considerable fisheries exist in the River Indus, chiefly for the fish known as palla, which are annually leased out by Government for about Rs. 20,000.

In the Gulf of Kutch two pearl fisheries exist, one for the true pearl oyster, the other for the window-pane oyster. The former is carried on by His Highness the Maharaja of Jamnagar, the other partly by this Prince and partly by the administration of His Highness the Maharaja Gaekwar of Baroda. The latter industry owes its local existence to the enterprise of the Baroda Government which in 1905 obtained the services on deputation of Mr. J. Hornell, now Director of Fisheries in Madras, for the purpose of examining the Marine potentialities of the Baroda territory in Kathiawar. One of the consequences was the discovery of large deposits of pearl-bearing window-pane oysters, until then unknown; of late years these beds have produced annually from Rs. 15,000 to Rs. 25,000 in revenue, perhaps the best example we have in India of the profitable nature of well-directed scientific enquiry into fishery problems, The Baroda Government, continuing their enlightened interest in the fishery developments, have had two officers trained in the Madras Fisheries Department and now employ them in development work on the Baroda coast.

Experiments in canning are now in progress at one of the chief fishing centres on the Southern Kathiawar coast and already promise considerable success particularly with regard to pomfrets.

Burma.

As with Bengal, the main fisheries of Burma are those in inland waters. From time immemorial the exclusive right of fishing in certain classes of inland waters has belonged to the Government, and this right has been perpetuated in various fishery enactments, the latest of which is the Burma Fisheries Act of 1905. Fishing is also carried on along the coast, but the sea fisheries absorb but a small portion of industry. Most of the fishermen labour in the stream

and pools, which abound particularly in the Delta Districts. The right to work these fisheries, mentioned in the enactments alluded to above, is usually sold at auction, and productive inland waters of this kind often fetch very considerable sums. River fishing is largely carried on by means of nets, and generally yields revenue in the shape of licence fees for each net or other fishing implement used. Here and there along the coast are turtle banks which yield a profit to Government. In the extreme south the waters of the Mergui Archipelago afford a rich harvest of fish and prawns, mother-of-pearl shells and their substitutes, green snails and trochas, shark-fins, fish-maws, and beche-de-mer Pearling with diving apparatus was introduced by Australians with Filipino and Japanese divers in 1893. They worked mainly for the shell, it being impossible for them to keep an effective check on the divers as regards the pearls. After about five years, when the yield of shell had decreased, they all left. The industry was then carried on by the Burmese.

In 1918, the Burma Government deputed one of their civilians to study the methods of fishery development found successful in Madras. His report and recommendations are now before Government. From what is known of fishery conditions in Burma, the coastal fisheries appear more backward and undeveloped than anywhere else in India. This is due partly to the fact that the Burman is a poor sailor, and partly to the ease with which the population can earn a fair living by agriculture and other less hazardous and more profitable callings The stress of population has not yet been felt in Burma.

The Punjab.

A Punjab Fisheries Department came into being as an experimental measure in 1912 and received the official sanction of Government as a regular department of the Punjab in April 1916. It operates under a Warden of Fisheries, under control of the Financial Commissioner. During the first three years the Department was almost entirely concerned with preliminary work, consisting largely of investigations and experiments in the Beas and Ravi Rivers.

These rivers were examined with a view to ascertain the indigenous species which inhabited them, their habits, spawning grounds and other data which would enable Government to frame regulations for their protection. The various fishing communities were interviewed and their views and statements carefully considered as to their rights in Government waters. Rules based upon the evidence when collated were subsequently drafted and approved by Government for the regulation of fishing in various districts, and are said to be working smoothly and satisfactorily. Those for each district take account of special local conditions, with a view both to conserve the fish supply and to secure a reasonable revenue to Government.

Trout culture flourishes in the hill streams, good sport being enjoyed by anglers in the Kulu Valley where operations were first initiated. The Kangra streams are now receiving attention, various consignments of ova having been sent there, successfully hatched out, and turned into suitable waters.

Travancore.

This State has affiliated Fisheries to the Department of Agriculture and with the help of two officers trained in Madras, the Department has already accomplished a notable amount of development work Special attention has been given to the regulation of fisheries in backwaters, to the establishment of co-operative societies among the fishing community and to the introduction of improved methods of sardine oil and guano production. Useful work has been done by one of the Officers in elucidating the life-histories of the more valuable food fishes and prawns.

The Opium Trade.

Two descriptions of opium must be distinguished. *Bengal* opium which is manufactured from poppy grown in the United Provinces; and *Malwa* opium which is almost entirely produced in certain Native States in Central India and Rajputana.

Bengal Opium.—Cultivation of poppy is only permitted under license. The cultivator to whom advances are made by Government free of interest is required to sell the whole of his production to the Opium Factory at Ghazipur at a rate fixed by Government, now Rs. 7/8 per seer of 70° consistency. The area licensed for cultivation has in recent years been much reduced as a consequence of the agreement between the Government of India and the Chinese Government, and is now restricted to the United Provinces. The following are the figures of the area under cultivation and of production in 1917-18: Bighas cultivated, 331,216; Gross produce in Maunds, 32,321; number of chests manufactured, 25,146. At the Factory two classes of opium are manufactured:

(1) "Provision" opium intended for export to foreign countries. This opium is made up in balls or cakes, each weighing 3·5 lbs., 70 cakes weighing 140½ lbs. being packed in a chest.

(2) "Excise" opium intended for consumption in British India. This is made up in cubic packets, each weighing one seer, 60 packets being packed in one chest. It is of higher consistency than "provision" opium.

"Provision" opium is sold by public auction in Calcutta, the quantity to be sold being fixed by Government. This quantity has been reduced in recent years in accordance with the agreement with China, the figures being 15,440 chests in 1911 and 6,700 chests in 1912. Exports to China have been stopped altogether since 1913.

Malwa Opium.—The poppy from which Malwa opium is manufactured is grown chiefly in the Native States of Indore, Gwalior, Bhopal, Jaora, Dhar, Rutlam, Mewar and Kotah. The British Government has no concern with the cultivation of the poppy, or the manufacture of the opium: but it used to regulate, before exports to China were stopped, the import of Malwa opium into, and the transport through, its territories. As the chief market for Malwa opium was China, and as the States in which the drug is produced had no access to the sea, except through British territory, the British Government were able to impose a duty on the importation of the drug on its way to Bombay for exportation by sea.

No statistics of cultivation or production are available. The poppy is sown in November, the plants flower in February, and by the end of March the whole of the opium has been collected by the cultivators who sell the raw opium to the village bankers. It is then bought up by the large dealers who make it up into balls of about twelve ounces and store it until it is ready for export, usually in September or October. The opium is of 90° to 95° consistency and is packed in half chests: considerable dryage took place in the case of new opium while transported to Bombay.

Sales of Malwa opium for export to China have ceased since January 1913 and the trade has become extinct since 17th December of that year when the last shipment was made. Practically the whole of the Malwa opium exported from Bombay went to China. There is no market for it in the Straits Settlements. A few chests annually are shipped to Zanzibar.

Revenue.—The revenue derived by the Government of India from opium in recent years is as follows:—

	£
1915–16	1,913,514
1916–17	3,160,005
1917–18	3,078,903
1918–19	3,229,000
1919–20	2,088,000
1920–21 (Budget Estimate) ..	1,775,200

Agreement with China.—The fluctuations in the revenue derived from opium are directly attributable to the trade conditions arising out of the limitation of opium exports. In 1907 being satisfied of the genuineness of the efforts of the Chinese Government to suppress the habit of consuming opium in China, the Government of India agreed to co-operate by gradually restricting the amount of opium exported from India to China. In 1908 an arrangement was concluded by which the total quantity of opium exported from India was to be reduced annually by 5,100 chests from an assumed standard of 67,000 chests. Under a further agreement, signed in May 1911, the cessation of the trade was to be accelerated on evidence being shown of the suppression of the native production of opium in China, and in accordance with this agreement a further limitation was placed on exports to Chinese ports. The reduction of exports led to an increase in the price of the drug in China and a corresponding rise in the price obtained in India at the auction sales. For some considerable time, however, in 1912 the trade in China was paralysed by the imposition by Provincial Governors in defiance of instructions from the Central Government of restrictions on the importation and sale of Indian opium. Stocks accumulated rapidly at Shanghai and Hongkong and the position in December 1912 had become so acute that a strong and influential demand was made on the Government of India to relieve the situation by the suspension of sales. Sales were accordingly postponed both of Bengal and Malwa opium and in order to afford the Malwa trade the most complete relief, the Government of India undertook to purchase for its own use 11,253 chests of Malwa opium which remained to be exported in 1913. The present position is that the export trade to China has ceased since 1913.

Exports:—The exports of opium on private account increased during the year 1920-21 from 6,247 chests (9,166 cwts.) valued at Rs. 1,96 lakhs to 7,660 chests (11,249 cwt.) worth Rs. 2,52 lakhs They were directed mainly to Java (3,000 chests against 2,000 in 1919-20), Siam (1,700 chests

against 1,400) Indo-China (1,230 chests against 995), Japan (750 chests against 980) and Hongkong (431 chests against 369). Prices fell considerably, those of Benares opium ranging between Rs. 5,000 and 6,000 and of Bihar between Rs. 4,800 and 5,800. There were 3,167 chests (6,581 cwts. valued at Rs. 94 lakhs), shipped on government account direct to the Governments of Hongkong and the Straits. The agreement for the supply of opium to the Government of Hongkong was renewed for five years from January 1921.

GLASS AND GLASSWARE.

The total value of the glass and glassware imported into India in 1920-21 showed an increase being valued at Rs. 338 lakhs, compared with Rs. 199 lakhs in the previous year. The imports of glassware in India are showing an upward tendency, they being in 1913-14 over Rs. 190 lakhs in value, *i.e.* over the quinquennial average of Rs. 161 lakhs. Austria Hungary and Germany before the outbreak of the war exported bangles, beads, bottles, funnels, chimneys and globes, etc., to the value of Rs.116 lakhs in 1913-14. The value of average imports from the enemy countries during the five pre-war years was Rs. 93 lakhs or about 57% of the trade. With their disappearance from the Indian market, imports from Japan increased to 71% from 8%, the pre-war average. United Kingdom increased her shipments of sheet and plate glass, which before 1914 came largely from Belgium. Japan, however, could not meet the Indian demand, and hence renewed and pioneer efforts were made in India to satisfy the needs of the Indian consumer After the war imports from what was the Dual Monarchy quickly revised. The trade returns for 1920-21 show imports of glass and glassware from "Austria-Hungary" valued at £433,000 compared with £583,000 in 1913-14.

Manufacture of Glass in India.—Glass was manufactured in India in centuries before Christ and Pliny makes mention of "Indian Glass" as being of superior quality. As a result of recent archæological explorations, a number of small crude glass vessels have been discovered indicative of the very primitive stage of the Industry. But no further traces of ancient Indian Glass Industry as such survive; yet, it is certain that by the sixteenth century it was an established Industry producing mainly bangles and small bottles. The quality of the material was inferior and the articles turned out were rough. Beyond this stage, the industry had not progressed until the nineties of the last century. Manufacture of glass in India on modern European lines dates from the nineties of the last Century, when some pioneer efforts were made in this line. Since then a number of concerns have been started, a number of them have failed, while some are still clinging to life owing to war conditions. They mainly devote themselves to the manufacture of bangles and lampware side by side with bottle-making on a small scale. This, therefore, is the criterion which determines the two well-defined classes of the Industry in its present stage, (i) indigenous Cottage Industry and (ii) the modern Factory Industry;

(i) The indigenous Cottage Industry which is represented in all parts of the country, but has its chief centres in Firozabad District of U. P., and Belgaum District, in the South, is mainly concerned with the manufacture of cheap bangles made from "glass cakes or blocks" made in larger Factories. The industry is at present in a flourishing state and supplies nearly one-third of the Indian demand for bangles. The quality has been improved by the discovery of new glazing processes and for the present the turnover in this line has gone up to 20 lakhs of rupees a year. But these bangles have now to face a very hard competition from Japan whose "silky" bangles are ousting the old-type Indian ones.

(ii) The modern Factory type of organization of this Industry is just in its infancy at present. The existing Factories either stop at producing glass cakes for bangle as in Firozabad or simple kind of lampwares and bottles. With the existing state of knowledge and machinery in India they can neither produce sheet and plate glass, nor do they pretend to manufacture laboratory or table glass. Artistic glassware is out of question and the private capitalists who have to run their concerns mostly with commercial ends do not think worth their while to spend money and labour on it. War caused a great decrease in volume—though not so much in value which was much increased—of the imports of the lampware, etc., and in order to meet the Indian demand for them, new Factories were started and old revived, which produced only cheap and simple kind of lampware and bottles on small scale. The total production of these Indian Glass Works has not been exactly estimated, but it is generally supposed that they were able to meet in these war years nearly half the Indian demand for this kind of glassware. There are at present 14 Factories engaged in the production of lampware, of which two or three only produce bottles and carboys also. The chief centres for the former kind are Bombay, Jubbulpore, Allahabad, and Bijhol and Ambala; while bottles are only manufactured at Naini and Lahore, and recently at Calcutta.

During the latter years of the war period, a number of Glass Works were opened in the Bombay Presidency and adjoining districts, local manufacture having been stimulated by the cessation of imports of German, Austrian and Belgian glass.

Causes of failure.—Records of the earlier ventures have shown that the failures in some cases were due in part at least to preventible causes, prominent among which were (1) Lack of enlightened management; (2) Lack of proper commercial basis, as in some cases the proprietors had a number of other more larger concerns to look to. (3) Bad selection of site. An ideal site for a Glass Factory would be determined by the (*a*) nearness of quartz and fire-clay, (*b*) nearness of fuel, and (*c*) by the nearness of market. At least two must be present. In some concerns, two were absent. (4) Specialisation was lacking, some factories in their initial stages trying to manufacture three or four different kinds of glassware simultaneously like lampware, bottles, and bangles, etc. (5) Paucity of suffici-

ent fluid capital for initial expenses for machinery or other improvements or even in some cases for running the concern in the beginning.

But beyond these there are certain real and special causes that contributed to the failure of some of these and hinder the progress of the rest. Chief among them are (1) The Industry is in its infant stage and hence such failures are but incidental. (2) No expert guidance in this line, there is a lack of men and good literature. (3) Paucity of skilled labour of higher type. The present Indian workmen in this line and blowers are few in number and illiterate. They, therefore, master the situation and are unamendable to management. (4) Heavy cost of good fuel, the works usually being situated where good sand and quartz can be obtained, and consequently, in most cases, at a great distance from the coal-fields. (5) To a certain extent competition from Japan and other European countries.

Alkali used is almost entirely of English manufacture being Carbonate of Soda 98-99% in a powdered form. This Alkali has almost completely taken place of the various Alkaline Earths formerly employed by the Glass Bangle manufactures as the latter cannot be used in the manufacture of glass which is to compete with the imported article. These points must be carefully noted for future guidance.

The Industry has developed considerably under war conditions, but in peace times, in this transition stage, immediate efforts must be made in the direction of what the Indian Industrial Commission say in their Report (Appendix E), *viz.*: "The Glass Industry, even in its simplest form is highly technical and can be efficiently carried on only by scientifically trained managers and expert workmen. The present stage has been reached by importing men, only partially equipped with the necessary qualifications, from Europe and Japan, and by sending Indian students abroad to pick up what knowledge they can. The glass industry is a closed trade and its secrets are carefully guarded, so that the latter method has not proved conspicuously successful."

WILD BIRDS' PLUMAGE.

The Bill for prohibiting the importation into England of wild birds' plumage, which was introduced into Parliament in 1913, was the occasion of a fierce controversy on the nature of the plumage trade. Organised opposition to the Bill, although successful in preventing it from becoming law, failed to convince the public that the plumage trade was not one of great cruelty. The controversy continued with unabated vigour until May 1921, when an agreement was arrived at between the two parties. The most important clause in the agreement stipulates that within four months of the Bill becoming law an Advisory Committee shall be appointed by the Board of Trade. This Committee will consist of an independent chairman, two expert ornithologists, three representatives of the feather trade, and four other independent members. The function of this Committee will be to advise the Board of Trade as to additions to and removals from the existing schedule (ostrich and eider duck) of birds whose plumage may be imported. The passing of the Plumage Bill will thus place England abreast of the United States and of her own daughter Dominions in the suppression of a barbarous industry, as all legitimate methods of breeding birds for their plumage will be safeguarded as definite exceptions under the Plumage Bill.

Plumage birds.—The birds most killed on account of their plumage in India are paddy birds, egrets, kingfishers, bustards, jungle-fowl, pheasants, paroquets, peafowl, hoopoes and rollers. Egrets and rollers (popularly known as Blue Jays) are perhaps the birds which have been most extensively killed in the past, and of these, egrets have attracted the greatest attention. There are three species met with in India; the Large, Smaller and Little Egrets. All three are pure white slim birds which develop during the breeding season a dorsal train of feathers, which elongates and becomes "decomposed" as it is expressed, that is to say, the barbs are separate and distinct from each other, thus forming the ornamental plume or aigrette for which these birds are much sought after and ruthlessly destroyed. Thirty years ago the exports were valued at over six lakhs in one year, but since 1895 the export trade has steadily diminished. But, though legitimate exports have been stopped, the trade is so lucrative as to lead to many attempts at smuggling. Within a recent period of 12 months the Bombay Preventive Department, for example, seized egret plumes worth Rs. 2,19,047 in India and £44,000 in London. The rupee value represents the sum which the exporters paid to those who took the feathers from the birds, so the loss to the trade was considerable. In addition, penalties varying from Rs. 5,000 to Rs. 10,000 each and amounting altogether to Rs 59,175 were inflicted on the ten merchants concerned in attempting to export the feathers. A case was reported from Rangoon in 1916 of a man being found in possession of 22 lbs. of egret feathers valued at Rs 66,000. Although frequently denied, there seems very little reason to doubt, that within the last decade egrets have been successfully bred in captivity by the fishertolk in the province of Sind. But whether such birds can be bred without cruelty, and if so whether the export of their plumage could be legalised without encouraging barbaries in other areas of the peninsula, is a question which can only be decided as a result of a searching and exhaustive inquiry.

Legislation.—Indian legislation on the subject will be studied with interest by those who have followed the course of legislation on this subject in other countries. Until 1887 no legislation was considered necessary in India. An Act of that year enabled local governments and municipal and cantonment authorities to make rules prohibiting under penalties the sale or possession of wild birds recently killed or taken during their breeding seasons, and the importation into any municipal or cantonment area of the plumage of any wild birds during

those seasons; and local governments were empowered to apply these provisions to animals other than birds.

Afterwards, in 1902, action was taken under the Sea Customs Act to prohibit the exportation of the skins and feathers of birds, except feathers of ostriches and skins and feathers exported *bona fide* as specimens illustrative of natural history. Act VIII of 1912 goes much further than the previous law. It schedules a list of wild birds and animals to which the Act is to apply in the first instance, enables local governments to extend this list, empowers local governments to establish "close times," presumably during the breeding seasons, in the whole of their territories or in specified areas, for wild birds and animals to which the Act applies, and imposes penalties for the capture, sale, and purchase of birds and animals in contravention of the "close time" regulations, and for the sale, purchase and possession of plumage taken from birds during the close time. There is power to grant exemptions in the interests of scientific research, and there are savings for the capture or killing by any person of a wild animal in defence of himself or of any other person, and for the capture or killing of any wild bird or animal in *bona fide* defence of property.

One defect in the law may be noticed. When an exporter is discovered, the Customs Department can on a magistrate's warrant have his house searched and seize the feathers found there to produce as evidence that he is engaged in the trade But they have to return the feathers and can only take possession of them if they are discovered presently in course of export.

BREWERIES.

Statistics compiled from official returns show that there were, in 1912, 22 **breweries** in British India, of which one did not work during the year. Fifteen of these are private property and seven are owned by six joint-stock companies with a nominal capital of Rs. 26,71,000, of which Rs. 22,26,260 was paid up at the end of 1912-13. Eight of the breweries are located at stations in the Himalayas from Murree to Darjeeling. The largest brewery is the one at Murree, the Bangalore, Solon, Rawalpindi, Kasauli, Poona, and Mandalay, breweries standing next in the order shown. In the pre-war year **production** was 3,651,000 gallons. This figure rose in 1918 to 8,214,000 gallons, but sank after the war, being in 1920 only 5,536,000 gallons.

A substantial quantity of beer produced locally is consumed by the British troops in India In 1907 the Army Commissariat purchased some 38 per cent. of the total production and the average purchases in the five years 1903-1907 amounted to 2,633,616 gallons yearly. From the 1st January, 1908, the contracts with Indian breweries for the supply of malt liquor to British troops have been discontinued, each British regiment being left free to make its own arrangements to obtain the necessary supply, as a result, the figures of Army consumption are no longer readily available.

GRAIN ELEVATORS.

The question of adopting elevators for the handling of Indian grain has engaged attention for some time and has assumed increased importance in the light of the railway congestion experienced in recent years and more particularly in the grain season. In the last three years great strides have been made by other countries in the adoption or perfecting of the elevator system, and a large mass of contemporary data on the subject has been brought together by the Commercial Intelligence Department. Since the subject is one that cannot receive adequate consideration in India till the facts are before the public, these have been embodied in a pamphlet entitled *Indian Wheat and Grain Elevators*, by the late Mr. F. Noel-Paton, Director General of Commercial Intelligence to the Government of India. The work gives full particulars regarding India's production of wheat, and shows that less than one-eighth of the crop is exported. It describes the conditions under which the grain is held and the risks that it runs It is pointed out that the cultivator has no adequate means of preserving his wheat and that he is constrained to sell at harvest time: also that the prices then obtained by him are considerably lower than those usually current in later months. The constant nature of the European demand is explained and an attempt is made to gauge the probability that the enormously increased quantities of wheat to be expected when new irrigation tracts come into bearing would be accepted by Europe at one time and at a good price, or could be economically transported under a system in which a few months of congestion alternated with a longer period of stagnation. Figures are given which suggest that in practice the effect of equipping railways to do this is to intensify the evil and so to engage in a vicious circle. The author explains the structural nature of elevators and their functions as constituted in other countries. Particulars are given as to the laws that govern their operations in such countries.

TRADE MARKS.

The **Indian Merchandise Marks Act** (IV of 1889) was passed in 1889, but its operation in the earlier years was restricted, especially in Calcutta, in consequence of the lack of adequate Customs machinery for the examination of goods. In 1894, with the introduction of the present tariff, the Customs staff was strengthened for the examination of goods for assessment to duty, and this increase enabled examination to be made at the same time for the purposes of the Merchandise Marks Act. The Act was intended originally to prevent the fraudulent sale of goods bearing false trade marks or false trade descriptions (as of origin, quality, weight, or quantity). While the Act was before the Legislature a provision was added to require that piece-goods should be stamped with their length in yards. In this respect these goods are an exception, for the Act does not require that other descriptions of goods should be stamped or marked, though it requires that when goods are marked the marks must be a correct description. **The number of detentions** under the Act during the twenty years ending 1912-13 has been :—

Average of the five years ending	.. .. ..	1897-98 1,386
" " " " "	..	1902-03 1,411
" " " " "	..	1907-08 1,198
" " " " "	..	1912-13 1.960

Detention is but rarely followed by confiscation, and there have been only 109 such cases during the stated twenty years. Usually, detained goods are released with a fine, and this procedure was followed in 19,282 cases out of the 29,774 detentions ordered in the same period. In 10,364 cases the detained goods were released without the infliction of a fine. In this period of twenty years 42 per cent. of the detentions were on account of the application of false trade marks or false trade descriptions. In 36 per cent. of the cases detention was ordered because the country of origin was either not stated or was falsely stated, and in 21 per cent. because the provisions of the Act for the stamping of piece-goods had been infringed.

HIDES, SKINS AND LEATHER.

India's local manufactures of skins and leather have steadily increased in recent years. Previous to the outbreak of war, the trade in raw hides in this country was good ; there was a large demand for hides, and prices ruled high. While in the continental markets stocks were high owing to overtrading in the previous year, the United States had a shortage which was estimated at approximately two million pieces. On the declaration of war, the trade which had up till then been brisk was seriously dislocated. Exports to enemy countries, especially to the great emporium of Indian hides, Hamburg, were stopped, and exporters had to find new markets for the raw material. The raw hide business of India, it is well known, has hitherto been largely, if not quite entirely, in the hands of German firms or firms of German origin. Germany has had the largest share of India's raw hides. In the four months before the outbreak of war she took 39 per cent. of the total exports. In 1912-13 she took 32 per cent. and in 1913-14, 35 per cent. Raw hides were exported to Trieste in considerable quantities whence they were taken to Germany or Austria. In the four months before the outbreak of war 15 per cent. of India's exports passed through Trieste ; in 1913-14 the percentage was 21.

Exports.—Owing to the removal of the embargo, exports rose in 1919-20 to Rs. 36 crores as compared with Rs. 19 crores in the previous year. But in 1920-21 this trade suffered heavily from the slump in foreign markets. Exports of raw hides and skins fell from Rs. 2,341 lakhs in 1919-20 to Rs. 525 lakhs and of tanned or dressed hides and skins from Rs. 1,255 lakhs to Rs. 317 lakhs. In March 1921 the Legislative assembly considered the desirability of removing the export duty of 15 per cent. *ad valorem* (including two-thirds rebate to tanners within the empire) but desisted in view of the financial position of the Government.

Conditions of the Trade.—The trade in hides and skins and the craft in leather manufacture are in the hands either of Mahomedans or of low caste Hindus and are on that account participated in by a comparatively small community. The traffic is subject to considerable fluctuations concomitant with the vicissitudes of the seasons. In famine years for instance the exports of untanned hides rise to an abnormal figure. The traffic is also peculiarly affected by the difficulty of obtaining capital and by the religious objection which assigns it to a position of degradation and neglect : it has thus become a monopoly within a restricted community and suffers from the loss of competition and popular interest and favour.

No large industry has changed more rapidly and completely than that of leather. By the **chrome process**, for example, superior leather may be produced from the strongest buffalo hides in seven days, from cowhide in twenty-four hours, and from sheep and goat skins in six to eight hours ; and these operations formerly took thirty days or as much as eighteen months. Of these changes the native tanners of India were slow to take advantage, but in spite of general backwardness the leather produced by some of the tanneries, especially those under European management, is in certain respects equal to the best imported articles. But since the outbreak of war progress has been more rapid and considerable quantities of special forms of chrome leather, for which Indian hides are particularly suitable, have found a ready market in London.

Protecting the industry.—The report of the Industrial Commission pointed out that the principal difficulty at present in the hides and leather industry was the lack of organisation and expert skill. Government action to foster the industry was first taken in September 1919, when a Bill was introduced in the Imperial Legislative Council further to amend the Indian

Tariff Act, 1894. The effect of this Bill was officially described as follows: "It is to impose an export duty of 15 per cent on hides and skins with a rebate of 10 per cen on hides and skins exported to other parts of the Empire, and there tanned. Its object is to ensure that our hides and skins shall be converted into fully tanned leather or articles of leather so far as possible in India and failing this in other parts of the Empire, instead of being exported in a raw state for manufacture in foreign countries." Sir George Barnes who was in charge of the Bill and described the tanning industry as one of the most promising Indian industries explained that "the present position is that we have in India at the present time some hundreds of tanneries for the tanning of hides, a large number of which have come into existence in order to satisfy military requirements during the war. We have in fact the foundations of a flourishing tanning industry, but there is reason to fear that it may tend to dwindle and disappear with the diminution of military requirements, if some other support is not given. We want to keep this industry alive, and we believe that in this case protection in the shape of a 15 per cent. export duty is justifyable and ought to be effective. It is clearly just also that the same measure of protection should be extended to the tanners of skins whose business, as I have already stated, was injured by the necessities of the war. Though Indian tanneries have enormously increased in number during the past three years, they can only deal with a comparatively small proportion of the raw hides and skins which India produces, and it is to the advantage of India and the security of the Empire generally that this large surplus should, so far as possible, be tanned within the Empire, and with this end in view the Bill proposes a 10 per cent rebate in respect of hides and skins exported to any place within the Empire. I should add that it is proposed to limit by notification the benefit of this rebate to hides and skins actually tanned within the Empire; and Indian hides and skins re-exported from an Empire port for the purpose of being tanned abroad will not be entitled to any rebate."

Indigenous methods.—India possesses a large selection of excellent tanning materials such as Acacia pods and bark, Indian sumach; the Tanner's cassia, Mangroves, and Myrabolans. By these and such like materials and by various methods and contrivances, hides and skins are extensively cured and tanned and the leather worked up in response to an immense, though purely local, demand.

INVENTIONS AND DESIGNS.

A handbook to the **Patent Office** in India, which was published in 1916 by the Government Press, Calcutta, gives the various Acts, rules, and instructions bearing on the subject together with hints for the preparation of specifications and drawings, hints for searchers and other valuable information that has not hitherto been readily accessible to the general public in so convenient a form. In the preface Mr H. G. Graves, Controller of Patents and Designs, explains the scope of the Patent laws in India and indicates wherein they differ from English law and procedure.

The foundation of patent legislation throughout the world lies in the English "Statute of Monopolies" which was enacted in 1623, the 21st year of King James the First. In part this Act has been repealed, but the extant portion of the more important section 6 is as follows:—"Provided also that any declaration before mentioned shall not extend to any letters patent and grants of privilege for the term of fourteen years or under, hereafter to be made of the sole working or making of any manner of new manufactures within this realm to the true and first inventor and inventors of such manufactures, which others at the time of making of such letters patent and grants shall not use, so as also they be not contrary to the law nor mischievous to the State by raising prices of commodities at home, or hurt of trade, or generally inconvenient; the said fourteen years to be accomplished from the date of the first letters patent or grants of such privilege hereafter to be made, but that the same shall be of such force as they should be if this Act had never been made, and of none other."

The **existing Indian patent law** is contained in the Indian Patents and Designs Act, 1911, supplemented by the Indian Patents and Designs (Temporary Rules) Act, 1915, and by the Rules made under those Acts. The Patent Office does not deal with trade marks or with copyright generally in books, pictures, music and other matters which fall under the Indian Copyright Act III of 1914. There is, in fact, no provision of law in British India for the registration of Trade Marks which are protected under the Merchandise Marks Act (IV of 1889) which forms Chapter XVIII of the Indian Penal Code.

On the whole, Indian law and procedure closely follow that in the United Kingdom for the protection of inventions and the registration of designs, as they always have done in matters of major interest. One main difference exists, however, as owing to the absence of provision of law for the **registration of trade marks**, India cannot become a party to the International Convention under which certain rights of priority are obtainable in other countries.

The first Indian Act for granting exclusive privileges to inventors was passed in 1856, after an agitation that had been carried on fitfully for some twenty years. Difficulties arising from an uncertainty as to the effect of the Royal Prerogative prevented earlier action, and, owing to some informalities the Act itself was repealed in the following year. In 1859 it was re-enacted with modifications, and in 1872 the Patterns and Designs Protection Act was passed. The protection of Inventions Act of 1883, dealing with exhibitions, followed, and then the Inventions and Designs Act of 1888 All these are now replaced by the present Act of 1911.

The existing Acts extend to the whole of British India, including British Baluchistan and the Santhal Parganas. This of course includes Burma, but it does not embrace the Native States. Of the latter three, *viz.*, (1) Hyderabad (Deccan), (2) Mysore, (3) Gwalior have ordinances of their own, for which particulars must

be obtained from the Government of the States in question as they are not administered by the Indian Patent Office in Calcutta. The object of the Act of 1911 was to provide a simpler, more direct, and more effective procedure in regard both to the grant of patent rights and to their subsequent existence and operation. The changes made in the law need not here be referred to in detail. They gave further protection both to the inventor, by providing that his application should be kept secret until acceptance, and to the public, by increasing the facilities for opposition at an effective period. At the same time a Controller of Patents and Designs was established, with power to dispose of many matters previously referred to the Governor-General in Council and provision was made for the grant of a sealed "patent" instead of for the mere recognition of an "exclusive privilege." The provisions of the Act follow with the necessary modifications those of the British Inventions and Designs Act of 1907.

The **annual report** of the Indian Patents Office for the Calendar year 1920 states that during the year there were 1,336 applications for patents as compared with 1,038 in 1919. Four hundred and thirty-four patents which were not accepted within 15 months from the date of application were declared void under Section V (4) of the Indian Patents and Designs Act, 1911. In these cases no specifications were printed. Thirty-two patents which were not accepted within 12 months from the date of application are still open for consideration. The number of patents accepted totalled 297. All these applications were made before July 1, 1919. Specifications have been printed but patents have not been sealed thereon. There were 83 cases in which the patents had been previously notified as void or lapsed which were revived during the year. Oppositions were filed to the grant of patents to the number of 44. Thirty-five of these patents succeeded in obtaining seals, in ten cases no patent was allowed, in three cases opposition was disallowed but the patent was not sealed, in one case the opposition was not pursued but the patent was not sealed, in two cases opposition was partly allowed, in two other cases opposition was overruled, and the remaining case is pending.

During the year entries were made on the register of patents affecting the right of the original patentees in regard to 250 patents. These figures are revealed in a table which forms one of the most interesting features of the journal under review, as the year of application, the name of the original patentee, and the name of the person claiming rights, are all set out. These patents were alive on the 31st December 1920. Twenty-seven applications which were held in suspense have now been sealed, subject to such limitations as may be prescribed in accordance with the Treaty of Peace with Germany.

On the 31st December 1920 there were 866 patents maintained in force which had been sealed before 1917. New lease of life was secured by the payment of continuance fees. In order that a patent or exclusive privilege may remain in force annual fees of Rs. 50 are payable before the expiry of the 4th, 5th, 6th, 7th and 8th years, followed by annual fees of Rs. 100 before the expiry of the 9th, 10th, 11th, 12th and 13th years. If by inadvertence or otherwise, the fee has not been paid within the prescribed time, an extension of one, two or three months may be procured on payment of Rs. 10, 25 or 50, respectively.

Printed Specification of applications for patents, which have been accepted (8 annas per copy), may be seen free of charge, together with other publications of the Patent Office at the following places:—

COPYRIGHT.

There is no provision of law in British India for the registration of Copyright. Protection for Copyright accrues under the Indian Copyright Act under which there is now no registration of rights, but the printer has to supply copies of these work as stated in that Act and in the Printing Presses and Books, Act XXV of 1867. The Indian Copyright Act made such modifications in the Imperial Copyright Act of 1911 as appeared to be desirable for adapting its provisions to the circumstances of India. The Imperial Act of 1911 was brought into force in India by proclamation in the *Gazette of India* on October 30, 1912. Under s. 27 of that Act there is limited power for the legislature of British possessions to modify or add to the provisions of the Act in its application to the possession, and it is under this power that the Indian Act of 1914 was passed. The portions of the Imperial Act applicable to British are scheduled to the Indian Act. The Act to which these provisions are scheduled makes some formal adaptations of them to Indian law and procedure, and some material modifications of them in their application to translations and musical compositions. In the case of works first published in British India the sole right to produce, reproduce, perform or publish a translation is, subject to an important proviso, to subsist only for ten years from the first publication of the work. The provisions of the Act as to mechanical instruments for producing musical sounds were found unsuitable to Indian conditions. "The majority of Indian melodies," it was explained in Council, "have not been published, *i.e.*, written in staff notation, except through the medium of the phonograph. It is possible in many cases to identify the original composer or author, and the melodies are subject to great variety of notation and tune. To meet these conditions s. 5 of the Indian Act follows the English Musical Copyright Act of 1902 by defining **musical work** as meaning any combination of melody and harmony, or either of them, printed, reduced to writing, or otherwise graphically produced or reproduced."

Coinage, Weights and Measures.

As the currency of India is based upon the rupee, statements with regard to money are generally expressed in rupees, nor has it been found possible in all cases to add a conversion into sterling. Down to about 1873 the gold value of the rupee (containing 165 grains of pure silver) was approximately equal to 2s., or one-tenth of a £, and for that period it is easy to convert rupees into sterling by striking off the final cipher (Rs. 1,000=£100). But after 1873, owing to the depreciation of silver as compared with gold throughout the world, there came a serious and progressive fall in the exchange, until at one time the gold value of the rupee dropped as low as 1s. In order to provide a remedy for the heavy loss caused to the Government of India in respect of its gold payments to be made in England, and also to relieve foreign trade and finance from the inconvenience due to constant and unforeseen fluctuations in exchange, it was resolved in 1893 to close the mints to the free coinage of silver, and thus force up the value of the rupee by restricting the circulation. The intention was to raise the exchange value of the rupee to 1s. 4d., and then introduce a gold standard at the rate of Rs. 15=£1. From 1899 onwards the value of the rupee has been maintained, with insignificant fluctuations, at the proposed rate of 1s. 4d., and consequently since that date three rupees have been equivalent to two rupees before 1873. For the intermediate period, between 1873 and 1899, it is manifestly impossible to adopt any fixed sterling value for a constantly changing rupee. But since 1899, if it is desired to convert rupees into sterling, not only must the final cipher be struck off (as before 1873), but also one-third must be subtracted from the result. Thus Rs. 1,000=£100—⅓=(about) £67.

Notation.—Another matter in connection with the expression of money statements in terms of rupees requires to be explained. The method of numerical notation in India differs from that which prevails throughout Europe. Large numbers are not punctuated in hundreds of thousands and millions, but in lakhs and crores. A **lakh** is one hundred thousand (written out as 1,00,000), and a **crore** is one hundred lakh or ten millions (written out as 1,00,00,000). Consequently, according to the exchange value of the rupee, a lakh of rupees (Rs. 1,00,000) may be read as the equivalent of £10,000 before 1873, and as the equivalent of (about) £6,667 after 1899, while a crore of rupees (Rs. 1,00,00,000) may similarly be read as the equivalent of £1,000,000 before 1873, and as the equivalent of (about) £666,667 after 1899.

Coinage.—Finally, it should be mentioned that the rupee is divided into 16 annas, a fraction commonly used for many purposes by both Natives and Europeans. The anna was formerly reckoned as 1½d., it may now be considered as exactly corresponding to 1d. The anna is again sub-divided into 12 pies.

Weights.—The various systems of weights used in India combine uniformity of scale with immense variations in the weight of units. The scale used generally throughout Northern India, and less commonly in Madras and Bombay, may be thus expressed one maund 40 seers, one seer=16 chittaks or 80 tolas. The actual weight of a seer varies greatly from district to district, and even from village to village, but in the standard system the tola is 180 grains Troy (the exact weight of the rupee), and the seer thus weighs 2·057 lb., and the maund 82·28 lb. The standard is used in official reports.

Retail.—For calculating retail prices, the universal custom in India is to express them in terms of seers to the rupee. Thus, when prices change what varies is not the amount of money to be paid for the same quantity, but the quantity to be obtained for the same amount of money. In other words, prices in India are quantity prices, not money prices. When the figure of quantity goes up, this of course means that the price has gone down, which is at first sight perplexing to an English reader. It may, however, be mentioned that quantity prices are not altogether unknown in England, especially at small shops where pennyworths of many groceries can be bought. Eggs, likewise, are commonly sold at a varying number for the shilling. If it be desired to convert quantity prices from Indian into English denominations without having recourse to money prices (which would often be misleading), the following scale may be adopted—based upon the assumption that a seer is exactly 2 lb., and that the value of the rupee remains constant at 1s. 4d., 1 seer per rupee=(about) 3 lb. for 2s., 2 seers per rupee=(about) 6 lb. for 2s., and so on.

The name of the unit for square measurement in India generally is the *bigha*, which varies greatly in different parts of the country. But areas have been expressed in this work either in square miles or in acres.

Proposed reforms.—Indian weights and measures have never been settled upon an organised basis suitable for commerce and trade characteristic of the modern age. They vary from town to town and village to village in a way that could only work satisfactorily so long as the dealings of towns and villages were self-contained and before roads and railways opened up trade between one and the other. It is pointed out that in England a hogshead of wine contains 63 gallons and a hogshead of beer only 54 gallons; that a bushel of corn weighs 46 lbs. in Sunderland and 240 lbs. in Cornwall; that the English stone weight represents 14 lbs. in popular estimation, but only 5 lbs., if we are weighing glass, and eight for meat, but 6 lbs. for cheese. Similar instances are multiplied in India by at least as many times as India is bigger than England. If we take, for instance, the maund denomination of weight common all over India, we shall find that in a given city there are nearly as many maunds as there are articles to weigh. If we consider the maund as between district and district the state of affairs is worse. Thus in the United Provinces alone, the maund of sugar weighs 48¾ seers in Cawnpore, 40 in Muttra, 72¾ in Gorakhpur, 40 in Agra, 50 in Moradabad, 43¾ in Saharanpur, 50 in Bareilly, 46 in Fyzabad, 48¾ in Shahjehanpur, 51 in Goshangunge. The maund

varies throughout all India from the Bengal or railway maund of 82-2/7 lbs. to the Factory maund of 74 lbs. 10oz. 11drs., the Bombay maund of 28 lbs., which apparently answers to the Forest Department maund in use at the Fuel Depot, and the Madras maund, which some authorities estimate at 25 lbs. and others at 24 lbs. and so on.

Committees of Inquiry.—These are merely typical instances which are multiplied indefinitely. There are variations of every detail of weights and measures in every part of India. The losses to trade arising from the confusion and the trouble which this state of things causes are heavy. Municipal and commercial bodies are continually returning to the problem with a view to devising a practical scheme of reform. The Supreme and Provincial Governments have made various attempts during 40 years past to solve the problem of universal units of weights and measures and commerce and trade have agitated about the question for the past century. The Indian railways and Government departments adopted a standard tola (180 grains), seer (80 tolas) and maund (40 seers) and it was hoped that this would act as a successful "lead" which would gradually be followed by trade throughout the empire, but the expectation has not been realised.

The Government of India considered the whole question in consultation with the provincial Governments in 1890-1894 and various special steps have at different times been taken in different parts of India. The Government of Bombay appointed a committee in 1911 to make proposals for reform for the Bombay Presidency. Their final report has not been published, but they presented in 1912 an *ad interim* report which has been issued for public discussion. In brief, it points out the practical impossibility of proceeding by compulsory measures affecting the whole of India. The Committee stated that over the greater part of the Bombay Presidency a standard of weights and measures would be heartily welcome by the people. They thought that legislation compulsorily applied over large areas subject to many diverse conditions of trade and social life would not result in bringing about the desired reform so successfully as a "lead" supplied by local legislation based on practical experience. The want of coherence, *savoir faire*, or the means of co-operation among the people at large pointed to this conclusion. The Committee pointed out that a good example of the results that will follow a good lead is apparent in the East Khandesh District of the Presidency, where the District Officer, Mr. Simcox, gradually, during the course of three years, induced the people to adopt throughout the district uniform weights and measures, the unit of weight in this case being a tola of 180 grains. But the committee abstained from recommending that the same weights and measures should be adopted over the whole Presidency, preferring that a new system started in any area should be as nearly as possible similar to the best system already prevailing there.

Proposals from England.—Suggestions have been made by the British Weights and Measures Association and the Decimal Association, respectively, at different times that British weights and measures and the decimal system should be introduced. Both proposals fail to meet the special requirements set forth by the Bombay Committee. Variations of them which have been put forward by different bodies in India in recent years are that the English pound weight and the English hundredweight should be adopted as the unit of weight for all India. The argument in favour of the importation of an outside unit in this manner is that people in India will always associate with a given, familiar denomination of weight or measure the value they have been accustomed to consider in regard to it, but that if a new weight were introduced they would learn to use it in dealing with their neighbours, without the interference of anything resembling prejudice at what they might regard as an attempt to tamper with their old, traditional standards of dealing.

Committee of 1913.—The whole problem was again brought under special consideration by the Government of India in October, 1913, when the following committee was appointed to inquire into the entire subject anew.—

Mr. C. A. Silberrad (*President*).
Mr. A. Y. G. Campbell.
Mr. Rustomji Pardoonji.

This Committee reported, in August, 1915, in favour of a uniform system of weights to be adopted in India based on the 180 grain tola. The report says:—Of all such systems there is no doubt that the most widespread and best known is that known as the Bengal or Indian Railway weights. The introduction of this system involves a more or less considerable change of system in parts of the United Provinces (Gorakhpur, Bareilly and neighbouring areas), practically the whole of Madras, parts of the Punjab (rural portions of Amritsar and neighbouring districts), of Bombay (South Bombay, Bombay city and Gujarat), and the North West Frontier Province. Burma has at present a separate system of its own which the committee think it should be permitted to retain. The systems recommended are:—

FOR INDIA.

8 khaskhas	= 1 chawal
8 chawals	= 1 ratti
8 rattis	= 1 masha
12 mashes or 4 tanks	= 1 tola
5 tolas	= 1 chatak
16 chataks	= 1 seer
40 seers	= 1 maund

FOR BURMA.

2 small ywes	= 1 large ywe
4 large ywes	= 1 pe
2 pes	= 1 mu
5 pes or 2½ mus	= 1 mat
1 mat	= 1 ngamu
2 ngamus	= 1 tikal
100 tikals	= 1 pelktha or viss.

The tola is the tola of 180 grains, equal to the rupee weight. The viss has recently been fixed at 3·60 lbs. or 140 tolas.

Government have approved the principles of the Report but left the Provincial Governments to take action.

Legislation and Inspection.

The conditions of factory labour until 1913 were regulated by the Indian Factories Act of 1881, as amended in 1891. The chief provisions of the amended Act were Local Governments were empowered to appoint inspectors of factories, and certifying surgeons to certify as to the age of children. A mid-day stoppage of work was prescribed in all factories, except those worked on an approved system of shifts, and Sunday labour was prohibited, subject to certain exceptions. The hours of employment for women were limited to 11, with intervals of rest amounting to at least an hour and a half; their employment between 8 p.m. and 5 a.m. was prohibited, as a general rule, except in factories worked by shifts. The hours of work for children (defined as persons below the age of 14) were limited to seven, and their employment at night time was forbidden; children below the age of nine were not to be employed. Provision was made for the fencing of machinery and for the promulgation of rules as to water supply, ventilation, the prevention of overcrowding, etc.

Act of 1911.

The decision to undertake further legislation was arrived at after comprehensive inquiries. An important factor in the case was the increasing use of electric light in the Bombay Mills, which radically changed the conditions prevailing when the Act of 1891 was passed and had abolished the security that operatives would not be employed for more than 12 hours a day on the average. The question of the hours of employment in textile factories was brought into prominence by the period of prosperity that the cotton industry began to enjoy in the cold weather of 1904-05, a large number of persons operatives being regularly worked for 15 hours a day or even longer.

Owing to complaints regarding the long hours worked in many mills, the Government of India in 1906 appointed a small Committee with Commander Sir H. P. Freer-Smith, R.N., late Superintending Inspector for Dangerous Trades in England, as chairman, to conduct a preliminary inquiry into the conditions of labour in textile factories. The Committee recommended that the working hours of adult males should be limited to 12 hours a day; that certificates of age and physical fitness should be required prior to half-time employment and prior to employment as an adult; that night work of women should be prohibited; and that whole-time Medical Inspectors should be appointed.

The conclusions of this Committee formed the basis of an investigation, extending to all factories in India, by a representative Commission. This report disclosed the existence of abuses, particularly in connection with the employment of children, and the excessive hours worked by operatives generally in textile factories. The majority of the Commission deprecated a statutory limitation of the working hours of male adults. But they recommended the formation of a class of "young persons" between 14 and 17 years of age, whose hours should be limited to 12, and considered that this would indirectly secure a 12 hours' day for male adults. They also recommended that the hours of work for children should be reduced from 7 to 6 hours and that the hours for women should be assimilated to those for "young persons," night work being prohibited for both classes. They recommended that children should be certified as to age and physical fitness.

Hours fixed.

The recommendations of the Committee and of the Commission having been considered by the Government of India and the Local Governments, a Bill was introduced in July 1908 to amend and consolidate the law relating to factories, and was finally passed into law as Act XII of 1911.

The new Act extended the definition of "factory" so as to include seasonal factories working for less than four months in the year; shortened the hours within which children, and, as a general rule, women, may be employed, and further restricted the employment of women by night by allowing it only in the case of cotton-ginning and pressing factories. It also contained a number of new provisions for securing the health and safety of the operatives, making inspection more effective, and securing generally the better administration of the Act. The most important feature of the Act, however, was the introduction of a number of special provisions applicable only to textile factories. The report of the Factory Commission showed that excessive hours were not worked except in textile factories. The Act for the first time applied a statutory restriction to the hours of employment of adult males by laying down that, subject to certain exceptions, "no person shall be employed in any textile factory for more than twelve hours in any one day." It is also provided in the case of textile factories that no child may be employed for more than six hours in any one day, and that (subject to certain exceptions, among which are factories worked in accordance with an approved system of shifts) no person may be employed before 5-30 a.m. or after 7 p.m. (the new limits laid down generally for the employment of women and children). Corresponding limitations are placed on the period for which mechanical or electrical power may be used.

Factory Inspection.

The inquiries of the Factory Commission showed that the then existing system of factory inspection had not sufficed to prevent widespread evasion of the provisions of the factory law. This result was attributed to the fact that the number of full-time factory inspectors was very small, the work of inspection being to a large extent in the hands of ex-officio inspectors (District Magistrates, Civil Surgeons, etc.), who, as the Commission reported, had neither the time nor the special knowledge necessary for the work. In Bombay Presidency, where there were three special inspectors, it was reported that the Act was, on the whole, well enforced. Steps have been taken since to reorganise the staff of whole-time inspectors of factories in India and to

increase it to a strength sufficient to cope with the work of inspecting all the factories in India. The total strength of the staff is now 14, as compared with 6 at the time of the Factory Commission's report. Each of the larger provinces has at least one inspector, Bombay having five. Except that in a few cases these officers have duties also in connection with boiler inspection, their whole time is given to factory inspection. The District Magistrate remains an inspector, ex-officio, under the new Act, and other officers may be appointed additional inspectors, but it is contemplated that inspection by ex-officio inspectors will be to a large extent discontinued, or limited to special cases.

OILS AND OIL CAKES.

The production of oil-seeds—rape, mustard, linseed, sesamum, and ground-nut—was estimated in 1920 21 at 2,762,000 tons of which 1,89,000 tons, or 18 per cent., were exported. The percentage of exports in the 5 years ending 1913-14 was 36 per cent., so that India is now retaining a higher proportion for her own consumption.

A pamphlet on the subject recently published by the Commercial Intelligence Department points out that it is both economically and industrially unsound for India to export her oil seeds instead of manufacturing the oils and oil cakes in India. It allows other countries to reap the manufacturers' profits and at the same time deprives Indian agriculture of the great potential wealth, as cattle-food and manure, contained in the oil cakes. An immense quantity of oil is, as a matter of fact, already manufactured in this country by more or less crude processes. Village oil mills worked by bullocks and presses worked by hand exist in all parts of the country and supply most of the local demand for oil. There has also been a great increase in recent years in the number of oil mills worked by steam or other mechanical power. These crush all the commoner oil seeds and development has been especially marked in the case of mustard oil, castor oil and groundnut oil. In spite of all this there has been a perceptible diminution in the export of oil from India, particularly of cocoanut oil and linseed oil, and an increase in the export of oil seeds, which is particularly marked in the case of copra and groundnuts. The situation created by the War has naturally led to too much discussion of the possibility of developing on a large scale the existing oil-milling industry in India.

There are three difficulties with which any proposal to develop in India an **oil-milling industry** on a great scale is faced. In the first place, there exist high protective tariffs in European countries which encourage the export from India of the raw material rather than the manufactured product. Secondly, there is a better market for the oil cake in Europe than in India and the freight on oil seeds is less than the freight on cake. Thirdly, it is much easier and less expensive to transport oil seeds by sea than it is to transport oil. While this has been the position in the European markets, Indian made oils, other than cocoanut oil, have made enough headway in Eastern markets to suggest the possibility of a development of those markets.

The problem of finding a market for **oil cakes** is equally important. The value of oil cakes is much better appreciated in Europe than in India. The Indian cultivator is prejudiced against the use of machine-made cake as a cattle food or as manure because he considers that it contains less oil and therefore less nourishment than the village-made cake. He is therefore unwilling to buy it except at a reduced price. His prejudices on this point have no justification in fact since experts are agreed that mill cake is a better food for cattle than village-made cake. Even when the mill cake contains less oil than the village cake, there is still more oil in the cake than cattle can digest. The excess of oil in the village cake, where it exists, is a drawback and not an advantage to the use of the cake as food. A considerable amount of demonstration work has been done by the Agricultural Departments of Government in order to remove the cultivator's prejudices and there is said now to be an increasing demand for most classes of mill cake.

Life Insurance.

There are no publications from which a complete statistical survey of the various branches of insurance work in India can be obtained, but the official "Abstracts of Accounts and Valuation Statements in respect of Life Assurance Companies doing business in British India," published by the Government of India, give much information in regard to the 75 Life Assurance Companies subject to the provisions of the Indian Life Assurance Companies Act, 1912.

The oldest of the Indian Companies were established in Madras about 80 years ago Bombay has none older than the Bombay Mutual, the Oriental and the Bombay Widows' Pension Fund which were established about 40 years ago. Life Assurance seems not to have been started in Bengal until much later. and it was not until 1906 that many Companies were established either in that Presidency or elsewhere in India. The year 1919 was marked by the formation of several new companies, more particularly in Bombay.

In his introductory note to the official publication already mentioned, Mr. H. G. W. Meikle, Actuary to the Government of India, dealing with the year 1920, says:—

The summaries of the Indian companies show that the new sums assured under ordinary life assurance policies during the year under review show a considerable increase, the total amount being nearly 5¼ crores as against 4¼ crores in the last year. There has been a steady increase each year since 1916 when the amount was only 1¾ crores. Endowment Assurance policies, under which the sum is payable at some stipulated age or at previous death, constitute over 83 per cent. of the total business.

The total sums assured, including bonus additions, remaining in force under ordinary life assurance policies issued by Indian companies have increased by over three crores during the year and amount to over 31 crores of rupees, or about 20 million pounds sterling at the present rate of exchange.

The outstanding features are the decrease in the claims by death last year and the large sums which were written off or transferred to investment reserve funds in the past six years to cover the depreciation of investments. This has caused a reduction in the amounts by which the life assurance funds improved in those years more particularly in the years 1916 and 1918 The total amount of **depreciation** already met is nearly 1½ crores, but as values have fallen considerably since the previous valuations further depreciation of a very large amount will have to be met in the next few years. Dividends to shareholders paid out of the life assurance funds amount to less than 1 per cent. of the sums paid as claims to policy-holders Before the Life Act came into force almost all of the proprietary Indian companies used to pay dividends to their share-holders, irrespective of whether or not their life assurance funds permitted of such dividends being declared. Now no dividend is paid by any company out of its life funds except out of profits ascertained by an actuarial valuation of its assets and liabilities. The expense ratio shows an increase each year since 1918; this is due to the increasing amount of new business transacted in the last two years as well as to the general all round advance in salaries and prices which has now to be met.

The average **rate of annual premium** payable under the policies issued by Indian companies is nearly 5½ per cent. of the sum assured. The corresponding rate deduced from the returns to the British Board of Trade is considerably lower, the difference being largely due to the fact that endowment assurances constitute a much larger proportion of the policies issued by Indian than by British Companies.

The average **amount of sum assured** under the policies issued by Indian companies is larger than in previous years and is now about Rs.1,900. The average sum assured under policies issued in India by the British companies is much larger than this and probably between Rs. 4,000 and Rs 5,000. Under most of the policies issued by Indian companies the premiums are payable by monthly instalments, while with the policies of the other companies a much larger number of the premiums are renewable yearly and half-yearly than monthly. These factors are greatly responsible for the Indian companies having the higher expense ratios.

The total assets of the Indian companies exceed 10 crores. They consist of Indian Government securities to the extent of 80 per cent of their total holdings in stock exchange investments.

Rate of interest.—Government 3½ per cent. paper which in 1914 was worth 96 per cent. of the face value depreciated to under 50 per cent. last December Now it is about 60. At this price it does not yield such a good return as the 6 per cent. income tax free redeemable loan recently issued by the Government of India. With Government 3½ per cent. paper at 53½ the annual return after allowing for income tax at 1 anna 4 pies in the rupee would be 6 per cent. The difference of over 6 points is possibly due to optimistic views being entertained of the action which Government may take to rehabilitate these irredeemable securities, and possibly also to the thought that the price will increase above 60 in a few years time, so that although the annual net return may be less than 6 per cent. on the present purchase price, the higher price which the purchaser expects to realise a few years hence will more than compensate for the smaller annual return in the meantime.

Rates of Premium and Surrender value.—If it becomes necessary for any company to adopt a higher rate of interest for the purpose of the valuation, it is quite likely that the reserve values of many policies will be found to be less than the guaranteed surrender values. In such circumstances the rates of surrender values hitherto guaranteed will be unsuitable for new policies as well as a source of weakness under the existing ones. There is yet another consideration which must now also influence the grant of correct surrender values. The expense ratio shows signs of advancement on account of the general rise in rents, printing, stationery, etc., as well as the advance in salaries consequent

on the general rise in prices. The rate at which surrender values are now allowed ought, therefore, to be largely reduced. At the same time it will probably be found that the rates of premium should be revised so as to give effect to the increased cost of procuration and management of business as well as to the higher rate of interest now obtainable. The higher interest would bring about a reduction in the rates of premium unless this benefit be counterbalanced by the increased loading now found to be necessary to meet expenditure. There are many other factors which must be taken into account in fixing on suitable surrender values and in the calculation of premium rates. The questions should not be decided without sound actuarial advice.

Rates of Mortality in India.—Actuaries in this country are frequently asked for a table which will show the expectation of life in India Sometimes this is asked for without any information being given as to the use to which the table is desired to be put. The rates might, for instance, be those applicable to selected Indian male lives assured, to the wives and daughters of Europeans in Government service, to the wild Hazaras from across the frontier or to the widows of P. & O. lascars. In every civilised country there are many different standard tables of mortality The rates vary not only with occupation, sex, etc., and are different for annuitants and lives assured, but vary with almost each different class of policy under which the lives are insured In India the problem is further complicated owing to her heterogenous population which differ from one another in their traditional occupation, mode of living, social and religious customs, etc, in a more marked manner than in any European country. It is thus not possible to get tables of mortality which can rightly be claimed as applicable to each and all of the almost innumerable different classes of lives in this country, but it will probably be of help in this direction if the main characteristics of some of the more recent important mortality investigations which have come to my notice relating to lives of residents in India be contrasted with well-known British standard mortality tables. For instance, it has been found that for members of the Indian Civil Service the expectation of life at ages over 30 is equal to that shown in the OM table for lives between 2 and 3 years younger. In the first few years of service in India the death rate in the I. C. S. is much heavier than the rate experienced after the first period of furlough and almost as heavy as for other members of the service 20 years older. For British officers in the Indian Army the death rate during the greater portion of service was, before the war, much heavier than the OM table. After retirement it was less than the rate in that table for lives of the same age, being about equal to the rate for those 2 years younger. The wives and daughters of members of these two services experience a lighter mortality than the select rates in the British Offices table for female annuitants. In the uncovenanted services of Government the rate of mortality applicable to members is approximately equal to those for lives 4 years older in the HM table. For wives and daughters of that in the uncovenanted services the expectation of life is about equal to the ultimate rate for lives two years older in the British Offices table for female annuitants.

It is impossible to differentiate correctly between the rates applicable to each of the many different races in India, but it has been found that the expectation of life of Mahomedan lives assured is less than that of Hindus, which again is less than that of Parsees. The rates of mortality and expectation of life deduced from the Indian census are not claimed to be more than an approximate indication of the actual rates prevailing. This unsatisfactory state of affairs must continue so long as the data relating to births and deaths, as well as to the ages at the date of the census remain as defective as has hitherto been the case.

Actuarial Valuations.—Up till now 42 of the Indian companies have submitted the results of actuarial valuations of their assets and liabilities Twenty-one of these valuations disclosed a surplus In 12 of the remaining twenty-one, the deficit was covered by the paid-up capital, thus proving solvency but precluding the payment of either bonus or dividend In 7 cases solvency was restored by reduction of sums assured or by calling up further capital. In 2 cases the degree of insolvency necessitated the winding up of the concern Many of the other companies which went into liquidation without an actuarial valuation being made adopted this course as the unsoundness of their financial position could be clearly demonstrated without it.

Mutual Companies.—With two exceptions, all the Indian companies shown as established within the last 25 years are proprietary companies with a share capital; but of the older companies, the great majority are mutual companies. These mutual companies generally have very small funds and it is found that payment of the full deposit prescribed in section 4 of the Life Act sometimes presses unduly on their resources, and as payment of the full deposit also interferes with the formation of new mutual companies, Government will be prepared to consider any application from an Indian mutual company for permission to pay a smaller deposit One or two of the existing Life Offices are called "Mutual" companies even although they have share capital; such nomenclature should be avoided in the case of companies established hereafter, as there is generally a recognised technical meaning attached to the use of the word "Mutual" in connection with life assurance, in consequence of which its use by a company having a share capital is likely to be misleading.

Since the passing of the Life Act twenty-two Indian life assurance companies have gone into liquidation.

Provident Insurance Societies.—Although several of the Indian Life Assurance companies formerly in existence may deservedly have had very undesirable reputations, it must be remembered that a great deal of discredit has been brought on the better class of such companies owing to the existence of a large number of Provident Societies The essential difference between a Life Assurance Company and a Provident Insurance Society is that the company is subject to the Life Act and not to the Provident Insurance Societies Act if, under insurances payable at the death or survivance of any one

life, it undertakes either to pay sums which in the aggregate exceed Rs 500 or to receive premiums which in the aggregate exceed Rs. 25 in any one year where the period for which the premiums are payable is unlimited, or Rs. 250 altogether where such period is limited. If, as may happen in the case of a dividing society, the sum assured payable at death is not fixed but may in certain contingencies exceed Rs. 500, the society is subject to the Life Act. The fact of either the sum assured or the premiums exceeding those limits under any other form of insurance than life assurance does not make the Society subject to the Life Act.

Fifteen years ago there were about 1,200 societies in existence in India of the Provident Insurance Society type. Now 29 only remain, 5 of which are proprietary and the rest mutual. The average paid-up capital of the proprietary societies is only about Rs. 1,600. Nine of these societies do ordinary life assurance business, one is a widows' fund and another transacts sickness insurance business. These 11 societies could withadvantage undergo actuarial valuation. The remaining 18 societies either work on the dividing plan without any minimum guarantee, or on the death call system, and are consequently not susceptible of actuarial valuation. They, however, are mostly in a moribund state. Eight of the Provident Insurance Societies transact other classes of business, mostly marriage insurance, in addition to life business.

Business other than Life Assurance.—The following is a list of Indian companies which transact other classes of insurance business in addition to life assurance :—

NAME OF COMPANY.	CLASS OF BUSINESS OTHER THAN LIFE ASSURANCE.
All India United	Fire and Marine.
New India	Fire, Marine, and Accident.
Himalaya	Fire, Marine, Motor Car, etc.
Bharat, Empire, National, National Indian	Fidelity Guarantee.
Rechabites	Sickness.
Sind Hindu Provident	Marriage.
Christian Mutual	Capital Redemption.
Bengal Insurance and Real Property	Bond investment.

Indian Life Assurance Companies.—The following list shows the Indian companies in existence in the several provinces of India arranged according to the year wh enthey were founded:—

The names of Mutual Companies have been printed in Capitals.

Year when established.	Madras Presidency.	Bombay Presidency.	Bengal Presidency	Punjab.	United Provinces, Assam, Ajmer-Merwara, Central Provinces and Bangalore.

1921	.	Indian-Lion; Great India.	....	.	Nagpore Pioneer (C. P.).

Postal Insurance Fund.—This Fund was instituted by the Government of India for the benefit of the postal employees in 1883 but gradually admission to this Fund has been thrown open to almost all classes of Government servants who are employed on civil duties. On the 31st March 1920 there were 30,699 policies in force assuring a total sum of Rs. 4,67,79,153 including bonus additions. The life assurance fund on that date amounted to Rs. 1,59,89,615. The last actuarial valuation disclosed a surplus which permitted a bonus being paid by way of addition to the sum assured at the rate of 1½ per cent. under whole life policies and 1 per cent. under endowment assurance for each year's premium paid in the valuation period. The limit of assurance permissible under the rules of the Fund, which was previously Rs. 4,000, has now been raised to Rs. 10,000.

British, Colonial and Foreign Companies.—There are at present 24 British, Colonial and Foreign Life Offices which have a place of business in India. Of these, 17 are constituted in Britain, 2 in Canada, 1 in Australia, 1 in the Straits Settlements, 2 in Shanghai and 1 in the United States of America. Nearly all are partially exempt from the operation of the Indian Life Assurance Companies Act of 1912 on the ground that, when it came into force, they were carrying on business in the United Kingdom in conformity with the provisions of the British Assurance Companies Act of 1909. The principal effects of the exemptions allowed to these British, Colonial and Foreign companies are that they are freed from the necessity either of making a deposit with the Controller of Currency or of making separate statements respecting their Indian business. Those granted exemptions are allowed to submit their accounts in the form prescribed by the British Assurance Companies Act of 1909. The Indian Life Act has to a great extent been enacted on the lines of the British Act. All of these 24 companies grant annuities and in addition carry on the other classes of business shown in the following statement. This statement also indicates the proportion of each company's business which is transacted in the United Kingdom. Unfortunately no similar information can be given regarding their Indian business as none of the companies, except the Great Eastern, the China and the Shanghai, are required to give any particulars of this nature. These three companies transact about ten per cent. of their business in India.

	Name of Company.	Year when established.	Head Office.	Insurance business done. F = Fire; M = Marine. C = Capital redemption S = Sickness and Accident. G = Fidelity Guarantee and Burglary, etc.					Percentage of Life Assurance premium income in the United Kingdom to total life assurance premium income.

Chambers of Commerce.

Modern commerce in India was built up by merchants from the west and was for a long time entirely in their hands. Chambers of Commerce and numerous kindred Associations were formed by them for its protection and assistance. But Indians have in recent years, taken a large and growing part in this commercial life. The extent of their participation varies greatly in different parts of India, according to the natural proclivities and genius of different races. Bombay, for instance, has led the way in the industrial and commercial regeneration of the new India, while Bengal, very active in other fields of activity, lags behind in this one. Arising from these circumstances we find Chambers of Commerce in Bombay, Karachi, Calcutta, Madras and other important centres, with a membership both European and Indian; but alongside these have sprung up in recent years certain Associations, such as the Bombay Indian Merchants' Chamber and Bureau, of which the membership is exclusively Indian. These different classes of bodies are in no sense hostile to one another and constantly work in association.

The London Chamber of Commerce in 1912, realising the increasing attention demanded by the economic development of India, took steps to form an "East India Section" of their organization. The Indian Chambers work harmoniously with this body, but are in no sense affiliated to it, nor is there at present any inclination on their part to enter into such close relationship, because it is generally felt that the Indian Chambers can themselves achieve their objects better and more effectively than a London body could do for them, and on various occasions the London Chamber, or the East India Section of it have shown themselves out of touch with what seemed locally to be immediate requirements in particular matters.

A new movement was started in 1913 by the Hon. Sir Fazulbhoy Currimbhoy Ibrahim, a leading millowner and public citizen of Bombay, which aims at effecting great improvement in strengthening Indian commercial organization. Sir Fazulbhoy's original plan was for the formation of an Indian Commercial Congress. The proposal met with approval in all parts of India. The scheme was delayed by the outbreak of war but afterwards received an impetus from the same cause and the first Congress was held in the 1915 Christmas holiday season in the Town Hall, Bombay. The list of members of the Reception Committee showed that all the important commercial associations of Bombay were prepared to co-operate actively.

The Congress was attended by several hundred delegates from all parts of India. Mr. (now the Hon. Sir) D. E. Wacha, President of the Bombay Indian Merchants' Chamber, presided, as Chairman of the Reception Committee, at the opening of the proceedings and the first business was the election of Sir Fazulbhoy Currimbhoy as the first President. The Congress resolved upon the establishment of an Associated Indian Chamber of Commerce, and elected a Provincial Committee empowered to take the necessary steps to get the Association registered and to enrol members and carry on work. The Congress also approved of the draft constitution. (See also under The Indian Industrial and Commercial Congress on page 393).

The following are the principal paragraphs of a Memorandum of Association of the new Associated Chamber as approved by the Congress.—

I. The name of the Chamber will be "THE ASSOCIATED INDIAN CHAMBER OF COMMERCE."

II. The Registered Office of the Chamber will be in Bombay.

III. The objects for which the Chamber is established are:—

(*a*) To discuss and consider questions concerning and affecting trade, commerce, manufactures, and the shipping interests, at meeting of delegates from Indian Chambers of Commerce and Commercial Associations or Bodies and to collect and disseminate information from time to time on matters affecting the common interests of such Chambers or Associations or Bodies and the commercial, manufacturing and shipping interests of the country.

(*b*) To communicate the opinions of the Chambers of Commerce and other Commercial Associations or Bodies separately or unitedly, to the Government or to the various departments thereof, by letter, memorial, deputation or otherwise.

(*c*) To petition Parliament or the Government of India or any Local Government or authority on any matter affecting trade, commerce, manufacture or shipping.

(*d*) To prepare and promote in Parliament or in the Legislative Councils of India, both Imperial and Provincial, Bills in the interest of trade, commerce, manufactures, and shipping of the country and to oppose measures which, in the opinion of the Chamber, are likely to be injurious to those interests.

(*e*) To attain those advantages by united action which each Chamber or Association or body may not be able to accomplish in its separate capacity.

(*f*) To have power to establish an office either in England or in any part of British India with an Agent there, in order to ensure to the various Chambers early and reliable information on matters affecting their interests and to facilitate communication between the Chamber or individual chambers and the Government or other public bodies, and generally to conduct and carry on the affairs of the Chamber.

(*g*) To organise Chambers of Commerce, Commercial Associations or Bodies in different trade centres of the Country.

(*h*) To convene when necessary the Indian Commercial Congress at such places and at such times as may be determined by a Resolution of the Chamber.

(*i*) To do all such other things as may be incidental or conducive to the above objects.

The Articles of Association provide for the management of the Chamber by an Executive Council composed of a President, Vice-President, and ten other members elected at the annual meeting of the Associated Chamber, the Executive Council to present a report and statement of accounts at each annual meeting. The Articles declare the number of members of the Associated Chamber not to exceed one hundred, and the Executive Council are given power to elect honorary members. "There shall be an annual meeting of the Associated Indian Chamber held at Bombay on a date to be fixed by the Executive Council in the month of February," or at some other time, and "semi-annual or special meetings . . . may be convened by the Executive Council or on the requisition of one-third of the total number of members addressed to the Secretary . . . "

The following are details of the principal Chambers of Commerce and kindred bodies in India at the present time :—

BENGAL.

The Bengal Chamber of Commerce was founded in 1834. Its head-quarters are in Calcutta. Other societies connected with the trade and commerce of the city are the Royal Exchange, the Bengal Bonded Warehouse Association, the Calcutta Trades Association, the Bengal National Chamber of Commerce and the Marwari Chamber of Commerce. The Bengal Chamber is registered with a declaration of membership of 300. Its objects are the usual purposes connected with the protection of trade "in particular in Calcutta." There are two classes of members. Permanent (Chamber and Associate) and Honorary.

Merchants, bankers, shipowners, representatives of commercial, railway and insurance companies, brokers, persons and firms engaged in commerce, agriculture, mining or manufacture, and joint stock companies or other corporations, formed for any purpose or object connected with commerce, agriculture, mining or manufacture, and persons engaged in or connected with art, science or literature, may be elected as permanent members of the Chamber.

The following are the office bearers of the Chamber for the year 1921-22 :—

President.—Sir R. M. Wats on Smyth, M L.C. (Turner Morrison & Co., Ltd.)

Vice-President.—Mr. C. W. Rhodes, C.B.E., M.L.A. (Hoare, Miller & Co., Ld.)

Committee.—Mr. J. Coates (Eastern Bengal Railway), Mr. W. C. Currie, M.L.C., (Mackinnon, Mackenzie & Co), Mr. C. F. Beadel, M.L.C. (Becker, Grey & Co., Calcutta, Ld), Mr. W. J. K. Hegarty (National Bank of India, Ld.), Mr. R. Langford James, M.L.C. (James Finlay & Co.), Mr. W. L. Carey, M.L.C. (Bird & Co.), and Hon. Sir Alexander Murray, C.B.E. (Thos. Duff & Co , Ld.).

The Secretary of the Chamber is Mr. H. M. Haywood. Asst. Secys.—Mr. D. K. Cunnison and Mr. A. C. Daniel.

The following are the public bodies (among others) to which the Chamber has the right of returning representatives, and the representatives returned for the current year :—

Council of State.—Hon. Sir Alex. Murray, C.B.E.

Bengal Legislative Council.—Sir R. M. Watson Smyth, M.L.C., A. Cochran, C.B.E , M.L.C., C. F. Readel, M.L.C., W. C. Currie, M.L.C., James E. Roy, M.L.C., and George Morgan, M.L.C.

Calcutta Port Commission — Mr. James E. Roy, M.L.C. (Macneill & Co), Mr. R O. Law (Birkmyre Brothers), Mr J.Campbell, M.L.C. (Mackinnon, Mackenzie & Co.), Hon. Mr. J. H. Pattinson M L.C. (H. V. Low & Co.), Mr R. M Watson Smyth, M.L.C. (Turner Morrison & Co , Ld.), and Mr. F. C. Danger, C.B.E. (Hoare, Miller & Co , Ld).

Calcutta Municipal Corporation.— Messrs. Norman R. Luke (Jas Luke & Sons), W. S. J. Willson (Turner Morrison, & Co., Ld.), George Morgan, M L C. (Morgan, Walker & Co) and W. R. Rae, M.L.C. (Sun Insurance Office).

Bengal Boiler Commission.—Messrs. John Williamson (Kinnison Jute Mills Co., Ld.), H. H. Reynolds (Andrew Yule & Co.) and H. E. Skinner (Jessop & Co , Ltd).

Board of Trustees of the Indian Museum.—Sir R. M. Watson Smyth, M.L.C. (Turner, Morrison & Co., Ltd.).

Bengal Smoke Nuisances Commission.—Messrs. A. Cochran, C.B E. M L C , (Burn & Co. Ltd.) and J. R. Murray (Clive Jute Mills.

Calcutta Improvement Trust.—Mr. C.F. Beadel M.L.C. (Becker, Gray & Co., Calcutta. Ltd)

The Chamber elects representatives to various other bodies of less importance, such as the committee of the Calcutta Sailors' Home, and to numerous subsidiary associations. The following are the recognised associations of the Bengal Chamber of Commerce :—

Calcutta Wheat and Seed Trade Association, Indian Jute Mills Association, Indian Tea Association, Calcutta Tea Traders Association, Calcutta Fire Insurance Agents Association, Calcutta Import Trade Association, Calcutta Marine Insurance Agents Association, The Wine, Spirit and Beer Association of India, Indian Mining Association, Calcutta Baled Jute Association, Indian Paper Makers Association, Indian Engineering Association, Calcutta Jute Fabrics Shippers Association, Calcutta Hydraulic Press Association, Jute Fabric Brokers Association, Baled Jute Shippers Association, Calcutta Jute Dealers Association, Calcutta Liners Conference, Calcutta Hides Skins Shippers Association, Northern India Tanners' Federation, Indian Indigo Association and Calcutta Motor Insurance Association.

The Chamber maintains a Tribunal of Arbitration for the determination, settlement and adjustment of disputes and differences relating to trade, business, manufactures, and to customs of trade, between parties, all or any of whom reside or carry on business personally or by agent or otherwise in Calcutta, or elsewhere in India or Burmah, by whomsoever of such parties the said disputes and differences be submitted. The Secretary of the Chamber acts as the Registrar of the Tribunal, which consists of such members or assistants to members as may, from time to time, annually or otherwise be selected by the Registrar and willing to serve on the Tribunal. The Registrar from time to time makes a list of such members and assistants.

The Chamber also maintains a Licensed Measurers Department controlled by a special committee. It includes a Superintendent (Mr. R. Ellis), Deputy Superintendent (Mr. A. H. Lugg), Head Office Manager (Mr. C. G. Smith) and four Assistant Superintendents (Messrs. J. G. Smyth) A. H. Mathews, W. H. Kitchen and G. L. Bennet) and the staff at the time of the last official returns consisted of 127 officers. The usual system of work for the benefit of the trade of the port is followed. The Department has its own provident fund and compassionate funds and Measurers' Club. The Chamber does not assist in the preparation of official statistical returns. It publishes weekly the *Calcutta Prices Current* and its Monthly Supplement and also publishes a large number of statistical circulars of various descriptions in addition to a monthly abstract of proceedings and many other circulars on matters under discussion.

BOMBAY.

The object and duties of the Bombay Chamber, as set forth in their rules and regulations, are to encourage a friendly feeling and unanimity among commercial men on all subjects involving their common good; to promote and protect the general mercantile interests of this Presidency; to collect and classify information on all matters of general commercial interest; to obtain the removal, as far as such a Society can, of all acknowledged grievances affecting merchants as a body, or mercantile interests in general: to receive and decide references on matters of usage and custom in dispute, recording such decisions for future guidance, and by this and such other means, as the Committee for the time being may think fit, assisting to form a code of practice for simplifying and facilitating business; to communicate with the public authorities, with similar Associations in other places and with individuals, on all subjects of general mercantile interests; and to arbitrate between parties willing to refer to, and abide by, the judgment of the Chamber.

The Bombay Chamber was established in 1836, under the auspices of Sir Robert Grant, who was then Governor of the Presidency, and the programme described above was embodied in their first set of rules. There is affiliated with the Chamber the Bombay Millowners' Association, which exists to carry out the same general objects as the Chamber in the special interests of "millowners and users of steam and water power." According to the latest returns, the number of Chamber members is 149 and the number of Associated members is 2. Of these numbers 20 represent banking institutions, 7 shipping agencies and companies, 3 firms of solicitors, 3 railway companies, 6 insurance companies, 15 engineers and contractors, 97 firms engaged in general mercantile business.

All persons engaged or interested in mercantile pursuits desirous of joining the Chamber and disposed to aid in carrying its objects into effect are eligible to election to membership by ballot. The Chamber member's subscription is Rs. 360 and the Associate member's subscription is Rs. 300 per annum and an additional charge of Rs. 640 per annum is made to firms as subscription to the trade returns published by the Chamber. Gentlemen distinguished for public services, or "eminent in commerce and manufactures," may be elected honorary members and as such are exempt from paying subscriptions. Any stranger engaged or interested in mercantile pursuits and visiting the Presidency may be introduced as a visitor by any Member of the Chamber inserting his name in a book to be kept for the purpose, but a residence of two months shall subject him to the rule for the admission of members.

Officers of the Year.

The affairs and funds of the Chamber are managed by a committee of nine ordinary members, consisting of the chairman and deputy-chairman and seven members. The committee must, as a rule, meet at least once a week and the minutes of its proceedings are open to inspection by all members of the Chamber, subject to such regulations as the committee may make in regard to the matter. A general meeting of the Chamber must be held once a year and ten or more members may requisition, through the officers of the Chamber, a special meeting at any time, for a specific purpose.

The Chamber elects representatives as follows to various public bodies:—

The Council of State, one representative.

Legislative Council of the Governor of Bombay, two representatives.

Bombay Municipal Corporation, two members, elected for three years.

Board of Trustees for the Improvement of the City of Bombay, one member, elected for two years.

Board of Trustees of the Port of Bombay, five members, two and three being elected in alternate years.

Representatives on the Legislative Councils become ex-officio members of the committee of the Chamber, during their terms of office, if they are not already members.

The following are the officers of the Chamber for the year 1920-21 and their representatives on the various public bodies:—

Chairman.—Mr. H. P. W. Macnaghten, M.L.C (Wallace & Co.)

Deputy Chairman.—Mr. V. A. Grantham.

Committee.—The Hon'ble Sir A. H. Froom, M.C.S. (Messrs. Mackinnon Mackenzie & Co.), Mr B Brown (James Finlay & Co., Ld.), Mr T. W. Dowding (Turner, Morrison & Co., Ld.), Mr A. K Graham (W. & A. Graham & Co.), Mr. J. Greig (The Chartered Bank of India, Australia and China), Mr C A Hawes, V. D. (G. I. P. Railway), Mr. A. B Morrison (Shaw, Wallace & Co.)

Secretary: Mr. C. B. Sayer.

Representatives on—

Council of State:—The Hon'ble Sir A H Froom.

Bombay Legislative Council: Messrs. H. P. W. Macnaghten, M.L.C and S. J. Gillum, M.L.C

Bombay Improvement Trust: Mr. Harry T. Gorrie.

Bombay Port Trust:- The Hon Sir A. H Froom Mr A K. Graham, Mr T. W Dowding, Mr. Harry T Gorrie and Mr F C. Annesley.

Bombay Municipality: Messrs. F. Portlock (James Mackintosh & Co.) and W. Turner Green (A. F. Ferguson & Co.)

Advisory Board of Sydenham College of Commerce and Economics: Messrs. W. A. Haig Brown and C. H. Wilson, C.I.E.

Bombay Smoke Nuisances Commission: Mr. A. Geddis.

St. George's Hospital Advisory Committee: Mr. V. A. Grantham.

Indigenous Industries Advisory Committee: Mr. H. P. W. Macnaghten, M.L.C.

Special Work.

One of the most important functions performed by the Chamber is that of arbitration in commercial disputes. Rules for this have been in existence for many years and have worked most satisfactorily. The decisions are in all cases given by competent arbitrators appointed by the General Committee of the Chamber and the system avoids the great expense of resort to the Law Courts.

A special department of the Bombay Chamber is its Statistical Department, which prepares a large amount of statistical returns connected with the trade of the port and of great importance to the conduct of commerce. The department consists of fourteen Indian clerks who, by the authority of Government, work in the Customs House and have every facility placed at their disposal by the Customs authorities. They compile all the statistical information in connection with the trade of the port, in both export and import divisions, which it is desirable to record. No other Chamber in India does similar work.

The Bombay Chamber publishes a Daily Arrival Return which shows the receipts into Bombay of cotton, wheat and seeds, and a Daily Trade Return, which deals with trade by sea and shows in great detail imports of various kinds of merchandise and of treasure, while the same return contains particulars of the movements of merchant vessels.

The Chamber publishes twice a week detailed reports known as Import and Export manifests, which give particulars of the cargo carried by each steamer to and from Bombay.

Three statements are issued once a month. One shows the quantity of exports of cotton, seeds and wheat from the principal ports of the whole of India. The second gives in detail imports from Europe, more particularly in regard to grey cloths, bleached cloths, Turkey red and scarlet cloths, printed and dyed goods, fancy cloth of various descriptions, woollens, yarns, metals, kerosine oil, coal, aniline dyes, sugar, matches, wines and other sundry goods. The third statement is headed, "Movements of Piece Goods and Yarn by Rail," and show the despatches of imported and local manufactured piece-goods and yarn from Bombay to other centres of trade served by the railways.

The "Weekly Return" issued by the Chamber shows clearances of a large number of important descriptions of merchandise. A return of "Current Quotations" is issued once a week, on the day of the departure of the English mail, and shows the rates of exchange for Bank and Mercantile Bills on England and Paris, and a large quantity of general banking and trade information.

The annual reports of the Chamber are substantial tomes in which the whole of the affairs of the Chamber and the trade of the port during the past year are reviewed.

The Chamber has also a Measurement Department with a staff of 18, whose business is that of actual measurement of exports in the docks before loading in steamers. Certificates are issued by these officers with the authority of the Chamber to shippers and ship agents as to the measurement of cotton and other goods in bales or packages. The measurers are in attendance on the quays whenever there are goods to be measured and during the busy season are on duty early and late. The certificates granted show the following details:—

(*a*) the date, hour and place of measurement;
(*b*) the name of the shipper;
(*c*) the name of the vessel;
(*d*) the port of destination;
(*e*) the number and description of packages;
(*f*) the marks;
(*g*) the measurement; and, in the case of goods shipped by boats;
(*h*) the registered number of the boat;
(*i*) the name of the tindal.

Bombay Millowners' Association.

The Bombay Millowners' Association was established in 1875 and its objects are as follow:—

(*a*) The protection of the interests of millowners and users of steam water and/or electric power in India
(*b*) The promotion of good relations between the persons and bodies using such power;
(*c*) The doing of all those acts and things by which these objects may be furthered.

Any individual partnership or company, owning one or more mill or mills or one or more press or presses or one or more ginning or other factory or factories actuated by steam, water, electric and/or other power is eligible for membership, members being elected by ballot. Every member is entitled to one vote for every complete sum of Rs. 50 paid by him as annual subscription.

The membership of the Association in 1921 numbered 95.

The following is the Committee for 1921 :—

Mr. J. A. Kay (*Chairman*), Capt E. V Sassoon (*Deputy Chairman*), Sir Dinshaw M. Petit, Bart , Sir Sassoon David, Bart , Sir Fazulbhoy Currimbhoy, Kt., The Hon'ble Sir Dinshaw E Wacha, Kt Sir Vithaldas D Thackersey, Kt, M.L.A Mr. Manmohandas Ramji, M.L.A. Mr. F. E. Dinshaw, Mr A Geddis, Mr. Mathradas Goculdas, Mr. H. M. Mehta, Mr. Tricumdas Gordhandas, Mr Narottam Morarji, Mr. Cowasji Jehangir, (Junior) C.I.E., O.B.E., M.L.C., Mr. Jehangir B Petit, M.L.C., Mr. N. B. Saklatwalla, Mr. H. H. Sawyer, Mr. S Taylor and Mr C. N. Wadia, C.I.E., M.L.C.

Mr. C. B. Sayer, *Secretary.*

The following are the Association's Representatives on public bodies :—

Indian Legislative Assembly : Sir Vithaldas D. Thackersey, Kt , M.L.A.

Bombay Legislative Council. Mr Jehangir B. Petit, M.L.C.

Bombay Port Trust: Sir Vithaldas D Thackersey, Kt., M.L.A.

City of Bombay Improvement Trust: Sir Vithaldas D. Thackersey, Kt., M.L.A.

Victoria Jubilee Technical Institute: Mr. Jehangir Bomanjee Petit.

Bombay Smoke Nuisances Commission Messrs. C. N. Wadia, C.I.E., M.L.C. and W. A. Sutherland.

Advisory Board of Sydenham College of Commerce and Economics : Mr. J. A. Kay.

Cotton Contracts Board : Messrs. A. Geddis and Manmohandas Ramjee., M.L.A.

Indian Merchants' Chamber.

The Bombay Indian Merchants' Chamber and Bureau was established in 1907 with the following objects :—"To encourage a friendly feeling and unanimity among the commercial men on all subjects involving their common good; to promote and protect the trade, commerce and manufactures of India and in particular to promote the general commercial interests of the Presidency of Bombay; to consider and deliberate on all questions affecting the rights of Indian Merchants, to represent to the Government their grievances, if any, and to obtain by constitutional methods the removal of such grievances ; to collect and compile and distribute in such manner as may be the most expedient for purposes of disseminating commercial and economic knowledge, all statistics and other information relating to trade, commerce and finance, specially India : as well as to form and maintain library, and generally to do all such matters as may promote the above objects in view; to arbitrate between parties willing to refer and abide by the judgment of the Chamber; to receive and decide references of matters of usage and custom in dispute, recording such decisions of future guidance and assisting by this and such other means, as the committee for the time being may think fit; to form a code of practice so as to simplify and facilitate the transaction of business."

The Chamber has not yet taken up the work of arbitration, measurements, etc.

The following bodies are connected directly and indirectly with the Chamber, though no public body is directly affiliated to it :—

The Bombay Native Piece-goods Association (which sends a large number of representatives);

The Grain Merchants' Association (which is a member);

The Hindustani Native Merchants' Association (which is a member);

The Bombay Rice Merchants' Association

The Bombay Fancy Piece-goods Association;

The Bombay Yarn, Copper and Brass Native Merchants' Association.

Under the Montagu-Chelmsford Reforms, the Chamber has the right of electing one representative on the Indian Legislative Assembly and one on the Bombay Legislative Council. The Chamber also has the right to elect a representative on the Board of the Sydenham College of Commerce and Economics, Bombay.

Any person engaged in mercantile pursuits or interested in trade and commerce desirous of joining the Chamber is eligible for membership, there being two classes of members, *viz.*, Ordinary and Honorary. Ordinary members shall be (1) Resident members who pay Rs. 30 annual fee, except that if an Association joins as a member it shall have to pay an annual fee of Rs. 125, and (2) Mofussil members who pay Rs. 25 as annual fee. An ordinary member also pays an entrance fee of Rs. 50 on being elected. The Chamber has got 519 members.

Gentlemen distinguished for public services or eminent in commerce and manufactures or otherwise interested in the aims and objects of the Chamber may be elected as Honorary members by a General Meeting of the Chamber on the recommendation of the Committee and as such are exempted from paying subscriptions. They are not entitled to vote at any meeting of the Chamber nor they are eligible to serve on the Committee. They are, however, supplied all the publications of the Chamber free of charge.

The following are the office-bearers of the Chamber for the year 1920-21 :—

Chairman.—Mr Lalji Naranji.

Vice-Chairman.—Mr. Hansraj Pragji Thackersey.

Committee.—Mr. Purshottamdas Thakurdas C.I.E , M.B.E., Mr. Chunilal Mehta, M.L.C., Mr. Manmohandas Ramji, M.L.A., Mr. Jehangir Bomanji Petit, Sir Fazulbhoy Currimbhoy, Mr. Lallubhai Samaldas, C.I.E., Mr. Lakshmidas Ravji Tarsey, Sir Vithaldas D. Thackersey, Mr. Motilal Kanji, Mr. Fazul Ibrahim Rahimtulla, Mr S. R. Bomanji, Mr. Surajmal Lallubhai, Mr. Jamnadas Dwarkadas, Mr. Jethmal Narandas, Mr. Manu Subedar, Mr. Vallabhdas Chaturbhuj Shivji, Mr. S. N. Pochkhanawala, Mr. Mavji Govindji, Sir Dinshaw M. Petit,

Mr. Kikabhoy Premchand, Mr. Phiroze J. Billimoria, Mr. B. F. Madon, Mr. N. M. Muzumdar, Mr. Rewashankar Jugjivan, Mr. Velji Lakhamsey Napu, and Mr. Mathuradas Kanji Matani.

The following are the Chamber's representatives on various public bodies:—

Indian Legislative Assembly: Mr. Manmohandas Ramji, M.L.A.

Bombay Legislative Council.—Mr. Chunilal V. Metha, M.A., L.L.B., M.L.C.

Bombay Port Trust.—Mr. Manu Subedar, B.A., B.SC. (Econ.), F.S.S., Barrister-at-Law.

Advisory Board of the Sydenham College of Commerce.—The Hon. Sir D. E. Wacha.

The staff of the Chamber include:—

Secretary.—Mr. J. K. Mehta, M.A.

Assistant Secretaries:—Mr. S. M. Muzumdar, M.A., L.L.B., and Mr. K. M. Desai (B. Com.)

Auditor.—Mr. Devidas Vithaldas.

Chamber's Solicitors.—Messrs. Captain and Vaidya.

The Chamber publishes every month a journal in Gujarati giving information on commercial and industrial subjects and publishing all statistics considered important relating to trade and commerce of India.

Cotton Trade Association.

The Bombay Cotton Trade Association, Limited, was founded in 1876. The objects for which it was established were, *inter alia*, "to adjust disputes between persons engaged in the cotton trade, to establish just and equitable principles in the trade, to maintain uniformity to rules, regulations and usages in the trade, to adopt standards of classification in the trade, to acquire, preserve and disseminate useful information connected with the cotton interests throughout all markets and generally to promote the cotton trade of the City of Bombay and India and augment the facilities with which it may be conducted." In 1892 the Association was incorporated under the Indian Companies Act, 1882, with a Capital of Rs. 50,000, in 50 shares of Rs. 1,000 each. In 1917 the share capital was increased to Rs. 60,000. In addition to the shareholders (Members), the Association had in 1918 126 Associate Members. The affairs of the Company are managed by a Board of Directors not less than nine or more than twenty in number. The present Directorate is constituted as follows:—

Messrs. C. W. Du Breul, *Deputy Chairman*, V. A. Grantham, W. Ellis Jones, B. C. Reade, S. B. Samollys, J. A. Grant, G. Wesche-Dart, R. Cedraschi, P. J. Negreponte, and C. N. Wadia, C.I.E.

Secretary.—Mr. D. Mehta.

Bombay Native Piece-Goods Merchants' Association.

The objects of the Association are as follow:—

(*a*) To promote by creating friendly feelings and unity amongst the Merchants, the business of the piece-goods trade in general at Bombay, and to protect the interest thereof; (*b*) to remove, as far as it will be within the powers of the Association to do so, all the trade difficulties of the piece-goods business and to frame such line of conduct as will facilitate the trade; (*c*) to collect and assort statistics relating to piece-goods and to correspond with public bodies on matters affecting trade, and which may be deemed advisable for the protection and advancement of objects of the Association or any of them; and (*d*) to hear and decide disputes that may be referred to for arbitration.

The following are the office-bearers for the current year:—

Chairman—Mr. Manmohandas Ramji, M.L.A., J.P.

Deputy Chairman.—Mr. Motilal Kanji, B.A., L.L.B.

Hon. Joint Secretaries—Messrs. Goculdas Jivraj Dayal and Hurjiwan Walji.

Hon Treasurer.—Mr. Mulji Luxmidas.

Grain Merchants' Association.

The object of this body is "to promote the interests of the merchants and to put the grain and seeds trade on a sound footing." It is an influential body of large membership. The office holders for the current year are as follow.—

Chairman—Mr. Velji Lakhamsi, B.A., LL.B.

Vice-Chairman.—Mr Ramdas Narandas (The India Agency, Ltd).

Hony. Secretary—Mr. Jeiam Cooverji (Messrs. Shivnarain Baldeo)

Secretary.—Mr. Uttamram Ambaram, B.A., LL.B.

KARACHI.

The objects and duties of the Karachi Chamber of Commerce are set forth in terms similar to those of Bombay. Qualifications for membership are also similar. Honorary Membership may be conferred upon "any gentlemen interested in the affairs and objects of the Chamber" subject to election by the majority of votes of members. All new members joining the Chamber pay Rs. 500 entrance fee and the monthly subscription is Rs. 18. The subscription to the Chamber's periodical returns is at present fixed at Rs. 5 per month. The affairs of the Chamber are managed by a committee of ten members, consisting of a Chairman, Vice-Chairman and eight members, elected at the annual meeting of the Chamber as early in the year as possible. The Chamber elects a representative on the Bombay Legislative Council, three representatives on the Karachi Port Trust and two on the Karachi Municipality. There were last year 60 members of the Chamber. The following are the officers for the current year:—

Chairman.—Mr. F. Clayton, M.I.C. (Fleming Shaw & Co.).

Vice-Chairman.—Mr. H. F. P. Hearson (Bombay Company, Ltd.)

Committee.—Messrs. C. C. Demetriadi (Messrs. Ralli Bros), Geo. Gordon (Chartered Bank of India, Australia and China); F. R. Hawkes, O.B.E., (North Western Railway); H. G. Houghton (Messrs. Donald Graham & Co.), B. F. Jones (Messrs. Forbes, Forbes Campbell & Co.), D. J. Macgillvray (Messrs. Mackinnon, Mackenzie & Co.); J. G. Nicholson (Messrs. Sanday, Patrick & Co.), S. C. Woodward (Messrs. Clements, Robson & Co.)

Representative on the Bombay Legislative Council.—Mr. F. Clayton, M.L.C.

Representatives on the Karachi Port Trust.—Mr. C. C. Demetriadi; Mr. H. G. Houghton, Mr. S. C. Woodward.

Representatives on the Karachi Municipality.—Mr. F. R. Hawkes, O.B.E., Mr. S. Moore.

Secretary.—Major Alan Duguid, A.F.C., late R.A.F.

Public Measurer.—Captain H. A. Cary.

The following are the principal ways in which the Chamber gives a special assistance to members. The Committee take into consideration and give an opinion upon questions submitted by members regarding the custom of the trade or of the Port of Karachi. The Committee undertake to nominate European surveyors for the settlements of disputes "as to the quality or condition of merchandise in which both parties desire the Chamber to do so." When two members of the Chamber or when one member and a party who is not a member have agreed to refer disputes to the arbitration of the Chamber or of an arbitrator or arbitrators nominated by the Chamber, the Committee will undertake to nominate an arbitrator or arbitrators, under certain regulations. A public measurer is appointed under the authority of the Chamber to measure pressed bales of cotton, wool hides and other merchandise arriving at or leaving the port.

MADRAS.

The Madras Chamber of Commerce was founded in 1886. All merchants and other persons engaged or interested in the general trade, commerce and manufactures of Madras are eligible for membership. Any assistant signing a firm or signing *per pro* for a firm is eligible. Members who are absent from Madras but pay their subscriptions may be represented in the Chamber by their powers-of-attorney, as honorary members, subject to ballot. Honorary members thus elected are entitled to the full privilege of ordinary members. Election for membership as by ballot at a general meeting, a majority of two-thirds of the recorded votes being necessary to secure election. Every member pays an entrance fee of Rs. 100, provided that banks, corporate bodies and mercantile firms may be represented on the Chamber by one or more members and are liable for an entrance fee of Rs. 100 once in ten years each. The subscription shall not exceed Rs. 300 per annum, payable quarterly in advance, subject to reduction from time to time in accordance with the state of the Chamber's finances. Absentees in Europe pay no subscription and members temporarily absent from Madras pay one rupee per month. Honorary members are admissible to the Chamber on the usual conditions. Members becoming insolvent cease to be members but are eligible for re-election without repayment of the entrance donation.

The Chamber undertakes arbitrations and surveys, the granting of certificates of origin and the registration of trade marks. One of the rules for the last named is "that no trade mark on ticket shall be registered on behalf of an Indian firm trading under a European name."

The following publications are issued by the Chamber:—Madras Price Current and Market Report, Tonnage Schedule and Madras Landing Charges and Harbour Dues Schedule.

There are 50 members and seven honorary members of the Chamber in the current year and the officers and committee for the year are as follows:—

Chairman.—Mr. J. F. Simpson.

Vice-Chairman.—Mr. W. Alexander.

Committee.—Messrs. A. F. Buchanan, W. Lamb, T. M. Ross, F. E. L. Weike and W. A. Turner.

The following are bodies to which the Chamber are entitled to elect representatives, and the representatives elected for the year:—

Madras Legislative Council.—Mr. Jas. F. Simpson.

Madras Port Trust.—Mr. Jas. F. Simpson, Mr. W. Alexander, Mr. T. M. Ross and Mr. W. A. Turner.

Madras Municipal Corporation.—Mr. A. B. Bradshaw.

British Imperial Council of Commerce, London—Mr. A. L. Jackson (Europe).

Secretary.—Mr. H. E. H. Sladen.

Southern India Chamber.

The Southern India Chamber of Commerce has its Registered Office in Madras. The objects of the Chamber are those usual for such bodies, concerning the promotion of trade, especially in the Madras Presidency, and the interests of members. Special objects are stated to be:—

"To maintain a Library of books and publications of commercial interest, so as to diffuse commercial information and knowledge amongst its members.

"To establish Museums of commercial products or organise exhibitions, either on behalf of the Chamber or in co-operation with others."

There are two classes of members, permanent and honorary. The usual conditions as to eligibility for election prevail.

The right of electing two representatives to the Madras Port Trust was accorded to the Chamber by the Madras Port Trust Amend-

ment Act, 1915. Members of the Chamber hold seats in the Madras Legislative Council and the Chamber has also been accorded the right of electing a representative to that body. Under the Madras City Municipal Act, 1919, the Chamber has the right of electing two Councillors to the Madras Corporation.

President.—M. Jamal Mahomed Sahib Bahadur.

Vice-Presidents.—Dewan Bahadur Govindas Chathoorbhujadas and Rao Sahib M. C. T. Muthia Chetti.

Honorary Secretaries.—Mahomed Musa Sait and C. Gopala Menon.

Assistant Secretary.—C. Duraiswamy Aiyangar, B A.

UPPER INDIA CHAMBER.

The Upper India Chamber of Commerce is concerned with trade, commerce and manufactures in the United Provinces and has its registered office at Cawnpore. Members are elected by the Committee, subject to confirmation by the next general meeting of the Chamber. Gentlemen distinguished for public service, or eminent in commerce or manufactures, may be elected honorary members of the Chamber by the members in a General Meeting and such shall be exempted from paying any subscription to the Chamber. There is no entrance fee for membership, but subscriptions are payable as follows:—A firm company or association having its place of business in Cawnpore, Rs. 200 a year; an individual member, resident or carrying on business in Cawnpore, Rs. 100; firms or individuals having their places of business or residence outside Cawnpore pay half the above rates, but the maintenance of a branch office in Cawnpore necessitates payment of full rates.

The affairs and funds of the Chamber are managed by a Committee of ten members, which has power to constitute Local Committees, of from four to seven members each, at trade centres where membership is sufficiently numerous to justify the step. Such Local Committees have power to communicate only with the Central Committee.

The Chamber appoints arbitration Tribunals for the settlement and adjustment of disputes when invited to do so, members of the Tribunals being selected from a regular printed list of arbitrators.

The Chamber has in the present year 75 members, three honorary members and six affiliated members.

The following are the officers:—

President—Sir Thomas Smith, KT, V. D., M.L.C. (Muir Mills Co., Ltd.)

Vice-President—Mr S. H. Taylor (Empire Engineering Co., Ltd.).

Members.—Mr. C. T. Allen, C.I.E. (The British India Corporation, Ltd.), Mr A. W. Lilley, M.B.E. (The Cawnpore Woollen Mills Co.), Mr. A. A. Black, M.A. (The Victoria Mills Co., Ltd.), Mr. C. R. O'Malley (Messrs W. H. Brady & Co., Ltd.), Mr H. B. Saxby, M.L.C. (The Empire Engineering Co.), Mr N. Charles (The National Bank of India, Ltd.), Mr J. P. Srivastava, M.S.C. (The Western India Prospecting Syndicate, Ltd.) and Mr. H. H. Yule (The East Indian Railway Co.).

Secretary.—Mr. J. G. Ryan.

Head Clerk.—Mr. B. N. Ghosal.

PUNJAB.

The Punjab Chamber of Commerce has its headquarters at Delhi and exists for the care of mercantile interests on the usual lines in the Punjab, the North-West Frontier Province and Kashmir. There is a branch of the Chamber at Amritsar. Members are elected by ballot, the only necessary qualification being interest in mercantile pursuits. There is no entrance fee. The rate of subscription is Rs. 10 per month. The Chamber returns one member to a seat on the Reformed Punjab Legislative Council jointly with the Punjab Trades Association and one on the Municipal Corporation, Delhi and Amritsar.

The following are the Officers, Committee and Representatives on public bodies as at the end of November 1920:—

Chairman.—Mr. V. F. Gray (Messrs. R. J. Wood & Co., Delhi.)

Vice-Chairman.—Sardar Sobha Singh (Khalsa Spinning and Weaving Mills, Delhi.)

Committee.—Mr. V. F. Gray (Messrs. R. J. Wood & Co.); Sardar Sobha Singh (Khalsa Spinning and Weaving Mills); Mr. F. J. Pruce (Messrs. James Currie & Co., Delhi); Mr. J. C. Roberts (Messrs. Gutmann & Co., Delhi), Sardar Jaidev Singh (R. B. Boota Singh & Sons); Lala Shri Ram (Delhi Cloth and General Mills, Ltd.), Mr. P. Mukerjee (Messrs. P. Mukerjee & Co., Delhi); Lala Girdhari Lal (Amritsar); Lala Lachminarain (Messrs I. D. Lachminarain, Amritsar); Lala Motiram Mehra (Messrs. Motiram Mehra & Co., Amritsar), and Mr. Abdul Sattar S. M. Fazl, Ellahie, Delhi)

Representative on the Delhi Municipal Committee.—Lala Shri Ram (Delhi Cloth and General Mills, Ltd.)

Honorary Secretary—Mr. P. Mukerjee.

The Chamber is affiliated with the British Imperial Council of Commerce, London, and is represented in England by Sir James Walker, C.I.E., Alliance Bank of Simla, and Mr. H. C. Chalmers, National Bank of India, Ltd., London, and is a member of the Associated Chambers of Commerce of India and Ceylon, Calcutta.

UNITED PROVINCES.

The number of members on register is 135 (89 Local and 46 Mofussil). All the important commercial and industrial interests of the Provinces of Agra and Oudh are represented.

Committee.

President.—Rai Bahadur Lala Bishambhar Nath, M.L.A., Proprietor, Sri Krishna Ginning Factory and Director of the Punjab National Bank, Ltd., Cawnpore.

Vice-Presidents.—Dr. Murari Lal, M. B, Babu Sriram Khanna (Managing Director of Ramchandra Gursahaimul Cotton Mills Co., Ltd., Lucknow), Lala Ram Kumar (of Messrs. Ramkumar Rameshur Dass), Cawnpore.

Secretary.—Babu Vikramajit Singh, M.L.C., (Director of Ramchandra Gursahaimul Cotton Mills Co., Ltd., Lucknow)

Joint Secretary.—Mr. J. P. Srivastava (of the Western India Prospecting Syndicate, Cawnpore)

Members—Mr T. Wilberforce (of the Pioneer Mills, Ltd, Cawnpore); Babu Dwarka Pershad Singh, Cawnpore; Mahashey Kashi Nath, Cawnpore; Babu Behari Lal, Cawnpore; Lala Mahadeo Pershad (of Messrs. Phoolchand Fatehchand). Cawnpore; Mr. S M. Raza, (of Whitfield & Co.), Cawnpore; Lala Saligram, Cawnpore; Lala Jairamdass (of the Lyalpur Sugar Co.), Cawnpore; Mr. I. D. Varshanie (Propt. of the U. P. Glass Works), Bahjoi, Dist. Moradabad; Babu Gur Pershad (of Messrs. Bastiram Matadin), Cawnpore: Lala Jwahar Lal Jainy (of Messrs. Jainy Brothers), Cawnpore.

BURMA.

The Burma Chamber of Commerce, with headquarters at Rangoon, exists to encourage friendly feeling and unanimity among commercial men on all subjects involving their common good, to promote and protect trade, commerce and manufactures and, in particular, the general mercantile interests of the province, to communicate with public authorities, associations and individuals on all matters, directly or indirectly affecting these interests, and to provide for arbitration between parties willing to refer to, and abide by, the judgment of arbitrators appointed by the Chamber. The following are affiliated bodies:—

Burma Fire Insurance Association.

Burma Marine Insurance Agents' Association.

Rangoon Import Association.

The Chamber elects representatives to the following Public Bodies:—

Council of State.

Burma Legislative Council.

Rangoon Port Trust Board.

Rangoon Municipal Committee.

Victoria Memorial Park Trustees.

Pasteur Institute Committee.

Burma Boiler Commission.

Burma University Council.

Rangoon Development Trust.

Lord Haig's Officers' Association.

All British corporations, companies, firms or persons engaged or interested in mercantile pursuits, such as merchants, bankers, shipowners and brokers or who are connected with agriculture, mining, manufactures, insurance, railways, commerce, art, science or literature shall be eligible to become Chamber Members. Every non-British concern or person, similarly engaged or interested as indicated above, other than a subject of a State with which the British Empire was at War on September 19th, 1918, shall be eligible for election as an Associate Member. The annual subscription of each Chamber Member shall be Rs. 480 per annum and of each Associate Member Rs. 360 per annum. An entrance fee of Rs. 150 is payable by each new Member. Officials and others indirectly connected with the trade of the province or who may have rendered distinguished service to the interests represented by the Chamber may be elected by the Committee either on their own motion or on the suggestion of two Members as Honorary Members of the Chamber. Honorary Members are not required to subscribe to the funds of the Chamber.

The Chamber undertakes arbitrations in addition to its ordinary work. It does not publish any statistical returns.

Secretary.—Mr. C. A. Cuttriss, M.B.E, F.R.G.S, F.R.S.A.

Representative on the Council of State.—Sir Edgar Holberton, KT., C.B E.

Representative on the Burma Legislative Council.—A. B. Ritchie, Esq., M.L.C.

Representatives on the Rangoon Port Trust Board.—Messrs. J. Hogg, A. B. Ritchie, M.L.C., J. A. Swan, and A. J. Anderson, C.S.I.

Representative on the Rangoon Municipal Committee.—Mr. A. McKeand

Victoria Memorial Park Trustee.—Mr. J. Hogg.

Pasteur Institute Committee.—Mr. A. B. Ritchie, M.L.C.

Burma Boiler Commission.—Mr. C. A. Cuttriss, M.B E., F.R.G.S., F.R.S.A.

Burma University Council.—H. Smiles, Esq., M.A.

Rangoon Development Trust.—A. J. Anderson, Esq., C.S.I.

Lord Haig's Officers' Association.—W. T. Henry, Esq.

COCANADA.

The Cocanada Chamber of Commerce was established on 29th October, 1868.

The following are the office-holders of the Cocanada Chamber of Commerce, which has its headquarters at Cocanada, the chief port on the Coromandel Coast, north of Madras :—

Messrs W Stephens (Agent, Imperial Bank of India,) *Chairman.*
C Hodding (Coromandel Co., Ltd.), E H. D'Cruz (Wilson & Co.), A. Simson (Simson Bros), M. R. Ry. Rao Bahadur K. Suryanarayanamaurty Naidu Garu and G. M. Lake (Innes & Co.), G. W. Thompson (Shaw Wallace & Co), Max Boesch (Volkart Bros), P. Lefaucheur (Gordon Woodroffe & Co.), F. L. R. Bosworth (J. H. Vavasseur & Co), S. Deane (Bank of Madras, Cocanada.)

Secretary—Mr. J. A. Muller.

The rules of the Chamber provide "that by the term 'member' be understood a mercantile firm or establishment, or the permanent agency of a mercantile firm or establishment, or a society of merchants carrying on business in Cocanada, or other place in the Districts of Kistna, Godavari, Vizagapatam, and Ganjam, and duly electing according to the Rules of the Chamber, and that all such be eligible, but only members resident in Cocanada can hold office." Members are elected by ballot. The Committee, when called upon by disputing members or non-members of the Chamber, give their decision upon all questions of mercantile usage and arbitrate upon any commercial matter referred to them for final judgment. In either case a fee of Rs. 16 must accompany the reference.

The Committee consist of 3 members, including the Chairman, and the Committee are elected by ballot, the Chairman at the general meeting of January in each year, for a term of 12 months. The entrance fee for each member, whose place of business is in Cocanada, is Rs. 50 and for each member whose place of business is elsewhere is Rs. 25. The subscription for each member whose place of business is in Cocanada is Rs. 120 per annum, and for each member whose place of business is elsewhere is Rs. 60 per annum, payable quarterly in advance. Committee meetings are held on the 1st Tuesday in the month and general meetings on the 2nd Tuesday.

A weekly slip of current rates of produce freights, and exchange is drawn up by the Committee.

CEYLON.

The Ceylon Chamber of Commerce was established on the 25th March 1839 and was incorporated in 1895, with its headquarters at Colombo. All firms and persons engaged in the general trade of Ceylon are admissible as members and every person or firm desirous of joining the Chamber must be proposed by one member, seconded by another and balloted for by the whole Chamber. The affairs of the Chamber are conducted by a Board of Directors consisting of Chairman and Vice-Chairman and from 5 to 10 members.

The following is the membership of this Board at the present time :—

Mr. C. S. Burns (*Chairman*); Mr. W. Sutherland Ross (*Vice-Chairman*); Mr. P. E. Beeston; Hon'ble Sir J. Thomson Broom, Kt., Mr. W. Fraser, Mr. W. Philips, Hon'ble Mr. J. Lochore, Mr. R. M. Milne, Mr. W. F. Hutson, Hon'ble Mr. R. S. Philpott, and Mr. D. W. Watson,

Secretary.—Mr. A. Duncan, A.C.A.

Representative in the Legislative Council.—Sir J. Thomson Broom.

THE INDIAN INDUSTRIAL AND COMMERCIAL CONGRESS.

The credit of conceiving the idea of organizing an Indian Industrial Conference under the auspices of the Industrial Association of Western India belongs to the late Mr. M. G. Ranade. Discussion of questions relating to agriculture, finance, commerce and industry of the whole country by inviting experts in different branches, the formation of well informed public opinion on economical problems were the objects kept by Mr. Ranade

in view in convening this meeting. The first session of the Conference was held at Poona in August 1891, under the Presidency of Captain Beauclerk of Hyderabad and was attended by distinguished European and Indian gentlemen. Two more sessions of the Conference were held in 1892 and 1893. But owing to the elevation of Mr. M. G. Ranade to the High Court and his transfer to Bombay this movement came virtually to a standstill, until it was revived in 1905. The National Congress almost since its inception has given prominent attention to some of the principal economic questions and the famines of 1896-97 and 1899-1900 contributed not a little to push the economical problem to the forefront and resulted in the organization of three or four Industrial and Agricultural exhibitions between 1900 and 1905 under the auspices of the National Congress, which gave the people an opportunity to take stock of their gains and losses in the field of arts and industries and opened their eyes to their industrial backwardness. Small committees were appointed at these exhibitions to devise means for the revival of existing industries and also for the starting of new ones.

In the year 1905 the exhibition Committee of Benares took the important step of reviving the Industrial Conference organization. The first session was accordingly held under the distinguished presidency of the late Mr. R. C. Dutta. During the last fourteen years of its existence, this conference has been fortunate in securing very able and influential gentlemen to occupy the Presidential Chair.

It has succeeded in creating an intelligent and powerful public opinion on mercantile and commercial matters, and in bringing about an industrial awakening throughout the country. In order to add to its efficiency, one of the resolutions unanimously passed at the Delhi-sitting, entrusted the Standing Committee of the Conference for the year, with the onerous task of over-hauling its constitution with a view to its complete re-organization and the improvement of its driving capacity. The Committee, after very careful and anxious consideration have come to the conclusion that the larger interests of the country would be more effectively served by reducing to the minimum the duplication of existing machinery, and by concentrating the energy and resources of the country into as few channels as possible. It has therefore been decided to bring about an amalgamation between the Conference and the Indian Commercial Congress which was started in Bombay in the year 1915 with very much the same object as the Conference, thus uniting their forces, strengthening their resources, and more effectively focussing the views of the public on all matters and problems relating to the commerce and industry of the country.

CONSTITUTION—The objects of the Conference as laid down in its revised constitution are as follows :—

AIMS & OBJECTS.—The Indian Industrial and Commercial Congress shall attempt to promote, protect and develop agriculture, commerce, manufactures and trade of India, on sound lines and to introduce new industries wherever possible.

(*a*) By holding annual sessions of all Chambers of Commerce to deliberate upon and discuss various commercial, industrial, economic and agricultural questions affecting the vital interests of India and to voice the views of the country by passing resolutions.

(*b*) By holding Conferences and meetings to deliberate upon and discuss the economic, agricultural and industrial needs and problems affecting the whole country.

(*c*) By collecting correct statistics and other information on the above subjects

(*d*) By disseminating the information so collected through the medium of books, pamphlets or leaflets.

(*e*) By making representations to the various departments of British Government, to the Railway Companies, the Rulers of Indian States and Industrial and Commercial bodies or Associations on all matters pertaining to or bearing on agriculture, manufactures, trade and commerce of the country.

(*f*) By the formation of industrial and commercial Associations in the various parts of the country, where they are non-existent.

In pursuance of the above objects, 14 sessions of the Indian Industrial Conference and one session of the Indian Commercial Congress were held before the amalgamation. The Report of each session contains the proceedings and the papers submitted to each Conference and covers over 500 pages of closely printed matter. The first joint session was held in Bombay in January 1920 in which important resolutions were passed. The office also has compiled the following books:—The Directory of Indian Goods and Industries (6th Edition) containing the names and addresses of manufacturers of and dealers in the Indian made goods, Indian Banks, etc. The Directory of Technical Institutions in India (2nd edition) gives the fees charged and other particulars relating to Agricultural, Commercial and Technical schools and colleges in India. The Guide to Modern Machinery gives the addresses of makers of machinery for starting three hundred different industries.

In addition to the educative work, the office fulfils the functions of a **Bureau of Economic Intelligence.** Inquiries of the following nature are received in the office. Small capitalists and gentlemen of limited means seek the advice of the Central Office for starting small cottage industries, which do not require a large outlay of money or the use of expensive or intricate machinery. Persons wishing to start soap or candle works, varnish making and similar chemical industries, ask for an estimate of the cost of machinery and plant for these different concerns, as well as rates for the chemicals required by them and the names of the firms from whom they can obtain the supplies. Advice is sometimes sought by Indian States and private individuals anxious to start plantations of Ramie, and other fibre producing plants and the cultivation of Rubber and other economic products. Parents and guardians of

students have addressed the Office for information in connection with institutions both in India and in foreign countries, where the young men can get training suited to them in Electrical Engineering and other technical courses. Information is also supplied regarding Indian experts in various branches. Small concerns which have already commenced to place their goods in the market, expect the Office of the Industrial Conference to help them in pushing forward the sale of their goods by prevailing upon well-known merchants, to help them by guaranteeing the purchase of their goods up to a certain quantity every year.

The Conference wishes to take in hand the following projects:—

(1) To compile a list of Indian as well as of foreign experts, who by their training either here or in foreign countries and practical experience in different Industrial and Manufacturing branches are capable of rendering assistance to the capitalists and others intent on starting any new industry, or reviving old or existing concerns requiring expert aid.

(2) To organize a Commercial Museum at Bombay to display samples of indigenous and foreign industrial products, models of machinery, raw materials and artware.

The fees for different classes of Membership will be as shown below commencing with the year 1919:—

	Rs.
Patron	1,000 or above
Life Member	250 ,,
Donors	50 ,,
Ordinary member ..	10.

Honorary Joint Secretaries.—

Mr. Ambalal Sarabhai, Mr. Manu Subedar, B.A., B.Sc (Econ.), London, and Mr. J. K. Mehta, M.A.

Office.—19, Bank Street, Fort, Bombay

* The Peoples of India.

It is essential to bear in mind, when dealing with the people of India, that it is a continent rather than a country. Nowhere is the complex character of Indians more clearly exemplified than in the physical type of its inhabitants. No one would confuse the main types, such as Gurkhas, Pathans, Sikhs, Rajputs, Burmans, Nagas, Tamils, etc., nor does it take long to carry the differentiation much farther. The typical inhabitants of India—the Dravidians—differ altogether from those of Northern Asia, and more nearly resemble the tribes of Malaya, Sumatra and Madagascar. Whatever may be their origin, it is certain that they have settled in the country for countless ages and that their present physical characteristics have been evolved locally. They have been displaced in the North-West by successive hordes of invaders, including Aryans, Scythians, Pathans and Moghals, and in the North-East by Mongoloid tribes allied to those of Burma, which is India only in a modern political sense. Between these foreign elements and the pure Dravidians is borderland where the contiguous races have intermingled.

The people of the Indian Empire are divided by Sir Henry Risley (Caste, Tribe and Race, Indian Census Report, 1901: the Gazetteer of India, Ethnology and Caste, Volume I, Chapter 6) into seven main physical types. There would be eight if the Andamese were included, but this tiny group of Negritos may be disregarded.

The Turko-Iranian, represented by the Baloch, Brahui and Afghans of Baluchistan and the North-West Frontier Province. Probably formed by a fusion of Turki and Persian elements, in which the former predominate. Stature above mean; complexion fair; eyes mostly dark but occasionally grey; hair on face plentiful; head broad, nose moderately narrow, prominent, and very long. The feature in these people that strikes one most prominently is the portentious length of their noses, and it is probably this peculiarity that has given rise to the tradition of the Jewish origin of the Afghans.

The Indo-Aryan occupying the Punjab, Rajputana, and Kashmir, and having as its characteristics members the Rajputs, Khattris, and Jats. This type, which is readily distinguishable from the Turko-Iranian, approaches most closely to that ascribed to the traditional Aryan colonists of India. The stature is mostly tall; complexion fair; eyes dark; hair on face plentiful, head long; nose narrow, and prominent, but not specially long.

The Scytho-Dravidian, comprising the Maratha Brahmans, the Kunbis, and the Coorgs of Western India. Probably formed by a mixture of Scythian and Dravidian elements. This type is clearly distinguished from the Turko-Iranian by a lower stature, a greater length of head, a higher nasal index, a shorter nose, and a lower orbito-nasal index. All of these characters, except perhaps the last, may be due to a varying degree of intermixture with the Dravidians. In the higher groups the amount of crossing seems to have been slight; in the lower the Dravidian elements are more pronounced.

The Aryo-Dravidian or Hindustani, found in the United Provinces, in parts of Rajputana, and in Bihar and represented in its upper strata by the Hindustani Brahman and in its lower by the Chamar. Probably the result of the intermixture, in varying proportions, of the Indo-Aryan and Dravidian types. The head-form is long with a tendency to medium; the complexion varies from lightish brown to black; the nose ranges from medium to broad, being always broader than among the Indo-Aryans; the stature is lower than in the latter group, and usually below the average according to the scale. The higher representatives of this type approach the Indo-Aryans, while the lower members are in many respects not very far removed from the Dravidians. The type is essentially a mixed one, yet its characteristics are readily definable, and no one would take even an upper class Hindustani for a pure Indo-Aryan or a Chamar for a genuine Dravidian. The distinctive feature of the type, the character which gives the real clue to its origin and stamps the Aryo-Dravidian as racially different from the Indo-Aryan is to be found in the proportions of the nose.

The Mongolo-Dravidian, or Bengali type of Lower Bengal and Orissa, comprising the Bengal Brahmans and Kayasthas, the Mahomedans of Eastern Bengal, and other groups peculiar to this part of India. Probably a blend of Dravidian and Mongoloid elements, with a strain of Indo-Aryan blood in the higher groups. The head is broad; complexion dark; hair on face usually plentiful; stature medium; nose medium, with a tendency to broad. This is one of the most distinctive types in India, and its members may be recognised at a glance throughout the wide area where their remarkable aptitude for clerical pursuits has procured them employment. Within its own habitat the type extends to the Himalayas on the north and to Assam on the east, and probably includes the bulk of the population of Orissa; the western limit coincides approximately with the hilly country of Chota Nagpur and Western Bengal.

The Mongoloid, type of the Himalayas, Nepal, Assam, and Burma, represented by the Kanets of Lahul and Kulu; the Lepchas of Darjeeling and Sikkim; the Limbus, Murmis and Gurungs of Nepal; the Bodo of Assam; and the Burmese. The head is broad; complexion dark, with a yellow tinge; hair on face scanty; stature short or below average; nose fine to broad; face characteristically flat; eyelids often oblique.

The Dravidian type extending from Ceylon to the valley of the Ganges, and pervading Madras, Hyderabad, the Central Provinces, most of Central India and Chota Nagpur. Its most characteristics representatives are the Paniyans of Malabar and the Santals of Chota Nagpur. Probably the original type of the population of India, now modified to a varying extent by the admixture of Aryan, Scythian, and Mongoloid elements. In typical specimens the stature is short or below mean; the complexion very dark, approaching black; hair plentiful, with an occasional tendency to curl; eyes dark; head long; nose very broad, sometimes depressed at the root, but not so as to make the face appear

* The Census was taken in 1921. Provisional figures only are available and these are given at the end of this article.

flat. This race, the most primitive of the Indian types, occupies the oldest geological formation in India, the medley of forest-clad ranges, terraced plateau, and undulating plains which stretches roughly speaking, from the Vindhyas to Cape Comorin. On the east and the west of the peninsular area the domain of the Dravidian is conterminous with the Ghats, while further north it reaches on one side to the Aravallis, and on the other to the Rajmahal Hills. Where the original characteristics have been unchanged by contact with Indo-Aryan or Mongoloid people, the type is remarkably uniform and distinctive. Labour is the birthright of the pure Dravidian whether hoeing tea in Assam, the Duars, of Ceylon, cutting rice in the swamps of Eastern Bengal or doing scavenger's work in the streets of Calcutta, Rangoon and Singapore, he is recognizable at a glance by his black skin, his squat figure, and the negro-like proportions of his nose. In the upper strata of the vast social deposit which is here treated as Dravidian these typical characteristics tend to thin and disappear, but even among them traces of the original stock survive in varying degrees.

It must, however, be clearly understood that the areas occupied by these various types do not admit of being defined as sharply as they must be shown on an ethnographic map. They melt into each other insensibly; and, although at the close of a day's journey from one ethnic tract to another, an observer whose attention had been directed to the subject would realise clearly enough that the physical characteristics of the people had undergone an appreciable change, he would certainly be unable to say at what particular stage in his progress the transformation had taken place.

Contrasts.—The linguistic survey has distinguished in India about a hundred and thirty indigenous dialects belonging to six distinct families of speech. In the domain of religion, though the bulk of the people call themselves Hindus, there are millions of Mahomedans, Animists, Buddhists, Jains, Sikhs, and Christians. So also in respect of social customs. In the north near relatives are forbidden to marry; but in the south cousin marriage is prescribed and even closer alliances are sometimes permitted. As a rule, female chastity is highly valued, but some communities set little store by it, at any rate prior to marriage, and others make it a rule to dedicate one daughter to a life of religious prostitution. In some parts the women move about freely; in others they are kept secluded. In some parts they wear skirts; in others trousers. In some parts again wheat is the staple food; in others rice, and in others millets of various kinds. All stages of civilisation are found in India. At one extreme are the land-holding and professional classes, many of whom are highly educated and refined; at the other various primitive aboriginal tribes such as the head-hunting Nagas of Assam and the leaf-clad savages of the southern hills who subsist on vermin and jungle products.

MAIN STATISTICS OF THE INDIAN EMPIRE.

According to the revised areas adopted in the Census of 1911, the Indian Empire contains 1,802,657 square miles, or some 36,000 more than in 1901. About 23,000 square miles have been added owing to the enumeration for the first time of the Agency tracts attached to the North-West Frontier Province. A further 6,500 represent the area of the Sunderbans, or swampy littoral of the Ganges delta, which was left out of account at previous enumerations. Finally the Frontier State of Manipur has been found to contain about 5,000 square miles more than the estimate made in 1901.

Population Divisions.—The provinces under British administration comprise 1,093,074 square miles, or 60·6 per cent. of the total. The remainder is included in the Native States. The total population is 315,156,396, of which British territory contains 244,267,542, or 77·5 per cent. and the Native States 70,888,854 or 22·5 per cent.

Comparisons with Europe.—These stupendous figures can be grasped only by contrast. The Indian Empire is equal to the whole of Europe, except Russia. Burma is about the same size as Austria-Hungary; Bombay is comparable in point of area with Spain; Madras, the Punjab, Baluchistan, the Central Provinces and Berar and Rajputana are all larger than the British Islands; the United Provinces and Bihar and Orissa than Italy; and Hyderabad and Kashmir than Great Britain excluding Yorkshire.

The population of India exceeds that of Europe without Russia, and is considerably more than three times that of the United States of America. The United Provinces and Bengal, with the States attached to them, both have as many inhabitants as the British Islands, Bihar and Orissa as France, Bombay as Austria, and the Punjab as Spain and Portugal combined. The population of the Central Provinces and Berar approaches that of Brazil; Hyderabad and Burma have as many inhabitants as Egypt; Central India and Rajputana as Scotland and Ireland combined; and Assam as Belgium.

Density.—In the whole Empire there are on the average 175 persons to the square mile, or much the same as Europe outside Russia. In British territory the number to the square mile is 223 and in the Native States 100; the former figure exceeds by 34 the density ratio in France and the latter is identical with that in Spain.

There are great local variations in density. In nearly two-thirds of the districts, and States, the number of persons to the square mile is less than 200, and in about a quarter it ranges from 200 to 500. The units with less than 100 persons to the square mile covers two-fifths of the total area, but contains only one-eleventh of the population.

Causes of Density.—The productiveness of the soil is the main factor in determining the density of the Indian people. The most thickly peopled tracts are the level plains where practically every inch of the land is fit for tillage. This is notably the case in Bengal and Bihar and the United Provinces East. The next most densely peopled tracts are the low-lying plains along the sea coast in the southern part of the peninsula. In the United Provinces West and the Punjab East the configuration of the surface is equally favourable; the rainfall is more scanty and less

regular; but it is supplemented in many parts by water from the canals. The natural divisions which contain the coast districts of Orissa and north Madras, with a rainfall of 50 inches, has a relatively low mean density, but this is because it includes on the west a considerable hilly area, while on the east near the sea the ground is swampy and impregnated with salt. In the intermediate strip, between the littoral and the hills, the density is as great as in parts of the lower Gangetic Plain. Want of water is the main explanation of the comparatively sparse population in several more or less level tracts such as Gujarat, Rajputana East and Central India West, and the North-West dry area. In Assam there are extensive tracts of hill and jungle and sandy stretches in the strath of the Brahmaputra River, where permanent cultivation is out of question. The agricultural returns show that three-quarters of the whole area is cultivable but this simply means that crops of some kind can occasionally be grown. The proportion of the area fit for permanent cultivation must be less than half that shown in the returns.

TOWNS AND VILLAGES.

The definition of a town in the Indian census statistics includes every municipality; all Civil Lines not included within municipal limits; every cantonment; every other continuous collections of houses inhabited by not less than 5,000 persons, which may be treated as a town for census purposes. Only 9·5 per cent. of the population of India are found in towns as defined above, compared with 78·1 per cent. in England and Wales and 45·6 per cent. in Germany. Rather more than half the urban population of India is found in towns containing upwards of 20,000 inhabitants, about one-fifth in towns with from ten to twenty thousand, and the same proportion in those with from five to ten thousand; the remainder, about one-fifteenth, live in towns with less than five thousand. The tendency to urban aggregation is most marked in the west of India and least so in the north-east. The proportion of the urban to the total population in the main provinces ranges from 18 per cent. in Bombay to only 3 per cent. in Assam. The urban population of Upper India is much larger than it otherwise would be because of the numerous old capitals which are found there. In the future the main factors will be the expansion of trade and industrial development.

Sex in Towns.—In respect of the distribution by sex, the urban population in India presents a striking contrast to that of European countries. In Europe the proportion of females is larger in towns than in the general population, but in India it is considerably smaller, and the number of females per thousand males is only 847, compared with 953 in the population as a whole. The reason is that in this country the great majority of the domestic servants, shop hands and factory employes are males. The disproportion is most marked in large trading and industrial centres where the number of immigrants is large. In Calcutta, for example, the foreign-born population contains only 357 females per thousand males.

Religion in Towns.—Of the Parsis no fewer than six out of every seven are resident in towns; of the Jains, the proportion is nearly one-third; and of the Christians more than one-fifth. There is a marked contrast between these proportions and those for Hindus and Mahomedans who form the bulk of the population. Of the Mahomedans less than one-eighth, and of the Hindus less than one-eleventh, reside in towns. In the case of the former the proportion rises to one-sixth if we exclude the figures for Bengal, where the majority of the Mahomedans are the descendants of local converts. Amongst the Hindus the higher castes have hitherto shown a greater predilection for town-life than the lower, but the disproportion is gradually disappearing; modern industrial developments are attracting the lower castes to towns in ever-increasing numbers.

Urban and Rural.—The proportion of the urban to the total population has fallen during the decade from 9·9 to 9·5 per cent. The main explanation of this is undoubtedly the fact that plague has been far more prevalent in town than in rural areas. This scourge has now spread to all parts of the Empire except the east and south. At the time of the census an epidemic was raging in many towns, especially in those of the United Provinces, Central India and the Central Provinces and Berar, and a large number of the regular inhabitants had gone away. In addition, however, to driving people away, plague has been responsible in many towns for a terribly heavy mortality. It is impossible to make any estimate of the direct and indirect effects of plague on the growth of towns, but it is quite certain that they have been enormous.

Urban Tendencies.—We cannot draw any conclusions as to the tendency to urban aggregation from a comparison of the statistics of the present census with those of the previous one, when plague was still a new and more or less local visitation, but there can be no doubt that there is a growing tendency for people to congregate in towns of a certain kind. The introduction of machinery is rapidly causing the old cottage industries to be replaced by mills and factories; and these are necessarily located at those places where there are the best facilities for collecting the raw material and distributing the manufactured article. The jute industry is practically confined to the banks of the Hooghly near the port of Calcutta. Cotton mills are found chiefly in Western India and woollen and leather factories at Cawnpore and Delhi. The increasing trade of the country and the improvements in railway communications also encourage the growth of towns. Not only are the great seaports attracting an ever-growing population, but various inland towns are benefiting from the same cause. The extent to which modern conditions of trade and industry are causing the growth of towns is obscured not only by plague, which is generally far more prevalent in towns than in rural areas, but also by the decay of old centres of population, which owed their importance to past political and economic conditions. Throughout India there are many former capitals of defunct dynasties whose population is steadily dwindling. During the last ten years, Mandalay, the last capital of the kings of Ava, has lost a quarter of its population.

CITIES.

The general practice of statisticians is to treat as cities only those places which have a population of more than 100,000. According to this standard there are in India only 30 cities, with a population of 7,075,782, or 2·2 per cent. of the population. Here there is an extraordinary difference between the Indian conditions and those of Western countries. In England the cities contain 45 per cent of the total population in Germany 21, and in France 14 per cent. But even in these countries the growth of cities is comparatively recent. In 1871 England had only 27 cities with 9·5 million inhabitants and Germany only 8 with 2 millions. There are signs that in India the growth will be more rapid in the future than it has been. The population of cities has risen since 1872 by 64 per cent. and the net increase, comparing like with like, is 42 per cent. The most rapid growth during this period is shown by Rangoon which has trebled its population. Next comes Karachi with an increase of 168 per cent.and then Madura and Howrah with 158 & 113 per cent respectively. Since 1901, two new places, Jubbulpore and Dacca, have entered the list of cities, while Baroda has disappeared from it. Eighteen cities have gained, and twelve have lost, population. Of the latter, a few like Mandalay are really decadent, but in most, such as Nagpur and Cawnpore, the loss was due wholly to the temporary influence of plague. The progressive cities are differentiated from those which are decadent by their large immigrant population. In Bombay, Calcutta and Howrah this exceeds 70 per cent. of the total and in Rangoon and Karachi it is close on 60 per cent. In Patna, Mandalay and Bareilly, on the other hand, it is barely 10 per cent.

Calcutta.—In speaking of Calcutta we may mean Calcutta proper, or the area administered by the Calcutta Municipal Corporation with the port, fort and canals, the population of which is 896,067, or this area plus the suburban municipalities of Cossipur-Chitpore, Manicktola and Garden Reach with 1,043,307 inhabitants,or lastly Greater Calcutta, which also includes Howrah, with an aggregate population of 1,222,313. The suburban municipalities differ from Calcutta only in respect of their Municipal Government. From a structural point of view they cannot be distinguished. The buildings are continuous throughout, and there is nothing to show where one municipality begins and the other ends. A striking feature of the statistics is the large number of immigrants. Less than 29 per cent. of the inhabitants of Calcutta proper claim it has as their birthplace. The vast majority are immigrants, of whom 204,000 come from Bihar and Orissa and 90,000 from the United Provinces. Of the Bengal districts, the largest contributions are those from the 24 Parganas (88,000), Hooghly (48,000) and Midnapur (29,000). The volume of immigration is equally great in the suburbs and Howrah.

The first regular census of Calcutta proper taken in 1872 showed a population of 633,009. In 1881 there was practically no change, but in 1891 a gain of 11·4 per cent. was recorded. In 1901 here was a further increase of 24·3 per cent., but part of this was due to improved enumeration. At the present census the rate of increase in Calcutta proper has dropped to 5·7 per cent. The falling off is due largely to the growing tendency of the inhabitants to make their home in the suburbs or even further afield. The suburban municipalities have grown during the decade by 45·3 per cent.

Bombay—which has now a population of 979,445 was a petty town with about ten thousand inhabitants when it passed into the possession of the British in 1661. The population was estimated to be 100,000 in 1780, 180,000 in 1814 and 236,000 in 1836. At the first regular census in 1872 it had risen to 644,405, and nineteen years later, in 1891, it was 821, 764. In the next decade plague, which first appeared in September 1896, caused a serious set-back; and it is estimated that by 1901 this disease had already been responsible for 114,000 deaths. The census of that year showed a decrease of about 6 per cent., but this was not wholly due to deaths. At the time when the census was taken, a virulent epidemic was in progress, and large numbers of the permanent residents had sought safety in flight. A fresh enumeration taken in 1906 by the Health Department of the Municipality gave a population of 959,537. The number now returned exceeds that of 1901 by 26 per cent. but it is only 2 per cent. more than it was at the time of the local enumeration of 1906. It is said that the census of 1911 was taken at a time when many of the immigrants from neighbouring districts had gone to their permanent homes for the Holi holidays, and that many of the cotton mills had closed down temporarily owing to the prohibitive price of the raw material. Like other large trading and industrial centres, Bombay is peopled mainly by immigrants; and more than 80 per cent. of its inhabitants were born elsewhere. Most of them come from the neighbouring districts; more than one-fourth of the total number are from Ratnagiri, while four other districts together supply more than a third. There are 30,000 Goanese, most of whom are in domestic service. Of the immigrants from outside the province, some 50,000, chiefly mill hands, are from the United Provinces, and 12,000 mainly shopkeepers, from Rajputana. Of the immigrants from outside India the largest number (6,000) come from the United Kingdom.

Madras.—Unlike Calcutta and Bombay, Madras, which is handicapped by its distance from the coal-fields, has but few large industries. The indigenous handicrafts are decaying and their place is not being taken by factories of the modern type. Apart from its being the headquarters of the Local Government, Madras owes whatever importance it possesses to its position as a distributing centre. Of its total population (518,660), only one-third are immigrants, and of these only 12 per cent. have come from places beyond the limits of the Madras Presidency. The great majority are natives of the four districts in the immediate vicinity of the city.

The population grew fairly rapidly during the twenty years prior to 1901, but since then it has been almost stationary. There has been an increase of about one per cent. in the number of persons born in the city, but fewer of them

have been enumerated within the city limits. As compared with 1901 the net gain due to migration is less than 9,000. It is possible that the great demand for labour in Burma, where wages are very high, has attracted many of the labouring classes who would otherwise have sought their living in Madras.

Hyderabad.—Next to the three Presidency towns, the largest city in India is Hyderabad, the capital of the Nizam's Dominions. Its population is shown in the local Census Report as 500,623. Hyderabad has hitherto made very little industrial progress, and less than a quarter of its population is drawn from outside.

HOUSES AND FAMILIES.

Generally speaking it may be said that the labouring classes in India live in one, or at the most two, single room huts. The home of a well-to-do peasant consists of a public sitting room and a cook room and several apartments which are arranged round and open on to a courtyard. In spite of the joint family system the number of houses corresponds very closely to the number of families in the European sense. The total number of houses is 63·7 million, and there are 64·6 million married females aged 15 and over. Except amongst the higher castes who form but a small fraction of the total population the joint family system is not nearly so common as is frequently supposed. Where it is in vogue, there is often a strong disruptive tendency. In the towns and cities owing to the high rents, the unit for all below the middle class is the room, not the house.

	Average population per house
1881	5·8
1891	5·4
1901	5·2
1911	4·9

MOVEMENT OF THE POPULATION.

According to the census returns, the total population of India has increased by 7·1 per cent. during the last decade, and by 52·9 per cent. since 1872, but the real gain since the latter date is very much less than this. Large tracts of country, including the Central India and Rajputana Agencies, Hyderabad and the Punjab States, which were omitted from the census returns of 1872, were included in those of 1881. In 1891 the greater part of Upper Burma and Kashmir and several smaller units were enumerated for the first time. In 1901 the most important additions were a portion of Upper Burma and the greater part of Baluchistan. In 1911 the Agencies and tribal areas in the North-West Frontier Province, together with a few smaller areas, were included within the scope of the enumeration. The real increase in the population in the last 39 years is estimated at about 50 millions, or 19 per cent. This is less than half the increase which has taken place in the same period amongst the Teutonic nations of Europe, but it considerably exceeds that of the Latin nations. In France the population has grown by less than 7 per cent. since 1870, but this is because of its exceptionally low birth-rate. In India the birth-rate is far higher than in any European country; and it is the heavy mortality especially amongst infants, which checks the rate of increase.

Famine and Disease.—In addition to the causes which ordinarily govern the movement of the population, India is subject to two special factors—famine and epidemic disease. The decade preceding the census of 1911 was free from widespread famines such as those of the preceding ten years. In 1907 there was a partial failure of the monsoon which was felt over a wide area, extending from Bihar to the Punjab and Bombay, and causing actual famine in the United Provinces and in a few districts elsewhere. Prices ruled high in most years and there was an extension of special crops, such as jute and cotton, which are more profitable to the cultivator than food grains. It was on the whole a period of moderate agricultural prosperity. From the point of view of public health, the censal period would have been an average one, but for the ravages of plague. Breaking out in Bombay in 1896, it has by March 1901 caused a recorded mortality of half a million. Since then it has continued its ravages, especially in Bombay and Upper India. The mortality from it rose from about a quarter of a million in 1901 to 1·3 millions in 1907. It fell below a quarter of a million in each of the next two years, but in 1910 it exceeded half a million. The total number of deaths from plague during the decade was nearly 6·5 millions of which over one-third occurred in the Punjab and two-fifths in the United Provinces and Bombay, taken together. The disease fortunately has failed to establish itself in Bengal, Assam, and on the East Coast and in the extreme south of the Peninsula. This however is only the recorded mortality; in time of epidemic the reporting agency breaks down and large numbers of deaths escape registration. Plague attacks women more than men, and people in the prime of life more than the young and old. If plague is omitted, and it is assumed that the mortality of the decade would otherwise have remained normal, the population of the census of 1911 would have been greater than it was by at least 6·5 millions. In other words, the population would have increased by 9·3 instead of 7·1 per cent.

General Conclusions.—The most noticeable feature is the continuous rapid growth in Burma. Lower Burma has grown by 135 per cent. since 1872 and the whole Province including Upper Burma, which was annexed in 1886, by 37 per cent. since 1891. In Assam including Manipur the increase since 1872 amounts to 70 and in the Central Provinces and Berar to 47 per cent. In the other main provinces the rate of growth has been much slower. In some provinces, such as Burma, Assam and Bengal there has been continuous progress but others, at some time or another, have sustained a set-back. In the larger provinces at least, the internal variations are also frequently considerable. In Bengal one district has at the present time a smaller population than it had in 1872, while four others have more than doubled their population since that date.

In British territory there has been a gain of 9·1 per cent. over about nine-tenths of the area

* The above figures for Calcutta exclude the population of Cossipore-Chitpur, Manicktola and Garden Reach. These places have a separate Municipal administration, but for all practical purposes they form an integral part of Calcutta. So also does Howrah except that it lies on the opposite bank of the Hoogly. If the first-mentioned Municipalities be added, the population of Calcutta rises to 1,043,307. If Howrah also be included, it comes to 1,222,313.

† Bangalore City and Bangalore Civil and Military Station are structurally a single unit, but for the purpose of the census they have been treated as separate places.

with three quarters of the total population, and a loss of 5·3 per cent. in the remaining one-tenth of the area and one-fourth of the population. The contrast in different parts of the Native States is still more striking. The net increase of 10·3 per cent. is the outcome of a gain of 14·3 per cent. in four-fifths of the total area and popn ation, coupled with a loss of 6·2 per cent. elsewhere. The relatively greater net increase in the Native States as compared with British territory is explained by the fact that many of the States suffered severely from famine in the previous decade when they sustained a net loss of 5 per cent., while British territory gained 4·7 per cent. Apart from this, in ordinary circumstances a comparatively high rate of increase is to be expected in the Native States, as they are, on the whole, more undeveloped than British territory, and contain a much larger proportion of cultivable waste land. The net increase in India as a whole during the last decade is the resultant of a gain of 10·3 per cent. in an area of 1,517,000 square miles, with a population of 245 millions and a present density of 162 to the square mile, and a loss of 5·5 per cent. in an area of 218,000 square miles with a population of 68 millions and a density of 312 to the square mile.

MIGRATION.

In India there are two currents of migration—minor and major. The chief of the minor movements is the custom, almost universal amongst Hindus, whereby parents seek wives for their sons in a different village from their own. Of the 26·5 million natives of India who were enumerated in a district other than that in which they were born, 16·5 millions, or 62 per cent. were born in a district adjoining that in which they were enumerated. The major currents of migration are governed by economic conditions. The most noticeable movements are the large streams of emigration from Bihar and Orissa, Madras, the United Provinces and Rajputana, and of immigration into Bengal, Assam and Burma. Owing to its fertile soil, Bengal is able to support practically the whole of its dense indigenous population by agriculture. It is necessary therefore to man the jute mills by imported labour, as also the tea gardens of Darjiling and Jalpaiguri and to draw the general labour supply from outside. In Bengal the net excess of immigrants over emigrants is close on 1,400,000. Of these about 236,000 are Natives of a district in Bihar and Orissa, or Assam, contiguous to the Bengal district in which they were enumerated. Assam and Burma are sparsely populated and the land available for cultivation being ample, very few of the indigenous inhabitants find it necessary to work for hire. The tea gardens of Assam and the rice mills and oil wells of Burma have to obtain their coolies elsewhere. In Assam 12·5 per cent. and in Burma 5 per cent. of the population are immigrants. On an average 51,000 labourers and dependants go each year to the tea gardens of Assam. In Burma, Madras supplies labourers for the rice-milling, oil and other industries, whilst many coolies flock into the province from Chittagong, chiefly for the rice harvest. The net loss to Bihar and Orissa on account of migration is about 1·5 millions. The United Provinces sustain a net loss of about 800,000 from migration, chiefly in the direction of Bengal. Madras being very backward from an industrial point of view, there is no great local demand for labour. At the same time there is an exceptionally large population of the "untouchable" castes, who have no scruples about seeking their livelihood oversea. It provides Ceylon with labour for its plantations, Burma with labour for its industries, and the Federated Malay States with labour for their rubber plantations. The enterprising Marwari traders of Rajputana have penetrated to all parts of India and are to be found in very important bazars throughout Bengal and even in Assam. Bombay is industrially more advanced than Bengal, but as its soil is less productive there is a large local supply of labourers, chiefly from the southern coast strip called the Konkan. The United Provinces give more than four times as many labourers to Bengal as to Bombay. As for the migration between British India and Native territory, it involves a loss of 135,000 to the Native States.

Asiatic Immigration.—Of the 504,000 persons born in other Asiatic countries who were resident in India at the time of the census, more than half were natives of Nepal. Of the 92,000 immigrants from Afghanistan all but 11,000 were enumerated in Northern India. The rest were cold weather visitors who travel about the country peddling piece-goods and other articles of clothing. These Cabuli pedlars cause great trouble in Bengal by their truculence. The number of Chinese is 80,000. Most of these are found in Burma, but the Chinaman is making his way into Bengal, where he is appreciated as a shoemaker and carpenter. From Arabia come 23,000 immigrants, chiefly to Bombay.

Non-Asiatic Immigration.—The total number of immigrants from countries outside Asia is 146,265. Of these 131,968 come from Europe. The United Kingdom sends 122,919; Germany comes next with only 1,860 and then France with 1,478. As compared with 1901 there is an increase of about 26,000 in the number of immigrants from the United Kingdom. Of the British-born 77,626 were serving in the army as compared with 60,965 at the time of the previous census, when a strong contingent had been sent from India to reinforce the British garrison in South Africa. The rest of the increase is accounted for by the industrial development which has taken place, the extension of railways, and the growing extent to which Englishmen in India marry. The number of females born in the British Islands and enumerated in India has risen during the decade from 14,663 to 19,494. The figures for other European countries do not call for any special comment.

Emigration from India.—The Indian census statistics naturally tell us nothing of the emigration from India to other countries. This emigration is of two kinds, the movement across the border which separates India from contiguous countries, such as China, Nepal, Afghanistan and Persia, much of which is of the casual type, and emigration to distant countries. No statistics are available regarding the emigration from India to the countries on its borders. There is probably very little movement from Burma into China

but, on the other hand, it is believed that the emigration into the somewhat sparsely peopled Nepal terai from some of the adjacent British districts, where the population is much congested, exceeds the countervailing immigration. Very few people go from British territory to settle permanently in Afghanistan or Persia, but at the time when the last census was taken owing to drought in Baluchistan, a considerable number of Nomad Brahuis from Chagai, and of Baloch from Mekran had passed over temporarily into Afghanistan and Persia. At a rough guess the number of emigrants across the Indian Frontier may be taken to be about a fifth of a million.

Emigration to Distant Countries.—Of the emigrants to distant countries a certain number find their way to French or Dutch Colonies, such as Surinam, Martinique and Guadeloupe. But the majority go to other parts of the British Empire. The total number of emigrants from India to other parts of the British Empire slightly exceeds a million, of whom about two-thirds are males; more than four-fifths of the aggregate are Hindus and only one-tenth are Mahomedans. Of the total number, about 474,000 were enumerated in Ceylon, 231,000 in the Straits Settlements and the Malay States, 88,000 in British Guiana, 73,000 in Natal, 51,000 in Trinidad, 35,000 in Mauritius, 29,000 in Fiji and 8,000 each in Jamaica and Zanzibar. About one-fifth of these emigrants failed to specify their province of birth; of the remainder no less than 693,000 or 85 per cent. were from Madras, 32,000 from Bengal, about 20,000 each from the United Provinces and Bombay, 16,000 from Bihar and Orissa, 13,000 from the Punjab and 8,000 from the Mysore State. The number who emigrated from other parts of India was inconsiderable. Most of these emigrants to the colonies went as ordinary labourers in sugar, tea, coffee, rubber and other plantations, but a large number of those from Bombay and Bengal are lascars on ships, while many of the natives of the Punjab are employed in the army or military police.

Ceylon.—The movement to Ceylon is of long-standing. Owing to the rapid expansion of tea cultivation, the number of natives of India enumerated in that Island increased by 65 per cent. in the decade ending in 1901. Since then there has been a further increase of nearly 10 per cent. chiefly on account of the new rubber plantations. The great majority of these emigrants are from the southern districts of Madras. Mysore sends about 8,000, Travancore 7,000 and Cochin and Bombay 3,000 each. Most of them are temporary emigrants, who return after a time to their homes in Southern India. The total number of Tamils enumerated in Ceylon exceeds a million, but about half of them have been domiciled in the Island for many centuries and barely 100,000 are the offspring of recent settlers.

Malaya.—The emigration to the Straits Settlements and the Malay States is of quite recent growth, and is due almost entirely to the demand for labour on the rubber plantations. Most of the emigrants are temporary settlers, who return to their homes when they have saved a little money; and the total number of Indians enumerated there exceeds by only 12 per cent. the number who returned to India as their birthplace. Almost four-fifths of the total number are males. Here also Madras is the principal source of supply, the Punjab (8,754) being the only other province which sends an appreciable number.

South Africa.—In Natal, there has been a great deal of permanent settlement; and of the total number of Indians enumerated there, nearly half were born in the colony. Many of these have forgotten their native language and now talk only English. But it is in Mauritius that the process of colonisation has made most headway. The introduction of Indian coolies to work the sugar plantations dates from the emancipation of the slaves, three quarters of a century ago: and from that time onwards many of the coolies who have gone there have made the island their permanent home. Though it now contains only 35,000 persons who were born in India, the total number of Indians is 258,000, or about 70 per cent. of the whole population. A large part of the island is now owned by Indians, and they are dominant in commercial, agricultural and domestic callings.

RELIGIONS.

India is a land of many religions. All the great religious faiths of mankind are represented in its population by communities, whose origin carries us back to the early history of their respective creeds Hinduism and its offshoots, Buddhism and Jainism, are autochthonous. The Jews of Cochin have traditions which carry back their arrival on the coast to the time of their escape from servitude under Cyrus in the sixth century B. C. The Syrian Christians of Malabar ascribe the introduction of Christianity and the establishment of their original Church to the Apostle St. Thomas, in the year 52 A.D. Nearly two centuries before the followers of Mahomed obtained a footing in India as conquerors, a peaceful trading colony of Arabs had settled on the Malabar coast. The Parsi settlement in Gujarat dates from about the same period. These facts are recalled here because not only Europeans, but even educated Indians, speak as if the first foreign settlement in India was that which followed the Mahomedan conquest, and that Christianity was first brought to the country by the Portuguese. They also dispose of another erroneous idea that up to the time of the Mahomedan conquest, Hinduism absorbed all the foreign elements which found their way into the country. No doubt Greeks, Bactrians and Scythians were so absorbed into the structure of Hinduism, but the fact that the Jews, the Syrian Christians and the Parsis have remained distinct from Hinduism, shows that this was not the case universally. If we may hazard a conjecture, it would seem that the ancient Hindu policy towards immigrants who came by land differed from that observed in the case of immigrants by sea. The Indo-Aryan himself entered the country through the mountain passes in the North-West, and knew something of the land which lay beyond. But the sea was always something of a mystery and a terror to him, and those

who came from beyond the sea were looked upon as beings of a different clay. They were treated hospitably, and in course of time they assimilated much of the influences of their Hindu environment. But they remained all the same separate communities, and no attempt was made to incorporate them in the great mass of Hinduism. The prohibition of sea voyage to members of the higher castes is another proof of the peculiar prejudice which ancient Indians cherished against inhabitants of countries divided from India by intervening seas.

Origin of Hinduism.—We have spoken alone of Hinduism as being autochthonous. The opinion generally held is that the ancestors of the Vedic Indians were immigrants from Central Asia. An Indian scholar of some repute has recently endeavoured to show that the received opinion is not borne out by the evidence available in the ancient literatures of India. Whatever may be the value attaching to his contention that the Vedic Indians were not immigrants or descendants of immigrants, but only a section of the indigenous population addicted to the cult of fire-worship, it is true, as he says, that there is no expression in the Vedas of a longing, lingering remembrance of a foreign homeland, such as one might expect to find in the literature of an immigrant race. This is all the more remarkable as an intense attachment to the land they lived in is manifest in all their compositions. A Sanskrit couplet in which the names of the seven great rivers of India, the Ganges, the Jumna, the Godavari, the Saraswati, the Nerbudda, the Indus and the Cauvery, are strung together in pious praise, is recited daily by millions of Hindus at their daily devotions, and helps to keep them in mind of the sanctity of the Indian Continent in Hindu eyes. If the ancient Hindus were immigrants, they not only took exceptional care to blot out all memories of the land from which they came from their own minds, but they also strove by every means in their power to bind the reverence and love of their posterity to India as the land *par excellence* of religion and morality, so much so that the name Hindu, in the orthodox acceptance of the term, is not applicable to anyone who is not born in India. If the ancestors of the Hindus were foreigners in India, they must have set themselves, as a matter of deliberate policy, to intertwine the deepest affections and the highest aspirations of their race with the land in which they had settled, to the entire exclusion of the land whence they had come.

Evolution of Hinduism.—Following from the theory that the ancestors of the Hindus were immigrants from Central Asia, is the explanation generally given of the varieties of religious beliefs and social practices to be found within the pale of Hinduism. Hinduism, it is the common idea, was originally a pure and simple creed which has had to compromise with the Animism of the population, amongst whom it spread, by accepting several of its godlings and superstitions. The greatest obstacle in the way of this explanation is that there is no evidence whatsoever of any organised missionary activity among the Hindus at any time. The immense distances and the absence of means of communication, would of themselves have made such activity difficult. Moreover, a compromise implies selection and rejection and the existence of some agency entrusted with the duty of selection. As a fact, however, we find that Hinduism has exercised very little selection, and that it covers practically all the beliefs and customs which prevail amongst the tribes who are included within its pale. Such a state of things is more consonant with the view that the purer forms of Hinduism are highly evolved stages of the cruder forms which are still observed by the less educated and prosperous sections of the community. This view, namely, that the higher forms of Hinduism are evolved from lower ones, rather than that the latter are corruptions of the former, gains support from what is now generally accepted as being the true explanation of the origin of certain social customs. Twenty years ago, it was generally held that the custom of child marriages, for instance, was of sacerdotal origin and was most largely prevalent amongst the higher castes from whom it spread to the lower. Recently, however, it has been proved that child marriages are prevalent far more largely and in a far grosser form amongst the lowest castes than amongst the higher castes, and that amongst the latter, it is a survival from the times when the caste system was less rigid and intermarriages, that is to say, the taking of wives by the higher castes from the lower, were common. It may be added that the two most characteristic beliefs of Hinduism, namely, that in the transmigration of souls and in the law of *Karma* or retribution, are held with, if anything, more tenacity by the lower than by the higher castes.

Scope of Hinduism.—From this point of view, the varying beliefs and customs which go under the name of Hinduism not only offer no difficulties, but furnish the right clue to the understanding of this unique socio-religious system. They explain why the term "religion" as applied to Hinduism does not adequately express its scope and method. Hinduism has no settled creeds which are obligatory on every Hindu. It enforces no fixed and uniform moral standards on the innumerable sects and castes which bear its name. It extends its suffrages to monogamous, polygamous and even polyandrous unions between the sexes and, in the case of the so-called *devadasis*, countenances a life of open irregularity. An Indian newspaper recently instituted an interesting discussion on the question "Who is a Hindu." An eminent Hindu lawyer, who subsequently rose to be a judge of one of the Indian High Courts, laid down that a Hindu was one to whom the Indian Courts would apply the Hindu law. The learned lawyer, however, forgot that there are Mahomedan castes which follow the Hindu law in regard to the inheritance of and succession to property.

And yet, though Hinduism refuses to conform to almost every one of the ideas which we usually associate with the term "religion," it is impossible to deny that it occupies a unique and highly important place amongst the religious systems of the world. The reason why it does not fit into our definition of religion is that it represents a fundamentally different line of evolution in the history of religious

thought. In other races the line of evolution was from polytheism to monotheism, but in India it was from polytheism to the higher pantheism. Contrasting the development of the Judaic idea of God with that of the Hindus, Dr. Harold Haffding observes "With the Hindus there was no God who claimed sole sway; they went back to the power which makes all gods what they are, to the inner aspirations and needs which find vent for themselves in prayer and sacrifice. Following an extremely remarkable line of thought that which drives men to worship gods was itself regarded as the true divine power. Brahma meant originally the magical, creative word of prayer, but it afterwards came to denote the principle of existence itself, so that we have a transition from the idea of motion towards to that of its goal, from prayer to the object addressed in prayer." The Indian philosopher saw the whole universe transfused and overspread with Deity. He perceived how evil was being perpetually transformed to good in the cosmic process spreading out before the poet and the philosopher, endless and timeless, to whom the evil and the good seemed but different stages in a great common process of which the secret was known only to the Supreme Being. No European writer has caught the innermost essence of the Hindu philosopher's idea of the Supreme, so faithfully, and expressed it so felicitously as Sir Edwin Arnold in his "Light of Asia."

> Before beginning, and without an end,
> As space eternal and as surety sure,
> Is fixed a Power divine which moves to good,
> Only its laws endure.
> It is not marred nor stayed in any use,
> All liketh it; the sweet white milk it brings
> To mothers' breasts, it brings the white drops too,
> Wherewith the young snake stings.
> It slayeth and it saveth, nowise moved
> Except unto the working out of doom;
> Its threads are Love and Life; Death and Pain
> The shuttles of its loom.
> It maketh and unmaketh, mending all;
> What it hath wrought is better than had been;
> Slow grows the splendid pattern that it plans
> Its wistful hands between.

The ethical values of Hinduism are not different from those of other great religions. Like them it attaches little importance to the qualities which make for wordly success, and most importance to self-sacrifice, humility and kindliness to all. Only its methods differ. On the whole, however, the Hindu socio-religious scheme, owing to its tendency to make the individual human being a passive instrument in the hands of a Higher Power instead of an active co-operator with it, has favoured stability at the expense of progress.

Hindu sects.—Hinduism is made up of many sects and cults. It is usual to speak of Hinduism as it was before Buddhism, as a single creed, but this is because the literature that has come down to us is the literature of the sect that came to supersede all others. But even in it, we can, by reading between the lines, discover the existence of rival sects. Even the Vedas themselves are the literature probably of one of several sects which happened to be gifted with a talent for letters. The rapid multiplication of sects, however, was undoubtedly encouraged by the introduction of idol worship in imitation of the practice of decadent Buddhism. Hindu religious philosophers recognised three ways of salvation, namely, the way of knowledge, the way of faith and the way of service. Every sect of Hinduism recognises the value of all these three ways, but it differs as to the relative importance to be attached to each. The sect of the great philosopher, Sankaracharya, who maintained that the Supreme Being was the only Reality and that all the phenomenal universe was Maya or illusion, and that salvation came from the realisation of this fact, did not discard faith and service altogether, but only gave these a subordinate position in his scheme of religion. Ramanuja, Madhva and Vallabhacharya who followed him and, in more or less degree, refuted his doctrine of the non-reality of the phenomenal universe, laid more stress on faith and service than on knowledge, but they did not discard the path of knowledge altogether. It should be mentioned here that it has been the great misfortune of Hinduism that the path of service has come to mean the path not of altruistic service to mankind but the path of service conceived in a ceremonial sense to priests, religious recluses and mendicants and to idols. It is the great aim of the modern religious reform movements such as the Arya Samaj and the Brahma Samaj to rescue the path of service from this spurious interpretation and to make altruistic social service an integral part of religion. The question of sect, however, does not play a very important part in Hinduism. Except in Southern and to a much smaller extent, in Western India, the great mass of the Hindus are not sectaries. In Southern India, the Vaishnavas and Madhvas will, on no account, worship Shiva or visit a temple dedicated to him. The Lingayaths are a Shiva sect found in the Karnatak districts of the Bombay and Madras Presidencies, and in Mysore, and they have an invincible repugnance to the worship of Vishnu. But these are exceptional instances. But so far as the bulk of the Hindus are concerned, they resort to the nearest shrine whether it be dedicated to Shiva or Vishnu. The attitude of Hinduism to other religions is that they are each of them the most suitable path to salvation for the people who are born in them—that they are all several roads which lead to Heaven. For this reason Hinduism has never been a proselytising religion. This has proved a disadvantage to it face to face with such religions as Mahomedanism and Christianity which not only admit converts, but are actively engaged in seeking them. The proportion of Hindus to the total population has steadily diminished during the last forty years, partly owing to conversions to other religions particularly from amongst the lower classes. Conversions from among members of the higher and literate classes have practically ceased.

Hinduism.—The Hindus number 217,586,892 or 69·4 per cent. of the total population of

India. Buddhists and Jains together number 11,969,635. Thus 229,556,527 or about 73 per cent. of the Indian people depend for their spiritual sustenance on Hinduism and its offshoots.

The Buddhist population is mostly Burmese, Buddhism having ceased a thousand years ago to count as a leading religion in the land of its birth. Several reasons are usually given to account for the hostility of Hinduism to Buddhism, such as that Buddha denied the authority of the Vedas and the existence of God and of the human soul. Jainism did all this, and yet Jains to-day occupy a recognised position in the Hindu social system. The real reason for the Hindu hostility to Buddhism was that it influenced and was in its turn influenced by in the later years of its prevalence in India, the alien Mongolian consciousness. Hinduism has always been extremely tolerant of indigenous heresies, but it is jealous of outside influence. Indian Buddhism, too, had become extremely corrupt and superstitious long before Hinduism re-established itself as the religion pre-eminently of the Indian people.

Other Indigenous Religions.—Buddhism and Jainism were originally only sects of Hinduism. Jainism even now is not so sharply divided from the latter religion as Buddhism is. Jains are everywhere a recognised section of Hindu Society, and in some parts of the country there has been an increasing tendency on their part to return themselves at the Census as Hindus. The outstanding feature of Jainism is the extreme sanctity in which all forms of life are held. The Jains are generally bankers and traders. Their number at the last Census was 1,248,182, the apparent decline being due to the tendency noted above for Jains to return themselves as Hindus. Buddhism is professed but by few persons in India. The Buddhist population of the Indian Empire is mainly Burmese. Their number is 10,721,453. The founders of Buddhism and Jainism are believed to have been contemporaries, whose date is assigned somewhere in the 5th Century B.C. Sikhism, which is the next important indigenous religion, had its origin many centuries later. The founder of Sikhism, Guru Nanak, flourished in the latter half of the 15th Century of the Christian era. Nanak's teaching amounted to nothing more than pure Theism. He taught that there is only one true God, he condemned idolatry, proclaimed the futility of pilgrimages and rites and ceremonies, and declared that the path to salvation lies through good deeds combined with devotion to the Supreme Being. He preached the brotherhood of men. Sikhism continued to exist as a pacific cult till about the end of the seventeenth century, when the persecutions of Aurangzeb had the effect of converting it into a militant creed. This momentous change was accomplished under the direction of Guru Govind, the tenth and last of the Gurus: "I shall send a sparrow," he once exclaimed and "lo! the imperial falcons will fly before it." On his death-bed, he exhorted his followers to regard the Granth, the sacred book of the Sikhs, as their Guru, to look upon it as the person of the living Guru. After his death, Sikhism passed through a period of deepest gloom, but it soon recovered and in 1758 the Sikhs entered Lahore in triumph. The teachings of Guru Nanak have profoundly affected Hindu thought and life in the Punjab, though the number of persons professing the Sikh religion is only 3,014,466 according to the 1911 Census. This represents an increase of over 40 per cent. since 1901. Two other religious movements, offshoots of Hinduism, remain to be mentioned, namely, the Brahmo-Samaj and the Arya-Samaj. Both of them are less than one hundred years old. The founder of the former was Raja Ram Mohan Roy, and of the latter, Swami Dayanand Saraswati. The Brahmo-Samaj does not believe in an infallible scripture, while the Arya-Samaj accepts the Vedas as Divinely revealed. Both the movements are opposed to idolatry and favour social reform. The Brahmo movement, appealing as it does to the cultured intellect, has not been making as much progress as the Arya-Samaj. The number of persons professing each of these creeds is 5,504 and 243,445 respectively. The stronghold of the Arya-Samaj is the Punjab, that of the Brahmo-Samaj, Bengal.

Non-Indian Religions.

Mahomedanism.—Of non-Indian religions, that is, of religions which had their origin outside India the religion which has the largest number of followers in this country is Mahomedanism. One hundred years before the Mussulmans obtained a foothold in Sind by right of conquest, they were settled in Cochin as traders and missionaries. The author of Cochin Tribes and Castes refers to a tradition that in the 7th Century, a Mahomedan merchant named Malak Medina, accompanied by some priests, had settled in or near Mangalore. The Kollam era of Malabar dates, according to popular tradition, from the departure of Cheruman Perumal, the last of the Perumal Kings, to Arabia, on his conversion to Islam. The date of the commencement of the era is the 25th August 825 A.D. For about twelve Centuries, Islam has existed in India side by side with Hinduism. During that period it has been greatly influenced by Hindu ideas and institutions. Moreover, the Indian converts to Mahomedanism have to a large extent retained the customs and beliefs of Hinduism. The writer of the article on religions of India in the new edition of the *Imperial Gazetteer* observes of Islam in India: "If it has gained some converts from Hinduism it has borrowed from it many of those practices which distinguish it from the original faith of Arabia. By degrees the fervid enthusiasm of the early raiders was softened down; the two religions learned to live side by side; and it the Mahomedan of the later days could never conceal his contempt for the faith of his 'pagan' neighbours, he came to understand that it could not be destroyed by persecution. From the Hindus Islam derived much of its demonology, the belief in witchcraft, and the veneration of departed Pirs or Saints. The village Musulman of the present day employs the Hindu astrologer to fix a lucky day for a marriage, or will pray to the village god to grant a son to his wife. This is the more natural, because conversion to Islam, whenever it does occur, is largely from the lower castes." Mahomedanism has

two main and several minor sects. The major sects are the Shiah and the Sunni. The great majority of Indian Mussulmans are of the latter sect. The Punjab and Sind in the North-West and East Bengal in the North-East are the strongholds of Islam in India. The Mussulman population of India, according to the Census of 1911, is 66,647,299. Of this number no less than 24 millions are in Bengal, about 12 millions in the Punjab, and about 5 millions in the United Provinces. Amongst Native States, Kashmere has the largest Mussulman population, about 2½ millions.

Christianity.—Indian Christianity has an even longer history than Indian Mahomedanism. According to the tradition prevailing among the Syrian Christians in Malabar, the introduction of Christianity and the establishment of the Original Church in Malabar in the year 52 A.D. are ascribed to the Apostle St. Thomas, who landed at Cranganore or Musiris, converted many Brahmins and others, ordained two Presbyters, and also founded seven churches, six in Travancore and Cochin, and the seventh in South Malabar (Cochin Castes and Tribes, Vol. II, Chapter XVI, p. 435). The history of Roman Catholicism in India dates from the beginning of the sixteenth Century. The first Protestant mission was established two centuries later by the Lutherans who started their work in Tranquebar in South India under Danish protection. The Christian population, according to the last Census, numbers 3,876,203. Nearly 2½ millions are inhabitants of the Madras Presidency and the Native States connected with it. Bihar and Bombay have each over 200,000 Christians.

Zoroastrianism.—This religion was brought or brought back to India in 717 A.D. by Parsis who, fleeing from persecution at the hands of the Mussulman conquerors of their native land, arrived at the little port of Sanjan, sixty miles north of Bombay in that year. According to the Indian antiquarian scholar, the late Rajendralal Mitra, the ancestors of the Hindus and Parsis dwelt together in the Punjab, when a religious schism led to the latter retracing their steps to Persia. This theory derives probability from the names of the beneficent and malefic deities referred to in the Hindu and Parsi sacred books: "What is most striking in the relations of the two faiths, is," writes Mr. Crooke in his article on the Religions of India in the *Imperial Gazetteer*: "that in the Avesta the evil spirits are known as Daeva (modern Persian Div), a term which the Indo-Aryans applied, in the form Deva, to the spirits of light. By a similar inversion, Asura, the name of the gods in the Rig Veda, suffered degradation and at a latter date was applied to evil spirits; but in Iran, Ahura was consistently applied in the higher sense to the deity, especially as Ahura Mazda, the wise, to the Supreme God." The Parsis have two sects. The principal difference between them appears to be that the holy days of the one precede those of the other by about a month. The number of Parsis, according to the last Census, is 100,096. The majority of the Parsis live in Bombay.

Jews.—The Beni-Israel at Kolaba, in Bombay, and the Jews at Cochin are descendants of ancient Colonies. The Kolaba Colony dates back to the sixth century, and the Cochin colony to the second century A.D. Both Jewish colonies recognize a white and black section, the latter being those who have more completely coalesced with the native population. The Jews numbered 20,080 at the Census of 1911.

Animists.—Since the Census of 1891, an attempt has been made to enumerate the "Animists" separately from the Hindus. 10,295,168 persons are classed as Animists, according to the last Census. The difference between Animism and Anthropomorphism has been stated by Professor Westermark, to be that, while the animist worships inanimate objects as gods, Anthropomorphism consists in the worship of such objects as representatives and reflection of the Deity. As a subtle distinction of this kind is not within the grasp of the average enumerator, the category of Animists in the Census Schedules is largely conjectural. Mr. Crooke in the *Imperial Gazetteer* observes "Such a classification is of no practical value, simply because it ignores the fact that the fundamental religion of the majority of the people—Hindu, Buddhist, or even Mussulman is mainly Animistic. The peasant may nominally worship the greater gods; but where trouble comes in the shape of disease, drought, or famine, it is from the older gods that he seeks relief."

SOCIAL INSTITUTIONS.

Uniformity of Indian Social Life.—Though India is a land of many religions and though each religious community has, as a rule, lived apart from the other communities for centuries, still there is a considerable uniformity in the arrangements and institutions of their social life. The social system of the Hindus is the type to which all other communities domiciled in the country have hitherto tended to conform. To a large extent, this uniformity of social arrangements is clearly due to the fact that, amongst the Mahomedans and Indian Christians, for instance, the converts from Hinduism continued to retain their old ideas in regard to social conduct. To a smaller extent, the motive which influenced them to conform to Hindu social ideal has been the convenience thereby caused in business intercourse with their Hindu neighbours. Thus, we find, there is scarcely any community in India which has not been more or less infected by the caste spirit. The Jews, the Parsis, the Christians, and even the Mahomedans have been influenced by it. Other Hindu social institutions and customs which have exerted a similar influence are the joint family system, the custom of child marriages, and of enforced widowhood, and the feeling that contact with persons engaged in certain occupations is polluting. In view of this general similarity of the social institutions of the several Indian communities, a description of the Hindu social system which is the great prototype of them all, will give a general idea of the social life of the Indian population as a whole. It should, however, be mentioned here that, in recent years, as the result of a growing communal consciousness, efforts have been

made by many of the Indian communities to discard whatever is in disaccord with the original simplicity of their respective faiths. But this movement has as yet touched no more than the highly educated fringe, and even among the latter, there are thoughtful men who distrust "revivals" as substitutes for reform.

Caste.—The most conspicuous social institution of India is caste. Caste is based on birth. The effect of caste is to divide society into a number of vertical sections, and not as in modern countries, into horizontal sections. The economic and cultural differences among the members of each caste are great. The millionaire and the pauper, the scholar and the illiterate of one caste, form a social unit. The rich man of one caste must seek a husband for his daughter among the poor of his caste, if he cannot find one of a corresponding position in life. He can on no account think of marrying her to a young man of another caste, though as regards culture and social position, he may be a most desirable match. Thus, each caste is, within itself, a democracy in which the poor and the lowly have always the upper hand over the rich and the high-placed. In this way, the system of caste has, in the past, served as a substitute for State relief of the poor by means of special laws and institutions. To some extent, this is the case even now, but the economic pressure of these days, and the influence of Western education, are profoundly modifying the conception of caste. The growth of the English-educated class on the one hand, and of the modern industrial and commercial class of Indians on the other, with common aspirations and interests, is a factor calculated to undermine the importance of caste. Although for purely social purposes, it will, no doubt, linger for many years longer, it is bound ultimately to collapse before the intellectual and economic influences which are moulding modern India. The question how caste originated has been discussed by several learned Orientalists, but the latest and most authoritative opinion is that its rise and growth were due to several causes, the principal of them being differences of race and occupation. The four original castes of the Hindus have multiplied to nearly two thousand, owing to the fissiparous tendencies of Hindu social life. Some large castes consist of many thousands of families, while others, notably in Gujarat, comprise scarcely a hundred houses. Among Indian Mahomedans, there are several communities which are virtually castes, though they are not so rigidly closed as Hindu castes. Indian Christian converts, in some parts of the country, insist on maintaining the distinctions of their original castes, and in a recent case, one caste of Indian Christians contested, in a Court of Law, a ruling of their Bishop disallowing the exclusive use of a part of their church to members of that caste. The Parsis are practically a caste in themselves. The observations regarding caste apply more or less to the institution of the joint family of which really the former is an extension. This institution is rapidly breaking-up, though the rigidity of the Hindu law of succession operates wholly in its favour.

The Social Reform Movement.—The social reform movement among the Hindus to which reference is made in the foregoing paragraph, had its origin in efforts made by the Government of India, with the co-operation and support of enlightened Hindus, in the early part of the last century to put down the practice of *sati*, that is, burning the widow along with her dead husband. This cruel practice, which prevailed particularly among the high caste Hindus in Bengal, was eventually suppressed by legislation. But the discussions which ensued in connection with *sati* question led to the exposure of the hard lot of Hindu widows as a class. Remarriage was prohibited and as child marriages were common, several young girls were condemned to lead a life of celibacy on the death of their husbands. This led to immorality, and infanticide by young widows, who were anxious to hide their shame, was not infrequent. Led by the Pandit Ishwar Chandra Vidyasagara, a very learned Sanskrit scholar, a movement began which had for its object the removal of the ban on the remarriage of Hindu widows. The Pandit was able to prove from the Hindu religious books that the remarriage of widows had the sanction of antiquity. But it was necessary in order to establish the validity of the remarriage of Hindu widows beyond doubt, to have a law passed by the Legislative Council of the Governor-General of India. The Pandit and his followers memorialised Government. There was strong opposition from the orthodox masses, but the Government of the day were convinced that justice was on the side of the reformers, and the Hindu Widow Remarriage Act was passed. The controversy on the question of the remarriage of widows led to other consequences. It was felt that the age at which girls were married was absurdly low, and that child marriages were at the root of many social evils. It was also realised that the general illiteracy of Indian women was the greatest obstacle in the way of reforming social customs, and that education of women should be the first plank in the social reform platform. The earliest social reformers in India were the Brahmo Samajists who discarded idolatry and caste. Other reformers since then have endeavoured to propagate ideas of social reform entirely on a secular basis. The Indian National Social Conference is their principal organisation, and it is supported by Provincial and District Conferences and Associations. Social reform ideas have made considerable headway during the last twenty-five years. Widow marriages are of weekly occurrence in some provinces. The restrictions of caste as to inter-dining and sea-voyage have lost much of their force. The age at which girls are married is steadily, if slowly, rising. The education of girls is making rapid progress. An increasing number of them go to high Schools and Colleges every year. But the most significant testimony to the spread of social reform ideas in the country is the remarkable diminution in the volume and weight of the opposition to them. The number of journals devoted to the social reform cause is increasing, and some of the newspapers which had made themselves conspicuous by their virulent opposition to social reform twenty years ago, now recognise its utility and importance.

SEX.

In India as a whole the proportion of females per thousand males rose steadily from 954 in 1881 to 963 in 1901. It has now fallen again to exactly the same figure as in 1881. The important aspect of these figures is the great contrast they show between India and Europe, where the number of females per thousand males varies from 1,093 in Portugal, and 1,068 in England and Wales, to 1,013 in Belgium, and 1,003 in Ireland. In drawing attention to this disparity the Chief Census Officer argued that the relatively high mortality amongst females was sufficient to account for the difference stated. Then in summarising the causes of this relatively higher mortality he said: "In Europe, boys and girls are equally well cared for. Consequently, as boys are constitutionally more delicate than girls, by the time adolescence is reached, a higher death-rate has already obliterated the excess of males and produced a numerical equality between the two sexes. Later on in life, the mortality amongst males remains relatively high, owing to the risks to which they are exposed in their daily avocations; hard work, exposure in all weathers and accidents of various kinds combine to make their mean duration of life less than that of women, who are for the most part engaged in domestic duties or occupations of a lighter nature. Hence the proportion of females steadily rises. In India, the conditions are altogether different. Sons are earnestly longed for, while daughters are not wanted. This feeling exists everywhere, but it varies greatly in intensity. It is strongest amongst communities such as the higher Rajput clans, where large sums have to be paid to obtain a husband of suitable status and the cost of the marriage ceremony is excessive and those like the Pathans who despise women and hold in derision the father of daughters. Sometimes the prejudice against daughters is so strong that abortion is resorted to when the midwife predicts the birth of a girl. Formerly, female infants were frequently killed as soon as they were born and even now they are very commonly neglected to a greater or less extent. The advantage which nature gives to girls is thus neutralised by the treatment accorded to them by their parents. To make matters worse, they are given in marriage at a very early age, and cohabitation begins long before they are physically fit for it. To the evils of early child-bearing must be added unskilful midwifery, and the combined result is an excessive mortality amongst young mothers. In India almost every woman has to face these dangers. Lastly, amongst the lower classes, who form the bulk of the population, the women often have to work as hard as, and sometimes harder than, the men, and they are thus less favourably situated in respect of their occupations than their sisters in Europe." It is but fair to say that this conclusion has been challenged by many Indian writers, who attribute far greater importance than the Chief Census Officer to the omission of females at the enumeration.

MARRIAGE.

Although recognised in some backward parts, polyandry is now rare in India. With orthodox Hindus marriage is a religious sacrament which cannot be revoked. The Mahomedans allow a man to divorce his wife without any special reason, but he then becomes liable to pay her dower. The permission is seldom acted upon. The Buddhists of Burma regard marriage merely as a civil contract, and either side can annul it. The Hindu law places no restriction on the number of wives a man may have; but most castes object to their members having more than one wife, except for special reasons. A Mahomedan may have four wives, but he also in practice is generally monogamous.

Marriage Statistics.—In the population of ages and religions, about half the males and one-third of the females are unmarried; 46 per cent. of the males and 48 of the females are married, and 5 and 17 per cent. respectively are widowed. A reference to the age statistics shows that the great majority of the unmarried of both sexes are very young children, three-quarters of the bachelors being under 15 years of age, while a somewhat larger proportion of the spinsters are under 10; only one bachelor in 24 is over 30, and only one spinster in 14 is over 15. At the higher ages practically no one is left unmarried, except persons suffering from some infirmity or disfigurement, beggars, prostitutes, concubines, religious devotees and mendicants and a few members of certain hypergamous groups who have been unable to effect alliances of the kind which alone are permitted to them by the rules of their community. It is the persons of the above classes who contribute the 1 per cent. of the males over 40, and the 1 per cent. of the females over 30 who are not, and never have been, married.

Marriage Universal.—This universality of marriage constitutes one of the most striking differences between the social practices of India and those of Western Europe. It has often been explained on the ground that, with the Hindus, marriage is a religious necessity. Every man must marry in order to beget a son who will perform his funeral rites and rescue his soul from hell. In the case of a girl it is incumbent on the parents to give her in marriage before she reaches the age of puberty. Failure to do so is punished with social ostracism in this world and hell fire in the next. But it is not only with the Hindus that marriage is practically universal; it is almost equally so with the Mahomedans, Animists and Buddhists.

Early Marriage.—Another striking feature of the Indian statistics as compared with those of Western Europe is the early age at which marriage takes place. According to M. Sundbarg's table showing the average distribution by age and civil condition of the people of Western Europe according to the censuses taken about the year 1880, of the population below the age of 20, only one male in 2,147 is married and one female in 142. In India, on the other hand, 10 per cent. of the male, and 27 per cent. of the female, population below that age are married. The number of males below the age of 5 who are married is small, but of those aged 5 to 10, 4 per cent. are married, and of those aged 10 to

15, 13 per cent. At '15-20' the proportion rises to 32, and '20-30' to 69 per cent. Of the females under 5, one in 72 is married, of those between 5 and 10, one in ten, between 10 and 15, more than two in five, and between 15 and 20, four in five. In the whole of India there are 2½ million wives under 10, and 9 million under 15 years of age. The Hindu law books inculcate marriage at a very early age, while many of the aboriginal tribes do not give their girls in wedlock until after they have attained puberty.

Widowhood.—It is only when we come to a consideration of the widowed that we find a state of things peculiarly Indian and one that seems to be derived from the prescriptions of the Hindu law-givers. The proportion of widowers (5 per cent. of the total male population) does not differ greatly from that in other countries, but that of the widows is extraordinarily large, being no less than 17 per cent. of the total number of females, against only 9 per cent. in Western Europe. When we consider their distribution by age, the difference becomes more still striking, for while in western Europe only 7 per cent of the widows are less than 40 years old, in India 28 per cent are below this age, and 1·3 per cent. (the actual number exceeds a third of a million) are under 15, an age at which in Europe no one is even married

The large number of widows in India is due partly to the early age at which girls are given in marriage, and partly to the disparity which often exists between the ages of husband and wife, but most of all to the prejudice against the re-marriage of widows. Many castes, especially the higher ones, forbid it altogether, and even where it is not absolutely prohibited, it is often unpopular. Although widow marriage is permitted by their religion, and the Prophet himself married a widow, the Mahomedans of India share the prejudice to some extent. How the re-marriage of widows first came to be objected to, it is impossible to say, but it seems highly probable that the interdiction originated amongst the Aryan Hindus, that it was confined at first to the higher castes, and that it has spread from them downwards.

Infant Marriage.—It is difficult to draw from the statistics any definite conclusion as to whether infant marriage is becoming more or less common, but so far as they go, they point to a slight diminution of the practice. The figures for 1901 were abnormal owing to the famines of 1897 and 1900, and it is safer to take the year 1891 as the basis of comparison. There are now 18 Hindu girls per mille who are married at the age of '0-5' as compared with only 16 at that time, but at the age '5-10' the proportion has fallen from 146 to 132, and at '10-15' from 542 to 488. Amongst Mahomedans the proportion at the first mentioned age-period has fallen from 7 to 5, at the second from 83 to 65 and at the third from 474 to 393.

The practice has been denounced by many social reformers, since Mr. Malabari opened the campaign a quarter of a century ago; and the Social Conference which holds its meetings annually in connection with the National Congress has made the abolition of child marriage one of the leading planks in its platform. It is, as we have seen, strongly discouraged by the Brahmos in Bengal and the Aryas in Northern India. The more enlightened members of the higher castes who do not allow widows to re-marry are beginning to realise how wrong it is to expose their daughters to the risk of lifelong widowhood, and a feeling against infant marriage is thus springing up amongst them.

In two Native States action has been taken. In Mysore an Act has been passed forbidding the marriage of girls under eight altogether, and that of girls under fourteen, with men over fifty years of age. The object of the latter provision is to prevent those unequal marriages of elderly widowers with very young girls which are popularly believed to be so disastrous to the health of the latter, and which in any case must result in a large proportion of them leading a long life of enforced widowhood. The Gaekwar of Baroda, the pioneer of so much advanced legislation, has gone further. He passed for his State in 1904, in the face of a good deal of popular opposition, an "Infant Marriage Prevention Act", which forbids absolutely the marriage of all girls below the age of nine and allows that of girls below the age of twelve and of boys below the age of sixteen, only if the parents first obtain the consent of a tribunal consisting of the local Sub-Judge and three assessors of the petitioner's caste. Consent is not supposed to be given except on special grounds, which are specified in the Act.

Widow re-marriage.—The prohibition of widow marriage is a badge of respectability. Castes do not allow it rank higher on that account in social estimation. There is a strong tendency amongst the lower Hindu castes to prohibit, or at least, to discountenance, the marriage of widows. At the other end of the social structure there is a movement in the opposite direction. Many social reformers have inveighed against the condemnation of virgin widows to perpetual widowhood, and have pointed out that the custom is a modern innovation which was unknown in Vedic times. In many provinces recently there have been cases in which such widows have been given in marriage a second time, not only amongst Brahmos and Aryas, who naturally lead the way, but also amongst orthodox Hindus. A number of such marriages have taken place amongst the Bhatias of the Bombay Presidency. It is said that in the United Provinces considerably more than a hundred widows have been re-married in the last ten years. The actual results no doubt are small so far, but the first step has been taken and the most violent of the opposition has perhaps been overcome.

EDUCATION.

The general education policy of the Government of India, and its results, are discussed in a special article on Education (*q. v.*) But we may conveniently here indicate some of the education tendencies revealed in the census returns.

Of the total population of India, only 59 persons per mille are literate in the sense of being able to write a letter to a friend and to read his reply. The number who can decipher the pages of a printed book with more or less difficulty is no doubt much larger. Throughout India there are many Hindus who though unable to write can

drone out at least the more familiar parts of the Mahabharata or Ramayana to their neighbours, who feel that it is meritorious to listen to the recital of the sacred texts, even though they, and possibly the reader also, may not always fully understand the meaning. Similarly there are many Mahomedans, especially in Northern India, who can read the Koran, though they cannot write a word. Of this minor form of literacy the census takes no count. The number of persons who are literate in the sense in which the term was used at the present census is divided very unequally between the two sexes; of the total male population, 106 per mille are able to read and write, and of the female only 10. In other words there is only one literate female to every eleven males. If we leave out of account children under 15 years of age, the number of literate males per mille is 149, and that of literate females 13.

Education by Provinces.—Thanks to the free instruction imparted in the monasteries and the absence of the pardah system which hampers the education of females in other parts of India, Burma easily holds the first place in respect of literacy. In the whole population 222 persons per mille are literate and the proportion rises to 314 amongst persons over 15 years of age. In every thousand persons of each sex, 376 males and 61 females are able to read and write. Of the other main British provinces, Bengal and Madras come next with 77 and 75 literate persons per mille respectively. Bombay follows closely on their heels. Then after a long interval come Assam, Bihar and Orissa and the Punjab. At the bottom of the list are the United Provinces and the Central Provinces and Berar, with 34 and 33 literate persons per mille respectively. Differences similar to those noticed above sometimes have their counterpart within provincial boundaries. Thus in Bihar and Orissa, the Orissa natural division has 64 literate persons per mille and the Chota Nagpur plateau only 28. In the Central Provinces and Berar, the proportion ranges from only 6 per mille in the Chota Nagpur States to 54 in the Nerbudda Valley.

Native States.—Education is more widely diffused in British provinces than in the Native States, which, taken as a whole, have only 79 males and 8 females per mille who are literate, as compared with 113 and 11 in British territory. The three Native States of Cochin, Travancore and Baroda, however, take rank above all British provinces except Burma, while in respect of female education Cochin divides with Burma the honours of first place. The Kashmir State where only 21 persons per mille can read and write, is in this respect the most backward part of India.

By Religion.—Of the different religious communities excluding the Brahmos and Aryas whose numbers are insignificant, the Parsis easily bear the palm in respect of education. Of their total number 711 per mille are literate, and the proportion rises to 831, if persons under 15 years of age are left out of account Of the males nearly four-fifths are literate, and of the females nearly two-thirds. Amongst those over 15 years of age only 8 per cent. of the males and 28 per cent. of the females are unable to read and write. The Jains, who are mostly traders, come next, but they have only two literate persons to every five amongst the Parsis. Half the males are able to read and write, but only 4 per cent. of the females. It is noticeable, however, that whereas the proportion of literate males is only slightly greater than it was at the commencement of the decade, that of literate females has doubled. The Buddhists follow closely on the Jains, with one person in four able to read and write. Here also we see the phenomenon of a practically unchanged proportion of literate males (40 per cent.) coupled with a large increase in that of literate females, which is now 6 per cent. compared with 4 per cent. in 1901. The Christians (22 per cent. literate) are almost on a par with the Buddhists, but in their case the inequality between the position of the two sexes is much smaller, the proportion of literate females being nearly half that of males. In order to ascertain how far the high position of Christians is due to the inclusion of Europeans and Anglo-Indians, the figures for Indian Christians have been worked out separately. The result is somewhat surprising; for although the Indian converts to Christianity are recruited mainly from the aboriginal tribes and the lowest Hindu castes, who are almost wholly illiterate, they have, in proportion to their numbers, three times as many literate persons as the Hindus and more than four times as many as the Mahomedans. One Indian Christian in six is able to read and write; for males the proportion is one in four; and for females one in ten. The influence of Christianity on education is strikingly illustrated by the figures for the province of Bihar and Orissa, where the proportion of Indian Christians who are literate is 76 per mille, compared with only 5 per mille amongst their animistic congeners. It has to be remembered, moreover, that many of the Indian Christians had already passed the school-going age at the time of their conversion; the proportion who are able to read and write must be far higher amongst those who were brought up as Christians.

The Sikhs come next in order of merit, with one literate person in every fifteen; for males the ratio is one in ten and for females one in seventy. Here again, while the proportion for males shows only a slight improvement, that for females has doubled during the decade. The Hindus have almost as large a proportion of literate males per mille (101) as the Sikhs, but fewer literate females (8). The Mahomedans with only 69 and 4 per mille respectively, stand at the bottom of the list, except for the Animistic tribes of whom only 11 males and 1 female in a thousand of each sex are able to read and write. The low position of the Mahomedans is due largely to the fact that they are found chiefly in the north-west of India, where all classes are backward in respect of education, and in Eastern Bengal where they consist mainly of local converts from a depressed class. In the United Provinces, Madras and the Central Provinces and Berar, they stand above or on an equality with the Hindus and the same is the case in Bombay excluding Sind. In Sind the Mahomedan population is exceptionally illiterate, but in the rest of the Presidency it consists largely of traders, and education is much more widely diffused amongst them than amongst Hindus. The figures for Hindus again are a general average for all castes, high and low. It will be seen further on that some of the higher Hindu castes

are better educated than the Buddhists while others are even less so than the Animists.

Increase of Literacy.—The total number of literate persons has risen during the decade from 15.7 to 18.6 millions or by 18 per cent. The number of literate males has increased by 15 and that of literate females by 61 per cent. The proportion who are literate per thousand males has risen from 98 to 106 and the corresponding proportion for females from 7 to 10. If persons under 15 years of age be excluded, the proportions are 138 and 149 for male and 8 and 13 for females. The great improvement in the proportion of literate females is most encouraging. It is true that too much stress should not be laid on this when the actual number is still so small, but, on the other hand, it must be remembered that the rate of increase was equally great in the previous decade, so that it has now been continuous for twenty years. The total number of females over 15 years of age who can read and write is now a million and a quarter compared with less than half a million twenty years ago.

Progress.—Before leaving these statistics of schools and scholars we may glance briefly at the progress which they show is being made. The total number of scholars in all kinds of educational institutions in 1891 was only 3.7 millions. In 1901 it had risen to 4.4, and in 1911 to 6.3 millions. 17.7 per cent. of the population of school-going age were at school in 1912 as compared with 14.8 per cent. in 1907. Between 1891 and 1911 the number of students in secondary schools and Arts Colleges has doubled, and the number in primary schools has increased by 67 per cent., the proportion ranging from 39 per cent in Bombay to 204 per cent. in the United Provinces. Excluding Madras, where a school final examination has recently taken the place of the Matriculation, or Entrance examination of the University, the number of persons passing that examination has risen from 4,079 in 1891 to 10,512 in 1911. Including Madras the number who passed the Intermediate examination in Arts or Science has risen during the same period from 2,055 to 5,141, and that of those who obtained a degree in Arts, Science, Medicine or Law from 1,437 to 5,373. The general conclusion appears to be that, while the general rate of progress is far greater than would appear from a comparison of the census returns of 1901 and 1911, it is most marked in respect of secondary education.

There was a continuous fall, both in the number and the proportion of persons afflicted from 1881 to 1901; and this has now been followed by a move in the other direction. Though the proportion is smaller the number of the insane and the deaf-mutes is now about the same as it was thirty years ago. The number of lepers and blind however is less by about a sixth than it then was.

Infirmities.

The total number of persons suffering from each infirmity at each of the last four censuses is shown in the following table:—

Infirmity.	Number afflicted			
	1911	1901	1891	1881
Insane	81,006 **26**	66,205 **23**	74,279 **27**	81,132 **35**
Deaf-mutes	199,891 **64**	153,168 **52**	196,861 **75**	197,215 **86**
Blind	443,653 **142**	354,104 **121**	458,868 **167**	526,748 **229**
Lepers	109,094 **35**	97,340 **33**	126,244 **46**	134,968 **57**
Total ..	833,644 **267**	670,817 **229**	856,252 **315**	937,063 **407**

NOTE.—The figures in heavier type represent the proportion per 100,000 of the population.

Insanity.—In respect of the prevalence of insanity, India compares very favourably with European countries. According to the latest returns, the proportion of persons thus afflicted in England and Wales is 364 per hundred thousand of the population, or fourteen times the proportion in India. This may be due partly to the fact that the English statistics include the weak-minded as well as those who are actively insane, and to the greater completeness of the return in a country where the majority of the mentally afflicted are confined in asylums; but the main reason no doubt is to be found in the comparatively tranquil life of the native of India. It is well known that insanity increases with the spread of civilisation, owing to the greater wear and tear of nerve tissues involved in the struggle for existence.

The total number of insane persons exceeds by 9 per cent. that returned in 1891, but their proportion per hundred thousand of the population has fallen from 27 to 26. The decline is fairly general, the chief exceptions being the United Provinces, the North-West Frontier Province and four Native States in the peninsular area. In the United Provinces the number of the insane per hundred thousand of the population has risen from 12 to 18. No satisfactory explanation of this large increase is forthcoming.

Deaf-Mutes.—By deaf-mutism is meant the congenital want of the sense of hearing which, in the absence of special schools, such as are only

just beginning to appear in India, necessarily prevents the sufferer from learning to talk. Clear instructions were given to the enumerators to enter only persons who were congenitally afflicted. Some few, perhaps, may have been included in the return who had lost the power of speech or hearing after birth, but the total number of such mistakes is now very small. In India as a whole 74 males and 53 females per hundred thousand are deaf and dumb from birth. These proportions are much the same as those obtaining in European countries.

Blindness.—In India as a whole fourteen persons in every ten thousand of the population are blind, as compared with from eight to nine in most European countries and in the United States of America. It is a matter of common observation that blindness is ordinarily far more common in tropical countries than in those with a temperate climate. It is, however, less common in India than in parts of Eastern Europe; in Russia, for instance, nineteen persons in every ten thousand are blind.

Lepers.—In India as a whole 51 males and 18 females per hundred thousand persons of each sex are lepers. Of the different provinces, Assam suffers most, then Burma, and then in order Bihar and Orissa, the Central Provinces and Berar, Madras, Bengal, Bombay, the United Provinces, the Punjab and the North-West Frontier Province. In the two last-mentioned provinces there are only 17 male and 8 female lepers per hundred thousand of each sex. The occurrence of leprosy is very local and its prevalence varies enormously within provincial boundaries.

The number of lepers has fallen since 1891 from 126 to 109 thousand, a drop of more than 13 per cent. When it is remembered that the number of persons suffering from the other three infirmities taken together has remained almost stationary, it may be concluded that the decrease in the reported number of lepers is genuine and indicates a real diminution in the prevalence of the disease. It is possible that this is partly the result of the improved material condition of the lower castes, amongst whom leprosy is most common, and of a higher standard of cleanliness. The greater efforts which have been made in recent years to house the lepers in asylums may also have helped to prevent the disease from spreading. The total number of asylums in India is now 73, and they contain some five thousand inmates, or about 4.7 per cent. of the total number of lepers. This may not seem much, but it has to be remembered that the movement is still in its infancy and that progress has been very rapid in recent years. Complete statistics for 1901 are not readily available, but it is known that in the two provinces of Bengal and Bihar and Orissa, the number of lepers in asylums was then only about half what it is now. The greater part of the credit for the provision of asylums for these unfortunate persons belongs to the Mission for Lepers in India and the East, which receives liberal help from Government. Its latest report shows that there are 3,537 lepers in the forty asylums maintained by the Society.

The belief is growing that leprosy is communicated from one human being to another by some insect, and two South African doctors have recently published papers implicating the bed bug (*acanthia lectularia*). If this theory be correct it is obvious that the segregation of lepers in asylums must reduce the number of foci of the disease, and to that extent prevent it from spreading. It is worthy of note that in many of the districts where the disease was most prevalent in 1891, there has since been a remarkable improvement. Chamba which in 1891 had 34 lepers in every ten thousand of its population, now has only 15; in Birbhum the corresponding proportion has fallen from 35 to 16, in Bankura from 36 to 23, in Simla 29 to 18, in Dehra Dun from 20 to 11, in Garhwal from 17 to 10, in Burdwan from 22 to 14 and in North Arakan from 28 to 20.

OCCUPATIONS.

Nowhere are the many points of difference in the local conditions of India, as compared with those of western countries, more marked than in respect of the functional distribution of the people. In England, according to the returns for 1901, of every hundred actual workers, 58 are engaged in industrial pursuits, 14 in domestic service, 13 in trade and only 8 in agriculture, whereas in India 71 per cent. are engaged in pasture and agriculture and only 29 per cent in all other occupations combined. The preparation and supply of material substances afford a means of livelihood to 19 per cent. of the population (actual workers) of whom 12 per cent. are employed in industries, 2 in transport and 5 in trade. The extraction of minerals supports only 2 persons per mille; the civil and military services support 14, the professions and liberal arts 15, and domestic service 18 persons per mille. The difference is due to the extraordinary expansion of trade and industry which has taken place in Western Europe during the last century in consequence of the discovery of the steam engine, and to the great improvement in means of transport and the use of mechanical power in factories of all kinds which have resulted therefrom. In Germany, sixty years ago, the agricultural population was very little less than it is at the present time in India. There are, as we shall see further on, indications that in the latter country also great changes are impending: and it is not unlikely that, as time goes on, the functional distribution of the people will become less dissimilar from that now existing in Europe.
